Shanley, John, Fargo, North Dak., willed to church, \$220,000.

Sharp, George M., Baltimore, Md., willed to Monthly Meeting of Friends, \$116,250.

Sharkles, P. M., of Westchester, Pa., gift to Swarthmore College, \$50,000.

Sharpless, Lella H., Philadelphia, Pa., will to charity, \$5000.

Shauffer, Mrs. A. F., New York, gift to Mount Hermon School, \$75,000.

Shaw, Elizabeth, Dixon, Ill., willed to Dixon Hospital, \$30,000.

Shaw, Mary B., Chester, Pa., will to charity, \$5000.

Shaw, Mrs. P. A., Boston, Mass., gift to Monroe Settlement, \$30,000.

Sheldon, Nicholas, Providence, R. I., gift to public library, \$10,000.

Shepard, E. M., New York, will to church, \$11,000.

Shepherd, D. C., of St. Paul, Minn., gift for library building, \$100,000.

Sherman, Texas, gift of library by Andrew Carnegie, \$50,000.

Shoenberg Bros., St. Louis, Mo., gift to hospital, \$20,000.

Shreveport, La., various donors to church, \$55,000.

Skiff, Margaret T., Rockford, Ill., willed to charity, \$8000.

Skogard, Jens, gift to Norwegian Hospital, Brooklyn, N. Y., \$15,000.

Slimmer, Abraham, gift to hospital, Waverly, Ia., \$50,000.

Sloane, William, of New York, gift to Amsterdam Hospital, \$25,000.

Small, Miss A. M., York, Pa., willed to charity, \$10,000; willed to church, \$20,000.

Smith, Hugh O., Denver, Col., willed to charity, \$70,000.

Smith, Sylvester T., Chicago, Ill., willed to charity, \$12,500.

Smith, W. D., Reading, Pa., will to charities, \$42,000.

Smith, Mrs. W. Van Rensselaer, New York, gift to church, \$100,000.

Smith, W. W., Poughkeepsie, N. Y., gift to Y. W. C. A., \$30,000.

Somerville, Mass., willed to library by Nathan J. Davis, \$10,000.

Southboro, Mass., willed to hospital by Charles F. Choate, \$5000.

Southern Pacific Railway Employees, benefit for, gift by Mrs. E. H. Harriman, \$50,000.

Southmayd, Charles F., New York, will to charity, \$17,000.

South, University of the, will by Mrs. Richard Peters, Atlanta, Ga., \$5000.

Sowden, A. J. C., Boston, Mass., willed to charity, \$15,000.

S. Pacific Hospital, gift by Mrs. A. D. Huntington, \$35,000.

Staaffer, W. A., willed to Reading, Pa., W. C. T. U., \$20,000.

Stanford, W. H., New York, will to charity, \$6000.

Steers, J. R., New York, gift to New York City College, \$5000.

Sterling, W. R., of Chicago, Ill., gift to Legal Aid Society, \$5000.

Stewart, D. D., of St. Albans, Me., gift to town, \$7000.

Stewart, Lisenpard, New York, gift to charities, \$65,000; gift to church, \$25,000; gift to Zoological Society, \$10,000.

Stillwell, Helen M., Whitefield, N. H., will to charity, \$5000.

Stotesbury, E. T., Philadelphia, Pa., gift to Firemen's Fund, \$25,000.

Strawbridge, J. C., Philadelphia, Pa., willed to Bryn Mawr College, \$10,000; willed to Haverford College, \$10,000.

Strong City, Kansas, gift to church by C. C. Patton, \$5000.

Strong, H. A., Rochester, N. Y., gift to Y. M. C. A., \$60,000.

Strong, Henry, Chicago, will to education, \$1,500,000.

Swan, Mrs. F. B., of Pasadena, Cal., gift to Occidental College, \$50,000.

Swarthmore College, unnamed donor, \$200,000; gift by P. M. Sharples, \$50,000; gift by Mrs. Agnes Bergstadt, \$25,000.

Sweden Hero Fund, gift by Andrew Carnegie, \$250,000.

Swords, Phoebe L., New York, will to St. Luke's Hospital, \$41,000; will to charity, \$11,000; will to Metropolitan Museum of Art, \$5000.

Tag day, Chicago, gifts to hospitals, \$55,367.

Taylor, Clara B., San Francisco, Cal., will to charities, \$10,000.

Taylor, Julia J., Cobatt, Conn., gift of park to New York City, \$1,000,000.

Teller, Sarah A., New York, will to charity, \$10,000.

Thames College for Women, gift by Morton F. Plant, \$1,000,000.

Thayer, Nathaniel, Lancaster, Mass., willed to Boston Art Museum, \$250,000; willed to Massachusetts Institute of Technology, \$50,000; willed to Massachusetts General Hospital, \$50,000.

Thomas, J. M., of Baltimore, Md., willed to St. Paul's Boys' School, \$8000.

Thome, Phoebe A., New York, willed to Bryn Mawr College, \$150,000.

Thompson, Caroline C., Bridgeport, Conn., willed to charity, \$25,000.

Thompsonville, Conn., library, gift by Andrew Carnegie, \$7500.

Throop Polytechnic Institute, Pasadena, Cal., gift by various donors, \$250,000.

Timme, Eliza, New York, will to German Hospital, \$10,000.

Tooker, Nathaniel, Newark, N. J., willed to charities, \$70,000.

Topeka Industrial Institute, unnamed donor, \$5000; gift by Andrew Carnegie, \$10,000.

Toplift, Elijah M., Manchester, N. H., will to Dartmouth College, \$200,000.

Transylvania College, gift by W. P. Bowen, \$15,000; other donors, \$6000.

Trinity College, gift by J. B. Durham, \$50,000.

Tuskegee Institute, willed by Alice M. Curtis, \$5000; willed by Lydia A. Barnard, \$25,000.

Sioux City, Ia., willed by Henry Redding, \$30,000.

Uhler, G. H. S., of Philadelphia, Pa., gift to charity, \$5500.

Union College, willed by Samuel Meyers, \$5000.

University of Pennsylvania, will by Frank Haseltine, \$10,000.

Valentine, Mitchell, New York, will to Hahne-mann Hospital, \$1,146,826.

Van Rensselaer, Henry, New York, willed to St. Xavier College, \$10,000.

Various donors, Minneapolis, Minn., gifts to Art Museum, \$400,000.

Various donors, gift to Colored Y. M. C. A., Chicago, Ill., \$66,000.

Various donors, to Wooster University, \$450,000.

Vassar College, gift by alumnae, \$50,000.

Venn, Clement, Chicago, Ill., will to church \$5000.

Vermont Academy, gift by Willard Crane, \$5000.

Virginia, University of, gift by Trustees of Phelps-Stokes Fund, \$120,000.

Voodrey, Anna, Bloomington, Ill., will to University of Illinois, \$30,000.

Wadsworth, Dr. O. F., Boston, Mass., will to Boston Medical Library, \$12,000.

Walker, T. B., Minneapolis, Minn., gift to Y. M. C. A., \$100,000.

Walker, T. B., Minneapolis, Minn., gifts to Y. M. C. A., \$100,000.

Walsh estate, New Haven, Conn., gift to Yale University, \$20,000.

Walters, Henry, Baltimore, Md., gift to Public Bath Commission \$15,000.

Wanamaker, John, gift to Y. M. C. A. at Peking, China, \$60,000.

Washington and Lee University, willed by Frank T. Howard, \$10,000.

Washington Catholic University, gift by James J. Ryan, \$50,000.

Washington, Hugh V., Macon, Ga., will to Daughters of American Revolution, \$75,000; will to Missouri Historical Society, \$75,000.

Waterbury, Conn., willed to charities by Elisha Leavenworth, \$500,000.

Waverly, Ia., gift to hospital by Abraham Slimmer, \$50,000.

Weld, Charles G., Newport, R. I., willed to Peabody Museum, Salem, Mass., \$25,000; willed to charities, \$125,000.

Weld, G. W., Boston, Mass., will to charity, \$105,000.

Wellesley College, willed by Evelyn S. Hall, \$5000.

Wells College, willed by Sarah R. Sage, \$5000.
Wells, Mrs. Benjamin, New York, willed to charity, \$30,000.

Wellsville, Ohio, gift to Children's Home by William P. McCullough, \$250,000.

Wesleyan University, willed by Walter Hubbard, \$40,000.

Wesson, S. B., estate of, gift to Connecticut Valley Historical Society, \$1,000,000.

Wheaton College, gift by J. F. Eberhart, \$5000; various donors, \$75,000.

White, Mary, Boston, Mass., willed to charity, \$10,500.

Whitney, Isabelle, New York, will to church, \$15,000.

Widener, P. A. B., of Philadelphia, Pa., gift to charity, \$500,000.

Wilkes, Florence H., New York, willed to charity, \$32,000.

Williams College, gift by estate of Mrs. H. Curtis, \$35,000.

Williams and Vashlt Colleges, various donors, \$100,000; Sarah H. Pattison, Ossining, N. Y., \$100,000; gift by Edward T. Perkins, \$25,000.

Wilson, Mehtable, C. C., Cambridge, Mass., willed to charity, \$250,000.

Winthrop, H. R., of New York, gift to Yale University, \$5000.

Witham, W. S., Atlanta, Ga., gift to schools, \$5000.

Woerrshoffer, Emma C., New York, will to Bryn Mawr College, \$750,000.

Woman's Hospital, Pittsburgh, Pa., willed by Thomas N. Miller, \$1,800,000.

W. C. T. U., willed by A. C. Arnold, Battle Creek, Mich., \$10,000; willed by Emilie D. Martin, \$15,000; willed by W. A. Staaffer, \$20,000.

Wood, John D., Pasadena, Cal., willed to charity, \$165,000.

Wooster University, gift by various donors, \$450,000.

Worcester, Mass., willed to church by Caroline S. Marble, \$10,000.

Worthington, Amella, Pittsfield, Mass., gift to church, \$275,000.

Wright, Charlotte L., Georgetown, Mass., will to church, \$5000.

Yale Forestry School, gift by unnamed donor, \$100,000.

Yale University, various donors, \$186,000; H. C. Loudenslager, \$40,000; gift by Mrs. F. C. Farwell, \$25,000; unnamed donor, \$10,000; gift by Walsh estate, \$20,000; gift by George H. Myers, Washington, D. C., \$15,000; other donors, \$197,000; gift by Francis E. Loomis, \$20,000; willed by Albert Lessel, \$25,000; gift by Joseph Parker, \$10,000; willed by Joseph Parker, \$10,000; gift by Mrs. E. N. Gibbs, \$5000; gift by H. R. Winthrop, \$5000; various donors, \$10,000; willed by Lawrie M. B. Kellogg, Oakland, Cal., \$50,000.

Yarnall, E. H., of New York, willed to church, \$200,000.

Y. M. C. A., gift by Adelaide Kenny, \$8000; gift by J. P. Crozer, \$10,000; will by W. V. Brown, \$40,000; James A. Patten, \$25,000; gift by Virginia McCormick, \$10,000; gift by two unnamed donors, \$60,000; various donors, \$24,036; gift by C. H. McCormick, \$50,000; gift by Mrs. T. J. Emery, \$225,000; various donors, \$216,964; various donors, \$55,000; gift by various donors, \$100,000; various donors, \$300,000; various donors, \$10,000; gift by James A. Patten, \$50,000; gift by H. A. Strong, \$60,000; gift by James Dysart, \$15,000; gift by Julius Rosenwald, \$25,000; various donors, \$50,000; gift by various donors, \$5000; gift by G. W. Elkins and sister, \$880,000; gift by various donors, \$880,000; gift by T. B. Walker, \$100,000; various donors, \$150,000; various donors, \$500,000.

Y. M. C. A., Army and Navy, gift by Helen Gould, \$30,000.

Y. M. C. A., Colored, Washington, D. C., various donors, \$100,000.

Y. M. C. A. Hotel Fund, gift by Julius Rosenwald, \$50,000; gift by N. W. Harris, \$50,000.

Y. W. C. A., gift by Frances J. Huntley, \$5000; gift by W. W. Smith, \$30,000; gift by Helen Gould, \$20,000.

Zoological Society, gift by Lisenard Stewart, \$10,000.

GILBERT, Sir WILLIAM SCHWENCK. An English humorist and librettist, died May 29, 1911. He was born in London in 1836. He was educated at Great Ealing and at King's College of the University of London. His intention was to go to Oxford, but instead he took the examination for a commission as officer in the Crimean War. The war came to a close before he could see service and in 1857 he took his examination for a clerkship in the Privy Council Office. He held this position for four years until the receipt of a small legacy enabled him to set up as a barrister. His first writing was the translation of a song for Madame Parepa Rosa, which was published in 1858 on a concert programme. In 1881 he contributed a drawing and a humorous article to the magazine *Fun*. This at once attracted attention and brought him the invitation to become a regular member of the staff. He continued to contribute to this and other periodicals while still practicing law. His earnings from his writings soon became so much greater than the returns from his legal practice that he gave up the law. Among his other literary work was included dramatic criticism, and this brought him into contact with the people of the theatre. An opportunity came to him for the writing of a Christmas burlesque for Miss Herbert, who was at that time manager of the St. James Theatre. He selected a burlesque on Donizetti's opera *L'Elisir d'Amore*, which was at that time very popular. The work was completed in ten days and was entitled *Dulcamara, or The Little Duck and the Great Quack*. This was successful, and it was followed by a burlesque on the same composer's *The Daughter of the Regiment*, with John Toole in the principal rôle. Following this came the *Merry Zingara*, a burlesque on *The Bohemian Girl*. By the successes of these pieces Gilbert's reputation became so well established that he was invited to write the work that opened the New Gaiety Theatre. He selected a burlesque of *Robert the Devil*. His first comedy, *An Old Score*, followed this and was also successful. A burlesque on Tennyson's *Princess* in blank verse was hardly as successful as his previous productions. With *The Palm of Truth*, 1870, he came into the field in which his widest success has been attained. This piece, adapted from the French for the Haymarket Theatre, had a run of 150 nights. It was followed in 1871 by *Pygmalion and Galatea*. For a time he abandoned the writing of opera librettos for the production of comedy. *The Wicked World* was given in 1873, *Charity* in 1874, *Broken Hearts* in 1876, *On Guard* and *Gretchen* in 1879. Gilbert's world-wide fame dates from his collaboration in the writing of comic operas with Sir Arthur Sullivan. The first of these was a burlesque called *Thespis, or The Gods Grown Old*. Then came *Trial by Jury* and this was followed by a succession of operas, which established the reputation of their writers throughout the English-speaking world. These included *The Sorcerer*; *H. M. S. Pinafore*; *The Pirates of Penzance*; *Patience*; *Iolanthe*; *Princess Ida*; *The Mikado*; *Ruddigore*; *The Yeoman of the Guard*; *The Gondoliers*; *Utopia Limited*; *His Excellency*; and *The Grand Duke*. The production of *Pinafore* marked an epoch in comic opera in English, while *The Mikado* was probably the most successful light opera ever produced in the English language. *Pinafore*

was produced in New York for the first time in 1879. All the other operas were produced in the United States after their English success. The collaboration between Gilbert and Sullivan was brought to an end as the result of a quarrel in relation to a trivial business matter. The music for *His Excellency* was written by Osmund Carr and for *The Chieftain* by F. C. Burnand. In 1894 there was a reconciliation, but their work had lost its first inspiration and the best of it had already been done. Gilbert's later writings were not strong in the possession of the humor so characteristic of his early plays and librettos. Few of the plays written after the death of Sir Arthur Sullivan were brought to the United States. His humor is perhaps best shown in the famous book of nonsense verses, *Bab Ballads*. In addition to the plays already mentioned he wrote *Dan'l Druse; Sweethearts; and Engaged*. He also adapted two novels, *Great Expectations*, and *Ought We to Visit Her?*, and took three farces from the French. For many years before his death, Gilbert occupied a beautiful country home in Middlesex, in which county he was a deputy lieutenant. He came to his death by drowning while attempting to save the life of a young woman.

GILMAN, CHARLOTTE PERKINS. See LITERATURE, ENGLISH AND AMERICAN, *Political and Social Science*.

GILROY, THOMAS F. An American public official, former mayor of New York City, died December 1, 1911. He was born in 1840, in Sligo, County Sligo, Ireland. His father having died, he was brought to America by his mother at the age of six years. He attended the common and high schools of New York City and was then apprenticed to a printer. After five years he obtained a place as clerk in the city government, where he remained for three years. He became active in politics and joined the Tammany Hall organization. After holding various public offices in New York City he was, in 1892, nominated for mayor against Edward Einstein, and was elected by a majority of over 70,000 votes. During his administration the famous Lexow investigation into the administration of the city government was carried on. After the expiration of his term of office he became interested in various financial institutions, including several banks. In 1891 he was Grand Sachem of the Tammany Society.

GLICK, GEORGE WASHINGTON. An American public official, formerly governor of Kansas, died April 13, 1911. He was born in Fairfield county, Ohio, in 1827, and was educated at Central College, Ohio. He was admitted to the bar in 1850, and for several years practiced in Ohio. He served for a short time in the Civil War and from 1867 to 1874 was attorney for the Union Pacific Railroad. He was a member of the Kansas legislature for seven terms and in 1883 was elected governor of the State.

He was a commissioner to the Centennial, Chicago, and St. Louis expositions.

GOLD. The total production of gold in the United States in 1910 was 4,657,018 fine ounces, valued at \$96,269,100, a decrease as compared with the output in 1909 of 164,683 ounces in quantity and of \$3,404,300 in value. The output was, however, next to the record production of 1909, the largest in the history of the country. This gold was produced in twenty-two States and Territories and in the Philippine Islands and Porto Rico. The gold mining industry was fairly active in 1910 as in 1909 notwithstanding the decreases in the output. In Alaska the decline in gold was chiefly from the Fairbanks district and in the Yukon basin, where exhaustion of the high grade levels has been expected. Colorado stood first in 1910 as a producer of gold. The output from that State was 992,969 fine ounces, valued at \$20,526,500. California was second with only slightly decreased production, 988,853 fine ounces, valued at \$20,441,400. Nevada was a close third with 913,015 fine ounces, valued at \$18,873,700.

The value of the gold produced in the various States and Territories in 1910, and 1911 preliminary, as estimated by the director of the mint, will be found in the following table:

	1911		1910	
	Fine ozs.	Value	Fine ozs.	Value
Alabama ..	887	\$ 18,335	1,592	\$ 32,900
Alaska ...	774,144	16,002,978	787,148	16,271,800
Arizona ...	142,938	2,954,790	165,114	3,413,200
California ..	982,544	20,310,987	988,853	20,441,400
Colorado ..	926,568	19,153,860	992,969	20,526,500
Georgia ...	1,477	30,532	1,161	24,000
Idaho	56,563	1,169,261	50,112	1,035,900
Illinois ...	280	5,788
Michigan ..	1	20
Maryland ..	1	20
Montana ..	153,341	3,169,840	179,975	3,720,400
Nevada ...	917,605	18,968,578	913,015	18,873,700
New Mexico ..	30,955	639,897	23,085	477,200
N. Carolina ..	3,710	76,693	3,120	64,500
Oklahoma ..	1,485	30,698
Oregon ...	28,988	599,235	32,963	681,400
Penns.	378	7,814
Philippines ..	6,313	130,501	7,469	154,400
Porto Rico ..	106	2,191	48	1,000
S. Carolina ..	650	13,437	1,829	37,800
S. Dakota ..	359,444	7,430,367	260,267	5,380,200

Wash'ton ..	24,407	504,537	38,990	806,000
Wyoming ...	909	18,791	198	4,100
Misc.	12,820	265,013
Total ...	4,655,297	\$96,233,528	4,657,018	\$96,269,100

The most notable features of the industry in 1911, according to the United States Geological Survey, were the resumption of normal labor conditions in the Black Hills of South Dakota, the increased dredge output in California, the development of production in the new Innokoditarod placer region of Alaska and the Republic district of Washington, continued development and prosperity of the great Goldfield, Nevada, and Treadwell, Alaska, mines; improvement in metallurgical methods and general increase in activity at many small deep and placer mines. Renewed interest in prospecting was shown in Colorado, although the gold output of the State decreased owing to the gradual ex-

haustion of several large ore bodies and to continued decrease in production from the great Cripple Creek camp. See METALLURGY.

GOLD COAST. A British crown colony and protectorate on the west coast of Africa. Area of the colony and the protectorate, with Ashanti, about 82,000 sq. miles. Population (April 2, 1911), 1,502,899 (colony, 857,516; Ashanti, 287,814; Northern Territories, 357,510). Europeans, about 1000. Capital, Accra (17,892 inhabitants). Pupils enrolled in government and mission schools (1909), 16,711; government grant, £6387. The natives are mostly pagans. Palm oil, palm kernels, cacao, rubber, and valuable timbers are produced. Gold output (1909), 230,494 ounces (£979,074). Imports (1909), £2,394,412 (textiles, alcohol, and hardware); exports, £2,655,573 (gold, £790,329; rubber, £358,876; palm kernels, £185,058; palm oil, £161,388; cacao, £866,571). Imports 1910, £3,439,831; exports, £2,697,706. Revenue (1910), £1,006,633; expenditure, £924,862. Railways open, 168 miles (under construction, 60). Telegraph lines, 1363 miles. Governor, (1911), James Jameson Thorburn.

ASHANTI. Chief town, Kumasi, population, 7000. Gold output (1908), 62,489 ounces (£265,468). Revenue, (1909), £20,264; expenditure, £102,211. **NORTHERN TERRITORIES:** Area, between 38,000 and 50,000 sq. miles; revenue (1909), £1690; expenditure, £67,169.

GOLF. The wonderful showing made by Harold H. Hilton of the Royal Liverpool Golf Club, amateur champion of England, was easily the feature of the 1911 golf season. Hilton after winning the highest honors in England visited the United States and captured the amateur championship title. He also finished only one stroke behind Harry Vardon and Arnaud Massy, who tied for the British professional championship. Other players in the limelight during the year were Jerome D. Travers, winner of the Metropolitan and New Jersey championships; Oswald Kirby, winner of the Tuxedo, Apawamis, and Nassau tournaments; Miss Margaret Curtis, winner of the women's national championship; Charles W. Evans Jr., winner of the French amateur championship; J. J. McDermott, winner of the United States open championship; Albert Seckel, winner of the Western championship, and Gilbert Nicholls, winner of the United States professional championship. Nicholls established a world's record by covering a 6000-yard course in 281.

The team championship of the Intercollegiate Golf Association for the fourth year in succession was won by Yale which defeated Harvard in the finals by 9 matches to 0. The individual winner was George Stanley of Yale who was victor over Henry Heyburn of the University of Pennsylvania 5 up and 4 to play. In dual college matches Princeton defeated Williams, Yale defeated Princeton, Williams defeated Columbia, and Harvard and Williams tied, Oxford won the contest with Cambridge 5 matches to 3.

The principal tournaments abroad aside from those already mentioned were the German and Irish championships. Alexander H. Revell of Chicago won the German amateur title and Harry Vardon of England the professional title. Vardon established a new record of 279 for 72 holes. The course was 4766 yards.

GORDON, GEORGE WASHINGTON. An American soldier, former congressman from Tennessee, died August 9, 1911. He was born in Giles county, Tenn., in 1836, and graduated from the Western Military Institute in 1859. He practiced civil engineering until the outbreak of the Civil War, when he enlisted in the military service of Tennessee as drill master of the eleventh infantry. He was transferred to military service in the Confederate army and was promoted in succession to be captain, lieutenant-colonel, colonel, and brigadier-general. He was taken prisoner and held until August, 1865, at Fort Warren, Mass. At the close of the war he studied law and practiced in Memphis until 1883. He was appointed one of the railway commissioners of the State and in 1885, received an appointment in the Department of the Interior of the United States. He resumed the practice of law in Memphis until his election as city superintendent of schools in 1892 and served in this position until 1907. He was a member of the Sixtieth and Sixty-first congresses, 1907 to 1911. He was major-general commanding the Tennessee Division of the United Confederate Veterans.

GORST, Sir ELDON. A British administrator, died July 12, 1911. He was the eldest son of Sir John Eldon Gorst and was born in New Zealand in 1861. He was educated at Eton and Trinity College, Cambridge. He entered the diplomatic service and in the following year was sent to the British Agency at Cairo as an attaché. He entered the service of the Egyptian government in 1890. In the meantime he had mastered the Arabic language, of which he acquired a better knowledge than the higher English officials who had not lived for many years in close and intimate contact with the people. After spending four years successively as controller of the direct taxes and under-secretary for finance he became, in 1894, adviser to the ministry of the interior as the first holder of this office. His administration was marked by many reforms, especially in the control of the Egyptian police. In 1898 he was made financial adviser in succession to Sir Elwin Palmer. Here his genius for finance made itself evident. In 1902, he was knighted and two years later was sent on special duty to Paris, where he played an important part in the conclusion of the Anglo-French agreement. He was then for three years assistant under-secretary at the British foreign office, especially in charge of that branch which deals with Egypt and Central Asia. On the resignation of Lord Cromer in 1907 Gorst was appointed his successor. This appointment came at a difficult period in the history of British rule in Egypt. The activities of the Young Egyptian party were beginning to cause unrest and dissatisfaction among the natives. One of his first achievements was to establish more cordial relations with the khedive. He also made patient efforts to improve the efficiency of the Legislative Council and the General Assembly, but in this he made slow progress. A great administrative reform which he carried out was the development of the provincial councils. In this he followed lines suggested by Lord Cromer. His last report, issued in May, 1911, showed that he had no confidence in the fitness of the people of

Egypt to manage their own affairs through representative institutions, though he indicated that a beginning might be made with local governing bodies. He found it necessary to revive the law controlling publications in native newspapers and did not hesitate to apply it. One of the most important results of his administration was the development of the Sudan, including the great project for irrigating the Gezira from the Blue Nile. He was obliged to return to England on account of ill health in April, 1911. See EGYPT.

GOUCHER COLLEGE. An institution for the higher education of women, founded as the Woman's College of Baltimore, in 1884. The change in the name of the college was made by order of the board of trustees under an act of the General Assembly of Maryland of March 31, 1910. The number of students enrolled in the various departments of the college in 1910-11 was 358. The faculty numbered 29. The principal change made in the faculty during the year was the resignation of Dr. E. A. Noble from the presidency to accept a similar position at Dickinson College. No successor had been chosen at the end of the year. Dr. Fanny C. Gates in the department of physics was succeeded by Dr. Samuel N. Taylor. Dr. S. O. Mast in the department of botany was succeeded by Dr. W. H. Longley. Miss Lila V. Knapp in the department of English was succeeded by Dr. H. L. Ebeling. Miss Ella A. Knapp in the department of English was succeeded by Miss Annette B. Hopkins. The department of education was dropped and with it Dr. Leonard A. Blue retired from the faculty. Educational courses are now given in connection with the department of philosophy. The library contains about 35,000 volumes. The acting president is John B. Van Meter.

GOVERNMENT, MUNICIPAL. See MUNICIPAL GOVERNMENT.

GOVERNORS' CONFERENCE. The conference of governors, the so-called "House of Governors," which meets in annual conference, held its fourth session in September, 1911, at Spring Lake, N. J. Thirty States were represented by their executives in person or by others sent to represent them. The following general topics were considered: Strengthening the power of the State executive, employers' liability and compensation, the inheritance tax, State comity, and State control of public utilities. Many interesting addresses were made during the conference, including those of Governor Harmon of Ohio, Governor Wilson of New Jersey (the two most conspicuous candidates for the Democratic nomination for the presidency), Governor O'Neal of Alabama, and others. Governor Wilson welcomed the visiting governors in an address. Governor Norris of Montana delivered an address on "Strengthening the power of the executive," and Governor O'Neal spoke on the same topic.

The most important action taken by the conference was its vote by twenty-five to one to send a committee of three to appeal to the Supreme Court of the United States to check "the autocracy of the inferior federal courts." Governor Harmon of Ohio, Governor Hadley of Missouri, and Governor Aldrich of Nebraska were chosen members of this committee. A pretext for this appeal was the decision of Justice Sanborn of the United States Circuit Court of Appeals enjoining the railway commission of Min-

nesota from regulating interstate commerce rates on the ground that such regulation could not be enforced, would deprive the roads of proper remuneration, and would interfere with interstate commerce. The governors took the ground that unless the Supreme Court by its final decision protects State rights, the States will soon become mere federal provinces. In explanation of the stand taken by the conference, the following statement was prepared by Governor Harmon and Governor Hadley:

"In view of the apparent misunderstanding by some of the action of the conference yesterday it is deemed advisable that a statement should be made as to its exact nature and purposes.

"As the decision of the United States Circuit Court in what are known as the Minnesota rate cases, to the effect that the State of Minnesota had no authority to regulate railroad rates within its own borders because interstate commerce was thereby affected, and as other cases involving the same question in other States would come before the Supreme Court of the United States for decision, the conference considered it advisable that a committee should be appointed to see that the State's side of this controversy is properly prepared and presented to the Supreme Court. The committee expects to deal only with the legal side of this controversy and the action taken yesterday was one of only ordinary precaution.

"Every State in the Union is vitally interested in the decision of this question, as the right of each State to regulate its own internal commerce would be destroyed by an adverse decision. We expect to ascertain what cases will first be considered by the Supreme Court in which this question will be decided, and if it is deemed advisable we will ask leave to present to the court a brief in argument in support of the right of the States to regulate commerce wholly within their borders."

The next meeting of the conference will be held in Richmond, Va., in 1912.

GRAPES. See HORTICULTURE.

GRAPE-SEEDS, OIL FROM. See HORTICULTURE.

GRAPHITE. The greater part of the crystalline graphite produced in the United States is mined in Alabama, New York, and Pennsylvania. A small quantity comes also from Alaska. Among the producers of amorphous graphite, Georgia ranks first. It is produced also in Colorado, Michigan, Nevada, and Wisconsin. The total amount of graphite of both varieties produced in 1910 was 38,740 short tons, valued at \$377,176. Of this, 5,590,592 pounds were crystalline, and 3945 short tons were amorphous. The imports of graphite into the United States come chiefly from Ceylon and Mexico. In 1910 these amounted to 25,235 short tons, valued at \$1,872,592. The world's production of graphite in 1909 was 107,308 short tons, valued at \$3,525,140. Austria ranks first in point of production with 45,194 short tons. Ceylon follows, with 28,660 tons, and Italy, with 12,787. United States ranks third in point of production. Other countries producing considerable quantities are Germany and India.

Artificial graphite is made in large quantities, the amount produced in 1910 being 13,149,100 pounds, valued at \$945,000. It is made entirely at Niagara Falls, N. Y.

GRASS DANCE. See ANTHROPOLOGY.

GREAT BRITAIN. The United Kingdom of Great Britain and Ireland, a constitutional monarchy. Capital, London.

AREA AND POPULATION. The total area, including the Isle of Man and the Channel islands, is 121,391 sq. miles. The area of England and Wales is shown in the table below as 58,324 sq. miles; for purposes of the 1911 census the area was taken as 37,337,630 acres, or 58,340 sq. miles, of land and inland water. By divisions the area and the population, according to the census of April 1, 1901, and preliminary returns of the census of April 3 (midnight, April 2), 1911, are shown in the following table:

	Sq. m.	Pop. 1901.	Pop. 1911.
England	50,851	30,811,420	34,043,076
Wales	7,473	1,716,423	2,032,193
Scotland	30,405	4,472,103	4,769,446
Ireland	32,360	4,458,776	4,381,951
Isle of Man	121,089	41,458,721	45,216,665
Channel Islands	227	55,608	52,034
Channel Islands	75	92,234	96,900
	121,391	41,976,827	45,365,599

The foregoing figures do not include army, navy, or merchant seamen abroad, who numbered, in 1901, 367,736. Of the population in 1911, 22,012,872 were males and 23,352,727 females. The growth of population (and in Ireland, since 1841, the decreases) are shown as follows:

Year	E. & W.	Scot.	Ire.	U. K.
1801	8,892,536	1,608,420
1811	10,164,256	1,806,864
1831	13,896,797	2,364,386	7,767,401	24,028,584
1841	15,914,148	2,620,184	8,175,124	26,709,456
1851	17,927,609	2,888,742	6,552,385	27,368,736
1861	20,066,224	3,062,294	5,798,967	28,927,485
1881	25,974,439	3,735,673	5,174,836	34,884,848
1911	36,075,269	4,759,445	4,381,951	45,216,665

The percentage of population in the different divisions has been as follows:

	1841	1861	1881	1891	1901	1911
England ..	56.1	65.6	70.6	72.8	74.3	75.3
Wales	3.4	3.8	3.9	4.0	4.1	4.5
Scotland ..	9.8	10.6	10.7	10.7	10.8	10.5
Ireland ..	30.7	20.0	14.8	12.5	10.8	9.7

The percentage of increase between 1901 and 1911 was: United Kingdom, 9.1; England, 10.5; Wales, 18.1; Scotland, 6.4; Ireland, decrease 1.7; Isle of Man, decrease 5.0.

The 1911 census returns for religious adherence are not yet available except in the case of Ireland, for which the preliminary returns are as follows (percentage of decrease, as compared with 1901, in parenthesis): Roman Catholics, 3,238,656 (2.1); Protestant Episcopalians, 575,489 (1.0); Presbyterians, 439,876 (0.8); Methodist, 61,806 (0.3); Jews, 5101 (increase 30.9); other persuasions, 57,718 (decrease, 2.4); unknown, 2610.

The Administrative County of London had in 1901, 4,536,267 inhabitants; in 1911 (preliminary returns), 4,522,861; Metropolitan Police district, 6,554,479 and 7,233,306; Greater London, 6,581,402 and 7,252,963. The only cities above 100,000 showing a decrease in 1911, were the Administrative County of London (0.3) and Halifax (3.2). The larger cities in 1911 (preliminary returns), with percentage of in-

crease over 1901; Glasgow, 784,455 (1.1); Liverpool, 746,566 (6.0); Manchester, 714,427 (10.8); Birmingham, 525,960 (0.5); Sheffield, 454,653 (11.1); Leeds, 445,568 (3.9); Belfast, 385,492 (10.4); Bristol, 357,059 (5.3); Edinburgh, 320,315 (0.9); Dublin, 309,272 (6.4); West Ham, 289,102 (8.1); Bradford, 288,505 (3.1); Kingston-upon-Hull, 278,024 (15.7) Newcastle-upon-Tyne, 266,671 (8.0); Nottingham, 259,942 (8.4); Stoke-on-Trent, 234,553 (9.2); Salford, 231,380 (4.7); Portsmouth, 231,165 (22.4); Leicester, 227,242 (7.4); Cardiff, 182,280 (10.9); Bolton, 180,885 (7.5); Croydon, 169,559 (26.6); Dundee, 165,206 (1.2); Aberdeen, 163,084 (6.2).

The following table shows the rate, per thousand of the population, of births, deaths, and marriages, i. e., persons married:

	E. & W.	Scot.	Ire.	U. K.
Births 1900	23.7	29.6	22.7	23.2
Births 1909	25.8	27.3	23.5	25.7
Births 1910	25.1	26.2	23.3	25.0
Deaths 1900	18.2	18.5	19.6	18.4
Deaths 1909	14.6	15.8	17.2	15.0
Deaths 1910	13.5	15.3	17.2	14.0
Marriages 1900	16.0	14.6	9.5	15.1
Marriages 1909	14.7	12.8	10.4	14.1
Marriages 1910	14.9	13.0	10.1	14.3

Arrivals and departures in 1909 and 1910, (exclusive of passengers from or to Europe), were as follows (the last column showing the number of British passengers from and to the United States):

	British	For'gn's.	Tot.	U. S.
Arr., 1909	149,068	112,257	261,325	53,323
Arr., 1910	164,139	134,640	298,779	58,623
Dep., 1909	288,761	185,617	474,378	109,700
Dep., 1910	397,848	221,011	618,859	132,192

EDUCATION. In England and Wales (where elementary instruction is compulsory), on July 31, 1910, there were in the public elementary schools accommodations for 7,117,941 pupils; 32,128 departments; 39,799 men teachers and 121,997 women teachers; 3,046,082 boys and 2,987,507 girls enrolled; and an average attendance of 88.85 per cent. On the same date, there were 52 higher elementary schools, with accommodations for 15,317 pupils, with 616 teachers, 12,184 pupils (average during the year), and an average attendance of 91.9 per cent. There are many special elementary schools for the blind, deaf, etc. For public secondary education, there were on January 31, 1910, 950 schools, with 5029 men and 4723 women teachers, and 84,305 boys and 72,032 girls enrolled. At evening and similar schools in 1910, there were 768,358 students; in day technical classes, 10,757; at technical institutions, 2664; in art classes, 2696; at schools of art, 43,973. Teachers are trained at pupil-teacher centres, training classes, and hostels. The public schools here treated are not to be confounded with the many private institutions known as "the public schools."

In Scotland, for the year ending August 31, 1910, there were 3156 public primary schools, with accommodations for 1,027,185 pupils. 818,890 pupils enrolled, and 719,122 in average attendance; 194 higher grade schools, with an enrollment of 24,352 and average attendance of

24,095; 1055 continuation classes, with 127,687 students. Teachers in elementary (primary and higher) schools, 5271 men and 14,397 women, exclusive of 324 pupil teachers. Secondary schools, 57, with 21,008 enrolled (11,993 boys, 9015 girls) and average attendance 19,965. Students at training colleges and centres, 2917.

In Ireland, December 31, 1910, there were 8337 public primary schools, with accommodations for 762,764 pupils, 679,435 enrolled, and 495,959 in average attendance; teachers, 12,829 (5697 men). Training colleges in 1910, 7, with 1195 students.

In the year ending March 31, 1910, total payments for public elementary education, £22,795,179 (£11,329,381 from Parliamentary grants, £11,012,392 local rates) against £21,987,004 in the preceding year. In Scotland, the expenditure from Parliamentary grants was £2,233,165 in the year ended March 31, 1911, and £2,129,710 in the preceding year. In Ireland the amount expended from grants and rates by the commissioners of national education was £1,714,252 in the year ended March 31, 1911, and £1,688,649 in the preceding year.

PAUPERISM. The mean number of paupers, and the ratio per thousand of estimated population, relieved on January 1 and on July 1 preceding (exclusive of casual paupers and insane) are as follows for England and Wales:

	Indoor		Outdoor		Total	
	Mean	Ratio	Mean	Ratio	Mean	Ratio
1905	222,217	6.6	542,891	16.1	764,589	22.7
1910	256,523	7.2	534,938	15.1	790,496	22.3
1911	256,100	7.2	503,181	14.1	758,278	21.2
Of whom able-bodied adults:						
1905	43,987	1.3	72,379	2.2	116,366	3.5
1910	53,797	1.5	72,832	2.1	126,629	3.6
1911	52,889	1.5	71,383	2.0	124,272	3.5

In the above table, for paupers receiving both in-door and out-door relief, deductions are made from total. The number of poor of all classes in receipt of relief in parishes in Scotland on January 15, 1910, was 75,626 paupers and 40,955 dependents; on January 15, 1911, 67,026 and 41,306. The number of paupers in receipt of relief in unions in Ireland at the close of the first week in January, 1910, was 99,002 (5129 able-bodied adults); 1911, 80,658 (4778).

AGRICULTURE. The total cultivated area in acres (in the first week in June) in Great Britain, in Ireland, and in the United Kingdom, including Man and the Channel Islands, has been as follows:

Year.	Gr. Brit.	Ireland.	U. K.
1895	32,577,513	15,179,382	47,883,097
1905	32,286,832	15,282,949	47,673,113
1909	32,183,073	14,580,142	46,888,403
1910	32,145,930	14,661,045	46,931,637

The following table shows the area in acres under the principal crops in the first week of June, 1910:

Crops.	Gr. Brit.	Ireland.	U. K.
Wheat	1,808,854	47,631	1,857,671
Barley	1,728,681	168,008	1,899,130
Oats	3,020,974	1,073,690	4,116,137
Rye	48,249	8,681	57,004
Beans	270,042	1,839	271,983
Peas	168,728	230	169,091
Total corn crops	7,045,528	1,300,079	8,371,016

Crops (cont.)	Gr. Brit	Ireland.	U. K.
Potatoes	539,684	592,985	1,144,466
Turnips and swedes	1,565,345	275,296	1,848,919
Total green crops ..	2,994,891	1,012,087	4,031,134
Cultivated grass	4,157,037	2,468,015	6,670,398
Uncultivated grass ...	17,477,040	9,821,896	27,327,816

The production of the principal crops in imperial bushels, long tons, or cwts., and the average yield per acre, were as follows in 1910:

Crops.	Great Britain.		Ireland.	
	Production. Bu.	Per ac. Bu.	Production. Bu.	Per ac. Bu.
Wheat ...	54,877,250	30.34	1,716,183	36.03
Barley ..	56,476,104	32.67	6,572,393	39.12
Oats	121,829,001	40.33	53,965,316	50.26
Beans	8,669,761	32.42	77,162	41.96
Peas	4,005,183	26.17	6,427	27.94
Potatoes ..	2,477,139	6.44	2,870,827	4.84
Turnips and swedes ..	25,695,018	16.41	4,624,341	16.80
Mangold ..	8,352,995	21.12	1,466,328	19.48
Cultiv. hay	3,264,333	1.57	1,888,180	2.14
Uncul. hay	6,252,292	1.25	3,890,064	2.52
Hops	302,675	9.20

Livestock in the first week of June, 1910 (the figures for horses include only those used for agriculture, brood mares, and unbroken horses):

	Gr. Brit.	Ireland.	U. K.*
Horses	1,545,376	539,517	2,094,587
Cattle	7,037,327	4,688,888	11,765,453
Sheep	27,102,945	3,979,516	31,164,587
Swine	2,349,946	1,200,005	3,561,481

*Including Isle of Man and the Channel Islands.

MINING AND METALS. The following table shows the quantity and the spot value of coal and metals produced in 1900, 1908, and 1909:

	1900	1908	1909
Coal, tons	225,181,300	261,528,795	263,774,312
..... £	121,652,596	116,598,848	106,274,900
Pig iron, Br.*tons	4,666,942	4,847,448	4,802,163
..... £	19,596,910	15,362,946	15,559,253
Pig iron, Fn.†	4,202,749	4,209,403	4,729,824
..... £	18,025,639	13,340,799	15,324,871
Fine copper, tons	765	579	435
..... £	59,995	36,935	27,162
Metallic lead, tons	24,364	20,999	22,463
..... £	418,960	288,124	298,945
White tin, tons	4,268	5,052	5,199
..... £	587,869	676,258	695,546
Zinc, tons	9,066	5,832	3,818
..... £	188,578	122,739	87,146
Silver, oz.	190,850	135,268	142,146
..... £	22,465	13,739	14,030
Bar gold, oz. ...	14,004	915	1,210
..... £	52,147	3,311	4,400

*From British ores. †From foreign ores.

The total spot value of coal and the metals named above has been: 1896, £78,738,947; 1900, £160,605,154; 1905, £113,552,434; 1908, £146,443,699; 1909, £138,286,253. In addition to coal, the non-metallic minerals produced in 1909 were valued at £8,441,294. The total minerals raised (that is, coal, stone, ores, etc., but not smelting products) in 1909 were valued at £119,394,486 (£130,003,670 in 1908), of which England is credited with £80,151,814, Wales, £23,707,215, Scotland, £15,280,480, Ireland, £213,816, and Man, £41,161. In 1909, 1,042,435

persons were employed in or about the mines (of whom all but 28,437 at the coal mines) and 83,937 in the quarries.

FISHERIES. The value of fish (exclusive of salmon) landed on the coasts of the United Kingdom is reported as follows:

	1909	E. & W.	Scot.	Ira.	U. K.
Fish wet	£7,497,139	£2,889,107	£304,937	£10,691,183	
Shellfish	262,521	72,302	58,864	393,777	
Total 1910	7,759,660	2,961,499	363,801	11,084,960	
Fish, wet	7,965,853	3,100,387	316,500	11,382,740	
Shellfish	228,424	69,760	59,130	357,314	
Total	8,194,277	3,170,147	375,630	11,740,054	

COMMERCE. Total imports, imports re-exported, and net imports (that is, imports for home consumption) have been valued as follows (exclusive of specie and bullion and of foreign merchandise transhipped under bond):

Year.	Total Imp.	Reexports	Net Imports.
1900	£523,075,163	£ 63,181,758	£459,893,405
1905	565,019,917	77,779,913	487,240,004
1909	624,704,957	91,344,819	533,360,138
1910	678,257,024	103,761,045	574,495,979

The total imports do not include diamonds imported from the Cape of Good Hope; the value of diamonds exported from the cape to the United Kingdom has been: 1900, £3,433,836; 1905, £8,758,623; 1909, £6,169,953; 1910, £8,480,875.

Imports and exports of gold and silver specie and bullion: 1900, £39,513,173 and £31,972,039 respectively; 1905, £51,559,909 and £45,391,519; 1909, £66,506,718 and £60,034,718; 1910, £71,422,077 and £64,724,213.

Total exports, reexports of foreign and colonial produce, and domestic exports (that is, exports of the produce of the United Kingdom) have been valued as follows (exclusive of specie and bullion and of foreign merchandise transhipped under bond):

Year.	Total Exps.	Reexports	Dom. Ex.
1900	£354,373,754	£ 63,181,758	£291,191,996
1905	407,596,527	77,779,913	329,816,614
1909	469,525,166	91,344,819	378,180,347
1910	534,145,817	103,761,045	430,384,772

Total imports of merchandise and domestic exports of merchandise in 1909 and 1910, are shown by classes in the following table:

	Total Imports		Domestic Exports	
	1909	1910	1909	1910
I. Food, drink, and tobacco:				
Grain and flour	£ 83,107,421	£ 77,298,383	£ 3,399,004	£ 3,416,637
Meat, including animals for food	47,623,428	48,878,947	797,203	935,958
Other food and drink	17,461,416	19,675,550
1. Non-dutiable	67,848,986	72,229,940
2. Dutiable	50,752,885	54,649,936
Tobacco	4,986,663	4,624,782	1,678,268	2,042,593
Total	254,319,383	257,681,588	23,335,891	26,070,738
II. Raw materials and articles mainly unmanufactured:				
Coal coke, and manufactured fuel	8,297	34,119	37,129,978	37,813,360
Iron ore, scrap iron and steel	5,076,131	6,261,471	509,758	476,863
Other metallic ores	8,327,193	8,970,272	95,553	71,791
Wood and timber	23,591,579	26,207,329	108,673	129,290
Raw cotton	60,295,049	71,711,908
Wool (including rags, etc.)	30,041,766	37,332,470	4,648,565	4,220,443
Other textile materials	12,127,707	12,803,327	214,261	323,536
Oil seeds, nuts, oils, fats, and gums	31,039,883	37,548,960	3,400,766	5,023,499
Hides and undressed skins	11,617,756	12,882,326	1,916,634	1,757,762
Materials for paper making	4,499,281	4,972,487	678,049	744,278
Miscellaneous	28,520,854	42,450,959	2,453,780	2,767,460
Total	220,145,496	261,175,628	51,156,007	53,328,382
III. Articles wholly or mainly manufactured:				
Iron and steel and manufactures thereof ..	7,971,594	9,086,214	38,192,142	42,976,671
Other metals and manufactures thereof ..	24,346,328	24,699,194	8,708,945	10,352,354
Cutlery, hardware, implements and instruments	3,719,049	4,673,473	5,412,652	6,423,695
Electrical goods and apparatus	1,322,509	1,686,540	2,230,799	4,102,602
Machinery	4,438,336	4,470,898	28,057,643	29,271,380
Ships and boats (new)	23,926	27,104	5,927,114	8,770,204
Manufactures of wood and timber (incl. furniture	2,054,258	2,338,472	1,451,073	1,835,762
Yarns and textile fabrics:				
1. Cotton	9,839,091	10,874,628	93,444,799	105,871,208
2. Wool	9,727,760	9,599,286	30,671,804	37,516,397
3. Silk	12,759,931	13,521,021	1,859,979	2,278,943
4. Other materials	7,324,876	8,054,667	12,441,525	13,481,198
Apparel (including boots, shoes, and hats) ..	5,072,261	5,107,315	9,824,125	12,717,587
Chemicals, drugs, dyes and colors	10,596,693	11,259,685	16,783,019	18,568,136
Leather and mfrs. thereof (excl. boots and shoes)	11,617,130	11,824,741	4,242,356	4,686,485
Earthenware and glass	3,757,389	3,816,971	3,687,249	4,352,059
Paper	5,647,437	6,413,718	2,559,371	3,122,699
Railway carriages and trucks (not of iron), etc.	4,690,781	5,603,149	6,163,770	7,449,977
Miscellaneous	22,761,845	23,788,385	25,100,103	29,091,840
Total	147,671,094	156,845,461	296,758,468	342,869,197
IV. Miscellaneous and unclassified (in. par. post).	2,568,984	2,554,347	6,929,981	8,116,555
Grand total	624,704,957	678,257,024	378,180,347	430,384,772

Re-exports of merchandise, classified according to the foregoing table, were as follows in 1909 and 1910 respectively: Class I., £12,000,262 and £12,873,975; class II., £54,398,260 and £63,310,059; class III., £24,672,737 and £27,342,345; class IV., £273,560 and £234,666; total, £91,344,319 and £103,761,045.

In 1910, leading imports not specified in the table included: Wheat, £44,160,884; rubber, £26,493,450; butter, £24,493,450; sugar, refined £13,133,352, unrefined £11,420,857; chilled and frozen beef, £11,745,146; tea, £11,381,056; corn, £10,294,340; fresh fruit, £10,381,639. Leading domestic exports not specified in the table included in 1910: Cotton piece goods, £78,685,438; cotton yarn, £13,337,780; woolen and worsted yarn, £6,548,928; coal, £36,099,560; galvanized sheet iron, £7,425,602; tin plate, £6,545,024; pig iron, £4,138,694.

Of the total imports of merchandise, £479,453,018 was from foreign countries and £145,251,939 from British possessions in 1909; in 1910, £507,806,758 and £170,450,266. In 1909, domestic exports to foreign countries £250,942,263 and to British possessions £127,238,084; in 1910, £283,081,830 and £147,302,942.

Total imports and total exports of merchandise by principal countries, in thousands of pounds sterling:

Countries.	Imports.		Exports.	
	1909.	1910.	1909	1910
United States	118,270	119,975	59,254	62,182
France	50,691	51,324	31,515	33,971
Russia	36,898	43,339	18,326	21,221
British India	35,452	42,852	44,698	47,032
Germany	40,115	41,199	47,169	54,911

*Imports do not include diamonds.

SHIPPING. Total net tonnage entered and cleared (exclusive of the coasting trade):

	Entered	British.	Foreign.	Total.
1900	31,445,328	17,777,478	49,222,806	
1909	39,661,660	26,647,859	66,309,519	
1910	39,641,620	27,018,829	66,660,449	
Cleared.				
1900	31,265,508	18,035,379	49,300,887	
1909	40,102,311	26,855,852	66,958,163	
1910	40,173,466	27,196,399	67,369,865	

In 1910, entered steam 64,709,154 tons, cleared 65,422,020; total entered with cargo 41,618,665, cleared 57,326,948. Leading foreign tonnage entered in 1910: German, 6,919,862; Norwegian, 4,369,251; Danish, 2,778,132; Dutch, 2,635,510; Swedish, 2,542,304. American tonnage entered was only 246,744. In 1910, net

tonnage entered in coasting trade, 61,808,816 (57,805,740 British); cleared, 61,569,327 (57,444,022 British). The merchant marine on December 31, 1910, consisted of 12,000 steamers, of 10,442,719 tons net, and 9090 sailing vessels, of 1,112,944; total, 21,090 vessels of 11,555,663 tons net (18,468,895 tons gross).

COMMUNICATIONS. Railways open to traffic increased from 23,280 miles December 31, 1909, to 23,387 miles December 31, 1910, of which in England and Wales 16,148, in Scotland, 3838, and in Ireland, 3401. Total paid-up capital, £1,318,515,000, with about 3.53 per cent. as the average rate of dividend or interest in 1910; gross receipts, £123,925,565; working expenditure, £76,560,670; net receipts, £47,355,889; percentage of working expenditure to gross receipts, 62. Tramways and light railways aggregated 2526 miles at the end of 1909; 1910, 2562 miles.

The principal British construction in 1911 consisted in the extension of the various underground lines in London and suburban railways, most of which were operated by electricity. Several of the London stations were being reconstructed, and enlargements were being made at Paddington and Waterloo. The London and Northwestern built a 3½-mile loop from the Nuneaton branch at Bedlam Gate through Coventry city to its main line between Coventry and Brandon. Progress was made on the Lancashire and Yorkshire electric-belt scheme from Liverpool via Ormskirk to Southport, and on the Midland deviation at Lancaster which included a viaduct over the river Lune. The great central deviation at Keadly which included a new bridge over the river Trent was also constructed, and a light railway from Immington to Barton was opened in May. The Great Western was engaged in developing its Swansea district lines, and improvements at Birmingham which were completed during the year. A 9-mile extension from Heath to Treforest in Cardiff was also completed. A 5½-mile long light railway between Thaxted and Elsingham in Essex was begun during the year. The Great Southern and Western Railway in Ireland was connected with the Cork and Bandon line by the completion of the Cork city railways. In Scotland the Great Northern and the Caledonian companies were enlarging the station at Aberdeen, so that it would have thirteen platforms with an aggregate length of 2½ miles.

On March 31, 1910, state telegraph lines had a length of 58,350 miles; wire, 1,170,125 miles; offices, 11,291; other telegraph offices, 2504; number of exchange telephones, 98,296. On March 31, 1911, there were 24,098 post offices.

FINANCE. The monetary unit is the pound sterling, worth \$4.8665. The following table shows, for years ended March 31, budget estimates of revenue, actual receipts into the Exchequer, and the excess (+) or deficiency (—) of the actual as compared with the estimated amounts:

Year.	Estimates.	Receipts.	Difference.
1900	£120,550,000	£129,804,566	- £ 9,254,566
1905	153,086,000	153,182,782	- 96,782
1909	153,080,000	151,578,295	- 1,501,705
1910	162,590,000	131,696,456	- 30,893,544
1911	199,791,000*	203,850,588	- 4,059,588

*Including arrears (largely in property and income tax) estimated at £30,046,000.

The table below shows, for fiscal years, budget and supplementary estimates of expenditure, actual issues out of the Exchequer chargeable against the revenue and the surplus (+) or deficit (—) of actual receipts (shown in foregoing table) as compared with actual expenditure:

Year	Estimates	Issues	Sur. or Def.
1900 ...	£144,064,823	£143,687,068	— £13,882,502
1905 ...	152,776,994	151,768,875	+ 1,413,997
1909 ...	154,321,699	152,292,395	— 714,100
1910 ...	163,171,000	157,944,611	+ 5,606,766*
1911 ...	174,129,000	171,995,667	

* The Revenue act, 1911, directed that the income and expenditure of the fiscal years 1910 and 1911 be aggregated (for the purpose of determining the Old Sinking Fund for 1911).

For the fiscal years 1910 and 1911, revenue (Exchequer receipts) was derived as follows: Customs, £30,348,000 and £33,140,000; excise, £31,032,000 and £40,020,000; estate, etc., duties, £21,766,000 and £25,452,000; stamps (exclusive of fee and patent stamps), £8,079,000 and £9,784,000; land tax, £150,000 and £1,220,000; house duty, £580,000 and £3,080,000; property and income tax, £13,295,000 and £61,946,000; land value duties, and £520,000; (total from these sources, £105,230,000 and £175,162,000); post office, £18,220,000 and £19,220,000; telegraph, £3,090,000 and £3,175,000; telephone, £1,720,000 and £1,955,000; crown lands (net receipts), £480,000 and £500,000; Suez Canal shares, £1,056,207 and £1,129,260; fee and patent stamps, £1,037,000 and £1,070,000; miscellaneous, £763,249 and £1,639,329; total £131,696,456 and £203,850,588.

Details of expenditure chargeable against revenue in the fiscal years 1910 and 1911:

	1910	1911
I. Consolidated Fund Services:		
National debt services	£ 21,757,661	£ 24,554,004
(Interest of funded debt)	(15,490,798)	(15,377,321)
(New Sinking Fund)	(1,000,000)	(4,112,961)
Road improvement fund, etc.		1,362,641
Local taxation accounts, etc.	9,445,395	9,881,709
Civil list	470,000	470,000
Annuities and pensions	265,269	299,933
Salaries and allowances	72,332	56,609
Courts of justice ..	518,565	514,283
Miscellaneous	327,389	323,488
Total	32,856,611	37,462,667
II. Supply Services:		
Army (incl. ordnance)	27,236,000	27,449,000
Navy	35,807,000	40,386,000
Misc. civil services ..	40,010,000	43,098,000
Customs and excise ..	2,116,000	2,211,000
Internal revenue ...	1,226,000	1,708,000
Posts, telegraphs, and telephones ..	18,639,000	19,681,000
Total	125,088,000	134,533,000
Grand total	157,944,611	171,995,667

Issues to meet capital expenditure aggregated £1,281,000 in the fiscal year 1910, and £1,040,000 in 1911. For the fiscal year 1910, the total

Exchequer receipts including the revenue and on April 1, 1909, a bank balance of £6,350,427) and issues (including the expenditure and, on March 31, 1910, a bank balance of £2,831,248) balanced at £237,124,840; for 1911, £278,647,731, (the bank balance March 31, 1911, being £13,546,171). Estimated revenue for the year ending March 31, 1912, £181,821,000; estimated expenditure, £181,284,000 (£31,086,499 army, £46,204,799 navy, £48,736,821 civil service).

During the year 1910-11 the so-called dead-weight debt was decreased by £28,012,949. On March 31, 1911, the funded debt stood at £610,315,194, the estimated capital liability in respect of terminable annuities at £34,417,265, and the unfunded debt at £40,500,000; total dead-weight debt, £685,232,459 (against £713,245,408 in 1910, £770,778,762 in 1903, and £628,930,653 in 1900). Capital liabilities in addition amounted to £47,840,151, so that the gross debt was £733,072,610 (against £762,463,625 in 1910, £798,349,190 in 1903, and £638,919,932 in 1900). Total charges of the gross debt in 1910-11, £20,211,989. Assets which must be set against the gross debt March 31, 1911: estimated market value of Suez Canal shares, £37,608,000; other assets, £4,003,098; and the Exchequer balance of £13,546,171; total, £55,157,269, leaving the net amount of the debt £677,915,341 (against £720,219,025 in 1910).

ARMY. But few changes were made during 1911 in the general plan of army headquarters and administration, as conducted by the army council under the presidency of the Secretary of State for War, Lord Haldane, assisted by the Chief of the Imperial General Staff, Gen. Sir W. Nicholson, who was to be succeeded in that position early in 1912 by Gen. Sir J. D. P. French. Gen. Sir C. W. H. Douglas was appointed to succeed Gen. Sir John French as inspector-general of the home forces, while Gen. Sir Ian Hamilton continued as general officer commanding-in-chief in the Mediterranean, and inspector-general of the oversea forces. The duties of this latter position in regard to self-governing dominions, and the general scheme of imperial division, were discussed during the year, and a committee of the imperial conference which was held at the war office in June, 1911, approved the plan as adopted. One of the features of this scheme was that the inspection of the forces of the self-governing colonies was only to take place at the invitation of these governments.

The whole army establishments and effectives, both officers and men, are shown in the accompanying table from the army estimates of 1911-12.

	Establish- ments	Effective Jan. 1, 1911	
	1911-12	1910-11	1911
Regular forces (regimental), Home and Colonial (including regular establishment of special reserves).....	168,239	168,233	166,331
Colonial and Native Indian corps.....	8,871	8,580	8,358
Army reserve	139,000	138,000	136,337
Special reserves (excluding regular establishment) ..	91,219	86,539	63,758
Militia, U. K.	2,722
Militia, reserve division ...	500	700	517
Militia, Channel Islands....	3,166	3,163	3,108

Militia, Malta, and Bermuda, and Bermuda volunteers	Establishments	Effectives
2,894	2,864	2,699
Territorial force	317,106	315,408
Isle of Man volunteers... ..	126	118
Officers' training corps (officers and permanent staff)	946	823
658		
Total Home and Colonial establishments	732,067	724,340
Regular forces (regimental) on Indian establishment	75,884	75,884
77,804		
Total	807,951	800,224
781,739		

The first line of the British army consists of the regular army which supplies the troops required for India and the expeditionary forces which are presumed to be ready for mobilization and prepared to take the field for at least six months' service. Service in the regular army is by voluntary enlistment for a term of twelve years, of which from six to eight years depending on the arm of the service is spent with the colors and the remainder in the reserve. In 1911 this regular army was made up as follows: Cavalry, 31 regiments, of which 3 were household cavalry; 7 dragoon guards, 3 dragoons, 6 lancers, and 12 hussars. There were six depots for recruiting, training, posting, and drafting of men. Twelve of the regiments serving at home were formed into four brigades as follows: (1) at Aldershot; (2) at Canterbury; (3) at Curragh; and (4) at Colchester. The regiment establishment was increased to 696 men and 528 horses. In the artillery there were 28 horse batteries, 150 field batteries, 8 mountain batteries, and 99 garrison companies, which included 12 heavy batteries in service at home and abroad. Six new howitzer batteries formed a part of the 72 field batteries included in the expeditionary forces, and 18 were assigned to the 6 training brigades, and 9 to the regular reserve, also for training. The 6-gun battery organization was used in the British army, except for the heavy batteries and training batteries, to which but four guns were assigned. The infantry of the line consisted of 67 regiments and 2 rifle regiments, aggregating 148 battalions, the normal organization being 2 battalions to a line regiment, one of which serves abroad while the other is at home. In addition, there were a depot and a special reserve battalion. In some cases there were two of these battalions assigned to a single regiment, so that in all 27 special reserve battalions were divided among the forces. In addition to the infantry of the line, 4 regiments, including 9 battalions, made up the brigade of guards. The Royal Engineers, exclusive of those in India, were organized into 83 troops, companies, and other divisions for various technical services. Eighty-four companies made up the army service corps, 75 of which were concerned with transport, 5 with supply, and 4 with remounts, most of these organizations being maintained at the large garrisons. The United Kingdom in 1911 was divided into seven separate commands, as follows: (1) Aldershot command, (2) Southern command, (3) Eastern command, (4) Irish command, (5) Scottish command, (6) Northern command, (7) Western command. All of those, with the exception of the Aldershot command, which is held ready for instant service as a part of the expeditionary

army, was subdivided into local districts for the organization of the infantry.

The army estimates of 1910-11 gave the distribution of the regular army as follows: England and Wales, 94,765; Scotland, 4610; Ireland, 26,651; Jersey, 822; Guernsey and Alderney, 940; in the colonies, Egypt, China, and Cyprus, 46,668; Indian depots in colonies, 413; in India, 77,817; general total at home and abroad, 252,686.

In the estimates of 1911-12 the establishment of the reserve was given as 139,000, or a greater number than normal on account of the large number of 3-year men recruited under the old system.

In the general organization of the British army the territorial force play an important part. This establishment is intimately connected with the various territorial divisions of the country, and aims to secure from them a force of 14 divisions, 14 mounted brigades, a proportion of armed troops, and special troops for coast defense. Each division of the territorial force is under the command of an officer of the regular army, assisted by an officer of the general staff and other officers, and in 1911 it was provided that the commanders of mounted and infantry brigades, and of the divisional artillery should be officers from the regular army appointed from half pay.

The effective strength of the territorial army on October 1, 1911, was given by Lord Haldane, minister of war, as 9475 officers and 254,692 non-commissioned officers and men. In addition, there were 724 officers in the medical service and 976 officers in the officers' training corps being instructed, making a grand total of 265,867. The recruits gained for the territorial army between October 1, 1910, and October 1, 1911, were 39,086 who had never served, and 17,167 obtained from the former organization of volunteers. In the marksmanship tests in 1911, of 113,096 trying, 90,672 qualified, and of 66,624 recruits, 36,089 qualified.

THE TERRITORIAL FORCE—ESTABLISHMENT AND STRENGTH JANUARY 1, 1911

	Establishment	Strength
Cavalry	26,111	26,551
Artillery	46,045	39,111
Engineers	15,627	12,848
Infantry	202,573	169,690
Army service corps..	8,876	7,685
Medical corps	15,102	12,770
Veterinary service...	202	97
Total	314,545	266,852

NAVY. The following list shows the vessels built and building December 1, 1911 (those building include colonial vessels; the list does not include vessels over twenty years old, unless reconstructed and rearmend since 1905, those not actually begun or ordered although authorized, vessels of less than 1000 tons except torpedo craft, torpedo craft of less than 50 tons, transports, colliers, repair ships, converted merchant vessels, etc.): Dreadnought battleships (having a main battery of all big guns 11 inches or more in calibre), 12 of 236,350 tons built, and 10 of 247,000 tons building; pre-dreadnought battleships, 42 of 617,500 tons built; battleship cruisers (armored cruisers of the *Invincible* type, having guns of largest calibre in main battery), 5 of 96,850 tons built, and 4 of 90,800 tons building; armored cruisers, 34 of 406,800 tons built; cruisers over 6000 tons,

14 of 148,500 tons built; cruisers 6000 to 3000 tons, 42 of 200,460 tons built, and 10 of 50,040 tons building; cruisers 3000 to 1000 tons, 23 of 49,540 tons built; torpedo-boat destroyers, 192 of 108,703 tons built, and 31 of 26,980 tons building; torpedo boats, 59 of 12,710 tons built; submarines, 65 of 20,736 tons built, and 17 of 13,610 tons building; total, 1,896,149 tons built, and 428,430 tons building (as compared, on the same date, with 749,699 tons built, and 337,700 tons building for Germany, 757,711 and 127,355 for the United States, 630,705 and 110,720 for France, 421,369 and 168,750 for Japan, 297,819 and 176,060 for Russia, and 203,812 and 108,310 for Italy).

Main armament of the larger vessels: The 12 dreadnoughts built have an aggregate of 20 13.5-in. and 100 12-in. guns, and the 10 building, 100 13.5-in. guns; the 5 battle cruisers built, 8 13.5-in. and 32 12-in. guns, and the 4 building, 16 12-in. and 16 13.5-in. guns; the 42 battleships built, 8 13.5-in., 152 12-in., 8 10-in., and 52 9.2-in. guns; the 34 armored cruisers built, 68 9.2-in. guns.

Vessels launched in 1911 include the following: Dreadnoughts, *Thunderer* (February 1); *Monarch* (March 30); *Conqueror* (May 1); *King George V.* (October 9); *Centurion* (November 18); battleship cruiser *Princess Royal* (April 29). It is expected that these vessels, and also the *Ajax*, *Audacious*, and *Queen Mary*, and the colonials *Australia* and *New Zealand*, will be completed between March, 1912, and February, 1913.

The dreadnoughts *Neptune* and *Orion* were completed in January and November, 1911, respectively; the battle cruisers *Indefatigable* and *Lion* in February and December. Principal characteristics of the *Orion* (launched August, 1910): Designed speed, 21 knots; displacement, 22,500 tons; length between perpendiculars, 545 ft.; beam, 88.5 ft.; draft, 27.5 ft.; battery, 10 13.5-in. and 20 4-in. guns; torpedo tubes, 3; maximum thickness of armor, 12-in. The *King George V.* is somewhat larger, having a displacement of 24,000 tons and a length of 555 ft. The *Indefatigable* is 555 ft. long, with a displacement of 18,750 tons, and a designed speed of 25 knots. Principal characteristics of the *Lion*: Designed speed, 29 knots; displacement, 26,350 tons; length, 660 ft.; beam, 88.5; draft, 27.5; battery, 8 13.5-in. and 16 4-in. guns; torpedo tubes, 2; maximum thickness of armor, 9 in.

Personnel in 1911, 133,965 officers and men. Expenditure, 1910-11, £40,386,000 (against £35,807,000 in 1909-10); estimate for 1911-12, £46,204,799. See NAVAL PROGRESS and BATTLESHIPS.

GOVERNMENT. The executive power is vested in the king, acting through his ministers; the legislative, in the Parliament, a body of two houses, the House of Lords and the House of Commons. The peers entitled to sit in the House of Lords in 1911 (including the lords spiritual and temporal and three royal princes) numbered 632. The powers of the House of Lords were greatly restricted by the Parliament act of 1911, which provided that a money bill passed by the Commons may become a law, without the Lords' assent, within a month, and other public bills, passed by the Commons in three successive sessions, within two years from the second reading in the first session. The Commons in 1911 consisted of 670 members, elected in December, 1910; Parliament (the second of

George V.) convened January 31, 1911. Of the 670 members of the Commons, 398 were ministerialists and 272 opposition. The ministerialists included 272 Liberals, 43 Labor members, and 84 Nationalists; the opposition consisted of Conservatives and Unionists. For England there were 226 ministerialists and 239 opposition; Wales, 27 and 3; Scotland, 61 and 11; Ireland, 84 and 19; total 398 and 272.

The king in 1911 was George V., who, as second (but only surviving) son, succeeded his father, Edward VII., May 6, 1910. He was born June 3, 1865, and married, July 6, 1893, Princess (Victoria) Mary of Teck. The heir-apparent is their eldest son, Edward, born June 23, 1894, and created Prince of Wales June 23, 1910.

Those of the king's ministers who form the cabinet were as follows at the end of 1911: Prime minister and first lord of the treasury, Herbert Henry Asquith (appointed April, 1908); lord high chancellor, Earl Loreburn (December, 1906); lord president of the council, Viscount Morley of Blackburn (November, 1910); lord privy seal, Earl Carrington (December, 1911, succeeding the Marquis of Crewe); first lord of the admiralty, Winston Spencer Churchill (October, 1911, succeeding Reginald McKenna). Secretaries of state; for home affairs, Reginald McKenna (October, 1911, succeeding Winston Spencer Churchill); foreign affairs, Sir Edward Grey (December, 1905); colonies, Lewis Vernon Harcourt (November, 1910); war, Viscount Haldane (December, 1905); India, Marquis of Crewe (November, 1910). Chancellor of the exchequer, David Lloyd-George (April, 1908); secretary for Scotland, Lord Pentland (December, 1905); chief secretary to the lord-lieutenant of Ireland, Augustine Birrell (January, 1907); postmaster-general, Herbert Louis Samuel (February, 1910). Presidents of committees of the council: Board of trade, Sydney Charles Buxton (February, 1910); local government board, John Burns (December, 1905); board of agriculture, Walter Runciman (October, 1911, succeeding Earl Carrington); board of education, Joseph Albert Pease (October, 1911, succeeding Walter Runciman); chancellor of the duchy of Lancaster, Charles Edward Henry Hobhouse (October, 1911, succeeding Joseph Albert Pease); first commissioner of works, Earl Beauchamp (November, 1910).

HISTORY

INTRODUCTION. The chief political issue in British politics during the year 1911 continued to be, as in the two previous years, the question of curtailing the powers of the House of Lords. As the differences of opinion on this subject have caused during these three years the greatest constitutional crisis in the recent history of the United Kingdom, a brief review, before proceeding to the record of the year 1911, may be of service. The Liberals, who came into power in January, 1906, were only in part successful in carrying out their policies. Down to December, 1909, they had devoted a great part of their time to the licensing and education projects, both of which failed. In their attempts to pass measures which, in a general way, may be classed under the head of industrial improvement and social reconstruction, they were more successful. Among such measures may be mentioned the Trades Disputes Workmen's Compensation, Small Holdings, Port of London, Children's

Court, Old-Age Pension acts, and acts for establishing an eight-hour day in coal mines, providing for labor exchanges in London and the provincial cities, providing for trade boards to put an end to the sweating system, providing for the development and improvement of roads, the improvement of workmen's dwellings, etc. The carrying out of this industrial and social programme involved heavy expenses, and the Old-Age Pension act, in particular, brought in an extraordinary item of cost. Thus the government was confronted in 1909 with a heavy deficit. To meet this it prepared a budget which departed so radically from precedent in the matter of taxation as to precipitate a Parliamentary crisis. The budget was based on the principle that the revenue should be raised chiefly from three sources of taxation: the luxuries of the masses, excess of wealth, and monopolies. Accordingly, increased duties were levied on spirits and tobacco; the income tax was increased; and there was a great increase in the price of liquor licenses. But the change that aroused the greatest opposition was the government's new and radical scheme for the taxation of land values, whereby a plan for the valuation and taxation of the unearned increment was put into effect. In the debate that followed the opposition attacked the budget as unfair, as discriminating against certain classes, and as socialistic. On November 30, 1909, the House of Lords carried a resolution declaring that the bill should be rejected until the country had pronounced upon it. This was followed by a vote of the House of Commons declaring that the action of the Lords in refusing to pass the financial provisions into law was a usurpation of the rights of the House of Commons. Parliament was then prorogued and the date of its dissolution fixed for January 8, 1910, to be followed by the general elections. After one of the most exciting political campaigns of recent years, the electorate returned the Liberals to power, but with a greatly reduced majority. In the preceding Parliament they and their allies had a majority of 334. After the January elections of 1910 the majority was only 124. The action of the Lords in refusing to pass the Finance bill of 1909 revived in acute form the question of the veto power in the upper house. This was vehemently discussed throughout the campaign, the Liberals declaring that the rejection of the Finance bill, after it had been exhaustively discussed and carried by an overwhelming majority in the Commons, was a violation of the constitutional practice hitherto recognized. The chief matters before Parliament in 1910, therefore, were the carrying of the budget and the framing of a measure that should limit the veto power of the House of Lords. The budget was passed in April, 1910, receiving the royal assent on April 29.

Meanwhile, there had been many debates on the constitutional issue. The Conservatives were ready to accept a measure for the reform of the House of Lords, but opposed the radical demands of the Liberals as amounting virtually to the creation of a single-chamber government. The chief features of the Liberal plan, as embodied in the Parliament bill which was passed by the House of Commons in April, were: First, the denial of the right of the Lords to reject or amend a money bill; second, the provision that on the passage of any bill through three successive

sessions of the lower house it should become a law without the consent of the Lords at the end of two years after its introduction; third, the reduction of the term of Parliament from seven to five years. The death of King Edward on May 6 caused a lull in the hostilities between the two parties and in the following month an attempt was made to adjust their differences by conferences on the constitutional question. After eleven of these meetings, the first of which occurred on June 17, and the last on October 21, 1910, it was definitely announced on November 21 that the opposing parties could not reach an agreement. In the autumn session of Parliament the Liberals, taking the stand that an agreement on the subject was hopeless, decided upon dissolution and refused to discuss the amendments which the Conservatives proposed to the Parliament bill. The Conservative plans for the reform of the House of Lords were embodied in Lord Lansdowne's resolutions providing that if differences arose in regard to any bill other than a money bill in two successive sessions and within an interval of not less than one year, a joint session of both houses should be held; but if the differences were of a very serious nature they shall not be referred to this joint sitting but to the popular judgment by referendum, and further declaring that the Lords would forego every constitutional right to reject or amend money bills if provision were made against "tacking," that is to say, against the practice of attaching to a money bill measures which were not of a financial character. With this constitutional issue before it the country again passed through an electoral contest, (December 2, 1910). The campaign was even more bitter than the last, and the issue even more important, as the constitutional question was now definitely before the electors. The elections had the singular result of leaving the government majority practically the same as it was before. On the constitutional question they could now muster a majority of 126, a gain of only two over the majority in the preceding Parliament. Such was the situation at the beginning of the year 1911.

OPENING OF PARLIAMENT. The formal opening of Parliament by the king took place on February 6. In the speech from the throne, after referring to the death of his father and to the return of his uncle, the Duke of Connaught, and his mission in South Africa, the king declared that the relations with foreign powers continued to be friendly; that negotiations had been entered upon with the Japanese government for the conclusion of a new treaty of commerce and navigation, Japan having given notice of her intention to terminate the treaty of 1894; that some improvement had lately appeared in the disordered trade routes in southern Persia; that the government looked forward with great interest to the imperial conference in May; and that after the coronation the king would visit India, and hold an assemblage there. As to the work of Parliament, the speech announced that proposals would be submitted without delay for settling the relations between the two houses; and that measures would be presented for carrying out and extending the policy begun in previous Parliaments by securing old-age pensions for those persons who were generally disqualified by their being in receipt of poor relief. Specific mention was also made of the plan for insurance of the industrial

workers against sickness and invalidism, and for insurance against unemployment in trades especially requiring it. In the debate that followed the government was sharply criticised for its refusal to accept colonial preference. Mr. Balfour attributed to this refusal the reciprocity arrangement between Canada and the United States, which, if carried out logically, would lead, he said, to imperial disaster. For years Canadian statesmen had been offering preference to Great Britain, but the party in power, while admitting the importance of preference, had intimated that nothing would be given in return. As to the constitutional question, he said that unless the government were prepared to act upon principles in which all would agree, the movement would not proceed quietly and smoothly in spite of the conciliatory temper on both sides.

TEXT OF THE PARLIAMENT BILL. As the government's Parliament bill continued to be the chief subject of Parliamentary discussion in 1911, its text is here presented in full for the reader's convenience:

Whereas it is expedient that provision should be made for regulating the relations between the two houses of Parliament: And whereas it is intended to substitute for the House of Lords as it at present exists a second chamber constituted on a popular instead of a hereditary basis, but such substitution cannot be immediately brought into operation: And whereas provision will require hereafter to be made by Parliament in a measure effecting such substitution for limiting and defining the powers of the new second chamber, but it is expedient to make such provision as in this act appears for restricting the existing powers of the House of Lords: Be it therefore enacted by the king's most excellent majesty, and by and with the consent of the lords spiritual and temporal, and commons, in this present Parliament assembled, and by the authority of the same as follows:

I. (1) If a money bill, having been passed by the House of Commons, and sent up to the House of Lords at least one month before the end of the session, is not passed by the House of Lords without amendment within one month after it is so sent up to that house, the bill shall, unless the House of Commons direct to the contrary, be presented to His Majesty and become an act of Parliament on the royal assent being signified, notwithstanding that the House of Lords have not consented to the bill.

(2) A money bill means a public bill which in the opinion of the speaker of the House of Commons contains only provisions dealing with all or any of the following subjects, namely, the imposition, repeal, remission, alteration, or regulation of taxation; the imposition for the payment of debt or other financial purposes of charges on the consolidated fund, or on money provided by Parliament, or the variation or repeal of any such charges; supply; the appropriation, receipt, custody, issue or audit of accounts of public money; the raising or guarantee of any loan or the repayment thereof; or subordinate matters incidental to those subjects or any of them. In this subsection the expressions "taxation," "public money," and "loan" respectively do not include any taxation, money, or loan raised by local authorities or bodies for local purposes.

(3) There shall be indorsed on every money bill when it is sent up to the House of Lords and when it is presented to His Majesty for assent the certificate of the speaker of the House of Commons signed by him that it is a money bill. Before giving his certificate, the speaker shall consult, if practicable, two members to be appointed from the chairman's panel at the beginning of each session by the committee of selection.

II. (1). If any public bill (other than a money bill or a bill containing any provision to extend the maximum duration of Parliament beyond five years) is passed by the House of Commons in three successive sessions (whether of the same Parliament or not), and, having been sent up to the House of Lords at least one month before the end of the session, is rejected by the House of Lords in each of those sessions, that bill shall, on its rejection for the third time by the House of Lords, unless the House of Commons direct to the contrary, be presented to His Majesty and become an act of Parliament on the royal assent being signified thereto, notwithstanding that the House of Lords have not consented to the bill: Provided that this provision shall not take effect unless two years have elapsed between the date of the second reading in the first of those sessions of the bill in the House of Commons and the date on which it passes the House of Commons in the third of those sessions.

(2). When a bill is presented to His Majesty for assent in pursuance of the provisions of this section, there shall be indorsed on the bill the certificate of the speaker of the House of Commons signed by him that the provisions of this section have been duly complied with.

(3). A bill shall be deemed to be rejected by the House of Lords if it is not passed by the House of Lords either without amendment or with such amendments only as may be agreed to by both houses.

(4). A bill shall be deemed to be the same bill as a former bill sent up to the House of Lords in the preceding session if, when it is sent up to the House of Lords, it is identical with the former bill or contains only such alterations as are certified by the speaker of the House of Commons to be necessary owing to the time which has elapsed since the date of the former bill, or to represent any amendments which have been made by the House of Lords in the former bill in the preceding session, and any amendments which are certified by the speaker to have been made by the House of Lords in the third session and agreed to by the House of Commons shall be inserted in the bill as presented for royal assent in pursuance of this section:

Provided that the House of Commons may, if they think fit, on the passage of such a bill through the house in the second or third session, suggest any further amendments without inserting the amendments in the bill, and any such suggested amendments shall be considered by the House of Lords, and, if agreed to by that house, shall be treated as amendments made by the House of Lords and agreed to by the House of Commons; but the exercise of this power by the House of Commons shall not affect the operation of this section in the event of the bill being rejected by the House of Lords.

III. Any certificate of the speaker of the

House of Commons given under this act shall be conclusive for all purposes, and shall not be questioned in any court of law.

IV. (1). In every bill presented to His Majesty under the preceding provisions of this act, the words of enactment shall be as follows, that is to say:

"Be it enacted by the King's most excellent Majesty, by and with the advice and consent of the Commons in this present Parliament assembled, in accordance with the provisions of the Parliament act, 1811, and by authority of the same, as follows."

(2). Any alteration of a bill necessary to give effect to this section shall not be deemed to be an amendment of the bill.

V. In this act the expression "public bill" does not include any bill for confirming a provisional order.

VI. Nothing in this act shall diminish or qualify the existing rights and privileges of the House of Commons.

VII. Five years shall be substituted for seven years as the time fixed for the maximum duration of Parliament under the Septennial act, 1716.

VIII. This act may be cited as the Parliament act, 1911.

THE CONSTITUTIONAL ISSUE Mr. Asquith introduced the Parliament bill into the House of Commons on February 21. Many points in criticism of the measure were brought out in the debate. The opposition argued that the passage of the Parliament bill would create a single unchecked chamber whose members would have to bow to the tyranny of the government. They accused the latter of being puppets of the Irish Nationalist party. They declared for a House of Lords greatly reduced in numbers, joint sessions, the absolute predominance of the Commons in matters of finance, and recourse to the referendum in cases of grave dispute. They emphasized the conciliatory spirit of their policy and blamed the government for their unwillingness to meet them half way. The Parliament bill passed its first reading on February 22 by 350 to 227, and its second reading at the beginning of March by 368 to 243. Meanwhile the government had met the wishes of the Irish Nationalists by a statement early in the debate that home rule would be taken up immediately after the passage of the Parliament bill.

During the spring a number of amendments were offered by the opposition in the House of Commons for the purpose of mitigating what they characterized as an attempt to set up a single chamber régime. The government combated each of these on the ground that it was without precedent or not applicable. The chief amendments proposed were that a substantial majority of the House of Commons was necessary to carry a bill without the assent of the upper house, that in cases of dispute a bill should be referred to a joint committee of both houses, and that the referendum should be employed as a means of deciding grave questions when all other expedients had failed. All of these were rejected by the government. As to the proposal for a referendum the government declared that it menaced the very foundations of the representative system. The bill passed its third reading in the House of Commons in May by a vote of 362 to 241.

THE PARLIAMENT BILL IN THE HOUSE OF LORDS. In the House of Lords Lord Lansdowne

gave notice early in the session that he would introduce a measure for the reform of the upper chamber. This bill, which was presented on May 8, provided that the House of Lords should be made up (1) of one hundred hereditary peers who had held certain specified official positions and who should be elected by the whole body of hereditary peers; (2) of one hundred and twenty chosen for electoral districts by electoral colleges composed of members of the House of Commons for the constituencies of each district; (3) of one hundred appointed by advice of the ministry of the day in the proportion of the strength of the parties in the House of Commons; (4) of the two archbishops (together with five bishops chosen by the episcopate of England and Wales), and (5) of sixteen peers who have held high judicial office. The term of office was to be twelve years, one-fourth of each of the above classes retiring every third year. It was argued for this measure that the house as thus reconstituted would be a great improvement on the present chamber, and that while it did not give it a Liberal majority it greatly lessened the Unionist preponderance. On the other hand, it was condemned as providing no remedy for the Liberal grievances. Its second reading was debated during the last week in May, at which time the government's Parliament bill was also under discussion. The latter measure thenceforth held the attention of the house and the opposition offered many amendments. These were designed, in the words of Lord Lansdowne, to "protect the country against dangerous and ill-considered innovations." It was soon evident that the government would not accept any of the Lords' amendments, but would if the Lords insisted upon them apply to the throne for the creation of new peers. The Conservatives would thus be in a worse position than before, since they would then have the Parliament bill passed into law and their own body adulterated besides by the infusion of new peers. Such was the situation in the month of July. The stronger element of the opposition, therefore, was disinclined to press amendments which the government refused absolutely to accept. On the other hand, a considerable body of Conservatives were determined to stand by their principles and "die in the last ditch." These argued that the government should be met with unyielding resistance and allowed to cover itself with shame by the creation of new peers. On July 20 the Parliament bill was read for the third time and passed as amended. The amendments provided for the appointment of a joint committee of both houses when a dispute arose between them and for submitting to the electors any measure which the joint committee thought to be of sufficient gravity to require the decision of the country.

THE CONSTITUTIONAL CRISIS. On July 22 Mr. Asquith threw the opposition into consternation by the sudden announcement that he would not accept the amendments to the Parliament bill, and that the king had assented to the creation of new peers to secure the passage of the bill in its original form. It was immediately announced that a considerable portion of the opposition, headed by Lord Halsbury and others, would adhere to the policy of "no surrender." On the other hand, Lord Lansdowne and the majority of the Unionists, comprising over 230 peers, held to the opinion that they must yield to superior force. On July 24 there occurred a very unusual scene of disorder in the House

RIGHT HONORABLE ANDREW BONAR LAW
Leader of the Unionist Party

TWO BRITISH STATESMEN, PROMINENT IN 1911

of Commons, where for the first time in many years a hearing was refused to the prime minister, who desired to address the house in justification of his course. As soon as he arose to speak, cries of "traitor" were raised. The confusion was so great that he could not continue and finally resumed his seat. Mr. Balfour, on the other hand, made an address in which he expressed the opinion of the opposition that the resort to the creation of peers by the prime minister was a serious breach of his responsible duties. It was a misuse of the prerogative of the crown and a blow at the independence of the second chamber. Its one object was to prevent the people from getting any verdict on the question of home rule. Great regret was subsequently expressed for the disturbance in the house. Mr. Balfour and Lord Lansdowne addressed their party earnestly on the necessity of admitting their defeat and maintaining their unity. It was hopeless, they declared, to resist the passage of the Parliament bill and the policy of forcing the Liberals to secure the appointment of new peers would be disastrous. Lord Halsbury and his followers contended for resistance to the utmost and for letting the government suffer the consequences of its own revolutionary folly in creating new peers.

THE VOTE OF CENSURE. The opposition now decided to bring a vote of censure against the government. It was hoped that this would adjust the differences between the extremists who favored the policy of "no surrender" and the majority headed by Lord Lansdowne, Mr. Balfour, and other leaders. The vote of censure was moved on August 7 in the following words: "That the advice given to His Majesty by His Majesty's ministers, whereby they obtained the pledge of a sufficient number of peers to be created to pass the Parliament bill in the shape in which it left this house is a gross violation of the constitutional liberty whereby, among other evil consequences, the people will be precluded from again pronouncing upon the policy of home rule." A sharp debate on the motion took place in the house. Mr. Balfour declared that the ministry had acted in a manner violative of the constitutional traditions and not in obedience to any pressure of public opinion but solely to meet the desires of the section that supported them. It was a wrong to the king and to the country. The government was accused of having obtained a pledge from the king and of keeping it secret. Thus all reality in the discussion of the bill in Parliament was removed, since its passage was a foregone conclusion. Mr. Asquith replied that the government had not obtained any pledge from the king while the bill was pending, but had tendered its advice to him after the Lords had added their amendments. They had taken that course because these amendments were fatal to the purposes of the bill and no other course was open to them. As to the understanding with the king in November, 1910, it was purely conditional. At that time the ministry had informed the king that they could not advise a dissolution unless, if their policy were approved by an adequate majority of the new house, the king would create new peers. To this the king had consented. The government paid no attention to the taunt that it was driven to this action by the Nationalists. The vote of censure was defeated by a majority of 119. On the following day a vote of censure was moved in the House of Lords, where

it was carried by a majority of 214. On August 10, however, the Lords decided by the small majority of seventeen not to insist on the amendments to the Parliament bill, which, therefore, was to go into effect without the necessity of creating new peers for the purpose. It received the royal assent on August 18. It was hoped that the "Forwards" or "Die-Hards," as the followers of Lord Halsbury were called, would acquiesce in the decision of Mr. Balfour and the leaders of the majority of Unionists in the necessity of this course. But despite the emphatic plea of the latter that it was better to yield than to have the House of Lords submerged by new peers, the Halsbury wing of the party continued bitterly opposed, and Mr. Balfour's leadership was in certain quarters called in question.

THREATENED DIVISION IN THE UNIONIST PARTY. As a result of Lord Halsbury's firm stand against the Parliament bill and the rallying to him of the group of irreconcilables known as the "Die-Hards," an organization was formed called the Halsbury Club, for the purpose of restoring a free constitution to the United Kingdom and reviving and maintaining principles that they held to be vital to the nation's interests. This was regarded as a virtual split in the party and as marking the discontent with Mr. Balfour's leadership. Disloyalty to the party and criticism of Mr. Balfour's leadership, however, were disclaimed by its members. It was understood that the chief object of the club was to bring it home to the constituencies that the present methods of the government were unconstitutional, and that the methods of dealing with their revolutionary course might be of a nature that would not be permissible under ordinary conditions. In other words, the plan was to insist on determined opposition to the government's schemes. Among the leading members of this wing of the party, besides Lord Halsbury, were the dukes of Northumberland, Norfolk, and Bedford, Lords Roberts, Selborne, Northcote, and Milner, and Mr. Austin Chamberlain.

THE UNIONIST POLICY. Mr. Balfour's view of the political situation was summarized in a speech early in October in which he condemned the government for plunging the country into a revolution. He said the friends of the revolution were a combination of the Radical, Labor, and Irish parties, which had been formed for the purpose of shackling the British constitution. As to his course in regard to the Parliament bill, he said that the crime which the government had committed was not, in his opinion, its action in July and August, but its treacherous course eight months before in advising the sovereign and getting from him a pledge concerning the creation of new peers. But when the government announced in the summer that unless the Parliament bill were put through without the amendments which had been added in the House of Lords, they would have recourse to the creation of new peers, it was impossible for the opposition to offer any resistance. The opposition could not at that time deal with a crime that had been committed in the previous November, namely, the securing from the sovereign the authority to misuse the royal prerogative for the sake of forcing through Parliament an objectionable measure. What the government sought in its destruction of the veto power was the disestablishment of the church,

"one man, one vote," and above all, home rule. After criticising these measures as mischievous he went on to explain the constructive policy of the Unionist party, which he said comprised, first, the reform of the Poor law; second, the reorganization of the second chamber in such a manner as would obviate its defects and preserve its efficiency and value, allowing it to play its independent part in the constitution, and finally the carrying through of a measure of tariff reform.

MR. BALFOUR'S RESIGNATION. On November 8 Mr. Balfour, who had been a prominent figure in British politics for twenty-five years and had led his party for a decade, announced his resignation of the leadership. He placed it entirely on the ground that old age was approaching and that he wished to abandon his heavy responsibilities before he could be suspected of "suffering from the most insidious of all diseases, a disease which came upon those who, without losing their health or their intellect, nevertheless got somewhat petrified in the old courses which they had pursued." He denied the assertions of some that the party was in bad condition. On the contrary, he believed that it was growing in strength and influence. In conclusion, he said that he had no intention of abandoning political life, but hoped for many years of activity as a member of Parliament. The news of the resignation was received with great regret among both Liberals and Unionists, the former recognizing his uniform courtesy in debate and the high standard that he always had raised in the discussion of public questions. As to his own party, although there had been a suspicion that he was losing his hold as a leader upon certain elements, especially upon the extreme members of the so-called "Die-Hards," there was little evidence to justify it. Only two days before the announcement of his resignation the Halsbury Club had passed a resolution announcing their loyalty to their two leaders, Mr. Balfour and Lord Lansdowne, and assuring them of their support in the coming struggle. Mr. Balfour began his political career in 1875, when he was returned as a Conservative member of Parliament for Hertford. Four years later he became private secretary to his uncle, Lord Salisbury, whom he accompanied to the Congress of Berlin. After the defeat of the Liberals in 1885, Mr. Balfour, who was now returned for East Manchester, became president of the Local Government board in the Salisbury ministry, and in the following year was appointed secretary for Scotland. During the next five years he made his reputation as a party leader in the debates on the Irish question. In 1891 he became first lord of the treasury and the leader of the Conservatives in the House. On the resignation of Lord Salisbury in 1902 Mr. Balfour became prime minister, holding that position until the ministry resigned in December, 1905. On the overturn of the Conservative party in the general election of January, 1906, he lost his seat, but was soon afterwards elected for the city of London and remained the leader of the opposition during all the Parliamentary struggles from 1906 down to the date of his resignation.

MR. BALFOUR'S SUCCESSOR. At a meeting of the Unionist party held on November 13, Mr. A. Bonar Law was unanimously chosen as leader to succeed Mr. Balfour. The recent differences of opinion among the Unionists appeared to

have been removed, and there was every evidence of party unity. Mr. Bonar Law was one of those who had stood by Mr. Balfour when the latter's leadership was called into question by some of the Unionists and had only a few days before his election paid a tribute to Mr. Balfour and expressed his loyalty to the programme for which the latter had stood. The new leader, though not very well known by the country at large, had made an admirable record as an able debater in the House of Commons, and especially as a skillful advocate of tariff reform. He had been a member of Parliament since 1900, when he was elected for the Glasgow constituency. Although he was appointed to no high official position he soon won a reputation by his effective speeches in Parliament and was characterized by Lord Lansdowne in a speech in March, 1909, as "one of the Dreadnoughts of the Unionist party." His selection was generally regarded as a wise one and as promising unity in the party councils.

SIDNEY STREET OUTRAGE. On December 16, 1910, three London policemen were killed and two wounded in an attempt to capture burglars who were endeavoring to break into the shop of a Houndsditch jeweler. Several arrests were made and two of the suspected criminals were traced to a house in Sidney Street, Mile End-road. On January 3, the police surrounded and isolated the house. The other inmates were removed and a regular siege was begun. The criminals were well equipped with arms and ammunition and kept up a fusillade from the upper window. The police failed to dislodge them, it was decided to summon the military, and a detachment of the Scots Guards was sent to the scene from the Tower. Crowds gathered at the extraordinary spectacle of a battle in the London streets. Mr. Winston Churchill, the home secretary, himself appeared on the scene and offered suggestions as to the method of proceeding, though he did not take actual command. Finally the house took fire; the two criminals were burned, and their charred bodies were afterwards found in the ruins. A number of the attacking party and several civilians were wounded. The artillery was called out, but reached the scene after the fire had broken out. The incident led to much discussion and criticism. The crime was imputed to anarchist agitation, the number and activity of the anarchists in London having recently increased. Mr. Churchill was criticised for visiting the scene in person, and there were adverse comments on the calling out of the military. The affair led to many suggestions as to the reform of the Aliens act, with a view of excluding undesirable aliens. The chairman of the committee which framed the main features of that act declared that its provisions for expulsion should be greatly widened and strengthened. He said that under the workings of the act at present many aliens who misconduct themselves are not expelled. He advocated the expulsion of certain offenders as a matter of course without the exercise of discretion, and the rendering of disobedience to an expulsion order a more serious offense.

TRADES UNION BILL. This measure was introduced by Mr. Churchill on May 24. It provided that the minority in the union should be relieved from the obligation to subscribe funds for political purposes. It gave the right to the unions to contribute money for such purposes

if the majority voted for it, but the payments must be made out of a separate fund, and any member might be exempted from the obligation upon giving notice of his unwillingness to contribute. Nor could contributions for political purposes be made a qualification for membership. The opposition condemned the bill as not really guaranteeing the rights of the minority, while Labor members, on the other hand, objected to the setting up of minority rights, which should not be permitted. The Trades Union Congress in September refused to accept the bill unless so amended as to embody the reversal of the Osborne judgment. Finally, in October the government announced that it would not proceed with the bill during 1911.

IMPERIAL CONFERENCE. At the Imperial Conference of 1907 it was decided that a meeting should be held every four years. It provided also for an Imperial Defense Council in the interval. The latter was held in 1909, and on May 23, 1911, the Imperial Conference opened its sessions in London. It comprised the six premiers, Mr. Asquith of the United Kingdom, Sir Wilfrid Laurier of Canada, Mr. Fisher of Australia, General Botha of the South African Union, Sir Joseph Ward of New Zealand, and Sir E. P. Morris of Newfoundland, accompanied by certain ministers from their respective cabinets. Early in its session Sir Joseph Ward moved that an imperial council of state be established, composed of representatives from all the self-governing parts of the empire for the purpose of providing for imperial unity, the imposition of equal burdens on the component parts of the empire, imperial defense, representation for the purpose of taking part in the questions of peace and war, immigration and emigration, and amount of contributions to the imperial treasury. On the discussion of this resolution many objections were raised to it and it was generally regarded by the other premiers as impracticable. Moreover, they declared that it was not advisory, as the author had maintained, but was legislative. In view of the opposition it was withdrawn by Sir Joseph Ward, without being brought to a vote. In the last days of May the five premiers from overseas met with the committee of imperial defense, which consisted of the premier, Mr. Asquith, and the chief members of his ministry. This amounted to a sort of imperial cabinet and was of importance as taking oversea premiers into the confidence of the imperial government. Its objects were kept secret and no report was issued. The conference adopted on June 1 the Declaration of London. Mr. Fisher of Australia regretted that the dominions had not been consulted before the British delegate accepted the terms of the declaration. He objected to the inclusion of foodstuffs and the rules which permitted the destruction of neutrals. The government agreed that the dominions ought to be consulted, and declared that this would be done before the next Hague conference and upon any matter that may arise from that conference. As it would be some time before the convention would be signed, the dominions would have a chance to discuss the results of the findings of the Hague conference thoroughly. The government declared its belief that the Declaration of London marked a great advance in international agreements, promoted arbitration, and was of a distinct advantage to Great Britain. The premiers agreed in the government's policy

as to the declaration, and a resolution was finally passed to this effect, the Australian premier, however, not voting. It had been proposed that a standing committee should be appointed to preserve the continuity of the imperial conference between its meetings, but this proposal was finally withdrawn. One of the subjects discussed by the conference was the promotion of migration within the empire. Mr. Burns appeared before its members and said that this object had generally been accomplished since the last conference. A resolution was passed requesting the imperial government to negotiate with foreign countries having commercial treaties which apply to British overseas dominions with a view to securing to a dominion the right to withdraw from such a treaty, if it desired. Another resolution provided for an imperial commission to investigate and report on natural resources and trade conditions in the dominions. Other resolutions dealt with the interchange of civil servants, navigation law, uniformity in law, emigration, naturalization, legislation as to the destitute, undesirable aliens, etc. "All Red" routes, including a scheme for imperial wireless telegraphy, and the question of Indian immigration, were discussed, but without definite action.

THE CORONATION. The coronation took place on June 22. Coronation Day was a bank holiday and celebrated throughout the United Kingdom. On June 30 there was a royal progress through the city, and on the following day the fleet was reviewed at Spithead. There were over 150 vessels of the home and Atlantic fleets, and the warships of many foreign powers were present. London had been crowded for weeks with visitors from all parts of the world, and the festivities lasted through the greater part of June and July. The king and queen visited Ireland in July. Investiture of the Prince of Wales took place at Carnarvon Castle on July 13.

HOME RULE. The condition imposed by the Irish party in regard to home rule was that it should have precedence not only over any other measures, but of any federal plans. At the beginning of March the cabinet were considering a scheme of home rule, and were ready to accept the Nationalist conditions as to its precedence. There were debates on home rule in February and April. On the former occasion a suggestion of Mr. Asquith's was taken as meaning that the government scheme would be modeled on the South African constitution. There was much speculation as to the nature of the government's plan for home rule. In the latter part of October, Mr. Birrell, chief secretary to the lord-lieutenant of Ireland, in replying to the demand that he explain the nature of the government's Home Rule bill, declared that its scheme involved all Irish parliament consisting of two chambers, with an executive responsible to it, and with full representative powers and control over purely Irish concerns. He said that the government was obliged to face the Irish question and would do its best next year to satisfy the demands of the overwhelming majority of the Irish people. Mr. Redmond about the same time in the course of an address, declared that he could not discuss the measure in detail, but that it would be entirely satisfactory to the Nationalists in Ireland. Attempts to draw out the ministry on the subject were unsuccessful. Mr. Asquith merely said that the

measure would be submitted in February or March, 1912. Mr. Balfour opened the speech-making campaign against it by a vigorous address on November 6, attacking the arguments of its advocates. Meanwhile the Ulster Protestants continued their agitation against it. In September a meeting of Ulster Unionists passed resolutions solemnly pledging themselves not to recognize a home rule government and choosing a commissioner to draw up a plan for a provisional government for Ulster, which should come into operation if a home rule measure passed.

THE SUFFRAGE QUESTION. On Saturday, June 17, there occurred in London a remarkable demonstration on behalf of woman suffrage. More than 40,000 women were said to have marched in a procession, which included historical pageants illustrating the activity of women in public life. It was followed by a mass-meeting at Albert Hall, at which £100,000 were raised. On November 7, Mr. Asquith announced that the government would introduce during the next session a measure providing for "one man, one vote," the sole qualification for the vote to be that the man should be a bona fide resident or inhabitant. The measure was to sweep away the present technical qualifications and introduce the principle of a man's right to vote as coming from the simple fact that he is a citizen. As to woman suffrage, his views had not changed, but it would be possible for Parliament to decide whether the measure should be extended to apply to women. This announcement provoked an immediate protest from the woman suffragists as shelving the Conciliation bill, which had been introduced on November 14, 1910, and which extended the parliamentary franchise to women occupiers. They declared that they rejected with contempt the proposal that their franchise could depend upon a mere amendment to the projected Reform bill, and they warned the government that they would revert to their militant tactics. The protest made no impression on the ministry and the suffragists proceeded to carry out their threats of public disturbances. On the night of November 21, they gathered at Caxton Hall, whence they started in procession to Parliament Square. The procession was scattered by the police, but other women, apparently acting on a concerted plan, had gathered in the streets and set about breaking windows. They smashed the windows of a number of the government buildings and newspaper offices. Many arrests were made.

NATIONAL INSURANCE. The National Insurance bill provided first for compulsory insurance against sickness and invalidism for the entire working population (with certain specified exceptions) whose incomes were below £26 a year, and for voluntary insurance for those whose incomes were below £160, the period covered being the working years, that is to say, from sixteen to sixty-five; and secondly, for unemployment insurance in certain specified trades. About one-half of the cost was to be met by the workmen and the remainder divided between the government and the employer. It passed its second reading toward the end of May. In the course of the debates much opposition was brought out on the part of physicians, who objected to the smallness of the fee. On the other hand, the friendly societies objected to it as too high. The British Medical Association succeeded in getting a backing of some 16,000

names, and a considerable fund for defense against the bad features of the measure. Physicians generally organized against the bill. When the autumn session of Parliament was opened on October 24, the prime minister announced that ample time would be allowed for its discussion, but its opponents complained that in view of its complexity and the great number of its clauses the government was rushing it through with too ruthless an exercise of its closure. It was the chief measure before the autumn session. The opposition was directed chiefly to the medical provisions and to the plan for the insurance of domestic servants. The latter led to an organized mass-meeting of servants and mistresses at Albert Hall on November 29 to protest against it. They contended that the bill would compel them to pay for what they did not need and would inflict upon them an enormous loss. Both mistresses and servants declared that if the bill were passed they would not pay. When the bill came to its third reading on December 6 in the House of Commons the opposition offered a reasoned amendment, declaring that public funds and individual contributions would not be used to the best advantage under the provision dealing with health insurance and that since the measure had not been adequately discussed or fully explained to the country it should be further considered in the next session. This request for a postponement was voted down by a majority of 320 to 223. Thereupon the third reading was carried by a majority of 303. In the debate the opposition urged that to postpone the measure would not have a wrecking effect, but would on the contrary greatly improve it. They maintained that their attitude was consistent with their original promise, that they would coöperate with the chancellor of the Exchequer in perfecting the details of the measure. The chancellor in reply said that since the bill had been before the country for eight months and under consideration of Parliament for forty or fifty days it was not desirable to reopen discussion. Every important feature of the bill had been discussed, and although the closure had been applied it had been used with greater fairness than upon any previous measure of the same character. He attacked the opposition vigorously for not having supported the government loyally. He belittled the agitation of the domestic servants as the result of misrepresentation in the press and of the interference of interested parties. Mr. Bonar Law attacked the measure as a plan for giving most to those who need it least and as employing unfair financial methods. He held that it did not represent the real opinions of the House and he accused the chancellor of having shown himself a bitter political partisan in his methods of rushing the bill through. The government, on the other hand, taunted the opposition with shifting and indirect methods and asked why they had not moved a direct negative to the motion for the third reading. Outside Parliament the criticisms of the bill had much the same form. It was condemned as a hasty measure. It was urged that its provisions should all be considered by a commission of experts. The House of Lords was advised either to apply the suspensive veto accorded to them by the recent Parliament act or to introduce the referendum and submit the matter to the judgment of the electors. See **WORKINGMEN'S INSURANCE**.

THE CORONATION OF KING GEORGE AND QUEEN MARY
THE SCENE ON PICADILLY, LONDON

THE ROYAL VISIT TO INDIA. On November 11 the king and queen sailed for India on board the battleship *Medina*. The proposed visit had been the subject of much discussion. It was the first time that a British sovereign with his consort had visited his Indian dominions, and it was taken as the beginning of a new policy toward that portion of the empire. Their majesties were to attend in person the Coronation Durbar on December 12, for which preparations of an elaborate nature had been made. There was some criticism of the government for advising their majesties to leave the country during a period of unrest, but in the main, it was thought that it could have no bad result, but would, on the contrary, inspire confidence rather than alarm, since it could hardly be thought that war was likely when the king left his throne to go to a distant part of the world. Much was hoped of the visit as a means of promoting the good-will of the Indian people. See *INDIA, History*.

OTHER FEATURES OF THE YEAR. The year was marked by serious labor troubles. The long-threatened international seamen's strike was announced at the leading ports on June 14. It arose from a demand for higher wages and for the establishment of a national conciliation board. Dockers and carters joined in the strike, which lasted for several weeks and assumed serious proportions. Riots and collisions with the police took place at Manchester, Liverpool, Hull, Cardiff, and Glasgow. A national railway strike was declared on August 17, threatening prolonged and serious disturbance of the country's industries, but the board of trade at once held conferences with the men's delegates, and on August 19 a settlement was reached and the strike declared at an end. Both sides accepted the government's offer to appoint a royal commission to investigate the conciliation scheme of 1907 and to report on the changes in it that seemed necessary. The report of the royal commission (October 20) was not satisfactory to the men, and it was feared that the strike would be renewed, but toward the close of the year the men accepted the arrangement. (See *ARBITRATION AND CONCILIATION*.) A general railway strike was declared in Ireland on September 18, originating from the dismissal of two railway porters for refusing to handle the timber of a company whose men were on strike, but public opinion was against it from the start, and it soon proved a failure. In the closing days of the year a strike in certain Lancashire cotton mills was answered by lockout, which threatened to involve 160,000 weaving operatives and a nearly equal number of spinners. (See *STRIKES AND LOCKOUTS*.) A general arbitration treaty between Great Britain and the United States was signed at Washington on August 2, but down to the close of the year was awaiting the action of the United States Senate. (See *UNITED STATES, History*.) The question of reciprocity between Canada and the United States was much discussed by British newspapers and public in its bearing on imperial interests. Many argued that reciprocity was a step toward annexation. (See *CANADA, History*.) For a further account of imperial affairs, see the articles on British overseas dominions and colonies. For details of Great Britain's part in the Moroccan affair, see *MOROCCO, History*; also *FRANCE* and *GERMANY*, under *History*. For an account of other phases of British foreign

relations, see *PERSIA*, *CRETE*, *CHINESE EMPIRE*, and *UNITED STATES*, under *History*; also *GERMANY*, paragraph on *Bagdad Railway*. See also *SOCIALISM*; *ARBITRATION*, *INTERNATIONAL*; and the various articles on social, economic, and political topics. See also *ARCHÆOLOGY* and *ARCHITECTURE*.

GREECE. A constitutional monarchy in southeastern Europe; divided into twenty-six nomos, or departments. Capital, Athens.

AREA, POPULATION, ETC. Area, 24,973 sq. miles. Population (1907), 2,631,952; 1909 estimate, 2,606,000. Emigration to the United States in 1906-7, 36,580; in 1907-8, 21,489; in 1908-9, 14,111; in 1909-10, 25,888. Athens had (1907), 167,479 inhabitants; Piræus, 71,505; Patras, 37,724; Volo, 23,563.

AGRICULTURE. Area under cultivation, 5,563,100 acres (cereals, 1,112,000; fallow, 1,200,000; forest, 2,025,400), besides 53,000 rendered available by the draining of Lake Copais. In addition, about 5,000,000 acres are in natural pastures and 3,000,000 waste land. Currants are the main crop for export (yield 1909-10, 155,000 tons).

MINING. The mineral output (in metric tons) in 1907, with the value in pounds sterling, is given as follows: Iron, 768,883 (£228,973); manganiferous iron ore, 92,770 (£44,015); zinc ore, 30,346 (£119,673); manganese, 11,139 (£9552); chromite, 11,730 (£19,706); magnesite, 60,248 (£54,702); lignite, 11,139 (£9552); emery, 10,589 (£45,109); salt, 26,066 (£108,046); lead (argent.), 13,814 (£313,500).

COMMERCE AND COMMUNICATIONS. The trade for three years is given below in drachmas (1 drachma = 19.3 cents):

	1908	1909	1910
Imports	152,635,000	135,907,000	158,504,775
Exports	109,244,000	101,413,000	137,544,625

The principal articles of special trade for 1909 are given below in thousands of drachmas:

Imps.	1000 dr.	Exps.	1000 dr.
Cereals	32,165	Currants	32,705
Textiles, etc.....	19,705	Wine	9,806
Coal	10,503	Lead (argent.)...	7,699
Timber	8,904	Tobacco	7,585
Chem. prods.....	6,733	Iron	5,462
Fish	6,777	Zinc	4,002
Mins. & mets.....	5,890	Olives	2,733
Animals	4,078	Olive oil.....	2,258
Paper	3,394	Figs	3,983
Skins	3,439	Grapes	1,600
Coffee	2,634	Silk (raw).....	2,669

Principal countries of origin and destination (1909): Great Britain—Imports, 31,127,000 drachmas; exports, 25,385,000; Russia, 26,781,000 and 1,447,000; Austria-Hungary, 17,282,000 and 10,265,000; Germany, 12,282,000 and 10,159,000; Turkey, 11,649,000 and 6,386,000.

Vessels entered (1907), 6412, of 4,812,834 tons. Merchant marine (1911): 283 steamers, of 301,785 tons; 811 sailing vessels, of 145,284.

Railways open (1911), 1609 kilometers (1000 miles). Telegraph lines, 4951 miles; post offices, 1147.

FINANCE. The drachma (worth 19.3 cents) is the monetary unit. Revenue and expenditure for three years follow (1911 estimate).

	1907	1908	1911
Revenue	126,382,258	128,301,087	234,331,604*
Expenditure ..	133,700,371	128,767,739	187,972,500

* Including 95,601,101 extraordinary.

Of the estimated revenue for 1911, indirect taxes accounted for 60,573,001 drachmas, direct taxes 23,095,201, stamps 16,527,000; estimated extraordinary revenue, 95,601,101. The larger estimated expenditures were: Public debt, 79,028,811 drachmas; finance, 26,535,902; war, 21,312,018; interior, 18,626,846.

On December 31, 1910, the gold debt stood at 692,530,500 drachmas; the internal paper debt, 160,225,845 (including 71,775,975 in paper money).

ARMY. During the year 1911 active reorganization of the Greek army was in progress, according to a law passed in 1909, and the complete operation of the scheme was designed to be effective by 1912. Military service is compulsory and begins at the completion of the nineteenth year, instead of the twenty-first, as was provided by the conscription law of 1904. The skeleton organization of the army was already in effect in 1911, and provided for a military force of three divisions, each composed of 3 brigades of infantry formed by two battalions of infantry, a battalion of evzones (national militia), and a machine-gun section, 1 regiment of field artillery, and 1 battalion of mountain artillery, 1 regiment of cavalry, 1 battalion of engineers, and 2 companies of train. This would give 18 regiments of infantry, 9 battalions of evzones (national militia), 3 regiments of cavalry, 3 regiments of field artillery, 1 regiment of heavy artillery, 3 battalions of mountain artillery, 3 battalions of engineers, 2 companies of pontoniers, 2 companies of telegraphers, 1 railway company, 1 company of firemen, and 6 companies of train. When these forces are fully organized the active army will have a strength of 20,000 to 25,000. The old organization was being transformed into the new as rapidly and effectively as possible. There was also provided a first reserve, which, with the active army, would give a war strength of 200,000, which, with the second reserve and national guard, could be increased to 250,000. Schneider-Canet quick-firing field guns were being provided for the artillery, and much interest was being manifested in the army. The government has a French military adviser, General Eydoux.

NAVY. The effective navy includes the armored cruiser *Georgios Averoff* (purchased 1910, launched 1908), of about 10,000 tons; 3 coast-defense vessels of about 4800 tons each, 12 modern destroyers and torpedo boats, and a few gunboats and torpedo craft of small importance. A submarine was launched April 2, 1911, and another is said to be building. Personnel, about 4000. In April, 1911, Rear-Admiral Lionel G. Tufnell was appointed naval advisor to the Greek government. He retired from the British navy to accept the appointment, and in September put forward a programme looking to a strength in 1921 of 3 armored cruisers, 20 destroyers, 10 torpedo boats, and 3 submarines.

GOVERNMENT. The king (1911, George I.) is the executive, aided by a responsible ministry. The legislative body is the National Assembly. The ministry (constituted October 19, 1910) was composed in 1911 as follows: Premier, Minister of War and Marine, E. Venezelos; Finance, L. Koromilas; Interior, E. Repoulis; Justice,

N. Dimitrakopoulos; Worship and Instruction, A. Alexandris; Commerce and Agriculture, E. Benakis; Foreign Affairs, J. Gryparis.

HISTORY. The elections to the Revisionary Assembly, of December, 1910, returned M. Venezelos to power with a majority of about six-sevenths of the chamber and he resumed the premiership with the portfolios of war and marine. The chamber was opened on January 21, and on February 7 the government submitted its plan for the reform of the constitution. Its chief features were as follows: The restoration of the Council of State; the right to appoint foreigners to government services; compulsory elementary education; reduction of the number of deputies to about 110; the appointment of judges for life; abrogation of the king's right to adjourn Parliament more than once in a single session without the consent of the chamber; Parliamentary disqualification of military and naval officers, civil servants, and bank managers. The Council of State, which had been abolished in 1865, had power to elaborate bills and to annul or appeal official decisions and acts contrary to law, also disciplinary control over civil servants, except magistrates. The chamber adopted the new constitution, and it was signed by the king on June 14. In June the rupture with Rumania came definitely to an end and a Rumanian minister arrived at Athens. The strained relations between the two countries had existed since 1905, and arose from Rumanian retaliation against Greek outrages. In June the crown prince and princess visited England to attend the coronation. See CRETE, *History*; and *ARCHAEOLOGY*.

GREENE, WILLIAM CORNELL. An American capitalist, died August 5, 1911. He was born in Westchester county, N. Y., in 1851. He left home at the age of seventeen years and started for the West in search of a more active life. From this until his retirement his life was one of ceaseless adventure. His first work in the West was as a government contractor in Colorado. He then went into ranching in Arizona. He was prosperous in this enterprise and, taking advantage of the Mexican law allowing prospecting on lands already granted for pasturage, he crossed the border into the state of Sonora and located eight mines on a large tract which had been purchased for grazing purposes by a syndicate of Californians. This syndicate was glad to sell out for a small sum rather than fight condemnation proceedings. This property afterwards developed some of the richest copper mines in the world. Greene then organized and became president of the Greene Consolidated Company, the Greene Gold and Silver Mining Company, the Greene Cattle Company, the Turkey Tract Cattle Company, and was identified with other corporations. He secured money to finance these enterprises in the East. In 1892, he headed a syndicate of four men, which bought a tract of 7,500,000 acres in Sonora, Mexico, for a ranch which was intended to be the largest in the world. In the following year he reached the height of his prosperity as a financier when his companies had a capitalization of nearly \$100,000,000 of which Greene owned more than half. In the fall of that year a systematic attack was made on his securities by John W. Gates and others. This resulted in a great drop in the shares of the stocks. He afterwards obtained a concession of 4000 square miles in Mexico and or-

ganized the Greene Gold-Silver Company and the Sierra Madre Land and Lumber Company, issuing securities to the amount of \$43,000,000. These, however, did not sell and he found himself without funds to develop the properties. He was forced to give up the control of the Greene Consolidated Company through attacks made by the Rogers Amalgamated copper interests and it was not long before he was deprived of most of his power and much of his properties. The panic of 1907 finished the fall of his fortunes and he left for Japan, hoping there to secure capital to put himself and his enterprise on a stable footing. This he was unable to do. Returning, he abandoned his office in New York and returned to his properties in Cananea. In June, 1906, his mines at this place were the scene of serious rioting by striking Mexican miners. These riots were put down by Arizona rangers, who crossed the border at the invitation of the governor of Sonora. Greene took part in several expeditions against the Indians in the Southwest.

GREENLAND. A Danish colony in the Arctic region. Area between 500,000 and 800,000 sq. miles (colonized area, about 46,740). Population (February 1, 1911), 12,968. Imports (1909), £72,111; exports, £26,500. A director (C. Ryberg in 1911) administers the colony from Copenhagen.

GREENLEAF, CHARLES RAVENSCROFT. An American physician and soldier, died September 3, 1911. He was born in Carlisle, Pa., in 1833, and was educated in Boston and Cincinnati. He studied medicine, graduating from the Ohio State Medical College in 1860. He enlisted in the Civil War as assistant surgeon of the Fifth Ohio Infantry. He served throughout the war, being promoted to captain and assistant surgeon. He was made major and surgeon in 1876, lieutenant-colonel and assistant medical purveyor in 1891, colonel and assistant surgeon-general in 1896. In 1902 he was retired. He was made brigadier-general by act of Congress of April 23, 1904. He was one of the most conspicuous medical officers during the Civil War. He built the Mower General Hospital at Chestnut Hill, Philadelphia, in 1862 and was executive officer of this institution. He served on the staffs of Generals McClellan, Lew Wallace, Hancock, Wright, and Thomas. In addition to his service during the Civil War he was chief medical officer during the Pittsburgh riots and served through several Indian campaigns. He was the author of the present system for personal identification of soldiers in the United States army. He organized the hospital corps of the United States army and originated and organized the ambulance service in San Francisco. During the Spanish-American War he was chief surgeon of the army in the field, serving in Cuba and Porto Rico. In 1900 he was chief surgeon of the Division of the Philippines on the staffs of Generals Otis and MacArthur. He served as professor of public and military hygiene at the University of California. He was the author of *Greenleaf's Manual for Medical Officers*, and *Greenleaf's Epitome of the Examination of Recruits*. He wrote also *A System of Personal Identification in Buck's Handbook* and in medical journals. He was a member of many medical societies and was a delegate to many medical congresses. He took a prominent part in the organization of the Red Cross Society.

GREGORY, ROBERT. A clergyman of the Church of England, died August 2, 1911. He was born in 1819 and was educated at private schools and at Corpus Christi College, Oxford. From 1843 to 1853 he served as curate in various parishes and from 1853 until 1873 he was rector of the Church of St. Mary the Less at Lambeth. In 1868 he was appointed canon of St. Paul's, serving in this position until 1891, when he was made dean of St. Paul's. Dr. Gregory was best known as the champion, in the earlier days of the great controversy, of religious education in elementary schools and the prime mover in the transformation which the last forty years have witnessed in the service of St. Paul's cathedral. He conceived the idea for the first time of bringing the whole cathedral constantly into use as the centre of diocesan life and of a continuous popular and dignified worship. Through untiring efforts he brought this about and St. Paul's became, under his administration, a popular place of worship. He was not a great preacher, but had marked practical and executive ability. His writings include *A History of Elementary Education* (1895) and *Lectures at St. Paul's; Sermons, etc.*

GRENADA. A British colony; the largest of the Windward Islands (q. v.), with an area of 133 sq. miles and a population (census of 1911) of 66,750. St. George's, the capital, had 4916 inhabitants. Agricultural population, 17,955. Imports (1910), £279,368; exports, £291,760. Revenue (1910-11), £81,413; expenditure, £75,561. Sir James Hayes Sadler was governor of the colony in 1910-11. Part of the Grenadine Islands are attached to Grenada.

GRENADINE ISLANDS. See GRENADA.

GRENFELL, W. T. See LITERATURE, ENGLISH AND AMERICAN, *Travel and Contemporary History*.

GRONNA, ASLE J. United States senator from North Dakota. He was born at Elkader, Iowa, in 1858. He was reared on a farm and educated in the schools of Houston county, Minnesota, and Caledonia Academy. In 1879 he removed to South Dakota and engaged in farming and banking. In 1889 he was a member of the Territorial legislature. He took an active part in politics and was elected to the Fifty-eighth, Fifty-ninth, Sixtieth, and Sixty-first Congresses. On the resignation of Senator Purcell in the latter part of 1910 he was appointed to fill out the unexpired term.

GUADELOUPE. Islands of the Lesser Antilles, forming a French colony. Area, 687 sq. miles; population, 190,273. Agriculture is the chief industry, and sugar, cacao, coffee, tobacco, and tropical fruits are grown. Imports (1908), 15,077,000 francs; exports, 17,361,000. The French budget shows (1911) an expenditure of 356,568 francs on the colony. The local budget balanced in 1909 at 4,678,757 francs. Governor, 1911, M. Gautrel.

GUARANTEE OF DEPOSITS. See BANKS AND BANKING.

GUATEMALA. A Central American republic. Capital, Guatemala City.

AREA, POPULATION, ETC. The usually accepted estimate of area is 48,290 sq. miles. Another estimate is 113,030 sq. kilometers (43,641 sq. miles). There is an unsettled boundary dispute with Honduras. Estimated population (December 31, 1909, 1,992,000, about 60 per cent. Indian, and most of the remainder mestizo. Estimated populations of the larger

towns: Guatemala City, 125,000; Cobán, 30,770; Quezaltenango, 28,940; Totonicapán, 28,310; San Pedro, 10,190. Primary education is free and nominally compulsory. Public schools in 1910, 1670, with over 54,000 pupils. There are several institutions for professional and special instruction.

INDUSTRIES AND COMMERCE. The people are engaged chiefly in agriculture and cattle-raising. The principal crops are coffee, corn, sugar-cane, bananas, tobacco, and cacao. There is some exploitation of cabinet woods, rubber, and chicle. The value of agricultural and forest products in 1910 is reported at 28,825,082 pesos (paper), of which 92,705,080 pesos represented coffee, 66,880,800 corn, and 30,783,303 wood. Mining and manufacturing have not attained much importance.

The latest available commercial statistics are for 1909, when imports were valued at \$5,251,317 and exports \$10,079,219, against \$5,811,586 and \$6,766,143 in 1908. The only large export is coffee, which amounted to 88,162,742 lbs., valued at \$8,816,274, in 1909; hides, \$308,685; wood, \$263,573; bananas, \$229,566. Imports from the United States and exports thereto, \$2,181,859 and \$5,828,554 respectively; Germany, \$1,249,559 and \$2,739,075 (Germany receives about one-half of the coffee); Great Britain, \$1,135,420 and \$1,006,263.

COMMUNICATIONS. Length of railways in 1910, 724 kilometers (450 miles). San José and Champerico, on the Pacific, are connected with Escuintla, Mazatenango, and Guatemala City, the lines aggregating 189 miles. Guatemala City is connected with Puerto Barrios, on the eastern coast, 195 miles. There are several short lines, and several others are projected or under construction. Telegraph lines, over 4200 miles; offices, 208. Post offices, about 200.

FINANCE. Revenue and expenditure, in thousands of pesos paper, have been as follows for fiscal years:

	1906	1907	1908	1909	1910
Revenue.....	30,501	35,298	37,336	49,240	51,571
Expenditure....	45,733	44,560	49,930	70,554	45,959

Over one-half the revenue is derived from customs, and one-third from spirits, tobacco, etc. In 1910, the ordinary expenditure for the administration was 17,358,294 pesos, and for the debt 28,601,116 pesos. Budget for 1910-11 showed an expenditure of 36,948,238 pesos; for 1911-12, 37,417,217 (22,000,000 for the debt, 2,578,760 public instruction, 2,343,996 war). Debt, December 31, 1910, foreign \$13,694,446 and £1,482,800, with arrears of interest £711,747; interior, 71,884,745 pesos paper. The approximate average value of the paper peso was 9 cents in 1906, 8 in 1907, 6½ in 1908, and 6 in 1909; during 1910 it fluctuated between 7 and 10 cents.

ARMY. Military service from the eighteenth to the twenty-fifth year is required by statute, and this supplies a standing army maintained at a strength of about 7000 men. By enrolling citizens from twenty-six to fifty years of age a national militia with an estimated strength of 57,000 is obtained.

GOVERNMENT. The executive authority is vested in a president, elected by direct vote for six years, and assisted by a cabinet of six members and a council of state of 15 members (of which the cabinet is a part). The legislative

power rests with the unicameral National Assembly (69 members). The president in 1911 was Manuel Estrada Cabrera, who succeeded to the executive office in March, 1898, and subsequently was elected for terms ending March 15, 1905, 1911, and 1917. First and second designados (elected by the assembly), Gen. Mariano Sarano and Gen. Manuel Duarte.

GUIANA. See **BRITISH GUIANA**; **DUTCH GUIANA**; **FRENCH GUIANA**.

GUILD, CURTIS. An American journalist, died March 12, 1911. He was born in Boston in 1827, and was educated in the public schools of that city. He began newspaper life on the *Boston Daily Journal* and was afterwards employed on the *Boston Daily Traveller*, of which he became one of the proprietors. In 1859 he founded the *Boston Commercial Bulletin* and was its editor until 1898. For twenty-five years he was president of the Bostonian Society. He was the father of Curtis Guild, Jr., governor of Massachusetts from 1906 to 1909. He was the author of *Over the Ocean* (1871); *Abroad Again* (1877); *Britons and Muscovites* (1888); *From Sunrise to Sunset* (verse, 1893), and *A Chat about Celebrities* (1896).

GUILMANT, FÉLIX ALEXANDRE. A French musician and composer, died April, 1911. He was born at Boulogne in 1837, and received his early instruction from his father, who was a professional musician. He made a study of the organ with Lemmens, and of harmony with Carulli. When but twelve years of age he was enabled to assist his father as substitute at the organ of the church at Saint Nicolas. In 1853 he was appointed organist of the church of Saint Joseph. He was appointed choir-master of Saint Nicolas in 1857 and of La Trinité in 1871. In 1896 he was appointed professor of the organ at the Paris Conservatory. He was the foremost exponent of the distinctively French school of organ music and on that account, as well as for his brilliancy as organist, met with great success in his tours of England, Italy, Russia, and the United States. His published works include many solos, choruses, and pieces for the orchestra, a symphony for organ and orchestra, several organ sonatas, and many smaller pieces for the organ. His vocal compositions include motets, masses, and choruses.

GULF OIL FIELDS. See **PETROLEUM**.

GUN, CEMENT. See **CEMENT GUN**.

GUTHRIE. See **OKLAHOMA**.

GYMNASTICS. The thirteenth annual intercollegiate gymnastic meet was won by the Yale team, which was also the victor in 1910. Yale rolled up a total of 25 points. Rutgers was second with 8 points and Pennsylvania third with 7 points. Other colleges to score points were: Harvard 5, Princeton 5, Columbia 2, Haverford 1½, and New York University ½. The all-round championship was won by F. Callahan of Yale. The Western intercollegiate championship went to Illinois, Chicago being second and Wisconsin third. In dual college contests Yale beat the U. S. Naval Academy 27½ to 17½, Princeton 38 to 16, and New York University 36 to 18, Rutgers defeated Amherst 37 to 15½, and tied with Lehigh 24 to 24; Pennsylvania defeated Haverford 35 to 13, Lehigh 43 to 11 and Princeton 33 to 21; New York University defeated Lehigh 29 to 25 and Columbia 33 to 21.

The club championship of the Amateur Athletic Union was won by the West Side Y. M. C. A., which scored 25 points. The New York Turn Verein was second with 13 points and the Germania Turn Verein of Cleveland third with 9 points. The all-round championship was won by Paul Krimmel of the New York Turn Verein, who made 147.70 points. W. Heisler, of the Bohemian Gymnastic Association, was second, and E. A. Henning of the Germania Turn Verein, third.

HAASE, FRIEDRICH. A German actor, died March, 1911. He was born in Berlin in 1826. He was attracted toward the theatre in his early youth and to qualify himself he studied for two years under the direction of the poet Tieck. In 1846 he made his debut at Weimar, and acted there until 1848, when he appeared at Potsdam and Berlin. He rose to prominence during his connection with the theatre in Prague in 1849-51. For a long time his progress in his profession was hindered by an imperfection in his utterance, which was overcome only after years of struggle. He increased his reputation by performances at Karlsruhe and Munich, and from 1855 to 1858 at Frankfurt. He traveled extensively, gradually acquiring recognition as a capable and impressive actor in tragic parts. He played at St. Petersburg through the six winters from 1860 to 1866 and firmly established his position in the front rank of German actors. Returning to Germany he became director of the Court Theatre at Coburg, which position he held in 1867-8. In 1869 he visited the United States, where his talents were at once recognized. From 1870 to 1876 he occupied the position of director of the Municipal Theatre in Leipzig. He visited the United States again in 1882, appearing in a number of classical and modern characters. In 1892 he retired from the stage into private life. Among the most famous of his parts were those of Wurm in *Kabale und Liebe*, Carlos in *Clari*, and Mephistopheles and Richard III. He was also excellent in parts in which eccentric characters could be illustrated by minute and delicate detail. He received many honors and decorations in recognition of his talent.

HAGUE TRIBUNAL. See **ARBITRATION.**

HAITI. A republic occupying the western part of the West Indian island of Haiti. The capital is Port-au-Prince.

AREA, POPULATION, ETC. Estimated area, 10,200 square miles. The population was estimated in 1908 at 2,079,700, nine-tenths negroes and most of the remainder mulattoes. Principal towns, with estimated population: Port-au-Prince, 100,000; Cape Haitien, 30,000; Les Cayes, 25,000; Gonaïves, 18,000. Since 1910 primary instruction has been nominally compulsory, but the educational system is very imperfect. There are some 400 national schools, besides a few private schools and five lycées. The prevailing religion is Roman Catholicism.

INDUSTRIES AND COMMERCE. The leading crop is coffee, and the culture of cacao, sugarcane, and cotton is of some importance. Cabinet and dye woods are cut for export. There are only a few manufactures, and mining is almost wholly undeveloped. In the year ended September 30, 1909, dutiable imports were valued at \$5,880,676, against \$4,701,161 in 1908. Dutiable exports in the fiscal year 1909 are reported at \$3,479,848, but total exports for that year

are unofficially calculated at \$11,008,483, against \$17,399,200 in 1908. For the calendar year 1910 dutiable imports were unofficially reported at \$7,681,746 and total exports at \$15,475,331. The most important exports are coffee, cacao, and logwood. The United States furnishes most of the imports, and France receives the greater part of the exports.

COMMUNICATIONS. There are about 64 miles of railway. In August, 1910, the government entered into a contract for the construction of a railway system of 321 miles, and work thereon was begun in 1911. It included a line from Gonaïves to Port-au-Prince, extending across the island from north to south, and other lines with numerous branches, all of narrow-gauge construction. Telegraph line, 124 miles; post offices, 31.

FINANCE. Exact amounts of revenue and expenditure in recent years are not available. The budget for the fiscal year 1910 placed the revenue at \$3,329,010 and 8,300,581 gourdes, and the expenditure at \$3,329,010 and 8,246,842 gourdes. Supplemental credits increased the estimated expenditure to \$4,234,642 and 11,368,091 gourdes. For the fiscal year 1911, the budget placed the revenue at \$3,297,059 and 7,806,092 gourdes, and the expenditure at \$3,279,059 and 7,858,560 gourdes. The paper gourde fluctuates but may be taken as averaging about 20 cents in value. The principal source of revenue is import and export duties, and the largest item of expenditure is service of the debt. On March 31, 1911, the debt, including arrears, was \$26,349,510 and 10,384,300 gourdes.

ARMY. There is a standing army recruited by both conscription and voluntary enlistment, the actual strength of which varies, as does the formal organization. Theoretically recruits obtained by conscription serve for seven years and the volunteers for four years. The strength of the army is variously estimated at from 7000 to 14,000 men.

GOVERNMENT. The constitution provides for the election of a president by the National Assembly for seven years, but the chronic spirit of revolution is likely to cut short his term. The National Assembly consists of two houses, the Senate (39 members elected indirectly) and the Chamber of Representatives (96 elected by popular vote). On December 17, 1908, Gen. Antoine Simon was elected president, after the deposition of Gen. Alexis Nord (popularly known as Nord Alexis). A revolution in 1911 resulted in the deposition of Simon, and on August 14 Gen. Cincinnatus Leconte was elected president as from May 15, for seven years.

HISTORY. Difficulties with Santo Domingo led to strained relations between the two countries in January, but under American influence the governments agreed to submit their differences to arbitration. The United States, Great Britain, France, Germany, and Italy sent a joint note to Haiti on July 5, requiring the settlement of the claims of their citizens within three months or the submitting of them to arbitration. A revolution broke out in July. It was said to be due to the dictatorial methods of General Simon, whose policy resembled that of his predecessor, Alexis Nord. In July it was announced that General Leconte, with a revolutionary force, was in control of Fort Liberté, Gonaïves, and Sainte Marie, and the president was confined at Port-au-Prince. General Simon

finally found further resistance useless and took ship for Kingston, Jamaica, under the protection of foreign flags. The revolutionists entered the capital and General Leconte was chosen president on August 14.

HALLGARTEN PRIZE. See PAINTING.

HALLOWELL, SUSAN MARIA. An American botanist, died December 16, 1911. She was born in Bangor, Me., in 1835, and from 1853 to 1875 she was instructor in the high schools of Portland and Bangor. She received the degree of M. A. from Colby College in 1875 and soon afterwards was appointed instructor in botany at Wellesley College. After three years she was made professor of botany at that institution, a position which she held until 1902, when she retired and was made professor emeritus. She was a fellow of the American Association for the Advancement of Science and was a member of the Boston Society of Natural History.

HAMLIN, CHARLES. An American lawyer and soldier, died May 15, 1911. He was born at Hampden, Me., in 1837, son of Hannibal Hamlin, Vice-President of the United States under Abraham Lincoln. He graduated from Bowdoin College in 1857. In 1868 he was appointed major of the First Maine Artillery and after various promotions was appointed brigadier-general of volunteers in 1865 for faithful and meritorious service during the war. He took part in many important battles and was mustered out of service on September 14, 1865. He practiced law at Bangor, Me., and was at various times city solicitor, United States commissioner, reporter of decisions for the Supreme Judicial Court. He was also lecturer in the College of Law at the University of Maine. In 1883-85 he was a member of the State House of Representatives, of which he was speaker in 1885. He was connected with several important financial institutions. He was the author of *Insolvent Laws of Maine* and other books relating to legal subjects and was one of the editors of *Maine at Gettysburg*. He also wrote *Great American Lawyers*.

HAMBURG. See GERMANY.

HAMILTON COLLEGE. An institution of higher learning at Clinton, N. Y., founded in 1812. The students in 1910-11 numbered 190. There were 20 members of the faculty, of whom Professors Chase, Hastings, and MacHarg were additions. The productive funds of the college amount to about \$900,000 and the income to about \$50,000. The library contains about 51,000 volumes. The president is M. W. Stryker, D.D., LL.D.

HAMPTON NORMAL AND AGRICULTURAL INSTITUTE. An institution for the education of negroes, founded in 1868, at Hampton, Va. The institution in 1878 opened its doors to Indian pupils. The total number of students enrolled in the various departments of the institute in 1911-12 was 1399. The faculty, instructors and officers numbered 197. The amount of productive funds was \$2,402,011. The library contains about 30,000 volumes. The president is Rev. H. B. Frissell, D. D.

HANKOW. See CHINA.

HARLAN, JOHN MARSHALL. An associate justice of the Supreme Court of the United States, died October 14, 1911. He was born in Boyle county, Ky., in 1833, and graduated from Centre College in 1859. He studied law

at Transylvania University, and after being admitted to the bar practiced law at Frankfort, Ky. In 1858 he was elected county judge. The following year he was candidate for Congress on the Whig ticket. The returns showed that he was defeated by 67 votes out of 16,000 votes cast. Although he claimed that it could be proved that 500 illegal voters had been brought in to defeat him he did not make a contest because he declared that there was no organized party in Congress with whose principles he was in full accord. On the outbreak of the Civil War he organized the Tenth Kentucky Infantry to serve on the Northern side in that conflict. He was made colonel of the regiment and served under Gen. George H. Thomas until 1863, when he resigned because of the death of his father. At that time his nomination for brigadier-general was before Congress. From 1863 to 1867 he was attorney-general of Kentucky. In the following year he returned to practice, forming a partnership with William F. Bullock. He was twice the Republican candidate for governor of the State. At the Republican convention in 1876 he served as chairman of the Kentucky delegation. It was through his influence that the name of Bristow was withdrawn from the nominees of that convention, and the Kentucky delegation declared for Hayes, which brought about the defeat of James G. Blaine. When Mr. Hayes became President, he selected Harlan for attorney-general, but for political reasons he was obliged to abandon this and instead a diplomatic post was offered. This was refused and Harlan was made a member of the Louisiana Commission, the decision of which in the investigation of the election of Hayes became known as the "Louisiana Fraud." While the committee was still in session, Harlan was made an associate justice of the Supreme Court on November 29, 1877. Only three members of the Supreme Court bench have served longer terms, Chief Justice John Marshall and Justices Stephen J. Field and Joseph Story. Justice Harlan was noted both on the bench and off for independence, and he never hesitated to declare his convictions, whether they were in agreement with popular sentiment or not. He was among the candidates mentioned for the presidential nomination in 1904, for although he had begun his political life as a Republican his friends believed that in later years he was an independent Democrat. Justice Harlan wrote the opinion in the famous Northern Securities case. He believed that the government should supervise the trusts, and favored an income tax. In the Tobacco and Standard Oil cases decided in 1911, he bitterly opposed the decision by his colleagues. He characterized as "judicial legislation" the reading into the law the words "undue" and "unreasonable" as applied to restraint of interstate commerce. (See TRUSTS and STANDARD OIL.) Justice Harlan was a commanding figure physically. He was over six feet in height and often declared that he had never had a day's illness. For fifteen years he taught constitutional law at the George Washington University. He was popular as a public speaker and as an expounder of the Constitution held a reputation in the law school and on the bench. He was a devoted member of the Presbyterian Church and took a keen interest in foreign missions. At one time it was said that he considered seriously resigning from the Su-

preme bench and devoting the rest of his life to advancing the interests of the Presbyterian Church, especially in the foreign mission field.

At the time of the death of Chief Justice Fuller, Justice Harlan was considered most likely to succeed him. President Taft, however, considered it unwise, because a large amount of important administrative work falls to the chief justice, and Justice Harlan was, he considered, unequal to the task because of his age and infirmity. Justice Harlan was the oldest living member of the court, and had he lived a month longer he would have served 34 years. In addition to his judicial duties he served as one of the American arbitrators on the Bering Sea Tribunal, which met in Paris in 1893.

HARPSTER, JOHN HENRY. An American Lutheran clergyman and missionary, died February 1, 1911. He was born in Centre Hall, Pa., in 1843. Before his education could be completed the Civil War broke out and he enlisted for service. He became captain and staff officer in the second corps and was twice dangerously wounded in battle. After the war he studied at Selinsgrove and Gettysburg, Pa. In 1871 he was ordained to the Lutheran ministry and from 1872 to 1876 served as missionary at Guntur, India. Returning to the United States on account of ill health he resided for some time in California. He was pastor for several years in churches in Kansas; from 1882 to 1884 at Trenton, N. J., and from 1884 to 1893 at Canton, Ohio. In the latter year he reentered the foreign mission work in India and in 1902 was appointed director of the Mission of the General Council in India.

HARRIGAN, EDWARD. An American actor and playwright, died June 6, 1911. He was born in New York City in 1845. His boyhood was spent in New York and San Francisco, where he worked in several shipyards. In the latter city he first appeared on the stage as assistant in a variety performance. He made an immediate success, and in 1870 appeared in New York and in the following year in Chicago. Returning to New York he played for several years in many pieces, with many well-known actors. His first written play was *The Major*. This was a success and was followed in 1877 by *Old Lavendar*, which was perhaps the most meritorious of his plays. The best known of his plays was the famous Mulligan Guards series, the first of which, *The Mulligan Guards' Ball*, was produced in 1879. In these plays he appeared with Anthony Hart and the two became famous throughout the country. In 1881 they opened the New Théâtre Comique, where a number of plays were produced. This theatre was destroyed by fire in 1884. In the following year Mr. Harrigan leased the Park Theatre and in the same year dissolved partnership with Hart, whose health was failing. Harrigan's ambition was to found a theatre of his own, and he built the house in Thirty-fifth Street just east of Broadway, now known as the Garrick. This was opened in 1900 and many successful plays were produced here. For many years before his death Mr. Harrigan appeared only occasionally in revivals of his old pieces. He originated a new type of play in his rollicking Irish farces. His characters were taken from the streets and they spoke and acted a humor that appealed to the playgoers of that generation.

HARRISON, CARTER H. An American public official, elected mayor of Chicago in April, 1911. He was born in Chicago in 1860. After preparatory education in the public schools of that city and a German gymnasium, he graduated from St. Ignatius College in 1881. He studied law and practiced in Chicago from 1883 to 1889. From 1891 he engaged in the real estate business with his brother, William Preston Harrison, and the two brothers became editors and publishers of the *Times*, which was sold in 1894. He had early in his career taken an active part in politics and in 1897 was a candidate for mayor of Chicago, defeating the Republican candidate. He was successful in three subsequent campaigns and was mayor of the city continuously until 1905, when he was defeated by the Republican candidate, E. F. Dunne. His father, Carter H. Harrison, was mayor of Chicago for five terms. For details of the contest, see ILLINOIS.

HARRISON, HENRY S. See LITERATURE, ENGLISH AND AMERICAN, *Fiction*.

HARRISON, JAMES ALBERT. An American philologist and educator, died February, 1911. He was born at Pass Christian, Miss., in 1848. He graduated from the University of Pennsylvania in 1868 and afterwards studied in Germany. He was professor of Latin and modern languages at Randolph Macon College from 1871 to 1876. From the latter year until 1895 he was professor of English and modern languages at Washington and Lee University. In 1895 he was called to the University of Virginia as professor of English and romance languages, afterwards taking the chair of Teutonic languages in the same university. He was also a lecturer on Anglo-Saxon poetry at Johns Hopkins University. His writings include *A Group of Poets and their Haunts* (1874); *Greek Vignettes* (1877); *Spain in Profile* (1879); *Story of Greece* (1885); *Autrefois*, a collection of Creole tales, and *Negro English*. He edited the works of several German and French writers and also edited the complete work of Poe (1902). He was one of the editors of the *Century Dictionary* and the *Standard Dictionary* and contributed frequently to the philological journals.

HART, A. B. See LITERATURE, ENGLISH AND AMERICAN, *Travel and Contemporary History*.

HART, Sir ROBERT. Former inspector-general of customs in China, died September 20, 1911. He was born at Milltown, Ireland, in 1835, and was educated at Queen's College, Taunton, Wesley College, Dublin, and Queen's College, Belfast. In 1854 he entered the English consular service in China and until 1858 occupied various positions in that service. In the latter year he became secretary to the Allied Commissioners of the Government of the City of Canton. In the same year he was granted special permission to resign this office and accept an appointment in the Chinese Imperial Maritime Customs. He was appointed deputy commissioner in Canton in 1859 and from 1861 to 1863 served as officiating inspector-general. He was appointed inspector-general of customs in 1863. In 1885 he was offered the post of Brit-

ish minister to China, but declined. Sir Robert Hart was the creator of the great organization known as the Imperial Maritime Customs of China. For years he was the most powerful single personage in the East. In spite of rebellions and wars the customs service in China persisted without break and its efficiency was attributed entirely to him. In 1893 the control of the postal service was handed over to him, and two years later his power had become so great that he was able to withstand the efforts of Li Hung Chang, who endeavored to place a German official in his stead. His hand was seen in every Chinese commercial treaty made during the years of his administration. During the Boxer troubles of 1901 he was for a long time believed to be dead, and in recognition of his services in that rebellion the Chinese government made him a viceroy. In 1905 by imperial decree two Chinese officials were placed in control of the customs of the country with supervision of Sir Robert's own staff. In 1907 he was given leave of absence and this was further extended in 1909 and he did not again return to China. Sir Robert's long stay in China made him perhaps more Chinese in habits of thought than English. He dressed in the Chinese native costume and spoke the language. Indispensable as were his services to China, he was hated if not feared by the native mandarins. He was never admitted to equality in their councils. He had, however, the support of the empress dowager and was thus enabled to disregard the enmity of the Chinese officials. Under his administration the foreign trade of China increased over four times in value from 1864 to 1899 and the home trade over six times, while the revenue increased three times. He maintained a fleet to protect commerce along the coast and managed a complete lighthouse service. He paid the state's general expenses and supplied the money for war indemnities. The negotiation of foreign loans was in his hands. He loved detail and was a master of it. He received many honors in China and also many decorations and honors in nearly every European country. He was knighted in 1893. He was the author of *These from the Land of Sinim* (1901).

HARUNA. See BATTLESHIPS.

HARVARD UNIVERSITY. The number of students registered in the university in the collegiate year 1911-12 was 5045. These were divided as follows: Faculty of Arts and Sciences, 2262; Graduate School of Arts and Sciences, 454; Graduate School of Applied Science, 123; Graduate School of Business Administration, 79; Divinity School, 48; Law School, 808; Faculty of Medicine, 275; Dental School, 154; Extension Students, 11; Summer School of 1911, 1065. The faculty numbered 707, of whom 134 were professors, 4 associate professors, 83 assistant professors, 45 lecturers, 186 instructors, 33 Austin teaching fellows, 18 teaching fellows, and fellows for research, and 204 demonstrators and assistants. In the Graduate School of Arts and Sciences were 572 students from other American colleges and universities and foreign universities. The gifts and bequests received by the university during the year will be found noted in the article GIFTS AND REQUESTS, and notes relating to the development of the work of the university in general will be found dis-

cussed in the article UNIVERSITIES AND COLLEGES. In Radcliffe College, the woman's college affiliated with the university, there were in 1911-12 546 students. The president of the university is Abbott Lawrence Lowell.

HARVEY. See NAVAL PROGRESS, *Armor*.

HASKELL, ELLA (KNOWLES). An American lawyer and public official, died January 27, 1911. She was born in North Ridge, N. H., in 1865. She studied law and was admitted to the bar. Moving to Montana she became prominent in politics and was the Populist nominee for attorney-general in 1893, opposing Henry J. Haskell, Republican. Although she made a strong campaign and polled a large vote, she was defeated. Haskell afterwards appointed her one of his assistants and she later married him. In a few years she secured a divorce and removed to Butte, where she opened a law office which was very successful. She won many notable mining cases and became known as one of the foremost women lawyers of the United States. She was active in woman's club work and in the Daughters of the American Revolution. She was also a student of Oriental philosophies.

HASTINGS, THOMAS SAMUEL. An American theologian, died April 2, 1911. He was born in Utica, N. Y., in 1827, graduating from Hamilton College in 1848. Three years later he graduated from the Union Theological Seminary. In 1852 he was ordained to the Presbyterian ministry and for four years was pastor at Mendham, N. J. From 1856 to 1882 he was pastor of the West Church, New York City. He was professor of sacred rhetoric and pastoral theology at the Union Theological Seminary from 1882 to 1904, and from 1904 to the time of his death was professor emeritus and lecturer on pastoral theology. From 1887 to 1897 he was president of the faculty of the seminary. He received the degrees of D. D. from New York University, LL. D. from Princeton and L. H. D. from Hamilton College.

HAVANA. See CUBA.

HAWAII, or HAWAIIAN ISLANDS. A territorial possession of the United States, comprising a chain of islands in the Pacific Ocean, which form the extreme northern group of Polynesia. The capital is Honolulu.

AREA AND POPULATION. The area of the islands is 6449 square miles. The largest are: Hawaii, 4015 square miles; Maui, 728 square miles; Oahu, 600 square miles; Kauai, 544 square miles; and Molokai, 261 square miles. According to the Thirteenth Census made in 1910 the population of Hawaii was 191,909, divided by races as follows: Japanese, 79,674; Hawaiian, 38,547; Portuguese, 22,303; Chinese, 21,674; American, British, German, and others, 29,711.

AGRICULTURE. The chief industries of the islands are those connected with agriculture, especially the sugar industry and fruit raising industry. The sugar industry surpasses in importance all other industries combined. The crop for 1911 is estimated at 555,000 short tons, as compared with 518,127 tons in 1910 and 533,156 tons in 1909. The most notable growth in the industries has been in the raising of pineapples. In importance this now ranks second to sugar. It is estimated that in the calendar year 1911, 800,000 cases were packed as compared with 610,000 in 1910. Much additional land was planted during the year which will

greatly increase the output during the next few years. A new product of its industries is a preparation of the juice of pineapples put up in bottles. In 1910 about 40,000 cases of this juice were prepared and in 1911 the quantity was nearly doubled. The tobacco and cotton industries are being developed and bid fair in time to be of importance. One of the chief obstacles to the agricultural development of the islands has been the difficulty of obtaining satisfactory labor. Owing to restrictions placed upon Chinese and Japanese labor by the United States government, it has been impossible to obtain an adequate supply of laborers from China and Japan. These have been found the most satisfactory laborers to be employed in the cultivation of sugar. Efforts made to obtain laborers from other countries have not been entirely successful. During 1911 the board of immigration brought to the Territory a shipload of Spanish and Portuguese laborers numbering 1451. These were not altogether satisfactory in physical or mental qualifications. Since 1905, 8793 European immigrants have been introduced into the islands. Of these 3853 were Portuguese, 3150 Spanish, and 1790 Russians. During 1910-11 the Hawaiian Sugar Planters' Association brought in 4930 Filipinos. On May 30, 1911, the laborers on the sugar plantations numbered 45,619. Of these the Japanese numbered 28,263; the Portuguese, 4053; Filipinos, 3358; Chinese, 2880, and the others were Spanish, Russians, Koreans, and Americans.

COMMERCE. The exports and imports for the year ending June 30, 1911, exclusive of specie, aggregated \$69,451,163. Of this amount \$27,512,580 were imports and \$41,938,583 were exports. As will be seen from the table below, by far the larger quantity of imports and exports go to and are derived from the United States. The distribution of imports and exports in 1910-11 will be shown in this table. In recent years there has been a steady and rapid increase of imports from the continental United States. During the last seven years these imports have increased from \$11,703,519 to \$22,322,121 or practically doubled. Although sugar continues to form the bulk of the exports, amounting in 1911 to 982,609,452 pounds of raw sugar, valued at \$35,612,887, and 22,609,400 pounds of refined sugar, valued at \$1,091,918, exports of rice, fruit, and hides are of considerable importance. The fruit and nuts exported to the United States in 1911 were valued at \$2,173,619. Exports of coffee in 1911 were valued at \$436,745, compared with \$330,228 in 1910. Rice, of which a considerable quantity is raised in the Territory, is consumed almost entirely within its limits.

Grand total	25,138,247	27,512,580	46,486,412	41,938,583

SHIPPING. During the fiscal year 1911 the tonnage entered at the ports of the island amounted to 1,343,876, an increase of 35,075 over the tonnage entered in 1910. The tonnage cleared amounted to 1,347,371. There has been a great increase in tonnage from 1901, the first year of the territorial government, when it amounted to 952,504. The number of vessels entered, however, owing to the substitution of larger steamships for smaller sailing vessels, decreased from 705 in 1901 to 427 in 1911. The number of American vessels entering ports in 1911 was 313, and of all others, 114. Nearly 95 per cent. in value of the freight was carried in American bottoms.

TRANSPORTATION. There is great necessity in the islands for improvement in the transportation facilities. One of the chief needs is a suitable harbor for deep water vessels on each of the larger islands, and two on the largest island, one on each side to serve as terminals for railways. Work is progressing under federal government for meeting this need at the harbors of Honolulu, Hilo, and Kahului on the islands of Oahu, Hawaii, and Maui respectively. The construction of railways is progressing in the islands and one or two new lines are contemplated. Transportation between Hawaii and the mainland is carried on by the American-Hawaiian Steamship Company, the Matson Navigation Company, the Oceanic Steamship Company, the Union Steamship Company, and the Associated Oil Company. A few American sailing vessels continue to carry sugar around Cape Horn.

PUBLIC LANDS. Amendments to the organic act which brought about radical changes in the territorial homestead laws were made in 1910. Under these amendments a number of drawings for homesteads were held in 1911. This land amounted in area to 2817 acres, valued at \$22,278. A proposition which has long been discussed, took definite form during the year, for the creation of a national park to include the volcano Kilauea, and the country surrounding it. This is the largest active volcano in the world and one of the most constantly active. The surrounding country includes a number of picturesque pit craters, sulphur banks, and other objects of unusual interest.

During 1911 three forest reserves aggregating 85,062 acres were created, of which 77,370, or 91 per cent., is public land.

EDUCATION. The number of pupils in the public schools in the islands in 1911 was 20,597. Of these 11,397 were males and 9200 females. The teachers numbered 523, of whom 401 were female and 122 male. The schools numbered 155. In 1911 the compulsory school age was changed from 15 to 17 years, as a maximum, the minimum remaining at six years. The new law provided also for the first time for summer schools. The Japanese comprise the largest number of school children. The pupils of this race have

increased in the last eleven years from 1352 to 7607. Manual and industrial training is carried on to a greater or less extent in most of the public schools.

FINANCE. The bonded debt at the beginning of the fiscal year 1911 was \$4,079,000. This was decreased during the year by the payment of \$75,000 of the 1903 issue of 4 per cent. bonds, leaving a total bonded indebtedness of \$4,004,000 at the close of the fiscal year. The receipts of the fiscal year were \$3,482,560, while the disbursements were \$3,584,517. The disbursements exceeded the receipts by \$101,956. There were received from taxes \$2,667,175, from land revenues, \$238,407.

POLITICS AND GOVERNMENT

The legislature is composed of fifteen senators and thirty representatives. There are four senatorial districts in which 2, 3, 4, and 6 senators are elected respectively, and six representative districts in each of three of which four representatives are elected and in each of the other three of which six representatives are elected. The sixth biennial session of the legislature convened in February, 1911. This was the most important session of the legislature held in the history of the Territory. Many laws of unusual importance were passed relating chiefly to schools, public health, city and county government, taxation, public works, population, immigration, and labor. The total number of bills passed was 169. No elections were held in the Territory in 1911. The last regular biennial election at which the delegate to Congress, the representatives, and half the senators of the territorial legislature and the higher city and county officers were elected, was held in November, 1910.

Early in the fiscal year 1911 the Territory was made a military district under the department of California. During the year progress was made in the construction of fortifications on the leeward side of the island of Oahu for the protection of Honolulu and Pearl Harbor. These included two forts for large disappearing rifles, two for mortars, and one for small rifles. A military survey, largely of a topographical nature, of the island of Oahu is nearing completion. At Pearl Harbor the work under the Navy Department progressed during the year. This included extensive dredging and the construction of a large dry dock.

OFFICERS. Governor, W. F. Frear; Secretary, E. A. Mott-Smith; Attorney-General, A. Lindsay, Jr.; Treasurer, B. L. Conkling; Commissioner of Public Lands, C. S. Judd; Superintendent of Public Works, M. Campbell; Superintendent of Public Instruction, W. T. Pope, Auditor, J. H. Fisher. See **ANTHROPOLOGY**.

HAY. The hay crop in 1911 in many parts of the world, owing to unfavorable weather conditions, was short. Some European countries were compelled to meet their requirements by importation. Great Britain produced in 1911, 8,081,145 tons, and in 1910, 9,693,710 tons; Germany produced in 1911, 31,016,088 tons, and in 1910 45,633,450 tons; and Canada, 12,694,000 tons in 1911, and 15,497,000 in 1910. The hay crop of 1911 in the United States was exceptionally short, the average yield per acre being only 1.10 tons, the lowest since 1895. All kinds of hay, wild and cultivated, were low in yield and for this reason more than the usual amounts

of corn fodder and silage were made and the straw of other cereal crops was saved with much greater care than is customary. The total production for the year was 47,444,000 tons, as compared with 60,978,000 tons the year before. The area under hay in 1911 was 43,017,000 acres and in 1910 45,091,000 acres. The average farm value on December 1 rose from \$12.36 in 1910 to \$14.64 per ton in 1911. The total value of the crop of 1911 was \$694,570,000, a value exceeding that of the wheat crop for the year by more than \$150,000,000. The leading hay States and their yields in 1911 were as follows: New York, 4,858,000 tons; Pennsylvania, 3,212,000 tons; Michigan, 2,797,000 tons; Iowa, 2,592,000 tons; Ohio, 2,505,000 tons; and Wisconsin, 2,495,000 tons. In area under hay New York stood first with 4,763,000 acres, followed by Pennsylvania with 3,148,000 acres, Iowa, with 3,240,000 acres, Ohio with 2,556,000 acres, and Missouri with 2,430,000 acres. The highest average yields per acre were secured under irrigation, which is largely practiced in the West, in growing alfalfa. The annual production of alfalfa hay in the United States amounts to about twelve million tons.

HAYNE, JOSEPH ELLIS. An Afro-American clergyman, physician, and author, died January 14, 1911. He was born in 1849 in Charleston, S. C. He served throughout the Civil War as commissary sergeant in a regiment of volunteers on the Union side. After the close of the war he graduated from Atlanta University and later studied theology at Harvard University. He was the author of *The Negro in Sacred History*, *The Black Man in Natural History*, and other works.

HEDGES, HENRY P. An American jurist, the oldest graduate of Yale College, died September 26, 1911. He was born in Wainwright, L. I., in 1817, and graduated from Yale College in 1838. It didn't become a university till 1887. He returned a year later to that institution for a post-graduate course. He was admitted to the bar and went to Ohio with the intention of settling there. He soon returned to Long Island, however, and opened an office in Sag Harbor and later in Bridgehampton where he practiced until he retired from active work in 1893. He took an active interest in politics and in 1856 was a delegate to the convention in which the Republican party was founded. During the Civil War he was district attorney of Suffolk county. He was appointed county judge and surrogate in 1870. He held this office for four years and was later reelected to the same office. He took a deep interest in the history of Long Island and in 1897, when he was eighty years old, he wrote a history of East Hampton. He had the distinction of having delivered an address at the celebration of the bicentennial of that town in 1849 and at the celebration of the 250th year of its existence in 1899.

HEPBURN, JAMES CURTIS. An American physician and missionary, died September 21, 1911. He was born in Milton, Pa., in 1816, and graduated from Princeton University in 1852. In 1840 he went to China as a medical missionary and was stationed in Singapore and Amoy. He returned to the United States in 1846 and resided in New York City until 1859. In the latter year he went to Japan, where he lived in Yokohama until 1892. He compiled the first English dictionary of the Japanese language, published in 1867, also an English-Japanese dictionary. He wrote a grammar of the Japanese language, also published in 1867, and began in 1872 a translation of the Bible into Japanese, which was finished in 1888. He published a Japanese dictionary of the Bible in 1891. Dr. Hepburn was the oldest living graduate of Princeton University. He was given the degree of LL.D. by Lafayette College in 1872 and by Princeton University in 1905.

HIGGINSON, THOMAS WENTWORTH. An American clergyman, soldier, and author, died May 9, 1911. He was born in Cambridge, Mass., in 1823, and graduated from Harvard College in 1841. During his college course he became associated with many of the most famous men in the literary history of New England, among them Thoreau and Storey, Longfellow, under whom he studied, Lowell, Holmes, and Whittier. Edward Everett Hale was two years his senior in the class of '39. Upon his graduation he entered the Harvard divinity school, from which he graduated in 1847. He shortly after became pastor of a church at Newburyport. He was an aggressive Abolitionist, and his sermons against slavery were not well received by his congregation, which was made up for the most part of slave-holding sea captains. He was obliged to leave his pastorate and in 1850 moved to Worcester, where with Theodore Parker he started a movement which they called the Free Church. He was in the same year an unsuccessful candidate of the Free Soil party for Congress. At the time of the anti-slavery troubles in Kansas he hastened there and served on the staff of James H. Lee in the Free Soil forces. He was indicted for murder in connection with an attempt to free a fugitive slave, but was discharged on account of a flaw in the indictment. On the outbreak of the Civil War he enlisted in the Fifty-first Massachusetts Infantry and was commissioned captain. He at first refused to have anything to do with the war unless the slaves were armed. In 1862 he was offered the command of a regiment of negroes, organized by the military governor of South Carolina. With this regiment he took and held Jacksonville, Fla., but was wounded at Wiltown Bluffs in 1863 and in October of the following year resigned because of disability. At the close of the war he took up writing as

a profession and until 1873 lived at Newport, R. I. In 1880-81 he was a member of the Massachusetts legislature. In 1878 he removed to Cambridge, where he remained the rest of his life. He married in 1879, Mary P. Thacher. With her husband she collaborated in 1894 in a book of poems called *Such as They Are*. Colonel Higginson was a prolific writer and, in addition to contributing steadily to two periodicals, the *Woman's Journal* of Boston, a publication devoted to woman suffrage, and *Harper's Bazaar*, he wrote many books, including histories, essays, novels, and reminiscences. He was assigned by the State legislature to write the *Naval and Military History of Massachusetts*, a task which occupied him for more than three years. Colonel Higginson up to the very end of his life took the keenest interest in public affairs. Through his views of modern life ran a vein of optimism and hope which distinguished him from several of his contemporaries in New England. His knowledge of the important literary personages of the early and middle part of the nineteenth century made his reminiscent writings of the greatest interest and value, especially as he himself was a notable figure among those of whom he wrote. Among his published works are *Malbone* (a romance, 1869); *Army Life in a Black Regiment* (1870); *Atlantic Essays* (1871); *Young Folks' History of the United States* (1875); *Short Studies of American Authors* (1879); *Life of Margaret Fuller Ossoli* (1884); *Larger History of the United States* (1885); *The Afternoon Landscape* (poems, 1889); *Concerning All of Us* (1892); *Massachusetts in the Army and Navy* (1861-5, 2 vols., 1895-6); *Cheerful Yesterdays* (1898); *Old Cambridge*, (1899); *Contemporaries* (1899); *Henry W. Longfellow* (1903); *John G. Whittier* (1903); *A Reader's History of American Literature* (1903); *Part of a Man's Life* (1905), and *Carlyle's Laugh, and Other Surprises* (1909).

HIGH PRESSURE SYSTEM. See FIRE PROTECTION.

HILLES, CHARLES DEWEY. An American public official appointed in March, 1911, secretary to the President to succeed Charles D. Norton, who resigned. He was born in Belmont county, O., in 1867, and received his education in the public schools there and at the academy of Oxford, Maryland. From 1892 to 1900 he was financial officer of the Boys' Industrial School of Ohio and from 1900 to 1902 was its superintendent. From 1902 to 1909 he was superintendent, having custody of the funds of the New York Juvenile Asylum, Dobbs Ferry, N. Y. During his administration of this office buildings were erected at a total cost of \$2,000,000 and disbursements were controlled to the amount of \$3,000,000. On April 20, 1909, he was appointed assistant secretary of the treasury. His active interest prior to this time had been in the education of delinquent children. He is a director of the National Conference of Charities and Corrections, the National Conference on Education of Backward, Truant and Delinquent Children, and is also a member of the executive committee of the Playground Association of America. He delivered a series of notable addresses before the National Conference of Charities and Corrections, in 1910.

HISTORICAL ASSOCIATION, AMERICAN.

A society organized in 1884 for the promotion of historical studies. Its membership is about 3000. Its principal office is fixed at Washington and it makes an annual report to the secretary of the Smithsonian Institution. It holds annual meetings in different cities in the United States. The meeting in 1911, which was the twenty-seventh, was held at Buffalo the last week in December. The meeting was held in connection with the meeting of the American Political Science Association (q. v.). At the opening of the session the two societies listened to the addresses of their respective presidents, William M. Sloane, for the Historical Association, speaking upon "The Substance and Vision of History." The president of the Political Science Association, Gov. Simeon E. Baldwin of Connecticut, chose for his subject "The Progressive Unfolding of the Powers of the United States." The second joint meeting of the two associations was held to discuss Latin-American and Anglo-American relations. Henry Gil, a young Argentinian scholar, delivered an address on "The Point of View of Latin-America." Other papers on historical subjects were read, including one by H. W. V. Temperley, of Peterhouse, Cambridge. In another session of the meeting the British imperial problems formed the general topic and these were discussed by two Canadian scholars, Prof. W. L. Grant and Prof. C. W. Colby. At the same time Prof. C. W. Alvord made a searching analysis of British political factions on the eve of the American Revolution. A session on international relations was also held. A committee of the association is engaged in preparing a bibliography of English history and progress on this was reported. A new enterprise was undertaken by the association in granting a board of editors and a subsidy to the *History Teachers' Magazine*, conducted by Albert E. McKinley. In addition to the meeting in Buffalo, meetings were held in Ithaca and Toronto. Theodore Roosevelt was chosen president of the association for 1912. The other officers were as follows: Secretary, W. G. Leland; treasurer, Clarence W. Bowen. The publications of the association include the *Annual Report*, the *American Historical Review*, and the *Handbook*. Under its auspices is being published a series of *Original Narratives of Early American History* and it is assisting in the publication of an annual bibliography, *Writings on American History*, and of the series, *Acts of the Privy Council of England, Colonial*.

HITCHCOCK, EDWARD. An American physician and educator, died February 16, 1911. He was born at Amherst, Mass., in 1828 and graduated from Amherst College in 1849. He studied medicine at Harvard, graduating in 1853. Until 1861 he taught chemistry and natural history in Williston Seminary. From 1861 to the time of his death he was professor of hygiene and physical education at Amherst College. In 1898-9 he was acting president and dean of the faculty. From 1879 he was a member of the Massachusetts State Board of Health, Lunacy and Charity. He was the first physician in the United States to be placed in charge of a college gymnasium. He was the author of *Anatomy, Physiology, and Anthropometry*.

HITCHCOCK, GILBERT MONELL. United States senator from Nebraska. He was born in Omaha, in 1859 and was educated in the

public schools of that city and at Baden-Baden, Germany. He studied law at the University of Michigan, graduating in 1881. In the same year he was admitted to the bar and engaged in practice in Omaha until 1886, when he established the *Omaha Evening World*. In 1889 he purchased the *Morning Herald* and consolidated it with the *World* as the *World-Herald*, becoming editor of the new paper. He was elected a member of the Fifty-eighth, Sixtieth, and Sixty-first Congresses. In November, 1910, he defeated Senator Burkett in the senatorial primaries and was accordingly elected to the Senate by the legislature in January. See NEBRASKA.

HOCKEY. The annual championship series of the American Amateur Hockey League was won by the Crescent Athletic Club, which went through the league season without suffering defeat. The New York A. C. team, which won the championship in 1909 and 1910, finished second. The final standing of the clubs follows: Crescent A. C., won 6, lost 0; New York A. C., won 4, lost 2; Hockey Club of New York, won 2, lost 4; St. Nicholas Skating Club, won 0, lost 6.

The professional championship of Canada was won by Ottawa with 13 victories and 3 defeats. Ottawa also captured the series for the Stanley Cup. New Edinburgh was the victor in the series played by the Inter-Provincial Amateur Hockey Union of Canada. In an international tournament held in Chamounix, Switzerland, Canada carried off the laurels, with Germany second, France third, and Belgium fourth. England finished in last place. Cambridge won its annual match with Oxford by a score of 4 to 1.

The championship of the Intercollegiate League (U. S.) was won by Cornell, which finished the season without defeat. Harvard was second, winning 4 games and losing 1. Yale won 2, lost 3. Columbia won 2, lost 3. Dartmouth won 1, lost 4, and Princeton, champions of 1910, also won 1 and lost 4.

HODGES, CHARLES LIBBENS. An American soldier, died December 26, 1911. He was born in Providence, R. I., in 1847 and was educated in public and private schools. At the age of fourteen he enlisted as a private in the Sixty-fifth New York Volunteer Infantry and served throughout the Civil War as a private and non-commissioned officer, taking part in the siege of Yorktown, and the battles of Williamsburg, Seven Pines, Malvern Hill, Gettysburg, the Wilderness, and Cedar Creek. In 1865 he left the volunteer service and four years later enlisted in the regular army as a private. In 1875 he received his first commission, that of second lieutenant in the Twenty-fifth Infantry, a negro regiment. Five years later he was promoted to be first lieutenant and in 1891 was made captain. During this period he was on duty in the Department of the South. He took part in the war with Spain, serving in the second division of the Fifth army corps. He was appointed major of the Seventeenth Infantry in 1900. In 1901 he was transferred to the Twenty-third Infantry, and in 1903 was made lieutenant-colonel. He was promoted to be colonel of the Twenty-fourth Infantry in 1907 and four months later was made a brigadier-general. After serving as commander of the Department of the Lakes he was placed on the retired list with the rank of major-general in March, 1911.

HOFF, JACOBUS HENDRICUS VAN'T. A Dutch chemist, died in March, 1911. He was born in 1852 and studied at the universities of Delft, Leyden, Bonn, Paris, and Utrecht. In 1876 he became a teacher in the veterinary school in the 'last-named university. Two years later he was made a professor at the University of Amsterdam, and in 1896 was called to the University of Berlin. With the French chemist, Lebel, he was founder of the science of stereo-chemistry and was one of the most prominent investigators in the new physical chemistry. In 1901 he received the Nobel prize. Among his publications are the following: *La chimie dans l'espace* (1875), translated by Arnold Eiloart as *The Arrangement of Atoms in Space* (1898); *Vorlesungen über theoretische und physikalische Chemie* (1898-1900; Vol. I., 2d ed. 1901), translated by R. A. Lehfeld under the title *Lectures on Theoretical and Physical Chemistry* (1898-99); and *Acht Vorträge über physikalische Chemie gehalten auf Einladung der Universität Chicago* (1902).

HONDURAS, BRITISH. See BRITISH HONDURAS.

HONDURAS. A Central American republic. Capital, Tegucigalpa.

AREA, POPULATION, ETC. There is an unsettled boundary dispute with Guatemala. One estimate of the area is 44,274 square miles, and another 46,250. The census of December 31, 1910, showed a population of 553,446 (270,722 males and 282,724 females), as compared with 500,136 in 1905, 489,367 in 1901, and 307,289 in 1881. The bulk of the population is Indian. The larger towns, with approximate population, are: Tegucigalpa, 35,000; Juticalpa, 17,800; Nacaome, 12,040; La Esperanza, 11,500. For primary instruction, which is free, secular, and nominally compulsory, there are upwards of 850 schools, with about 30,000 pupils. Several secondary schools are maintained and, at the capital, an institution for higher and professional education.

INDUSTRIES AND COMMERCE. The people are engaged principally in agriculture and cattle raising. The number of cattle is doubtless over 500,000. The leading crops are bananas and corn; sugar cane and tobacco are raised, and there is exploitation of cabinet woods (especially mahogany) and rubber. The country is remarkably rich in metals, but they are not extensively worked, except at the Rosario mine (not far from Tegucigalpa), which is reported to have produced altogether over \$16,000,000 in gold and silver.

For fiscal years ended December 31 imports and exports have been valued as follows in pesos silver (gold premium in 1908 and 1909 about 150, in 1909 about 165): 1908, 7,075,085 and 4,585,157 respectively; 1909, 6,841,115 and 5,275,094; 1910, 7,548,541 and 6,429,700. The principal imports are cotton textiles and foodstuffs. Larger exports in the fiscal years 1909 and 1910: Bananas, 2,410,193 and 2,420,070 pesos; gold and silver, 1,513,571 and 1,945,332; rubber, 93,746 and 314,365; hides, 139,622 and 304,204; cocoanuts, 300,104 and 279,564; cattle, 126,263 and 279,125. In 1910, imports from and exports to the United States, 5,148,806 and 5,637,528

pesos respectively; Germany, 1,060,194 and 399,752.

COMMUNICATIONS. In 1910 there were in operation 171 kilometers (106 miles) of railway, of which the National Railway, from Puerto Cortés to Pimienta, comprised 90 kilometers (56 miles); the remainder was plantation railway into the banana lands. A large additional mileage is projected, and some construction work has been carried on. Steamers ply the Ulua River from its mouth 125 miles to Progreso. Telegraph lines at end of 1910, 3220 miles, with 226 offices; post offices, 264.

FINANCE. For the year ended July 31, 1910, the revenue was 4,149,078 pesos (or, after deducting cost of collection, net revenue 3,666,901 pesos); expenditure, 3,992,623 pesos. Three-fourths of the revenue is derived from liquor excise and customs; of the expenditure, 1,492,893 pesos were for war. The budget for 1910-11 balanced at 4,714,065 pesos. Debt, August 1, 1910: Internal, 4,053,370 pesos; foreign (of which much has been in dispute), £22,933,875, including capital and arrears of interest from 1872. For several years efforts have been made looking to a settlement of the foreign debt. In March, 1909, a proposition for settlement submitted by the council of foreign bondholders was approved by President Dávila, but it failed to secure the approval of the United States government. On January 10, 1911, a convention providing for the conversion of the debt was signed at Washington by the American secretary of state and a special Honduran envoy. Under this convention, which had not been ratified by the American Senate at the close of the year, it was expected that Honduras would contract a loan with Messrs. J. P. Morgan & Company of New York.

ARMY. A standing army of about 2000 officers and men is maintained and a militia or reserve, in which some 50,000 citizens are enrolled. Every citizen is liable for service in the regular army from his 21st to 35th year and in the reserve for five years longer.

GOVERNMENT. The executive power is vested in a president elected by direct vote for four years, and the legislative in a unicameral congress of 42 members. On April 18, 1907, Gen. Miguel R. Dávila assumed provisional charge of the presidency (succeeding Gen. Manuel Bonilla) and became president early in the following year. An insurrectionary movement, fomented by Bonilla in 1910, led to the resignation of Dávila, who on March 28, 1911, turned over the executive office to Francisco Bertrand as provisional president until the end of the year. Dávila seemed to be inspired by a decent patriotism and a real desire to avert further conflict. On November 3, 1911, General Bonilla was elected president.

HONGKONG. A British possession (crown colony), made up of an island off the southeast coast of China (about 30 square miles), a strip of territory on the mainland leased from China (376 square miles), and four square miles of the Kowloon Peninsula. Population (1910) of the colony, 435,986, of whom 414,931 were Chinese; of the leased territory, 100,000, all Chinese. Victoria, with 219,755 inhabitants, is the capital. Hongkong is the centre of a large transit trade, and a free port. The trade, chiefly with Great Britain, China, India, Australia, the United States, and Germany, is not officially reported. Tonnage registered (1909) 48,666; en-

tered, 11,184,701; cleared, 11,230,424. The revenue in 1910 amounted to 6,960,869 dollars Mexican, and the expenditure to 6,907,113. Public debt, January 1, 1911, £1,485,732. The Chinese section of the Kowloon-Canton Railway was completed October 4, 1911. The total length of line is 111 miles. Sir F. D. Lugard was the governor in 1911.

HOOKEER, FRANK ARTHUR. An American jurist, died July 10, 1911. He was born at Hartford, Conn., in 1844 and received an academic education. He graduated in law at the University of Michigan in 1865 and in the same year was admitted to the bar. He practiced for one year at Bryan, Ohio, and then removed to Charlotte, Mich. From 1872 to 1876 he was prosecuting attorney. In 1878 he was appointed judge of the fifth judicial circuit of Michigan and in 1893 was appointed justice of the Supreme Court of that State for the term expiring in 1914.

HOOKEER, Sir JOSEPH DALTON. An English botanist and traveler, died December 11, 1911. He was born in Suffolk in 1817, the son of Sir W. J. Hooker, who was regius professor of botany at Glasgow and subsequently director of Kew Gardens. The son was educated at Glasgow, taking the degree of M. D. at the university of that city in 1839. He soon afterwards gave up the pursuit of medicine for that of botany and began a series of travels which formed a conspicuous feature of his life. He joined the famous Antarctic expedition of Sir James Clark Ross, receiving commission as assistant surgeon of the *Erebus*, but acting in the capacity of botanist. For a few years he cruised about the southern seas, visiting Australia, New Zealand, and the Falkland Islands. He gathered together an enormous mass of botanical information and over 5000 specimens of plants which, with those discovered on the voyages of Captain Cook and others, he discussed in six large volumes under the titles of *Flora Antarctica*, *Flora Novæ Zelandiæ*, and *Flora Tasmania*, 1844-60. These works at once gave him an eminent position in science. In 1845 he received the appointment as botanist to the Geological Survey of Great Britain and did excellent work in fossil botany. Soon afterwards he undertook another long journey to the northern frontiers of India. This expedition, the expenses of which were defrayed by the British government, lasted over three years and included the botanical and geographical explorations of many Himalayan peaks and passes, which were probably trodden then for the first time by a European. He made large collections which, joined with those of his friend, Dr. Thomson of the Botanical Gardens, Calcutta, aggregated nearly 7000 specimens. A narrative of this expedition is contained in *Himalayan Journeys*, 1852-4. In 1855 he was appointed assistant director of Kew Gardens, of which his father had been appointed director in 1841, and ten years later he succeeded his father as director, a position which he held until 1885. In 1860 he undertook a journey in Palestine and eleven years later visited Morocco on a botanical expedition, in the course of which he explored a portion of the Great Atlas range of mountains. His next journey was to the United States, where, in 1877, in company with Professor Asa Gray he studied the botany of the Rocky Mountains and the general distribution of American plants. In 1868 he pre-

sided over the Norwich meeting of the British Association. The address which he delivered on that occasion attracted much attention as it supported the Darwinian theory, which in those days was not generally accepted. Hooker, indeed, had a considerable share in the development of the theory of evolution. In 1873 he was chosen president of the Royal Society of which he had become a Fellow in 1847. He was knighted commander of the Star of India in 1877. In 1907 on the occasion of his ninetieth birthday, he received the Order of Merit. In addition to the works mentioned above his most important writings are contained in *Flora of British India* (1874); *Students' Flora of the British Islands*, and the great work, *Genera Plantarum*, undertaken in conjunction with his friend, George Bentham. This began to appear in 1862. Sir Joseph Dalton was the most eminent of living botanists. He received many decorations in the form of medals from learned societies.

HOOKWORM DISEASE (Uncinariasis: Ankylostomiasis; Miner's Anæmia). An active campaign against this disease was carried on during 1911 in several of the Southern States, especially North Carolina. The Rockefeller Commission held a conference at Atlanta, Ga., in February, at which the field agents of the commission organized for active work. Investigations in Georgia showed that in 138 out of 145 counties of that State, hookworm infection existed. In North Carolina the report of the State board of health for the first three months of the year showed that 1153 of the 1500 physicians in that State made reports on hookworm disease, and 519 of these report that they have treated cases. Altogether, 19,933 cases of hookworm disease were reported. It is estimated that 25,000 cases have probably been under treatment. Of the 16,994 specimens sent to the State laboratory for examination, infection was found in 5178.

Many dispensaries were established for the especial purpose of treating hookworm anæmia. Mississippi was the first to start this work, in 1910, with a dispensary at Columbus, which was treating 300 cases a month during 1911. In Alabama, there were four dispensaries in Geneva county, 5 in Dale county, 3 in Coffee county, and 2 at Houston. That the people were fully alive to the seriousness of the situation was shown by the result following the distribution of a circular in one county, announcing that free clinics for hookworm patients would be held at stated intervals. Up to April 14, the total number of patients coming in for treatment in response to this notification was 1416, and on one day as many as 439 patients applied for treatment at one clinic. In Florida a handbook of information, prepared under the direction of the State board of health, was generally distributed. In this brochure a history of the work in the State is given, together with a description of the worm, its distribution, life cycle, the symptoms of uncinariasis, and the diagnosis and treatment.

Stiles and Gardner conducted experiments for the purpose of determining the length of time hookworm eggs may retain their vitality in the soil and under various conditions of drying and temperature. They found that the soil under and around the privy is not entirely free from infection with hookworm even five months after the privy was last used, although the infection was considerably reduced at the end of

SIR JOSEPH HOOKER
BOTANIST, DIED DECEMBER 11, 1911

four months. When the infected material has undergone decomposition under water, most of the hookworm eggs are dead in about ten weeks. They believed it would not be safe to use such material as a fertilizer in less than three months. It was shown that chloride of lime failed to kill hookworm eggs in 22 to 40 hours.

As the result of an extensive investigation covering several years, Gunn reports that hookworm disease is found in 50 to 80 per cent. of the miners working in certain mines in California, and that the infection is present in Nevada mines also. As early as 1902, Stiles, of the Public Health and Marine Hospital Service, who first described the disease in America, discovered that infection was present among the copper miners of Virginia, and the coal miners of the Cummock district, and in the region of the Haile gold mines. It is believed that the infection was introduced by imported European miners, this disease being widely prevalent in the mines of various European countries. Gunn says that up to six years ago miner's anæmia was unheard of in California, except for a few imported cases. In 1905 he called attention to the fact that a large number of Porto Ricans were coming to California and that over 50 per cent. of them were hookworm "carriers." In the latter part of 1910, under the auspices of the California State board of health, he investigated the conditions existing in certain gold mines in California and found that the disease was endemic and the infection extensive, being as high as 75 per cent. in some of the mines. Two cases were found in San Francisco which had unquestionably been imported from the Hawaiian Islands, where the plantations have been badly infected by thousands of Porto Ricans, who have been employed there for years, and by the Chinese and Japanese. Through the recently established bureau of tropical medicine of the San Francisco board of health, Gunn has investigated the subject of the importation of hookworm disease, and in so far as the infection from the Hawaiian Islands is concerned, he finds that of a total of 355 examinations of individuals coming to California from various tropical regions, 171 came from Hawaii, and 15 per cent. of these were infected with the hookworm. Of 59 Porto Ricans examined, 24 were found to harbor the parasite. The results of this investigation correspond very closely with those he obtained six years ago, when an examination of over 100 Porto Ricans in San Francisco demonstrated infection in more than 50 per cent., and he regards the problem of hookworm prevention in California as a matter of considerable importance.

HOOSAC TUNNEL. See ELECTRIC RAILWAYS.

HOPS. The hop crop of the world in 1911 was very uneven and below the average in quantity. The German fields suffered considerable injury from attacks of the red spider and untoward weather conditions, and as a result they ranged from good to bad. In Prussia the hop crop has decreased in general since 1899 and the crop of 1911 was the smallest in quantity and the lowest in quality for the last twelve years. Most European countries produced smaller crops than in 1910, but in Russia the production for the two years was about the same. In the United States fair crops were secured in the Pacific Coast States, while in New York the crop was extensively injured by

blue mold and vermin, this injury in some places approaching 50 per cent. The world's production in 1911 was estimated at 132,000,000 pounds or 44,000,000 pounds less than the crop of 1910. The well-known Saaz hop regions produced 9,350,000 pounds, as compared with 18,700,000 pounds the year before. Austria-Hungary produced on 50,635 acres 19,800,000 pounds, against 31,680,000 pounds in 1910. The German Empire, which in 1910 produced 44,000,000 pounds, yielded in 1911 only 20,900,000 pounds. The French yield in 1911 was about 4,950,000 pounds, Holland and Belgium produced 6,050,000 pounds, and Russia 6,600,000 pounds. The English yield was 36,080,000 pounds, while England's consumption is about 66,000,000 pounds. The United States produced 44,000,000 pounds, the production by States given in bales being: California, 87,000; Oregon, 80,000; New York, 30,000, and Washington, 23,000 bales, or a total of 220,000 bales. The world's crop for the year was over 55,000,000 pounds short of the world's consumption, which is about 187,000,000 pounds. Quick sales were made immediately after harvest, so that at the close of the year few hops remained in original hands. The rise in prices raised the value of the crop in the United States 40 per cent. over the five-year average.

HORMONAL. A liquid extract obtained from the spleen of an animal killed at the height of digestion. It is prepared by killing the animal, usually a guinea-pig, at the time when its digestive process is at the highest point. The spleen is removed and an extract made under aseptic precautions. Hormonal is a yellowish liquid, which is often turbid, but the slight precipitate does not appear to affect its efficiency. It is claimed that the extract has the property of exciting the peristalsis of the intestine, and it is therefore recommended in the treatment of chronic constipation and as a means of relieving paresis of the intestine in peritonitis and after abdominal operations. A prophylactic injection at the time of operation on the abdomen will, it is believed, obviate post-operative intestinal paresis. The drug may be given by the mouth, by intramuscular or by intravenous injection, a special preparation being required for each of these methods.

HORSE BREEDING. See STOCK-RAISING.
HORTICULTURAL EXHIBITION, ROYAL INTERNATIONAL. See HORTICULTURE.

HORTICULTURE. Unseasonable weather conditions in Europe and America alike were responsible for a rather serious shortage in the commercial and local supplies of early fruits and garden crops. The winter stock of vegetables was short, and the prices, especially of potatoes, often prohibitive. Several municipalities in Germany and one or two in the United States bought potatoes and sold them at cost. Thanks to a late growing season with plenty of moisture, and probably in some cases to the fruiting of new plantings, good to excellent crops of late apples, pears, plums, peaches, and grapes, as well as citrus fruits, figs, and olives, were secured in both Europe and America. On account of crop shortages early in the season, followed by a later active demand for fresh products, the total pack of canned and dried fruits and vegetables was only sufficient to meet current needs and was subject to speculation with resulting high prices.

The United States produced nearly 30,000,000 barrels of apples, as compared with about 24,-

000,000 barrels in 1910, and Canada's yield was over 3,000,000 barrels, or an increase of 75 per cent. over 1910. Nova Scotia produced a banner crop of over 1,000,000 barrels. During the season ending October 31, California shipped a record-breaking citrus crop of 14,000,000 boxes, as compared with 10,000,000 boxes in 1910. Florida's citrus crop was about 4,000,000 boxes. Twelve thousand, five hundred and thirty-nine ears of fresh deciduous fruits and about 183,300 tons of cured fruits were shipped from California in 1911, as compared with 11,936 cars and 151,275 tons, the final figures for 1910. Shipments of fresh grapes and of cured prunes were notably heavy.

EXPORT TRADE. The value of all fruits exported from the United States in the fiscal year 1911 was \$23,893,663, as compared with \$18,885,654 in 1910 and with \$8,415,103 in 1902. The imports of fresh fruits have steadily increased from \$17,436,184 in the fiscal year 1902 to \$24,177,160 in 1910, and \$27,017,632 in 1911. Fourteen million, three hundred and seventy-five thousand and seventy-five dollars' worth of bananas alone were imported in 1911, as compared with \$11,642,693 worth in 1910. New Orleans imports as many bananas as any other two ports in the world. The United States imported \$14,497,435 worth of nuts in 1911, over half of which were almonds and walnuts.

China is now exporting walnuts; \$43,829 worth were exported to the United States in 1910 and larger shipments were made last year. These nuts are produced in Manchuria and northern China, and are so hardy that the United States Department of Agriculture is introducing them for trial in the Northern States. Hawaii's canned pineapple pack has increased from 2000 cases in 1901 to about 800,000 cases in 1911. Porto Rico exported \$1,654,958 worth of oranges, pineapples, and grapefruit in 1911. The great demand for cocoanut oil has led to the rapid development of cocoanut culture in the Philippines, which are now supplying about one-third of the world's consumption of copra, or dried cocoanut, from which the oil is produced. In 1899, at the commencement of the American occupation, the islands shipped copra to the value of \$656,870 to all countries, as compared with \$9,899,457 in 1911. The copra is largely shipped to France to be made into oil and other products, although exports to the United States have increased rapidly the past two or three years.

During the year a successful test shipment of oranges and lemons from New South Wales was received in British Columbia. A large shipment of fresh peaches from Wenatchee Valley, Washington, was successfully marketed in London twelve days after starting. Canadian fresh peaches have been shipped abroad for a number of years. The establishment of peasant ownership in Ireland has given a marked impetus to fruit-growing. Exports of apples from Ireland to England five years ago did not exceed \$150,000 annually. Last year they totaled \$650,000.

The interest in commercial fruit culture has extended over a wide territory in recent years. Turkestan, for example, exports about 300,000,000 kegs of apples, pears, plums, walnuts, etc., worth in Europe about \$37,000,000; and to encourage this industry express trains are being run a distance of over 3000 miles to Riga. The fruit-growers in Crimea export over \$10,000,000

worth of fruit to Russia and England, and are now organizing a cold-storage warehouse modeled on that of Château Renard in France (see HORTICULTURE, 1910). Measures are being taken to perfect the culture of export fruit in the Caucasus region of Russia.

The recent rapid extension of the olive industry in California was attributed partially to the law which no longer allows cheap cotton-seed oil to be labeled as olive oil and partially to the extension of the ripe pickle market. Recent heavy plantings have absorbed the supply of nursery stock. In order to stimulate the better culture of olives in France, the growers are to receive an annual bounty until the year 1921 of about \$1.25 per acre for properly cultivated trees over 15 years old.

The establishment of the date industry in Arizona and California now seems assured, since the difficulties in ripening the better varieties have recently been overcome by the Arizona Experiment Station. By using an oven with proper regulation of moisture and heat, Deglet Noor dates may be rapidly ripened. The planting of this variety in the Salton Basin, along the lower Colorado, and in southern Arizona up to the altitude of 1200 feet, is now definitely recommended.

FRUIT BY-PRODUCTS. The utilization of by-products is one of the most striking characteristics of modern industry. A recent example is found in Italy, where a means has been discovered to turn to account the hitherto worthless seeds of the grapes used in wine-making. Oil is now extracted from them on a commercial scale by a process of direct heating with tetrachloride of carbon. The latter is obtained in abundance in Italy in the preparation of electrolytic soda. Private concerns in Florida have undertaken to place on the market the juices of oranges and grapefruit, thereby opening a way for the utilization of windfalls and scarred fruit. Likewise, a high grade of pineapple syrup is now being made in Hawaii. The manufacture of banana food products has become an important industry in Jamaica. Banana meal and chips are already fairly well known in Europe, especially in Germany, as a nutritious breakfast food.

ROADSIDE FRUIT TREES. The value of roadside fruit trees as road taxpayers is indicated by the results in the province of Hanover, where along certain stretches of the roads the auction sales of fruit have amounted to \$595 per mile. This province has some 7000 miles of country highways bordered with fruit trees, the profit of which is appropriated toward the upkeep of the roads. The natives have a healthy respect for the law and do not touch the fruit.

COLD STORAGE OF TABLE GRAPES. The government investigators in the United States and in Australia successfully demonstrated the practicability of storing choice table grapes for several months without seriously impairing the color and freshness of the fruit. A large shipment of California grapes stored in New York City on November 8 was removed six weeks later with selling price enhanced 150 per cent. The most important results of this experiment are the full corroboration of the suitability of cleaned redwood sawdust as a filler for grape packing, the necessity for prompt and quick cooling, and the apparent superiority of the round drum as a fruit package over the ordinary boxes used in previous experiments.

INTRODUCTION OF HARDY FRUITS. F. N. Meyer, the well-known agricultural explorer, secured a number of hardy fruits in Central Asia during the year, which are to be tried out in the more rigorous sections of the United States. Among the large number of things which were secured in Russian Turkestan, Chinese Turkestan, and Siberia were a collection of table grapes, some of them possessing special shipping qualities; forms of the bush cherry, an exceptionally hardy fruit for testing on the Great Plains; varieties of peach, nectarines, and apricots, promising for trial along the northern border of the peach belt; seeds of hardy wild apple and apricots, growing at high altitudes; and large fruited varieties of oleaster, which are among the hardest of all fruit plants. The hardness of the large fruited Chinese jujubes, previously introduced, was indicated as far north as the State of Washington. A wide area of adaptability seems open to this new dry-land crop, whose preserved fruits compare favorably with the true date in quality.

By crossing native varieties of fruits with hardy fruits from Asia, N. E. Hansen has succeeded in breeding a hardy race of plums for South Dakota, many of which bid fair to become standard market varieties.

PLANT BREEDING. G. W. Oliver of the United States Department of Agriculture recently announced an improved method for the rapid multiplication and testing of new or rare fruits and ornamental plants, which is known as the "seedling-inarch" method, and is so easily performed that it may be employed by the amateur and professional nurseryman alike. Oliver has employed it principally with tropical fruits, but has also found it adapted to roses, chestnuts, walnuts, hawthorns, oaks, and many other hard-wooded plants not readily propagated by older methods. The manipulation of the seedling-inarch and its modifications is fully described in Bulletin No. 202 of the Bureau of Plant Industry, entitled "The Seedling-Inarch and Nurse-Plant Methods of Propagation."

By using a series of "adjuvant" stocks, G. Coudere, a French investigator, has been able to flower and fruit grape-vine cuttings the first season. This is accomplished by grafting a stock having one internode and a good root system under each eye along the length of the cutting, which remains in a horizontal position. This investigator's vineyard experiments with "adjuvant" grafts, or the use of two stocks for one scion, have shown that the companion stocks have a much greater period of duration than either of the stocks used alone; thereby prolonging the life of the vineyard.

At the Canadian Experimental Farms, Ottawa, a comparative study of many different individual trees of the same varieties of apples has been conducted for over ten years. The results show clearly that our fruit trees should be grown from selected scions. In a group of seventeen Wealthy apple trees, for instance, one tree has yielded practically five times as much fruit as the poorest trees and nearly twice as many as the average yield of the whole group. Similar studies being made by the Bureau of Plant Industry in California citrus groves are showing a striking variation in the total yield and the commercial quality of the fruit borne by individual trees under comparative environmental conditions. Many fruit-growers were actively searching for the unprofitable trees.

NEW METHODS OF PRESERVING POLLEN IN A VIABLE CONDITION. While pollinating a number of different fruits, S. N. Green found that pollen inclosed in empty quinine capsules retains its vitality for a long time. The capsules may be mailed to distant points without trouble. Working along the same line, J. Simon, a German investigator, found that pollen grains may be preserved in a viable condition for several weeks by placing the pollen in small glass vessels with the mouth loosely plugged with cotton, and then inclosing these vessels in a larger vessel containing water-free calcium chloride. The calcium chloride, which is placed to a depth of a few centimeters and covered with a layer of cotton, absorbs the humidity from the air in the larger vessel.

SPRAYING. Widespread demonstration experiments in 1911 convinced many fruit-growers that spraying is a highly profitable practice, and that the combination of self-boiled lime-sulphur and lead arsenate is the standard remedy for the principal fungus diseases and insect pests of the apple and peach. Orchardists in New Zealand were importing American spraying machinery and lead arsenate.

The effectiveness of spraying should be increased in a large measure by using a nozzle such as that recently devised by Dr. G. E. Stone of the Massachusetts Experiment Station and which gave very satisfactory results in spraying large trees from a high-pressure machine. The spraying was just as thorough and the cost was about one-third of that in which Vermorel and other fine-mist nozzles were used.

IMPROVED METHOD OF BLEACHING NUTS. In the old process of bleaching with a chloride of lime solution, the kernels often become rancid or taste, at least, of the chemical used; hence California nut-growers are rapidly adopting a new process which consists in subjecting walnuts and the like to the action upon the shells of an electrolyzed solution of salt. One electrolyzer will produce in eight hours sufficient bleach for eight tons of walnuts. Aside from the preservative property of the salt, the process is cheaper than the old method.

PROCESSING PERSIMMONS. The experiments begun by the United States Department of Agriculture several years ago with a view to removing their astringency in advance of the softening of the fruit have shown definitely that the processing carried on by the Japanese in sake casks may be duplicated under more exact conditions by surrounding the fruit with an atmosphere of carbon dioxide gas. The perfection of a practical method of using this process under commercial conditions will lead to the production of non-astringent persimmons, which may be pared and eaten like an apple.

The Royal International Horticultural Exhibition to be held on the grounds of the Royal Hospital at Chelsea, England, will be opened by his majesty, King George, on May 22, 1912. The exhibition has been announced as the great horticultural event of the present generation. There will be 428 classes of entry, representing all phases of horticulture and including collective exhibits from several foreign countries, as well as from individual counties in Great Britain. An international conference of horticultural educators and investigators will be held during the period of the exhibition.

LITERATURE. Among the recent contributions to horticultural literature may be mentioned:

Leitfaden für gärtnerische Pflanzen-Züchtung, by M. Lobner (Jena, 1909), which treats of methods for breeding new ornamentals, fruits, and vegetables; *The Art of Grafting and Budding*, by C. Baltet (London, 1910, sixth ed.), is an English translation of the author's *L'Art de Greffer*; *The Fruit-Growers' Guidebook*, by E. H. Favor (St. Joseph, Mo., 1911), a popular manual of fruit-growing for the amateur and a reference work for the commercial orchardist; *Produce Markets and Marketing*, by W. T. Seibels (Chicago, 1911), deals with the principles of marketing fruit and produce; *Root and Stem Vegetables*, by A. Dean (London and Edinburgh, 1911), discusses the culture of root and blanching stem crops, including a chapter on growing mushrooms; *De l'Art des Jardins*, by M. Fouquier (Paris, 1911), comprises a pictorial-historical account of the evolution of garden art in France; *What England Can Teach Us about Gardening*, by W. Miller (Garden City, N. Y., 1911), this comparative study of the various types of ornamental gardening in England and America is offered as a contribution to the foundation of an American style of gardening; *Der Garten* by A. Grisebach (Leipzig, 1910), a descriptive and pictorial account of formal gardening in different ages in Europe, including an extensive bibliography; *Shade Trees in Towns and Cities*, by W. Solotaroff (New York and London, 1911), deals with the selection, planting, and care of shade trees—their municipal control and supervision; *Annual and Biennial Garden Plants*, by A. E. Speer (London, 1911), the plants are arranged alphabetically and briefly considered relative to their value, uses, and culture; *The Bulb Book*, by J. Weathers (London, 1911), is a descriptive, cultural treatise on bulbous and tuberous plants for the open air, stove, and greenhouse, including plants from all parts of the world having bulbs, corms, tubers, or rhizomes with the exception of orchids; *The Practical Flower Garden*, by Helena R. Ely (New York and London, 1911), treats of the culture and color arrangement of shrubs and flowers; and *The Book of the Flower Show*, by C. H. Curtis (London and New York, 1910), which is a reference work for those having the management of flower shows.

HORTON, MARCUS N. An American educator, died May 18, 1911. He was born in Oxford, N. Y., in 1829. He received his education at the Delaware New York Literary Institute and at Williams College, graduating from the latter institution in 1853. In 1855 he was associated as instructor in natural science with Dr. George Kerr. Soon after he became principal of the Walton, N. Y., Academy. In 1861 he again became associated with Dr. Kerr, first as professor of botany and physics in the New York State Agricultural College, and next as associate principal of the Jefferson County Institute. In 1864 he became principal of the Oneida, N. Y., Seminary. He studied law and in 1869 was admitted to the bar. He served as principal of various high schools in Pennsylvania. He was one of the oldest graduates of Williams College.

HOSPITALS. The Presbyterian Hospital of New York City received a bequest of \$100,000 from the estate of E. O. Kindberg, \$100,000 by the will of Miss Adèle Dortic, and \$10,000 by the will of Miss Frances S. Welles, the latter to be used to make more comfortable the nurses and patients in the general wards and to brighten their lives. Among other gifts may be

mentioned one of \$10,000 to the Montefiore Home, New York City, from Mrs. Adolf Schefel; the Geneva Hospital received \$2000 from the estate of Bernard Amend; the Methodist Episcopal Hospital of Brooklyn a \$5000 bequest from the late William Lawrence. By the will of the late George L. Fox of Brooklyn St. Catherine's Hospital received \$25,000, the Brooklyn Hospital \$20,000, Eastern District Hospital \$100,000, St. Mary's Hospital \$25,000, German Hospital \$25,000, St. John's Hospital \$10,000, and the New York Ophthalmic and Aural Institute \$10,000. St. Catherine's Hospital also received \$10,000 from the estate of Charles Engert and St. Mary's Hospital, the German Hospital Society, and St. Peter's Hospital each \$5000 from the same source. Mr. Abraham Abraham bequeathed \$50,000 to the Jewish Hospital of Brooklyn. The New York Post-Graduate Hospital was completed in October. The building is said to be the tallest hospital structure in the country. The main building is ten stories in height, with a solarium on the roof. On the ground floor are the dispensary rooms for the visiting staff, patients, trustees, etc.; on the second floor the medical and surgical amphitheatre, wards, examination rooms, X-ray laboratory, and minor operating room; the mezzanine floor is given over to diseases of the eye, ear, nose, and throat; the fourth floor is occupied by a children's ward, maternity ward, and museum; sleeping-rooms for nurses and servants are on the fifth floor; the sixth, seventh, and eighth floors are devoted to private patients; the ninth floor to private operating rooms and wards; the tenth floor to an isolation ward and the dining-rooms. The main building cost about \$650,000, and with the adjoining ambulance station, training school for nurses, and cost of ground, represents an investment of about \$1,000,000. The New York Hospital bought as a site for a new home the entire block bounded by Fifty-fourth and Fifty-fifth streets and Eleventh and Twelfth avenues, at a cost of about \$1,000,000. This site was selected because of the ample supply of light and fresh air, the DeWitt Clinton Park being directly to the south and the Hudson River to the west. It is stated that the proposed group of buildings will surpass any similar group in the city. The New York Hospital is the oldest in the city, having been chartered by the authority of King George III. in 1771. The Mount Sinai Hospital purchased property adjoining its present structure in East Ninety-ninth Street for the site of a pathological building, on the strength of a donation of \$200,000 by Adolph Lewisohn. The new Contagious Disease Hospital on Ellis Island, constructed at a cost of over \$75,000 by the United States government and designed for the exclusive use of immigrants suffering from contagious diseases, was opened January 22. There are 16 measles wards, with room for 480 patients; diphtheria and scarlet fever patients will be accommodated in detached pavilion wards. Sixty acres of ground were purchased by the Burke Foundation on Mamaroneck Avenue, White Plains, for \$180,000. Cottages to accommodate 300 convalescent patients will be built. A new hospital was opened at Rockaway Beach. It is a brick structure, costing \$100,000, raised by popular subscription. A new hospital was also opened at Coney Island; the institution accommodates 184 patients and is under the auspices of the Children's Aid Society of Brooklyn.

Mrs. Samuel W. Bowne gave \$50,000 for a tuberculosis hospital for the city of Poughkeepsie. A fund of \$31,771 to complete and furnish the Webber Hospital, Biddeford, Maine, was raised and the hospital was opened during the summer. The Bigelow Memorial Hospital, North Conway, N. H., was formally dedicated May 18. This hospital is situated midway between North Conway and Intervale; it is built on the cottage plan and has accommodation for twenty patients. St. Margaret's Hospital, Dorchester, Boston, was opened for public inspection May 5. The will of Mrs. Rosa A. Cole of Kingston left \$100,000 to the Jordan Hospital, Plymouth, Mass., and the will of Mrs. W. O. Moseley gave the sum of \$200,000 to the Anna Jacques Hospital, Newburyport, Mass. St. Vincent's Hospital of the same city received \$10,000 from the estate of Rev. Thomas Griffin. Twenty thousand dollars was left by John Ashton to the Massachusetts General Hospital in Boston; this institution also received \$25,000 by the will of Mrs. Sarah A. Matchette, who in addition left \$50,000 to the McLean Hospital for the Insane, Waverley. The Rotch Memorial Infants' Hospital, on the grounds of the Harvard Medical School, was completed. The building has a frontage of 120 feet and is three stories in height. The will of the late Ellis A. Yarnall gave \$200,000 to the Episcopal Hospital at Philadelphia. A new addition to the Methodist Episcopal Hospital of Philadelphia was dedicated on February 25; the building cost \$40,000, and will be used for kitchens, storage rooms, dining-rooms, and dormitories. By the will of Miss Ada George, the Nursery and Childs' Hospital and the Church Home and Infirmary, Baltimore, each received \$1000. The Presbyterian Hospital, New Orleans, was formally opened on February 4. The will of John W. Gates devised \$150,000 to the Mary Gates Memorial Hospital of Port Arthur, Tex. In Illinois, Elizabeth Shaw bequeathed \$30,000 to the Dixon Public Hospital; a hospital for the care of destitute and crippled children, costing \$50,000, was erected near Wheaton, and the new Sparks Hospital, Carlisle, was dedicated September 21. The new Schneck Memorial Hospital, costing \$25,000, was dedicated at Seymour, Ind. The new building of the German Hospital, Kansas City, constructed at a cost of \$150,000, was opened November 21. In California, through the generosity of the heirs of Calvin Page and D. O. Mills, St. Luke's Hospital, San Francisco, received an endowment of more than \$1,000,000; the new Children's Hospital, San Francisco, was opened October 20; the cornerstone of St. Luke's Hospital, San Francisco, to cost about \$400,000, was laid with impressive ceremonies October 18; plans were completed for the erection of the Psychopathic Hospital at Los Angeles, to cost \$100,000; and Mrs. Whitelaw Reid gave \$60,000 to the Red Cross Guild Hospital, San Mateo.

HOUSSAYE, HENRI, Count. A French historian and academician, died September 24, 1911. He was born in Paris in 1848, the son of Arsène Houssaye, the novelist. His earliest intention

was to become a painter, but he soon turned to literature, publishing a *History of Appelles* at the age of 19. His education was received at the Lycée Napoléon. In the Franco-German War, 1870-71, he served as a first lieutenant. After a long sojourn in Greece he published a work on *Alcibiades in the Athenian Republic*, which won for him the Academy's prize of 20,000 francs. After occupying himself with subjects relating to ancient Greece for many years, he turned his attention to France and Gaul, and in 1876 published a clever work describing the first siege of Paris, B. C. 52. This was a remarkable achievement, both from an archaeological and a military point of view. He then became interested in the history of Napoleon and the post-revolutionary era of France. This resulted in a brilliant work on *The Decline and Fall of Napoleon I.*, insuring his election to the Academy, which followed on the death of Leconte de Lisle in 1894. He was for a time editor of the *Journal des Débats*, and the *Revue des Deux Mondes*. In 1904 he published a work entitled *Napoléon, homme de guerre*. Among his other published works are *L'art français depuis dix ans*; *Les hommes et les idées*; *La réforme de la loi militaire*, and *1815, la terreur blanche*.

HOWARD UNIVERSITY. An institution for the higher education of negroes, founded in Washington, D. C., in 1867, under the Freedmen's Bureau. The university is under the control of the Interior Department of the United States government. The students enrolled in all departments of the university in 1910-11 numbered 1182. The faculty numbered 114. Two professors, one from the Iowa State University and one from Lafayette College, were called to the new school of applied science, which was opened in 1910. The chair left vacant in the school of theology by the Rev. Dr. John L. Ewell was filled by the Rev. Dr. Pezavia O'Connell. A new science building was erected at a cost of \$100,000, and more than six hundred students are taking advantage of the courses in physics, chemistry, and biology. A new steam heating, electric lighting, and power plant was finished in the fall of 1911. This also cost over \$100,000. The opening of the year 1911-12 saw a notable increase in the number of students registered. The entering freshman class was more than twice as large as the entire enrollment in the college department five years ago.

HOWELL, EDWIN EUGENE. An American geologist, died April 16, 1911. He was born in Genesee county, N. Y., in 1845, and was educated in the public schools and in special study at the University of Rochester. In 1872-3 he acted as geologist in the United States geographical surveys west of the one hundredth meridian. He was also engaged in the Powell survey of the Rocky Mountain region in 1874. He made in the following year a relief map of the Grand Cañon of the Colorado. Five years earlier he had modeled a relief map of the island of Santo Domingo, which was probably the first relief map made in the United States. After resigning from the geological survey he was for a time at the Rochester Museum. A few years later he removed to Washington, where he established the "Microcosm," an institution devoted chiefly to the manufacture of geologic materials, especially the modeling of relief maps. His most notable work consisted of the plastic representation of the physiography, topography, and geologic structure which are to be found

on the walls of museums and schoolrooms throughout the United States. He was one of the founders of the Geological Society of America, and was connected with a number of other scientific organizations, national and local. Among his writings are: *A Report on the Geology of Portions of Utah, Nevada, Arizona, and New Mexico in Explorations and Surveys west of the One Hundredth Meridian* (1875); *Rocks of the New York System* (1878), and numerous articles on meteorites in journals and scientific proceedings.

HUGHES, CHARLES JAMES, JR. United States senator from Colorado, died January 11, 1911. He was born in Kingston, Mo., in 1853, and graduated from Richmond college in 1871. He studied law at the University of Missouri, and in 1879 started in the practice of law at Denver. He took an active interest in politics, and in 1888 and 1904 was Democratic candidate for presidential elector. He was presidential elector in 1900. From 1892 he was professor of mining law in the Denver law school, and from 1903 to 1906 lectured on the same subject at the Harvard law school. He was elected United States senator in 1909 for the term expiring in 1915. Senator Hughes was one of the best known lawyers in the West, and during his term in the Senate participated in many important discussions and became, in spite of his short period of service, an influential member of that body.

HYGIENE. Mr. Leonard Hill made an interesting series of experiments at the London Hospital, which have led to a somewhat novel doctrine of ventilation. All the current teaching of the hygiene of ventilation runs on the chemical purity of the air, but according to Hill the essential thing in ventilation is heat, not chemical purity. It does not matter if there is 1 per cent. more carbon dioxide and 1 per cent. less of oxygen. In the worst ventilated rooms there is not 1 per cent. less than the normal amount of oxygen. The only effect of an excess of carbon dioxide is to increase the depth of respiration. To produce any toxic effect a much higher amount is necessary. As to organic impurities derived from respiration, there is no physiological evidence of their toxicity or that they are of any importance except as an indicator of the number of bacteria in the air. Chemical purity of the air is desirable in order to diminish the chance of infection, but in halls and theatres there is very little chance of preventing infection from persons who sneeze or cough out thousands of bacteria. To prove these views Hill made the following experiments. Into a small chamber which holds about three cubic meters, he put eight students and sealed them up. They got into the chamber laughing and joking. At the end of half an hour, the wet-bulb temperature had risen to 85 F. They had ceased to laugh and joke and their faces became congested. The carbon dioxide had gone up 5 per cent. and the oxygen down to a corresponding extent. Hill then put on three electric fans and merely whirled the air about just as

it was. The effect was like magic. The students at once felt perfectly comfortable, but when the fans were stopped they felt as bad as ever. In another experiment, a man in the chamber breathed through a tin of soda lime, so that no carbon dioxide was admitted. When the wet-bulb temperature rose to 85° sweating and discomfort came on just as in the first experiment, and when the fans were turned on, he got the same relief. Then a bag containing carbon dioxide was connected with the chamber, and enough of the gas was admitted to raise the percentage of carbon dioxide to 2 per cent. The man in the chamber felt no ill effects whatever, but he was observed to breathe more rapidly. These experiments, Hill asserts, show that all the discomfort from breathing air in a confined space is due to heat and moisture, not to carbon dioxide. Even after forty-five minutes in the chamber, there were no after effects, such as headache. In a crowded room the air is at the body temperature and there is no circulation; therefore it becomes saturated with moisture and there is no way of keeping the body temperature down. We cannot radiate heat because the air about us is of the same temperature, and we cannot lose heat by evaporation, because the air is stagnant. The open-air treatment that is so generally advocated, Hill declares, is not so much a matter of fresh air, as it is the constant cooling of the body by the circulation of air, which makes us eat more and be more active. This leads to a general strengthening of the body, because the blood is not only circulated by the heart, but by every muscle in the body. There cannot be efficient circulation without constant movement and activity; if there is constant cooling by ventilation, an individual is kept more active and the general health is improved.

Frequently our confidence in the efficacy of milk inspection is shaken. In the spring of 1911, a remarkable epidemic of virulent tonsillitis occurred in Boston and its suburbs, affecting over a thousand persons and causing forty-eight deaths. Unimpeachable evidence showed that the epidemic was spread in milk from a particular dairy farm, the infection of the milk apparently originating in an epidemic of the same character which prevailed in the neighborhood of the farm during some six weeks preceding the Boston outbreak. The milk supply of Boston has been for some years thoroughly inspected and excellent regulations were in force to avoid contagion. Searching inquiry failed to reveal any instance of neglect or lack of precaution; in short, the conditions surrounding the implicated milk supply were ideal. Here infection leaped the barriers of all known precautions. Boston has had other similar epidemics. In 1907 there were 1700 cases of scarlet fever traced to one source of milk supply, and seventy-two cases of diphtheria to another. In 1908 there was a milk-borne outbreak of typhoid fever totaling 400 cases. In 1910 there was a scarlet fever epidemic of 842 cases. Including the present outbreak, there have been over 300 cases of epidemic disease traced to milk in the immediate neighborhood of Boston during a period of five years.

Epidemics of "septic sore throat" in England have been attributed to contaminated milk, but in the United States such outbreaks have occurred infrequently or else have been unrecognized. A recent epidemic of diphtheria among

the students and faculty of the University of Minnesota, however, was traced to the milk supply, in this case coming from one of the cleanest and best regulated dairies in the State. It is suggested that a carrier among the dairy workers was responsible for the infection. The difficulty of guarding milk against contamination of this sort brings the question of Pasteurization seriously to the front.

HYGIENE EXHIBITION, INTERNATIONAL. See FOOD AND NUTRITION.

ICELAND. A Danish crown colony, covering 40,456 sq. miles, with a population (February 1, 1911) of 85,089. Imports (1908), 16,375,000 kroner; exports, 10,704,000. The minister (1911, Kristjan Jonsson) resides at Reikjavik, and is the responsible executive.

IDAHO. POPULATION. The Thirteenth Census, taken in 1910, showed a population of 325,594, as compared with 161,772 in 1900, an increase in the decade of 101.3 per cent. This was the largest increase shown in any of the States except Washington and Oklahoma. The principal cities of the State, with their populations in 1910 and 1900 are as follows—the figures in parenthesis are for 1900: Boise, 17,558 (5957); Pocatello, 9110 (4046); Cœur d'Alene, 7291 (508); Lewiston, 6043 (2425); Twin Falls, 5258.

AGRICULTURE. The Thirteenth Census included statistics of agriculture in the State, dated April 15, 1910. At that date the total number of farms in the State was 30,807, as compared with 17,471 in 1900. The land in farms was 5,183,604 acres, as compared with 3,204,903 acres in 1900. The improved land in farms was 2,778,740 acres, as compared with 1,413,118 acres in 1900. The average acres per farm was 171.5. The value of farm property, including land, buildings, implements and machinery, domestic animals, poultry, and bees was \$305,317,185, as compared with a value of \$67,271,202 in 1900. The average value of all property per farm was \$9911, as compared with \$3850 in 1900. The average value of land per acre was \$41.63, as compared with a value of \$11.07 in 1900. Of the 30,807 farms in 1910, 27,619 were operated by owners (of which 17,983 were mortgage-free and 9010 were under mortgage) and managers, and 3188 by tenants. Of those operating and managing farms, 24,694 were native whites, 5708 foreign born whites, and 405 negroes or other non-whites. The total value of the various kinds of domestic animals and poultry and bees in 1910 was \$49,775,309, as compared with a value in 1900 of \$21,657,974. The cattle numbered 453,807, valued at \$11,330,639; horses and colts, 197,772, valued at \$19,832,423; mules, 4036, valued at \$481,301; swine, 178,346, valued at \$1,398,727; sheep and lambs, 3,010,478, valued at \$15,897,192. The poultry of all kinds numbered 1,053,876, valued at \$598,190. The acreage, production, and value of the principal crops of the State will be found in the table below:

	Acreage	Prod., bu.	Value
Corn1911	11,000	330,000	\$280,000
1910	10,000	320,000	227,000
Wheat1911	517,000	15,860,000	10,468,000
1910	472,000	10,658,000	7,674,000
Oats1911	331,000	14,564,000	5,826,000
1910	319,000	12,282,000	5,158,000
Rye1911	8,000	68,000	46,000
1910	3,000	60,000	40,000

(Cont.)	Acreage	Prod. bu.	Value
Potatoes ...1911	29,000	5,220,000	\$3,393,000
1910	28,000	3,976,000	2,584,000
Hay1911	525,000	1,628,000	12,373,000
1910	491,000	1,473,000	13,257,000

a Tons.

MINERAL PRODUCTION. The total value of the mineral products in 1910 was \$15,437,403, as compared with \$14,908,819 in 1909.

This State produces a considerable quantity of gold and silver. The output of gold in 1910 was 53,059 fine ounces, valued at \$1,096,842. The output of silver was 7,369,742 fine ounces, valued at \$3,979,661. In 1911 the production of gold was 56,563 fine ounces, valued at \$1,169,261, a slight increase over the production of 1910. The silver output in 1911 was 7,507,802 fine ounces, valued at \$4,129,291. This increase was due to the steady production at an increased rate from the lead-silver mines of the Cœur d'Alene region and at Gilmore.

The production of copper in the State in 1911 showed a considerable decrease from the output of 1910. As in previous years the main output was derived from the Snowstorm mine in the Cœur d'Alene district. The output from this mine was considerably less than in 1910. A considerable amount of copper is produced, chiefly in the Cœur d'Alene district. In 1910 the output was 6,877,515 pounds of blister copper, as compared with 7,096,132 pounds in 1909.

MANUFACTURES. The Thirteenth Census, taken in 1910, included statistics of manufactures in the State for the calendar year 1909. The results will be found summarized in the table below. It will be seen from this that while the manufacturing interests of Idaho are not much in actual volume, they showed a remarkable increase in the five years from 1904 to 1909. The industries in which are the largest number of establishments, and the greatest capital invested, are those producing lumber and timber products. The value of these products in 1909 was \$22,400,000. Flourmill and gristmill products ranked next, with a value of \$10,689,000. Following are cars and general shop construction and repairs by steam railway companies, printing and publishing, manufactures of butter, cheese and condensed milk, liquors, brick and tile. The total number engaged in manufactures in 1909 was 9909, of whom 9646 were males and 263 females. For the majority of the wage earners, the prevailing hours of labor were 60 hours a week. The following table gives a summary of the results of the censuses for the calendar years 1904 and 1909.

	Number or amount 1909	1904
Number of establishments...	725	364
Persons engaged in industry.	9,909	3,791
Proprietors and firm members.....	831	371
Salaried employees	858	359
Wage earners (average number)	8,220	3,061
Primary horsepower	42,804	16,987
Capital	\$32,477,000	\$9,689,000
Expenses	18,981,000	7,619,000
Services	6,482,000	2,438,000
Salaries	984,000	379,000
Wages	5,498,000	2,059,000
Materials	9,920,000	4,069,000
Miscellaneous	2,489,000	1,112,000
Value of products.....	22,400,000	8,769,000
Value added by manufacture (value of products less cost of materials)	12,480,000	4,700,000

FINANCE. The receipts during the fiscal year 1911 were \$3,792,000. The disbursements were \$2,946,000, leaving a balance in the treasury December 31, 1911, of \$1,699,283. The total outstanding bonded debt of the State at the end of the fiscal year was \$2,402,750.

LEGISLATION. The only statutes of general interest adopted by the legislature of 1911 were measures providing for submission to the people of the initiative, referendum, and recall. The recall does not apply to judicial officers.

STATE GOVERNMENT in 1911: Governor, James H. Hawley; Lieutenant-Governor, Lewis H. Sweetser; Secretary of State, W. L. Gifford; Treasurer, O. V. Allen; Auditor, S. D. Taylor; Attorney-General, D. C. McDougall; Superintendent of Education, Grace Shepard—all Republicans, except Hawley.

JUDICIARY: Supreme Court: Chief Justice, George H. Stewart, Republican; Associate Justices, James F. Ailshie, Republican, Isaac N. Sullivan, Republican; Clerk, I. W. Hart.

STATE LEGISLATURE, 1911: Senate, Republicans, 14; Democrat-Fusion, 9; House, Republicans, 34; Democrat-Fusion, 25; joint ballot, Republicans, 48; Democrat-Fusion, 34; Republican majority, Senate, 5; House, 9; joint ballot, 14.

The representatives in Congress will be found in the article UNITED STATES, section *Congress*.

ILLINOIS. POPULATION. The Thirteenth Census, taken in 1910, showed a population of 5,638,591, as compared with 4,821,550 in 1900, a gain of 16.9 per cent. in the decade. The State ranks third among the States in point of population. The principal cities, with their populations in 1910 and 1900, are as follows: The figures in parenthesis are for 1900. Chicago, 2,185,283 (1,698,575); Peoria, 66,950 (50,100); Springfield, 51,678 (34,150); Rockford, 45,401 (31,051); Quincy, 36,587 (36,252); Joliet, 34,670 (29,353); Decatur, 31,140 (20,750); Moline, 24,199 (17,248).

AGRICULTURE. The Thirteenth Census included statistics of agriculture, of date April 15, 1910. On that date the farms in the State numbered 251,872, as compared with 264,151 in 1900, a decrease of 12,279, or 4.6 per cent. The land in farms amounted to 32,522,937 acres, as compared with 32,794,728 in 1900. The improved land in farms was 28,048,323 acres, as compared with 27,699,219 in 1900. The average acres per farm was 129.1. The value of farm property was \$3,905,321,075, as compared with a value in 1900 of \$2,004,316,897, an increase in value of \$1,901,004,178. This property included land, buildings, implements and machinery, domestic animals, poultry, and bees. The average value of all property per farm was \$15,505, as compared with a value of 7588 in 1900. The average value of land per acre was \$95.02, as compared with \$46.17 in 1900. The farms operated by owners and managers in 1910 were 147,493; by tenants, 104,379; of the farms operated by owners, those free from mortgage numbered 86,713, and those mortgaged, 55,792. Of the 251,872 farms in the State 217,053 were operated by native whites, 33,394 by foreign-born whites, and 1425 by negroes or other non-whites. The total value of the various kinds of domestic animals, poultry, and bees in 1910 was \$308,804,431, as compared with a value in 1900 of

\$193,758,037. The cattle numbered 2,440,577, valued at \$73,454,745; horses and colts, 1,452,887, valued at \$163,363,400; mules, 147,833, valued at \$18,140,335; swine, 4,686,362, valued at \$36,210,179; sheep and lambs, 1,059,846, valued at \$4,843,736. The poultry of various kinds numbered 21,409,835, valued at \$11,696,650. The acreage, production, and value of the various crops in 1910-11 will be found in the table below:

		Acreage	Prod., bu.	Value
Corn1911	10,150,000	334,950,000	\$184,222,000
	1910	10,250,000	400,775,000	152,294,000
Wheat1911	2,625,000	42,000,000	37,380,000
	1910	2,444,000	36,360,000	32,261,000
Oats1911	4,220,000	121,536,000	51,045,000
	1910	4,325,000	164,350,000	49,305,000
Rye1911	52,000	874,000	708,000
	1910	58,000	1,009,000	716,000
Potatoes1911	138,000	6,900,000	6,210,000
	1910	146,000	10,950,000	6,460,000
Hay1911	2,376,000	a 1,948,000	33,116,000
	1910	2,795,000	3,717,000	44,604,000
Tobacco1911	1,000	b 750,000	58,500
	1910	1,500	1,185,000	112,575

a Tons. b Pounds.

MINERAL PRODUCTION. The mineral products of the State in 1910 were valued at \$141,809,121, compared with a value in 1909 of \$143,051,729. Petroleum was produced to the amount of 33,143,362 barrels, valued at \$19,669,383 in 1910, as compared with 30,898,339 barrels, valued at \$19,788,864, in 1909.

That total production of coal in the State in 1910 amounted to 45,900,246 short tons, valued at \$52,405,897, as against 50,904,990 short tons in 1903, valued at \$52,405,897. The State was the storm centre of the struggle between the operators and the mine workers, which began April 1, 1910, and tied up the industry in most of the mining districts of the State for nearly six months. It was the most protracted and most bitterly contested strike in the history of bituminous coal mining in the United States (see *STRIKES*). As a result of the decreased production, Illinois lost second place as a producer of coal to West Virginia. In 1910 out of a total of 72,264 men employed in the coal mines of the State, 67,218 were idle for an average of 136 days. In the fiscal year ending June 30, 1910, there were 390 fatal and 737 non-fatal accidents in the coal mines of the State.

FINANCE. The reports of the treasurer are made for the biennial period, October 1, 1908, to September 30, 1910. There was in the State treasury on the former date, \$3,859,263. The receipts for the biennial period amounted to \$21,611,919 and the disbursements to \$21,046,572, leaving in the treasury on September 30, 1910, \$4,424,610. The bonded debt of the State outstanding October 1, 1910, was \$17,500, consisting of bonds which have been called in by a proclamation of the governor and have ceased to draw interest, but have not been surrendered. The total amount of State taxes levied in 1909 was \$83,269,865.

CHARITIES AND CORRECTIONS. The General Assembly in 1911 was more liberal in its treatment of the State charitable institutions than any of its predecessors. Its appropriations were by far the largest on record.

The total appropriations were \$9,753,098 for

two years beginning July 1, 1911, of which sum \$6,915,848 was for ordinary maintenance, \$1,184,250 for new buildings and permanent improvements, \$135,000 for a new water supply at Anna State Hospital, \$583,000 for the maintenance and new structures at the Cook County Hospital for the Insane, which the State takes over on July, 1912, \$500,000 for the purchase of a site and the construction of the underground work for a new hospital for the insane to cost not less than \$1,200,000, \$80,000 for the erection of a surgical institute for crippled children on 160 acres, which are to be donated to the State, \$10,000 for the visitation and education of the adult blind in their own homes. Among the improvements authorized are homes for employees, so that when these are constructed all the large institutions, except Anna Hospital, will be provided with such buildings. All the hospitals for the insane are now equipped with modern high-class psychopathic receiving hospitals or wards. The State Psychopathic Institute was provided with enough money to place it thoroughly on its feet and to complete its equipment and staff. It now has a director, an assistant, a chemist, a pathologist, and a bacteriologist. Liberal appropriation was also made to permit the Illinois Pellagra Commission to continue its investigations into the causes of this disease. The appropriation for the department of visitation of children was more than doubled and additions were made to its force of visitors and inspectors. The plans have been drawn for the new State prison at Joliet, and 2500 acres of land on which it is to be erected have been purchased. This institution will cost in the neighborhood of \$7,000,000, and will permit the abandonment of the present prison plant. By July 1, 1912, all insane in the county farms of the rural counties will have been removed to State hospitals under the terms of the 1907 complete State care law, and on that day the State will take over bodily the Dunning or Cook County Hospital for the Insane with its 2700 patients; thus completing the intention of this act.

EDUCATION. The total enrollment for the year ending June 30, 1911, in the public schools of the State was as follows:

Boys in graded schools....	364,118
Girls in graded schools....	361,634
Boys in ungraded schools..	145,903
Girls in ungraded schools..	136,239
Total	1,007,894
Boys in private schools....	82,108
Girls in private schools....	87,223
Total	169,331
Total enrollment.....	1,177,225

There are 11,843 school districts in the State, 10,633 of them maintaining one-room schools and the other 1210 districts maintaining schools in 2505 buildings, containing more than one room and are known as graded schools. The city of Chicago is known as one school district and has one-third of the enrollment of the State. There were 519 secondary or high schools in the State, 144 of which are maintained in buildings built especially for them.

The total cost of the public schools for the year was \$37,705,411.97, of which amount \$18,195,917.72 was paid for teaching.

The total value of school buildings and grounds owned by the public is \$88,819,064.

The proceeds of the sales of the sixteenth section that is used as an endowment fund of the public schools amounts to \$19,168,579.20, from which an income of \$847,677.75 was derived.

POLITICS AND GOVERNMENT

The legislature met in 1911 in a regular and a special session. At the regular session many important measures were passed and these are noted in the paragraph *Legislation*, below. The special session was called to pass a deep-waterway measure. It assembled June 14 and adjourned June 29 until October 24. At the October session the waterway bill was defeated. The most interesting occurrences during the session of the legislature were connected with the Lorimer investigation (see below). An attempt was made to pass a bill extending the local option area from townships to counties, but this was rejected by the lower house in April. An attempt to repeal the local option law altogether also failed to succeed. Resolutions providing for initiative and referendum caused a long and hard fight, but were beaten. Defeat also resulted to the efforts of would-be reformers of the constitution of the State to have a constitutional convention authorized.

ELECTIONS. There were no elections for State officers during the year. The most important political contests related to municipal elections. Commission government was adopted during the year by the cities of Springfield, Moline, Rock Island, Ottawa, Decatur, Dixon, Elgin, Kewanee, Jacksonville, Pekin, Waukegan, Spring Valley, and Hillsboro. A number of cities rejected the commission plan, in elections called on the question. The State Supreme Court, in the year, gave a decision upholding the constitutionality of commission government for cities.

On February 28 the first primary elections for the nomination of candidates for mayor of Chicago were held in that city. The leading candidates for the Republican nomination were Charles E. Merriam, professor of political science at the University of Chicago and a member of the city council, John R. Thompson, a prominent business man who was affiliated in politics with the regular organization, and John F. Smulski, who was also identified with the party organization, and had the support of Governor Deneen. As a result of the primaries, Mr. Merriam received 53,089 votes, or more than the votes cast for Mr. Thompson and Mr. Smulski combined. The Democratic candidates for the nomination were Carter H. Harrison, who had four times previously served as mayor of the city, E. F. Dunne, a former mayor and Andrew J. Graham a banker. Mr. Harrison received the nomination, but there were cast for him only 1420 votes more than those cast for Mr. Dunne, who received 53,696 votes. After a campaign of unusual bitterness, Mr. Harrison was elected mayor on April 4. He received 177,997 votes to 160,672 cast for Mr. Merriam. With a few exceptions, the Republican organization leaders were hostile to Mr. Merriam, who had received his nomination at the direct primaries. One of the causes of his defeat was believed to be his assertion that he would be strict in the enforcement of the laws and ordinances relating to liquor selling and Sunday amusements. Supporters of Mr. Harrison, on the other hand, raised a cry of personal liberty

and no "blue laws." The State law prohibiting Sunday liquor selling has been unenforced in Chicago for many years. Other demands of the Merriam campaign were progressive policies, administrative efficiency, and opposition to all forms of graft. Mr. Harrison duplicates the history of his father, who also served four terms as mayor of Chicago, and then after an interval of six years was again chosen.

An election was held in the State on November 7 for judges and minor officers. In Chicago seven Republican and three Democratic Superior Court judges were chosen.

THE LORIMER ELECTION CHARGES. The charges brought against Senator Lorimer to the effect that his election to the United States Senate had been brought about by bribery and corruption in the State legislature, continued to form the chief political feature of the year in Illinois. These charges were first published in April, 1910, and were included in the alleged confession made by Charles A. White, a Democratic member of the House, who charged that certain leaders in the State legislature had raised a fund which was used to bribe Republican members to vote for Mr. Lorimer. These charges were brought before the United States Senate and, at the request of Mr. Lorimer, the committee on elections was appointed to investigate the charges. These investigations were carried on during the fall and early winter of 1910. On December 12 a majority of the committee made a report to the Senate in which Senator Lorimer was exonerated from any complicity in bribery. In this report the majority members declared that the charges were made by persons who were unworthy of belief, and that in any event Senator Lorimer received enough untainted votes to secure his election. Two members of the committee dissented from the views of the majority. Senator Frazier of Washington in the minority report took the ground that the evidence, reasonably construed, implicated enough members of the legislature to have made Senator Lorimer's election turn upon these transactions. Senator Beveridge of Indiana, having made a careful study of the case, on January 9, 1911, presented a minority report to the Senate and at the same time offered a resolution to declare vacant the seat held by Senator Lorimer, on the ground that he had not been duly and legally elected. The debate on the acceptance or rejection of the report by the Senate continued until March 1, when a vote was taken. The Senate refused to unseat Senator Lorimer by a vote of 46 to 40.

In the meantime the State legislature had taken action. Early in January a resolution was passed authorizing a thorough investigation of the charges by a committee of the Senate. This investigation brought out certain new facts. The most important of these was the charge in the Chicago *Record-Herald* that a corruption fund of \$100,000 had been raised by business men to elect Senator Lorimer. H. H. Kohlsaat, editor of the newspaper, was at once summoned before the committee. He testified that he had heard that such a sum had been raised, but refused to reveal the source of his information on the ground that he was pledged to secrecy by his informant. After Mr. Kohlsaat had been threatened with imprisonment for contempt, Clarence H. Funk, general manager of the International Harvester Company, made public the fact that he was the editor's informant. Mr.

Funk appeared before the committee and testified that Edward Hines, head of a lumber company, had solicited his contribution to a fund for reimbursing those who paid \$100,000 to elect Senator Lorimer, and that Edward Tilden, president of the National Packing Company, had been named by Hines as collector for the fund. Mr. Funk declared he had refused to contribute to the fund. On the publication of this testimony, Mr. Hines declared emphatically that he had never solicited a contribution from Mr. Funk. He had previously testified as a witness that he had never discussed with anyone the question of raising money, and had heard of no one who had raised or solicited money for the election of Senator Lorimer before or after his election. As a result of this and other testimony, on May 17, the special investigating committee of the State Senate—commonly called the Helm committee—reported that the election of Senator Lorimer could not have been accomplished without bribery and corruption. On the following day a resolution was adopted asking the United States Senate to reopen the investigation. Even before this request had been received from the Illinois Senate, an attempt had been made in the United States Senate to reopen the investigation. On April 6, Senator La Follette of Wisconsin submitted a resolution reciting that new testimony had been made available as a result of the investigation by the committee of the Illinois Senate, and asking for the appointment of a select committee of five Senators, three Republicans and two Democrats. A substitute for this resolution was passed June 1, directing the committee on privileges and elections to reopen the investigation. On June 5 the committee named a sub-committee of eight members to inquire into all phases of the charges made. This committee was composed of Senators Dillingham, Gamble, Jones, and Kenyon, Republicans, and Johnston, Fletcher, Kern, and Lea, Democrats. Senators Dillingham, Gamble, Johnston, and Fletcher had voted against unseating Senator Lorimer at the previous session, and Senator Jones had voted in favor of unseating him. Senators Kenyon, Kern, and Lea were not in the Senate at the time of the previous investigation, but were known to be opposed to the seating of Senator Lorimer. The hearing was carried on in Washington during the summer, and in addition to the testimony heard at the previous investigation several new witnesses appeared. Among them were former Senator Albert J. Hopkins, Mr. Kohlsaat, and others. The hearings were in Washington until the middle of August, and were then held in Chicago. At the end of the year no report had been made by the committee. The Lorimer defense sought to show a bitter feeling between Mr. Hines and Mr. Funk, and charged that a newspaper, the Chicago *Tribune*, had framed a conspiracy to unseat Senator Lorimer because of political enmity.

OTHER EVENTS. Charges of fraud in the elections of 1910 were made in several counties of the State, and on February 14, 22 men were indicted for selling votes at an election held in Petersburg, Menard county. A still more serious condition prevailed in Vermillion county, in which is the city of Danville. Investigation of the alleged election frauds in this county were undertaken by a grand jury under the direction of Judge R. E. Kimbrough. Politicians and office-holders of both parties, including

Judge Kimbrough himself and Mayor Platt of Danville, were subpoenaed and asked to tell the grand jury all the facts in their possession in regard to the reported bribes of 3000 to 4000 voters. It was alleged in the newspapers that the Democrats had spent \$40,000 to carry the city of Danville in 1910. On March 14 the Vermillion county grand jury found 37 indictments, 14 of which were for electoral corruption. The small number of indictments compared with the accusations made, caused the public impression that the inquiry was a failure. No prosecutions were made during the year, under the indictments.

On April 5 the Chicago Vice Commission, appointed nearly a year previously to investigate conditions in Chicago, made its report to the city council. The report showed that Chicago spent \$15,000,000 annually on sexual vice, and recommended new State and municipal laws to declare evil resorts nuisances, an identification system for women in resorts, the protection of immigrant girls, a trade school and hospital for unfortunate women, and other regulations. For immediate initiation of reform the commission recommended the establishment of a morals commission and a morals court by the city. No action was taken on the report, in the year.

In October the city council approved a proposal made by the mayor that a commission be appointed to form plans for a subway system for the city of Chicago. A commission of three engineers was created to prepare plans for the subway and also for an outer harbor—on the lake front. This commission, headed by John Ericson, city engineer, reported plans for a subway system to serve the downtown district and to accommodate street cars and elevated railway trains, and also plans for two piers as the nucleus of the projected lake-front harbor. Construction on both the subway and the harbor will be begun, it is expected, in 1912. The subway, as projected, is to cost about \$10,000,000; the harbor about \$5,000,000. An outer harbor is considered necessary because of the congestion of the Chicago River, heretofore the city's chief harbor.

An investigation of the police force of Chicago, begun in the summer of 1911, by the city civil service commission, resulted in the discovery that the force was honeycombed with graft and corruption. As a result of the investigation the force was reorganized, the office of inspector being abolished and new regulations adopted designed to prevent the protection of vice and crime by police officers. At the end of the year the investigation was in progress, with every prospect that it would develop still more startling exposures.

LEGISLATION. The important measures passed at the legislative session of 1911 include the following: Several important bills were passed relating to legal proceedings. Provision was made for a system of probation in criminal cases, together with the suspension of final judgment. An act regulating the civil service of the State was considerably amended, and a bill was passed resembling the act relating to civil service in counties. An interesting measure provides for the establishment of a surgical institution for the surgical treatment of children under fourteen years of age, suffering from physical deformity or injuries of a nature likely to yield to surgical skill and treatment, and which unless so treated would probably make such chil-

dren in whole or in part public charges in after life. Another bill authorized the establishment of classes and schools by school directors and boards of education for deaf, dumb, and blind children. School directors and boards of education in cities are authorized to establish and maintain classes and schools for delinquent children. A measure was passed which imposed the most stringent regulations on the employers of labor, and liability for non-compliance. The laws in relation to coal mines and subjects relating thereto were amended, and provision was made for the health and safety of persons employed in mining coal. The pure food law of the State was amended, especially as regards the storing, packing, and distribution of food. The use of a common drinking cup, glass, or utensil in public and private schools and other public and semi-public places is prohibited. The act relating to dependent children was amended so as to provide that if the parents of such children are poor and unable properly to care for them, and are otherwise proper guardians, and it is for the welfare of the children to remain at home, the court having jurisdiction over such matters may enter an order finding such facts and fixing an amount of money necessary to enable the parent or parents properly to care for the children.

February 24 the contract between the city of Chicago and the People's Gas Light and Coke Company, the monopoly supplying gas to the city, ended. Gas had been furnished under this contract for 85 cents per 1000 feet. The election of Mayor Harrison was caused in part by his insistence that gas could be furnished at a fair profit to the company for 70 cents a 1000 feet. An expert on the question, W. J. Hagenah, employed by the outgoing city administration (that of Mayor Busse) refused to report on the price before the election of April 4. On April 17 he reported to the city council that the company could furnish gas at a fair profit, at the price of 77 cents. The incoming mayor and Democratic aldermen were dissatisfied with this recommendation and hired E. W. Bemis as an expert, to report on the question. Mr. Bemis reported, July 5, that fair rates would be 75 cents for the first year of a new contract, 70 cents the second, third, and fourth years, and 65 cents for the fifth year. July 18 the council passed an ordinance fixing a rate of 70½ cents per 1000 feet, for five years. The gas company sought the aid of the courts and August 2 Judge Gibbons, in the State court, fixed a rate of 80 cents to be charged after August 7 and until a final adjudication of the proper cost.

On the plea of non-resident stockholders, the company took the case into the federal court. November 14 Judge Kohlsaat, in the United States District Court, enjoined the enforcement of the 70½ cent rate. December 4 he denied a permanent injunction against enforcement of the city council's rate, and the year closed with the case still in the federal court, but the State court case pending, and with prospects of a long-drawn-out suit before a settlement of the matter.

STATE GOVERNMENT IN 1911. Governor, Charles S. Deneen; Lieutenant-Governor, John G. Oglesby; Secretary of State, James A. Rose; Treasurer, Edward E. Mitchell; Auditor, J. S. McCullough; Attorney-General, W. H. Stead; Adjutant-General, Frank S. Dickson; Superintendent of Public Instruction, Francis G. Blair;

Superintendent of Insurance, Fred W. Potter—all Republicans.

JUDICIARY. Supreme Court: Chief Justice, Orrin N. Carter, Republican; Associate Justices, Alonzo K. Vickers, Republicans; William M. Farmer, Democrat; George A. Cooke, Democrat; John P. Hand, Republican; Frank D. Dunn, Republican; James H. Cartwright, Republican; Clerk of the Court, J. McCan Davis, Republican.

STATE LEGISLATURE, 1911. Republicans, Senate, 34; House, 82; joint ballot, 116; Democrats, Senate, 17; House, 68; joint ballot, 85; Independents and Prohibition, Senate, 0; House, 3; joint ballot, 3; Republican majority, Senate, 17; House, 11; joint ballot, 28.

The representatives in Congress will be found in the article UNITED STATES, section Congress.

ILLINOIS, UNIVERSITY OF. An institution of higher learning at Urbana-Champaign, founded in 1867. The students enrolled in the various departments of the university for the year 1911-12 were 5207. The total number of members of the faculty was 615. The productive funds of the university amounted to about \$650,000. The income is derived from State appropriation, from the United States government, and other sources and amounts to about \$1,500,000. Among the important additions to the faculty for the collegiate year 1911-12 were the following: Raymond M. Alden, professor of English; Charles R. Richards, professor of mechanical engineering; Chester G. Vernier, professor of law; Burt R. Rickards, associate professor of municipal and sanitary dairying; Alexander D. MacGillivray, professor of systematic entomology, and Alonzo M. Buck, assistant professor of railway engineering. Two new buildings were opened during the year: Lincoln Hall, a three-story building, erected to provide accommodations for advanced work in several departments, at a cost of \$250,000; and a considerable addition to the power plant. The library contains about 175,000 volumes. The president is E. J. James, Ph. D., LL. D.

ILLUMINANTS. See ELECTRIC LIGHTING.

IMMIGRATION AND EMIGRATION.

The number of immigrants arriving in the United States from foreign countries in 1911 was less than in 1910 by 162,983. The figures for the respective years are 878,587 and 1,041,570. The decrease in 1911 was confined to the last eight months of the fiscal year. In addition to the aliens of the immigrant class, there entered 151,713 non-immigrants. These are travelers from abroad who intend to make only a temporary stay in the United States. The total number of aliens arriving in 1911 was therefore 1,030,300. The departures during the year numbered 518,215. Of these 295,656 were emigrants and 222,549 non-emigrants. The non-emigrants are those former immigrants who made temporary visits to foreign countries. It will be seen that the total gain in population of immigrants in the fiscal year 1911 was 512,085, as compared with 817,619 in 1910 and 543,843 in 1909. The actual gain was therefore less in 1911 than for several years. The table below shows the country of origin and the number of immigrants in 1910-11. This table includes only immigrants:

Countries	1910	1911
Austria	185,793	82,129
Hungary	122,944	76,928

Countries (cont.)	1910	1911
Belgium	5,402	5,711
Bulgaria, Servia, and Montenegro	4,737	4,695
Denmark	6,984	7,555
France, including Corsica	7,383	8,022
German Empire	31,283	32,061
Greece	25,888	26,226
Italy, inc. Sicily and Sardinia	215,537	182,882
Netherlands	7,534	8,358
Norway	17,538	13,950
Portugal, including Cape Verde Islands and Azores	8,229	8,374
Rumania	2,145	2,522
Russian Empire and Finland	186,792	158,721
Spain, including Canary and Balearic Islands	3,472	5,074
Sweden	23,745	20,780
Switzerland	3,533	3,458
Turkey in Europe	18,406	14,438
United Kingdom:		
England	46,706	52,426
Ireland	29,855	29,112
Scotland	20,115	18,796
Wales	2,120	2,162
Other Europe	151	377
Total Europe	926,291	764,757
China	1,968	1,460
Japan	2,720	4,520
India	1,696	524
Turkey in Asia	15,212	10,229
Other Asia	1,937	695
Total Asia	23,533	17,428
Africa	1,072	956
Australia, Tasmania and New Zealand	998	984
Pacific islands, not specified	99	59
British North America	56,555	56,830
Central America	893	1,193
Mexico	18,691	19,889
South America	2,151	3,049
West Indies	11,244	13,403
Other countries	43	39
Grand total	1,041,570	878,587

It is shown by this table that the largest number of immigrant aliens came from Italy, and the second largest number came from the Russian empire and Finland. There was a marked decrease if immigrants from Austria and Hungary and the total from Russia and Finland also decreased, as it did from Italy.

The largest number of immigrant aliens was admitted at the port of New York. These numbered 637,003. At Boston 45,865 were admitted; at Philadelphia, 45,023, and at Baltimore, 22,866. From border stations were admitted 58,350. The States to which the largest number of aliens went as permanent residents were: New York, 260,278; Pennsylvania, 114,922; Illinois, 76,565; Massachusetts, 70,811, and New Jersey, 46,782. Every State in the Union received some of the immigrants admitted in 1911.

OCCUPATION OF IMMIGRANTS. Of the total number of aliens admitted in 1911, 12,035 were classed as professional, including clergymen, editors, teachers, engineers, lawyers, physicians, artists, etc.; 148,892 were classed as skilled laborers; 471,638 were classed as miscellaneous, and 246,022 were classed as having no occupation. These included women and children.

SOURCES OF IMMIGRATION. As noted above, the larger number of the aliens coming to the United States are from Italy, Russia, and Austria-Hungary. While in former years a very large number of the immigrants came from Teutonic and Celtic countries of northern and western Europe, during 1911 only 202,391 came from these countries, which include Denmark, Belgium, France, Germany, Netherlands, England, Ireland, Scotland and Wales.

A serious feature of the question of immigration is the fact that many of the aliens now coming to the United States do so as the result of artificial means of inducement held out by agents and corporations, whose principal business is to increase the steerage passenger business and to introduce into the United States an over-abundant and therefore cheap supply of common labor. Another fact which tends to accentuate the seriousness of the problem is the habit of most of the immigrants to colonize and thus discourage distribution and even and quick assimilation. So far no plan has been devised which affords a practical and far-reaching system of distribution of present-day immigration. Efforts have been made by societies and otherwise to make such distribution, but so far the results have not been entirely successful.

JAPANESE IMMIGRATION. The immigration of Japanese into the United States and Hawaii in 1911 showed an increase over 1910. In the former year 4282 Japanese were admitted, as compared with 2598 in 1910. The figures for 1911, however, should be compared with those of 1908, the first year in which the present regulations for restriction of Japanese immigrants went into effect. In that year 9544 Japanese were admitted to the continental United States, and 8694 to Hawaii.

CHINESE EXCLUSION. During 1911 5107 Chinese were admitted as compared with 5950 in 1910, 6395 in 1909, and 4624 in 1908. These Chinese aliens were made from the exempt class, which includes merchants, students, teachers, etc. In 1911 692 Chinese were deported, as against 969 in the preceding year. In spite of the efforts to enforce the exclusion law a number of Chinese each year secure admission into the United States through illegitimate means.

EMIGRATION INTO CANADA. The question of the emigration of citizens of the United States into Canada was much discussed during 1911, chiefly in connection with the attempt to pass the reciprocity measure. During the fiscal year 119,753 persons left the United States for Canada, while 105,512 emigrated from Canada to the United States. In 1910 the emigrants from the United States to Canada numbered 116,377, and the immigrants from Canada to the United States, 94,528.

LEGISLATION. As a result of the report of the Immigration Commission made in 1910, a new law regulating immigration was introduced into Congress, but no action had been taken on this at the end of the year. This measure makes an attempt to regulate and restrict immigration and contains provisions for the abolition of the so-called white slave traffic.

INCH, RICHARD. A rear-admiral, retired, of the United States navy, died April 21, 1911. He was born in Washington in 1843, and was educated in East Washington Seminary and Washington Seminary. In 1863 he was appointed third assistant engineer in the United States navy, and after passing through several grades, became chief engineer. He was made commander in 1899, captain in 1902, and was

retired as rear-admiral in 1905. He served from 1863 to the end of the Civil War. From 1899 he was placed in charge of the engineering department of the Cavite Naval Station, Philippine Islands. Before this he was chief engineer of the *Boston* at the battle of Manila Bay, and was advanced three grades for conspicuous merit on that occasion.

INDIA, BRITISH. British India is that part of East India governed by the king of Great Britain (emperor of India) through the governor-general of India or the latter's subordinates. India, as defined by the British Parliament, includes British India and the Native States under the suzerainty of the British government. Capital of British India, Calcutta. Announcement was made in December, 1911, that the seat of government would be transferred to Delhi.

AREA AND POPULATION. The census of March 15, 1901, showed that British India, with an area of 1,097,901 square miles, had a population of 231,072,832, and that the Native States, comprising 675,267 square miles, had 62,288,224 inhabitants; total, 1,773,168 square miles and 294,361,056 inhabitants. The census of March 10, 1911, showed a total population of 315,132,567, of whom 244,267,542 were assigned to British India and 70,864,995 to the Native States. The following table gives the returns in detail:

	Sq. miles	Population
States of British India:		
Ajmer-Merwara	2,711	501,395
Andamans and Nicobars.....	3,143	26,459
British Baluchistan	45,804	414,412
Bengal	107,363	52,668,269
Bombay (Presidency)	123,064	19,672,642
(Aden)	(80)	(46,165)
Burma	236,738	12,115,217
Central Provinces and Berar	100,345	13,916,308
Coorg	1,582	174,976
Eastern Bengal and Assam..	106,130	34,018,527
Madras	141,726	41,405,404
North-West Frontier Province	16,466	2,196,993
Punjab	97,209	19,974,956
United Provinces of Agra and Oudh	107,164	47,182,044
Total British India.....	1,089,445	244,267,542
Natives States:		
Baluchistan (Agency tracts).	86,511	396,432
Baroda	8,099	2,032,798
Bengal States	41,229	4,538,161
Bombay States	65,761	7,411,675
Central India Agency.....	78,772	9,356,980
Central Provinces States....	31,188	2,117,002
Eastern Bengal and Assam States	575,835
Hyderabad	82,698	13,374,676
Kashmir	80,900	3,158,126
Madras States	9,969	4,811,841
Mysore	29,444	5,806,193
North-West Frontier Province (Agencies, etc.).....	1,622,094
Punjab States	36,532	4,212,794
Rajputana Agency	127,541	10,530,432
Sikkim	87,920
United Provinces States.....	5,079	832,036
Total Native States	683,723	70,864,995
Total India	1,773,168	315,132,567
1901	294,361,056
1891	287,314,671

By a transfer of 8456 square miles from the Bengal Province (British) to the Bengal Native States, the area of British India and the area of the Native States became 1,089,445 and 683,723 square miles respectively; the population of the former area in 1901 was 231,624,807, and of the latter 62,736,249. In the foregoing table, it will be observed that the total population of the Native States includes 2,305,849 persons dwelling in various scattered states and agencies, which are included in the total area for British India.

Of the total population, 161,326,110 were males, and 153,806,427 females. The number in British India was about 78 per cent. of the total, and in the Native States about 22 per cent.

The larger cities, including cantonments, with population (subject to slight revision) in 1911: Calcutta, including suburbs and Howrah, 1,216,514; Bombay (city and island), 972,936; Madras, 517,335; Hyderabad, including suburbs, 499,840; Rangoon, 293,316; Lucknow, 260,261; Delhi, 232,859; Lahore, 228,318; Ahmadabad, 215,443; Benares, 204,222; Bangalore, 189,393; Agra, 182,419; Cawnpore, 174,037; Allahabad, 166,463; Karachi, 159,270; Poona, 157,666; Amritsar, 152,866; Mandalay, 138,456.

In 1901 the principal religions in India were thus represented: Hindu, 207,147,026; Mohammedan, 62,458,077; Buddhist, 9,476,759; Animist, 8,584,148; Christian, 2,923,241.

EDUCATION. Steady progress is reported in the development of the educational system. It is certain that the census of 1911 will show a considerably smaller proportion of illiterates than did the census of 1901, when only about one male in ten and one female in 144 could read and write. The total number of educational institutions, including primary schools, on March 31, 1900, was 150,584; in 1909, 168,228; 1910, 170,590. Total number of pupils and students in 1900, 4,463,735; in 1909, 5,984,110 (including 784,075 females); in 1910, 6,214,995 (831,954 females). Of the institutions, about 70 per cent. are maintained by the state or aided by grants, the rest being private and unaided. Expenditure on public education (exclusive of that in British Baluchistan) in fiscal years: 900, £2,515,268; 1909, £4,397,552; 1910, £4,588,082 (of which £2,412,171 from provincial revenues and local and municipal funds and £1,237,982 from fees). There are five universities (Calcutta, Madras, Bombay, Allahabad, and the Punjab); these are examining bodies (though an act of 1904 provides for a teaching system), but have numerous affiliated colleges.

AGRICULTURE. In 1909-10 some 254,000,000 acres were cropped in British India, of which about 34 per cent. was under rice, 11 per cent. under wheat, 41 per cent. under other food grains and pulses, 6 per cent. under oilseeds, and 7 per cent. under cotton, jute, and other fibres. Other crops include sugar, spices, tea, opium, tobacco, coffee, and indigo. Indigo culture has greatly declined in recent years. Of the total area under crops, nearly one-fifth is irrigated. Reported figures of production in India are not complete, details from some of the Native States being unavailable; but the statistics approximate sufficiently to the actual yield and, covering about the same territory from year to year, have a comparative value. Some of the more important yields, as officially reported for 1907-8 and 1908-9, are: Rice (cleaned), 379,211,300 and 598,909,800 cwt.; wheat, 6,106,700

and 7,590,000 tons; rape and mustard, 688,000 and 988,000 tons, sesamum, 285,700 and 474,600 tons; cane sugar, 2,046,900 and 1,841,800 tons; cotton, 4,291,000 and 4,776,000 bales (of 400 lbs.); jute, 9,817,800 and 6,310,800 bales; linseed, 163,200 and 288,800 tons; tea, 248,020,397 and 247,477,324 lbs. For 1906-7 wheat production, in bushels of 60 lbs., is stated at 317,023,500; 1907-8, 227,983,487; 1909-10, 357,940,798; 1910-11 (preliminary), 369,432,000;—linseed, in bushels of 56 lbs., is reported at 17,008,000 in 1906-7, 6,528,000 in 1907-8, 17,104,000 in 1909-10, and 22,600,000 (preliminary) in 1910-11. The 1910 cotton crop amounted to 3,809,000 bales; the estimate for 1911 was 3,102,000. Rice production in 1910, 283,038,459 metric quintals.

MINERALS. The coal output (of which about nine-tenths is in Bengal) increased from about 11,870,000 tons in 1909 to 12,046,000 in 1910. Petroleum (produced chiefly in Burma) amounted to about 215,000,000 gallons in 1910, against 19,000,000 in 1908. Salt in 1910, 1,486,000 tons; manganese ore, 801,000 tons; gold (almost entirely in Mysore), 573,000 ounces. There is a considerable output of mica, jade, and rubies.

MANUFACTURES. Cotton and jute textiles are the most important manufactures; others include paper, woollens, indigo, foundry products, beer, silk filatures, and sugar. The ancient village handicrafts still survive, though they suffer more and more from the competition of machine-made goods. There are reported as in operation in 1909-10 215 cotton mills (mostly in the Bombay Presidency), representing a capital of about £12,648,000, with 5,774,000 spindles and 74,600 looms, and an output of 593,000,000 lbs. of yarn and 245,000,000 lbs. of tissues. There were 60 jute mills (in or near Calcutta), representing a capital of £7,674,000, with 645,862 spindles and 31,418 looms. Employees in the cotton mills numbered 231,850, and in the jute mills 204,104. Owing to complaints of long hours in mills, an act of 1911 restricts the hours of adult males to 12, of women to 11, and of children to 6 per day in the textile factories.

COMMERCE. For years ended March 31, the foreign trade of India has been valued as follows, in thousands of pounds sterling:

Sea-borne trade	1900	1909	1910	1911
Imports:				
Private mdse.....	47,141	80,844	78,038	86,240
Government stores	3,062	5,008	3,727	2,901

Excess exports	13,841	5,294	22,797	28,573

Figures for the frontier trade are of doubtful accuracy; for 1909-10 imports are reported at £5,638,000 and exports, £4,545,000, and for 1910-11 imports £6,127,000 and exports, £4,952,000. The total sea-borne trade in 1911 was the largest on record, although the import value was less than in 1907-8, when it reached £119,215,000. There was an increase in imports of cotton goods, apparel, sugar, glass, spices, metals, hardware and cutlery, mineral oil, and woolen goods; but machinery and railway materials showed a decline. Values of the leading sea-borne imports of private merchandise were as follows in 1910-11, in thousands of pounds sterling: Cotton goods and yarn, 29,894; metals, 9660; sugar, 8777; machinery, etc., 3154; railway materials, 2830; mineral oil, 2259; hardware, etc., 2231; apparel, 2065; provisions, 2020; woolen goods, 2013; silk goods, 1843; liquors, 1265; glass, 1045; spices, 1028; dyes and tans, 896; carriages, wagons, etc., 854; instruments, etc., 825. Principal sea-borne domestic exports in 1910-11, in thousands of pounds sterling: Raw cotton, 23,402; seeds, 16,749; rice, 15,490; jute manufactures, 11,330; raw jute, 10,327; wheat and flour, 9060; hides and skins, 8723; opium, 8509; tea, 8278; cotton yarn and cloth, 7341; raw wool, 1891; lac, 1429; pulse, millets, etc., 1177; oils, 1067; coffee, 888; fodder, etc., 816. As may be seen from foregoing figures, the great bulk of the imports consists of manufactures; about 70 per cent. of the exports are food-stuffs and raw materials.

The percentages shared by the leading countries in the imports of private merchandise (total £86,240,000) and the exports of private merchandise (total, £136,582,000) were as follows in 1910-11: Great Britain, 61.1 per cent. of the imports and 24.9 per cent. of the exports; China (including Hongkong), 1.9 and 9.3; Germany, 4.0 and 9.0; United States, 2.7 and 6.5; France, 1.6 and 7.6; Belgium, 4.5 and 5.3; Japan, 2.6 and 6.3; Straits Settlements, 2.3 and 3.7; Austria-Hungary, 2.5 and 3.4; Java, 6.9 and 0.8; Ceylon 0.6 and 3.9; Italy, 1.2 and 3.8; other countries, 8.1 and 15.5.

SHIPPING. In 1909-10 the number of vessels which entered and cleared at the ports in the foreign trade was 8042, of 14,597,091 tons; in 1910-11, 8435, of 14,984,528 tons. Of the tonnage about three-fifths is from or to Great Britain and British possessions, and about four-fifths is under the British flag. About 70 per cent. of the trade is with Calcutta and Bombay.

COMMUNICATIONS. The length of railways open to traffic December 31, 1910, was 32,100 miles, against 31,490 miles in 1909, and 24,752 in 1900. There were under construction or sanctioned 2676 miles. Of the mileage open, about 52 per cent. was standard gauge and about 42 per cent. meter gauge. Nearly all the railways are owned by the state and administered by the railway board, though many are leased to and operated by companies. Up to December 31, 1910, there was a capital outlay of £292,700,000 on the lines open to traffic. Net earnings in 1910, £15,990,000, or about 5.46 per cent. on the capital outlay (against 4.81 per cent. in 1909 and 4.33 in 1908). The net gain to the state from the railways was £2,866,000 in 1910, against a loss of £959,000 in 1909, after charging to expenditure interest on capital outlay of lines under construction.

Railway construction in India was making satisfactory progress during the year 1911, and

the following summary, made by *The Engineer*, of an official report, dated May, 1911, shows the construction under way: Railways in the hands of the state: (1) Eastern Bengal, comprising the Ganges bridge and connecting lines and another line of 24 miles; (2) North-western, six lines, covering 392 miles; and (3) Oudh and Rohilkhand, two lines, 175 miles. These represent a mileage of 591 miles and an estimated expenditure of about £5,056,930. The lines in the hands of companies are much more extensive, and aggregate 1871 miles, at an estimated expenditure of £10,195,000. Nearly one-half of the combined expenditure had been incurred at the date of the report. The new lines expected to be undertaken during the year, March, 1911, to March, 1912, on which some expenditure had been incurred, consisted of six, aggregating 279 miles, by the state, and eleven, amounting to 306 miles, by the companies. The grand total amounts to 3047 miles at an expenditure of £18,203,700.

Length of telegraph wire, March 31, 1910, 283,374 miles; capital cost to that date, £7,265,000. Messages in 1909-10, 12,085,000, showing a deficit of £11,691. The post office in 1909-10 conveyed 920,000,000 letters, post cards, newspapers, etc., and issued 24,000,000 money orders; net loss to government, £353.

FINANCE. The standard coin is the British sovereign, worth \$4.8665, but the current coin is the rupee, valued at 32.44½ cents (15 rupees to the pound sterling). For British India, the gross revenue and the expenditure charged against revenue, in thousands of pounds of sterling, were as follows in years ended March 31 (revised estimate for 1911):

	1900	1908	1909	1910	1911
Rev.	59,474	71,003	69,762	74,593	80,327
Exp.	56,701	70,697	73,499	73,987	76,936

In addition to the above expenditure, there is a capital outlay, not charged against revenue. This in the fiscal year 1909 amounted to £9,488,168 for railways and £983,489 for irrigation; in 1910, £6,322,000 and £1,052,000.

The principal receipts in the fiscal years 1908, 1909, and 1910, with revised estimates for 1911, were as follows, in thousands of pounds sterling:

Receipts	1908	1909	1910	1911
Land	18,719	19,769	21,332	20,955
Opium	5,245	5,885	5,535	7,528
Salt	3,339	3,276	3,320	3,196
Stamps	4,260	4,344	4,548	4,821
Excise	6,227	6,390	6,538	6,980
Customs	5,004	4,832	4,965	5,543
Income tax	1,504	1,563	1,559	1,576
Provincial rates	526	534	539	549
Forest	1,733	1,701	1,736	1,827
Registration	415	431	430	425
Tribute from Native States	585	590	588	608
Total	47,557	49,295	51,090	55,008
Interest	966	987	1,184	1,419
Post Office	1,824	1,826	1,927	2,005
Telegraphs	1,007	978	903	998
Civil depts.	1,098	1,146	1,146	1,209
Military depts.	1,167	1,047	1,137	1,174
Irrigation	2,440	2,467	2,543	2,534
Railways (net)	12,499	9,968	12,445	13,686
Grand total, incl. other	71,003	69,762	74,593	80,327

Principal expenditures, in thousands of pounds (for fiscal year 1911, revised estimates):

Expenditures	1908	1909	1910	1911
Direct demands*.....	8,837	8,742	8,860	8,923
Interest	1,821	1,967	2,115	2,212
Post Office	1,773	1,897	1,928	1,955
Telegraphs	1,084	1,028	992	1,034
Civil depts.:				
Gen. adm'tration....	1,622	1,695	1,656	1,771
Justice	3,449	3,687	3,610	3,731
Police	3,813	4,196	4,222	4,340
Education	1,489	1,682	1,705	1,851
Medical	857	1,018	968	1,012
Total, incl. other....	13,098	14,489	14,186	14,998
Superannuation	3,009	3,058	3,094	3,157
Famine relief and insurance	1,296	1,645	1,000	1,000
Ry. rev. account.....	10,938	11,200	11,620	11,851
Irrigation	2,834	2,949	3,064	3,148
Army and naval services	20,415	20,651	20,249	20,523
Total, incl. other....	70,697	73,499	73,987	76,936

* Direct demands on the revenue; these consist of refunds and drawbacks, assignments and compensations, and collection charges, including production costs in the salt and opium monopolies.

It should be pointed out that the working expenses of railways are treated, not as expenditure, but as a deduction from revenue. Total net revenue and expenditure (in which, as in the case of the railways just mentioned, specific receipts that are properly offsets against expenditure are deducted) have been as follows, in thousands of pounds (revised estimate for fiscal year 1911):

	1900	1908	1909	1910	1911
Net rev.....	39,767	47,006	45,700	49,620	54,864
Net exp.....	36,993	46,700	49,438	49,013	51,473
Surplus	2,774	306	3,738	607	3,390

On March 31, 1911, the interest-bearing debt amounted to £275,064,000 (against £267,200,387 a year before); the sterling debt (raised in England) was £182,998,000, and the rupee debt (raised in India), 1,38,09,90,000 rupees, or £92,086,000.

ARMY. The Indian army is organized on divisional lines similar to the British army, and the plan involves the mobilization ready for service of 9 infantry divisions and 8 cavalry brigades, with adequate supply and transport facilities and staff organization. This would total 180,000 men. The aggregate strength of the military forces in India in 1911 was estimated at 352,784 men, made up of British regular forces, Indian regular forces, British volunteers, imperial service troops, local corps, and the military police, under civil control. The establishment of the British regiments in India in 1911-12 was 75,884, the representation of arms of the service and units being virtually the same as in the previous year—nine regiments of cavalry, 11 horse batteries, 42 field batteries, 3 howitzer batteries, 8 mountain batteries, 21 garrison artillery companies, 6 heavy batteries, 21 ammunition columns, 52 battalions of infantry, and details of royal engineers, royal army medical corps, etc. In the reorganization of the Indian army much attention was being paid to the strategical location of the troops in larger garrisons, and upon lines of railway communication, as well as on the armament of the artillery with weapons of modern type,

and the development of ordnance and other facilities. Thus in the estimates of 1911-12 the sum of £100,000 was presented for the rearmament of the mountain batteries, and £75,000 for the purchase of rifles. The Indian regular forces, or native army, had a strength of about 162,000 in 1911, and consisted of 3 regiments of body guards, 39 regiments of cavalry, and the Aden troops, 1 corps of guides, 12 mountain batteries, 1 frontier garrison company, 26 companies of sappers and miners, 117 infantry battalions, and 20 battalions of Gurkhas. During 1911 the chief questions under consideration were the reduction of the expense of the Indian army establishment by suitable economies, and the improvement of the organization to higher standards of efficiency.

GOVERNMENT. The king of Great Britain and Ireland is emperor of India, by act of Parliament of 1876. King George V. was crowned emperor of India at Delhi December 12, 1911. In England, the administration of Indian affairs is intrusted to the secretary of state for India (a member of the British cabinet), who is assisted by a council. The expenditure of Indian revenues is determined by the secretary of state in council. In respect of the relations of the Indian government to foreign powers or to the Native States, in making peace and war, and in matters requiring secrecy, the secretary of state may act independently of the council. In November, 1910, Viscount Morley of Blackburn, secretary of state for India, resigned and was succeeded by the Earl (now Marquis) of Crewe, who continued to hold the position throughout 1911. In India the chief executive power resides in the "government of India," that is, the governor-general in council. The governor-general (appointed by the crown for five years) in 1911 was Baron Hardinge of Penshurst, who succeeded the Earl of Minto in 1910. The council consists of six members, appointed by the crown, and of the commander-in-chief of the army in India. There are ten departments of government. In accordance with the Indian Councils act of 1909, the governor-general's legislative council consists of 28 official and 32 non-official members (including 25 elected), in addition to ex-officio members. There are similar legislative councils in the presidencies of Madras and Bombay and in the following provinces: Bengal, Eastern Bengal and Assam, the United Provinces of Agra and Oudh, the Punjab, and Burma. By the act of 1909, these councils, both viceregal and provincial, were enlarged, their powers increased, and the elective element extended. In 1911, British India consisted of 13 local governments and administrations. In the presidencies of Bombay and Madras, the executive authority is vested in a governor; in each of the above-named provinces, in a lieutenant-governor; and in a chief commissioner in each of the remaining divisions—the Central Provinces and Berar, Ajmer-Merwara, Coorg, British Baluchistan, the North-Western Frontier Province, and the Andaman (and Nicobar) islands.

The Native States are governed by their princes, ministers, or councils, but the government of India, through British residents or agents, exercises varying degrees of control and does not permit the States to maintain external political relations.

THE DURBAR AT DELHI
THE PAVILION IN WHICH THEIR MAJESTIES WERE CROWNED

HISTORY

NATIVE AGITATION. Although the signs of native discontent under British rule were plentiful in 1911, they were on the whole less violent and widespread than in the years preceding. The Seditious Meetings act passed in 1907 expired in 1911, but its chief provisions were reenacted as a permanent law. The new law reserved to the government the right to proclaim disturbed regions and vested the district magistrate, instead of the police, with the authority to grant permission to hold meetings. The case of Savarkar continued to draw public attention. As ringleader of the so-called "Nasik conspiracy" he had been sentenced in 1911 to transportation for life, but owing to his temporary escape from a steamship at Marseilles an international question was raised and referred to the Hague Tribunal, and execution was deferred pending the Hague decision. In January a further charge was brought against him of having sent to Bombay a pistol which was subsequently given to the assassin who murdered Mr. Jackson. The Hague court rendered its award on February 24, in favor of the British contention, namely, that despite the escape and recapture on French soil, it was not a matter for French jurisdiction. The Bengal conspiracy case, pending since the summer of 1910, in which forty-two persons, under the leadership of Pulin Behari Das, were accused of inciting to revolt against the imperial government, resulted in June, 1911, in a verdict of not guilty. This verdict, rendered by the native assessors of the special tribunal of the Calcutta High Court, was, however, set aside in August by the extra sessions judge at Dacca, who sentenced one of the accused to transportation for life, seventeen to ten years' imprisonment, and one to three years' imprisonment. Rioting was reported at Bombay in January, and in the Khulna district in May. A number of outrages and sensational trials of political malcontents occurred in the spring. Early in April nine young men were found guilty of an attempt to murder Colonel Ferris, a former political agent in Kolhapur, and two other officials. A case of political dacoity on March 31 led to the arrest of a member of one of the high castes. This was one of many instances of dacoity which appeared to be the result of predetermined purpose and considerable organization. In the same month explosives were found indicating anarchistic intentions, and a passenger train was thrown off the track near Dinapur as the result of the intentional removal of one of the rails. On June 17, Mr. R. W. Ashe, a Madras collector, was shot and killed by a Brahman attorney. In July two native policemen who had given evidence in political cases were murdered by a gang. In October an unsuccessful attempt was made to wreck the Darjeeling mail train.

BORDER DISTURBANCES. At the end of February the chief commissioner of the North-West Frontier Province, learning that raiders had gathered under the notorious outlaw, Hakim Khan, near Abazai, attacked them with an escort of some 250 men, killing twenty-two and capturing seven. In March, there were reports of fighting on the Afghan border with the Mahsud tribesmen, who were about to make a raid. Several soldiers of the South Waziristan

Militia were killed and wounded. The most serious disturbance took place on the north-eastern frontier, where Mr. Noel Williamson, assistant political officer at Sadiya, who was leading a small party on a friendly mission, was treacherously attacked and killed by Abors. The government authorized a punitive expedition, which set out in October under Maj.-Gen. Hamilton Bower, 2000 strong, and by the first week of December was reported to have captured one of the Abor strongholds after some sharp fighting in which several were killed on each side. The disaffected region lay to the north of the Brahmaputra River in the neighborhood of Pasighat. A friendly expedition to the Mismi was planned at the same time. The traffic in arms continued to give trouble on the northwest frontier and led to renewed measures to check the gun-running in the Persian Gulf. An expedition of 1000 men, under Admiral Slade, started from Bombay early in April, and made two raids in Persian Mekran, returning to India on May 8.

THE CORONATION DURBAR. On December 2 King George and Queen Mary, emperor and empress of India, paid the first visit ever rendered by a British sovereign with his consort to the Indian empire. The great coronation Durbar was celebrated with elaborate ceremonies at Delhi on December 12. Over 100,000 of the Indian subjects were reported to be present and nearly 150 of the native princes. On this occasion the king-emperor made the following announcement: "We are pleased to announce to our people that on the advice of our ministers, tendered after consultation with our governor-general in council, we have decided upon the transfer of the seat of the government of India from Calcutta to the ancient capital, Delhi, and, simultaneously and as a consequence of that transfer, the creation, at as early a date as possible, of a governorship for the presidency of Bengal, of a new lieutenant-governorship in council administering the areas of Behar, Chota Nagpur, and Orissa, and of a chief commissionership of Assam, with such administrative changes and redistribution of boundaries as our governor-general in council with the approval of our secretary of state for India in council may in due course determine. It is our earnest desire that these changes may conduce to the better administration of India and the greater prosperity and happiness of our beloved people."

The change of the capital to Delhi, as well as the other terms of the proclamation, caused considerable surprise and some criticism in certain quarters, but in general was received with favor.

OTHER EVENTS. One of the first acts under Lord Hardinge's administration was the passage by the viceroy's Legislative Council on January 3 of a resolution forbidding the emigration of indentured Indians to Natal after July 1. For the subject of Indian immigration into South Africa, see *SOUTH AFRICA, UNION OF, History*. An important factory act was passed in March fixing the hours of daily labor in the textile industries at twelve for adults and six for children. The constitution of the new native state of Benares, created by Lord Minto in December, 1910, was formally proclaimed on April 1. Sir Edward Baker resigned the office of lieutenant-governor of Bengal in October. An important educational movement took form in 1911 on behalf of the Europeans and Eurasians. A dele-

gation representing the Protestant communions in India visited England in April and a committee, consisting of the heads of English Protestant churches and distinguished retired Indian officers, was formed to promote the cause. The Mohammedans, at the instance of the Aga Khan, also set on foot a movement to make the Anglo-Oriental College at Aligarh a Moslem university in honor of the durbar. A plan was also under way for a Hindu university at Benares.

INDIA, PORTUGUESE. See **PORTUGUESE INDIA.**

INDIANA. See **CHILD LABOR**, and **ARBITRATION AND CONCILIATION, INDUSTRIAL.**

INDIANA. POPULATION. The Thirteenth Census, taken in 1910, showed a population of 2,700,876, as compared with 2,516,462 in 1900, a gain of 7.3 per cent. in the decade. The principal cities, with their populations in 1910 and 1900, are as follows (the figures in parentheses are for 1910): Indianapolis, 233,650 (169,164); Evansville, 69,647 (59,007); Fort Wayne, 63,933 (45,115); South Bend, 53,684 (35,999); Terre Haute, 50,157 (36,673).

AGRICULTURE. The Thirteenth Census included statistics of agriculture, dated April 15, 1910. At that date the total number of farms in the State was 215,485, as compared with 221,897 in 1900, a decrease of 6412. The land in farms was 21,299,823 acres. The improved land in farms was 16,931,252 acres. These figures show no material change from those of 1900. The total value of farm property, including lands, buildings, implements, and machinery, domestic animals, poultry, and bees, was \$1,809,135,238, as compared with a value of \$978,616,471 in 1900. The average value of all property per farm was \$8396, as compared with a value of \$4410 in 1900. The average value of land per acre was \$62.36, as compared with \$31.81 in 1900. Of the 215,485 farms in the State, 150,798 are operated by owners and managers and 64,687 by tenants. Of the farms operated by owners, those free from mortgage numbered 89,847; those under mortgage, 56,914. Of those operating and managing farms, 204,951 were native whites; 9729 foreign born whites, and 805 negroes, and other non-whites. The value of the various kinds of domestic animals, poultry, and bees in the State in 1910 was \$173,860,101, as compared with a value in 1900 of \$109,550,761. The cattle numbered 1,363,016, valued at \$39,110,492; horses and colts, 813,644, valued at \$67,118,468; mules, 82,168, valued at \$9,678,014; swine, 3,613,906, valued at \$23,739,586; sheep and lambs, 1,336,967, valued at \$5,908,496. The various kinds of poultry numbered 13,789,119, valued at \$7,762,015. The acreage, production, and value of the various crops in 1910 and 1911 are shown in the table below:

	Acreage	Prod., bu.	Value
Corn1911	4,850,000	174,600,000	\$94,284,000
.....1910	4,800,000	188,640,000	75,456,000
Wheat1911	2,337,000	34,354,000	30,575,000
.....1910	2,256,000	35,194,000	30,619,000

.....1910	30,000	26,400,000	2,508,000

a Tons. b Pounds.

MINERAL PRODUCTION. The total mineral production of the State in 1910 was valued at \$59,039,303. Of this the coal produced was valued at \$20,813,659; clay products, \$8,100,010; Portland cement, \$6,487,508. Stone was produced to the value of \$4,476,382. Other mineral products of the State include lime, and petroleum, of which 2,159,725 barrels were produced in 1910, and sandlime brick.

The production of coal in the State in 1910 was 18,389,815 short tons, valued at \$20,813,659, a gain of 3,565,556 tons in quantity and \$5,658,978 in value over the figures of 1909. While some of the coal miners of the State suspended work in 1910 in sympathy with the strike in Illinois and in the Southwestern States, the idleness in Indiana was not general, nor was it so prolonged as in the other States affected. Of the total number of men employed in the coal mines of the State only about 60 per cent. stopped work at the call of the strike and these remained idle for an average of but thirty-four days. Of the total production of coal in 1910, 8,896,495 short tons, or nearly 50 per cent., were mined by machines. There were employed 21,878 men. The average production per man was the greatest in any of the coal-producing States, 841 tons for each employee for the year. See **COAL.**

EDUCATION. The enumeration made in 1911 showed a school population of 750,185, of whom 284,406 were white males, 358,161 white females, 7836 colored males, 7882 colored females. The total enrollment for the year was 530,267, and the average daily attendance was 416,776. The average daily attendance shows a decrease from the preceding year, when it was 420,780. The decrease is attributed in part to epidemics of various diseases that prevailed during the year.

CHARITIES AND CORRECTION. The charitable and correctional institutions supported by the State are 17 in number. On September 30, 1911, they had 11,000 inmates. In 1911 the maintenance expense of these institutions amounted to \$2,133,977.53; new buildings and permanent improvements, \$285,932.50. Grand total, \$2,419,910.03.

With the exception of the tuberculosis hospital, which was opened at Rockville in 1911, and which operates under a slightly different law, each institution is managed by a board of four trustees appointed by the governor, not more than two of whom must be of the same political affiliation or belief. Each board appoints its superintendent, who in turn appoints all officers and employees. The law specifies that no other qualification except fitness must be taken into consideration in the making of any appointment and the trustees are forbidden to interfere in any way with the selection or discharge of employees. Campaign assessments are illegal. Supplies are bought on competitive bids.

The State prison, reformatory, and woman's prison since 1897 have operated under the indeterminate sentence and parole laws. The three institutions have paroled 6291 of their inmates. Of this number only 26.05 per cent. are known to have violated their parole. The woman's prison has a correctional department for the incarceration of women misdemeanants who prior to 1907 served their sentences in the county jails. This department of the prison in 1911 had an average attendance of 60.90.

All of the institutions are under the supervision of the Board of State Charities, a non-

partisan, unsalaried body having offices at the State House. This is a supervisory board. It inspects, suggests, advises, and reports, but has not and does not desire power to enforce its recommendations. It supervises not only the State institutions but all public charities and corrections, both county and township, and is also charged with the duty of licensing maternity hospitals and all agencies or institutions having to do with children. Through an agency created for the purpose, it supervises all work for dependent children made public wards.

POLITICS AND GOVERNMENT

The legislature met in 1911 and the most important measures are noted in the paragraph *Legislation* below. On January 17, John W. Kern (q. v.) was elected United States senator to succeed Albert J. Beveridge. The election of Mr. Kern was the result of the success of the Democrats in electing members of the legislature in the elections of November, 1910. Mr. Kern received the entire vote of his party in the two houses and the full Republican vote was cast for Senator Beveridge. In January the legislature repealed the county local option law, substituting the township or ward as the unit of option, and on February 26, the first election was held in forty cities and townships under the new law. As a result of this election, three cities, Martinsville, Connersville, and Wabash, changed from "dry" to "wet," and Crawfordsville, Tipton, Frankfort, Mitchell, and Bedford voted "dry." In the State there are at the present time twenty-four no-license counties and twenty-one no-license cities.

The legislature refused to pass the recall bill, which was aimed especially at Mayor Shank of Indianapolis. The bill was defeated in the Senate on February 13 by a vote of 23 to 17. Mayor Shank acquired during the latter part of the year a national celebrity as the result of his purchasing and selling large quantities of farm and garden products at public sale at a price a little more than the cost. This was the result of alleged attempts on the part of dealers in these products in Indianapolis to control prices.

In connection with the presidential campaign of 1912, E. F. Lee, chairman of the State committee, made the assertion at the meeting of this committee in Washington on December 12 that Mr. Taft could not carry the State. This assertion was made in a formal statement issued at the close of the meeting. Mr. Lee was formerly regarded as a Beveridge representative. His assertion was contradicted by Harry S. New, who was elected committeeman from Indiana at this meeting. This State promises to be one of the most hotly contested battlefields in the presidential election of 1912.

The Democrats decided to present the name of Thomas R. Marshall for the presidency. Senator Kern was also urged as an available man, though he steadfastly declares for Marshall.

Indianapolis, as the headquarters of the International Association of Bridge and Structural Iron Workers, was one of the news centres in the development of the McNamara dynamiting cases. Judge Anderson of the federal court sent officers after the records of the union and took them out of the hands of the local courts which had refused to deliver them to the Los Angeles authorities. The McNamaras, in California,

pleaded guilty soon after these records were turned over to the federal grand jury. See CALIFORNIA.

LEGISLATION. At the legislative session of 1911 an unusually large number of statutes regulating railroads were passed. This legislation, however, contained nothing especially new. A measure regulating child labor was passed. This prohibits the employment of any children under fourteen years of age in other than farm work or domestic service, and contains many provisions as to the hours and occupations of children between fourteen and eighteen years of age. A stringent employers' liability act was passed. This practically makes the employer responsible for every accident to the employee. (See **EMPLOYERS' LIABILITY**.) The conduct of dangerous occupations so as to minimize and prevent accidents was regulated, and provision was made for the safety of persons employed in coal mines. Miners' examining boards were created and provision was made for the examination of persons seeking employment in coal mines, with the definition of those who are competent to work in mines. The laws relating to public utility franchises were amended and a comprehensive law on the subject of corrupt practices was passed. Of laws affecting education, the most notable were those providing for the prevention of infant blindness, the establishment of public playgrounds, medical inspection of school children, a minimum wage for school teachers, and night schools in cities of 3000 or more. Several important statutes were enacted relative to pure food. One of these forbids druggists to sell dangerous drugs except upon the written prescription of a physician. Another regulates the holding and sale of products in cold storage and refrigerating warehouses. Still others regulate the sale of milk and butter. Provision is made for the prevention of hydrophobia. The tax laws of the State were amended in regard to the taxation of telegraph, telephone, railroad, and other corporations. It is made a misdemeanor, subject to a fine of from \$100 to \$500, and imprisonment for not less than one year nor more than fourteen years, to procure the naturalization of an alien. Non-resident persons desiring to hunt or fish in the State are required to obtain a license.

STATE OFFICERS. Governor, Thomas R. Marshall; Lieutenant-Governor, Frank J. Hall; Secretary of State, L. G. Ellingham; Treasurer, William H. Vollmer; Auditor, William H. O'Brien; Attorney-General, Thomas M. Honan; Adjutant-General, George W. McCay; Superintendent of Education, Charles A. Greathouse—all Democrats.

JUDICIARY. Supreme Court: Chief justice, Quincy A. Meyers; justices, John V. Hadley, James H. Jordan, Leander J. Monks, Oscar H. Montgomery; clerk of the court, Edward V. Fitzpatrick—all Republicans.

STATE LEGISLATURE, 1911. Republicans, Senate, 20; House, 40; joint ballot, 60. Democrats, Senate, 30; House, 60; joint ballot, 90. Democratic majority, Senate, 10; House, 20; joint ballot, 30.

The representation in Congress will be found the article **UNITED STATES, Congress**.

INDIANS. The activity of the Bureau of Indian Affairs, as in past years, has been directed towards two main ends—the improvement of the Indian's health and his education along the line of self-supporting activity. In view of the latter aim the number of Indians receiving rations has been reduced to about 21,000. The number of expert farmers to instruct the Indians has been materially increased, and still larger additions to this teaching force are planned. Although there was a partial failure of crops from drought, there was on the whole notable progress throughout the service. In the Yakima reservation fifty-six Indians raised 23,000 bushels of grain, while others successfully raised alfalfa. Among the Nebraska Winnebago the value of crops was estimated at \$90,000. In twenty-two Western reservations demonstration farms have been established for the benefit of the Indians, and in a number of cases the State authorities have coöperated with the department in its teaching activity. Stock raising does not progress as to quantity of stock, but the grade seems to be almost everywhere improving. Besides, it must be noted that in some cases the same adverse conditions affect the white stock raisers; for example, while the Blackfoot lost 15 per cent. of their herds last winter, still larger losses were sustained by their white neighbors. The employment bureau designed to secure labor for Indians away from reservations and on the same conditions as white persons continues its efforts with excellent results. Thus, in the district comprising Arizona and New Mexico, the total earnings of the Indians looked after by the bureau exceeded \$260,000. For the education of children, the department still maintains 223 day schools, 79 boarding schools on reservations, and 35 non-reservation boarding schools. The total enrollment for the year was 24,500. In some regions, such as Oklahoma, conditions are favorable to the attendance of ordinary public schools by the Indian children, as race prejudice is practically absent and the State constitution grants the same educational privileges to Indians and whites.

Independently of the department, there was founded an "American-Indian Association," which held its first meeting in Columbus, Ohio, Oct. 12-15, 1911. The organization is to bring together all progressive Indians for the purpose of promoting the adaptation of the race to modern civilized conditions. See ALASKA.

INFANTILE SPINAL PARALYSIS (ANTERIOR POLIOMYELITIS). A full report of the situation in the United States with regard to this disease was made by a special committee appointed by the American Medical Association. This report declares that there can be no doubt but that anterior poliomyelitis has greatly increased during recent years in this country. During the year 1909 about 2500 cases were reported as occurring in epidemics. Dur-

ing that year 539 deaths, indicating probably not less than 500 cases, were reported from the registration area, comprising 55 per cent. of the population of the United States. In 1910, 5093 cases and 825 deaths were reported. A great deal of experimental work was done to determine the methods by which the disease spreads. The successful transmission of poliomyelitis from man to monkey and from monkey to monkey showed the disease to be due to a specific virus. Several observers reported finding minute bodies in the filtrate from emulsions of the spinal cord of infected monkeys. Other bodies were found by the Pennsylvania health authorities in the blood of infected persons and monkeys, but it was not established that any one of these bodies is the causative organism. The virus of poliomyelitis has been shown to be present in the spinal cord and bulb, and possibly in the spleen, blood, and cerebrospinal fluid of human beings who have died during the acute stages of the disease. Among the lower animals the virus has been found in the brain, spinal cord, lymphatic glands, and in the nasal and pharyngeal mucous membrane of monkeys experimentally infected with the virus. The monkey appears to be the only one of the lower animals susceptible to the disease. Guinea pigs, rats, mice, dogs, cats, sheep, goats, hogs, horses, chickens, and pigeons have so far been found resistant to experimental infection. The virus has never been found outside the animal body. Its demonstration in the nasal pharyngeal mucous membrane and salivary glands of experimentally infected monkeys has led to the inference that the nasal and buccal secretions contain the virus, but it has been found impossible to prove this. It is believed that the virus has no natural animal host except man, and that its existence outside of the human body is short. Investigations so far indicate that transmission is direct from person to person, although Neustaedter and Thro conducted a number of experiments with monkeys which apparently prove that poliomyelitis may be propagated by dust. These observers collected the sweepings of the rooms where cases of poliomyelitis had occurred. These sweepings were taken from rooms where the children were playing and sleeping and were dried for days, then sifted and macerated in normal salt solution and finally filtered through paper and a Berkefeld filter. This filtrate was injected into monkeys, with the result that the animals became ill with the disease and showed the characteristic paralysis. These investigators are satisfied that the germ of poliomyelitis may be carried by dust, that the naso-pharynx is probably the point of entry, and that acute poliomyelitis is both infectious and contagious. No method of treatment has been discovered which will abort or cut short the disease or prevent subsequent paralysis. The possibility of controlling virus in the body was investigated by Flexner and Clark, of the Rockefeller Institute. They found that when hexamethylenamine was given in doses so large that it circulated in the spinal fluid of a monkey, paralysis was prevented in the animal into which the virus was afterward injected. These experiments do not prove that the drug will control an already established infection, but its use by clinicians has shown that it has a practical value. Taking advantage of the fact, reported by several observers, that the serum of persons who have recovered from an attack

of poliomyelitis will neutralize the virus of the disease so that when injected into monkeys infection will not take place. Anderson and Frost studied the serum from nine suspected abortive cases of poliomyelitis without paralysis and found that the serum of six of the nine possessed the same germicidal action against the virus as the serum from a frank case of the disease with extensive paralysis. Their observations point toward the possibility of developing a serum which will protect persons exposed to poliomyelitis in the same way that diphtheria antitoxin gives immunity. INSANITY. The Iowa Board of Control of State Institutions reported on June 30, 1910, 4143 insane in the four State Hospitals, 865 in county houses, and 599 in the five private hospitals, making a total of 5607 patients, 3018 men and 2589 women. This is an increase over 1908 of 132.

Dr. Copp, secretary of the Massachusetts State Board of Insanity, reported on September 30, 1910, a total of 11,979 patients under care in the public institutions, 5961 male and 6018 female lunatics; besides 14 men and 261 women under family care, total, 275; as well as 110 men and 210 women, total, 320, in private institutions; making a grand total of 6085 men and 6489 women, or 12,574 in all. These figures show an increase of 522 over last year, against 508 increase for the previous year. A special colony for the teachable insane has been established at Gardner. The curable cases reached 22.42 per cent. of the number of first admissions during the year. Of the first admissions, 44.88 were of foreign birth. The number boarded out with families reached 275, or 34 more than last year. Voluntary admissions constituted 9.74 per cent. of all, and 43.5 per cent. of the admissions into McLean Hospital, a semi-private establishment, with a population of 216. Of the 3254 admissions, 2852 were first cases. Alcohol was reported to be the causative factor in 22.15 per cent. of the cases. Next to alcohol in the causation comes heredity, in 19.99 per cent.; coarse brain lesions in 7.51 per cent.; and syphilis in 3.91 per cent. There is one insane person to every 268 of the population of the State.

The Minnesota State Board of Control gave 2824 men and 2037 women, total, 4861 insane, as the number under care in its five public hospitals on August 1, 1910, against 4562 at the beginning of the last biennial period. The board recommends that the counties be obliged to pay at least one-half of the cost of maintenance of the patients, considering entire State care as undesirable. A detention hospital for observation of alleged insane has been opened in connection with the Fergus Falls and St. Peter State hospitals. Patients may now, without commitment, enter a State hospital on the certificate of three physicians. Voluntary admissions are also in use.

Dr. Dibrell, of the board of State Charitable Institutions of Arkansas, stated on January 1,

1911, that it is projected to erect a second hospital in that State for the insane. The present institution, called the Hospital for Nervous Diseases, houses 1124 patients. It is believed by Dibrell that there are 322 more insane in the State, and it is known that 57 insane people are in various jails.

On November 30, 1910, the Colorado State Board of Charities and Correction, through Dr. Grant, commissioner and secretary, reported 676 men and 455 women, total 1131 insane patients, in the State insane asylum, an increase for the year of 229.

Dr. Herring, secretary of the Maryland Commission in Lunacy, gave the figures for the fiscal year ending December 1, 1910, as follows: 890 men and 729 women, total 1619 insane patients in the public hospitals; while in addition there were 248 men and 382 women, total, 630, in Mount Hope; also 53 men and 63 women in St. Peter's; and others in various homes. A tract of 663 acres in Crownsville has been selected as a site for a hospital for the negro insane. The present commission continues its excellent work of taking the insane out of jails and poorhouses.

Dr. Ferris, president of the New York State Commission in Lunacy, reported the number of committed and voluntary insane, and committed insane in the licensed private houses as 16,010 men and 17,301 women, total, 33,311 patients, on September 30, 1911. Of this number, 1064 were inmates of Matteawan and Dannemora State hospitals for insane criminals. There were 783 patients on parole. The net increase for the year was 653, against 1119 for the previous year, and 1014 for two years ago. During the year, over 1100 insane were deported to other States and countries, as against 864 the previous year. This most valuable work of detecting, verifying, and preparing for deportation is done by a board of three alienists, Drs. G. B. Campbell, T. W. Salmon, and W. E. Sylvester, under the control of the commission. The total number admitted during the year was 7854, of which total 6265 were first admissions and 1589 were readmissions. Of the admissions 37 were discharged as mere inebriates, 8 as drug cases, and 84 as not insane under the statute. Of all patients in the State hospitals, 29,770 were supported by the State, while 2246 paid the bare cost of maintenance or a part of it, and 234 were rated as of the private class. From the 14 civil hospitals, 1697 were discharged recovered, 476 as much improved, and 2886 died during the year. The voluntary provision of the law was invoked in the cases of 305 persons only, owing to the apathy of physicians in general practice to its benefits, this figure omitting those received as voluntary patients into the licensed private houses. One additional private house was licensed during the year, bringing the total of this class of institutions up to twenty-three. The amount disbursed for maintenance for the year was \$6,023,065.69. Upon new buildings, extraordinary repairs or equipment, or emergencies was expended the sum of \$1,114,336.87. The annual per capita for maintenance (omitting any calculation for the value of lodging) was \$199.664, as against \$189.14 in 1910; owing to the fact that many expenditures were taken out of maintenance which were properly chargeable as before to extraordinary equipment or emergencies. Calculated on previous years' bases the per

capita was \$187. The percentage of recoveries was 23.4, calculated on the admissions for the year. The rate of insane to population is 1 to 281 of the population of the state.

Alcohol still remains the chief avoidable cause of insanity in this State, furnishing, as the determining factor, 30 per cent. of the male cases, and about 8 per cent. of the female cases. Syphilis furnishes about 15 per cent. of all cases. The overcrowding continues, amounting to about 2200 beds more than there is room for. No sufficient relief was in sight. Constructions under way would relieve the conditions by 1200 beds, but when ready, the increase was expected to reach about the same figures. Work on the plans and development of the Yorktown tract were delayed most of the year, by reason of special investigation. The final construction was to be planned for 3000 patients, because of the rapid increase of possible curable cases from New York City The Psychiatric Institute, connected with the medical work of all the hospitals, didactic, pathological, and corrective, pursued its activities, its staff being under Director August Hoch, M. D., as in 1910, and the various interhospital conferences were held about the State. The statistician continued his labors, and a most instructive statistical volume was published as a supplement to their report by the commissioners. Commissioner Ferris lectured on prevention of insanity at various places, and edited the quarterly State Hospital Bulletin, as heretofore. See NEW YORK.

The commissioners for England and Wales reported on January 1, 1911, that the number of notified insane at that date was 133,157, against 130,553, showing an increase of 2604. The average increase of known cases has been 2521 for the past ten years. The number in receipt of relief and living with friends is decreased by 181, owing to the Old-Age Pension act. The yearly total number was distributed as follows: 4709 male and 6181 female, or 10,890 private patients; 56,142 male and 65,030 female, or 121,172 paupers; 833 male and 263 female, or 1095 criminals. The insane have increased less steadily than the population. There is one insane person to every 275 of the population. There were 7501 discharged as recovered, 2323 as unrecovered (10.6 per cent. of the total admissions), and 9777 deaths. Of those admitted, 82.1 per cent were first admissions. The recovery rate was 34.31 per cent. based on total admissions. Of the causes, prolonged mental stress was assigned in 9.6 per cent.; heredity in 19 per cent. of the males and 23 per cent. of the females; alcohol in 22.1 per cent. of the males, and 8.7 per cent. of the females. But it was asserted that with other causes alcohol was operative in many more instances, prominent among the conditions referred to being syphilis, privation, traumatism, the climacteric, and epilepsy. Sudden stress operated in 2.2 per cent., largely in women.

The commissioners for Scotland reported on January 1, 1911, a total of 18,636 insane patients in that country, in increase of 299 over the previous year. The voluntary patients numbered 127, an increase of 34. As recovered, 42.5 per cent. of the private patients and 36.7 per cent. of the paupers were discharged, reckoned on the admissions. The deaths numbered 163 private and 1181

pauper patients, total 1344, a decrease of 31 over last year. The deaths of patients with general paresis numbered 183, an increase in the last five years, though a decrease in the last two.

The inspector of lunatics for Ireland reported January 1, 1911, 20,603 insane patients under care, 11,099 men and 9504 women, an increase of 333 over the preceding year. Of these, 2571 were in workhouses, 909 in private asylums, 143 in unlicensed houses as chancery patients. During 1910, 1307 were discharged recovered, constituting 36.5 per cent. of recoveries, calculated on admissions. The deaths numbered 1479. In Dundrum, the institution for criminals, there were 197 under care, 168 remaining, a decrease of 6. The voluntary boarders in private asylums totaled 22. The proportion of insane to population is 1 to 179.

INSECTS AND THE PROPAGATION OF DISEASE. Bruck succeeded in isolating the toxin which he calls culicin from the common mosquito. His method was to grind the mosquitoes, *Culex pipiens*, in a mortar with salt solution containing a little glycerine and to centrifugate. It was found that culicin contained hemolytic and a urticaria-producing principle. Bruck also found that mosquitoes would never bite a syphilitic lesion; they always avoided the morbid tissues and settled only on the sound tissue surrounding them. At the same time mosquitoes were able to take up spirochetes on their feet and thus transmit infection, so that the possibility of communicating the disease by this means must be recognized.

Flexner and Clark of the Rockefeller Institute showed by laboratory experiments that it is possible for the common house fly to carry the virus of epidemic poliomyelitis. (See INFANTILE SPINAL PARALYSIS.) They consider it possible that the disease is actually carried in this way. In their experiments flies were permitted to feed on laboratory material known to be infected with the virus. An extract was then made of the bodies of the flies. When this extract was injected into monkeys, it produced the characteristic lesions of anterior poliomyelitis. The house fly has received a good deal of attention from sanitarians of late, and the more it is studied the more loathsome and dangerous a neighbor does it appear. The whole subject is covered by Dr. L. O. Howard in his book, *The House Fly Disease Carrier; an Account of its Dangerous Activities and of the Means of Destroying it* (New York, 1911).

INSURANCE. LIFE INSURANCE. STATISTICS. According to the report of the superintendent of insurance of the State of New York issued in August, there were eleven New York State companies doing life insurance business in that State in 1910, as compared with thirteen in 1909, fourteen in 1908, fifteen in 1907, and sixteen in 1906. This latter was the maximum number in thirty years. The number of policies in force was 3,226,542, an increase of about 7 per cent. over the preceding year. The amount of these policies was \$5,998,366,000. The gross assets of these companies was \$2,144,213,000. There were 22 companies with

headquarters in other States. They had 2,824,000 policies in force, an increase nearly 5 per cent. over 1909. The total amount of these policies was \$5,671,333,000; and the gross assets were \$1,649,034,000. The 33 companies doing business in New York (these companies doing more than 90 per cent. of all of the life insurance business of the country) thus had 6,050,000 policies in force amounting to \$11,669,700,000. The number of policies and their amount was figured on a "paid for basis," in both cases representing an increase over any preceding year. There were issued 51,906 more policies than in 1909. The gross income of 33 companies in 1910 was \$716,625,000, of which \$532,919,000 was derived from insurance. The total disbursements for the year were \$495,365,000, of which \$218,406,000 was paid for claims, \$72,219,000 for lapsed and surrendered policies, \$72,913,000 in dividends to policy holders, \$46,328,000 for commissions, and \$45,202,000 for salaries and medical examiners' fees. The net income over disbursements was \$221,287,000. The total number of policies issued was 747,028, insuring \$1,435,841,000. There were 425,288 policies terminated, insuring \$813,300,000. Of the insurance terminated \$136,633,000 was due to deaths, \$336,729,000 to 118,613 surrendered policies, \$276,197,000 to 177,392 lapsed policies, and smaller amounts to maturing of endowment policies, and to the expiration of term insurance. Policies in force were classified as follows: whole life, 3,796,030 policies, insuring \$7,664,709,323; endowment, 1,901,409 policies, insuring \$2,886,140,168; all others, including term and irregular, 353,178 policies, insuring \$1,036,411,379.

There were four companies writing industrial insurance, namely, the Metropolitan, Prudential, John Hancock, and Colonial. In 1910 they had in force 21,520,953 policies, insuring \$2,997,815,000. Of these 10,465,074 policies and \$1,512,599,000 insurance were credited to the Metropolitan, and 8,957,170 policies with \$1,143,352,000 to the Prudential.

MORTGAGE LOANS. The enactment of a law forbidding insurance companies to hold the stock of other corporations brought about a considerable change in their investments. The leading New York companies have gradually increased their investments in real estate mortgages. Thus in 1906 the New York Life Insurance Company had only \$25,000,000 invested in mortgages. In 1911 this form of investment reached \$110,000,000. Such loans are made only on improved and unincumbered property. The total investments of the 33 companies doing business in New York State in 1910 in real estate bonds and mortgages was \$1,126,003,000. The larger companies, moreover, have been distributing their investments over a considerable number of States, although slightly more than 40 per cent. of the total loans have been made on New York City property. This form of investment is so eminently suited to insurance companies that some attention was directed during the year to the possibility of securing the aid of insurance company funds to develop model villages for workers. Thus in connection with the proposed Homestead Commission in Massachusetts it was thought possible to induce insurance companies to loan large lump sums to such a commission, the loan to be guaranteed by the State and secured by the land and buildings erected.

POLICY LOANS. A number of insurance com-

pany presidents called attention during the year to the increasing amount of policy loans. The 33 companies doing business in New York State had \$441,379,000 of outstanding loans on policies on December 31, 1910. It was pointed out that these loans are rarely repaid; it was stated that about 90 per cent. were never repaid. They are usually a first step towards the cancellation of the policy. They thus defeat the very object for which insurance was intended. While the policy loan was originally intended to enable the policy holder to meet his premium during periods of financial stress, the practice has become common of using the policy loan to purchase luxuries, often beyond the real standard of the purchaser. For this reason the president of the National Life Insurance Company of Vermont thought policy loans should be charged 6 per cent. interest.

FIRE INSURANCE. Much attention has been given in recent years to the enormous losses due to fire in the United States. In spite of the fact that improvements have been made in building construction, in methods of fire prevention, and in the efficiency of city fire departments, the total losses from fire continue to remain at an enormous sum, instead of diminishing as might be expected. During the five years 1907-1912, the total losses from fire were \$1,250,000,000; this was slightly less than the total for the preceding five years 1902-1906 inclusive, owing to the San Francisco disaster of 1906 bringing the total fire loss of that year up to \$459,710,000. According to the *Journal of Commerce* the fire loss in 1911 was \$234,337,000. This was almost exactly the same as the loss of 1910, 1.5 per cent. greater than in 1909, and about the same as in 1908 and 1907. That these losses are excessive has been shown by many comparisons between the United States and Europe. The annual per capita fire loss in the United States is about \$2.50. In Europe the average is only 33c., ranging from 12c. in Italy, 30c. in France, to 49c. in Germany. A table, prepared from government data showing the fire losses in 1907, in American and European cities classified according to population, showed that in cities of 10,000 to 30,000 population the loss in the United States was \$2.37 per capita and in Europe 81 cents per capita; in cities of 100,000 to 300,000 in the United States \$2.14, Europe 37 cents; in cities with over 300,000, United States \$2.24, Europe 65 cents. The annual expense of fire protection in the United States since 1907 has averaged about \$240,000,000; of this sum about \$154,000,000 represents the excess of premiums over insurance paid by the insurance companies; \$29,000,000 represents the annual expense of water-works chargeable to the fire service; \$49,000,000 represents the annual expense of fire departments; the remainder is due to private expense for fire protection. If to this expenditure is added the losses, the total outlay due to fire loss and prevention exceeds \$5.30 per capita each year.

According to the report of Superintendent of Insurance Hotchkiss of New York State there were 183 companies writing fire insurance in that State in the year ending December 31, 1910. Of these 148 were domestic joint-stock companies, one-third of them being New York companies; 37 were foreign joint-stock companies; and eight were mutual companies. The total assets of these companies were \$553,253,-

000, of which 80 per cent. was credited to domestic joint-stock companies and practically all the remainder to the foreign joint-stock companies. The total income for the year was \$315,760,000, of which \$275,171,000 came from premiums. The total disbursements were \$279,148,000, of which \$137,379,000 went for fire losses, \$61,823,000 for commissions, \$23,500,000 for salaries and office expenses, and \$12,821,000 for dividends. The total amount of fire risks in force was \$43,443,159,000.

REPORT OF LEGISLATIVE INVESTIGATING COMMITTEE. The committee of the New York legislature which began in 1910 the investigation of fire insurance companies operating in that State was issued in the summer of 1911. Among the topics discussed in that report were the following: The advisability of fixing fire insurance rates by State authority instead of by the New York Fire Insurance Exchange as at present; the licensing of agents and brokers by the State, instead of by the New York Fire Insurance Exchange; the advisability of enacting an anti-rebate law applying to fire insurance similar to the anti-rebate law applying to life insurance; the need of a State fire marshal; improvements in methods of fire prevention; greater publicity as to the methods of classification used by the different fire insurance companies; compulsory reporting to the insurance department of the amounts of insurance carried in congested areas; modification and simplification of the standard fire insurance policies; the admission to the State of mutual companies doing business in special lines, such as the New England Mill Mutuels.

FRATERNAL INSURANCE. Though fraternal insurance is not as conspicuous as the insurance

of the regular old-line insurance companies, nevertheless it is probable that the total amount of insurance in all fraternal societies is little short of that in all of the regular life insurance companies. The number of such orders issuing insurance in 1910 was 497, according to the *Insurance Year Book*. Their total income for that year was \$128,631,000; total claims paid, \$92,280,000; total insurance in force, \$9,562,511,000. These orders had issued 8,558,000 certificates of insurance, and they owned property and investments valued at \$129,426,000. The amount of insurance written by the reporting orders has increased considerably in recent years, the average for the past five years having been nearly \$1,200,000,000 per year. The foregoing statistics relate only to the well-established orders and do not include the hundreds or even thousands of small fraternal societies which spring up like mushrooms, only to disappear after a year or two.

The principal problem which has been confronting the fraternal insurance societies in the past few years is that of placing themselves on a sound actuarial basis. During the past ten years some of the more important organizations have made strenuous efforts to put their rates high enough to guarantee their permanent solvency. This has been accomplished only by a little struggle. It is still true of the majority of even the better known societies that their rates are not high enough to carry them when their membership has reached a much higher age average. This matter was taken up at the 1909 National Convention of Insurance Commissioners. At their 1910 convention the commissioners drafted a model uniform law, which was thereafter pushed through more than

a dozen State legislatures in 1911. This bill is a compromise between those who favored such stringent action that unsound orders would be speedily extinguished and those who would leave the matter to adjust itself. When added to other legislation, the 1911 laws bring it about that as many as twenty-five of the States now provide for a moderate degree of regulation of fraternal societies. The effect is that it is becoming more and more difficult for new orders to be promoted on an inadequate basis. Moreover, the gradual extinction of orders whose rates will not enable them to pay their claims will be accomplished. That continued advance may be expected in this regard is evidenced by the fact that the National Fraternal Congress, which comprises a large proportion of the leading societies, has declared itself definitely in favor of the adoption of a more scientific basis for their financial operations.

Every attempt to raise the rates is of course strenuously resisted by the older members, upon whom the increases fall most heavily. In some cases the assessments of older members have been raised to five times their preceding amount. The decisions of the courts as to the legality of such increases have varied. In some States the increases have been upheld on the ground that the societies had a right to raise their rates to an adequate level, whereas in others such increases have been pronounced illegal on the ground that the society had no authority to raise the rates beyond the amount agreed upon in the original contract.

On the preceding page is a list of the most important fraternal organizations, with their membership in 1911 and the amounts disbursed by them from their establishment.

INTERNAL - COMBUSTION ENGINES. The great progress made with various types of internal-combustion engines, in which fuel is used in the form of gas, was particularly emphasized in 1911, and it was realized that the gas engine had become to be considered a serious rival not only of the steam engine, but even of the steam turbine. The maximum size of internal-combustion motors had greatly increased, and a new development of importance was the increased use of heavy oil engines of the Diesel type. When it is recalled that the first large gas engine, a machine of 600-horsepower, was exhibited at the Paris Exposition of 1900, the steady development can be appreciated by the fact that at the Brussels Exposition of 1911 there were shown gas engines of the four-stroke cycle type with 1500 horsepower in each cylinder, and gas engines of the two-stroke cycle type with 2000 horsepower in each cylinder. There were units of 8000 horsepower of the twin tandem double-acting type in use during the year, and it was reported that large gas-engine plants could be installed at the same cost, and often for less outlay than the steam turbine, which had become the approved practice for central station work. For the smaller central stations the gas engine was considered especially well adapted and to have great possibilities, and a number of plants in Europe so equipped were showing marked economy. In

Switzerland at such generating stations Diesel engines up to 2000 horsepower were in use. Engines of this type were being made as light in weight as triple-expansion steam engines, and some installations compared favorably with steam turbines and boilers. In one case a 1000-horsepower gas engine installed weighed but 187 pounds per horsepower, as against 180 pounds for a steam turbine and boiler installed in like capacity.

In addition to the use of large gas engines for various purposes on land, there was considerable development of internal-combustion motors for marine service (see NAVAL PROGRESS). At the same time, important steps were being taken to develop internal-combustion locomotives for railway purposes, and several such were being used experimentally in Europe on standard-gauge tracks. The Prussian State Railways were reported to be operating a 1000-horsepower locomotive with a Diesel engine.

FUELS FOR INTERNAL-COMBUSTION ENGINES. That the range of possible and economical fuels for internal-combustion motors was being extended was clearly demonstrated in 1911. The United States Bureau of Mines had under way important investigations in regard to high ash coals as fuels for producer plants, as well as other low-cost fuels, and in Canada it was shown that peat could be prepared for use in the producer at from 30 to 40 per cent. of the cost of equivalent British thermal units in anthracite coal in the Dominion. Progress also was being made in the study of producer gas from lignite and from high ash coals in addition to peat. It was found that gas producers could be built to employ crude oil successfully, and progress in this field was taking place slowly but surely. In California, with crude oil as fuel at a cost of 2.3 cents per gallon, the same amount of power was developed per gallon of oil used in the oil producer as with the old standard internal-combustion engine operated upon distillate costing 7 cents per gallon.

Tar oil has become a common fuel for Diesel engines of 600 to 800 horsepower, and has been employed in one engine at least of 4000 horsepower. Both gas-retort tar and thick coke-oven tar can be used as fuel if there is injected into the cylinder a small amount of light oil to assist in igniting the tar. This process has been developed to a point where it is claimed that a wide range of tars can be used without developing smoke or appreciable residues. The amount of ignition oil used in some tests at the Körting works in Germany was about 2 per cent. when operating at full load, and about 13 per cent. when working at half load. A 600-horsepower Diesel engine to operate with raw tar was reported under construction during the year. See SHIPBUILDING and NAVAL PROGRESS.

IOWA. POPULATION. According to the Thirteenth Census the population of the State in 1910 was 2,224,771, as compared with 2,231,853 in 1900, a decrease of 7082 in the decade. Iowa was the only State showing a decrease in population in 1910. The chief cities in the State, with their populations in 1910 are as follows—the figures in parenthesis are for 1900: Des Moines, 63,368 (62,130); Sioux City, 47,828 (33,111); Cedar Rapids, 32,881 (25,656); Dubuque, 38,494 (36,297); Council Bluffs, 29,292 (25,802); Davenport, 43,028 (35,254); Waterloo City, 26,693 (12,580).

AGRICULTURE. The Thirteenth Census included statistics of agriculture, bearing date April 15, 1910. Iowa is the only State in the Union which showed a decrease in population between 1900 and 1910, and this decrease as shown by the census figures was entirely in the agricultural regions of the State. The total number of farms in the State in 1910 was 217,044, as compared with 228,622 in 1900, a decrease of 11,578 in number and 5.1 per cent. The land in farms amounted to 33,930,688 acres and the improved land in farms 20,491,199. The average acreage per farm was 156.3. In spite of the decrease in the number of farms, the statistics show a great increase in the value of farm property. In 1910 this was \$3,745,860,544, as compared with a value in 1900 of \$1,834,345,546. This includes land, buildings, implements and machinery, domestic animals, poultry, and bees. The average value of all property per farm was \$17,250, as compared with \$8023 in 1900. The average value of land per acre was \$82.58, as compared with \$36.35 in 1900. Of the 217,044 farms in the State in 1910 134,929 were operated by owners and managers and 82,115 by tenants. While the total number of farms decreased by 11,578 during the decade and the number operated by owners and managers decreased 13,957, the number operated by tenants increased 2379. Of the farms operated by owners, those free from mortgage in 1910 numbered 63,234, while 68,045 were mortgaged. Of the owners and operators of farms 167,856 were native white, 48,987 were foreign-born white, and 201 were negro and other non-white. The various kinds of domestic animals and poultry and bees were valued at \$393,003,196, as compared with a value in 1900 of \$278,830,096. The cattle numbered 4,448,006, valued at \$118,864,130; horses and colts, 1,492,226, valued at \$177,999,124; mules, 55,524, valued at \$7,551,818; swine, 7,545,853, valued at \$69,693,218; sheep and lambs, 1,145,549, valued at \$5,748,836. The poultry of all kinds numbered 23,482,880, valued at \$12,269,881. The acreage, production, and value of the principal crops in 1910 and 1911 are shown in the following table:

		Acreage	Prod., bu.	Value
Corn	1911	9,850,000	305,350,000	\$161,836,000
	1910	9,470,000	343,761,000	123,754,000
Wheat	1911	647,000	10,622,000	9,348,000
	1910	532,000	11,174,000	9,497,000
Oats	1911	4,950,000	126,225,000	51,752,000
	1910	5,100,000	192,780,000	52,051,000
Rye	1911	30,000	540,000	416,000
	1910	35,000	648,000	415,000
Potatoes ..	1911	174,000	12,876,000	9,399,000
	1910	172,000	12,384,000	7,430,000
Hay	1911	3,240,000	2,592,000	32,400,000
	1910	3,600,000	3,780,000	36,288,000

a Tons.

MINERAL PRODUCTION. The mineral products of the State in 1910 were valued at \$22,730,658. Of this the coal produced was valued at \$13,903,913; sand at \$558,056; clay products at \$5,328,241. Other mineral products of the State include sandlime brick, mineral waters, and lime.

The coal production of the State in 1910 was 7,928,120 short tons, valued at \$13,903,913, an increase of 170,358 tons in quantity and \$1,110,285 in value over 1900. The coal mines of the State benefited by the strike in the Illinois fields, which eliminated the competition of coal from that State from local markets. The mines were comparatively free from strikes during the year. The general strike, which began on April 1, lasted six weeks, while in Illinois it lasted practically six months. There were employed in the coal mines of the State in 1910 16,666 men, who worked an average of 218 days. The average production per man was 476 tons for the year.

FINANCE. On June 30, 1911, there was on hand in the general State revenue fund, \$1,282,539, with outstanding warrants of \$173,745, leaving a net balance of \$1,108,793. The State has no bonded indebtedness. The assessed value of all property in 1911 was \$757,336,279, which is one-fourth of the actual value.

CHARITIES AND CORRECTIONS. The General Assembly of 1911 enacted several important statutes which are noted as follows: One provided for granting pensions to firemen who have attained the age of fifty years and who have served continuously as firemen for twenty-two years. The rate of pension is one-half that of the pay. An act was passed making it compulsory to levy tax for pensions of retired policemen. An act was passed authorizing the operation of vasectomy or ligation of the Fallopian tubes upon certain inmates of State institutions who are criminals, idiots, feeble-minded, imbeciles, drunkards, drug fiends, epileptics, or syphilitics. Although this was designed to prevent the procreation of defectives and criminals, yet no operations, so far as we are aware, have been performed under the act. An act was passed permitting courts to suspend sentences of imprisonment of certain persons convicted of crime, with the purpose of giving persons convicted the opportunity to reform before the stigma of having served a term of imprisonment for crime attaches. A highly important meeting of the State conference of charities and correction was held at Iowa City on November 19, 20, and 21, 1911.

POLITICS AND GOVERNMENT

The legislature met in 1911 and the most important measures passed will be found in the paragraph *Legislation* below. There was no State

election during the year, and the most important political event was the choosing by the legislature of a senator to succeed Senator Dolliver, who died in 1910. On the death of Senator Dolliver the governor appointed Lafayette Young to fill the place until the legislature could act. The attempt to elect Dolliver's successor resulted in a deadlock in the legislature which lasted twelve weeks, and resulted on April 12 in the election of William S. Kenyon, assistant to the attorney-general of the United States. Senator Kenyon will hold his seat until March, 1913, the date of the expiration of the term of Senator Dolliver. The State legislature passed a primary bill based on the Oregon plan, but this was vetoed by Governor Carroll, who declared that certain of its provisions were an evasion of the constitution. The constitutional amendment providing for the initiative and referendum was defeated by the legislature, which also rejected the joint resolution providing for woman suffrage. On January 2 the State Railway Commission ordered a reduction of express rates of from 5 to 20 per cent.

LEGISLATION. The measures passed at the legislative session of 1911 include the following: Several radical changes were made in the laws relating to taxation. An important change was made in the statutes relating to criminal procedure. The new statute allows county attorneys in certain cases, with the approval of the court or a judge thereof, to prosecute criminal cases to final judgment on information without the intervention of the grand jury. A defendant under this statute may be prosecuted upon information prepared by the county attorney for any crime known to the laws of the State when the county attorney and the court, or a judge thereof, determine such a trial advisable. This statute is not intended to abolish the grand jury and trials by information may be resorted to only in exceptional cases. A statute was enacted providing for the pardoning of certain criminals for a first offense. Among the statutes passed relating to education was one providing for a mileage tax for the support of the State educational institutions. A statute also was passed providing for the granting to teachers of life certificates, and the State board of education was given more power and additional duties. An unusual and important statute was one creating the office of commerce counsel. This officer was given many powers, including the appointment of assistants, subject, however, to the approval of the board of railroad commissioners. It is made his duty to investigate the reasonableness of rates charged by railroads for service rendered. He has similar charge also of the rates of express companies and parties or corporations subject to the jurisdiction of the board of railroad commissioners. In general, he represents the people of the State in matters pertaining to commerce. Few new statutes were enacted for the regulation of the sale of intoxicating liquors. Wholesale liquor dealers of the State are allowed to sell liquors to registered druggists. The sale of cocaine and certain other drugs was prohibited, except to physicians. New legislation for the working of mines and the protection of miners was enacted, and a labor commission was created to investigate and report upon the question of compensation for laboring men injured in hazardous employments. The federal income tax amendment was ratified by the legislature and approved by

the governor on February 27, 1911. See the foregoing paragraph.

STATE GOVERNMENT, 1911. Governor, B. F. Carroll; Lieutenant-Governor, George W. Clarke; Secretary of State, W. C. Hayward; Treasurer, W. W. Morrow; Auditor, J. L. Bleakly; Attorney-General, George Cosson; Superintendent of Education, A. M. Deyoe; Adjutant-General, Guy E. Logan—all Republicans.

JUDICIARY. Supreme Court: Chief justice, John C. Sherwin; judges, Scott M. Ladd, Emlin McClain, William D. Evans, Horace E. Deemer, S. M. Weaver; clerk, Burgess W. Garrett—all Republicans.

STATE LEGISLATURE, 1911. Republicans, Senate, 34; House, 70; joint ballot, 104. Democrats, Senate, 16; House, 38; joint ballot, 54. Republican majority, Senate, 18; House, 32; joint ballot, 50.

The representatives in Congress will be found in the article UNITED STATES, section Congress.

IOWA, STATE UNIVERSITY OF. An institution of higher learning at Iowa City, Iowa, founded in 1847. The number of students enrolled in the various departments of the university in 1910-11 was 2300. The faculty numbered 175. An important administrative change in the history of the college during the year was the inauguration of President John G. Bowman, succeeding President George E. MacLean, taking office on August 1, 1911. Dean Austin W. Scott succeeded Charles Noble Gregory in the College of Law. The amount of productive funds of the university was \$240,000, and the income amounted to about \$650,000. A students' union has been established, affording a reading-room for men. The new Hall of Physics was nearly completed during the year, at a cost of \$225,000, and a wing to the university hospital, costing \$100,000, was in course of erection. An expedition for zoölogical purposes in the interests of the university was made to Laysan Island. The library contains about 80,000 volumes.

IRELAND. See GREAT BRITAIN.

IRISH HOME RULE. See GREAT BRITAIN, *History*.

IRON AND STEEL. The iron and steel industry of the United States in 1910 surpassed all previous records by a small margin, according to the reports of the United States Geological Survey. The total volume of business, however, was not so great as was anticipated at the beginning of the year. The recovery in 1909 from the depression of 1908 was so rapid that preparations for much larger production of iron ore and pig iron in 1910 were made than were necessary. As a consequence, there was an overproduction and a gradual depression marked the close of the year.

The iron ore produced in 1910 amounted to 56,889,734 long tons, valued at \$140,735,607 at the mines, as compared with 51,155,437 long tons, valued at \$109,964,903 in 1909. The average price per ton for the whole country in 1910 was \$2.47, as compared with \$2.15 in 1909. Iron ore was mined during the year in twenty-eight States. Of these, four States, Idaho, Montana, Nevada, and Utah, produced ores for fluxing only. A part of the production of Colorado was for fluxing and part for pig iron. The various States in which iron ore occurs are grouped into six commercial districts: The Northeastern District, including Massachusetts, Connecticut, New York, New Jersey, Pennsyl-

vania, and Ohio; the Southeastern District, including Maryland, the Virginias, Kentucky, Tennessee, North Carolina, Georgia, and Alabama; the Lake Superior District, including Michigan, Wisconsin, and Minnesota; the Mississippi Valley District, including Iowa, Missouri, Arkansas, and Texas; the Rocky Mountain District, including Idaho, Montana, Wyoming, Colorado, New Mexico, Utah, and Nevada; and the Pacific Slope District, including Washington and California. Of these districts, the Lake Superior is by far the most important and is followed in order by the Southeastern District and the Northeastern District. The Mississippi Valley and the Western districts are of minor importance. Of the iron ore produced in 1910, 46,420,226 long tons, or 81.60 per cent., were produced in the Lake Superior District.

Among the States producing iron ore, Minnesota ranks first. There were produced in the State in 1910 31,966,769 tons, valued at \$78,462,560. Michigan ranks second, with 13,303,906 tons; Alabama third, with 4,801,275 tons; New York fourth, with 1,287,209 tons, and Wisconsin fifth, with 1,149,551 tons. None of the other producing States produced over 1,000,000 tons. During 1910, of the 451 iron ore mines that operated, 191 mines produced over 50,000 long tons of iron ore each, as compared with 150 mines in 1908. The largest amount produced by any single mine was 3,190,093 long tons, from the Hull-Rust mine at Hibbing, on the Mesabi range, Minnesota. Nine other mines in Minnesota produced more than 1,000,000 tons each. The second largest quantity was 1,797,067 long tons, produced by the Red Mountain group of mines near Birmingham, Ala.

A considerable stock of iron ore was left at the mines at the end of 1910, and this is not included in the production. On December 31, this stock amounted to 9,408,235 tons. The apparent consumption of iron ore in the United States in 1910 was 56,161,091 tons.

The imports of iron ore into the United States in 1910 exceeded the imports of any year heretofore recorded. The total amounted to 2,591,033 tons, valued at \$7,832,225. Fifty-six per cent. of the imports were from Cuba, 17 per cent. from Spain, and about 10 per cent. from Sweden. The bulk of the rest was from Newfoundland. The exports from the United States to other countries in 1910 amounted to 644,875 long tons, an increase of more than 41 per cent. over the exports of 1909.

The latest available statistics for the world's production of iron ore by countries are shown in the following table:

Countries	1908 Tons	1909 Tons
United States	35,924,771	51,155,437
Germany and Luxemburg	24,278,151	25,506,000
United Kingdom	15,031,025	14,979,979
Spain	9,271,592	(a)
France	10,057,145	11,890,000
Russia	(a)	(a)
Sweden	4,713,160	(b)
Austria-Hungary	4,718,700	(a)
Canada	c212,573	c239,324
Newfoundland	935,154	c991,115
Cuba	930,446	1,417,914
Algeria	943,424	891,000
Tunis	148,000	218,000
Greece	515,368	(a)
Italy	539,120	531,000
Belgium	188,780	200,000
China d	133,458	(a)

Countries (cont.)	1908	1909
India	72,300	83,456
Japan	(a)	(a)
Norway	119,656	(a)
Australia	55,194	(a)

a Not available. b Austria produced 2,490,000 tons. Figures for Hungary not available. c Shipments. d Exports.

Of the figures in this table, those for the United States, United Kingdom, Cuba, Canada, India, and Australia are in long tons. Those for other countries are in metric tons.

Pig Iron. The production of pig iron in the United States in 1910 amounted to 27,303,567 long tons, valued at the furnaces at \$425,115,235, as compared with 25,795,471 long tons, valued at \$419,175,000 in 1909. Pennsylvania is first among the States in the production of pig iron. In that State 11,272,323 long tons, valued at \$180,695,338, were produced. This was an increase of 353,499 tons over the production of 1909. Ohio ranks second, with 5,752,112 tons; Illinois third, with 2,675,656 tons; Alabama fourth, with 1,939,147 tons; New York fifth, with 1,938,407 tons. None of the other States produced over 1,000,000 tons. The total number of blast furnaces in 1910 was 473. Of these 293 were in blast on June 30. Of the total pig iron produced, Bessemer and low phosphorous amounted to 11,245,642 short tons; basic (mineral fuel) 9,084,608 long tons; foundry and ferrosilicon 5,260,447 long tons. The other varieties produced in smaller quantities were forge pig iron, malleable Bessemer, spiegeleisen, and ferromanganese.

STEEL. The total production of all kinds of steel ingots and castings in 1910 was 26,094,919 long tons, compared with 23,955,021 long tons in 1909. Of the total amount, 16,504,509 long tons were open-hearth, 9,412,772 long tons were Bessemer, and 177,638 long tons were crucible and other. In the production of open-hearth steel ingots and castings, Pennsylvania ranks first among the States. The total quantity in that State was 10,153,816 long tons. Other States producing more than 1,000,000 long tons were Ohio and Indiana. The largest quantity of Bessemer ingots and castings was produced in Ohio, 3,314,053 long tons. Pennsylvania produced 2,975,750 long tons and Illinois 1,693,053.

Included in the total production of steel in 1910 there were 55,335 tons produced by various minor processes including the electric process. By the latter process there were cast 2141 tons of ingots and castings. These were made with electricity by seven plants in Massachusetts, New York, Pennsylvania, Indiana, and Illinois.

IRON AND STEEL EXPORTS FROM THE UNITED STATES AND OTHER LEADING COUNTRIES, 1900 TO 1911. The official report was as follows: The high record exportation of practically a quarter billion dollars' worth of iron and steel manufactures from the United States in the calendar year 1911 and of over 1½ billion dollars' worth in the decade ending with that year has led the Bureau of Statistics, Department of Commerce and Labor, to prepare a statement showing the relative rank of the leading nations in the exportation of that important factor of international commerce.

The world's leading exporters of iron and steel, according to official figures covering the latest period for which statistics are available, are the

United Kingdom, Germany, and the United States, with totals ranging from a little less than 400 million dollars down to about 250 million dollars each. To these might be added a second group of countries with smaller totals, which would include Belgium, Netherlands, France, Switzerland, and Sweden. These eight countries had in 1910 a total exportation of iron and steel of over one billion dollars, or about 8 per cent. of the entire value of all merchandise entering the international markets of the world. At the head of the list of exporters of iron and steel is the United Kingdom, with a total of 361 million dollars, exclusive of 16 million dollars' worth of agricultural machinery, manufactured in part from iron and steel and by certain countries included under that title. Germany is second in exports of iron and steel, with a total of 339 million dollars, in addition to which exports of agricultural machinery aggregated 9 million dollars. The United States is third, the 1910 figures being 201 million dollars for iron and steel and 31 million for agricultural implements. Belgium shows 65 million dollars' worth of iron and steel, including agricultural machinery, exported in 1910, and France, a total of 45 million dollars, exclusive of 1½ million dollars' worth of agricultural machinery. From Switzerland and Sweden the exports of iron and steel were, in the latest available year, about 18 million dollars each, exclusive of agricultural machinery, amounting to nearly one million dollars in the case of Sweden and about \$150,000 in that of Switzerland.

While the United States thus ranks only third as an exporter of iron and steel, her progress in that branch of commerce has been rapid, the total exports of that class of articles having increased from 103 million dollars in 1901 to nearly or quite 250 million in 1911 and of agricultural implements from 17 million to 35 million dollars during the same period. Taking the period 1900-1910, the latest period for which figures are available in the case of foreign countries, the growth in exports of iron and steel has been as follows: The United Kingdom, from 271 to 361 million dollars; Germany, from 171 to 339 million; United States, from 130 to 201 million; France, from 27 to 45 million; Belgium, from 41 to 65 million; and Switzerland, from 11 to 18 million dollars. In exports of agricultural machinery the United States leads all other countries, with a total in 1910 of 31 million dollars, against 16 million for the United Kingdom, 9 million for Germany, and 1½ million for France.

The 250 million dollars' worth of iron and steel and 35 million dollars' worth of agricultural implements exported from the United States last year (1911) found markets in practically every part of the civilized world. Steam locomotives and steel rails went largely to Canada, Mexico, Brazil, Argentina, and Japan, where the rapid development of railways enabled an increased absorption of those materials from this country. Structural iron and steel of American manufacture is being utilized in increasing quantities by most of the leading countries of North America, as well as in Australia and Japan. The farms of Canada, Argentina, Brazil, Australia, and New Zealand are requiring increasing quantities of American wire. Our sales of electrical machinery show a healthy expansion in such important markets as the

United Kingdom and other European countries, as well as the newer communities of the western hemisphere. The same might be said of sewing machines and metal-working machinery. American cash registers and typewriters are facilitating business in offices scattered in every part of the world—in France, the United Kingdom, and Germany; in Canada, Mexico, and Cuba; in Argentina and Brazil; in India and Australia, and in many other countries, nearly all of them showing larger totals in 1911 than in any earlier year.

The principal articles forming the quarter billion dollars' worth of iron and steel products exported from the United States in the calendar year 1911, with approximate value of each based upon eleven months' figures already at hand, are: Sheets and plates, 18 million dollars; builders' hardware, saws, and tools, 17 million; locomotives and other engines, 17 million; steel rails, 12 million; pipes and fittings, 12 million; wire, 12 million; structural iron and steel, 11 million; sewing machines, 9 million; electrical machinery, 8 million; mining machinery, 7 million; bars and rods, 5 million; cash registers, 4 million; pumps and pumping machinery, 4 million; printing presses, 3 million; sugar-mill machinery, 3 million; and tin andterne plates, nearly 5 million dollars, or five times as much as in the preceding year; while stoves and ranges, shoe machinery, laundry machinery, scales and balances, castings, and wire nails each exceeded one million dollars in the value of the year's exports, representing for the most part increases when compared with earlier years.

IRRIGATION. The period between the years 1907 and 1911 has been one of great activity in the extension of irrigation in all arid sections of the world. In the United States more land has been brought under ditch in that period than in any other period of equal length. This development is outlined more in detail below.

FOREIGN COUNTRIES. In the western provinces of Canada the Canadian Pacific Railway Company has developed and settled large areas, and the provinces themselves have been encouraging irrigation in every way possible. Mexico has created a bank and provided for guaranteeing loans especially to provide funds for irrigation construction, and has organized a bureau of irrigation in its department of promotion. Brazil, Chile, and Argentina have provided for loaning government funds or credit for irrigation construction. The Spanish government has undertaken the construction of irrigation works under agreements with the land owners, by which one-half of the cost is to be repaid by the owners of the lands benefited. Italy has continued its national construction and the advancing of funds for cooperative works. In Egypt the Assuan dam is being raised, greatly increasing its storage capacity, and making it possible to extend considerably the irrigated area in the valley of the Nile. Irrigation is being promoted in South Africa by government construction and aid, as well as by investigation of the water resources and irrigable lands. The state of Victoria, Australia, is extending its irrigation works and buying up the large land holdings under them, to be subdivided and sold in small tracts, which it has been actively engaged in colonizing with farmers from other irrigated countries. The state of New South

Wales, Australia, has been doing similar work, while the Commonwealth of Australia has been considering federal construction. The Turkish government has been making investigations of the feasibility of restoring the irrigation works in the valleys of the Tigris and Euphrates rivers, and has provided for a beginning of the actual work. The Russian government has undertaken the reclamation of large areas in Turkestan by irrigation, and the British government is continuing to extend its canals in India. Figures showing the extension of the irrigated areas throughout the world are not available, but the activity in irrigation construction has been worldwide.

UNITED STATES. During the years 1910 and 1911 the United States Census Bureau has taken a census of irrigation, the preliminary results of which have been published. The leading facts relating to irrigation in the United States in 1909 and 1910 are summarized below, with comparisons with the results of previous censuses. In the table which follows the acreages irrigated in 1889, 1899, and 1909 in the arid and semi-arid regions of the United States are given by States, with the percentage of increase from 1889 to 1899, and from 1899 to 1909:

States	Acreage irrigated		1899-		1889-
	1909	1899	1889	1909	
Total	13,739,499	7,527,690	3,631,381	82.5	107.3
Arizona	320,061	185,396	65,821	72.6	181.7
California	2,664,104	1,445,872	1,004,233	84.3	44.0
Colorado	2,792,032	1,611,271	890,735	73.3	80.9
Idaho	1,430,848	602,668	217,005	137.5	177.7
Kansas	37,479	23,620	20,818	58.7	13.5
Montana	1,679,084	951,154	350,582	76.5	171.3
Nebraska	255,950	148,538	11,744	72.3	1164.8
Nevada	701,833	504,168	224,403	39.2	124.7
New Mexico	461,718	203,893	91,745	126.5	122.2
North Dak.	10,248	4,872	445	110.3	994.8
Oklahoma	5,402	2,759	95.8
Oregon	686,129	388,310	177,944	76.7	118.2
South Dak.	63,248	43,676	15,717	44.8	177.9
Texas*	164,283	40,952	18,241	301.2	124.5
Utah	999,410	629,293	263,473	58.8	138.8
Washington	334,378	136,470	48,799	146.8	177.6
Wyoming	1,133,302	606,878	229,676	87.1	163.8

* Exclusive of rice.

In addition to the acreage given above, there were irrigated in Texas, Louisiana, and Arkansas 604,730 acres of rice, and in the humid States 28,919 acres of miscellaneous crops, making a total of 14,463,148 acres irrigated in the United States in 1909. The acreage irrigated in 1909 (A), the percentages of the separate enterprises (B), the acreage which existing enterprises were capable of irrigating in 1910 (C), and the total acreage included in projects, either complete or under way in 1910 (D), are given in the following table classified by the type of enterprise controlling the irrigation works.

	A	B	C	D
Total	13,739,499	100.0	19,335,711	31,112,110
U. S. Reclamation service	395,646	2.9	786,190	1,973,016
U. S. Indian service	172,912	1.2	376,576	879,068
Carey act enterprises	288,553	2.1	1,089,677	2,573,874
Irrigation districts	533,142	3.9	804,951	1,589,865

	A	B	C	D
Coöperative enterprises	4,646,039	33.8	6,194,677	8,845,437
Commercial enterprises	1,444,806	10.6	2,416,516	5,096,337
Individual and partnership enterprises	6,258,401	45.5	7,667,124	10,154,513

The most striking fact brought out by this table is the very large percentage of the acreage supplied with water by coöperative, individual, and partnership enterprises, all of which are controlled by the water users. Of the acreage irrigated in 1909, about eighty-four per cent. was served by enterprises of this character, including irrigation districts in this class. All United States reclamation and Carey act enterprises and many of the commercial enterprises are to become coöperative. Classing these with those already under the control of the water users leaves less than ten per cent. of the acreage irrigated in 1909 to be served by works which are not now or soon to be controlled by those who use the water.

The United States Reclamation Service is building works, under the act of Congress approved June 27, 1902, with the receipts from the sale of public lands. The cost is to be repaid to the government by the water users in annual installments, the payments to go into the reclamation fund for the construction of additional works. The United States Indian Service is building works for the irrigation of land in Indian reservations. Under the Carey act (act of Congress, August 18, 1894) the federal government grants to each of the arid States 1,000,000 acres of arid land on condition that the State provide for its irrigation. The States contract with construction companies to build the works necessary to irrigate this land, and the land and water rights are sold under agreements providing that the works shall become the property of the water users when the rights are paid for. Irrigation districts are public corporations organized under State laws, giving them the power to issue bonds and to levy and collect taxes. Payments on both principal and interest on bonds, and the cost of operation and maintenance are levied in the form of taxes, which are a lien on the land in the district. Coöperative enterprises are for the most part controlled by stock companies, the stock of which is owned by the water users. Both water and costs are apportioned according to the stock owned. In Arizona and New Mexico most of the coöperative enterprises are operated under "community" ditch laws or customs. Commercial enterprises supply water for hire, usually demanding the purchase of a water right and the payment of annual rates. Individual and partnership enterprises are controlled by single farmers or by neighboring farmers without formal organization.

In the following table the acreage irrigated in 1909 is classified by the sources of its water supply:

	Acres
Streams	12,940,849
Flowing wells	125,590
Pumped wells	308,043
Reservoirs	98,193
Lakes	70,638
Springs	196,186

The extent and character of irrigation works in the arid region of the United States are shown in the following table:

Length of ditches (miles).....	125,615
Main ditches (miles).....	87,336
Laterals (miles).....	38,279
Number of reservoirs.....	6,933
Capacity of reservoirs (acre-foot).....	12,872,256
Number of flowing wells used for irrigation	5,070
Number of pumped wells used for irrigation	14,544
Number of pumping plants.....	13,951
Engine capacity of pumping plants (h.p.)	207,241
Capacity of pumps (gal. per min.).....	9,918,755

The cost of irrigation work in 1889, 1899, and 1910, and the average cost per acre irrigated are as follows:

	Total cost	Average
1899	\$29,611,000	\$ 8.15
1899	67,482,261	8.89
1909	304,699,450	22.18

The average annual cost of operation and maintenance per acre irrigated in 1909 is reported as \$1.07; in 1899, 38 cents, and in 1889, \$1.07, the same as in 1909.

ISIDOR MEDAL. See PAINTING.

ISLE OF PINES, THE. A dependency of New Caledonia (q. v.)

ISOSTASY. See GEOLOGY.

ISRAELS, JOSEF. A Dutch painter, died August 12, 1911. He was born in Groningen, Holland, in 1824, of Jewish parentage. He was intended for a commercial career, but showing artistic aptitude he studied at Amsterdam under Kruseman and at Paris under Picot and Scheffer. He also studied under Delaroche in Paris. Israels began his career as an artist by combining historic and dramatic subjects in the romantic style of to-day. He went by chance after an illness to recuperate at the fishing town of Zangvoort, near Haarlem, where he was so impressed with the daily tragedy of the life of the simple fisher folk, that a vein of pity and woe possessed most of his work thereafter. He continued to live chiefly at Amsterdam until he settled at The Hague in 1870. In 1862 his pictures "The Cradle" and "The Shipwrecked Mariner," exhibited in London, excited much interest. Among other important works of his early career were: "Zangvoort Fishermen," "The Silent House," which gained a gold medal at the Brussels salon in 1858, and "Village Poor." Among his maturer works were: "The Widower," "When We Grow Old," "Alone in the World," and "The Bric-à-Brac Seller," which gained medals of honor at the Paris Exposition of 1900. "David Singing before Saul," one of his latest works, has a touch of the return to the Rembrandt spirit of his youth. He produced, in addition to his paintings, a great number of water colors and etchings. His etchings are noted for their simplicity and sureness of touch. He was perhaps the most eminent of contemporary painters.

ISTHMIAN CANAL ZONE. See PANAMA CANAL.

ITALIAN SOMALILAND. A protectorate administered by the Italian government, having an area of 100,000 square miles and a

population of about 400,000. Mogadisho (Benadir) is the seat of government (inhabitants, 10,000). Imports (1908-9), 2,888,000 lire; exports, 1,740,000. Estimated revenue and expenditure for 1910-11 balanced at 3,551,000 lire. Signor de Martino was governor in 1911.

ITALY. A constitutional monarchy of southern Europe. Capital, Rome.

AREA AND POPULATION. The area is variously estimated at from 110,500 to 110,690 square miles. Estimated population January 1, 1910, 34,947,865. Marriages in 1910, 268,739; births, 1,194,603; deaths, 732,832; still-births, 50,337. Emigrants 1910, 651,475, of whom 214,593 to the United States. According to the preliminary returns, census of June 10, 1911, Rome had 538,634 inhabitants; Naples, 723,208; Milan, 599,266; Turin, 427,733; Palermo, 341,456; Genoa, 272,077; Florence, 232,860.

EDUCATION. In 1907-8 there were in Italy 3576 infant schools, with 7392 teachers and 355,594 pupils; 63,618 public (61,944 teachers, 2,548,583 pupils), and 6534 private (8110 and 184,700) elementary schools; 134 normal schools, with 27,171 students. Secondary education is provided in lyceums and gymnasia, chiefly state-maintained, and special schools are numerous. Students in universities 1909-10, 22,882. While Roman Catholicism is nominally the state religion, entire religious toleration prevails.

AGRICULTURE. About seventy per cent. of the total area of Italy is under cultivation. The following table shows area and production of staple crops in hectares and quintals (1911 preliminary), and the yield per hectare:

	1910	1911	1910	1911
Wheat, ha.....	4,758,600	4,751,600
Wheat, qt.....	41,750,000	52,362,000	8.8	11.0
Rye, ha.....	121,730	112,290
Rye, qt.....	1,381,500	1,345,600	11.3	11.0
Barley, ha.....	247,560	247,600
Barley, qt.....	2,064,600	2,369,400	8.3	9.6
Oats, ha.....	503,300	514,160
Oats, qt.....	4,147,600	5,947,300	8.2	11.6
Corn, ha*.....	1,520,500	1,512,100
Corn, qt.....	24,690,000	23,836,000	16.2	15.8
Rice, ha.....	143,860	144,500
Rice, qt.....	4,379,800	4,792,200	30.4	33.2
Sugar beets, ha.....	50,200	52,590
Sugar beets, qt.....	16,780,700	14,817,000	334.5	272.2
Vines, ha.....	4,462,800	4,477,200
Vines, ht.....	29,293,240	42,000,000	6.6	9.4

* Late sown only. † Hectoliters.

Forest area, about 4,093,000 acres (exclusive of chestnut plantations). Yield, 1909: 1,096,000 cubic meters of timber (37,556,000 lire), 4,049,000 of firewood (48,086,000), 3,994,000 quintals of charcoal (38,490,000). The total value was 124,132,000 lire. Value of secondary products, in addition, about 32,000,000 lire annually. Area replanted with government assistance, 1867-1910, 31,748 hectares.

Average annual production of silk cocoons, 53,758,000 kilograms; of silk, 5,788,000 kilograms.

MINING, MANUFACTURES, ETC. In 1909 there were 714 mines in operation, employing 50,587 persons. The workers employed, the production in metric tons, and the value in lire are given in the table below:

Minerals	Wkrs.	Met. tons	Lire
Sulphur	22,789	2,827,455	32,516,220
Zinc	14,041	129,899	12,504,451
Iron	1,885	505,095	6,964,768
Lead	*	37,945	5,756,891

Minerals (cont.)	Wkrs.	Met. tons	Lire
Coal, etc.....	3,232	555,073	4,971,986
Mercury.....	1,230	97,592	3,600,648

Quarries.....	69,143	50,069,797
Kilns.....	98,412	159,135,997

* Included in the 14,041 at zinc above.

Number of persons employed in the silk industries (1903), 191,000; in the woolen industries, 38,000; cotton industries, 140,000; vegetable fibre mills, 26,000. Sugar factories (1909-10), 34, with aggregate output of 110,795 tons. Value of industrial chemical products (1909), 134,320,000 lire.

Number of vessels and boats engaged in the fishing industry (December 31, 1908), 26,787, of 77,550 tons, carrying 109,825 fishermen. Value of 1908 catch, 20,287,000 lire (tunny-fish, 2,277,000 lire; coral, 1,407,000).

COMMERCE. The trade is given for three years in lire in the table below:

	1908	1909	1910
Imps. mdse.	2,913,274,509	3,111,710,447	3,204,700,000
Prec. mets.	28,052,400	18,000,800	31,066,000
Total	2,941,326,909	3,121,711,247	3,235,766,000
Exps. mdse.	1,729,263,357	1,866,889,562	2,008,275,000
Prec. mets.	21,012,200	54,067,700	48,116,000
Total	1,750,275,557	1,920,957,262	2,056,391,000

Details of the special trade for 1909 are given in thousands of lire as follows:

Imps.	1000 lire	Exps.	1000 lire
Cereals.....	368,200	Silk.....	499,000
Coal.....	260,500	Cottons.....	112,900
Cotton.....	243,700	Fruits.....	91,100
Silk.....	180,400	Silks.....	88,000
Machines.....	175,300	Chem. prods.....	59,500
Chem. prods.....	154,000	Hemp.....	53,400
Timber.....	151,800	Skins.....	49,200
Iron.....	132,500	Cheese.....	44,800
Skins.....	100,100	Wine.....	44,600
Wool.....	90,700	Eggs.....	43,400
Fish.....	86,000	Citrus fruits.....	35,100
Animals.....	84,500	Olive oil.....	34,100
Iron mfrs.....	67,900	Sulphur.....	33,700
Instruments.....	58,100	Wooden wares.....	32,800
Woolens.....	52,800	Marble, etc.....	26,700
Copper, etc.....	44,700	Pastes.....	24,100
Silks.....	43,200	Vegetables.....	24,700

The trade with principal countries of origin and destination is given as follows, with values in thousands of lire: Germany, 503,464 imports and 307,202 exports; Great Britain, 490,643 and 167,929; United States, 390,193 and 202,374; France, 329,106 and 198,717; Austria-Hungary, 309,303 and 155,087; Russia, 209,600 and 33,597; Argentina, 120,901 and 150,849; British India and Ceylon, 97,466 and 23,008; Switzerland, 80,498 and 216,753; Belgium, 73,345 and 38,781; Turkey, 71,426 and 79,063; China and Hongkong, 60,717 and 5065; Rumania, 55,180 and 8518; Spain, 32,984 and 10,947; Netherlands, 29,770 and 15,069; Tunis, 29,094 and 6975.

FINANCE. The monetary unit is the lira

(worth 19.3 cents). Financial statistics are given below in lire for three successive fiscal years:

	1907-8	1908-9	1909-10
Rev.	2,320,597,699	2,584,696,913	2,602,163,326
Exp.	2,258,720,848	2,502,815,599	2,551,286,013

The revenue for 1910-11 was reported at 2,684,873,689 lire, and the expenditure at 2,574,463,776. Details and totals of the 1911-12 budget are shown in the following table:

Revenue	1000 L	Expenditure	1000 L
State property..	58,162	Treasury	718,708
Direct taxes....	474,470	Finance	314,330
Transactions ..	308,800	For. Affairs.....	23,590
Customs, monop-		Justice, etc.....	53,929
olies, etc.....	1,044,850	Instruction	101,332
Public services.	172,511	Interior	119,976
Repayments	166,078	Public Works....	52,045
Various	26,430	Posts & tels....	119,397
Special	58,435	War	343,726
		Navy	194,715
		Agriculture, etc.	22,541
Total ord.....	2,309,776	Total ord.....	2,064,288
Extraord	248,155	Extraord.	438,685
	2,557,931	Total	2,502,973

The public debt stood July 1, 1911, at 508,471,651 lire. Aggregate cash and reserve of the three banks of issue December 31, 1909, 1,510,805,144 lire. Postal savings banks (December 31, 1909), 9043, with 1,586,518,148 lire deposits; other savings banks, 208, with 2,191,470 depositors and 2,305,210,419 lire deposits.

NAVY. The number and displacement of war vessels of 1000 tons and over, and of torpedo craft of 50 tons and over, built and building, in 1911 were placed at 157, of 312,122 aggregate tons, detailed as follows: Four dreadnoughts (all building), of 85,820 aggregate tons; 8 first-class battleships, of 95,700; 10 armored cruisers, of 78,520; 3 cruisers (6000 to 3000 tons) (all building), of 9670; 6 cruisers (3000 to 1000 tons) of 12,470; 22 torpedo-boat destroyers, of 7587, and 10, of 6130, building; 46 torpedo boats, of 7713, and 28, of 3390, building; 9 submarines, of 1822, and 11, of 3500, building. Of the four dreadnoughts building, the *Dante Alighieri* was launched August 20, 1910; the *Conte di Cavour*, August 20, 1911; the *Leonardo da Vinci* and the *Giulio Cesare* in October, 1911. The cruisers building are the *Quarto* (launched August 21, 1911), the *Marsala*, and the *Nino Bixio*. Estimated naval expenditure for the year ending June 30, 1912: ordinary, 194,714,772 lire; extraordinary, 500,500. Personnel, 30,587 officers and men. See NAVAL PROGRESS.

ARMY. The organization of the central administration of the Italian army was put to a test in 1911 by the outbreak of hostilities with Turkey and the campaign in Tripoli (see TURCO-ITALIAN WAR). The law of 1910 relative to certain changes in organization was being carried out, but the lack of recruits had to be considered, and, although the annual contingent was being increased, the regular army was being maintained at about eighty-five per cent. of its organic strength. The army was organized into 12 army corps, 25 divisions, 3 cavalry divisions, 51 infantry brigades, 8 cavalry brigades, and 12 brigades of field artillery. The total war strength of the kingdom was stated

at about 3,500,000 men, but of these over 2,000,000 are territorial militia, practically untrained, so that a war strength of 1,500,000 trained men was nearer the condition of the country. Service in Italy is compulsory, and two years in the infantry are required.

During the year the Italian army was holding competition trials to determine on a new field gun, as some 600 pieces were required to replace the older types. The competition lay between the Schneider differential recoil field gun and the Deport "scissors trail" gun.

The effective strength and distribution of the army on a peace basis were as follows: (O., officers; N. C. and M., non-commissioned officers and men):

	O.	N. C. & M.
Greater general staff.....	156
Staff	155
346 battalions of infantry.....	7,285	153,515
145 squadrons of artillery and 29 depots	985	26,938
245 batteries of artillery, 98 companies, 51 depots, and 40 companies of train.....	2,217	45,848
74 companies of engineers and 10 companies of train.....	610	10,529
Officers of 88 military districts..	336
12 hospital corps companies....	768	3,712
12 companies of supply.....	452	3,978
Officers of administration.....	356
12 legions of carabineers.....	685	30,067
Military schools	404	2,061
Veterinary corps.....	213
	14,648	276,645

Returns for the peace strength of the army, considering only the officers and men serving with the colors, gave the distribution and numbers of troops as follows: Infantry, 167,000; cavalry, 24,000; field artillery, 27,000; foot artillery, 7000; coast artillery, 5000; technical troops, 11,000; train, 2500; sanitary troops, 3729; total peace strength, 288,409. The fighting strength of the three arms, namely, the infantry, cavalry, and artillery on mobilization, considering only the existing organization, was estimated as follows: Infantry rifles, 300,000; cavalry sabres, 20,880; field guns, 1470; sabres per thousand infantry bayonets, 69.99; field guns per thousand infantry bayonets, 4.90; fully trained reserves available for passing from peace to war footing, 1,250,000.

GOVERNMENT. The executive authority is vested in a king, who acts through a responsible council of eleven ministers. The reigning king (1911), Victor Emmanuel (Vittorio Emanuele) III., was born Nov. 11, 1869; was married (1896) to Princess Elena of Montenegro; he succeeded his father July 29, 1900. Heir apparent, Prince Umberto, born September 15, 1904. The legislative authority rests conjointly in the king and a parliament, consisting of a senate (318 members), and a representative chamber of deputies (508). The ministry, as constituted March 30, 1911, was as follows: Premier and minister of the interior, G. Giolitti; foreign affairs, A. (Marchese) di San Giuliano; justice, C. Finocchiaro-Aprile; finance, L. Facta; treasury, F. Tedesco; war, Gen. P. Spingardi; navy, Vice-Admiral P. Leonardi Cattolica; instruction, L. Credaro; public works, E. Sacchi; agriculture, etc., F. S. Nitti; posts and telegraphs, T. Callasano.

HISTORY

The chief event in the history of Italy in 1911

was the TURCO-ITALIAN WAR, which is discussed under that title. The following paragraphs deal only with the internal affairs of the country during the year.

MINISTERIAL CRISIS. Parliament was reopened on January 24, 1911. Early in the session the chamber passed, after brief consideration, a railway bill which aimed to improve the condition of the lower grades of employees, and added a heavy financial burden to the cost of railway management. Meanwhile the Socialists had brought up the question of the high cost of living and demanded immediate remedies. The government received a vote of confidence on this occasion by 261 against 88. The Luzzati cabinet, however, which came into power in March, 1910, had only an insecure basis from the first. Lacking an effective majority, the premier appealed to representatives of all the political groups, and they were held together only temporarily. In February and March the difficult question of revising the electoral laws came up, and finally the government recommended that the bill for the extension of the franchise and for compulsory voting should be postponed until 1913. The chamber gave the government a majority of 195, but the Radicals voted with the minority, and three Radical members of the ministry resigned rather than break with their party. On account of this defection and the discontent of the Moderates with the government's financial policy, the entire ministry soon afterwards handed in their resignations. Signor Giolitti, who alone could count on a parliamentary majority, then formed a new ministry, which was announced on March 29. Signor Bissolati, the Socialist leader, was summoned to an audience with the king on the political situation—an incident which caused general surprise—and was afterwards offered the portfolio of agriculture in the Giolitti cabinet, but he refused. With three exceptions the members of the Luzzatti ministry retained their portfolios in the new government.

THE GIOLITTI MINISTRY. The new ministry's programme, presented to the chamber on April 6, included a new electoral reform bill and an old-age pension bill, for which the funds were to be secured by a government monopoly of insurance. Pursuant to the latter purpose Signor Nitti, the minister of agriculture, presented on June 3 a bill for a national system of insurance. This required all private insurance companies to present their registers to the officers appointed, whereupon the register would be closed. The affairs of the companies were to be turned over to the government within two weeks from the passage of the act. Existing contracts were recognized, but no new business was to be done. The measure aroused violent opposition, and early in June the chamber agreed to defer the insurance bill until the autumn session and voted confidence in the ministry.

THE CAMORRIST TRIAL. Great interest was shown not only in Italy, but in all parts of the world in the sensational trial of the Camorrista, which began near Viterbo, near Rome, on March 18, 1911. The Camorra was a secret society, which for many years had flourished in Naples despite the efforts of the authorities to suppress it. At the head was a grand master, whose name was supposed to be unknown even to the members. The society consisted of twelve

branches, each composed of semi-independent groups. There was a court of judges, who met and rendered sentence in secret. The society rendered aid to members accused of criminal offenses, and when convicted helped them in escaping punishment. It levied blackmail on the citizens, and at times terrorized the community. A long list of unpunished murders marked its activities. People who refused to obey its commands met mysterious deaths. The occasion of the trial was an atrocious murder of a man and his wife, the Cuocolos, on June 5, 1906, and according to the evidence it was brought out that at a meeting of the Camorristas one Enrico Alfano, who passed under the name of Erricone, had denounced the Cuocolos for having betrayed a comrade, who was afterwards sentenced to penal servitude. The tribunal declared that the Cuocolos deserved death, and four Camorristas carried out the sentence with great ferocity. Cuocolo was lured to a lonely place on the seashore. His body when found bore the marks of thirty-nine wounds. His wife was murdered in bed. The chief informer against them was one of the Camorristas, himself accused of complicity, named Abbatemaggio. The difficulties of the case would be gathered from the fact that there were 600 witnesses and that the counsel for the defense numbered thirty-two. One of the most interesting features of the trial was the examination of Erricone, who defended himself in an exceedingly able manner, showing real power as an orator. The proceedings were still pending at the close of the year.

OTHER EVENTS. It was reported in January, after an inspection by the minister of public works, that great progress had been made in the rebuilding of Messina, destroyed by the earthquake, more than three-fourths of the amount originally placed at his disposal having been expended, and contracts having been made for the expenditure of the balance. It was announced that at that time 40,000 persons were living in temporary dwellings in Messina and that 20,000 were living in houses that had been repaired. The government had had about \$100,000,000 at its disposal for the work of reconstruction. Its present plan was to go on first with the completion of the building of the new public offices, and then to engage in work on private property unless the owners took the necessary measures of their own accord within the next three months. In January the Vatican announced that the year was to be one of mourning in commemoration of the loss of temporal power. The year was notable as the fiftieth anniversary of Italian unity, and the jubilee was celebrated with many festivities which began at Rome in the Aula Senatoriale, where the king made an address. Exhibitions were held at Rome, Florence, and Turin, and in June the imposing monument of Victor Emmanuel II. was unveiled at Rome. Asiatic cholera appeared in southern Italy in June and July. A serious riot broke out at Verdicaro at the end of August owing to the ignorance of the people, who misunderstood certain sanitary regulations. They attacked the town hall and set it on fire, and committed other acts of violence until they were put down by the authorities. The king received a visit from King Peter of Servia in February and from several royal representatives, including the crown prince of Germany, in April, in connection with the jubilee.

For an account of earthquakes in 1911, see **EARTHQUAKES**. For notes on architecture in 1911 see **ARCHITECTURE**. See also **EXPOSITIONS**. **ITALY, FIFTIETH ANNIVERSARY OF THE KINGDOM OF.** See **EXPOSITIONS**.

IVES, HALSEY COOLEY. An American art director, died May 6, 1911. He was born in Montour Falls, N. Y., in 1846. His education was received in the technical schools of South Kensington, London, and various art schools. In 1874 he was appointed director of the St. Louis School of Fine Arts, the art department of Washington University. This office he retained until 1909, when he was appointed director of the City Art Museum of St. Louis. He several times represented the United States government as commissioner abroad and was chief of the art department of the Chicago Exposition in 1893 and of the St. Louis Exposition in 1904. He received decorations from many foreign orders and societies. He was recipient of the grand prize for educational services from the St. Louis Exposition in 1904 and of the silver medal for the landscape "Waste Lands" at the Portland Exposition.

IVORY COAST, THE. A French West African colony, covering 315,250 square kilometers; population, 1,127,170 (658 French). Bingerville is the capital. Imports (1909), 11,192,242 francs; exports, 11,787,852. There are 183 kilometers of railways. Revenue (1909), 5,022,784 francs; expenditure, 4,923,273. Lieutenant-governor in 1911, G. Angouvant. See **FRENCH WEST AFRICA**.

JAMAICA. An island of the West Indies; with dependencies, a British crown colony. The island covers 4207 square miles; population (census of April, 1911), 831,383. Imports (1910), £2,561,674; exports, £2,628,307. Tonnage entered and cleared (1909), 3,129,207. Railways, 184 miles. Revenue (1909-10), £1,140,327; expenditure, £1,190,166. The governor in 1911 was Sir Sidney Olivier. Attached to Jamaica are the **TURKS AND CAICOS ISLANDS**, **CAYMAN ISLANDS** (qq. v.), **MORANT CAYS** and **PEDRO CAYS**.

JACOBS, W. W. See **LITERATURE, ENGLISH AND AMERICAN, Fiction**.

JACKSONVILLE. See **FLORIDA**, and **MUNICIPAL GOVERNMENT**.

JAGGARD, EDWARD AMES. An American jurist, died February 13, 1911. He was born at Altoona, Pa., in 1859, and graduated from Dickinson College in 1879. He studied law at the University of Pennsylvania and was admitted to the bar in 1882. In 1888 he was appointed lecturer on medical jurisprudence at the St. Paul Medical College. From 1892 to the time of his death he was a member of the law faculty of the University of Minnesota. In 1898 he was appointed judge of the district court of the second district of Minnesota, serving until 1905, when he was appointed associate justice of the Supreme Court of the State. He was a member of several learned societies and was the author of *Jaggard on Torts* (2 vols., 1893); *Jaggard on Taxation in Minnesota and North and South Dakota* (1901); *Jaggard on Taxation in Iowa* (1902); *Anomalies in the Law of Libel and Slander* (1903), and many published addresses.

JAMES, WILLIAM. See **PHILOSOPHY**.

JANEWAY, EDWARD GAMALIEL. An American physician, died February 10, 1911. He was born in New Jersey in 1841 and graduated from Rutgers College in 1860. He began the study of medicine at the College of Physicians and Surgeons at Columbia University, but interrupted his course to serve as medical cadet at the United States army hospital at Newark, N. J., in 1862-3. He took his degree in 1864, and from 1868 to 1872 he was curator of the Bellevue Medical College. From 1872 to 1879 he was professor of pathology and practical anatomy and from 1881 to 1886 professor of diseases of the mind and nervous system, and from 1886 to 1892 professor of medicine at that institution. From 1898 to 1905 he was dean of the University and Bellevue Hospital Medical College. In addition to these professional employments, Dr. Janeway held several important public offices. He was commissioner of the New York City health department and was a member of the advisory committee of the Chamber of Commerce during the cholera scare of 1892. In 1909 he was delegate to the Sixteenth International Medical Congress at Budapest. He was one of the best known diagnosticians and consulting physicians in the United States, and was a specialist in nervous diseases. He received the degree of LL. D. from Rutgers College and from Columbia and Princeton universities. He wrote many medical papers and was the author of *Clinical Points in the Diagnosis of Hepatic Affections*.

JANVRIN, JOSEPH EDWARD. An American physician, died December, 1911. He was born in Exeter, N. H., in 1839, and was educated at Phillips Exeter Academy. He served throughout the Civil War as assistant surgeon of the Fifteenth New Hampshire Volunteers. After graduating from the College of Physicians and Surgeons he began to practice in New York in 1872 as assistant surgeon in the Woman's Hospital in the city of New York. He held this position until 1882. A year later he became gynecologist of the New York Skin and Cancer Hospital and held this position until the time of his death. In 1896-7 he was president of the New York County Medical Association. He was a member of many medical and patriotic societies.

JAPAN. An eastern Asiatic island empire, a constitutional monarchy. Japan proper consists of Honshiu (the "mainland"), Kiushiu, Hokkaido, and many smaller islands. Annexed to the empire are Formosa (Taiwan), the southern half of Sakhalin (Karafuto), Korea (Chosen), and, as a leasehold, Kwantung (Kwantung-shu) (qq. v.), and the Pescadores. Capital, Tokyo.

AREA AND POPULATION. The area of Japan proper is stated at 24,794.36 square ri (147,655 square miles); the island of Honshiu covers 14,492.21 square ri (86,304 square miles); Hokkaido (Yezo), 5056.78 square ri (30,115 square miles); Kiushiu, 2311.86 square ri (13,767 square miles); Shikoku, 1151.24 square ri (6856 square miles). The population of Japan proper is reported as having been 33,110,000 in 1872, 39,607,000 in 1888, 43,763,000 in 1898, and 49,587,243 on December 31, 1908 (25,045,359 males and 24,541,884 females). Estimate in 1911, 51,591,361 for Japan proper and 17,015,312 for Japanese possessions (Chosen, Taiwan, etc.); total, 68,606,673. By grand divisions the population of 1908 was as follows: Honshiu, 37,

413,141 (northern, 7,480,380; central, 19,003,457; western, 10,929,304); Kiushiu, 7,748,402; Shikoku, 3,288,290; Hokkaido, 1,137,410. At the end of 1909 there were in Japan 17,537 foreigners, of whom 9880 were Chinese, 2499 British, 1651 American, and 800 German. In 1908 there were 461,949 marriages, 1,672,627 births, 1,038,110 deaths; in addition, 162,676 still-births. The large annual increase of population in an already crowded territory in considerable degree explains Japan's policy of expansion. This increase in recent years is especially remarkable when brought into comparison with the former almost stationary figures of population. It is stated that a census of 1721 showed about 29,000,000 inhabitants, and that, although there was no emigration, the net increase during the 125 years ending 1846 was less than one-fortieth of one per cent. per annum. Since 1872, when the periodical census was resumed, the population has increased by about 1.35 per cent. per annum. This change in rate of increase is attributed to the removal of checks and regulations imposed by the feudal system, as well as of barriers to free trade and intercommunication, which often prevented famine relief. It should be noted that, with the perhaps unfortunate development of Western industry and culture in Japan, the urban population is increasing much more rapidly than the rural. In the five years from 1903 to 1908 the average increase in cities of over 20,000 was 20.5 per cent., as compared with 6.1 per cent. for the whole country. Estimated population of the larger cities December 31, 1908: Tokyo, 2,186,079; Osaka, 1,226,590; Kyoto, 442,462; Yokohama, 394,303; Nagoya, 378,321; Kobe, 378,197; Nagasaki, 176,480; Hiroshima, 142,763.

EDUCATION AND RELIGION. Primary instruction is compulsory. The latest statistics available relate to March 31, 1908. At that time there were 27,125 elementary schools, with 122,038 teachers and 5,713,698 pupils; 288 middle schools (5546 teachers and 111,967 pupils; 5382 special and technical schools (8454 and 283,204); 2210 "various" schools (7908 and 152,288); besides high schools, normal schools, kindergartens, and the universities of Tokyo (5411 students), Kyoto (1412), and Tohoku (694). Public expenditure on schools in 1907-8, 55,633,579 yen.

The principal religious forms are Shintoism and Buddhism. The latest figures available are for December 31, 1907. At that date Shintoism had 12 administrative heads of sects, 78,140 preaching priests, 15,008 monks, 171 state temples, 55,095 district temples and temples of inferior rank, and 121,474 other (non-distinguished) temples. Buddhism had 52 administrative heads of sects, 50,155 high priests, 781 high priestesses, 72,501 preaching priests, 47,631 monks, 72,128 regular temples, and 37,417 other temples. The numbers of the Buddhist priesthood remain about stationary, those of Shintoism show a slight decline. Christianity was represented December 31, 1907, by 1808 ministers (1200 Japanese and 608 foreign) and 1160 churches, chapels, etc. Roman Catholic churches numbered 167; Orthodox, 129; Presbyterian, 201; Congregational 118; Episcopal, 196; Methodist, 148; Baptist, 55.

AGRICULTURE. On January 1, 1910, taxed land owned by private persons and local corporations amounted to 14,475,478 cho, of which 5,272,737 cho were under cultivation, 7,509,952 under forest, and 1,284,515 open field (one cho=

2.4507204 acres). Rice is by far the most important crop. The following table shows, for the cereal crops, in metric measure, the area harvested, the production in 1910, the estimated production in 1911, and the yield per hectare in 1910:

Crops	Hectares		Quintals		Qs. per ha.
	1910	1911	1910	1911	
Rice	2,927,076	2,937,000	66,452,561	75,451,000	22.7
Wheat	471,529	492,000	6,457,693	6,755,000	13.7
Barley	1,285,458	1,260,500	19,522,249	20,800,000	15.2
Oats	39,333	42,000	618,691	673,000	15.7
Corn	52,712	55,000	949,501	884,000	18.0

Rice crops, in Winchester bushels, have been as follows: 1902, 189,056,270; 1904, 362,271,301; 1908, 265,849,598; 1909, 268,428,392; 1910, 238,712,244. Tea production in 1908, 7,409,974 kwan; sugar, 197,748,974 kwan (one kwan=8.267323 lbs.). The production of silk cocoons is very important. Livestock in 1908: Cattle, 1,297,974; horses, 1,494,506; sheep, 4085; goats, 82,352; swine, 284,729. In 1908 about 60 per cent. of the population was dependent on agriculture.

MINING. Some of the mining products were as follows in 1908: Gold, 959,441 momme (one momme=3.75 grammes); silver, 32,846,707 momme; copper, 68,998,195 kin (one kin=1.3228 lbs.); lead, 4,850,501 kin; iron, 12,105,526 kwan; manganese, 18,550,574 kin; sulphur, 55,699,100 kin; coal, 14,825,363 tons.

MANUFACTURES. Manufacturing industries, especially in textiles and iron and steel, have developed rapidly. In 1908 there were 86 cotton mills, with 75,225 employees, 1,403,034 spindles, and a yarn output of 42,864,262 kwan. Output values in that year included: Silk goods, 94,799,152 yen; mixed silk and cotton, 21,632,156; cotton, 100,654,814; matches, 10,741,886; earthenware, 10,733,983; European paper, 13,690,983; matting, 11,071,757; oil, 10,019,007; lacquered ware, 7,665,126; leather, 7,171,733.

COMMERCE. Imports and exports of merchandise and of specie and bullion have been valued in thousands of yen as follows:

	Imports		Exports	
	Mdse.	S. & B.	Mdse.	S. & B.
1872	26,175	17,027
1892	71,326	91,103
1902	271,731	258,303
1906	418,784	47,211	423,755	25,784
1908	436,257	17,544	378,246	3,773
1909	394,199	79,588	413,113	6,584
1910	464,234	17,672	458,429	25,175

Exact figures for 1909 and 1910 were: Imports of merchandise, 394,198,843 and 464,233,808 yen; of specie and bullion, 79,587,502 and 17,671,797; exports of merchandise, 413,112,511 and 458,428,996; of specie and bullion, 6,584,327 and 25,175,091. The principal imports were valued as follows in 1910 in thousands of yen (figures in parenthesis for 1909): Raw cotton, 159,322 (108,308); machinery, 23,619 (15,581); oilcake, 19,888 (24,357); iron and steel mfrs., 17,122 (15,934); petroleum, 14,303 (11,657); wool, 13,520 (9092); sugar, 13,347 (13,367); cotton goods, 11,854 (12,686); woolen goods, 10,057 (8758); iron, 9838 (8433); ammonium sulphate, 9066 (5924); soybeans, 8978 (10,546); rice, 8644 (13,586); woolen yarn, 5951 (5041). Similar figures for exports: Silk, 130,833 (124,243); cotton yarn, 45,347 (31,991); silk

goods, 34,138 (35,846); cotton goods, 26,034 (18,961); copper, 20,806 (21,071); coal, 16,300 (17,297); tea, 14,542 (13,082); straw manufactures, 13,610 (12,297); matches, 10,390 (11,625); floss silk, 8417 (7552); sugar, 6098 (5083); rice, 5900 (5867); earthenware, 5514 (5258). The values of imports and exports of merchandise by countries are shown in the following table in thousands of yen:

Countries	Imports		Exports	
	1909	1910	1909	1910
Great Britain	86,277	94,701	27,092	25,781
Germany	40,217	43,946	7,955	11,168
France	5,568	5,405	41,520	44,925
Rest of Europe	16,071	19,711	19,577	26,696
British India	65,167	106,361	14,425	18,713
China	46,886	68,570	73,087	90,037
Dutch East Indies ..	18,631	18,880	3,071	3,134
Korea	14,139	8,592	26,997	17,450
French Indo-China ..	6,372	4,538	439	341
Hongkong	628	675	21,675	23,460
Rest of Asia	24,692	18,543	28,887	33,145
United States	54,043	54,699	131,547	143,702
Other countries ..	15,418	19,713	16,839	19,877
Total	394,199	464,234	413,113	458,429

SHIPPING. Entrances in the oversea trade in 1910 aggregated 11,168 vessels of 20,173,787 tons, of which 7629 (9,348,659 tons) were Japanese, 1971 (8,160,648) British, 414 (1,389,614) German, and 199 (1,397,629) American. On January 1, 1911, the merchant marine consisted of 2518 steamers of 1,233,785 tons, and 6337 sailing vessels of 412,859 tons; in addition, there were small native sailing vessels to the number of 21,470, aggregating 300,069 tons.

COMMUNICATIONS. Railways in operation March 31, 1909, aggregated 5020 miles, of which 4542 were state (including 271 in Formosa), and 478 private (in 1908, 4453 state and 445 private). The total mileage in 1910 is reported at 5150. An extensive plan was adopted in 1911 for state railway construction, and, more especially, improvement, including the broadening of the gauge. At the end of 1911 it was estimated that more than 5500 miles of railway were open in Japan, with 271 miles in Formosa and 25 miles in Sakhalin. The new construction, reported unofficially, was about 450 miles. The most important event of the year was the opening to traffic of the line from Nagoya to Haichioji, near Tokyo. This line was reported as 224 miles long and represents an outlay of £3,500,000. There are 95 tunnels, with a total length of 113,378 feet. The tunnel on the Sasago Pass, over two miles long, is the longest tunnel in Japan, and there are 350 bridges, with a total length of 24,265 feet. The Torii tunnel, situated 3189 feet above sea-level, is the highest point reached on any Japanese railway. The construction work has been attended by great difficulties, as the line traverses mountainous country almost entirely. Telegraphs (1910), 3952 offices, with 36,815 kilometers of line and 162,259 of wire; post offices, 7525.

FINANCE. The monetary unit is the yen, worth 49.8 cents (0.75 gramme of pure gold). Revenue and expenditure in thousands of yen have been as follows in fiscal years ended March 31:

	1906	1907	1908	1909	1910
Rev.	535,256	530,448	857,084	794,939	677,449
Exp.	420,741	464,276	602,401	636,361	532,894

Budget for the fiscal year 1911: Revenue: ordinary, 486,793,876 yen; extraordinary, 47,509,985; total, 534,303,861; expenditure: ordinary, 417,682,876 yen; extraordinary, 116,620,985; total, 534,303,861. For the fiscal year 1912 the budget showed ordinary receipts estimated at 494,916,497 yen and extraordinary at 73,987,419; ordinary expenditure, 410,141,977, and extraordinary, 158,762,039, estimated revenue and expenditure balancing at 568,903,916 yen. The larger estimated ordinary receipts for 1912 included: Excise, 128,814,550 yen; land tax, 75,072,765; monopolies, 61,346,402; customs, 50,514,465; posts and telegraphs, 48,589,725; income tax, 32,968,278; stamps, 25,026,150. The larger estimated expenditures for 1912: Finance, 187,478,214 ordinary and 40,880,764 yen extraordinary (including 155,531,860 for the debt); war, 76,371,236 and 22,021,133; navy, 40,746,338 and 46,063,392; communications, 56,889,910 and 20,862,073; interior, 11,828,477 and 19,041,202; justice, 11,722,752 and 765,076; agriculture and commerce, 7,323,853 and 8,087,229; public instruction, 9,032,170 and 801,113; civil list, 4,500,000. Public debt March 31, 1911: Internal, 1,203,179,400 yen; external, 1,447,215,716; total, 2,650,395,116 yen. In the fiscal year 1911 there was a readjustment of the tax system with a view, on the one hand, of favoring the development of the country's economic possibilities, and, on the other, of rendering more equitable the incidence of taxation.

ARMY. The Japanese army is recruited by conscription and the contingent available annually amounts to about 500,000 men, from which recruits may be sent to the active army or *geneki*, where they serve with the colors for two or three years, and with the first active or reserve army, known as the *yobi*, where the remainder of the seven and one-third year period of service is passed. They then spend 10 years in the second reserve or *kobi*, and later are enrolled in national army, or *kokumin*, until the age of exemption is reached. The active army is held in readiness for foreign service, while the national army is organized for home defense, and the militia as an auxiliary force, though the latter may be drawn upon to supply deficiencies in the first reserve. The complete success of this scheme of organization has been conceded, and for ability to turn out a large and well-equipped army ready for service Japan stands unrivaled. In fact, so well developed has been the general scheme for the organization of the Japanese army that the changes made from time to time are of a minor character rather than radical in nature. The active army and guard which comprise 19 divisions were to be increased, it was stated in 1911, by 2 divisions for service in Korea. While service is compulsory in the empire proper, it was not proposed to have conscription in Korea. During the year 2 additional brigades of cavalry, the third and the fourth, were being formed so as to remedy one of the very apparent weaknesses of the Japanese army. Furthermore, it was proposed to increase the heavy field artillery by 2 brigades. This portion of the service was to be armed with 4-inch guns and 4-inch and 6-inch howitzers. During the year considerable progress was made in aeronautics, and aeroplanes of various types were purchased for the use of the army.

Returns for the peace strength of the army,

considering only the officers and men serving with the colors, published in military journals, gave the distribution and numbers of troops as follows: Infantry 149,402, cavalry 4585, field artillery 18,918, foot artillery and coast artillery 6889, technical troops 16,727, train 11,427, sanitary troops 3484; total peace strength 230,000. The fighting strength of the three arms of the service, namely, the infantry, cavalry, and artillery on mobilization, considering only the existing organization, was estimated as follows: Infantry rifles 228,000, cavalry sabres 14,550, field guns 954; sabres per thousand infantry bayonets 63.81, field guns per thousand infantry bayonets 4.18, fully trained reserves available for passing from peace to war footing 1,000,000.

NAVY. On December 1, 1911, Japanese warships, built and building, of 1000 or more tons, and of torpedo craft of 50 or more tons, were as follows (exclusive of transports, colliers, repair ships, converted merchant vessels, etc., vessels not actually begun or ordered, though authorized, and vessels over twenty years old, unless reconstructed and rearmed since 1905): 2 dreadnoughts built, of a combined displacement of 39,150 tons, and 2 building, of 41,600 tons; 11 first-class battleships built, of 152,548 tons; 2 coast defense vessels built, of 9086 tons; 4 battle cruisers built of 56,700 tons, and 4 building, of 110,000 tons; 9 armored cruisers built, of 81,400 tons; 2 cruisers (above 6000 tons) built, of 13,130 tons; 8 cruisers (6000 to 3000 tons) built, of 30,303 tons, and 3 building of 15,000 tons; 5 cruisers (3000 to 1000 tons) built, of 9158 tons; 58 torpedo-boat destroyers built, of 22,607 tons, and 2 building, of 1200 tons; 59 torpedo boats built, of 5560 tons; 10 submarines built, of 1726 tons, and 3 building, of 950 tons; total, 421,369 tons built and 168,750 building. Aggregate main batteries of the larger vessels were: The 2 dreadnoughts built, 8 12-inch and 24 10-inch guns; the 2 dreadnoughts building, 24 12-inch guns; the 11 battleships built, 36 12-inch and 6 8-inch guns; the 4 battle cruisers built, 16 12-inch and 16 8-inch guns; the 4 battle cruisers building, 32 13.5-inch guns; the 9 armored cruisers built, 32 8-inch guns and one 10-inch gun. The dreadnought *Satsuma* was completed in April, 1910; the dreadnought *Aki* in April, 1911; the dreadnought *Kawachi*, launched in October, 1910, and the dreadnought *Settsu*, launched in April, 1911, are to be completed in 1912. The cruiser *Kurama* (14,800 tons, 4 12-inch and 8 8-inch guns) was completed in February, 1911. The principal characteristics of the *Aki* and *Kawachi*, respectively, are: Designed speed, 20 and 20.5 knots; displacement, 19,800 and 20,800 tons; length, 460 and 500 feet; beam, both 84; draft, both 27.5; battery, 4 12-inch and 12 10-inch for *Aki* and 12 12-inch and 10 6-inch for *Kawachi*; torpedo tubes, 5 each; maximum thickness of armor belt, both 9 inches. Personnel, December 1, 1911, 47,167 officers and men. See NAVAL PROGRESS.

GOVERNMENT. The executive authority rests with the emperor, acting through a cabinet of ministers, appointed by and responsible to himself. The legislative power is vested in a parliament, or imperial diet, of two chambers, the House of Peers and the House of Representatives. Representatives, 379 in number, are elected by male subjects having attained the age of twenty-

five and possessing certain property qualifications. The emperor in 1911 was Mutsuhito, who was born at Kyoto, November 3, 1852, and succeeded his father, Komei Tenno, February 13, 1867. Heir-apparent, Prince Yoshihito, born at Tokyo, August 31, 1879. The failure of the ministry of Gen. Marquis Katsura Taro (formed July 14, 1908) to check the increase of taxation led to the ministry's resignation, August 25, 1911. A new ministry, formed August 30, was as follows: Premier, Marquis Saionji Kinmochi; navy, Vice-Admiral Baron Saito Minoru (who was retained from the preceding ministry); communications, Count Hayashi Tadasu; justice, Mr. Matsuda; interior, Viscount Hara; foreign affairs, Viscount Uchida Yasuya (who at the time of his appointment was ambassador to the United States, the portfolio of foreign affairs being temporarily assumed by Count Hayashi); agriculture and commerce, Baron Makino Nobuaki; war, Lieut-Gen. Ishimoto Shinroku; public instruction, Mr. Haseba; finance, Mr. Yamamoto.

HISTORY

THE ANARCHIST TRIAL. The most conspicuous event in the early part of the year was the trial of the Kotoku conspirators, who were accused of plotting against the life of the emperor. It was reported in the newspapers that they had confessed to a plot which aimed at the assassination not only of the emperor, but of several ministers of state. The trial was held in the Court of Cassation. It was charged that the men concerned in the plot were Socialists, but later it was pointed out that they were anarchists. The trial was held in secret, but was witnessed by many Japanese subjects and by members of the diplomatic corps. The court imposed the death sentence upon Dr. Kotoku, his wife, and twenty-two fellow-conspirators. Twelve of the convicted anarchist conspirators, including Dr. Kotoku and his wife, were executed on January 24, but the sentences of the others were commuted to imprisonment for a term of years. There was considerable criticism of the Japanese authorities for trying the anarchists in secret. The answer of the government was that an open trial would have tended to hinder the suppression of anarchy. The premier in an interview on this subject pointed to the fact that a great many small newspapers would have done their best to inflame the popular mind against the existing order of things.

PARLIAMENT. In February, the Katsura cabinet formally entered into an alliance with the Sei-yu-kai (Liberals), thus securing a majority in the Diet. Progress was made towards effective factory legislation by the passage in March of a factory act, which sought to remedy specific abuses in connection with the employment of young persons. It was learned toward the end of August that the Katsura cabinet would resign. Popular opinion had turned against it, especially on the ground that it strengthened the bureaucracy through the appointment of new peers and the additions to the imperial nominees in the upper house. The programme on which it had come into power had been completed. The cabinet resigned, and on August 30, a new cabinet under Marquis Saionji was announced. The chief difference between

the incoming and outgoing cabinets was in their domestic policy. One of the most significant appointments was that of Viscount Hara to the ministry of the interior. He was a member of the Saionji cabinet of 1906-1908, and had been a leader of the Sei-yu-kai. His policy was likely to be far more liberal than that of the previous cabinet, which had been criticised for its attitude toward socialism, creating a sympathy with the movement which had not existed before. Viscount Hara in his previous administration had been criticised for going to the opposite extreme, that is, for being too lenient to the Socialists and agitators. The main question before the new cabinet was the financial problem, which fell to the hands of the new finance minister, Mr. Yamamoto, who was at one time governor of the Bank of Japan. On the one hand, people were complaining of the heavy burden of taxation and, on the other hand, the need of increased expenditures for the army and navy was urged. The new ministry, however, declared that it would not make any fundamental change in the government's policy which would aim as heretofore at improving the national credit and developing industries. It was announced early in December that the cabinet had agreed on a naval programme involving the expenditure of 92,500,000 yen for a battleship and three super-dreadnoughts.

FOREIGN RELATIONS. Marquis Komura delivered an important speech on Japan's foreign policy on January 24, in the House of Representatives, in the course of which he referred to the additional strength and solidity of the Anglo-Japanese alliance, and sought to disarm the suspicion that had been shown in certain quarters as to the recent understanding with Russia. He said: "I have no hesitation in positively declaring that it [the Russo-Japanese agreement] has for its sole object the maintenance of the status quo in Manchuria and of enduring peace in the Far East by confirming and supplementing the provisions laid down in the former convention." He also announced the desire of the imperial government to conclude new treaties as soon as possible with foreign powers on an entirely equal footing. There were, as usual, many reports of friction between the United States and Japan. These were denounced by Mr. Taft as malicious and mischievous, and by Mr. Knox as merely sensational. On the other hand, Baron Uchida referred to them as "merely irrational yet persistent war talk." The new treaty with the United States was ratified by the United States Senate, February 24. It was accompanied by a note from the Japanese ambassador, explaining that the present arrangement, by which Japan herself controls the emigration to the United States, would be continued. (See **ARBITRATION, INTERNATIONAL.**) It was announced on June 20 that Russia would agree to the Japanese proposals to settle all claims resulting from the war and that the troublesome question of the three hospital ships seized by Japan was adjusted. An agreement for the settlement of these outstanding questions was signed in August. On August 19, Japan and France entered into a commercial and navigation agreement, whereby the latter applied her minimum tariff to certain Japanese products, and Japan granted tariff reductions on fifteen exports. On July 13 a new agreement between Great Britain and Japan revising the terms

of the alliance and renewing it for a period of ten years, was signed. The chief change is the insertion of a new provision to the effect that if either party concluded a treaty of general arbitration with a third power, it is not to be inferred that anything in the present agreement shall constrain such contracting party to go to war with the third power. Several articles were omitted as superseded or superfluous. The renewal of the treaty, so far as Great Britain was concerned, marked a new departure in that for the first time the Canadian ministers were consulted in regard to it. The objects of the agreement were the same as before, namely, the consolidation and maintenance of the general peace in the regions of eastern Asia and India; preservation of the common interests of all powers in China by insuring the independence and integrity of the Chinese empire, and the principle of equal opportunities for the commerce and industry of all nations in China; the maintenance of the territorial rights of the high contracting parties in the regions of eastern Asia and India, and the defense of their special interests in the said regions.

JAPANESE-AMERICAN TREATY. See UNITED STATES, *Treaties*, and JAPAN.

JAPANESE INTERNATIONAL EXPOSITION. See EXHIBITIONS.

JASTROW, MORRIS, Jr. See LITERATURE, ENGLISH AND AMERICAN, *Religion*.

JAVA. An East Indian island; a Dutch colonial possession. Area of Java and Madura, 50,775 sq. miles; population, 30,098,008. Batavia (138,551 inhabitants), the capital, is also the capital of the Dutch East Indies (q. v.). Imports (1908), 183,449,000 guilders; exports, 289,386,000. C. W. A. van Rinsum was the resident in 1911.

JEASSU, Lidj. A grandson of the Negus Menelek, emperor of Abyssinia, proclaimed emperor on May 15, 1911. His appointment was due to the death of Ras Tassama, the regent who was appointed in 1910, after Menelek had been incapacitated by paralysis. The newly proclaimed emperor was born in 1897, and is the son of Menelek's daughter, Schoagash.

JELLY, GEORGE FREDERICK. An American alienist. He was born in 1843 and graduated from Brown University in 1864. He studied at the Harvard Medical School and began active practice in Springfield, Mass., making a specialty of nervous and mental diseases. In 1869 he became assistant physician to the asylum at Waverly, Mass., and in 1871 was chosen president of this institution. He relinquished this in 1879 and took up private practice in Boston. On the organization of a State board of insanity in 1898 he was made its first chairman. His services were extensively sought as consultant and expert in court. For many years he acted in the latter capacity for the most of the important cases not only in Massachusetts but in other States.

JELUTONG. See CHEMISTRY, INDUSTRIAL.

JENSEN, WILHELM. A German novelist, died November 24, 1911. He was born at Heiligenhafen in Holstein in 1837. He was educated in the gymnasium at Kiel and afterwards studied medicine at the universities of Jena, Würzburg, and Breslau. He settled at Munich and devoted himself to literature. Here he edited the *Schwabische Volkszeitung* for one year. He then removed to Flensburg, where he edited a

paper for three years, then to Kiel and later to Freiburg. He finally made his home at Munich, where he remained until the time of his death. During this entire period he was engaged in the composition of stories and novels. His earlier stories were notable for their descriptions of country scenes. Among these are *Die braune Erica* (1868) and *Eddy-stone* (1872). With *In der Fremde* (1887), he dealt with city and the higher social life. He later returned to his earlier manner in *Im Zwing und Bann* (1892). He was one of the most prolific of German writers and he produced nearly 160 printed volumes. Many of these are novels, but they also include works on a variety of literary subjects and works of travel. He also published a volume of poems. His last work includes the romance *Der Schleier de Maja* (1902) and *Gäste auf Hohenaschau* (1904).

JERSEY CITY. See NEW JERSEY, and MUNICIPAL GOVERNMENT.

JEWS. This article contains statistical matter relating to the Jews throughout the world and some notes of important political events concerning them during the year. The nature of the subject prevents exhaustive treatment.

According to estimates made by various authorities, including the *American Jewish Year Book*, the total number of Jews in the world in 1911 was about 13,000,000. Of these there were in Russia 6,243,712; in Austria-Hungary 2,076,378; in the United States 2,044,672; in Germany 697,862; in Turkey 463,686, including 78,000 in Palestine. Other countries in which there are 100,000 or more are Morocco, Holland, and France. In the British empire there are about 995,000.

The immigration of Jews into the United States in the fiscal year 1911 was 91,223. Of these by far the larger number came to the port of New York. The Jews in the United States, according to estimates made by the *American Jewish Year Book*, in 1910 were 2,044,792. Of these 905,000 were in New York, 150,000 in Pennsylvania, 110,000 in Illinois, and 7000 in New Jersey. They are found in every State of the Union.

The chief historical event connected with the Jews in 1911, as regards the United States, was the abrogation of the treaty of 1832 with Russia as a result of the refusal of that country to admit American citizens who were Jews. A discussion of this will be found in the article UNITED STATES, paragraph *Foreign Relations*.

In Russia restrictions against Jews continued to be made during the year, and Jews were expelled from many cities. On February 9 the Duma, by a vote of 208 to 138, declined to express an opinion for or against the bill providing for the abolition of the Jewish Pale. On February 12 a conference of all the Russian nobility demanded the unconditional expulsion of Jews from government and military service; that Jews be denied employment in administrative and judicial positions, even if converted; that Jews be separated from Christians in schools; that the integrity of the Pale be maintained, and that the privileges of Jewish honorary citizens be restricted.

In Palestine the Jewish communities continued to increase under the tacit approval of the government of Turkey. In other countries of Europe there were no particular events of

unusual interest relating to the Jews. Persecutions in Rumania subsided, although the government passed new restrictions against Jews becoming commissioned officers in the army. In Austria nine Jews were elected to the Chamber of Deputies on June 30.

JOHNS HOPKINS UNIVERSITY. An institution of higher learning and graduate research, founded in 1876 at Baltimore, Md. The enrollment in all departments of the university in 1911-12 was 787, distributed as follows: Graduate students, 212; candidates for the degree of M. D., 355; physicians attending special courses, 40; and undergraduates, 180. There were in addition 116 persons attending the college courses for teachers given at late afternoon hours. There were no important changes in the faculty during the year. Among the benefactions received was a gift of \$250,000 from the General Education Board. A condition of this gift was that \$750,000 additional should be secured by the university and its friends. This condition was complied with and \$20,000 additional was subscribed. A new departure in the history of the university was the inauguration of a summer session of six weeks, which in the summer of 1911 was attended by 335 persons, mostly teachers living in Baltimore, and other parts of Maryland. No new buildings were completed during the year, but a considerable enlargement of the botanical laboratory and greenhouse at the new site was begun. The productive funds of the university amounted to nearly \$5,000,000. The income from all sources in 1910-11 was about \$350,000. The library contains about 150,000 volumes. The president is Ira Remsen, Ph. D., LL. D.

JOHNSON, CHARLES F. United States senator from Maine. He was born in Winslow, Me., in 1859 and graduated from Bowdoin College in 1879. He taught school, in the meantime studying law, and was admitted to the bar in 1886. He continued in practice in Waterville until his election to the Senate. In 1892-4 he was Democratic candidate for governor of the state. In 1905-7 he was a member of the State legislature. He was a delegate to the Democratic National Convention in 1904. In January, 1911, he was elected to the United States Senate to succeed Senator Eugene Hale for the term beginning March 7, 1911. His term of service will expire in 1917.

JOHNSON, FREDERICK FOOTE. An American Episcopal clergyman, elected on May 18, 1911, bishop-coadjutor of South Dakota. He was born in Newtown, Conn., in 1866, and graduated from Trinity College in 1894. He became priest in 1897 and was rector at Glenwood Springs, Col., in 1897 and filled several pastorates in that State until 1908. In 1904-5 he was diocesan missionary to western Massachusetts. He was consecrated assistant bishop of South Dakota in 1905.

JOHNSON, TOM LOFTIN. An American public official and financier, died April 10, 1911. He was born in Scott county, Ky., in 1854. He was christened Thomas Loftin by his parents, but throughout his life he was known by the more familiar designation, Tom L. When he was still very young his parents removed to Staunton, Va. While still a youth he accumulated a small sum of money and with it went to Louisville where he began work for a street railway company. In a short time he removed to Indianapolis where he obtained an interest

in the old street railway company and within a year or two become its manager. Before he was twenty-two years old he owned a controlling interest in the stock of the company and was worth half a million dollars. He next bought an interest in a small street railway in Cleveland in the outskirts of the city. This he consolidated with another line and within a year was in control of a trunk line system. He acquired iron foundries and street car lines in other cities and began to take an active interest in politics. In 1888 he ran for Congress in the Cleveland district on a free trade and single tax platform, but was defeated. He again tried for election in 1890 and was elected by a large majority. Two years later he was reelected by a majority of 3200 in a Republican district. In 1901 he was elected mayor of Cleveland and served four successive terms. His administration of the affairs of that city created wide attention from his attempts to put into effect many of the reforms advocated by Henry George. During his entire administration he carried on a struggle to secure a three-cent fare on the street cars of the city. This he finally succeeded in doing, but the venture did not turn out to be profitable. His principal work as mayor of Cleveland was the securing of a franchise tax by which the city obtained a legal valuation of the street railway properties. In 1910 he again ran for the office of mayor, but was defeated. In 1903 he was nominated by the Ohio Democrats as governor, but was decisively beaten. He supported Mr. Bryan in three campaigns in which the latter was a candidate for President, but he was not an advocate of the candidate's free silver ideas. Several years before his death he announced that he had lost his entire fortune and was obliged to begin life anew. He was an inventor of several street railway devices which were of considerable profit.

JOHNSTON, MARY. See *LITERATURE, ENGLISH AND AMERICAN, Fiction.*

JOHNSTON, SAMUEL. An American inventor, died April 20, 1911. He was born in Shelby, N. Y., in 1825 and was educated in the common schools. He was the first person to invent and manufacture a reaping machine capable of handling all kinds of grain successfully. This he perfected in 1860. He also invented a corn planter, rotary and disk harrows, corn harvesters, self-raking reapers and roller forging mills. In 1868 he organized the firm of Johnson, Huntley & Co. and began the manufacture of the famous Sweepstake reaper. He was the inventor of a metal working process by which finished articles are produced in duplicate.

JOHORE. A native state (under British control) in the Malay Peninsula, covering about 9000 sq. miles and having about 200,000 inhabitants. Johore Bahru is the chief town. Revenue (1910), 3,323,000 Straits Settlements dollars; expenditure, 2,718,000; debt, 11,676. The reigning sultan is H. H. Ibrahim.

JONES, GEORGE WILLIAM. An American mathematician and educator, died October 30, 1911. He was born in East Corinth, Me., in 1837 and graduated from Yale College in 1859. He taught mathematics in several institutions in Connecticut and New York until 1868 when he was appointed professor of mathematics in the Iowa State College. In 1877 he was chosen assistant professor of mathematics at Cornell University and became in turn associate professor and professor. He was professor emeritus

at the time of his death, having retired from active teaching in 1907. He was the author of a *Treatise on Algebra* (1882); *Drill Book in Algebra* (1892); *Some Proofs in Elementary Geometry* (1904); and other text-books on mathematics.

JUPITER (Collier). See **NAVAL PROGRESS, Propulsion.**

JUVENILE COURTS. The movement for the establishment of special courts for the hearing of cases involving children continued to make headway during the year. Historical study showed that the first suggestions for such a court were made by J. J. Kelso, of Toronto, Canada, in 1893. An act providing for such courts was passed in the Ontario Assembly before the juvenile court was established in Chicago, in 1898. Nevertheless, it has been the development of the juvenile court in the United States that has set the standard and given the impetus to the general movement for the entire world. The real necessity for such courts was brought out clearly by a statement made by Ernest K. Coulter, clerk of the Children's Court of New York county, that of the 80,000 children who had been brought before that court the vast majority are normal from the standpoint of their surroundings. He said that the court handled about 10,000 cases per year; of these practically one-half are due to offenses growing out of a child's normal instincts for play. He thought that a minimum of about two per cent. of these children were mentally defective. The juvenile court, with its probation system, makes it possible to handle all normal cases in an intelligent, effective manner, looking to the reclaiming of the child for future useful citizenship. The present system, however, does not as yet make adequate provision for the small minority of mentally defective children who very often are placed in ordinary reformatory institutions. Mr. Coulter thought that there were many cases of such defectives who had been sent to reformatories to become indifferent or hardened criminals, who with proper medical attention and treatment could have been cured.

KENTUCKY. The constitutionality of the juvenile court law of Kentucky was called in question by means of a case in which a girl was committed to a convent by the county court of Jefferson county. The law was attacked on three grounds: That the creation of the juvenile court was not authorized by the constitution; that the judgment of the court being for an indeterminate period should be subject to an appeal under criminal practice; that the law was unconstitutional in that it denied to the delinquent the right of trial by jury, thus depriving him of liberty without due process of law. The court overruled all these objections. The main point upon which the court laid stress was that the act did not provide for criminal proceedings, the service of the government being called in merely to protect children who through misfortune or lack of parental care are unable and unwilling to care for themselves.

Considerable criticism was passed upon the judge conducting the juvenile court at Louisville, because of his appointment of a probation officer not deemed suitable. This caused a split in the advisory board of the court and public meetings of protest.

WASHINGTON. A new juvenile court law in Washington provided for the appointment of juvenile court officers by the presiding judges, but with the condition that all such appointments must be approved by the county commissioners. These latter were given power to fix the number of such court officers and their salaries. In both Spokane and Seattle the judges reappointed former officers, but the county commissioners refused their assent. This was pointed to by students of juvenile courts as an illustration of the evil of submitting such administrative institutions to undue political influence. Where such appointments are likely to be made in payment of political debts the greatest efficiency is not possible.

AUXILIARY AGENCIES. Undoubtedly one of the reasons for the success of the juvenile court is the interest that has been taken in it by numerous volunteer organizations, very largely of women, who have willingly sacrificed time and effort to reclaim neglected or wayward children. One of the most successful of these volunteer groups is the juvenile court auxiliary at San Francisco, organized in 1910, with a membership in 1911 of nearly 700. It declared its general purpose to be the betterment of child life. It renders friendly service in connection with the juvenile court and probational work; and it carries on a continuous campaign of education by means of public meetings and publications.

INTERNATIONAL CONGRESS. The first International Congress for juvenile courts was held at Paris, June 20-July 1. It was attended by two representatives from the United States. One of the striking differences between the attitude of many foreign representatives and that of Americans was that the former looked upon the juvenile court as a special form of criminal procedure, whereas the latter viewed the court mainly as a child-saving agency, entirely apart from any suggestions of crime. One of the questions dealt with the organization of juvenile courts. The congress held that below a certain age, to be determined by law, no judicial procedure should be instituted against a child. All children under this age charged with violating the law should be brought before a special court; this court should consist of a single judge, who should give special study to the needs of children and should continue in service long enough to become experienced and skillful; the judge should employ only measures which promise protection and assistance, never applying punitive measures; minors should be examined by a physician; they should have a legal defender; the public and reporters should be excluded from this special court. The congress also agreed that children might be returned to their families, placed under probation officers, or placed in a suitable institution. It was agreed that negligent parents should be punished.

A second question for discussion related to the rôle played by charitable institutions and societies. It was voted to recommend that before the first hearing the representative of such an institution be permitted to visit the arrested child in its place of detention; that such representative may be present at the hearings and speak for the child; that the court have a free clinic among such institutions; that each institution be under both administrative and judicial control by the State; that it be legally authorized to pay part of its expenses from money

collected from parents or from public subsidies; and that if it finds it cannot control or reform a child it may appear before the court and secure a transfer to some other institution better adapted to the child's needs.

A third question related to probation officers. It was agreed that this service is desirable for all neglected and delinquent children, who cannot properly be treated at home; or who can be put on probation after reform training; the court should decide when this method is applicable and be free to choose the most suitable agents; so far as possible these agents should be specially trained; agents for child-saving institutions should be selected from the probation officers. The congress held that children should be kept under supervision long enough to secure reformation, even though this required supervision until majority. Moreover, probation officers should report frequently in order that desirable changes in the mode of treatment might be ordered.

KAISER WILHELM LAND. See GERMAN NEW GUINEA.

KAMERUN. A protectorate, under German control, on the Gulf of Guinea, covering 190,600 sq. miles and with about 3,500,000 inhabitants. Buéa is the capital. Imports (1909), 17,722,598 marks; exports, 15,701,176. Tonnage entered (1909), 1,634,654. Miles of railway, 320. Revenue and expenditure balanced (1910-11) at 9,281,000 marks. Governor (1911), Dr. Gleim. See MOROCCO, *Franco-German Treaties*.

KANEM. See FRENCH EQUATORIAL AFRICA.

KANSAS. POPULATION. According to the Thirteenth Census, taken in 1910, the population of the State in that year was 1,690,949, as compared with 1,470,495 in 1900, an increase of 220,454 or 15 per cent., in the decade. The largest cities with their population in 1910 and 1900 are as follows (the figures in parenthesis are for 1900): Wichita, 52,450 (24,671); Topeka, 43,684 (33,608); Kansas City, 51,418 (22,331).

AGRICULTURE. The Thirteenth Census included statistics of agriculture in the State. They are of date of April 15, 1910. On that date the number of farms in the State was 177,841, as compared with 173,098 in 1900. The land in farms was 43,384,799 acres, as compared with 41,662,970 acres in 1900. The improved land in farms was 29,904,067 acres, compared with 25,040,550 acres in 1900. The average acreage per farm was 244, as compared with 240.7 in 1900. The total value of farm property, including land, buildings, implements and machinery, domestic animals, poultry, and bees, was \$2,039,389,910, as compared with \$864,100,286 in 1900, or a remarkable increase of \$1,175,289,624 in the ten-year period. The average value of all property per farm in 1910 was \$11,467, as compared with \$4992 in 1900. The average value of land per acre was \$25.45, as compared with \$12.77 in 1900. Of the 177,841 farms in the State in 1910, 112,443 were operated by owners and managers and 65,398 by tenants. Of the farms operated by owners, those free of mortgage were 60,582; those under mortgage, 49,249. The native white farmers numbered 150,346; the foreign-born white 25,804, and negro or other non-white, 1691. Of the non-whites, 157 were Indians, and 2 were Japanese. The domestic animals of all kinds in the State in 1910 were valued at \$253,528,577, compared with a value in 1900 of \$190,956,936. The

cattle numbered 3,079,403, valued at \$80,557,443; horses and colts, 1,147,056, valued at \$112,758,108; mules, 208,409, valued at \$25,629,418; swine, 3,050,157, valued at \$24,708,885; sheep and lambs 272,475 valued at \$1,209,931. Poultry of the various kinds numbered 15,736,038, valued at \$7,377,469. The acreage, production, and value of the principal crops will be found for 1910 and 1911 in the following table:

		Acreage	Prod., bu.	Value
Corn	1911	8,709,000	126,150,000	\$79,474,000
	1910	8,950,000	170,050,000	76,522,000
Wheat	1911	4,810,000	51,887,000	46,762,000
	1910	4,490,000	63,236,000	53,118,000
Oats	1911	2,000,000	30,000,000	13,500,000
	1910	1,675,000	55,778,000	18,965,000
Rye	1911	18,000	198,000	160,000
	1910	20,000	280,000	204,000
Potatoes	1911	80,000	1,760,000	1,866,000
	1910	82,000	4,674,000	4,207,000
Hay	1911	1,649,000	1,402,000	13,880,000
	1910	1,792,000	2,061,000	16,076,000

a Tons.

MINERAL PRODUCTION. The minerals products of the State in 1910 were valued at \$28,304,191. Of this, the coal produced was valued at \$7,914,709; natural gas, \$7,755,367; zinc, \$1,103,760; clay products, \$2,261,527; petroleum, \$44,763. Other mineral products of the State include lead, salt, sand and gravel, and stone.

The coal production of the State in 1910, according to the figures of the United States Geological Survey, amounted to 4,921,451 short tons, valued at \$7,914,709. This was a decrease from the production of 1909, which was 6,986,478 short tons. The decrease was largely the result of coal strikes. During the year 80 per cent. of the men employed in the coal mines were on strike and the period of idleness exceeded that of activity. The number of men employed in the coal mines of the State during the year was 12,870, of whom 10,346 were idle during the strike. The average number of days worked was 148, and the average number of days idle was 153.

EDUCATION. The total population of school age in 1910 was 516,061. The total enrollment was 398,746. The average attendance was 291,329. The total number of teachers employed was 13,467. The average salary paid to male teachers per month was \$51.30 and to female teachers, \$49.11.

The legislature of 1911 provided for a minimum term of seven months and State aid to such districts as having levied four and one-half mills find it impossible to conduct a seven months' term. The appropriation for this purpose amounts to \$150,000. State aid is also granted to certain high schools which maintain normal training courses for teachers. There are 160 high schools receiving aid under this provision. Ninety-six high schools of the State have introduced domestic science and agriculture and receive \$250 State aid yearly. Two measures are now being advocated in the State—a larger unit of school organization and a small amount of State aid to be given annually to such rural schools as may reach the standard to be set by the department of education. This standard will include model school buildings in the matter of heating, lighting, and ventilating; proper equipment, well-kept grounds, and a library of a certain size, both general and reference, and a teacher who is the holder of a first-grade certificate. It is believed that such a recognition of

excellence on the part of the State would result in great good and in the rapid multiplication of the better type of rural schools.

FINANCE. According to the report of the State treasurer, there was a balance on hand July 1, 1909, of \$1,177,029. The total disbursements amounted to \$7,236,016. The balance remaining at the end of the fiscal year 1910, was \$1,026,165. The chief receipts were from the general revenue fund, the permanent school fund, and from the annual school fund. The total assessed valuation of the State in 1910 was \$2,752,107,678, and the total State levy of that year was \$2,889,712.

POLITICS AND GOVERNMENT

The legislature was in session in 1911, and the most important measures passed will be found in the paragraph *Legislation* below. On January 19, the legislature ratified the proposed income tax amendment. A resolution was passed submitting to the people the amendment establishing woman suffrage, but the amendment providing for the initiative and referendum was defeated by the Senate, although it had been passed by the House by a vote of 96 to 22. In April, primaries were held for the nomination of municipal officers of the State. The results were remarkable in the number of Socialist candidates who were nominated. In the elections held on April 5, the Socialists elected three of the five councilmen and the city attorney in Fort Scott. In Girard the Socialist mayor was elected. The chief contest was in Wichita, where the complete Socialist ticket was chosen at the primaries, but at the election not one of the candidates was elected. Two vacancies occurred in Congress as the result of the deaths of Alexander C. Mitchell of the Second district and Edmond H. Madison of the Seventh District. The election held to fill the vacancy in the Second district resulted in the election of Joseph Taggart, a Democrat. He was elected by a majority of about 1100. The district was formerly Republican. Not more than 50 per cent. of the normal vote was cast. Republican disaffection was caused by the refusal of the congressional committee to call a primary, the committee itself making the party nomination. So much criticism followed this action that the committee's nominee refused the nomination. A primary was then called, but an entrance fee of \$3000 was required by the committee. The only Republican to enter was the committee's former nominee, his defeat following at the election. The election in the Seventh district was held January 9, 1912, and resulted in the election of a Democrat, George W. Neely, of Hutchinson, the Republican majority of 5000 for the late Judge Madison being converted into a Democratic majority, on a light vote, of 1300. The district has been continuously Republican, until this election, since the defeat of Jerry Simpson, the Populist, in 1898.

LEGISLATION. Among the important measures passed at the session of the legislature of 1911, were the following: A law was passed governing investment companies doing business in the State (other than banks, trust companies, real estate, mortgage companies, and building associations). The statute requires them to disclose the character of their business, their financial condition, and it must be filed in writing with the secretary of the State, and they are prohibited from

selling stocks or bonds within the State until they are authorized to do so by the bank commissioner. A measure was passed prohibiting contributions to political campaigns by corporations and prohibiting others from receiving contributions. Newspapers are prohibited from printing campaign literature, unless over the signature of at least two officers of the campaign committee, or over the signature of an individual who becomes responsible therefor, and in such cases it is to appear as advertising. All persons are prohibited from paying newspapers or periodicals to induce them to advocate the claims of candidates for office editorially, and such publications are prohibited from receiving any money for such purposes. A law was enacted authorizing voters to express their preference of candidates for United States senators, and making candidates for the legislature bound thereby if they promise to be so bound in their canvass for election. A voluntary workmen's compensation act was passed. This is applicable to all hazardous employments, and gives a maximum compensation in case of death of \$3600, and in case of total disability of not to exceed \$15 a week for not more than ten years, with right of action therefor. Employers may choose as to whether they shall come under the act by filing such choice with the secretary of State, when it shall stand for one year and continue from year to year unless it is withdrawn by a sixty days' notice thereof. Employees are presumed to come in under the act unless they serve written notices before injury of their refusal. When action is brought to recover by those refusing the benefits of the law, it is no defense that the injured employee expressly or impliedly assumed the risk, nor that the injury occurred because of want of due care of a fellow-servant, nor that the injury was caused by contributory negligence of the employee. The law applies to all railroads, mines, quarries, and other works inherently dangerous. It does not apply to interstate business, nor to employers employing less than fifteen persons. The violation of the prohibitory liquor law was made a felony upon conviction of a second offense. This is punishable by one year in the penitentiary. A law was passed providing for the ouster of public officials guilty of immoral conduct, such as drunkenness and gambling, and for unfaithfulness in office. A sanitarium for tuberculosis patients was authorized. A measure was enacted, fixing weights and measures. A commission of three persons, known as the public utilities commission, was created. This commission has control of all railroads and other public utilities. It has power to fix the rates and charges of such utilities, to control their stock and bond issue and to make a valuation of the property of the utility used in interests fully under the control of the commission. Railroads are made liable for death or injury of their employees, irrespective of contributory negligence.

STATE GOVERNMENT IN 1911. Governor, W. R. Stubbs; Lieutenant Governor, Richard J. Hopkins; Secretary of State, Charles H. Sessions; Treasurer, Mark Tulley; Auditor, W. E. Davis; Attorney-General, John S. Dawson; Adjutant-General, C. I. Martin; Superintendent of Education, E. T. Fairchild; Superintendent of Insurance, Ike S. Lewis; Commissioner of Agriculture, F. D. Coburn—all Republicans.

JUDICIARY. Supreme Court: Chief Justice,

William A. Johnston; Associate Justices, Judson S. West, Silas Porter, Clark A. Smith, Rousseau A. Burch, Henry F. Mason, and Alfred W. Benson, all Republicans; Clerk, D. A. Valentine.

STATE LEGISLATURE, 1911. Republicans, Senate, 35; House, 71; joint ballot, 106; Democrats, Senate, 5; House, 53; joint ballot, 58; Independent, Senate, 0; House, 1; joint ballot, 1; Republican majority, Senate, 30; House, 17; joint ballot 47.

The representatives in Congress will be found in the article UNITED STATES, section *Congress*.

KANSAS CITY. See BUILDING, and MUNICIPAL GOVERNMENT.

KANSAS-OKLAHOMA OIL FIELD. See PETROLEUM.

KANSAS, UNIVERSITY OF. An institution of higher learning, at Lawrence, Kan., founded in 1866. The number of students enrolled in the various departments of the university in 1911-12 was 2500. The faculty numbered 172. There were no notable changes in the faculty during the year. The endowment of the university amounts to \$150,000. It is supported almost entirely by State appropriations, which in 1910 amounted to \$413,820. The library contains about 70,000 volumes. The president is F. Strong, LL. D.

KANT. See PHILOSOPHY.

KARAFUTO. See SAKHALIN.

KAWACHI. See BATTLESHIPS.

KEDAH. A Malay state on the west coast of the Malay Peninsula; a British protectorate. Capital, Alor Star. Area, including the Langkawi group of islands, about 3150 sq. miles. Population (estimate), 219,000, chiefly Malays. The principal products are paddy and rice, tapioca, coconuts, pepper, fruits, and rubber. Opium is a government monopoly. The mining industry has declined. Cattle and buffaloes are raised; the number of cattle reported in 1908 was 30,000, since diminished by the rinderpest. The nominal ruler is (1911), Sultan Abdulhamid Halimshah ibni Ahmad Tajudin. British adviser and actual administrator, W. George Maxwell.

KEITH, WILLIAM. An American artist, died April 13, 1911. He was born at Aberdeenshire, Scotland, in 1839 and when about twelve years of age came to the United States. He was apprenticed to a wood engraver in New York and for some time worked on *Harper's Weekly* and *Harper's Monthly*. In 1859 he removed to California and began painting in water colors. He went abroad for study at various times, but for the most part lived in San Francisco. His entire collection of paintings was lost in the San Francisco fire of 1906. His reputation was made chiefly by his landscape paintings.

KELANTAN. A native Malay state under the protection of Great Britain. Area (estimate), 5000 sq. miles; estimated population, 300,000 (Siamese, 15,000; Chinese, 10,000). Shafi Mohammedanism is the prevailing religion. Capital, Kota Bharu, with about 10,000 inhabitants. The principal products are rice, coconuts, rattan, bamboo, pepper, tapioca, sugar-cane, and corn. The jungle yields valuable timber. Stock-raising is an important industry. The mines produce gold, galena, pyrites, and tin. Silk-weaving, boat-building, and brick-making are carried on. Imports (1909-10), 1,175,158 Straits Settlements dollars; exports, 1,473,413 (gold, 289,272), Revenue (1909-10), 370,959 Straits Settlements dollars; expenditure, 377,062.

There are few roads; internal communication is by means of the rivers. Kota Bharu connects by telegraph with Bangkok and Penang. A hereditary rajah administers the state under the direction of a British adviser (1911, J. S. Mason).

KENSICO RESERVOIR. See AQUEDUCTS.

KENTUCKY. POPULATION. According to the Thirteenth Census, taken in 1900, the population of the State in that year was 2,289,905, as compared with 2,147,174 in 1900, an increase of 142,731 or 6.6 per cent. in the decade. The principal cities with their population in 1910 and 1900 are as follows (the figures in parenthesis are for 1900): Louisville, 223,928 (204,731); Covington, 53,270 (42,938); Newport, 30,309 (28,301); Paducah, 22,760 (19,446).

AGRICULTURE. The Thirteenth Census included statistics of agriculture. These are of date of April 15, 1910. At that time the farms in the State numbered 259,185, as compared with 234,667 in 1900. The land in farms was 22,189,127 acres, as compared with 21,979,422 acres in 1900. The improved land in farms was 14,354,471 acres, compared with 13,741,968 acres in 1900. The average acreage per farm was 85.6 in 1910, compared with 93.7 in 1900. The value of farm property, including land, buildings, implements and machinery, domestic animals, poultry, and bees, was \$773,797,880 in 1910, compared with \$471,045,856 in 1900. The average value of all property per farm was \$2986, compared with \$2007 in 1900. The average value of land per acre was \$21.83, compared with \$13.24 in 1900. Of the total number of farms in the State in 1910, 171,325 were operated by owners and managers, 87,860 by tenants. Of the farms operated by owners those free from mortgage, 33,039. The native white farmers numbered 245,496, foreign-born white, 1956, negro and other non-white, 11,730. Of the non-white, all but 21, who were Indians, were negroes. The total value of the domestic animals, poultry, and bees in 1910, was \$117,486,662, compared with \$73,739,106 in 1900. The cattle numbered 1,000,937, valued at \$25,971,571; horses and colts, 443,034, valued at \$44,796,120; mules, 225,043, valued at \$26,402,090; swine, 1,491,806, valued at \$8,951,692; sheep and lambs, 1,363,013, valued at \$5,573,998. Poultry of all kinds in 1910 numbered 8,764,205, valued at \$4,461,871. The acreage, production, and value of the principal crops in 1910 and 1911 are as follows:

Crops	1911	1910	Acreage	Prod. bu.	Value
Corn	3,600,000	93,600,000	\$59,968,000
			3,500,000	101,500,000	53,975,000
Wheat	780,000	9,906,000	9,114,000
			767,000	9,818,000	9,131,000
Oats	170,000	3,128,000	1,564,000
			175,000	4,375,000	1,969,000
Rye	22,000	204,000	243,000
			25,000	325,000	276,000
Potatoes	52,000	2,028,000	2,170,000
			57,000	5,244,000	3,251,000
Hay	450,000	a 428,000	7,404,000
			500,000	645,000	8,450,000
Tobacco	345,000	b303,600,000	23,377,200
			525,000	425,250,000	36,996,750

a Tons. b Pounds.

MINERAL PRODUCTION. The mineral products of the State in 1910 were valued at \$21,512,982. Of this coal was valued at \$14,405,887; clay products, \$2,567,537; natural gas, \$456,293. Other mineral products are asphalt, lead, lime, sand, and gravel.

The total coal production of the State in 1910 was 14,623,319 short tons, valued at \$14,405,887, as against 10,697,384 short tons, valued at \$10,079,917 in 1909. The stoppage of work in the neighboring States was of material benefit to the operators and miners in Kentucky, particularly in the western fields. Notwithstanding the extraordinary demand upon the Kentucky mines, the labor supply was entirely adequate, as many of the miners who were thrust out of work in Illinois and the Southwestern States sought employment in Kentucky and in other States not affected by the strike order. During 1910 the coal mines of the State gave employment to 20,316 men who worked on an average 221 days. Labor troubles in the mines of the State were limited to short strikes in fourteen mines. Kentucky is one of the leading States in mining coal by the use of machines and ranks next to Ohio in the percentage of the machine mined output of the total product.

EDUCATION. The total population of school age in 1910-11 was 591,755. Of these 531,855 were white and 59,900 were colored. The total enrollment in the public schools was 424,976, of whom 385,617 were white, and 39,369 were colored. County high schools numbered 265 and in these were enrolled 2559 pupils. The teachers in the schools of the State numbered 8504 white and 983 colored. The total receipts for school purposes in 1911 were \$4,220,193.

FINANCE. The receipts for the fiscal year ending June 30, 1911, amounted to \$7,676,588. There was a balance in the treasury on July 1, 1910, of \$420,931. The disbursements during the year amounted to \$7,013,330, leaving a balance in the treasury on June 30, 1911, of \$356,289. The bonded debt of the State at the end of the fiscal year amounted to \$2,315,627.

POLITICS AND GOVERNMENT

The State legislature did not meet in 1911, as the sessions are biennial and the last was held in 1910. The State was one of five in which elections for State officials were held in 1911. In addition, primaries were held for the nomination of United States senator to succeed Senator Paynter, whose term expires in 1912. National issues took a large part in the campaign for governor. The Democrats nominated James B. McCreary, and the Republicans, Judge E. C. O'Rear. The Democrats in their platform vigorously denounced the Republican administration and President Taft. The platform attacked the Payne-Aldrich tariff law, declaring it to be a gross breach of the promises of the Republican President and his political party. The record of the representatives of the State in Congress was indorsed, especially in connection with the efforts at tariff revision. Declaration was made in favor of a direct primary election law, and a plank was adopted favoring the nomination and election of United States senators by direct vote of the people. In the primary following the convention, Ollie M. James, a representative in Congress, was nominated as the Democratic candidate for United States senator. On July 12 the Republican State convention nominated Judge O'Rear. The election on November 7 resulted in an overwhelming victory for the Democratic nominees. The State, which for four years had had a Republican governor, gave Mr. McCreary a plurality of 31,335 votes. The total vote cast was,

for McCreary, 226,771; for O'Rear, 195,436. The legislature elected was Democratic, both houses, and Mr. James was elected to the United States Senate on January 10. The Socialist vote was larger than in previous elections, but not strong enough to elect any officer. Two cities in the State, Lexington and Paducah, voted on the commission form of government November 7. It was adopted by a large majority in Lexington, but was defeated in Paducah. One of the first acts of the legislature was to pass a county unit bill, making the county the unit in all local option elections. A compulsory and direct primary bill also passed both houses of the General Assembly.

STATE GOVERNMENT IN 1911. Governor, James B. McCreary; Lieutenant-Governor, Edward J. McDermott; Secretary of State, C. F. Crecelius; Treasurer, Thomas S. Rhea; Auditor, Henry M. Bosworth; Attorney-General, James Garnett; Superintendent of Public Instruction, Barksdale Hamlett; Commissioner of Agriculture, John W. Newman; Commissioner of Insurance, Clifford Bosworth—all Democrats.

JUDICIARY. Court of Appeals: Chief Justice, J. P. Hobson, Democrat; Justices, W. E. Settle, Democrat; Edward C. O'Rear, Republican; John M. Lassing, Democrat; John D. Carroll, Democrat; T. J. Nunn, Democrat; Shackelford Miller, Democrat; Commissioner of Appeals, William R. Clay, Democrat; Clerk, Robert L. Greene, Democrat.

STATE LEGISLATURE, 1912. Democrats, Senate, 32; House, 76; joint ballot, 108. Republicans, Senate, 6; House, 24; joint ballot, 30. Democratic majority, Senate, 26; House, 52; joint ballot, 78.

The representatives in Congress will be found in the article UNITED STATES, section *Congress*.

KENYON, WILLIAM S. United States senator from Iowa. He was born in Elyria, O., in 1869, and was educated in the public schools of Grinnell, Iowa, and at Cornell College. He studied law in this institution and was admitted to the bar. He was for two terms public prosecutor of Webster county, Ia., and was for one year judge of the eleventh judicial district of that State. For many years he was attorney and general counsel for the Illinois Central Railroad. In 1910 he was appointed assistant to the attorney-general of the United States. He was elected to the Senate by the Iowa legislature as a compromise candidate after a prolonged deadlock. See Iowa.

KERGUELEN. A dependency of Réunion (q. v.).

KERMADEC ISLANDS. A dependency of New Zealand (q. v.).

KERN, JOHN WORTH. United States senator from Indiana. He was born at Alto, Ind., in 1849 and received his education in the public schools. He studied law at the University of Michigan and was admitted to the bar in 1869. From that year until 1885 he practiced law at Kokomo, and after the latter date at Indianapolis. He was city attorney of Kokomo for six terms from 1871 to 1884, and from 1885 to 1889 was reporter of the Supreme Court. From 1892 he was a member of the Indiana Senate. He was city attorney of Indianapolis from 1897 to 1901. He was a candidate for governor on the Democratic ticket in 1900-1904. In 1905 he received the vote of his party for United States senator. He was Democratic

nominee for Vice-President of the United States on the ticket with William J. Bryan in 1908. In the election of November, 1910, he defeated Albert J. Beveridge for nomination to the United States Senate and he was elected to that position by the State legislature on January, 1911.

KESTER, VAUGHAN. An American novelist, died July 4, 1911. He was born in New Brunswick, N. J., in 1869. His parents removed to Ohio and he was educated in the common schools of Mt. Vernon in that State. He occupied positions on the staffs of several magazines and wrote many short stories and miscellaneous articles. His published novels are: *The Manager of the B. and A.* (1901); *The Fortunes of the Landrays* (1905); *John o' Jamestown* (1907), and *The Prodigal Judge* (1911). See LITERATURE, ENGLISH AND AMERICAN, Fiction.

KEY, ELLEN. See LITERATURE, ENGLISH AND AMERICAN, Political and Social Science.

KIAO-CHAU. A German protectorate, composed of a harbor, town, and district on the east coast of the Chinese province of Shantung, leased (1898) from China for ninety-nine years. Area, exclusive of bay, about 200 square miles; population, 33,000. Foreign imports and exports (1909), £3,452,050 and £2,367,200 respectively. Vessels entered (1909), 511, of 670,000 tons, besides native junks. A railway (247 miles) runs from Tsingtau (the seat of government) to Tsinan, with a 30-mile branch to Poshan. Administration expenses (1910-11), 12,720,000 marks. A governor (1911), Vice-Admiral Truppel) administers the colony under the navy department.

KILDARE, OWEN FRAWLEY. An American author, died February, 1911. He was born in New York in 1864 and started in life as newsboy. He was in turn a prize fighter, an employee in a saloon, and a dock laborer. As the result of a severe illness and through the influence of his nurse, whom he afterwards married, he became impatient for an education. He learned to read at thirty years of age and competed, a few years later, for a prize offered by a newspaper for the best love story. He continued to write and contributed to many magazines, besides publishing four books: *My Mamie Rose*, a story of his regeneration from the slums; *The Good of the Wicked*; *The Wisdom of the Simple*, and *My Old Bailiwick*.

KINEMACOLOR PROCESS. The popularity of motion pictures has stimulated attempts to secure satisfactory reproduction of many photographs in color, and this was realized practically during 1911 in the "kinemacolor" process, which was exhibited extensively on both sides of the Atlantic, particularly in the display of moving pictures of the coronation in London. The new process was based on the familiar three-color process, where negatives were made through screens of different colors and the resulting positives were then combined by projection with light that had passed through screens of the appropriate colors. While three and four-color processes have been successfully developed, both for projection and for printing, yet they did not lend themselves to cinematography, and accordingly the success achieved by Urban and Smith in their kinemacolor process, while founded on the principle of filter screens, departs so radically from previous work as to make it most interesting. It employs only two screens for taking and

reproduction, and only one film, the combination being effected on the retina of the eye. The process essentially involves the taking in rapid succession through a red and green screen alternately of a series of pictures on the usual film. This film, however, must be operated at twice the usual speed, or thirty-two exposures per second, instead of sixteen, and the shutter and screen must of course be in absolute unison. After the film is developed and printed the positive film is then placed in a projection lantern, where red and green screens are interposed in rapid succession in the path of the rays of light, the appropriate sections of the film of course being in harmony with the screens. The red picture and the green picture coming in rapid succession blend on the retina of the eye and the result is a very successful reproduction of the natural colors, which, with its defects, has proved far more successful than hand-painted films. The reds in some cases seemed very vivid and the greens intense, but these circumstances in many cases added to the brilliancy of the pictures. The process seemed destined to have wide vogue and exhibitions held in many cities were thronged.

KING, FRANKLIN HIRAM. An American agricultural scientist, died August 5, 1911. He was born at Whitewater, Wis., in 1848 and graduated from the State Normal School at Whitewater in 1892. In the following year he was engaged on the Wisconsin Geological Survey where he remained until 1876. From 1876 to 1878 he took special courses at Cornell University. In the latter year he was appointed professor of natural sciences at the River Falls State Normal School. From 1888 to 1901 he was professor of agricultural physics in the University of Wisconsin. He was appointed in 1901 chief of division of soil management, United States Bureau of Soils. He was a member of several scientific societies. He was the author of *Economic Relations of Wisconsin Birds* (1882); *The Soil* (1895); *Principles of Agricultural Irrigation and Farm Drainage* (1899); *Physics of Agriculture* (1900); and *Ventilation for Dwellings, Rural Schools, and Stables* (1908).

KING GEORGE V. See BATTLESHIPS.

KINNICUTT, LEONARD PARKER. An American chemist, died February 6, 1911. He was born at Worcester, Mass., in 1854 and graduated from the Massachusetts Institute of Technology in 1875. He studied at the universities of Heidelberg and Bonn, and at Johns Hopkins. He was instructor in chemistry at Harvard in 1880-83, assistant professor of chemistry, 1883-1885, and in 1885 was made professor of chemistry. From 1890 until the time of his death he was director of chemistry at the Worcester Polytechnic Institute. He was consulting chemist of the Connecticut Sewage Commission and was recognized as one of the greatest experts on sewage disposal and water supply in the United States. He was a member of many learned societies and contributed on chemical subjects to scientific journals.

KIPP, CHARLES JOHN. An American surgeon, died January 13, 1911. He was born at Hanover, Germany, in 1838. In 1854 he came to the United States and in 1861 graduated from the College of Physicians and Surgeons. He served throughout the Civil War as surgeon and was brevetted lieutenant-colonel of the United States Volunteers. He resigned from the army

in 1868 and engaged in the practice of surgery. He was surgeon of the Newark Eye and Ear Infirmary from 1880 to the time of his death. From 1901 to 1906 he was president of the board of managers of the New Jersey Sanatorium for Tuberculous Diseases. He was consulting surgeon to many hospitals. He was president of the American Ophthalmological Society and was a member of several medical societies both in the United States and abroad. He contributed to medical encyclopædias and was the author of numerous papers on professional subjects.

KIRISHIMA. See BATTLESHIPS.

KITTREDGE, ALBERT BEARD. An American public official, formerly United States senator from South Dakota, died May 4, 1911. He was born in Cheshire county, N. H., in 1861 and graduated from Yale University in 1882. He studied law and in 1885 was admitted to the bar. He began practice in Sioux Falls, S. D., and practiced his profession in that city until the time of his death. From 1889 to 1893 he was a member of the State senate. From 1892 to 1900 he was a member of the Republican national committee. He was appointed United States senator July 11, 1901, to fill the unexpired term of James H. Kyle. He was reelected for the term of 1903 to 1909. In the latter year he was defeated for reelection.

KLEIN, BRUNO OSCAR. An American musician, died June 21, 1911. He was born at Osnabrück, Germany, in 1858. He studied piano and composition with his father, who was organist in that city. He also studied under Rheinberger and Wullner at the Munich Conservatory. In 1878 he removed to the United States, and after several years spent in travel, settled in New York in 1883. From 1884 to the time of his death he was head of the piano department in the convent of the Sacred Heart. He also taught at the National Conservatory in the New York City for some time. In 1894 he went to Germany and appeared on the concert platform. He composed many piano works of high quality, several songs, and a sonata for violin and piano. He also composed an opera, *Kenilworth*, which was produced with success in Hamburg in 1895.

KNAPP, HERMAN. An American eye and ear surgeon, died May 1, 1911. He was born in Prussia, in 1832, and studied medicine at the University of Giessen, graduating in 1854. He afterwards studied ophthalmology in Germany, London, and Paris, and was professor in that branch at the University of Heidelberg, 1864-1868. In the latter year he for the first time visited the United States and became so impressed with the possibility of doing good service in the surgery of the eye and ear that he resolved to settle in New York. At that time the study of ophthalmology had received practically little attention in the United States. Previous to this, while at Heidelberg, he had founded the hospital and dispensary for eye diseases, which was later incorporated into the university. He resolved to establish a similar institution in New York and in 1869 founded the New York Ophthalmic and Aural Institute. In the same year he started a special journal, *The Archives of Ophthalmology and Otolaryngology*, which he edited both in English and German. In 1882 he became professor of ophthalmology in the New York University Medical College and in 1888, on the death of Dr. Agnew, was appointed to the same

chair in the College of Physicians and Surgeons. This chair he held until 1902, when he was made professor emeritus. Dr. Knapp continued in active service up to 1910, when increasing age obliged him to retire. He was for many years known as the most eminent eye and ear specialist in the United States. In addition to his general practice his work among the poor was notable. It was estimated that he examined the eyes of at least 275,000 during the active practice of his profession. From a very large proportion of these he received no pay. He was the author of *Intra-Ocular Tumors* and many papers on eye and ear surgery.

KNIGHT, GEORGE THOMSON. An American theologian and educator, died September 10, 1911. He was born in Windham, Me., in 1850 and graduated from Tufts College in 1872. In 1875 he was ordained to the Universalist ministry and in the same year became instructor in rhetoric and church history in the Crane Theological School, Tufts College. In 1883 he was made professor of church history, and in 1900 professor of Christian theology. He was the author of *The Goodness of God* (1904), and *The Praise of Hypocrisy* (1906).

KNOTT, JAMES PROCTOR. An American public official, former governor of Kentucky, died June 18, 1911. He was born in Washington (now Marion county), Kentucky, in 1830, and received his education at home. He studied law and was admitted to the bar in 1851. He practiced at Memphis, Mo., from 1851 to 1862, and from 1862 to the time of his death at Lebanon, Ky. In 1858 he was elected member of the Missouri House of Representatives and from 1859 to 1861 was attorney-general of Missouri. He was elected to the Fortieth and Forty-first and Forty-fifth and Forty-seventh congresses. From 1883 to 1847 he was governor of Kentucky. From 1892 to 1894 he was professor of civics and economics, and from 1894 to 1901 professor of law, and dean of the law faculty at Centre College. Mr. Knott during his service in Congress achieved considerable fame as a speaker and as a humorist.

KOCH-GEUNBERG, Dr. See EXPLORATION.

KOKOVTSOFF, VLADIMIR NIKOLAYEVITCH. A Russian statesman, who became prime minister following the assassination of P. A. Stolypin (see RUSSIA). He was born in 1847, and was educated in the Imperial Alexandrofsky Lyceum of St. Petersburg, an institution devoted to the training of young noblemen to the service of the state. His public career began as assistant to the chief of the prison administration, and soon afterward he was connected with the Council of the Empire and was promoted in turn from the position of assistant chief secretary of the economic department of that body to the general secretaryship of the council. He showed great skill in economic and financial questions and in 1901 was appointed an assistant minister of finance under Count Witte, and was appointed president of the commission to investigate the economic conditions of the central provinces and to ascertain the reason for the impoverishment of the agricultural population of that portion of the empire. He afterwards acted as president of another imperial commission, organized for the purpose of studying the life and circumstances of factory operatives and laborers in foundries and mills. When Count Witte in 1903 became president of the Council of Ministers, Kokovtsoff became treasur-

er of Russian monetary affairs and in February, 1904, was made minister of finance. He showed great ability in financing the war with Japan, especially in the raising of foreign and domestic loans. He provided a sum of approximately \$665,000,000 in less than fifteen months at rates of interest varying from 3.6 to 5 per cent. After the close of the war he greatly improved the credit of Russia in foreign countries by his prudent and skillful conduct of affairs. In November, 1905, he was appointed a member of the Council of the Empire and several times, beginning with 1909, acted as prime minister during the illness or temporary absence of Premier Stolypin. He has written on financial and other subjects, and in addition to his voluminous report on the economic conditions of the southern provinces, has published two books of some importance. Kokovtsoff is said to be rather more liberal and tolerant than was Stolypin. He is, however, a Conservative and a Monarchist rather than a Liberal.

KOMURA JUTARO, Marquis. A Japanese statesman and diplomat, died November 24, 1911. He was born at Hyuga in 1855. He was one of the first company of students sent by the Japanese government to the United States for education at its expense. Entering Harvard University he graduated in the class of 1877. On his return to Japan he was appointed an official in the department of justice, but in 1884 was transferred to the department of foreign affairs as secretary. Shortly afterwards he was made assistant director of the translation bureau of this department. He began his diplomatic career as *chargé d'affaires* at Peking, where he remained until the outbreak of the war between China and Japan in 1894. He was successively civil administrator of Antung and director of the political bureau of the department of foreign affairs. At the beginning of disturbances in the relation of Japan and Korea as a consequence of the assassination of the queen of Korea, he undertook an important diplomatic mission to that country. In 1896 he was recalled to Japan and assumed the post of vice-minister for foreign affairs. In 1898 he was appointed minister to the United States. He remained here four years, and then was given a similar post at St. Petersburg. He was recalled to Japan upon the debate before the Boxer uprising in China and took an important part in the international conference held as a result of this uprising. In 1901 he was made minister of the foreign office in the Katsura cabinet. During his administration the first Anglo-Japanese agreement was concluded. At this period also came the protracted negotiations with Russia which ended in the Russo-Japanese War. Komura was one of the commissioners appointed by Japan to negotiate with Russian commissioners at Portsmouth, N. H., for the treaty of peace. He negotiated the second Anglo-Japanese treaty of alliance and the Japan-Chinese negotiations which followed as a result of the Portsmouth treaty. The Japanese dissatisfaction with the terms of this treaty made him unpopular with the people. He retained the confidence of the government, however, and was appointed privy councillor in 1906. In the same year he was appointed ambassador to Great Britain and held this office until 1908. He was one of the most brilliant of Japanese

diplomats. His services were recognized by King Edward VII. by the award of K.C.B.

KONGO. See **BATTLESHIPS**.

KOREA, or officially **CHOSŬN**. The peninsula between the Yellow Sea and the sea of Japan. Formerly an independent monarchy, it is now a part of the Japanese empire, to which it was annexed August 29, 1910. Capital, Seoul.

AREA, POPULATION, ETC. The estimated area is 14,123 sq. ri (84,106 sq. miles). Estimated population in 1910, 12,959,981. The Japanese population (exclusive of the military) fluctuates, but probably averages between 145,000 and 150,000. Foreigners in 1910 were reported to number 13,382, of whom 11,533 were Chinese. Seoul has perhaps 250,000 inhabitants, and Ping-Yang 50,000. In general, the Koreans are ancestor-worshippers; among the upper classes Confucianism prevails, and there is a considerable number of Buddhist monasteries in the country. Christian missions have been very successful, the number of native Christians being reported at about 250,000 in 1910. The Japanese have undertaken the reorganization of the primary school system and the establishment of industrial and technical schools.

PRODUCTION, COMMERCE, ETC. Korea has large natural resources, but the country when annexed by Japan was economically depressed. Years of incompetent government and oppressive taxation had deprived the people of incentive and energy. It was expected that the new régime would produce large economic and social betterment, and improvement was already noticeable in 1911. Important crops include rice and other cereals, beans, cotton, tobacco, hemp, and ginseng. Gold, copper, iron, silver, graphite, coal, and other minerals occur, but, with the exception of gold, are little worked. Gold is mined by several American companies. The Japanese have taken energetic measures to develop the fisheries, the annual output of which is now valued at about \$4,000,000.

Imports and exports of merchandise have been valued as follows, in thousands of yen:

	1907	1908	1909	1910
Imports	40,050	41,026	36,649	39,793
Exports	17,002	14,113	16,249	18,914

The leading import is cotton goods; others of importance are yarn, timber, silk, tobacco, sugar, machinery, saké, and coal. The principal exports in 1910 were: Rice, 6,278,000 yen; beans, 5,726,000; cattle hides, 1,005,000; animals, 634,000; wheat, 361,000; iron, 340,000. In 1910 Japan sent 63.7 per cent. of the imports and received 77.3 per cent. of the exports: China, 9.7 and 15.2; Great Britain, 15.7 and 0.1; United States, 8.1 and 1.5. Trade largely passes through the ports of Fusan and Chemulpo. Masampo, near Fusan, has one of the finest harbors in the Orient, but at the annexation the Japanese authorities declared it a closed port from January 1, 1911. The harbor is now for the use of the Japanese navy.

Railway in operation at the end of 1910, 671 miles (1080 kilometers), of which thirty-four miles were added during the year. The line from Mokpo to Tajon is to be opened in 1913, the one from Seoul to Gensan in 1914, and the bridge across the Yalu early in 1912. This bridge will connect the Seoul-Wiju line (which has been in process of reconstruction) with the Manchurian Antung-Mukden (also recon-

structed); with all completed, Seoul will be connected by through trains with Kuanchengtzu (Changchun), the point at which the South Manchurian Railway connects with the Chinese Eastern Railway. The former (Japanese control) connects with the Imperial Railways of North China and the latter (Russian control) with the Siberian system. In 1910 there were 5567 kilometers of telegraph line in Korea and 12,799 of wire; post offices, 445.

FINANCE. The unit of value is the yen, worth 49.8 cents. The budget for the fiscal year 1910, including Japanese subventions, balanced at 20,915,678 yen; for 1912, 48,741,782. Of the estimated revenue for the latter year, the ordinary amounted to 24,067,583 yen and the extraordinary 24,674,199; expenditure, 27,891,437 and 20,850,345. The principal sources of ordinary revenue are the land tax and customs. Public debt (which has been taken over by the Japanese treasury) December 31, 1910: Treasury bonds, 24,610,000 yen; loans, etc., 68,347,890 yen.

GOVERNMENT. Korea, formerly independent, was a Japanese protectorate from March 2, 1906, to August 29, 1910. Annexed to Japan on the latter date, it was placed under the administration of a governor-general, Gen. Viscount (now Count) Terauchi Masakata, who had been the resident-general and who continued in office during 1911.

KRUPP. See NAVAL PROGRESS, *Armor*.

KUBELIK, JAN. See MUSIC.

KUBU TRIBE. See EXPLORATION, *Asia*.

KURDISTAN. See PERSIA.

KWANG-CHOW-WAN. A territory on the Chinese coast leased to France (1898) for ninety-nine years. Area, 386 sq. miles (land area, about 190); population (1906), 177,097. The administrator-in-chief (1911, M. Salabelle) is under the control of the governor-general of French Indo-China.

KWANTUNG, or KWANTO. A Japanese dependency, occupying the southern part of the Liaoting Peninsula (Manchuria). Area, 1221 sq. miles; population (1909), 445,414 (Chinese about 400,000). Japanese settlers (1910), over 32,000 (two-thirds in the Dairen region), Dairen (formerly Dalny, the capital and chief port, had (1909) 41,333 inhabitants; Port Arthur (Ryojun), 15,195. Fishing is an important industry. The main agricultural products are corn, millet, beans, wheat, buckwheat, rice, tobacco, hemp, and vegetables. Salt is manufactured. Imports (1910), 28,732,797 yen; exports, 38,797,925. Trade is chiefly with Japan. About eighty miles of the South Manchurian Railway are in Kwantung. Revenue and expenditure balanced (1911-12 estimate) at 4,984,926 yen. Japan makes up the deficit. Governor-general (1911), General (Viscount) Oshima.

LABOR. Various aspects of labor conditions will be found treated under the following heads: AMERICAN ASSOCIATION FOR LABOR LEGISLATION; ARBITRATION AND CONCILIATION, INDUSTRIAL; BOYCOTT; CHILD LABOR; EMPLOYERS' LIABILITY, which includes the progress of workmen's compensation; LABOR, AMERICAN FEDERATION OF; LABOR LEGISLATION, where the new laws not included under other articles are classified under *Administration of Labor Laws, Hours, and Accidents*; MINIMUM WAGES; OCCUPATIONAL DISEASES; OLD-AGE PENSIONS; STRIKES AND LOCKOUTS; TRADE UNIONS; UNEMPLOYMENT; VAGRANCY; WOMEN IN INDUSTRY;

and WORKINGMEN'S INSURANCE. Under several of these will be found cross-references to other articles containing matter relating to labor conditions and movements. See also UNITED STATES STEEL CORPORATION.

BIBLIOGRAPHY. The following are some of the more important books of the year treating various aspects of the conditions and organizations of labor in the United States and foreign countries: A. Acht, *Der moderne französische Syndicalismus*; R. A. Bray, *Boy Labour and Apprenticeship*; G. Cahen, *Les fonctionnaires*; F. T. Carlton, *The History and Problems of Organized Labor*; W. Gladden, *The Labor Question*; A. Greenwood, *Juvenile Labor Exchanges and After-care*; J. H. Greenwood, *The Law Relating to Trade Unions*; J. H. Greenwood, *The Theory and Practice of Trade Unionism*; Y. Guyot, *Les chemins de fer et la grève*; G. Lacoste, *Le travail de nuit des enfants*; E. Lesigne, *Les droits du travail*; Loubat, *Les accidents du travail en droit international*; P. Louis, *Histoire du mouvement syndical en France* (2d. ed. rev.); Scott Nearing, *The Solution of the Child Labor Problem*; W. V. Osborne and M. H. Judge, *Trade Unions and the Law*; Charles E. Persons, Mabel Parton, Mabelle Moses, and Threë "Fellows," ed. by Susan M. Kinsbury, *Labor Laws and Their Enforcement, with Special Reference to Massachusetts*; H. H. Schloesser and W. S. Clark, *Legal Position of Trade Unions*; S. and B. Webb, *The History of Trade Unionism* (new edition); T. Wright, *Sweated Labour and the Trade Boards Act*, Catholic studies in Social Reform; A. Zevas, *Le syndicalisme contemporain*; *Risks in Modern Industry*, *Annals American Academy of Political and Social Science*; *Uniform Child Labor Laws*; *Proceedings of the Seventh Annual Conference of the National Child Labor Committee*, *ibid.*; *Report of the Sixth General Meeting of the Committee of the International Association of Labour Legislation*, held at Lugano, September 26-28, 1910; Gilbert L. Campbell, *Industrial Accidents and Their Compensation*; Frank P. Gilbreth, *Motion Study; A Method for Increasing the Efficiency of the Workman*; F. W. Taylor, *The Principles of Scientific Management*; Frank H. Streightoff, *The Standard of Living among the Industrial People of the United States*; I. G. Gibbon, *Unemployment Insurance*; detailed account and analysis of all experiments and proposals made for insurance against unemployment.

LABOR, AMERICAN FEDERATION OF. ANNUAL CONVENTION. The fourteenth annual convention of this organization was held at Atlanta beginning November 13. The report of the president contained a record of progress in the four principal departments—building trades, metal trades, railroad employees, and union label trades. The building trades department included twenty international unions, with a total membership of 294,345. This was considerably less than the membership a year previous, owing to the defection of the United Brotherhood of Carpenters and Joiners and the International Organization of Steam and Hot-Water Fitters and Helpers, who took away 189,312 members. This loss was partly offset by the addition of the International Association of Machinists and the Slate and Tar Roofers International Union with 67,445. The metal trades department dealt with various strikes during the year, including

that of the molders of the Watertown Arsenal against the introduction of scientific management. The Union Label Trades Department reported very considerable increases in the numbers of commodities produced during the year bearing the union label. During the year ending September 30, 1911, the following new affiliations were made: Three international unions, 61 city central bodies, 207 local trade unions, and 55 federal labor unions. The total membership at the close of the year was as follows: International unions, 115; State federations, 38; city central bodies, 631; local trade unions, 493; federal labor unions, 187. There was therefore a total of 1484 organizations, including approximately 28,000 local unions, with an aggregate paid membership of 1,761,000. This was an increase of about 200,000 during the year. A considerable part of this increased membership was due to the affiliation of the Western Federation of Miners, with 51,300 members.

BOYCOTT AND CONTEMPT CASES. Two suits had begun against the American Federation of Labor and its officers on account of an injunction secured by the Buck's Stove and Range Company in restraint of a boycott carried out by the federation. One of these cases had to do with the rightful scope of the injunction, the other case dealt with an alleged contempt of the Supreme Court of the District of Columbia by the violation of the injunction by the officers of the federation. The injunction suit was carried to the Court of Appeals of the District of Columbia, which modified the original injunction; the case was then taken by appeals on both sides to the Supreme Court of the United States, where it was set for argument in January, 1911. Before this date, however, an agreement, settling all differences, was reached between the Buck's Stove and Range Company and the American Federation of Labor. When the Supreme Court of the United States, therefore, reached the appeals on the injunction it refused to pass judgment on the case since there was no longer any real dispute involved. The case was, therefore, dismissed and the costs equally divided.

The second suit, known as the contempt proceedings, was brought by the Buck's Stove and Range Company to determine whether Messrs. Gompers, Mitchell, and Morrison, president, vice-president, and secretary, respectively, of the federation, were not guilty of contempt of court through violating the injunction. Justice Wright of the Supreme Court of the District of Columbia, who issued the original injunction, found these men guilty and sentenced them to imprisonment for one year, nine months, and six months, respectively. These sentences were confirmed by the Court of Appeals of the District of Columbia and the case was taken to the Supreme Court of the United States on a writ of certiorari. In its decision in January the Supreme Court upheld the contention of Attorneys Alton B. Parker and Jackson H. Ralston for the defendants that the proceedings were of a civil and not a criminal nature, since the original petition filed by the Buck's Company was civil in nature. That company had sought whatever relief or compensation was due it on account of the failure of the injunction to prevent injury to its business. But, since the company and the defendants had settled their differences, the present suit had necessarily lost all ground with

the settlement of the main cause of which it was a part. The decision of the Court of Appeals was therefore reversed and the case sent back to that court with instructions to remand the case to the Supreme Court of the District of Columbia with directions that the proceedings instituted by the Buck's Stove and Range Company be dismissed. The sentences of imprisonment were declared improper because punitive rather than civil in character. The court, however, ordered that the dismissal of the company's suit should not prejudice the power and right of the Supreme Court of the District of Columbia to punish by a proper proceeding any contempt that had been committed. Justice Wright then appointed a committee to investigate and report whether there was good cause for believing Messrs. Gompers, Mitchell, and Morrison guilty of contempt. This committee, which consisted of the company's attorneys in the original injunction and contempt cases, formulated grounds for contempt proceedings. The taking of testimony was under way at the end of the year.

The federation continued to advocate through certain Congressmen legislation modifying the anti-trust law as it relates to trade unions and boycotts and also the modifying of the power of the courts in the issue of injunctions and the punishment of contempt cases growing out of the violation of injunctions.

Post Suit. In September, 1910, Mr. C. W. Post of Battle Creek, Mich., a minority stockholder of the Buck's Stove and Range Company, and a conspicuous opponent of organized labor, brought suit in the Circuit Court at St. Louis against the American Federation of Labor and others to recover damages under the Sherman law on account of the boycott against the above company. He alleged damages of \$750,000, and, therefore, made a claim to threefold that amount. The demurrer of the federation and others was sustained by the court in May and the dismissal of the suit was ordered. An appeal was taken to the United States Circuit Court of Appeals, where the case remained at the end of the year. See **TRADE UNIONS** for the federation's part in the McNamara case.

LABOR EXCHANGES. See **UNEMPLOYMENT.**

LABOR LEGISLATION. ADMINISTRATION OF LABOR LAWS. A considerable body of laws relating to the administration of labor laws was enacted by the States in 1911. The most notable act was that creating the Wisconsin Industrial Commission. Among the evident tendencies in the legislation was increasing specialization in labor departments and a strengthening of the provisions for the enforcement of labor laws. A considerable number of States also enacted laws with reference to the inspection of mines, greatly extending the powers of inspectors for safeguarding the health and lives of miners.

Alabama required the governor to appoint a coal mine inspector for each 2,500,000 tons of coal mined; the qualifications of inspectors and associate inspectors were placed on a high level; and inspectors were given power to close the mines under conditions deemed dangerous and to oversee the abandonment or reopening of old mines. California removed the four-year limit to the term of office of the commissioner of labor and added a deputy and assistant deputy to the department. Colorado organized a bureau of mines; divided the State into four

metalliferous mining districts with an inspector for each. Georgia established a department of commerce and labor for the collection and dissemination of statistics, with a commissioner elected for two years. Illinois added a physician and five new inspectors to the Department of Factory Inspection; increased mine inspection districts from ten to twelve; and extended the duties of coal mine inspectors. Indiana replaced its Department of Inspection with a bureau divided into three sections: Inspection of buildings, factories, and workshops; inspection of mines; and inspection of boilers. Maine combined its Bureau of Industrial Labor Statistics and the office of factory inspection into a department of labor and industries, with a commissioner appointed for three years. Massachusetts extended to February 14, 1912, the time allowed the commission for the investigation of factory inspection. Michigan required the election in each county where there are iron or copper mines of a competent mining inspector. Missouri strengthened the law for the inspection of lead and zinc mines and for the safeguarding of the health and lives of miners therein. Montana raised the qualifications of coal mine inspectors and extended their powers and duties in case of accident. Nevada extended the term of the State inspector of mines to four years; and increased considerably the penalties for failure to comply with any part of the mining laws. New Hampshire enlarged the powers of the Bureau of Labor. New Jersey increased the number of factory inspectors from sixty to eighty-five, fifteen of whom must be women; these inspectors were divided into five grades; the salary of the commissioner was raised to \$5500; the commissioner was authorized to establish districts with sub-offices in any city. Ohio increased the penalties for failure to comply with orders for alterations or additions or new appliances in shops or factories and made provision whereby shops and factories thus failing may be declared public nuisances. Oklahoma reorganized its Department of Labor into four bureaus: Statistics; arbitration and conciliation; free employment; and factory inspection. It also strengthened the powers of the commissioner of labor and of the factory inspectors. Pennsylvania made slight alterations in the law relating to bituminous coal mines, among other things increasing the number of inspectors and inspection districts; the inspection districts of anthracite coal mines were increased from seven to eight. South Carolina provided for the enforcement of the laws requiring seats for female employees in various employments, and for a woman inspector for the collection of evidence of violations. Texas authorized the appointment of a special inspector of safety appliances. Utah reorganized its Bureau of Statistics as the Bureau of Immigration, Labor, and Statistics; and increased the powers and duties of the mine inspectors. Washington abolished its mine inspection districts.

The Wisconsin Industrial Commission will consist of three men at a salary of \$5000 each and necessary expenses. It may employ experts and other assistants and fix their salaries; it will administer all the labor laws of the State, including those relating to workmen's compensation, employment agencies, trade disputes, child and woman labor, and truancy. This law covers all places of employment, except agricul-

ture and domestic services. The commission is authorized to establish "safe" conditions of industry; this is defined to mean "such freedom from danger to the life, health, or safety of employees or frequenters as the nature of the employment will reasonably permit." It is required also to protect the "welfare" of employees, this being defined as "comfort, decency, and moral well-being." The commission may make investigations and issue either general or special orders. As to unemployment, the commission may do all in its power to bring employers and employees together, may "aid in inducing minors to undertake promising skilled employments," may "provide industrial or agricultural training for vagrants" and others, and may "encourage wage-earners to insure themselves against distress from unemployment." In trade disputes the commission is given broad powers; it may appoint and pay the expenses of temporary boards of arbitration. Wyoming made new provisions for the appointment of the State mine inspector.

HOURS. The establishment of the eight-hour day for public works has become almost universal in this country, and along with its extension is going a reduction in the number of hours in private employments, such as mining and railway transportation, where long hours are likely to result in accidents. The number of hours in public employments was reduced in 1911 in four States. Connecticut limited to eight per day the hours of labor of painters, carpenters, masons, electricians, machinists, engineers, firemen, and plumbers in State institutions. Massachusetts increased the penalties for those employers who "require or permit" a violation of the public eight-hour law; persons employed in the preparation of election ballots or in legislative printing during sessions are exempted from the eight-hour law. New Jersey limited to eight hours per day work on all future public contracts, but permitted overtime with extra pay in case of accidents. Wisconsin extended the scope of its eight-hour law for public works and defined an "emergency," for which exemption is made to mean the protection of property or human life when endangered by a public enemy or by fire, storm, or flood; it also declared that if the fact of work for more than eight hours in any one day be proven this should constitute *prima facie* evidence of the violation of the law. The United States Congress provided that no part of the appropriation made for new submarine torpedo boats should be expended on contracts with employers who do not maintain an eight-hour day for all the work for which that appropriation was made.

The legislation regarding the hours in private employments was more extensive. California limited the hours of trainmen, train dispatchers, and telegraph operators to sixteen consecutive hours, to be followed by eight consecutive hours off duty; heavy penalties for violation were provided. Colorado extended its eight-hour law for miners and smelter employees, by including a larger variety of such workers, and by declaring that the period of employment shall not exceed eight hours within any twenty-four. Connecticut forbade the employment of anyone in commercial or industrial work on Sunday unless one full day in the following week be given free; a long list of exceptions, however, was added. Georgia reduced the hours of all persons in cotton and woolen mills, with the ex-

ception of engineers, firemen, watchmen, mechanics, teamsters, yard employees, clerical force, and some other help, from sixty-six to sixty per week; longer hours to make up lost time caused by accidents are permitted. Idaho increased penalties for violation of the eight-hour law and required that overtime must be paid for on an eight-hour day basis. Massachusetts declared that employees must not be required to work in mills or factories on legal holidays. Montana limited to eight hours per day the work of men in underground mines or workings, including railroad or other tunnels. Nebraska limited the hours of trainmen to sixteen consecutive hours, after which they must have at least ten consecutive hours off duty; and if they are employed as many as sixteen hours in any twenty-four they must then have at least eight consecutive hours off duty. Train dispatchers and similar employees must not be on duty more than nine hours in twenty-four at offices which are operated day and night nor for more than thirteen hours in offices operated only during the day; but in emergencies four additional hours for three days per week are permitted. Nevada extended her eight-hour law for mines, so as to include all workmen employed about the surface of any underground mine. North Carolina limited the hours of railroad employees, as did Nebraska; hours in all manufacturing establishments were reduced from sixty-six to sixty per week, with the exception of several classes of men. Oregon limited the hours of trainmen and train dispatchers, as did Nebraska, except that the consecutive hours of trainmen were limited to fourteen. Pennsylvania limited to eight hours in each twenty-four the employment of hoisting engineers at anthracite coal mines. Wisconsin forbade the opening on Sunday of shops for the sale of dry goods, shoes, hardware, furniture, dishes, jewelry, coffee, teas, and spices.

ACCIDENTS. The increased attention given in the last few years to industrial accidents led to a great volume of legislation in 1911. The new laws dealt with the reporting and the prevention of accidents. The most important features were increased regulations for the prevention of the loss of life through fires in shops and factories and the prevention of accidents on mines and railroads. Thirteen States passed laws on the reporting of industrial accidents. These laws were designed to hasten report of accidents to some State authority and to make such reports more complete. The United States required common carriers engaged in interstate commerce to report all locomotive boiler accidents resulting in serious injuries or death to boiler inspectors.

The memorable factory fires in Newark, N. J., and in New York City led to many new provisions. New Jersey enacted a very detailed law for the prevention of fire and the provision of fire-escapes. Ohio, Wisconsin, Minnesota, New Hampshire, and Massachusetts also raised their standards of safety. Pennsylvania provided for fire drills in establishments where women and girls are employed. Fire marshals were appointed or their duties increased in many States. New York appointed a commission to investigate manufacturing conditions as regards fire safety in conditions of the cities of the first and second class. Minnesota passed a law relating to safeguarding dangerous machinery. Ohio created a board of boiler rules. Massachusetts

authorized the State board of health to investigate lighting conditions in industrial establishments with reference to injuries to the eye and occupational diseases. A new law in Illinois required special devices to protect employees in dangerous processes, such as those involving the use of poisonous lead; and New Jersey protected workers in metal casting from poisonous gases. The following States passed laws on the prevention of accidents in factories and workshops: Massachusetts, Colorado, Illinois, Indiana, Iowa, Minnesota, Missouri, Nebraska, New Hampshire, New Jersey, New York, North Carolina, Ohio, Oklahoma, Oregon, Pennsylvania, Rhode Island, and Wisconsin.

Frequent mine disasters in recent years have aroused the interest of the entire country in the prevention of mining accidents. A number of States have established mining boards and the United States government has established the Bureau of Mines. The most notable legislation of the year was the creation by Illinois of a mining investigation commission to study methods and conditions of coal mining with reference to the safety of life and property and the conservation of coal deposits. It also made an appropriation of \$30,000 for the Mine Rescue Station Commission. Moreover, it established a form of educational work in the prevention of accidents in coal mines and industrial plants to be known as the Illinois Miners' and Mechanics' Institutes. The following States passed laws, in most cases very extensive and detailed, for the prevention of mining accidents: Alabama, Illinois, Indiana, Iowa, Kansas, Missouri, Montana, Nevada, North Carolina, Pennsylvania, Ohio, Texas, Utah, Washington, and Wyoming.

Attention has been called repeatedly in recent years to the great number of accidents upon railroads. These have been numerous in spite of a considerable body of legislation and rules by railroad commissions designed to prevent them. Not fewer than fifteen States enacted laws in 1911, the purpose of which was to increase the protection of railroad employees. In nine States the authority of railroad commissions was increased in one way or another; in Colorado and South Carolina these commissions were given authority to make whatever rules they deem necessary to prevent accidents; and in Washington the commission was given authority to investigate all accidents and to establish specific standards for safety appliances. Laws requiring adequate trained crews, in some cases specifying the number of the crew as related to the size of the train, were passed in six States. An equal number of States established a standard for the construction of caboose cars. In three States laws prescribed experience, training, or examinations for engineers, firemen, conductors, brakemen, and signalmen. Legislation was passed in two States relating to air-brakes and in two relating to the safeguarding of frogs and switches. A locomotive boiler inspector was authorized by Indiana, which State also regulated the height of bridges and increased regulations regarding automatic bell-ringers and signal lights and switches. In Oregon sheds were required to protect employees on repair work. In Washington a public service commission, with extended powers and duties, was created to supersede the railroad commission.

Another line of accident prevention to which the laws of 1911 apply was the conditions of

building construction. Extensive laws on this subject were passed in Oregon, Indiana, and Nebraska. California, Massachusetts, New York, Rhode Island, and Wisconsin also increased the protection of workmen in the building trades.

For legislation affecting convict labor, see section under PENOLOGY. See also CHILD LABOR; AMERICAN ASSOCIATION FOR LABOR LEGISLATION; WOMEN IN INDUSTRY; UNEMPLOYMENT; OLD-AGE PENSIONS; EMPLOYERS' LIABILITY; WORKINGMEN'S INSURANCE; and VAGRANCY.

GREAT BRITAIN. Shops Bill. Early in the year Mr. Churchill introduced a bill to consolidate, amend, and extend the Shops Regulation acts of 1892 and 1904. The aim of the new bill was to limit the hours of shop assistants to sixty per week, with one afternoon holiday weekly. Overtime was allowed to the extent of 90, or 75 hours per year, except for boys under sixteen and girls under eighteen, and on condition that all assistants are given an annual vacation of two weeks or one week, respectively, on full pay. Jewish shopkeepers who closed on Saturday could keep open on Sunday; all others, with minor exceptions, were required to close on Sunday. Local authorities were empowered to fix closing hours, but these could not be earlier than 7 P. M., except on the half-holiday, when 1 P. M. was to be the earliest; moreover, any ruling by a local authority must have the approval of two-thirds of the shops affected. Seats must be provided in shops employing girls, not fewer than one seat for three girls. Public houses, refreshment rooms, motor and cycle accessory shops, newspaper, confectionery, and tobacco shops, and dairies were exempted. Bread could be sold on Sunday until 10 A. M., and hairdressers could keep open until 2 P. M. The bill was passed in November. See ARBITRATION AND CONCILIATION, INDUSTRIAL.

LABOR LEGISLATION, AMERICAN ASSOCIATION FOR. This association held a notable conference at Chicago, September 15-16, on the subject of industrial accidents. The discussions were divided under three headings: Standardization for accident prevention; administration by commissions; and uniform reporting of industrial injuries. Under the first heading much attention was given to the introduction of safety devices and to the proper functions of scientific supervision by engineering experts. Under the second heading the work of the Industrial Commission of Wisconsin, the Massachusetts Board of Boiler Rules, and the Department of Factory Inspection of Illinois were discussed. Under the third heading were presented the beginnings of reports on occupational diseases, the accident record of Minnesota, and the advantages of standard accident reports.

The association held an annual meeting in December in Washington, in connection with the meeting of the American Economic Association, and the American Sociological Society. The subjects of discussion were the conservation of human life and energy by the prevention of accidents and occupational diseases, especially in the mining industry, and the proper compensation of workmen for industrial injuries. Attention was also given to methods of obtaining full and reliable statistics of industrial accidents and diseases. Unemployment as a waste of social energy and the cause of much demoralization and dependency was another topic of discussion. Among the facts presented

was the record of 30,000 coal miners killed and 80,000 seriously injured in the past twenty years. Dr. John R. Haynes, who made this statement, vigorously urged the formation of an interstate mining commission with powers to make and enforce mining regulations. Mr. I. M. Rubinow developed the proposition that the United States government is a much worse employer, with respect to compensation for accidental injuries, than many large corporations. The constitutionality of workmen's compensation was discussed by Ernest Freund of the University of Chicago. Unemployment was presented by William Hard of *Everybody's Magazine* and by Prof. Charles R. Henderson of the University of Chicago. The latter contended that industrial education and continuation schools were badly needed and that the best form of unemployment insurance is the out-of-work benefit by trade unions subsidized by the city or State, as is commonly practiced in cities of continental Europe. In this connection a committee was appointed to organize an American branch of the International Association for the Struggle against Unemployment. Some review of the extensive labor legislation (q. v.) of 1911 was given and attention was called to the fact that neither the bill for prohibiting the use of poisonous phosphorous in match-making nor the bill for the creation of a federal commission on industrial diseases has been passed. The association has begun the publication of a regular quarterly journal entitled *The American Labor Legislation Review*. It has laid out the following programme: The passage by Congress of the Esch bill prohibiting the use of white phosphorous in the match industry (see OCCUPATIONAL DISEASES); uniform reporting of occupational diseases; the adoption of standard schedules for industrial accident and trade disease reports; one day's rest in seven; a maximum ten-hour working day for women; additional workmen's compensation acts; more efficient machinery for the administration of labor laws.

See LABOR LEGISLATION; OCCUPATIONAL DISEASES; EMPLOYERS' LIABILITY; CHILD LABOR; ARBITRATION AND CONCILIATION, INDUSTRIAL.

LABUAN. See STRAITS SETTLEMENTS.

LACROSSE. The magnificent showing made by the Crescent Athletic Club was the feature of the 1911 lacrosse season in the United States. Only two teams scored victories over the Bay Ridge players—Swarthmore by 6-3, and the Toronto A. C. by 5-1. The Crescents defeated Stevens 14-0, New York Lacrosse Club 7-1, 8-2, and 6-0, Cornell 5-0, Mount Washington 5-3, and 5-1, Toronto University 8-3, and 4-1, and the Toronto Rowing Club 7-3. The contest in Canada for the Minto Cup was won by the Vancouver team. The victors in the Intercollegiate League (U. S.) were Harvard in the northern division, and Johns Hopkins in the southern division. In a match played between these two teams Johns Hopkins won by a score of 3 to 1.

LAMB DIN, ALFRED COCHRAN. An American editor and critic, died November 7, 1911.

He was born in Philadelphia in 1846 and was educated in private schools. He graduated from the medical department of the University of Pennsylvania in 1866. From 1867 to 1875 he practiced medicine in Germantown, at the same time acting as editor of the *Germantown Chronicle*. From 1875 to 1896 he was managing editor, and from 1896 to 1902, editor of the *Philadelphia Times*. This paper was merged in the latter year with the *Philadelphia Public Ledger*. Dr. Lambdin acted as editor from 1905 to the time of his death. He was well known as a musical and dramatic critic.

LANCASHIRE COTTON LOCKOUT. See **STRIKES.**

LANDS, SWAMP. See **DRAINAGE.**

LANDS, PUBLIC. Matters relating to public lands are discussed under **CONSERVATION, ALASKA, FORESTRY, and IRRIGATION.** There were no unusual developments in the administration of public lands of the United States during 1911. A bill was pending in Congress to modify the laws regulating to homesteads so as to eliminate certain hardships which those who have taken up or are to take up homesteads have hitherto suffered.

The investigation of coal claims in Alaska (q. v.) continued during the year and a decision was rendered in the so-called Cunningham claims, holding that the entries on these lands should be canceled on account of improper methods used in filing claims upon them. This is the final disposition of the long-drawn-out controversy over these claims. The total number of locations in Alaska coal claims was 1125, and the number of applications for patents was 521. Up to July, 1911, indictments returned in Alaska criminal proceedings affecting coal lands covered 641 claims out of the total of 1125.

The total cash receipts from the sale of public lands during the year was \$7,245,207. The total area of public and Indian lands originally entered during the fiscal year was 17,639,099 acres, an increase of 8,752,169 acres, as compared with the area entered during 1910. The area patented during the fiscal year was 12,272,495 acres, an increase of 1,289,345 acres, as compared with 1910.

LAND CLASSIFICATION. The total area of coal lands classified December 1, 1911, was 15,621,429 acres, valued at \$711,523. Oil land withdrawals on December 1, 1911, amounted to 3,394,914 acres; phosphate land withdrawals amounted to 2,396,391 acres; power site withdrawals amounted to 1,681,750.

NATIONAL PARKS. There were twelve national parks, comprising 4,500,000 acres. The latest of these was the Glacier National Park, which was made a national reservation in 1911. The others are the Yellowstone National Park, Yosemite National Park, Sequoia National Park, General Grant National Park, Mesa Verde National Park, Mt. Rainier National Park, Wind Cave National Park, Crater Lake National Park, Sullys Hill National Park, Hot Springs Reservation, and the Platt National Park.

LANGUAGE, INTERNATIONAL. For some time the famous scientist, Wilhelm Ostwald, of Leipzig, has had in mind the foundation of a "bureau of the international language," on the same plan as the Bureau of the International Postal Union which exists in Bern. There is in Sweden

a marked movement in favor of a universal language; in Stockholm and in other cities a strong union is working for the cause. Professor Ostwald, wishing to take advantage of the situation, has endeavored through his friend Arrhenius, to interest the Swedish government in his scheme. Representative Lindhagen has proposed to the Riksdag (congress) that Sweden should take the initiative in establishing a universal language. The bill was rejected by only 114 votes against 79. It is well known that Professor Ostwald is supporting *Ido* rather than *Esperanto*. (The Idists claim for their language the following improvements over Esperanto: Suppression of all accented letters and use of the Latin alphabet; suppression of diphthongs like *aj*, *ej*, *oj*, *uj*; suppression or simplification of useless or complex rules such as agreements of adjectives; regulation of derivations; and fixed rules for order of words.)

The International Congress of Esperanto took place in Antwerp in August with the usual features.

The U. E. A. (Universal Esperanto Association) is trying to show the usefulness of Esperanto in practical life. They work chiefly among business people, tourists, workingmen, young men's associations. Their number is 8000, of forty-four different nationalities. From Geneva, which is their central quarter, statistics came out recently showing that in 1910 they have helped 7565 people, of whom 1513 were business people, 1791 tourists, 402 young men, etc. In Esperanto 740 courses were organized, attended by over 12,000 pupils. More than 50,000 letters have been exchanged.

This year died in Bavaria the famous priest, Johann Martin Schleyer, the inventor of Volapük.

LANNELONGUE, ODILON MARC. A French surgeon, died December 20, 1911. He was born in 1840 at Castera-Verdun in the department of the Gers. After obtaining his medical education he devoted himself chiefly to surgery. In 1884 he was made a professor in the faculty of medicine. He acquired great fame as a practical and theoretical surgeon and several of his books on surgery are considered standard works. He was a member of the Academy of Sciences and also of the Academy of Medicine. He was a senator from the department of the Gers and a member of the Legion of Honor.

LAOS. One of the five territories (the largest) of French Indo-China (q. v.); a French protectorate. Area (estimated), 111,940 square miles; population (1906), 663,727. Capital, Vientiane. The three protected states—Luang Prabang, with its capital Luang Prabang, the residence of the king (Som-Deck Phra Chao Sisawong); Bassac; and Muong Sing—are included with Laos. Opium, tobacco, rice, cotton, indigo, etc., are grown, and the forest products are valuable. The mines yield gold, tin, lead, and precious stones. A railway is projected to connect the Mekong with the sea, starting at Keng-Kabao and terminating at Quang-Tri—about 300 kilometers. The survey is finished to Ai-Lao (about 230 kilometers). The road is expected to be completed in 1913. There is telegraphic communication with Hué and Saigon. The budget balances at about 1,960,000 piastres (local revenue, about 600,000 piastres, the balance being supplied from the general budget of Indo-China). Resident-superior, Georges Mahé.

LARNED, CHARLES WILLIAM. An American army officer and educator, died June 19, 1911. He was born in New York in 1850 and graduated from the United States Military Academy in 1870. He served as second lieutenant with the Third Cavalry and with the Seventh Cavalry. He was made first lieutenant in 1876 and served in the South during the reconstruction period, from 1871 to 1873. In the latter year he took part in the Stanley expedition against the Sioux Indians and participated in the engagement at Big Horn River. In 1876 he was made professor of technical and military graphics and applied geometry at the United States Military Academy, after being promoted to the rank of colonel. He was dean of the Military Academy at the time of his death. He was the author of *The Great Discourse* (1890), and contributed to magazines on educational, art, military, and religious subjects.

LASPOCHORION. See ARCHÆOLOGY.

LATROBE, FERDINAND CLAIBORNE. An American lawyer and public official, died January 13, 1911. He was born in Baltimore in 1833 and was educated at the College of St. James. In 1860 he was admitted to the bar and practiced law in Baltimore. From 1869 to 1872 he was a member of the Maryland House of Delegates. He was also a member of that house in 1900. He was elected mayor of Baltimore for seven successive terms from 1874 to 1895.

LATTA, JAMES P. An American public official, congressman from Nebraska, died September 11, 1911. He was born near Ashland, O., in 1844. When he was two years of age his parents removed to eastern Iowa, where he was educated in the district schools. In 1883 he took up a homestead in Nebraska and thereafter engaged in farming and stock raising. He also organized several banks. In 1887 he served in the State House of Representatives, and in 1907 to the State Senate. He was elected to the Sixty-first Congress from the Third Nebraska district.

LAURIER, SIR WILFRID. A Canadian statesman, until September, 1911, prime minister. (See CANADA.) He was born at St. Lin, Quebec, in 1841, and was educated at L'Assumption College and McGill University. He studied law and became a barrister in 1864 and queen's counsel in 1880. He became interested in politics in his youth and was active when the Dominion was formed in 1867. He, indeed, opposed its formation, but he accepted the new federation loyally. He made no attempt to enter the first federal Parliament, but in 1871 was elected to the Provincial Legislature of Quebec. He resigned in 1874 to enter federal politics and as member for Drummond and Athabasca formed part of the Liberal majority which supported the new Mackenzie government. At the end of 1877 he was made minister of inland revenue in the cabinet, but his constituents refused the reelection which it was necessary for him to ask. A seat was, however, found for him in the eastern division of the city of Quebec, which from that time onward he represented. He held office in the cabinet but a few months, as the Conservative victory of 1878 consigned him to the Opposition for sixteen years. As a lieutenant of Edward Blake he took an active part in the long campaign against the régime of Sir John A. Macdonald. He had developed re-

markable oratorical powers; and the protective tariff, the terms of the Canadian-Pacific Railway contract, the execution of Louis Riel after the rising of 1885, the alleged gerrymandering of constituencies in the redistribution of 1881, and the alleged corruption of the administration were among the chief objects which he attacked with marked effect. As Canada showed no sympathy with general free trade or a low revenue tariff, the Liberal party was obliged to adopt a policy of sectional free trade in the form of unrestricted reciprocity with the United States. This was not received with enthusiasm, and Mr. Blake, the Liberal leader, after the general election in 1887, abandoned the leadership of the Liberal party. To this leadership Sir Wilfrid Laurier then succeeded, although with reluctance. It was considered doubtful whether a French-Canadian leader could attract enough support from the English-speaking provinces to achieve success. The party was successful, however, but the plan for unrestricted reciprocity was abandoned. As leader of the Liberal party he became prime minister in 1891. He led his party to victory in 1896 on a platform which left the tariff question in abeyance. Under his rule, however, a notable departure was made, establishing a preferential tariff treatment for British goods. When he went to England in 1897 he joined in the celebration of the Diamond Jubilee of Queen Victoria. He was received with particular favor on account of this measure. In 1902 he attended King Edward's coronation as representative of Canada and in 1911 that of King George V. He took a leading part at the imperial conferences of 1902, 1907, and 1911. He was a strong opponent of the various plans of closer imperial organization. He was knighted in 1897. For the details of the defeat of the Liberal party on the question of reciprocity under his leadership, see the political sections of the article CANADA.

LAW, ANDREW BONAR. An English statesman, who was elected leader of the Unionist party in the House of Commons to succeed A. J. Balfour (q. v.). He was born in New Brunswick, Canada, in 1858, and received his education at the Gilbert Field School, Hamilton, Ontario, and at the high school in Glasgow. He became a member of a firm of iron merchants in the latter city and was at one time chairman of the Glasgow Iron Trade Association. He was elected to Parliament from the Blackfriars division of Glasgow in 1900, and held that seat until 1906, when he was elected from the Dulwich division of Camberwell. From 1902 to 1906 he was parliamentary secretary of the Board of Trade. While Mr. Law has never been in the cabinet, he has shown the qualities of leadership and ability on financial questions. He is an active protectionist and is earnestly opposed to the doctrine of home rule for Ireland. See GREAT BRITAIN.

LAWES-WITTEWRONGE, SIR CHARLES. An English sculptor, died October 6, 1911. He was born at Teignmouth in 1843 and was educated at Eton and Trinity College, Cambridge. He was born Charles Lawes, but in 1902, by royal license, changed the name, adding Wittevronge. In addition to his fame as a sculptor, he achieved notoriety by the famous Lawes-Belt suit in 1883. Richard Belt, a sculptor, brought suit against him on account of charges that Belt was an impostor, who had put forth, as his own work, sculptures made for him by others. Among

them were a statue of Dean Stanley, the Byron monument, and memorial busts of Charles Kingsley and Canon Conway. The trial was a famous one. It lasted for six weeks. Belt modeled before the jury a bust, which was declared by eminent artists to be without artistic merit and conclusive proof that another hand must have fashioned the works of art which he claimed as his own. In spite of this the jury awarded damages to him of \$25,000. Soon afterwards Belt was sent to prison for fraud and forgery. Sir Charles Lawes-Wittewronge was a famous athlete, and in 1865 was amateur champion oarsman of England. One of his best known works was "The Death of Circe," a group in marble. He was president of the Incorporated Society of British Sculptors and was, perhaps, the ablest plastic artist in England at the time of his death.

LAWRENCE, EDWARD ADDISON. An American educator, died February 5, 1911. He was born at Groton, Mass., in 1823, and he received his early education in that town. He graduated from Dartmouth College in 1839. He became principal of the Appleton Academy at New Ipswich, N. H., where he remained for eight years. From there he removed to Scranton, Pa., and became superintendent of the public schools in that city. In 1862 he was appointed literary adviser and director of the University Publishing Company of New York City. In this position he remained for forty-five years. He edited and revised many school and college text books.

LAW LIBRARIES, ASSOCIATION OF. See LIBRARY PROGRESS.

LAWN TENNIS. The lawn tennis season of 1911 was the most notable in the history of the sport. The visit of the English players to the United States to meet the Americans in the preliminary matches for the Davis Cup held by the Australians, attracted world-wide interest, and all former attendance records were broken at the international contests held on the courts of the West Side Tennis Club in New York City. The victory of the American team was hailed with great enthusiasm and gave tennis an impetus in the United States that augurs well for the future of the game. The team finally chosen to go to Australia and contest for the Davis Cup consisted of W. A. Larned, M. E. McLoughlin, and B. C. Wright.

A remarkable feature of the season's play was the fifth successive victory of William A. Larned in the all-comers' championship tournament at Newport, R. I. This made the seventh time that Larned had captured the highest honors, a record only equalled by Richard D. Sears, who held first ranking from 1881 to 1887 inclusive. The California players, M. E. McLoughlin and T. C. Bundy, for the third time contested with success on the Eastern courts, McLoughlin giving Larned a hard fight for the championship. Miss Hazel Hotchkiss, also of California, retained the woman's national singles title.

To the surprise of the experts F. B. Alexander and H. H. Hackett who had held the doubles championship since 1907 went down to defeat before R. D. Little and G. F. Touchard. Harvard and Princeton divided the honors in the thirty-first annual intercollegiate tournament, E. H. Whitney of Harvard capturing the singles event and Dean Mathey and J. H. Butler of Princeton the doubles match.

A summary of the principal championship and open tournaments held in 1911 follows:

International Davis Cup Ties: Singles—William A. Larned (America) defeated C. P. Dixon (Great Britain), 6-3, 2-6, 6-3, 3-6, 7-5; Maurice E. McLoughlin (America) defeated A. H. Lowe (Great Britain), 8-6, 6-1, 4-6, 4-6, 6-3; William A. Larned (America) defeated A. H. Lowe (Great Britain), 6-3, 1-6, 7-5, 6-1; Maurice E. McLoughlin (America) defeated C. P. Dixon (Great Britain), 8-6, 3-6, 6-3, 6-2. **Doubles—**C. P. Dixon and A. E. Beamish (Great Britain) defeated R. D. Little and T. C. Bundy (America), 6-3, 7-5, 6-4.

All-Comers' National Championship, thirty-first annual: Men's singles—Maurice E. McLoughlin defeated Beals C. Wright, 6-4, 4-6, 7-5, 6-3. **Challenge round—**William A. Larned (holder) defeated Maurice E. McLoughlin (challenger), 6-4, 6-4, 6-2. **Doubles, challenge round—**Gustave F. Touchard and Raymond D. Little (challengers) defeated Harold H. Hackett and Frederick B. Alexander (holders), 7-5, 13-15, 6-2, 6-4.

National Championship Doubles Preliminary Ties: Gustave F. Touchard and Raymond D. Little (Eastern champions) defeated T. C. Bundy and M. E. McLoughlin (Pacific coast champions), 6-4, 6-4, 7-9, 3-6, 10-8; C. B. Doyle and H. E. Doyle (Southern champions) defeated C. M. Bull, Jr., and H. C. Martin (Western champions), 6-3, 8-6, 6-1. Final—Gustave F. Touchard and Raymond D. Little (Eastern champions) defeated C. B. Doyle and H. E. Doyle (Southern champions), 6-4, 4-6, 6-4, 1-6, 6-3.

Woman's National Championship: Singles—Miss Florence Sutton defeated Miss Eleanora Sears, 6-2, 6-1. **Challenge round—**Miss Hazel Hotchkiss (holder) defeated Miss Florence Sutton (challenger), 8-10, 6-1, 9-7. **Doubles—**Miss Hotchkiss and Miss Sears defeated Miss Sutton and Miss Green, 4-6, 6-4, 6-2. **Mixed doubles—**Miss Hotchkiss and Wallace F. Johnson defeated Miss Wildey and H. Tilden, 6-4, 6-4.

Twelfth National Indoor Championship, at Seventh Regiment Armory, New York City: Men's singles—Theodore Roosevelt Pell defeated William B. Cragin, Jr., 6-2, 6-3, 6-4. **Doubles—**Frederick B. Alexander and Theodore Roosevelt Pell defeated Calhoun Cragin and Wylie C. Grant, 11-9, 6-3, 6-1.

Fifth National Indoor Championship, at Seventh Regiment Armory, New York City: Women's singles—Miss Marie Wagner defeated Mrs. Frederick Schmitz, 6-4, 7-9, 6-4. **Doubles—**Miss Elizabeth C. Bruce and Miss Barbara Fleming defeated Mrs. Frederick Schmitz and Miss Erna Marcus, 6-4, 8-6.

Eastern Doubles Championship and Longwood Singles: Men's doubles—Gustave F. Touchard and Raymond D. Little defeated Beals C. Wright and Nathaniel W. Niles, 6-4, 6-4, 7-5. **Men's singles—**Edward P. Larned defeated Gustave F. Touchard, 6-3, 5-7, 6-3, 6-4. **Challenge round—**Edward P. Larned (challenger) defeated William A. Larned (holder) by default.

Western Championship Singles and Doubles: Men's singles—McLoughlin defeated Hayes, 6-2, 6-3, 6-3. **Challenge round—**McLoughlin (challenger) defeated Bundy (holder), 4-6, 6-3, 6-3, 6-3. **Men's doubles—**Bull and Martin defeated Mathey and Church, 7-9, 2-6, 6-3, 7-5. **9-7. Women's singles—**Miss Hotchkiss defeated Miss Neely, 6-1, 6-1. **Challenge round—**Miss Hotchkiss (challenger) defeated Miss Gwendolyn Rees (holder) by default. **Women's doubles—**Miss

Hotchkiss and Miss Neely defeated Miss Taylor and Miss Butler, 6-2, 6-3.

Metropolitan Championship: Men's singles—Frederick C. Inman defeated G. C. Shafer, 6-0, 6-3, 5-7, 6-2. Doubles—Gustave F. Touchard and Lyle E. Mahan defeated Karl H. Behr and Raymond D. Little, 6-3, 2-6, 7-5, 7-5. Women's singles—Miss Hotchkiss defeated Mrs. Wallace, 6-0, 6-1. Women's doubles—Miss Hotchkiss and Miss Browning defeated Miss Sutton and Miss Green, 3-6, 6-2, 6-1. Mixed doubles—Miss Hotchkiss and Carlton R. Gardner defeated Mrs. George H. Chapman and A. Holmes, 6-4, 6-4.

Intercollegiate Championship, thirty-first annual: Men's singles—E. H. Whitney (Harvard) defeated A. H. Mann (Yale), 6-1, 6-2, 6-2. Doubles—Dean Mathey and C. T. Butler (Princeton) defeated Henry N. Tift, Jr., and A. Kuhn (Princeton), 7-5, 6-1, 6-3.

All-England Championship, at Wimbledon, London: Men's singles—H. Roper Barrett defeated C. P. Dixon, 5-7, 4-6, 6-4, 6-3, 6-1. Challenge round—Anthony F. Wilding (holder) defeated H. Roper Barrett (challenger), 6-4, 4-6, 2-6, defaulted. Women's singles—Miss Boothby defeated Mrs. Hannam, 6-2, 7-5. Challenge round—Mrs. Lambert Chambers (holder) defeated Miss Boothby (challenger), 6-0, 6-0. Men's doubles—Gobert and Decugis defeated Parke and Hardy, 6-2. See RACQUETS AND COURT TENNIS.

LAWRENCE. See MASSACHUSETTS.

LEA, LUKE. United States senator (Democrat) from Tennessee. He was born in 1879 at Nashville, Tenn., and graduated from the University of the South in 1899. He studied law at the Columbia Law School, engaging in the practice of his profession until the time of his election to the Senate. He was elected on January 23, 1911, receiving 68 votes, 66 being necessary to elect. (See TENNESSEE.) His term of service expires in 1917.

LEAD. The total production of primary lead from all sources, domestic and foreign, in 1910, showed a gain of 5 per cent. over that of 1909, and of this amount domestic lead played an important part. The total production of refined lead in 1910 was 470,380 short tons, compared with 448,112 short tons in 1909. Of this total of 1910 361,827 short tons were obtained from domestic ores from base bullion, 76,905 tons from foreign ores, and 31,648 tons from foreign base bullion. Of the lead produced, 329,062 tons were desilverized lead, 141,318 tons were soft lead, and 14,069 tons were antimonial lead. The largest quantity of lead produced in any one State was mined in Missouri. There the total production in 1910 according to mine reports was 161,016 tons, compared with 159,435 tons in 1909. In Idaho were mined 114,120 tons, compared with 107,993 tons in 1909. The mines of Utah produced 61,662 tons, compared with 74,143 tons in 1909. The only other State producing considerable quantities was Colorado, where 38,036 tons were mined in 1910, as compared with 36,084 tons in 1909. Amounts varying from 4000 to 1000 tons were produced in Wisconsin, Oklahoma, New Mexico, Kansas, Montana, Nevada, California, and Arizona.

Of the total amount of lead produced in 1910, 305,601 tons were obtained from lead ores, 29,623 tons from lead-zinc ores, 41,932 tons from zinc ores, and 18,157 tons from all other ores.

The world's production of lead in 1910, ac-

cording to the figures of the United States Geological Survey, amounted to 1,211,411 tons. Of this the largest quantity was produced in the United States. Following were Spain, with 211,201 tons; France, 174,053 tons; Mexico, 138,890; Australia, 108,907. These are the only countries producing over 100,000 tons. Considerable quantities come from Belgium, France, Canada, Great Britain, Greece, Turkey, and Austria-Hungary.

The value of lead and type metal imported into the United States in 1910 was \$755,092. Of this the largest value was base bullion, \$337,223; and pigs, bars, and old lead imported were valued at \$212,858; the lead in ore at \$198,196.

The production of lead as estimated by the United States Geological Survey at the end of the year 1911 exceeded the output of 1910 by between 25,000 and 35,000 tons. This relates to the mine production. The smelter production of domestic lead is estimated to have increased 35,987 tons. The production of refined lead exceeded that of 1910 by a considerable margin. The quantity of foreign lead smelted and refined in bond in the United States was the smallest since 1905, but this was more than offset by the production of desilverized and soft lead. The total production of refined lead, desilverized and soft, from domestic and foreign ores was approximately 487,520 short tons, worth \$43,876,800. These figures do not include the estimated output of 13,195 tons of antimonial lead. The production of soft lead from Mississippi Valley ores was estimated at 189,386 tons, compared with 169,244 tons in 1910, which indicates that Missouri retains first place among the lead producing States. The imports of lead in 1911 were estimated at 18,881 short tons of lead in ore, 69,914 short tons of lead in base bullion and 2448 tons of refined lead, valued at \$210,500, a total of 91,243 tons (108,602 tons in 1910). Of the imports in 1911 92 per cent. came from Mexico.

LEAGUE OF LIBRARY COMMISSIONS.

See LIBRARY PROGRESS.

LEATHER. The hide and leather industry in 1911 was not marked by any special factors of unusual moment. As will be seen from the accompanying table the slaughter of cattle at the eight great markets was the smallest in point of numbers for several years. The prices obtained for hides in 1911 were better than in 1910, the average price of packer hides for January ruling 11.395 and for December 14.445, the maximum average being for November 14.483. The average for the year was 13.218 as compared with 11.931 for 1910 and 14.830 for 1909. For country hides the average price was for January 10.49 and for December 13.437, with a maximum average for November of 13.472. The average for the year was 11.979 as compared with 11.378 in 1910 and 11.373 in 1909.

Cattle and sheep slaughtered in 1910 and 1911:

Market	Cattle		Sheep	
	1911	1910	1911	1910
Chicago	1,715,209	1,741,076	4,452,821	3,734,346
Kansas City..	1,232,391	1,285,272	1,515,489	1,185,692
Omaha	706,415	776,567	1,377,578	1,256,893
St. Louis ..	758,012	837,820	881,832	650,412
St. Joseph..	312,242	353,532	550,676	412,787
Sioux City..	189,128	187,393	147,509	71,552
Ft. Worth..	347,188	435,435	121,817	92,768
St. Paul....	132,273	145,310	169,594	208,819
Total	5,392,927	5,762,405	9,217,316	7,613,249
Loss.....	369,478		Gain.....	1,604,066

Total cattle slaughtered in eight large markets by years: 1911, 5,392,927; 1910, 5,762,405; 1909, 5,715,739; 1908, 5,406,144.

The total imports of cattle hides into the United States during the calendar year 1911 were 170,652,626 lbs., valued at \$25,227,819, as compared with 221,969,098 lbs., valued at \$32,925,374 in 1910. Calf skins aggregating 82,628,078 lbs., and valued at \$21,226,228, were imported in 1911, as against 53,157,553 lbs., valued at \$11,814,440, in 1910. The total imports of hides and skins in 1911 were valued at \$81,456,348, as against \$86,107,728 in 1910. The total exports of raw hides and skins, except fur skins in 1911 were 36,115,677 lbs., valued at \$3,942,532, as against 30,586,908 lbs., valued at \$3,506,825 in 1910. The total imports of upper leather in 1911 were valued at \$152,920, as compared with \$530,382, in 1910. Exports of upper leather in 1911 were valued at \$25,148,798, as compared with \$25,777,468 in 1910. The total exports of sole leather in 1911 were 42,704,300 lbs., valued at \$9,085,767, as against 38,615,004 lbs., valued at \$8,419,475 in 1910.

The demand for leather in Japan was increasing and the native manufacture of boots and shoes was becoming a promising industry. Leather belting was also being turned out by Japanese manufacturers.

The importance of technical instruction in the tanning and preparation of leather was beginning to be realized in the United States and a shoe and leather continuation school was being maintained by the Boston School Committee, with the coöperation of shoe and leather associations. Pratt Institute in Brooklyn carried on successful courses in tanning, which were well attended.

The movement against adulteration and substitution in leather was in evidence during the year in South Australia and a Footwear Regulation act was passed providing against the use in soles of shoes of fraudulent or imperfect materials and requiring each sole to be marked. This act was not to take effect until the end of 1912 and after similar legislation had been enacted by the parliaments of New South Wales, Victoria, and Queensland.

The British leather trade, which for several years has been endeavoring to secure reforms in the purchase of leather, was active in an attempt to bring about the standardization of leather measuring instruments. Several conferences were held with representatives of the government, but no definite action was taken by the end of the year.

LEEWARD ISLANDS. A group of West Indian islands, north of the Windward group; a British colony composed of five presidencies: Antigua (with Barbuda and Redonda), St. Christopher (St. Kitts) (with Nevis and Anguilla), Dominica, Montserrat, and the Virgin Islands (qq. v.). Total area (official statistics, 1909), 708 sq. miles. Population 1901, 127,434; in 1911 (April census), 127,189. Sombrero is a small island of the Leeward group, from which phosphate of lime is shipped. It is attached administratively to the Virgin Islands. Schools (1909), 146; with average attendance, 12,555; government grant, £7195. Total cultivated area, 52,834 acres (Dominica unknown), of which 32,727 were under sugar cane. Export of sugar in 1908 was 23,572 tons; of cotton, 1,060,996 pounds. Imports (1909), \$587,817; exports, \$558,-

165. Tonnage entered and cleared (1909), 2,313,293. Railways (private, 16¼ miles); in Antigua. Revenue (1909-10), £164,375; expenditure, £159,263; public debt, March 31, 1910, £273,250. St. John, in Antigua, is the residence of the governor and commander-in-chief (1911, Sir Ernest Bickham Sweet-Escott).

LEEWARD ISLANDS (ILES SOUS LE VENT). See FRENCH ESTABLISHMENTS IN OCEANIA.

LEFEBURE, ALBERT-LÉON. A French economist, died August, 1911. He was born in 1838. He was for a time engaged actively in political life and was a member of the second De Broglie cabinet. He made special investigation into the condition of French prisons. In 1903 he was elected to the Academy of Moral and Political Sciences. His writings on economic subjects were numerous and include the well-known *Etude sur l'économie rurale de l'Alsace*.

LEFFINGWELL, E. D. See POLAR RESEARCH.

LEGISLATION, EDUCATIONAL. See EDUCATION.

LEGROS, ALPHONSE. A French painter and etcher, died December 8, 1911. He was born in 1837, at Dijon, France. He studied under Lecoq de Boisbaudran, and exhibited his first picture, a portrait of his father, in 1857. Two years later he painted his "Angelus," which received high praise. In 1863 he became professor of etching at South Kensington, London, and in 1886 was appointed Slade professor of fine arts at University College, London, to succeed E. J. Poynter. He held this chair for seventeen years. In addition to being an excellent painter he was one of the revivalists of etching and was a finished draughtsman in chalk and silver point.

LEHIGH UNIVERSITY. An institution of higher learning, founded in 1866 at South Bethlehem, Pa. The number of students in attendance in 1911-12 was 655 and the faculty numbered 67. The university offers the following four-year courses of instruction in arts and sciences: Classical, Latin scientific, biology and chemistry, geology, mathematics and physics, business administration. In technology: Civil engineering, mechanical engineering, metallurgical engineering, electro-metallurgy, mining engineering, electrical engineering, chemistry and chemical engineering. The productive funds amounted to \$1,182,986, and the total income to \$91,171. The library contains about 125,000 volumes. The president is Henry S. Drinker, LL. D.

LELAND STANFORD JUNIOR UNIVERSITY. An institution of higher learning at Stanford University, Cal., founded in 1887. The total enrollment of all departments of the university in 1910-11 was 1770. The registration for 1911-12 was 1618. The faculty at the beginning of the year 1911-12 numbered 174. Prof. A. A. Young as head of the department of economics, resigned, and Dr. A. S. Johnson of the University of Chicago was appointed his successor. On January 1, 1911, Dr. R. L. Wilbur assumed the permanent headship of the department of medicine, and at this time began the active work of the university department of medicine at San Francisco in the plan of taking over the Cooper Medical College, an adjustment which will be completed in July, 1912, with the graduation of the last class to enter Cooper College.

A gift of \$10,000 was received from Mr. and Mrs. F. W. West, of Seattle, to found a memorial lectureship in honor of their son, who was drowned while an undergraduate in the university. The lectureship has for its subject, "Immortality: Human Destiny and Human Conduct." The income of the various funds of the university available for educational uses amounts to about \$450,000 per year. The library contains about 150,000 volumes. The president is David Starr Jordan, LL. D.

LEMONS. See **HORTICULTURE.**

LEONARDO DA VINCI (Ship). See **BATTLE-SHIPS.**

LEPROSY. Marked advances in the knowledge of this disease were made in 1911, and the prospect that a cure will be found on the basis of modern biological methods seems assured. Koch's postulates as to what constitutes a specific contagious disease have at last been fulfilled in the case of leprosy, to wit, a particular type of microorganism is constantly found in the lesions of the disease; these organisms can be cultivated in artificial media, and inoculation with these cultures produces the specific lesion in another animal. Success in animal inoculation advanced almost equally with progress in artificial cultivation of the leprosy bacillus. Clegg produced from inoculation of pure cultures localized lesions in the guinea-pig closely resembling those in man, and Duval has recently successfully repeated these experiments in monkeys, obtaining from the infected animals an acid-fast organism from the remote lesions. As to transmission, Duval and Gurd were able to cultivate the organism from the nasal secretions in two out of five cases. They also succeeded in inoculating mice by rubbing cultures of the bacillus into their nares after gentle scarification. It is held by some observers that insects may play an important rôle in transmitting leprosy. Considering the enormous numbers of lepra bacilli in the infiltrated or ulcerated skin and nasal mucus of a leper in the active stage of the disease and the ingestion of bacilli by certain insects, it was suggested that direct contact and transmission by flies, fleas, mosquitoes, or other insects are possible modes of spreading the disease, but such infection must be accidental and exceptional. Sandes found acid-fast bacilli answering to the characteristics of lepra bacilli in about 30 per cent. of specimens of *Acanthia lectularia* up to sixteen days after feeding on lepers, and he believes that this species of insect constitutes a not unimportant agent in spreading leprosy. The possibility of the bacillus being carried by vermin also occurred to Long. With a view of testing this hypothesis, bedbugs obtained from huts which had never been inhabited by lepers were caused to bite lepers in the neighborhood of leprosy nodules on the face. These bugs were then killed and the alimentary tract examined. In those bugs which bit freely, bacilli were found similar to the bacillus lepræ. Control bugs from the same hut contained no such organisms.

In the light of the foregoing, the development of a vaccine treatment against leprosy would seem logical and feasible. Rost treated twelve patients with a vaccine prepared from a culture of the leprosy bacillus. Five of these cases were cured so far as clinical observation goes, while the remaining seven are remarkably improved. Rost used one c. c. of a 1 to 400 dilution of dried culture, or the equivalent thereof,

and one c. c. of a sterilized six weeks' broth culture. He found it advisable to give small doses in nodular cases and larger doses in the anæsthetic variety. The higher the reaction in the anæsthetic cases, the better was the result. The reason for this, he believes, lies in the fact that in anæsthetic cases, the bacilli being situated in the nerves, there is not the danger of metastasis that there is in the large masses of the nodular variety. Williams also used a vaccine prepared in fifteen cases with very gratifying results, although he refuses to consider his patients absolutely cured.

LEVASSEUR, PIERRE EMILE. A French economist and educator, died July 10, 1911. He was born in Paris in 1828 and was educated at the Collège Bourbon. After graduation he became professor in the Lyceum at Alençon. This position he held for two years and then went to Besançon. In 1856 he received an appointment at the St. Louis Lyceum in Paris, and in 1872 became professor in the Collège de France. Previous to this in 1868 he had been elected a member of the French Academy. In 1903 he was elected president of the Political Economy Society. His chief studies were made in relation to the working classes and their problems. He was active in promoting international congresses for the discussion of statistical and geographical topics and was one of the founders of the French Society of Commercial Geography. He visited the United States Columbian Exposition and wrote as the result, *Agriculture in the United States* (1899), and *The American Worker* (1900). Among other important works written by him are *Historical Researches of the System of Law* (1884); *History of the Working Classes in France from the Conquest of Caesar to the Revolution*, and *History of the Working Classes in France from 1789 to 1867*.

LEWIS, Sir GEORGE HENRY. An English solicitor, died December 7, 1911. He was born in 1833. His father, James Graham Lewis, was an eminent solicitor. He was admitted to practice as an attorney in 1856, and soon afterwards became famous by conducting the prosecution of the directors of Overend and Gurney's Bank after that institution had failed. He figured either as prosecutor or defendant's attorney in some of the most famous cases tried in England. Among these were the Colin-Campbell divorce case and the Tramby-Croft baccarat scandal. He also prepared the case for Parnell in the famous *Times* Parliamentary Commission hearing. He was the discoverer of the fact that the informer, Richard Piggott, was the forger of the alleged Parnell letters on which the case turned. He was sometimes called "Father Confessor" of London because he had heard so many of the sins of society and had never revealed them. He was created a knight in 1893 and baron in 1902. Two years before his death he retired from active service.

LEXINGTON. See **KENTUCKY.**

LIABILITY, EMPLOYERS'. See **EMPLOYERS' LIABILITY.**

LIBERIA. A negro republic (independent) on the west coast of Africa. Area (estimate), 35,000 sq. miles; population, about 1,500,000 (10,000 Americo-Liberians). The majority of the indigenous negroes belong to the Mandingo, the Kisi, the Gola, and the Kru tribes, all pagans except the first, which is Mohammedan. Capital, Monrovia (6000 inhabitants). Im-

ports (1910), £122,300; exports, £188,500. The trade is largely with Great Britain, Germany, and the Netherlands. Customs revenue (1910), £84,875; expenditure, no estimate given. External debt, £178,250 in 1908. By an agreement reached in January, 1911, an international loan of £500,000 is to be raised, secured on the customs; and the United States assumed responsibility for internal administration of the country. An American controller is to direct the customs, assisted by British, French, and German sub-controllers. The executive is the president (January 1, 1912-16, Daniel Edward Howard, elected May, 1911), aided by a council of six. The parliament (of two houses) is the legislative body. Secretary of state (1911), F. F. R. Johnson. Chief inspector of customs and British financial adviser, Richard Sharpe.

HISTORY. An obstacle to the American treaty with Liberia appeared in the attitude of the French government, which required as conditions precedent to its consent, that Liberia should sign the boundary treaty with France of 1907, as it had been interpreted by the Mixed Frontier Commission. In January it was announced that the Liberian government had acceded to this demand. Thus the way was now open to the carrying out of the American treaty negotiations. Prof. Roland P. Faulkner, formerly head of the American Commission to Liberia and later appointed special financial agent to the United States, visited Monrovia for the purpose of securing the passage of the necessary legislation. It was announced in October that a scheme for American financial control was, after long negotiations, approved by the United States, Germany, France, and Great Britain. The receiver-general was to be an American, and was to serve also as financial adviser to the Liberian government. It was provided that French, German, and British subjects should be appointed as receivers to cooperate with him. It was also provided that a frontier police force should be established for the securing of the revenue, organized by trained military officers designated by the United States. The first financial measure proposed was a loan which should be a first lien on all import and export customs, on rubber tax and head moneys.

LIBRARY ASSOCIATION, AMERICAN.

A society organized in 1876 and incorporated in 1879 to develop the public library in its bearing on American education and by cooperation to increase the efficiency of library administration. The association holds annual meetings. The thirty-third annual conference was held May 18 to 24, at Pasadena, Cal., at which there was an attendance of 582. At this conference the Special Libraries Association was received as an affiliated organization and a section for librarians of agricultural libraries was created. The question of affiliation of the various State library associations with the national association was discussed at a round table called for that purpose. In addition to the usual business reports of committees, and discussions, the following subjects were among those considered in the programme: What the community owes the library (president's address and general theme of the conference), exploitation of the public library, the effect of the commission plan of city government on public libraries, municipal civil service as affecting libraries, the academic standing of college library

assistants and their relation to the Carnegie Foundation, the condition of libraries in federal prisons, the administrative units in library extension—the township, the county, the State, etc., the basis of support for public library work, materials and methods in bookbinding, and various phases of work with children.

The headquarters of the association are in Chicago, in the public library building. This is the distributing centre for all the American Library Association publications, and serves as a bureau of information concerning library work in the United States and Canada. The official organ is the *Bulletin of the American Library Association*, which is published bi-monthly and distributed free to members. One number contains the proceedings of the annual conference and one constitutes the handbook of the association. The association publishes a monthly magazine, the *Booklist*, an annotated guide for the selection and purchase of new books. Publications of value to librarians are on file for the assistance of library workers and others. The association has been instrumental in establishing library organizations in 40 States, besides many local library clubs in cities and districts. Affiliated with it are four national organizations for kindred purposes: The National Association of State Libraries, the League of Library Commissions, the American Association of Law Libraries, and the Special Libraries Association. An important activity of the association is a publishing board, which operates under a gift of \$100,000, made in 1902 by Andrew Carnegie. The income from this fund is used in the compilation of indexes, of bibliographies, reference helps and literature for the promotion of library extension and the selection of books. Among its publications are an important bibliography of American history, a portrait index containing 120,000 references, and the A. L. A. catalogue of 8000 best books (1904). Early in 1912 a supplement to this catalogue will be published covering the books printed from 1904 to 1911. A manual of library economy, the chapters written by specialists in the respective subjects, is being prepared. About 60 publications of the association are now in print. The membership of the association is about 2100. The officers for 1911 were as follows: President, Mrs. H. L. El-mendorf, Buffalo Public Library; first vice-president, Henry E. Legler, Chicago Public Library; second vice-president, Mary W. Plummer, New York Public Library School; executive board, the above officers and W. C. Lane, Harvard College Library, Alice S. Tyler, Iowa Library Commission, Des Moines, Herbert Putnam, librarian of Congress, Purd B. Wright, Kansas City (Mo.) Public Library, C. W. Andrews, John Crerar Library, Chicago, Linda A. Eastman, Cleveland Public Library; treasurer, Carl B. Roden, Chicago Public Library; secretary and executive officer, George B. Utley, 78 E. Washington Street, Chicago. The thirty-fourth annual meeting of the association will probably be held at Ottawa, Canada, in June, 1912. See LIBRARY PROGRESS.

LIBRARY OF CONGRESS. There were in the Library of Congress at the end of the fiscal year 1911, 1,891,729 books, 123,568 maps and charts, 557,010 volumes and pieces of music, and 336,966 prints. There is also a large number of manuscripts, but a numerical statement of these is not possible. During the year there

were acquired 98,571 additional volumes. There were no considerable gifts of collections during the year, but among the notable acquisitions was the copy of the catalogue of the collection of jewels and precious works of art, owned by J. Pierpont Morgan, together with fifteen catalogues and lists of Mr. Morgan's collections of printed books. From the John Rylands Library of Manchester, England, was received a "copy of the English Bible in the John Reynolds Library, 1525-1640." No important collections of books were purchased during the year, but several important acquisitions were made in the field of history and auxiliary science, and in the field of art and architecture. In the division of manuscripts one of the most important additions was the John Sherman papers given to the library by Mr. Hoyt Sherman of Washington. Papers of Gen. George B. McClellan were given by his son, Hon. George B. McClellan. A collection of papers relating to the Civil War period of Edwin M. Stanton was given by his son, Mr. Lewis H. Stanton, and Edgar T. Welles of New York deposited in the library the papers of his father, Gideon Welles. A number of other collections relating to American history were received. Librarian, 1911, Herbert Putnam.

LIBRARY PROGRESS, 1911. ASSOCIATIONS AND COMMISSIONS. In the United States there are 34 States that have library commissions or bodies serving commission purposes. There are 38 State library associations. The leading library commissions publish bulletins, most noteworthy among which are: *New York Libraries*, *News Notes of California Libraries*, and the *Wisconsin Library Bulletin*. The League of Library Commissions is affiliated with the American Library Association and includes membership from all commissions. The commissions and associations work together, the commission carrying on the pioneer and library organization work of the State. The State associations hold annual meetings, some of which are almost like national conferences in character of programme and in number of attendance. Important State conferences were held in Asbury Park, N. J., in May, in Madison, Wis., in July, and in New York City in September. This last was the annual meeting of the New York Library Association and in attendance excelled all but a few national conferences. It was the third library convention held in New York City.

NEW LIBRARY BUILDINGS. Of paramount importance was the completion of the new building of the New York Public Library, which was opened on May 23, 1911, with appropriate ceremonies. The new building was designed by the celebrated architects, John Mervin Carrere and Thomas Hastings, following out the original plan as conceived by Dr. John S. Billings, the library's director. The New York Public Library is the largest library system in the world and the new building one of the most magnificent of library structures. It was erected by the city at a cost of some \$9,000,000. Its site was obtained in 1897 and the cornerstone laid in 1902. The building has accommodation for about 3,000,000 volumes and over 1700 readers. Another beautiful new library opened during the year was the University of California library. The St. Louis Public Library is almost completed. Plans are under way for the erection of a new building for the Provincial Library of British Columbia. Chicago, Cleveland, and Seattle have erected interesting representative

branch libraries. Among smaller public libraries, Elizabeth, N. J., and Springfield and New Bedford, Mass., have erected handsome new buildings.

CARNEGIE LIBRARY GIFTS. The organization of a Carnegie Corporation of New York places the donation of Carnegie library gifts under the control of a corporation. Mr. Carnegie gave \$25,000,000 to this body, which was organized on November 10, "to promote the advancement and diffusion of knowledge and understanding among the people of the United States."

LIBRARY TRAINING SCHOOLS. The New York Public Library established a library school in May, 1911. This school is financed for five years by Mr. Andrew Carnegie, with a yearly appropriation of \$15,000; it is housed on the ground floor of the new building of the New York Public Library. Miss Mary W. Plummer is principal of the school, which is already of leading importance. This brings the number of library schools in the United States up to '2. Their courses vary from one to two years, and some schools admit only students who hold B. A. degrees. The schools are connected with libraries, universities, or State commissions. There are several brief summer library courses extended by library commissions or library schools with the purpose of giving systematic instruction to untrained library workers. Many libraries also give professional or training classes as preliminary equipment for work within their own grades of service. The Brooklyn, Chicago, and St. Louis public libraries give such courses. The professional training section of the American Library Association purposes to standardize and develop the efficiency of the library schools.

LIBRARY APPOINTMENTS. Several important library appointments were made during the year. Mr. George B. Utley, previously librarian of the public library of Jacksonville, Fla., succeeded Mr. Chalmers Hadley as secretary of the American Library Association. Miss Frances J. Olcott resigned from the directorship of the Carnegie Library Training School of Pittsburgh after remarkable pioneer work in this field. Miss Katharine Wootten succeeded Miss Julia Rankin as the librarian of the Carnegie Library of Atlanta. Everett R. Parry succeeded Purd B. Wright as librarian of the Los Angeles Public Library. The profession lost by death F. M. Crunden, one of its oldest leading members, who, previous to his retirement because of illness, was for many years librarian of the St. Louis Public Library. W. I. Fletcher, another pioneer in the American library movement, resigned from the Amherst College library after twenty years of service.

SPECIAL EVENTS. The irreparable loss by fire of the New York State Library on March 29 marks a crucial event in library history. Of the collection, which numbered over 1,000,000 books, pamphlets, and priceless manuscripts, perhaps 10,000 books and one-tenth of the manuscripts, and a few pamphlets, were saved. This calamity, due to gross negligence in the State capitol, exerted an immense influence throughout the country in the development of precautionary measures against fires in library buildings. Library cooperation in exhibits, such as the New York City and Chicago child welfare exhibits, and budget exhibits in New York and other cities, indicate the vitality of library work and its close relation to civic activities.

Work with schools, playgrounds, and institutions for defective and criminal classes continues with an increase of organization and efficiency. The work with high school libraries, including the training of students in the use of the library, has been developed into a field for expert library workers. There is an increase of coöperation between libraries in the interchange of books, co-operative publication of bulletins, and standardization of library methods.

LIBRARY LITERATURE. Perhaps the most important library publication of the year was the new revised edition of the *Dewey Decimal Classification*, an exhaustive scheme for the classification of libraries, by Melvil Dewey, the first edition of which was published thirty-five years ago. The *A. L. A. Catalogue of Subject Headings*, another valuable library tool, which has been in preparation for several years, is also a noteworthy publication of the year. There have been additions to Mr. Dana's *Modern American Economy* series and to Miss Hasse's *Index of Economic Material in Documents of the States of the United States*.

LIBRARY TRAINING SCHOOLS. See LIBRARY PROGRESS.

LIGHT. See PHYSICS.

LIGHTHOUSES. A new European lighthouse was completed on the island of Ushant, off the coast of France, near Cape Finisterre, at a cost of about \$155,000 for the structure and complete equipment. This new lighthouse, La Jument, was first suggested in 1904, when a M. Pourtelon left \$80,000 towards its erection. It is located at the extreme southern point of Ushant, and is the first of a complete system of lights and beacons to aid in the navigation of the channel between the island and the mainland. It is a granite tower, rising to a height of 107 feet above sea level, with foundations sunk to a depth of 20 feet in the solid rock. The light is visible for 20 miles and shows a red flash light, obscured three times for 2.42, 2.42, and 8.42 seconds, the light itself showing for little less than a second. There is also a fog signal installed at the lighthouse.

There were in 1911 (June 30) the following aids to navigation maintained by the United States lighthouse service:

Lighted aids	
Hyper-radiant lights	1
First-order lights	57
Second-order lights	25
Third-order lights	72
Three-and-a-half-order lights	17
Fourth-order lights	333
Fifth-order lights	151
Sixth-order lights	90
Lens-lantern lights	551
Range lens lights	20
Reflector lights	97
Post-lantern lights	2,362
Electric lights without lens	10
Light-vessel stations	51
Gas-lighted buoys	232
Gas and Whistling buoys	25
Gas and aerial bell buoys	30
Float lights	87
Total	4,211
Lights on fixed aids	3,786
Lights on floating aids	425
Total lighted aids	4,211
Unlighted aids	
Fog signals, engine-power	249
Fog signals, clock-work	232

LIP AND LEG ULCERATION. See VETERINARY SCIENCE.

LIPPE. See GERMANY.

LIPPITT, HENRY F. United States senator (Republican) from Rhode Island. He was born in Providence in 1856 and graduated from Brown University in 1878. He at once entered the cotton manufacturing business, in which he served in various capacities from day operative to general manager. He became director in several financial institutions and an official in cotton manufacturing companies. He was elected June 18, 1911, to succeed Nelson W. Aldrich (See CONNECTICUT.) His term of service expires in 1917.

LIQUORS. The following table, compiled from

Countries	Malt gallons	Malt liquors		Wines		Distilled spirits	
		Gallons per cap.	Million gallons	Gallons per cap.	Million gallons	Gallons per cap.	Million gallons
United States.....(1910) ..	1,851.3	20.09	60.5	0.66	132.5	1.45	
United Kingdom.....(1909) ..	1,397.3	31.44	15.2	0.31	40.1	0.96

official sources by the Bureau of Statistics Department of Commerce and Labor, shows in millions of gallons the consumption of malt liquors, wines, and distilled spirits, respectively, in the principal countries of the world for which statistics of this character are published, and the per capita consumption in each instance, the figures being for the latest year for which statistics are published (see page 400).

Belgium is by far the largest consumer of malt liquor per capita of any country in the world, the United Kingdom being second, Germany third, Denmark fourth, and the United States fifth, while Italy is the smallest consumer.

Regarding the consumption of wines, France is by far the largest consumer, while Italy and Portugal are the next largest, Spain being fourth, and Switzerland fifth. Canada is the lowest consumer of wine, only 0.12 gallon per capita being consumed yearly.

Regarding distilled spirits, Denmark is the largest consumer, the consumption being 2.97 gallons per capita. Hungary is second, Netherlands third, France fourth, and Austria fifth. The country consuming the least amount of distilled spirits is Bulgaria. The United States is fifth as regards the amount of malt liquors used, eighth as regards distilled liquors, and nearly the lowest among the nations in the amount of wine consumed, being fifth on this basis; in other words, only four other countries consume less amounts of wine than the United States.

This table is somewhat at variance with the ordinary ideas regarding the matter, as Germany has always been considered the greatest consumer of malt liquors, and from this table it appears that it is third on the list. The figures are also somewhat unexpected as regards the consumption of distilled spirits, as Russia and England have always been considered large consumers of distilled spirits.

In addition to the figures given in this table, information shows that in New Zealand the total consumption of wine in 1910 was 715,908 gallons, or at the rate of 0.21 gallons per capita, a very slight increase in consumption over that noted for the previous year. Regarding malt liquor, the total amount consumed during 1910 was 9,500,000 gallons, or a per capita rate of 13.48 gallons, which shows New Zealand to be one of the large consumers of malt beverages.

More interesting is a comparison of the consumption in 1910 with that of 1904, as shown in the following tables giving the per capita consumption of the principal countries of Europe:

	Malt Liquors		Wines		Spirits	
	1904	1910	1904	1910	1904	1910
	Gals.	Gals.	Gals.	Gals.	Gals.	Gals.
United Kingdom	35.42	31.44	.39	.31	1.38	1.45
France	7.48	9.51	34.73	39.36	2.51	1.81
Germany	30.77	26.47	1.93	1.16	2.11	1.48
Italy	.20	.51	31.86	31.17	.34	.76
Russia	1.33	1.46	1.29	1.45
Belgium	56.59	55.2	1.28	1.21	1.42	1.42
Sweden	8.83	13.31	.18	2.13	1.57

This table shows that in the United Kingdom and Germany there has been an appreciable decrease in the consumption of malt liquors in the last few years, while in Sweden and France there has been an increase. Regarding the consumption of wines, there has been very little change during the period covered by the table,

although France shows an increase. In 1904 Belgium was the great consumer of malt liquors, very largely exceeding any other country.

In the case of distilled spirits, France, Sweden, and Germany show a decreased consumption in 1910, while the United Kingdom, Italy, and Russia show a slight increase.

Regarding the consumption of liquors in the United States, the Statistical Abstract of the United States, 1910, page 544, gives some exceedingly interesting figures showing that since 1840 there has been a great decrease in the consumption of distilled spirits, reaching its lowest figure in 1896 with a per capita consumption of 1.01 proof gallon. Since that time, however, there has been an increase, reaching 1.58 gallons in 1907, and 1.43 gallons in 1910. In consumption of wines there has been very little change, the figures showing a very gradual increase, from .29 gallon per capita in 1840 to .65 gallon in 1910. In malt liquors, however, there has been a remarkable increase, this country consuming in 1840 only 1.36 gallons per capita, and 19.79 gallons in 1910.

The following table, taken from the above-named publication, gives the consumption of distilled spirits, of wines, of malt liquors, and the total of all wines and liquors, per capita, in the United States for the last ten years (in gallons):

Year	Spirits	Wines	Mt. liq.	Total
1900	1.28	.39	16.09	17.76
1901	1.31	.36	15.98	17.65
1902	1.34	.61	17.18	19.14
1903	1.43	.47	17.67	19.57
1904	1.45	.52	17.91	19.87
1905	1.42	.41	18.02	19.85
1906	1.47	.53	19.64	21.55
1907	1.58	.65	20.56	22.79
1908	1.39	.58	20.26	22.22
1909	1.32	.67	19.07	21.06
1910	1.43	.65	19.97	21.86

WINES. The wine production of the world for 1911 was much more nearly normal than in 1910, which was a very bad year. The great wine-producing countries of the world—France, Italy, and Spain—show a marked increase due to the better season, France producing 1,277,238,000 gallons in 1911, as against 627,652,608 gallons in 1910, being nearer to its normal production. Italy produced 1,188,000,000 gallons in 1911, as against 700,000,000 in 1910; and Spain 540,000,000 in 1911, as against 400,000,000 in 1910. These three countries alone produced 1,277,583,392 gallons more wine in 1911 than in 1910, and when we consider that this increase in production is more than the total amount of wine produced in all the other countries in the world combined, it can be seen that it will greatly affect the markets of the world.

In comparison with this enormous production, the 24,000,000 gallons of dry wines and 18,850,166 gallons of sweet wines produced in California is hardly appreciable. In fact, the total production of wines in the United States in the year 1911, approximately 55,000,000 gallons, can have little weight as affecting prices in the world's markets.

AMERICAN FORTIFIED WINES. The production of this class of wines in this country being under the direct supervision of the Treasury Department, it is possible to give exact figures. The

table given below states the production for 1910 and 1911, and shows a slight increase. This increase is almost entirely in the production of wines of the port type, the production of 1911 being 10,042,819 gallons, as against 9,319,629 gallons in 1910. The table gives tax gallons of brandy used, and wine gallons fortified (1910 and 1911):

	Tax gals. brandy used		Wine gals. fortified	
	1910	1911	1910	1911
California	4,702,861	4,951,640	18,086,868	18,850,166
Hawaii ..	8,214	10,190	89,843	43,593
New York	139,240	138,892	572,049	548,208
N. Carolina	4,570	5,834	87,512	53,116
Virginia ..	31,924	262,444
Total				
for U. S.	4,888,445	5,101,517	19,012,397	19,498,767

FERMENTED LIQUORS. The year 1911 was a record year in the production of malt liquors; 63,216,851 barrels tax-paid as against 59,485,117 barrels in 1910. This means 1,896,505,530 gallons of beer, ale, etc., produced in the United States. The report of the commissioner of internal revenue shows a smaller number of breweries in operation, 1492 in 1911 as against 1658 in 1910; i.e., 162 fewer breweries produced a very much larger amount of malt liquors, indicating a tendency towards larger plants.

DISTILLED SPIRITS. The total production of distilled spirits in the United States shows a marked increase over the previous year, being 175,402,395 gallons in 1911, as against 150,237,526 in 1910, and 133,459,755 in 1909; in fact, it was the largest production in the history of the Bureau of Internal Revenue. The amount of distilled spirits tax-paid for consumption also shows a large increase, 132,058,636 gallons being withdrawn in 1911, as against 126,384,726 in 1910. These figures indicate a marked increase in the use of distilled spirits, which applies to the last four years. The table given below shows the production of the various kinds of distilled liquors for the past three years:

	Rum	High wines	Gin
1909	1,952,374	221,277	2,483,743
1910	1,730,561	206,534	2,985,435
1911	2,077,904	165,017	3,345,370
	Whisky	Alcohol	Com.
1909	70,152,174	42,563,103	16,078,082
1910	82,463,894	50,708,845	15,841,370
1911	100,647,155	44,205,329	21,780,391

The principal change is in the production of whisky, under which heading is now included spirits made from molasses as well as from grain. This condition has tended to increase the bottling in bond, which guarantees the purity of the product to the consumer, as shown by the following figures: 1908, 4,794,358 gallons; 1909, 6,365,839 gallons; 1910, 8,985,759 gallons; 1911, 10,631,091 gallons.

The latter amount represents about eight per cent. of the potable spirits tax-paid during the year. There is also a considerable amount bottled in bond for export, and this

is increasing year by year, as is evident from the fact that 24,339 gallons were exported in 1909, 30,461 in 1910, and 41,188 gallons in 1911.

The amount of illicit distilling is steadily on the increase, especially in prohibition States, 2488 such distilleries being seized and destroyed in 1911, as against 1911 in 1910. When it is considered that there are only 923 registered distilleries in the United States the extent of the fraud is seen. This illicit distilling is chiefly done in Alabama, Georgia, North Carolina, South Carolina, Tennessee, and Virginia.

CORDIALS. Regarding cordials the most interesting happening during the year was the issuing of a tentative ruling by the Board of Food and Drug Inspection prohibiting the importation of absinthe. This ruling was based on the fact, noted in other countries, that the drinking of this cordial flavored with wormwood had a very injurious effect. Several countries have prohibited the manufacture and sale of it, and France has found it necessary to make restrictions regarding its sale.

LIQUOR REGULATION. The most spectacular event relating to the liquor question in 1910 was the election held in Maine to determine whether or not the constitutional amendment providing for prohibition should be repealed. This is discussed fully in the article **MAINE**. An interesting campaign was carried on in Texas, which resulted in the defeat of prohibition by a majority of about 7000 (see **TEXAS**). In Alabama the legislature repealed the prohibitory law, enacting in its place a county local option law. Under this law fourteen counties voted during the year, of which 7 voted dry, 1 voted for a dispensary, and 5 for open saloons. In California a law was enacted providing for local option in towns, cities, and supervisory districts outside of municipalities. At the end of the year about 42 per cent. of the State was dry. In Florida agitation was carried on during the year for statewide prohibition following the defeat of the prohibitory amendment in November, 1910. The prohibition question in Georgia became a prominent factor in the gubernatorial primaries of 1911, and Governor Brown, who was the successful candidate, stood for the enforcement of the existing prohibitory law. In Indiana the legislature of 1911 repealed the county option law passed in 1908, enacting in its place city and township local option measures. Under this law 70 of the 92 counties of the State had abolished saloons at the end of the year. In Illinois several important measures were passed relating to liquor regulation. A campaign was carried on during the year for county local option. This was defeated in the legislative session. As a result of a Supreme Court decision handed down on December 18, 1911, 247 saloons in Iowa were compelled to go out of business. This law was an interpretation of the Moon law, which makes it impossible for more than one saloon to operate in any town in Iowa having a population of less than 1000. An attempt to incorporate a provision for prohibition in the constitution of New Mexico was defeated, as was also an effort to secure a clause in the constitution providing for local option, with the county as a unit. The legislature of West Virginia in 1911 by a majority vote in both houses submitted to the people an amendment to the State constitution providing for state-

wide prohibition. This amendment will be voted on in November, 1912. An attempt to pass a county local option measure in Wisconsin was defeated in the legislature. There were, however, a number of restrictive measures passed.

The Anti-Saloon League continued its aggressive campaign for the limitation of areas in the various States in which liquor was not to be sold or made.

The following table, taken from the *Anti-Saloon League Year Book*, shows the relative population living in "wet" and "dry" territory in the United States in 1911:

State or Territory	Total Population	Population in "Dry" Territory	Population in "Wet" Territory
Alabama	2,138,093	1,924,284	213,809
Arizona	204,354	45,000	159,354

FICTION. It is hardly possible to speak of any general trend of popular taste when all sorts of fiction are continually in demand. The books that are stacked up together upon the "best sellers" counter of the department stores are simply the most attractively written specimens of their respective species. Still, it may be noted that there is a pronounced tendency to prefer romances of quiet, homely, and optimistic sentiment to fiction of an extravagant and exotic character or to the gloomy and perplexing problem novel. Books of a decidedly sensual or salacious tone are not so much in evidence as they were a few years ago, although they rarely then attained any great popularity. In England, however, there has been much discussion of the pernicious influence of recent fiction in undermining the institutions of society, and many demands are heard for greater stringency on the part of the circulating libraries. Several of the most popular novels of 1910 reappear in the American list of best-selling fiction for 1911: *Molly Make-Believe*, by Eleanor Hallowell Abbott; *Max*, by Katherine Cecil Thurston; *The Rosary*, by Florence Barclay; *The Mistress of Shenstone*, by the same author; *The Siege of the Seven Suits*, by Meredith Nicholson; *Flamstead Quarries*, by Mary E. Waller. Of the twenty-eight authors represented in the list of best-selling fiction, twelve are women. The most popular novel of the year in America was *Molly Make-Believe*, a fresh and charming story of love's fairyland with a winsome heroine. *The*

LITERARY CRITICISM. See LITERATURE, ENGLISH AND AMERICAN.

LITERATURE, ENGLISH AND AMERICAN. In England there were 10,914 books published during 1911, a greater number than ever before and 110 more than the total of 1910. In America the number was 11,123, which is less than the year before. The accompanying table gives the statistics of American production in detail as reported by the *Publishers' Weekly*, with

Broad Highway, by Jeffery Farnol, is a romance of rural England a century ago, with the spirit of adventure and a hero of the open road to recommend it to popular favor. *The Prodigal Judge*, by Vaughn Kester, is an adventure story of the South full of whimsical humor and well-drawn characters. Next in the order of popularity are: *The Rosary*, by Florence Barclay, the best-selling book of last year; *Queed*, by Henry Sydnor Harrison, a novel of newspaper life in Richmond, Virginia; *The Long Roll*, by Mary Johnston, a story of the Civil War with Stonewall Jackson as its central figure; *The Rules of the Game*, by Stewart Edward White, a presentation of the conservation problem and pictures of life in the forest; *Miss Gibbie Gault*, by Kate L. Boshier, a sequel to *Mary Cary*; *The Winning of Barbara Worth*, by Harold Bell Wright, a story of conservation work in a Colorado desert; *The Ne'er-Do-Well*, by Rex Beach, romantic adventures in Panama; *The Phantom of the Opera*, by Gaston Leroux, a wildly sensational mystery of the opera house in Paris; *The Root of Evil*, by Thomas Dixon, an anti-Mammon tract; *The Grain of Dust*, by the late David Graham Phillips, a bitter story of a young lawyer's life in New York; *The Golden Silence*, by C. M. and A. M. Williamson, the "silence" is that of a desert harem; *The Miller of Old Church*, by Ellen Glasgow, a Virginia pastoral; *The Common Law*, by Robert W. Chambers, the story of an artist's model; *The Harvester*, by Gene Stratton Porter, a story of the forest; *The Iron Woman*, by Margaret Deland, a sequel to *The Awakening of Helena Richie*, one of the strongest novels of the year, with a powerful woman as its central figure; *The Purchase Price*, by Emerson Hough, a story of slavery and the negro question; *The Golden Web*, by Anthony Partridge, concerns itself with a gold mine and a lost deed; *Marie Claire* translated from the French of Marguerite Audoux and skillfully advertised; *The Glory of Clementina*, by William John Locke, treating of the transformation of a plain, spinster artist into a conventionally brilliant woman, and the vain attempt of a kindly man to be cruel. This was equally popular in England, where it appeared under the name of *Clementina Wing*. Arnold Bennett also commands a large audience in America which he visited for the first time this year. His *Hilda Lessways* is the complement of *Clayhanger*, presenting the feminine view of the incidents recorded in the former novel and explaining the actions of its illusive heroine. His *Denry the Audacious*, a lighter story of the Five Towns, also appeared this year, and his earlier essays and romances are being reprinted. *The Case of Richard Meynell*, by Mary Augusta (Arnold) Ward (Mrs. Humphry Ward), is, in a sense, a sequel to *Robert Elsmere*, as it presents the modernist movement in the Church of England, with a more aggressive hero than Elsmere as its protagonist, and Catherine reappears in the new book, twenty years older and wiser, although no modernist. *Ethan Frome*, by Edith Wharton, is a vital story of New England village life, most carefully wrought out, a triumph of artistry. In *A Likely Story* William De Morgan attempts to satisfy those who liked his former manner and disliked his historical romance of last year, *An Affair of Dishonor*, by combining the two styles, putting an old Italian romance in an "early Victorian" frame. *Peter and Wendy*, by J. M. Barrie, is

another telling of the story of *The Little White Bird* and *Peter Pan*. In *Mrs. Thompson* W. B. Maxwell has drawn with great skill the mature and efficient business woman, a type rare in fiction, yet appearing also this year in *The Iron Woman*. Maurice Hewlett returns to the style of his earlier romances in *The Song of Renny* and *Brasenhead the Great*. Two novels are devoted specifically to the divorce question; Anthony Hope in *Mrs. Mazon Protests* views separation leniently, Harold Begbie in *The Cage* is emphatically opposed. *The New Macchiavelli* by H. G. Wells is an extensive work consisting of a series of graphically detailed scenes from the life of a politician whose career was ruined by an illicit love affair. *Jennie Gerhardt*, by Theodore Dreiser, is the story of a poor girl forced into vice by sordid circumstance, reminding one of George Moore's *Esther Waters* by reason of style, theme, and effectiveness. *The Fruitful Vine* by Robert Hichens is the tragedy of a childless couple, set in Italian scenes. *At Good Old Siwash*, by George Fitch, is a series of sketches of student doings in a middle West college, satirical but kindly, extravagant burlesque, and yet somehow true to life. *Sizes and Sevens* is a collection of short stories by the late "O. Henry" (Sidney W. Porter). In *Potash and Perlmutter* Montague Glass presents Hebrew-American types in an inimitable manner. *Pay Envelopes*, by James Oppenheim, deals with people caught in the cog-wheels of industrialism. In *Members of the Family* Owen Wister returns to the sage brush country. Other volumes of short stories appearing during the year are: Gilbert K. Chesterton's *The Innocence of Father Brown*, in which a priest plays the part of detective in various fantastic mysteries; Richard Harding Davis's *The Men Who Could not Lose*; W. W. Jacobs's *Ships' Company*, sea-captains' yarns, delightful as ever; Mrs. Edith Wharton's *Tales of Men and Ghosts*; Prof. L. P. Jacks's *Among the Idol Makers*, a group of eccentric characters under the influence of Nietzsche and other kindred spirits; St. John Lucas's *Saints, Sinners, and Unusual People*; *The Empty House*, by the late Elizabeth Stuart Phelps (Ward), the last of over thirty volumes; Sir Arthur Conan Doyle's *The Last Galaxy*, impressions and tales.

Fiction by women is generally indistinguishable from that written by men, but in three volumes of the year the feminine point of view is distinctly and delicately expressed. *The Very Little Person*, by Mary Heaton Vorse; *Mother*, by Kathleen Norris; *More Letters to My Son*, by "A Soldier's Wife." Other noteworthy novels of the year are: *The Outcry*, by Henry James; *The Secret Garden* by Frances Hodgson Burnett, a fresh air story of child life; *The Life Everlasting* by Marie Corelli; *The Following of the Star*, by Florence Louisa Barclay, a Christmas love story, a mixture of religion and sentiment; *Lalage's Lovers* by George A. Birmingham; *Adrian Savage*, by Lucas Malet (Mrs. Mary St. Leger Harrison); *Tante*, by Anne Douglas Sedgwick, a striking study of an egotistic artist; *Red Eve*, by Sir Henry Rider Haggard, a romance of Crécy and the Black Death; *Thanks to Sanderson*, by W. Pett Ridge; *Mayfield*, by Vincent Brown; *A Safety Match*, by Ian Hay; *Juggernaut*, by E. F. Benson; *Kennedy Square*, by F. Hopkinson Smith, with Poe as one of the characters; *John Sherwood*, *Ironmaster*, by Dr.

H. G. WELLS

ARNOLD BENNETT

FOUR AUTHORS PROMINENT IN 1911

S. Weir Mitchell; *Margery*, by E. F. Benson, a finished study in egoism; *The Patrician*, by John Galsworthy; *The Doctor's Christmas Eve*, by James Lane Allen, a sequel to *The Bride of the Mistletoe*; *The Visioning*, by Susan Glaspell; *Under Western Eyes*, by Joseph Conrad, an Englishman among Russian revolutionists; *The Healer*, by Robert Herrick, a great physician's compromise with commercialism; *The Conflict*, by the late David Graham Phillips; *The Beacon and Demeter's Daughter*, by Eden Phillpotts; *Burning Daylight*, by Jack London, a story of the Klondike; *Eve's Second Husband*, by Corra Harris, the career of a Southern politician; *Fenella*, by H. L. Stuart, a charming portrait of a dancer; *The Early History of Jacob Stahl*, by J. D. Beresford, a minute study of a sensitive youth; *The Quest of the Silver Fleece*, by W. E. Burghardt Du Bois; author of *The Soul of Black Folks*; *The Ship of Coral*, by H. de Vere Stacpoole, island adventures; *Flaws*, by Miss Barlow, a novel of Ireland and the Irish; *The Centaur*, by Algernon Blackwood, a mystical tale of the Caucasus; *The Lady of the Spur*, by David Potter, a stirring romance of the West Jersey pine barrens; *Keeping Up with Lizzie*, by Irving Bacheller, an American Book of Snobs; *One Way Out*, by William Carleton, a middle-class New Englander "emigrates to America" to solve his financial difficulties by living as newly arrived citizens do. *Jean-Christophe* and *Jean-Christophe in Paris* by Romain Rolland, contain the detailed history of the life of a musician in Germany and in France, giving in the latest volume published a remarkable analysis of French art and society. The two volumes are translated by Gilbert Cannan.

POETRY. Considering the small demand there is for poetry it is astonishing how much of it is produced every year. Often a volume of excellent verse will scarcely sell at all outside the author's personal circle. Perhaps it is because of the fact that the writing of poetry is only a labor of love that the average quality of it is so high. The most common defect, which probably accounts largely for its lack of popularity, is aloofness from life, a failure to contribute new thought or inspiration on questions in which people of to-day are vitally interested. This fault, at least, cannot be charged against G. K. Chesterton, for in retelling the story of Alfred in his *Ballad of the White Horse* he finds opportunity to denounce imperialism and decadent literature. The volume most generally recognized by the critics as distinctive for its true poetic merit is *Provença*, by Ezra Pound, a product of the author's residence in the south of France. But in this field we can merely mention titles without attempting characterization: *The Lure of Life*, by Oliver Opp-Dyke; *A Midsummer Memory*, an elegy on the death of Arthur Upton, by Richard Burton; *The Princess*, a poetic drama in two scenes by James Oppenheim; *At Sunset*, last poems by the late Julia Ward Howe; *Poems*, by Sophie Jewett; *Les Enfants*, French Canadian dialect poems, by Gertrude Litchfield; *The Overture and Other Poems*, by Jefferson Bolton Fletcher; *The Anteroom and Other Poems*, by William Hervey Woods; *The Wanderers and Other Poems*, by Henry Bryan Binns; *Helen of Troy and Other Poems*, by Sara Teasdale; *America the Beautiful and Other Poems*, by Katherine Lee Bates; *The House of Orchids and Other Poems*, by George Sterling; *Song-Surf*, by Cale Young

Rice; *A Roman Wit*, epigrams of Martial, by Paul Nixon; *The Woman and the Fiddler*, a play, by Arne Norrevang, translated by Mrs. Herman Sanaby; *Three Lays of Marie de France*, by Frederick Bliss Luquiens; *Lyrics and Sonnets*, by Louis How; *By the Sea and Other Poems* by Anne Cleveland Cheney; *Soldiers of the Light*, by Helen Gray Cone; *Ægean Echoes*, by Helen Cole Crew; *At the Silver Gate*, by John Vance Cheney; *Songs of Courage and Other Poems*, by Bertha F. Gordon; *Æonian Echoes*, by Martha J. Kidder; *Mothers' Love Songs*, by Elizabeth Toldridge; *Summer of Love*, by Joyce Kilmer; *Poems and Dramas*, by George Cabot Lodge; *Poems*, by Madison Cawein; *The Fighting Race and Other Poems*, including the well-known "Kelly and Burke and Shea," by Joseph I. C. Clarke; *The Rose of the Wind*, by Anna Hempstead Branch; *Poems of the Past and Present*, by Marguerite Radclyffe-Hall; *A Fool's Paradise*, by Dum-Dum (Captain Kendall); *Hard Labor and Other Poems*, by John Carter, a Minnesota convict; *Fifty Poems*, by John Freeman; *New Poems*, by Katherine Tynan; *The Crucibles of Time and Other Poems*, by Darrell Figgis; *Mirage*, by Douglas Ainslie; *Confessional*, by Wilfred Thorley; *Poems*, by Emery Pottle; *Sonnets*, by Lucilla; *A Woman's Love*, by Helen F. Bantock; *Mary and the Bramble and The Sale of St. Thomas*, by Lascelles Abercrombie; *Poems*, by C. F.; *The Garden of Gray's Inn and Other Verses*, by Christian Tearle; *The Porch of Paradise*, by Anna Bunston; *A Soggarth's Last Verses*, by Father Mathew Russell; *A Wayfarer's Treasures*, by an anonymous author; *Pagan Sonnets*, by John Myres O'Hara. Of poetical anthologies and collected works may be mentioned: *The Ellesmere Chaucer*, reproduced in facsimile; *English Songs of Italian Freedom*, chosen and arranged with an introduction by George Macaulay Trevelyan; *A Book of Light Verse*, edited by R. M. Leonard; *An Anthology of Humorous Verse* from Robert Herrick to Owen Seaman, by Helen and Lewis Melville; *The Collected Works of William Morris*, with introductions by his daughter, May Morris; *The Poems of Henry van Dyke*, now first collected and revised with many hitherto unpublished; *The Book of Scottish Poetry*, chosen and edited by Sir George Douglas; *Scottish Poetry*, Drummond to Ferguson, by the same editor; *The Plays and Poems of George Chapman*, the tragedies edited, with introduction and notes, by Thomas Marc Parrott; *Poems in Wiltshire* by Alfred Williams.

DRAMA. The printed drama nowadays shows many conflicting ideals and curious cross-currents. It ranges from boldest realism to airy allegory, from classical or pre-classical forms to ultra-modernism and even futurism. The revival of pageantry, ecclesiastical, scholastic, literary, and historical, in England and America has stimulated popular interest in new forms of outdoor acting, most original of which are perhaps the annual "high-jinks" of the Bohemian Club of San Francisco, producing privately in the forest such musical plays as *The Green Knight*, by Porter Garret and Edward G. Stricklen. John Galsworthy, author of powerful sociological dramas like *Justice* and *Strife*, comes forward now with a bit of delicate Alpine symbolism in prose and verse, *The Little Dream*. Maurice Hewlett in his "Trilogy of God and Man," *The Agonists*, again puts into poetry the old story of the house of Crete, from the rape of

Europa to the death of Phædra, with the promise of an epilogue concerning the passion of Christ. Other poetic dramas are: *The Florentines*, by Maurice V. Samuels; *Manin and the Defence of Venice*, by John Presland; *The Silver Age*, by Arthur E. J. Legge; *Experiments in Playwriting in Verse and Prose*, by John Lawrence Lambs; *The Days of the Magnificent*, by Arthur Marquarie; *Mona*, an opera in three acts, by Brian Hooker, with music by Horatio Parker, awarded the \$10,000 prize in the contest for an American opera; *Sherwood*, by Alfred Noyes. In prose drama we have: *The Playboy of the Western World*, by John M. Synge, which, when produced in New York by the Irish players of Lady Gregory, aroused a riot in the theatre from their fellow-countrymen; three plays by George Bernard Shaw, *The Doctor's Dilemma*, *Getting Married*, and *The Shewing Up of Blanco Posnet*, dealing respectively with the iniquities of medical practice, the absurdities of marriage laws and the psychology of conversion; *The Arrow-Maker*, by Mary Austin, an Indian play; *Disraeli*, by Louis N. Parker; *Three Plays by Brieux*, translated from the French, with a preface by Shaw. The success of *The Blue Bird* and the award of the Nobel prize for idealistic literature has aroused special interest in Maurice Maeterlinck, so we have biographies by Montrose J. Moses and Edward Thomas, and a study of symbols entitled *On Maeterlinck*, by Henry Rose. Mr. Moses has also a life of *Henrik Ibsen* and a volume on *The American Dramatist*. Edward Gordon Craig has enlarged and republished his revolutionary essays *On the Art of the Theater*. On the American stage we have *Memories of a Manager*, by Daniel Frohman; *English Dramatic Companies, 1558-1642*, by John Tucker Murray, is a valuable and accurate piece of research.

ESSAYS AND LITERARY CRITICISM. This is, as usual, a rich and well-worked field. People much prefer to read about poetry, and particularly about poets, than to read poetry, especially that written by their contemporaries. The schools, public libraries, and culture clubs afford a good market for well-written studies of authors, and classroom lectures and prefaces to collected editions provide abundant materials. The most popular book of the year in this department, *Appreciations and Criticisms of the Works of Charles Dickens*, by G. K. Chesterton, originated in such prefaces; and the same author's *Alarms and Discursions* is composed of his contributions to current periodicals. *The Cambridge History of English Literature*, edited by A. W. Ward and A. R. Waller, reaches its seventh volume dealing with the period of *Cavalier and Puritan*, and especially with Milton. On the Shakespearean period, we have: *The Women of Shakespeare*, by Frank Harris; *English Literature during the Lifetime of Shakespeare*, by Felix E. Schelling; *The Chief Elizabethan Dramatists*, by William A. Neitson; *Stories of Shakespeare's Comedies*, by H. A. Guerber. *The French Renaissance in England*, by Sidney Lee. A series of volumes edited by W. H. Hudson, for the use of schools, half biography and half selected poems, comprises for this year: *Matthew Arnold and His Poetry*, by Francis Bickley; *Coleridge and His Poetry*, by Kathleen E. Royds; *Lovell and His Poetry*, by W. H. Hudson; *Shelley and His Poetry*, by E. W. Edmunds. *Japanese Poetry*, by Basil Hall Chamberlain, is a thorough and authorita-

tive treatment of a subject which is beginning to arouse the same interest as Japanese architecture and decorative art. Prof. William Lyon Phelps of Yale contributes a volume of *Essays on Russian Novelists*. Thomas Whittemore edits the works of Lionel Johnson, under the title *Post Liminium: Essays and Critical Papers*. In literary criticism the discussion of the methods and meaning of poetry is most prominent: *A Study of Versification*, by Brander Mathews; *Lectures on Poetry*, by J. W. Mackail; *The Inspiration of Poetry*, by George Edward Woodberry; *English Poetry: an Induction*, by W. Winslow Hall; *Poetry and Prose* by Adolphus Alfred Jack; *The Origin of Tragedy*, by William Ridgeway; *The New Criticism*, by J. E. Spingarn; *The Comic Spirit in George Meredith*, by Joseph Warren Beach; *Two Centuries of the English Novel*, by Harold Williams; *Thomas Hardy*, by F. A. Hedgecock; *The Outdoor Life in Greek and Roman Poets*, by the Countess Evelyn Martinengo Cesaresco; *Platonica*, by Herbert Richards; *The Craftsmanship of Writing*, and *Some American Story Tellers*, by Frederic Taber Cooper; *The Writing of News*, by Charles G. Ross, addressed primarily to students of journalism. Among the essays of a more general character may be mentioned: *Adventures in Friendship*, by David Grayson, a volume that pleased a wide circle of readers; *The Believing Years*, by Edmund L. Pearson, charming glimpses of boyhood; *Essays in Fallacy*, by Andrew MacPhail; *Genius and Other Essays*, by the late Edmund Clarence Stedman; *Edgehill Essays*, by Adrian Hoffman Joline; *The Belmont Book*, by Vados, a human-nature study book; *The Coming Religion*, by Charles F. Dole; *The Talk of the Town*, by Mrs. John Lane; *First and Last*, by Hilaire Belloc; *French Men, Women, and Books*, by M. Betham-Edwards, nineteenth century studies; *The Choice*, by Robert Douglas, in part dialogues on conflicting duties; *Learning and Other Essays*, by John Jay Chapman, marked by much vigor and originality and containing acute criticism of American culture; *Philistine and Genius*, by Dr. Boris Sidis, a trenchant attack upon educational methods; *A Defence of Prejudice and Other Essays*, by John Grier Hibben, the new president of Princeton; *Lectures on Literature*, by various authors, given at Columbia University; *Alchemy of Thought*, by Lawrence Pearsall Jaks; *Old Lamps for New*, by Edward Verrall Lucas; *Spirit of Romance*, by Ezra Pound.

LITERARY BIOGRAPHY. The first place here must be given to the poet laureate, Alfred Austin, whose *Autobiography* from 1835 to 1910 appeared in two large volumes, of which his experiences as a journalist form the most interesting part. The centenaries of Dickens and Thackeray have brought out new and handsome editions of their works, as well as much biographical data, such as, a new copiously illustrated edition of John Forster's *Life of Charles Dickens*; *Charles Dickens in America*, compiled and edited by William Glyde Wilkins; biographical introductions to one of the new editions of Thackeray by his daughter, Lady Ritchie; *Some Aspects of Thackeray*, by Lewis Melville; *The Leaves of the Tree*, consisting of eleven biographical sketches, by A. C. Benson. Robert Louis Stevenson appears in a new form, *The Swanston Edition*, with an introduction by Andrew Lang, and the *Letters* in a definitive edition in four volumes edited by Sir Sidney Colvin.

We have also a *Life of Robert Louis Stevenson*, by Graham Balfour. The memoir of Tennyson by his son is supplemented by a volume: *Tennyson and His Friends*, containing twenty contributions by those who knew him. Here should also be mentioned *Alfred, Lord Tennyson*; *His Homes and Haunts*, by R. G. Ambler. *J. M. Synge and the Ireland of His Time*, is a study of the Celtic movement, by William Butler Yeats. An elaborate study of the life and works of *George Bernard Shaw* has been made by Prof. Archibald Henderson. Frederic Harrison's *Autobiographic Memoirs* are voluminous and form an interesting commentary on the Victorian age. *George Moore in Ave*, which is to be followed by *Salve and Vale*, speaks very frankly of his associates in the Irish literary movement. Three volumes of the year are devoted to Johnson: *Six Essays on Johnson*, by Walter Raleigh; *Samuel Johnson*, by Alice Meynell and G. K. Chesterton; *Dr. Johnson, Lexicographer, Scholar, Man of Letters*, by Alexander Cross. Other English men of letters who have received attention during the year are: *John Ruskin*, a study in personality by Arthur Christopher Benson; *Ruskin*, by Edward Tyas Cook; *Thomas Love Peacock*, a critical study by A. Martin Freeman; *The Life of Thomas Love Peacock*, by Carl Van Doren; *The Life of Robert Browning*, by W. Hall Griffin; *The Brownings*, by Lilian Whiting; *Early Literary Career of Robert Browning*, by Lounsbury; *The Life and Letters of Laurence Sterne*, by Lewis Melville; *Life and Memoirs of John Churton Collins*, by his son L. C. Collins; *Douglas Jerrold and Punch*, by Walter Jerrold; *Letters of Edward John Trelawny*, the friend of Shelley, edited by H. Buxton Forman; *The Life of Henry More*, by Richard Ward; *Correspondence of Jonathan Swift, D. D.*, by F. Elrington Ball; *George Eliot, scenes and people in her novels* by Charles S. Olcott; *Hannah More*, a biographical study, by Annette M. B. Meakin; *Later Letters of Edward Lear*, and *Queery Leary Nonsense*, a Lear nonsense book, both edited by Lady Strachey; *Wordsworth and the English Lake Country*, by Eric Robertson; *The Life of John Oliver Hobbes* (Pearl Mary Teresa Craigie), by her father, John Morgan Richards; *Masters of English Journalism*, a study of personal forces, by T. H. G. Escott; *The Life of Sir William Russell*, by John Black Atkins, a life of the first special correspondent; *The Life of Sir George Newnes*, a most successful journalist, by Hulda Friederichs. Of American literary biography we have: *The Life of Bret Harte*, by Henry Childs Merwin; which contains some account of the California pioneers; *The Life of George Cabot Lodge*, by Henry Adams; *Louise Chandler Moulton*, by Lilian Whiting, the tribute of an ardent friendship; *Letters of Sarah Orne Jewett*, edited by Annie Fields, letters of unusual charm and interest; *Harriet Beecher Stowe*, the story of her life by her son, Charles Edward Stowe, and her grandson, Lyman Beecher Stowe; *The Journals of Ralph Waldo Emerson*, with annotations, edited by Edward Waldo Emerson and Waldo Emerson Forbes, journals dating from Emerson's college days, 1820 to 1832; *Richard Henry Dana, Jr.*, speeches in stirring times and letters to a son, edited by Richard H. Dana (3rd); *Moses Coit Tyler, 1835-1900*, letters and diaries of a frank and unconventional nature, compiled by his daughter, Jessica Tyler Austen; *Forty Years of*

Friendship, correspondence of Ellis Yarnall, a merchant of Philadelphia, from 1856 to 1895, with John Duke, Lord Coleridge, edited by Charlton Yarnall; *Edgar Allan Poe*, a critical study, by Arthur Ransome; *Anglo-American Memories*, by George W. Smalley, American correspondent of the *London Times*; *Reminiscences*, by Goldwin Smith, containing a valuable account of the founding of Cornell University. A few of the most important foreign biographies are: *The Life of Friedrich Nietzsche*, translated from the French of Daniel Halévy; *The Mother of Goethe*, by Margaret Reeka; *Heinrich Heine's Memoirs*, from his works, letters, and conversations, edited by Gustav Karpeles, in one of the letters of which Heine says, "I will tell thee the fairy-tale of my life"; *The Loves of the Poets*, by Richard Le Gallienne, the poets' search for the wonder-woman; *From Memory's Shrine*, the reminiscences of Carmen Sylva (H. M. Queen Elizabeth of Rumania), translated by Edith Hopkirk; *Tolstoy*, by Romain Rolland, author of *Jean-Christophe*; *Two Russian Reformers*, Ivan Turgenev and Leo Tolstoy, by J. A. T. Floyd; *Memoirs of Bertha von Suttner*, translated by Nathan Haskell Dole; *Adam Mickiewicz*, the national poet of Poland, by Monica M. Gardner, a worthy book; *Balzac*, by Frederick Lawton.

GENERAL BIOGRAPHY. Biographies pour forth from the English press year after year in such abundance, that one would think that a large part of the living inhabitants of the British Isles must be engaged in compiling memoirs of the dead. There is space here to give only the titles of some representatives of the various types, and in most cases this is enough, because it is rare to find one that is written with sufficient literary skill to be sought for any other reason than desire for information. One of the most valuable works of the year for historical as well as biographical purposes is that of J. Holland Rose in two volumes, *William Pitt and the National Revival* and *William Pitt and the Great War*, the dividing line between the two volumes being 1791. *The Speakers of the House of Commons*, by Arthur Irwin Dament; *British Statesmen of the Great War 1793-1814*, by J. W. Fortescue; *In and Out of Parliament*, reminiscences of a varied life, by the Right Hon. Robert Farquarson; *Memoirs and Letters of the Right Hon. Sir Robert Morier* from 1826 to 1876, by his daughter, Mrs. Rosslyn Wemyss; *The Right Hon. Hugh Oakley Arnold-Forster*, a memoir by his wife; *The Life of Edward, Earl of Clarendon*, by Sir Henry Craik; *The Life of Spencer Compton, Eighth Duke of Devonshire*, by Bernard Holland; *Henry Fox, First Lord Holland*, by Thaddeus W. Riker; *The Life of Sir Humphrey Gilbert*, by William Gilbert Gosling; *The Real Captain Kidd*, a vindication of his character and career, by Sir Cornelius Neale Dalton; *The Family of Sir Francis Drake*, by Lady Elliott-Drake; *The Gay King, Charles II.*: his court and times, by Dorothy Senior; *King Edward as a Sportsman*, edited by Alfred E. T. Watson; *The Record of an Adventurous Life*, by H. M. Hyndman, giving an inside view of the socialistic movement in England; *Sir Randal Cremer, His Life and Work*, the labor leader and peace advocate, by Howard Evans; *John Redmond: The Man and the Demand*, by L. G. Redmond Howard; *Irish Recollections* by Justin McCarthy; *In Castle and Court House*: being reminiscences of thirty years in Ireland, by Ramsay Colles;

Incidents of My Life, professional, literary, social, with service in the cause of Ireland, by Thomas Addis Emmet; *The Life of Sir Joseph Banks*, president of the Royal Society, with some notices of his friends and contemporaries, by Edward Smith; *Some Pages of My Life*, by Bishop Boyd Carpenter; *Archbishop Maclagan*, Primate of England, by F. D. How; *I Remember*, by Canon Horsley, chaplain of a London prison; *The Russells of Birmingham*, radicals and non-conformists of the eighteenth century, by S. H. Jeyes; *A Duke and His Friends*, the life and letters of the second Duke of Richmond, by his son, the Earl of March; *When Life was New*, by Horace Hutchinson; *Intimate Society Letters of the Eighteenth Century*, edited by the Duke of Argyll; *My Naval Career and Travels*, fifty-eight years of active service, by Sir Edward Seymour; *Recollections of a Long Life*, by Lord Broughton, two more volumes compiled from the Hobhouse archives, edited by his daughter, Lady Dorchester; *The Life of George Joachim Goschen*, 1831-1907, by the Hon. Arthur D. Elliot; *Notes from the Life of an Ordinary Mortal*, by A. G. Liddell; *Memoirs and Memories*, by Mrs. C. W. Earle, the history of her family extending over one hundred years; *Lady John Russell*, a memoir edited by Desmond MacCarthy and Agnes Russell; *A Diplomatist's Life in Many Lands*, by Mrs. Hugh Fraser; *Lives of the Hanoverian Queens of England*, Vol. II: Charlotte Sophia of Mecklenburg-Strelitz, Amelia Elizabeth Caroline of Brunswick, and Adelaide of Saxe-Meiningen, by Alice Drayton Greenwood; *Mary Tudor*, Queen of France, by Mary Croom Brown; *My Life Story*, by Emily Shareefa of Wazan, an Englishwoman who married a Moorish saint; *The Keeper of the Robes*, by Frank Frankfort Moore, an agreeable and faithful picture of eighteenth-century life and manners; *Mary Wollstonecraft*, a study in economics and romance, by G. R. Stirling Taylor; *The Spanish Journal of Elizabeth, Lady Holland*, edited by the Earl of Ilchester; *The Amazing Duchess*, being the romantic history of Elizabeth Chudleigh, maid of honor, the Hon. Mrs. Hervey, Duchess of Kingston and Countess of Bristol, by Charles E. Pearce; *An Irish Beauty of the Regency*, compiled from *Mes Souvenirs*, the unpublished journals of the Hon. Mrs. Calvert, 1789-1882, by Mrs. Warrenne Blake; *D'Orsay, or the Complete Dandy*, by W. Teignmouth Shore; *The English Court in Exile*, by Edwin and Marian Sharpe Grew, treats of James II. at Saint-Germain. The delightful autobiography of *Sir William Butler* is the history of a half century of active service closing with the Boer War.

In American biography, as usual, the period of the Civil War predominates. Among the most important books on this period are *William H. Seward*, by Edward Everett Hale, Jr.; *Recollections of Abraham Lincoln*, 1847-1865, by Ward H. Lamon, edited by Dorothy Lamon Treillard; *William Lloyd Garrison*, by Lindsay Swift; *Recollections of Alexander H. Stephens*, by Myrta Lockett Avery; *Stephen A. Douglas*, by Henry Parker Willis; *The Diary of Gideon Welles*, from 1862 to 1869; *Daniel Webster*, a vindication by William Cleaver Wilkinson; *Serving the Republic*, memories of civil and military life, by Gen. Nelson A. Miles, and *Memories of Two Wars*, Cuban and Philippine experiences, by Gen. Frederick Funston, giv-

ing much interesting material on more recent military history. In political annals a remarkable *Autobiography of Thomas Collier Platt* has been compiled and edited by Louis J. Lang; *Fifty Years of Public Service*, personal recollections of Shelby M. Cullom, senior United States senator from Illinois; *As I Remember*, by Marian Gouverneur, recollections of society in Washington political circles during most of the nineteenth century; *Recollections Grave and Gay*, by Mrs. Burton Harrison, gives the impressions of another woman at the Confederate capital of Richmond during the Civil War; *Memories of the White House*, the home life of our Presidents from Lincoln to Roosevelt, by Col. W. H. Crook; *Pioneer Priests of North America*, 1642-1710, by the Rev. T. J. Campbell, S. J., which has reached its third volume; the story of another early missionary is that of *Timothy Flint* pioneer, missionary, author and editor, 1780-1840, by John Ervin Kirkpatrick; *An American Railroad Builder*, John Murray Forbes, by Henry Greenleaf Pearson; *Fifteen Thousand Miles by Stage*, by Mrs. Carrie Adell Strahorn, intimate recollections of travel and experience in the West by the first white woman to visit Yellowstone Park; *My Larger Education*, by Booker T. Washington, a sequel to his *Up from Slavery*; *Edison*, his life and inventions, by E. L. Dyer and T. C. Martin.

Prominent among the biography of other countries is *Martin Luther*, of whom we have two thorough and original studies by American scholars, Arthur Cushman McGiffert and Preserved Smith, the former work being the more extensive of the two; also a monograph on *The Political Theories of Martin Luther*, by Luther Hess Waring. Richard Wagner's *Mein Leben*, of which a few copies were printed during his lifetime but kept secret until the present year, appeared in English translation a few months after its publication in Germany and attracted a great deal of attention. Lives of three leaders of German socialism have appeared in English: Part I of *Bebel's Reminiscences*, 1840-1869; *Ferdinand Lassalle*, by Georg Brandes; *Karl Marx*, by John Spargo. Auguste Fournier's *Napoleon I. A Biography*, a well-balanced and comprehensive work, is translated by Annie Elizabeth Adams, with an introduction by H. A. L. Fisher; and we have also on the same inexhaustible subject: *The Life of Napoleon*, by Arthur Hassall; *Napoleon and His Coronation*, by Frédéric Masson; and *The Tragedy of St. Helena*, by Sir Walter Runciman. *Metternich*, by G. A. C. Sandeman; *Andreas Vesalius*, by O. F. Ball; *A Woman of the Revolution*, by Franl Hamel; *The Tale of Henry of Navarre*, by John Bloundelle-Burton; *Queen Jeanne of Navarre*, by P. F. William Ryan. G. M. Trevelyan completes his work on Garibaldi with his *Garibaldi and the Making of Italy*; William Roscoe Thayer's *The Life and Times of Cavour* is the most complete and competent biography of Cavour that has appeared in the English language. Guglielmo Ferrero's *The Women of the Cæsars*, on account of its brilliant style and frequent references to modern conditions attracted a large number of readers in England and America, and the same subject is treated by Joseph McCabe in *The Empresses of Rome*. William Archer in *The Life, Trial, and Death of Francisco Ferrer*, ardently cham-

ANTONIO FOGAZZARO

FOUR AUTHORS WHO DIED DURING 1911

pions the cause of the Spanish anarchist who was executed after the riots in Barcelona. *The Amazing Emperor Heliogabalus*, by J. Stuart Hay, is a vindication of the character of the notorious Roman emperor. *Blücher and the Uprising of Prussia against Napoleon*, 1806-1815, is the first life of Wellington's great colleague in English; *An Imperial Victim*, is Marie Louise, Archduchess of Austria, Empress of the French, and Duchess of Parma, by Mrs. Edith E. Cuthell; *The English Court in Exile*, by Edwin and Marian Sharpe Grew, treats of James II.; *Rachel*, her stage life and her real life, by Francis Gribble; *St. Francis of Assisi and His Legend*, by Prof. Nino Talmassia; *Recollections of a Parisian*, under six sovereigns, two revolutions, and a republic, 1789 to 1863, by Dr. Poumiès de la Siboutie; *William the Silent*, by Ruth Putnam. Biographies of artists: *John La Farge*, a memoir and a study, Royal Cortissoz; *Giotto*, by Basil de Selincourt; *Hogarth* by Edward Garnett; *Blake*, by G. K. Chesterton, *Life of Benvenuto Cellini*, by R. H. Hobart Cust; *Winslow Homer*, by William Howe Downes.

HISTORY. In the records of the year there are few historical works of conspicuous merit. The great coöperative histories that have been characteristic of the past few years have been brought to a close. The text of *The Cambridge Modern History*, which was planned by Lord Acton, and edited by A. W. Ward, G. W. Prothero and Stanley Leathes, was completed last year by Volume XII dealing with *The Latest Age*, and this year a supplementary volume appeared containing genealogical tables and lists, and a general index. Coincident with the completion of this monumental work, there is started another coöperative history on the same extensive scale, *The Cambridge Medieval History*, planned by J. B. Bury and edited by H. M. Gwatkin, and J. P. Whitney. The first volume covers the period of the Christian Roman Empire and the foundation of the Teutonic kingdoms, beginning with Constantine and extending almost to Justinian. In this connection may best be mentioned a work of unusual character: *The Medieval Mind*, by Henry Osborn Taylor, a history of the development of thought and emotion in the Middle Ages, comprising in two volumes the analysis of representative specimens of medieval literature from romance and poetry to law and theology, with generous quotations.

In English history, the most striking, if not the most scholarly, is *The History of England* for boys and girls, in which Rudyard Kipling coöperates with Charles Robert Leslie Fletcher. Mr. Fletcher's *Introductory History of England* in two volumes, showed him to be a pronounced imperialist, well fitted for coöperation with Mr. Kipling, and they have together produced a lively narrative interspersed with effective poems, all intended to train British youth in patriotism of a Tory type. Irish history is conspicuous this year, possibly by reason of the struggle for home rule. *The Battle of the Boyne*, together with an account based on French and other unpublished records of the war in Ireland (1688-1691) and of the formation of the Irish Brigade in the service of France, by Demetrius Charles Boulger; *Ireland under the Normans*, 1169-1216, by Goddard Henry Orpen; *The Legacy of Past Years*, a study of Irish history, by the Earl of Dunraven;

The End of the Irish Parliament, by Joseph R. Fisher; *Revolutionary Ireland and Its Settlement*, by the Rev. Robert H. Murray, the stand of the Irish in favor of James II. against William of Orange, and its results; *A Hundred Years of Conflict*, being a record of the services of the six generals of the Doyle family from 1756 to 1856, by Col. Arthur Doyle; *The Olive Branch in Ireland*, by William O'Brien, the history of the political relations between Ireland and the imperial government from Parnell to Asquith, discussed in a reasonable and genial spirit; *Irish Nationality*, a general history from the earliest times to the present, by Alice Sophia Amelia (Stopford) Green; *The War in Wexford*, by Harold Felix Baker Wheeler and Alexander Meyrick Broadley. On Scotland and Wales we have: *A History of Wales*, from the earliest times to the Edwardian conquest, in two volumes, by John Edward Lloyd, an authoritative work; *The Awakening of Scotland*, a history from 1747 to 1797, by William Law Mathieson; *The Making of Scotland*, by Sir Herbert Maxwell; *Controversial Issues in Scottish History*, by William Henry Gregg. In the voluminous *Victorian History of the Counties of England*, the fourth volume on Hampshire and the Isle of Wight, and the fourth volume on Lancashire have appeared. *Gordon at Khartoum*, by Wilfred Scawen Blunt, is like the author's *Secret History of the English Occupation of Egypt*, chiefly an arraignment of the British administration; *Scots in Canada*, by J. Murray Gibbon, is an enthusiastic glorification of the Scottish race in the New World; *England under the Hanoverians*, by C. Grant Robertson, the real beginning of parliamentary government in England under Walpole and its subsequent history. *The Customs of Old England*, by F. J. Snell; *The University of Cambridge*, by James Bass Mullinger, reaches its third volume, from the election of the Duke of Buckingham to the chancellorship in 1626 to the decline of the Platonist movement. *The King's Serjeants and Officers of State*, with their coronation services, by J. Horace Round, was called out by the recent coronation of George V. *Industrial England in the Middle of the Eighteenth Century*, by Sir Henry Trueman Wood, is the story of the coming of modern England, and the marvelous changes made in less than a century and a half. *The Republican Tradition in Europe*, by Herbert Albert Laurens Fisher, lectures delivered at the Lowell Institute, is an argument for constitutional monarchy. *A History of the Peninsular War*, by Charles Oman, reaches its fourth volume, December, 1810, to December, 1811, Masséna's Retreat, Puentes de Onoro, Albuera, Tarragona. In the Far East we have *A History of the Great Moghuls*, Vol. II., 1605 to 1739, by Kennedy; *Indian Unrest*, by Valentine Chirol; *The Story of Korea*, by Joseph H. Longford, an able history of the Hermit Kingdom; *Famous Sea Fights from Salamis to Tsu-Shima*, by John Richard Hale; *The History of Japan*, by James Murdoch, from the origins to the arrival of the Portuguese, in 1542; Gubbins' *The Progress of Japan*; *International Relations of the Chinese Empire*, a comprehensive history by Hosea Ballou Morse. In Italian history there are several noteworthy works: *Heroines of Genoa and the Riviera*, by Edgumbe Staley; *Venice in the Thirteenth and Fourteenth Centuries*, by F. C. Hodgson; *Sixtine Rome*, by J.

A. F. Orbaan; *Venice in the Eighteenth Century*, by Monnier; *Medieval Sicily*, by Cecilia Waern; *Little Cities of Italy*, by André Maurel; *Women in Italy*, "from the introduction of the chivalrous service of love toward the end of the thirteenth century" to the appearance of the professional actress toward the end of the sixteenth, by William Boulting; *History of Rome and of the Popes in the Middle Ages*, by Hartmann Grisar. In German history we have: *The House of Hohenzollern*, two centuries of Berlin court life, by E. A. Brayley Hodgetts; *The History of German Civilization*, by Ernst Richard, a general survey; *The History of Russia*, by V. O. Kluchevsky, translated by C. J. Hogarth. Easily first among the histories of France, is the vivid study by Cécile Hugon of *Social France in the XVII. Century*; *The French Ideal*: Pascal, Fénelon, and other essays, by Madame Duclaux, historical studies of the best and most elevating French thought; *France Under the Republic*, by Jean C. Bracq, contemporary French history; *Comedy and Tragedy of the Second Empire*, by Edward Legge; *The French Revolution*, by Lord Acton; *The French Revolution*, by Francis Victor Alphonse Aulard; Classical: *Essays on Roman History*, by Henry Pelham, fourteen papers of scholarly research, edited by F. Haverfield; *Classical Rome*, by Henry Stuart Jones, an excellent general manual; *Influence of Wealth in Imperial Rome*, by William Stearns Davis. *The Roman Empire*, by Frederick William Busell; *Romance of Imperial Rome*, by Elizabeth Champney; *A Roman Frontier Post and Its People*, by James Curle; *Outdoor Life in Greek and Roman Poets*, by Evelyn Martinengo Cesaresco; *The Silver Age of the Greek World*, by John Pentland Mahaffy; *Thucydides and the History of His Age*, by G. Grundy, surpasses his former illuminating work on *The Greco-Persian War*, and throws light upon the personalities of the time; *Hellenistic Athens*, an historical essay, by William Scott Ferguson, treats of the decline and fall of Athens; *The Greek Commonwealth*, politics and economics in fifth-century Athens, by Alfred E. Zimmern, the political phase of Periclean Athens; *Greece and the Greeks*, by Z. Duckett Ferrihan. Professor Mosso's *Dawn of Mediterranean Civilization* has been translated by Marian C. Fisher; *Ancient Italy*, by Ettore Pais, translated by C. Densmore Curtis, comprises historical and geographical investigations in central Italy, Magna Græcia, Sicily, and Sardinia. *Ancient Hunters and Their Modern Representatives*, by W. J. Sollas, a study of Palæolithic culture; *In the Time of the Pharaohs*, by Alexander Moret, a popular account of ancient Egyptian civilization; *The Revolutions of Civilization*, by William Mathew Flinders Petrie, a succession of waves in ancient civilizations; *In the Land of the Pharaohs*, by Duse Mohamed, a short history of Egypt by an Egyptian; *History of the Ancient World*, by G. W. Botsford. The new *History of Babylonia and Assyria*, from prehistoric times to the Persian conquest, begins with a volume on the period preceding the foundation of the Babylonian monarchy, by Leonard William King, entitled *History of Sumer and Akkad*.

In American history we have two very diverse views of the Revolutionary War and the character of Washington: *The First American Civil War*, first period 1775-1778, by Henry Belcher,

is savagely anti-American in its tone, and bitterly partisan; *The Revolutionary War and the Military Policy of the United States*, by Gen. Francis Vinton Greene, a competent authority on military matters, praises Washington as a leader, and vigorously refutes the criticism voiced by the contrasting book of Mr. Belcher; in *Studies, Military and Diplomatic, 1775-1865*, by Charles Francis Adams, is another disparaging estimate of Washington's ability. *The Beginnings of the American Revolution*, by Ellen Chase, is based upon contemporary letters, diaries, and other documents. The part of *France in the American Revolution* forms the subject of a book by James Breck Perkins. *The Dutch Republic and the American Revolution* is by Frederick Edler. In colonial days we find: *Indian Wars of New England*, by Herbert Milton Sylvester, in three volumes; *The Quakers in the American Colonies*, by Rufus M. Jones and others; *The Origin and Growth of the American Constitution*, by Hannis Taylor, an able work by a former minister to Spain; *New Jersey as a Royal Province, 1738 to 1776*, by Edgar Jacob Fisher; *Narratives of Early Carolina, 1650-1708*, edited by Alexander S. Salley, Jr.; *Louisiana under the Rule of Spain, France, and the United States, 1765-1807*, edited by James Alexander Robertson; *California under Spain and Mexico*, by Irving Berdine Richman; *Narratives of Early Maryland, 1633-1684*, edited by Clayton Coleman Hall; *Pennsylvania in American History*, by Samuel Whitaker Pennypacker; *The Records of the Federal Convention of 1787*, edited by Prof. Max Farrand of Yale University. The period of the Civil War is apparently inexhaustible in materials for monographs and more extended histories: *The Presidential Campaign of 1860*, by Emerson David Fite; *Kansas in the Sixties*, by Samuel J. Crawford; *On the Trail of Grant and Lee*, by Frederick Trevor Hill; *Statesmen of the Old South*, from radicalism to conservative revolt, by William E. Dodd, studies of Davis, Jefferson, and others from the Southern point of view; *Gettysburg*, by Robert K. Beecham, an officer in the famous "iron brigade"; *Campaign of Chancellorsville*, a strategic and tactical study, by John Bigelow, Jr. *The Relations of the United States and Spain*, by French Ensor Chadwick, treats of the Spanish-American War. *An American History*, by David Saville Muzzey, is a compact and well-balanced narrative. *Social Forces in American History*, by Algie Martin Simons, is a review of social progress. *A Short History of the United States Navy*, by George Ramsey Clark and others, is a careful piece of work. On South America we have: *The Incas of Peru*, by Sir Clements Markham; *Uruguay*, by W. H. Koebel, a comprehensive work.

TRAVEL AND CONTEMPORARY HISTORY. Fortunately for our understanding of the revolutionary changes now taking place in China, the literature in this field has been very abundant for several years. There is something to suit every need and taste, from statistical reports and doctors' dissertations to lively travel sketches. Dr. Chen Huan-chang has made at Columbia University a thorough study of *The Economic Principles of Confucius and His School*, in two volumes, which includes some interesting comparisons between Chinese and Western civilization. Three American travelers have produced volumes of more interest than

ordinarily attaches to observations based on brief residence: *The Changing Chinese*, by Edward Alsworth Ross, sociologist of the University of Wisconsin; *The Obvious Orient*, by Albert Bushnell Hart, historian of Harvard; and *The West in the East*, by Price Collier, a journalistic view of India, China, and Japan which has proved the most popular of the travel books of the year. An intimate view of one of the most remarkable women rulers of the world's history is given in *Two Years in the Forbidden City*, by Princess Der Ling (Mrs. Thaddeus C. White), First Lady-in-Waiting to the Empress Dowager. This forms an admirable complement to the interesting volume published last year by Bland and Backhouse, *China under the Empress Dowager. The Eighteen Capitals of China*, by William Edgar Geil, gives graphic portraits of the chief cities of the Middle Kingdom. *Eastern Asia*, by Ian C. Hannah, comprises in a single volume, the ancient and modern history of China, Japan, and India, as well as of the smaller islands and dominions. A comprehensive and attractively written volume is William Elliot Griffis' *China's Story in Myth, Legend, Art and Annals. The Face of Manchuria, Korea, and Russian Turkestan*, by E. G. Kemp is, as the title confesses, superficial, but is interesting as giving a woman's impressions of these rapidly changing regions. We have two records of personal experiences covering the period from the Tai-ping rebellion to the present revolution: *Gleanings from Fifty Years in China*, by the late Archibald Little; and *Half a Century in China*, by Archdeacon Moule. *The Surgeon's Log*, being impressions of the Far East, by J. Johnston Abraham. Three books on the religions of China are: *The Religion of the Chinese*, by J. J. M. DeGroot; *The Religions of Eastern Asia*, by Horace Grant Underwood; and *Studies in Chinese Religion*, by E. H. Parker. Other works on China are: *The Chinese at Home*, by J. Dyer Ball; *The Coming China*, by Joseph King Goodrich, professor in the Imperial Government College, Kyoto; *Across China on Foot*, by Edwin J. Dingle; *China and the Far East*, by George H. Blakeslee; *Lion and Dragon in Northern China*, by R. F. Johnston. Japan, a few years ago one of the most conspicuous of countries, has now been almost eclipsed in popular interest by China. We have this year: *The Full Recognition of Japan*, by Robert P. Porter; *Some Statistics of Japan*, by Charles V. Sale; *Behind the Screens in Japan*, by Evelyn Adam; *Highways and Homes in Japan*, by Kate, Lady Lawson; *Rare Days in Japan*, by George Trumbull Ladd; *Eastern Voyage*, by Fritz von Hochberg; *The Japanese Empire*, and its economic conditions, by Joseph Dautremere.

Books on India, as usual, treat chiefly of sport and politics; *India Under Curzon and After*, by Lovat Fraser, a comprehensive discussion of English interests in eastern and western Asia; *Among Indian Rajahs and Ryots*, by A. H. Fraser; *The Position of Women in Indian Life*, by the Maharani of Baroda and N. M. Mitra; *Sport on the Nilgiris and in Wynad*, by F. W. F. Fletcher; *The Awakening of India*, by Ramsay MacDonald; *Indian Unrest*, by Valentine Chirol; *Forest Life and Sport in India*, by Sainthill Eardley-Wilmot; *Twenty Years in the Himalaya*, by Charles Granville Bruce; *Modern India*, by Sir John David Rees; *The Call of the Snowy Hissar*, by Fanny Bul-

lock Workman and William Hunter Workman; *Stalks in the Himalaya*; jottings of a sportsman-naturalist, by E. P. Stebbing; *Adventure, Sport, and Travel on the Tibetan Steppes*, by W. N. Ferguson; *A Vagabond in the Caucasus*, by Stephen Graham. Java, Sumatra and the Other Islands of the Dutch East Indies, by A. Caboton; *Seventeen years among the Sea Dyaks of Borneo*, by Edwin Herbert Gomes. Australian life, Persia and the Near East attract much attention of late, but books on the subject are not so numerous this year as last; *Life in the Moslem East*, by Pierre Ponafidine, the Russian consul-general at Constantinople, translated by his wife; *Through Persia in Disguise*, with reminiscences of the Sepoy Rebellion, by Col. Charles E. Stewart; *The Emir of Bokhara and His Country*; Journeys and studies in Bokhara (with a chapter on My Voyage on the Amu Darya to Khiva), by O. Olafsen; *Consuls in the Caucasus*; *The Diary of a Sporting Holiday*, by Agnes Herbert; *The Persian Revolution of 1905-1909*, by Edward G. Browne; *Palestine and Its Transformation*, by Ellsworth Huntington, an unusually valuable study of an old field; *Studies in Galilee*, by Ernest W. Gurney Masterman; *Palestine*, by G. E. Franklin; *A Journalist in the Holy Land*, glimpses of Egypt and Palestine, by Arthur E. Copping; *The Holy Land*, by Robert Hichens. Of general Asiatic travel, besides the volumes of Collier and Hart mentioned above, we have: *An Eastern Voyage*, by Count Fritz von Hochberg; *An Eastern Miscellany*, by the Earl of Ronaldshay; *Around the Black Sea*, by William Eleroy Curtis. The Turkish empire, in Europe and Asia, receives much attention: *Turkey and Its People*, by Sir Edwin Pears, a resident in Constantinople for nearly forty years, especially interested in Bulgaria; *The Danger Zone of Europe*, by H. Charles Woods, discussing changes and problems in the Balkans and Asia Minor; *Regilding the Crescent*, by F. G. Afialo, a gossip and cursory account of the rise of Young Turkey; *Turkey of the Ottomans*, by Lucy M. Garnett, the latest of a series of popular volumes on life in various countries; *Through Savage Europe*, by Harry DeWindt, chiefly dealing with Servia; *From Constantinople to the Home of Omar Khayyám*, by A. V. Williams Jackson, the observations of a traveler competent to interpret what he sees, whether old or new; *The Land of Uz*, by Abdullah Mansar; *Walls of Constantinople*, by B. Granville Baker, *Twixt Sand and Sea*, by Cyril Fletcher Grant and L. Grant, description of the ruins and modern conditions in Tunis and Algeria, with abundant photographs; *England in the Soudan*, by Jacob Artin.

While travelers are eagerly seeking the remote corners of the world there seems to be at last a slackening in the immense flood of books which in recent years has poured forth from the press descriptive of the familiar tourist routes. Even Italy, which is ordinarily productive of more pages of print than any other country, is represented this year by comparatively few volumes, none of unusual interest: *Venice and Venetia*, by Edward Hutton; *Italian Castles and Country Seats*, by Mrs. Tryphosa Bates Batcheller; *My Italian Year*, by Richard Bagot; *Sicily in Shadow and Sun*, by Maud Howe; *American Housebuilding in Messina and Reggio*, treating of the restoration work after the great earthquake, by Lieut.-Com. Reginald

Rowan Belknap; *A Roman Pilgrimage*, by Ellis Roberts; *Through the Alps to the Apennines*, by P. G. Konody; *The New Italy*, by Federico Garlanda, translated by M. E. Wood; *The Valley of Aosta*, by Felice Ferrero, an Alpine valley little known; *The Ideal Italian Tour*, by Henry James Forman, an admirable volume of impressions; *Little Cities of Italy*, by André Maurel, information at first hand; *Florence Past and Present*, by the Rev. J. Wood Brown; *Famous Castles and Palaces of Italy*, by Edmund B. D'Auverge. Spain attracts more attention year by year: *Spain*, by Albert F. Calvert; *Unexplored Spain*, by Abel Chapman and Walter Buck; *The Spaniard at Home*, by Mary F. Nixon-Roulet; *Heroic Spain*, by E. Boyle O'Reilly; *Spain from Within*, by Raphael Shaw; *Four Months Afoot in Spain*, by Harry Alverson Franck; *The Truth about Spain*, by G. H. B. Ward, strongly Protestant in tone; *Valencia and Murcia*, by Albert Frederic Calvert, a glance at African Spain; *Things Seen in Spain*, by C. Gasquoine Hartley; *Spanish Journal*, by Lady Holland; *Unexplored Spain*, by A. Chapman and W. J. Buck; *The Cathedrals of Spain*, something more than an architectural guide-book, by John Allyn Gade; *The Magic of Spain*, by Aubrey F. G. Ball. Other books on foreign countries include: *Paradise in Portugal*, by Mark Sale; *Greece and the Greeks*, by Z. Duckett Ferriman; *Switzerland*, by Oscar Kuhns; *Dolomites*, a tour in the Alps, by Sam Hield Hamer; *Belgium of the Belgians*, by Demetrius Charles de Kavanagh Boulger; *The Spell of Holland*, by Burton E. Harrison, entertaining sketches; *Home Life in Holland*, by D. S. Meldrum, giving more of the real life of the country; *Rural Denmark and Its Lessons*, by Sir H. Rider Haggard, a study of the causes of the prosperity of Danish agriculture; *In the Kaiser's Capital*, by James F. Dickie; *Brittany and the Bretons*, by George Wharton Edwards; *In the Rhone Country*, by Rose Georgina Kingsley; *Real France*, by Laurence Jerrold; *French Men, Women and Books and Unfrequented France*, by Miss Betham-Edwards; *The Russian People*, by Maurice Baring; *Undiscovered Russia*, by Stephen Graham; *St. Petersburg*, by George Dobson; *Letters from Finland, 1808-1908*, by Rosalin Travers; *The Southern Slav Question*, by R. W. Seton-Watson.

The effort to induce the English people to "think imperially" is shown in the systematic production of works descriptive of the British empire, like the "All Red Series," of which the third volume, by L. Griffith, is devoted to the *Dominion of Canada*; and the *Historical Geography of the British Colonies*, of which the fifth volume contains *Canada and Newfoundland*, by J. D. Rogers; *Labrador—Its Discovery, Exploration and Development*, by W. C. Goslin; *On the Wallaby through Victoria*, by E. M. Clowes, feminine views of life in Melbourne; *Sunny Australia*, impressions of the country and its people, by Archibald Marshall. *We of the Never-never*, by Jeannie Gunn; *Down North on the Labrador*, by Dr. Wilfred T. Grenfell; *British Dominions*, commercial and industrial conditions, by various authors, edited by W. J. Ashley; *An Englishman in Ireland*, by R. Scott-Jones; *Home Life in Ireland*, by Robert Lynd; *The Ocean Empire*, its dangers and defense, from a British standpoint, by Gerard Fienness; *A Book of the Wye*, by Edward

Hutton; *Windsor: The Castle of Our Kings*, and some notes concerning Eton College, by Arthur Goddard; *The Kent Coast*, by Arthur D. Lewis; *The Place-Names of Berkshire*, by the Rev. Walter Skeat, and *The Place-Names of Berkshire*, an essay by F. M. Stenton; *A Study in Nationality*, by the Rev. J. Vyrnwy Morgan, a dispassionate view of Wales and the Welsh; *Wordsworthshire*, an introduction to the poet's country, by Eric Robertson; *Roulandson's Oxford*, by A. Hamilton Gibbs, airily happy sketches; *Romance of Oxford Colleges*, by Francis Henry Gribble; *By Fell and Dale at the English Lakes*, by H. D. Rawnsley, essays descriptive of walks in springtime; *Glamour of Oxford*, by William Angus Knight; *Relics and Memorials of London Town*, by James S. Ogilvey; *Highways and Byways in Cambridge and Ely*, by John William Edward Conybeare. *The Imperial Conference*, a history and a study by Richard Jebb, an ardent imperialist. In the field of Polar exploration, we must first mention Fridtjof Nansen's history of Arctic exploration from the remotest antiquity to the beginning of the sixteenth century, in two volumes of about 800 pages, entitled *In Northern Mists*, the story of the second French South Polar expedition 1908-1910, is told in *The Voyage of the Why Not?*, by Dr. Jean Charcot. A hunter's explorations for wild sheep in the sub-Arctic Mountains, is told in *The Wilderness of the Upper Yukon*, by Charles Sheldon; *My Climbing Adventures in Four Continents*, by Samuel Turner. North American travel is more scanty than usual: *Impressions of Mexico* with brush and pen, by Mary Barton, an attractive book; then come three volumes on Canada; *A Fisherman's Summer in Canada*, by Frederick George Afalo; *Canada and the Empire*, by W. R. Lawson; *Highways and Byways of the Great Lakes*, by Clifton Johnson; *River and I*, by John Gneisenau Neihardt, a delightful story of a trip on the Missouri River; *The Grand Canyon of Arizona* and *The Wonders of the Colorado Desert*, by George Wharton James; *Old Indian Trails*, by Mary T. S. Schaeffer.

On the countries south of us we have: *A Recent View of Uruguay* by W. H. Koebel; *Panama*, the canal, the country, and the people, by Albert Edwards, containing something of the earlier history of the Isthmus; *South America To-day*, by George Clémenceau, travel sketches by a veteran French journalist; *Brazil*, by Pierre Denis; *Ten Republics*, by Robert P. Porter; *Across South America*, by Hiram Bingham; *Search for the Apex of America*, by Annie Smith Peck; *Unknown People in an Unknown Land* (Paraguay; Argentine Plains, and Andine Glaciers), by Walter Larden; *Argentina in the Twentieth Century*, by Alberto B. Martinez and Maurice Lewandowski; *Argentine Republic*, by A. Stuart Pennington. A few of the more important books on Africa are: *Black and White in South-East Africa*, by Maurice S. Evans; *South Africa Today*, by Hamilton Fyfe; *A Holiday in South Africa*, by Sir H. Mortimer Durand; *The Baganda*, an account of their native customs and beliefs, by John Roscoe; *An Englishwoman's Twenty-five Years in Tropical Africa*, by George Hawker; *My Journey from Rhodesia to Egypt*, by Theodore Kassner; *Service and Sport in the Soudan*, by D. C. E. Comyn; *Five Years in the Soudan*, by Edward Fothergill; *The Big Game of Africa*, by Richard Tjader; *In the Heart of Africa*, by Adolphus

Frederick of Mecklenburg; *Land of the White Helmet*, by Edgar Allen Forbes; *Uganda for a Holiday*, by Sir Frederick Treves; *Egypt*, by Sir Gaston Camille Charles Maspero; *A Motor Flight through Algeria and Tunisia*, by Emma Burbank Ayer; *Lassoing Wild Animals in Africa*, by Guy H. Scull; *An Outpost in Papua*, by Arthur Kent Chignell, brightly written missionary experiences.

RELIGION. Among the more important works on primitive and non-Christian religions are: The third edition of J. G. Frazer's *The Golden Bough*, now expanded to six parts of one or two volumes each, of which four have now appeared, the latest dealing with *The Magic Art and Taboo*; *Marriage, Totemism, and Religion*, an answer to critics by Lord Avebury; *Osiris and the Egyptian Resurrection*, by E. A. Wallis Budge; *Oriental Religions in Roman Paganism*, by Franz Cumont, with an introductory essay by Grant Showerman; *Aspects of Religious Belief and Practice in Babylonia and Assyria*, by Morris Jastrow Jr.; *Handbook of Greek Religion*, by Arthur Fairbanks; *Religious Experience of the Roman People*, from the earliest times to the age of Augustus, by William Warde Fowler; *Two Religions of Israel*, with a re-examination of the prophetic narratives and utterances, by Thomas Kelly Cheyne; *Aspects of Islam*, by Duncan Black MacDonald; *Myths and Legends of the Celtic Race*, by Thomas William Hazen Rolleston; *Survivals in Belief among the Celts*, by George Henderson; *Folk-Lore of West and Mid Wales*, by Jonathan Ceredig Davies; *The Soul of the Indian*, by Charles Alexander Eastman, himself an Indian. The spiritual philosophy of Prof. Rudolf Eucken of Jena is attracting more attention in this country since he received the Nobel prize for idealistic literature in 1908. Of Eucken's works we now have in English; *Christianity and the New Idealism*; *Religion and Life*; and *The Truth of Religion*. The controversy over the historicity of Jesus, raging in Germany, makes its appearance in English in Arthur Drews's *The Christ Myth*, translated by C. Dellisle Burns; in opposition to which we have such works as: *The Historic Christ in the Faith of To-day*, by William Alexander Grist; *Jesus According to Saint Mark*, by J. M. Thompson; *The Kingdom and the Messiah*, by E. F. Scott; *Miracles in the New Testament*, a study of evidence, by J. M. Thompson. The application of Christianity to the problems of modern life continues to be the foremost subject of discussion; *The Social Basis of Religion*, by Simon N. Patten; *Socialism in Church History*, by Conrod Noel; *The Function of the Church in Modern Society*, by William Jewett Tucker; *The Contagion of Character*, by Newell Dwight Hillis; *The Social Task of Christianity*, by Samuel Zane Batten; *The Church and the Individual*, by Frank Hsley Paradise; *The Ethics of Jesus*, by Henry Churchill King; *Theology and the Human Problem*, by Eugene William Lyman; *The Country Church and the Rural Problem*, by Kenyon L. Butterfield; *The Call of the Carpenter*, by Bouck White. Of the many works of biblical criticism and the history of the Christian church, only a few may be mentioned: *Introduction to the Literature of the New Testament*, by James Moffatt; *The Old Testament in the Light of the Ancient East*, by Alfred Jeremias; *History of Old Testament Criticism*, by Archibald Duff; *History of*

New Testament Criticism, by F. C. Conybeare; *The Spirit of Power*, as seen in the Christian church of the second century, by Arthur Ernest Edgehill; *Origin and Development of the Christian Church in Gaul*, during the first six centuries of the Christian era, by Thomas Scott Holmes; *Lollardy and the Reformation in England*, by James Gairdner, Vol. III; *The Principles of the Reformation*, practical and historical, by Henry Wace; *History of Nonconformity*, from Wiclif to the close of the nineteenth century, Vol. I., from Wiclif to the Restoration, by Henry W. Clark; *Dawn of Modern England*, being a history of the Reformation in England, by Carlos B. Lumsden; *The History of Pope Boniface VIII. and His Times*, by Eugene T. Donnelly. Other important works on religion are: *A Dictionary of Christian Biography and Literature*, by Henry Wace and William C. Piercy; *The Ideal of Jesus*, by William Newton Clarke; *English Literature in Account with Religion*, by Edward Mortimer Chapman; *A Valid Religion for the Times*, by Parley P. Womer; *Religion and Immortality*, by Goldsworthy Lowes Dickinson; *The Psychology of Religious Experience*, by Edward Scribner Ames; *Essays in Theology and Related Subjects*, a testimonial to Charles Augustus Briggs; *Christianity and the Modern Mind*, by Samuel McComb; *Captains and Comrades in the Faith*, by Randall Thomas Davidson, Archbishop of Canterbury; *Divine Transcendence and Its Reflection in Religious Authority*, by J. R. Illingworth; *The World a Spiritual System and the Basal Beliefs of Christianity*, by James H. Snowden; *Cardinal Elements of the Christian Faith*, by D. S. Adam; *The Spiritual Sequence of the Bible*, by John Gamble; *The Church and the Divine Order*, by John Oman; *The Mishna on Idolatry*, by W. A. Elmslie; *Creed and the Creeds*, by J. H. Skrine.

REFERENCE WORKS. The most important book of the year is undoubtedly the eleventh edition of the *Encyclopædia Britannica*. This is virtually the first edition since the ninth (1875-1888), for the tenth was not rewritten, but merely a reissue of the ninth with a supplement. The work was begun under the auspices of the London Times and published by the Cambridge University Press. It comprises 40,000 articles, 44,000,000 words, 7000 text illustrations, 450 full-page plates, and 569 maps, prepared by 1500 specialists of 21 countries under the direction of a permanent editorial staff, in London and New York, of 64 members. The advance cost of the production is stated to have been \$1,500,000. India paper was used, thus reducing the shelf length of the 29 volumes from 7 feet to 28 inches and the weight from 240 pounds to less than 80. This thin paper edition, though more expensive, was preferred by 85 per cent. of the purchasers. The reviews of the Catholic periodicals in this country, notably *America*, criticised it severely for its treatment of Catholic topics. On the other hand, the London *Tablet* defended the work and pointed out that Catholic authors had been called upon to a greater extent than ever before to contribute to the *Encyclopædia*. For fuller and more authoritative exposition of the doctrines, history, and organization of the Roman Catholic Church, the reader will naturally refer to the *Catholic Encyclopædia*, which was mentioned in the NEW INTERNATIONAL YEAR BOOK

for 1908 and which has now reached its twelfth volume. *The New Schaff-Herzog Encyclopedia of Religious Knowledge*, edited by Samuel Macauley Jackson, Charles Colebrook Sherman, and George William Gilmore, has reached the eleventh of its twelve volumes. This standard library of ecclesiastical information has been completely revised and brought up to date by a large amount of new material. *The Encyclopedia of Religion and Ethics*, edited by James Hastings, a work of similar extent and even wider range of topics, is now in its third volume and is distinguished by the same scholarship and modernness as the editor's *Dictionary of the Bible*, completed three years ago. The *Oxford English Dictionary*, edited by Sir James A. H. Murray, is well along toward the completion of its eighth big volume and the letter S. Since this enormous work is beyond the reach of most book buyers. A handy volume has been prepared from it by H. W. and F. G. Fowler. *The Concise Oxford Dictionary of Current English*, which makes a generous use of illustrative quotations. A new work of great importance is the *Cyclopedia of Education*, to be completed in five large volumes, of which two appeared in 1911. The editor, Prof. Paul Monroe of Columbia University, has enlisted the services of several hundred specialists, with the aim of presenting a complete summary of the history, methods, and aims of education in all its various forms. The *Cyclopedia* will not be so extensive as that edited by Professor Rein of Jena, but is intended to be quite as comprehensive and will have the advantage over the German work of possessing the American point of view and giving special attention to American topics.

Here it is convenient to refer to one of the most remarkable literary movements of the last few years, the production of new and standard works in neat handy volumes, well enough printed, at the cost of a shilling in England. *Everyman's Library*, now containing 600 titles, is said to have sold more than ten million volumes in six years, mostly reprints of famous English fiction, history, biography, essays, poetry, philosophy, and theology, and translations from ancient and modern languages. The *Manuals of Science and Literature*, published by the Cambridge University Press, and the *Home University Library* are, on the contrary, composed entirely of new works written for the purpose of giving to the general reader the results of modern scholarship on scientific, sociological, literary, and historical questions. *Harper's Library of Living Thought* is a similar series of brief contributions to current topics.

MISCELLANEOUS. A survey of the literature of the year would not be complete without reference to the very large class of books which are commonly ignored by the critics but which sell widely and exert a great influence over the thought of the times. These books will have to be considered collectively by subjects, because any popular demand brings out many volumes almost equally serviceable, but rarely distinguished by any marked superiority in style or originality in treatment. Books on the applied arts and sciences are always in demand, especially the development of new fields, such as electricity, water power, automobiling, aeroplanes, and concrete construction. Municipal

problems, such as sanitation, city planning, park improvement, and the cost of living, receive much attention. Magazines and books relating to hygiene and physical culture are popular as ever, and while there has been no perceptible diminution in the number devoted to the advocacy of some eccentricity of diet or mode of life, yet there seems to be more of a demand than formerly for books based upon the accepted principles of medical science. The first enthusiasm for psychotherapy seems to be somewhat abated, and the books on this subject now most read treat of it from a historical standpoint, such as *Three Thousand Years of Mental Healing*, by George Barton Cutten, and *Scientific Mental Healing*, by Henry Addington Bayley Bruce. The increased attention given to domestic science in the colleges and high schools is shown by the development of the literature of the subject, and especially by the favorable reception given to reforms in the traditional methods of the kitchen. *Soyer's Paper-bag Cookery* sold like a novel, and the fireless cooker has come quickly into general use. The advocacy by the leading women's magazines and by the Society for Moral and Social Prophylaxis of a greater frankness in instructing the young in sexual matters has created a strong demand for reliable and inoffensive books on sex hygiene for boys and girls. Books on nature study, especially birdlore, and on country and suburban life, especially horticulture and chicken-raising, are numerous and generally attractively illustrated. *The Practical Flower Garden*, by Helena Rutherford Ely, was one of the most successful of its class. Books on the conduct of life, particularly of the "inspirational" or "uplift" type, maintain the popularity of former years; among the more prominent are: *The Manual of Spiritual Fortification*, an anthology collected by Louise Collier Wilcox; *The Miracle of Right Thought, Getting On and Self-Interest*, by Orison Swett Marden, and all of Arnold Bennett's witty essays. *How to Live on Twenty-four Hours a Day, The Human Machine, and Mental Efficiency*.

In this article we have attempted to mention books likely to be of interest to the general reader. Special bibliographies will be found in such articles as PHILOSOPHY, PSYCHOLOGY, POLITICAL ECONOMY, PHILOLOGY.

LITTLE, CHARLES JOSEPH. An American theologian and educator, died March 11, 1911. He was born in Philadelphia in 1840 and graduated from the University of Pennsylvania in 1861. He afterwards studied at the University of Berlin. He was ordained to the Methodist Episcopal ministry in 1862. After filling pastorates in Newark, Del., Philadelphia, and Springfield, Pa., he was teacher in mathematics in Dickinson Seminary from 1867 to 1869. During 1872-1874 he was pastor of Christ Church, Philadelphia. In the latter year he was appointed professor of philosophy and history in Dickinson College. He occupied this position until 1885, when he became professor of logic and history in Syracuse University. In 1891 he was chosen professor of historical theology in the Garrett Biblical Institute and in 1895 became president of this institution. From 1882 to 1885 he was librarian of the Pennsylvania State Library. He was the author of *Christianity in the Nineteenth Century* (1900), and *The Angel in the Flame* (1904).

LOAN AND TRUST COMPANIES. The development of loan and trust companies during the last fifteen years has been one of the most striking features of the remarkable development of American banking institutions. From 246 in 1898 and 683 in 1905, they increased to 1091 in 1910 and to 1251 on June 1, 1911. Their aggregate resources increased in three years from \$2,865,600,000 in 1908 to \$4,665,110,000 in 1911. Their loans and discounts aggregated \$2,429,421,000, an amount nearly equal to that held by the 12,800 State banks. About 50 per cent. of these loans were secured by collateral other than real estate and about 16 per cent. by real estate, including mortgages. Their investments in bonds and securities amounted to \$1,114,778,000, of which 33 per cent. were railroad bonds, 20 per cent. bonds of other public service corporations, and 17 per cent. State, county, and municipal bonds. The capital, together with surplus and undivided profits, amounted to \$994,652,000, and their individual deposits to \$3,295,855,000. Of the deposits 25 per cent. were in savings accounts. These companies reported 4,487,000 depositors, of whom 2,632,000 were savings depositors. The interest paid on savings deposits averaged 3.74 per cent., and that on other individual deposits 2.89 per cent.

These banking institutions are found all over the country, but the greatest number and those with the greatest resources are found in New York and neighboring Eastern States. Thus in 1911 there were 172, with resources of \$581,700,000 in the New England States; 487, with resources of \$2,769,000,000, in the Eastern States; 180, with resources of \$152,310,000,000, in the Southern States; 308, with resources of \$1,075,000,000, in the Middle Western States; 65, with resources of \$39,496,000, in the Western States; and 39 with resources of \$46,702,000, in the Pacific States.

CLEARING. Following the panic of 1907 there was considerable demand that the New York trust companies be brought under closer regulation and into closer connection with the rest of the banking world. They had been the storm centre of that panic, and one or two of the largest were saved only by the action of the associated banks. They had been affiliated with banks belonging to the Clearing House Association until 1903-4, when, on account of a new rule of that association requiring a larger reserve of member or affiliated institutions, they withdrew. The new State laws raising the reserve requirements of trust companies did not bring such reserves up to the clearing house standard. But in the spring of 1911 a special committee of the clearing house secured the assent of trust company managers to new rules, whereby the trust companies might clear through members or be admitted to full membership themselves. Seventeen trust companies, with capital and surplus of \$128,415,000 and deposits of \$425,300,000, were admitted to membership.

LOOMIS, CHARLES BATTALL. An American humorist, died September 23, 1911. He was born in Brooklyn in 1861 and was educated at the Polytechnic Institute of that city. From 1879 to 1891 he was engaged in business, but in the latter year abandoned this for writing. He contributed to nearly all the best known periodicals and became widely known as a humorist. He was also successful as a public speaker. Among his published writings are *Just Rhymes* (1899); *Yankee Enchantments* (1900); *Cheerful Americans* (1903); *Minerva's Manœuvres* (1905); *A Holiday Touch* (1908), and *Little Maude* (1909).

LOPEZ DOMÍNGUEZ, JOSÉ. See DOMÍNGUEZ, JOSÉ LOPEZ.

LORD, NATHANIEL WRIGHT. An American metallurgist, died May 23, 1911. He was born in Cincinnati in 1854 and graduated from Columbia University in 1876. After serving for some time as chemist and engineer for a gold mining company, he engaged in the practice of chemistry in 1883, and in 1888 he was appointed consulting chemist of the Ohio Geological Survey. He was also chemist in charge of the analysis of fertilizers for the Ohio State Board of Agriculture. He was the author of *Notes on Metallurgical Analysis*, and also wrote *Iron Manufacture of Ohio*, Vol. V., and *Natural and Artificial Cements*, Vol. VI., of the *Ohio Geological Survey*. He also prepared the report on the chemical examination of the waters of the Scioto, Olentangy, and Mahoning rivers for the Ohio State Board of Health (1891). He was director of the chemical laboratory of the United States fuel testing plant at the St. Louis Exposition in 1904.

LORD, WILLIAM PAINE. An American public official, died February 17, 1911. He was born in Dover, Del., in 1838, and graduated from Fairfield College in 1860. He served throughout the Civil War and was mustered out as major. Until 1867 he served as second lieutenant in the Second United States Artillery, but resigned in the following year. He was admitted to the bar and practiced law in Salem, Ore. In 1878 he was a member of the Oregon Senate. For fourteen years he was justice of the Supreme Court of the State. He was elected governor of Oregon in 1895, serving until 1899. From the latter year to 1903 he was American minister to the Argentine Republic.

LORE, CHARLES BROWN. An American jurist, died March 6, 1911. He was born in Odessa, Del., in 1831, and graduated from Dickinson College in 1852. He studied law and was admitted to the bar in 1861. From 1869 to 1874 he was attorney-general of Delaware. In 1883 he was elected to the forty-eighth Congress and was reelected to the forty-ninth in 1885. When Senator Bayard retired to become secretary of state in President Cleveland's cabinet, Mr. Lore was defeated for the senatorial vacancy by George Gray by one vote. In 1893 he was appointed chief justice of the State and was reappointed under the new constitution in 1897. His term expired in 1909. He was for many

years the most prominent layman in the Methodist Episcopal Church in Delaware.

LOUDENSLAGER, HENRY CLAY. An American public official, representative in Congress from New Jersey, died August 1, 1911. He was born in Mauricetown, N. J., in 1852, and was educated in the public schools of Paulsboro. From 1872 to 1882 he was engaged in business in Philadelphia. In the latter year he became county clerk of Gloucester county, N. J., serving until 1892. In the following year he was elected to Congress and served in successive Congresses until the time of his death. In 1906, 1908, and 1910 he was secretary of the Republican Congressional campaign committee. In the House of Representatives he was a member of many important committees. He was chairman of the committee on pensions, and was a member of the committee on naval affairs.

LOUISIANA. POPULATION. The Thirteenth Census, taken in 1910, showed a population of 1,656,388 as compared with 1,381,625 in 1900, an increase of 274,763, or 19.9 in the decade. The principal cities, with their populations in 1910 and 1900 are as follows (the figures in parenthesis are for 1900): New Orleans, 339,075 (287,104); Shreveport, 28,015 (16,013); Baton Rouge, 14,897 (11,269); Alexandria, 11,213 (5,648).

AGRICULTURE. The Thirteenth Census included statistics of agriculture. These are of date of April 15, 1910. On that date the farms in the State numbered 120,546, compared with 115,969 in 1900. The land in farms was 10,439,481 acres, compared with 11,059,127 acres in 1900. The improved land in farms was 5,276,016 acres, compared with 4,666,532 in 1900. The average acres per farm was 86.6, compared with 95.4 in 1900. The total value of farm property, including land, buildings, implements and machinery, domestic animals, poultry, and bees, was \$301,220,988 in 1910, compared with \$198,536,906 in 1900. The average value of all property per farm was \$2499, compared with \$1712 in 1900. The average value of land per acre was \$17.99, compared with \$17.74 in 1900. Of the total number of farms in the State those operated by owners and managers numbered 53,930 and those operated by tenants 66,607. Of the farms operated by owners, those free from mortgage numbered 42,011; under mortgage 9834. The native white farmers numbered 63,236; foreign-born white 2431; negro and other non-white 54,879. Of the non-white farmers all but 60 were negroes. There were 58 Indians and 2 Chinese. The value of the various kinds of domestic animals, poultry, and bees was \$44,699,485, compared with \$28,869,506 in 1900. The cattle numbered 804,795, valued at \$11,685,354; horses, 181,286, valued at \$11,789,695; mules, 131,554, valued at \$15,624,962; swine, 1,327,605, valued at \$3,824,046; sheep, 178,287, valued at \$343,

046. Poultry of all kinds numbered 3,542,447, valued at \$1,326,614. The acreage, production, and value of the principal crops will be found in the following table, for 1910 and 1911:

		Acreage	Prod., bu.	Value
Corn	1911	1,800,000	33,300,000	\$23,310,000
	1910	1,782,000	42,055,000	23,130,000
Oats	1911	40,000	840,000	546,000
	1910	36,000	774,000	379,000
Rice	1911	371,200	11,693,000	9,237,000
	1910	371,200	12,769,000	8,555,000
Potatoes ..	1911	22,000	1,518,000	1,518,000
	1910	25,000	1,375,000	1,238,000
Hay	1911	24,000	a 81,000	372,000
	1910	25,000	44,000	506,000
Tobacco ..	1911	500	b 225,000	69,750
	1910	500	275,000	68,750
Cotton	1911	...	c 395,000

MINERAL PRODUCTION. The total mineral products of the State in 1910 were valued at \$10,119,993. Of this, petroleum was represented by \$3,574,069; clay products \$546,873; mineral waters, \$163,975; and sand and gravel, \$372,336.

Louisiana is an important producer of petroleum. The production in 1910 was 6,841,395 barrels, nearly double the amount produced in 1909, which was 3,059,531 barrels. Oil is produced in five districts, the Jennings, Welsh, Anse la Butte, Caddo, and Vinton fields. Of these fields, the Jennings and the Caddo are by far the largest producers. The production of petroleum in 1911, according to the preliminary estimates of the United States Geological Survey, exceeded that of 1910 by more than 3,000,000 barrels and approached 10,000,000 barrels. The chief event in this oil field during the year was the development of the Vinton area in the southwestern part of the State. Many new gushers were opened in this field during the year.

MANUFACTURES. The Thirteenth Census included statistics of manufactures in the State for the calendar year 1909. The industries giving employment to the largest number of wage earners in the State are those connected with the lumber and timber products. In these industries 46,072 persons were employed. Second in point of numbers are the industries connected with sugar and molasses and sugar refining, 5093. Other industries in which over 5000 persons are employed are bread, and other bakery products, printing and publishing, foundry and machine shop products, cars and general shop construction and repairs by steam railroad companies, turpentine and rosin. The industry in which the largest capital is invested is sugar and molasses and sugar refining, \$63,775,000. In the industries connected with lumber and timber products, \$62,838,000 was invested; in the industries connected with oil, cottonseed, and cake, \$13,085,000; in the rice industry, \$12,529,000; in the manufacture of bags other than paper bags, \$5,352,000. These are the only industries in which over \$5,000,000 was invested. The total number of persons engaged in the industries was 86,563. Of these 80,787 were male and 5776 female. The great majority of the wage earners of the State worked from 60 to 72 hours a week or from 10 to 12 hours a day. Only 18.1 per cent. were employed in establishments where the prevailing hours were less than 10 a day, and only 3.7 in establishments where the prevailing hours were more than 12 a day. The chief manufacturing city in the State is

New Orleans, where the wage earners employed numbered 17,186, and the value of the products was \$78,794,030. No other city in the State has a considerable number of industrial establishments. The principal results of the census are shown in the following table, with corresponding figures for 1904 and the increase per cent. between 1904 to 1909:

	Number or amount		In-crease
	1909	1904	
Number of establishments	2,516	2,091	20.3
Persons engaged in manufactures	86,563	63,735	35.8
Proprietors and firm members...	2,295	1,899	20.9
Salaried employees	3,103	5,977	35.6
Wage earners (average number) ..	76,165	55,859	36.4
Primary horsepower	346,652	251,963	37.6
Capital	\$221,816,000	\$150,811,000	47.1
Expenses	304,024,000	164,442,000	37.5
Services	42,394,000	31,360,000	35.2
Salaries	9,008,000	6,044,000	49.0
Wages	33,386,000	25,316,000	31.9
Materials	134,865,000	117,035,000	15.2
Miscellaneous	26,765,000	18,047,000	66.8
Value of products ..	223,949,000	186,380,000	20.2
Value added by manufacture (value of products less cost of materials)	89,084,000	69,345,000	28.5

EDUCATION. The total enrollment in the elementary schools of the State in 1909, the last year for which statistics are available, was 174,984. Of these, 78,862 were colored. The average attendance in the elementary schools was 128,622 white and 54,637 colored. The total value of the school property in the State in that year was \$7,805,926. The total number of teachers, white and colored, was 6286. The average salary paid to white male teachers was \$75.29, to white female teachers, \$50.80; to colored male teachers, \$34.25, and to colored female teachers, \$28.67. The legislature of 1911 passed ten laws bearing upon public schools. Among these were measures simplifying the machinery of holding special school tax elections, regulating institutes, and summer schools, regulating the adoption of text-books, and a constitutional amendment requiring the *police juries* of all the parishes to appropriate as much as three mills of the various taxes for public education.

POLITICS AND GOVERNMENT

There was little of political importance in the history of the State in 1911. The legislature did not meet, as the sessions are biennial, and the last was held in 1910. There were no elections in the State during the year.

STATE GOVERNMENT, 1911. Governor, J. Y. Sanders; Lieutenant-Governor, P. M. Lambemont; Secretary of State, Edward Everett; Auditor, Paul Capdeville; Treasurer, O. B. Steele; Attorney-General, Walter Guion; Superintendent of Education, T. H. Harris; Commissioner of Agriculture, E. O. Bruner; Commissioner of Insurance, E. J. O'Brien, Jr.; Commissioner of Public Lands, Fred J. Grace—all Democrats.

JUDICIARY. Supreme Court: Chief Justice, J. A. Breaux; Associate Justices, A. D. Land, Walter B. Summerville, Frank A. Monroe. O. O. Provosty; Clerk, Paul E. Mortimer—all Democrats.

STATE LEGISLATURE, 1911. Both houses Democratic: Senate, 41; House, 116.

The representatives in 1911 will be found in the article UNITED STATES, *Section Congress*.

LOUNSBURY, T. F. See LITERATURE, ENGLISH AND AMERICAN, *Literary Biography*.

LOW, Sir ROBERT CUNLIFFE. An English general, died August 4, 1911. He was born in 1838. In 1854 he entered the Indian army as cornet in the Ninth Bengal Cavalry. He took part in the Indian Mutiny in operations around Delhi and in the relief of Lucknow. As a result of this service he was appointed brigademajor and was later promoted to be lieutenant-colonel. In 1880 he was made director of transport. In 1895 he led the famous Chitral Relief Expedition, at the end of which he was created a G. C. B. He returned to England the same year and was made a lieutenant-general. In 1898 he returned to India to take up the command of the forces at Bombay. This he held for five years. In 1900 he was given the rank of general. He was retired in 1905 and was given the place of keeper of the crown jewels.

LOWELL, FRANCIS CABOT. An American jurist, died March 6, 1911. He was born in Boston in 1855, graduating from Harvard College in 1876. After a course in the Harvard Law School he was admitted to the bar in 1880. He practiced law in Boston until his appointment as United States district judge for the District of Massachusetts in 1898. He served on this bench until 1905, when he was appointed United States circuit judge of the First Circuit. He was a member of several learned societies and was the author of *Joan of Arc* (1896).

LOYALTY ISLANDS, THE. A dependency of New Caledonia (q. v.).

LÜBECK. See GERMANY.

LUCAS, E. V. See LITERATURE, ENGLISH AND AMERICAN, *Essays and Literary Criticism*.

LUDLOW, JOHN MALCOLM FORBES. An English economist, died October 17, 1911. He was born in *Nimach*, India, in 1821, and was educated at the *University of France*. He became a barrister in 1843 and practiced his profession until 1874. In 1875 he was appointed by the government chief registrar of Friendly Societies and for sixteen years he held this office. When the Labor Copartnership Association was started in 1884 he became one of its first members and in 1897 was made its president. Mr. Ludlow was one of the founders, with F. D. Maurice, of the Workingmen's College. He was identified with almost every organization and movement to assist others to help themselves. He wrote much on industrial and economic questions and contributed a series of articles on the Christian Socialist movement to the *Atlantic Monthly*. One of his last acts was to sign a manifesto urging the wider adoption of the copartnership plan as a remedy for the labor unrest. Among his published writings are *Letters on the Criminal Code* (1847); *Woman's Work in the Church* (1865); *Progress of the Working Class, 1832-67* (with Lloyd Jones, 1867); *The War of American Independence* (1876). He edited *Politics for the People*, *Christian Socialist*, *Journal of Association*, etc., in addition to contributing to many magazines.

LUTHERAN CHURCH. A religious denomination which includes the largest body of Protestants in the world. The four general

bodies of Lutherans embrace two-thirds of the Lutherans in the United States. The chief independent synods are the United Norwegian Synod, the Joint Synod of Ohio, and the German Iowa Synod. According to the United States religious census taken in 1906 and published in 1910, the total number of communicants of the Lutheran faith in the former year in the United States was 2,112,494, with 11,194 church edifices and 7841 ministers. These statistics included twenty-four Lutheran bodies. The statistics of the denomination given below are from the church authorities.

GENERAL COUNCIL. Communicants, 490,489; ministers, 1611; congregations, 2503; church property is valued at \$30,192,881; benevolent offerings for 1911, \$665,556; receipts for local expenses, \$3,708,843. The Bible schools numbered 2184, with an enrollment of 299,855. The next biennial convention will be held in Toledo, O., September 9, 1913.

GENERAL SYNOD. Communicants, 308,564; congregations, 1791; ministers, 1347; church property, valued at \$20,488,390; benevolent offerings, \$578,850; receipts for local expenses, \$2,526,515; Sunday schools, 1712, with an enrollment of 289,698. The next convention will be held at Atchison, Kan., May 14, 1913.

SYNODICAL CONFERENCE. Communicants, 793,500; ministers, 2771; congregations, 3481; church property valued at \$14,884,000. The amount raised for local expenses was \$3,628,631. The Sunday schools numbered 839, with an enrollment of 153,516. This branch also maintains parochial schools, with an enrollment of 146,767. The next convention will be held in Saginaw, Mich., in August, 1912.

UNITED SYNOD OF THE SOUTH. Communicants, 48,352; ministers, 243; congregations, 462; church property valued at \$2,600,895; benevolent offerings, \$68,367; receipts for local expenses, \$207,861; Sunday schools, 383, with an enrollment of 36,740.

INDEPENDENT SYNODS. Communicants, 640,477; ministers, 2699; congregations, 5811; church property valued at \$16,254,222; benevolent offerings, 1911, \$781,521; local expenses, \$2,386,356; Sunday schools, 2411, with an enrollment of 170,688.

The grand total is 64 synods, 8671 ministers, 14,048 congregations, 2,281,382 communicants, 6526 parochial schools with 267,642 pupils, 7529 Sunday schools, with an enrollment of 952,507. The church property is valued at \$83,826,388. The receipts for local expenses were \$12,458,206, and for benevolence, \$2,832,793.

The most significant events in the history of the church in 1911 had to do with the making clear the strong confessional position of the Lutheran Church in the United States. A remarkable book on the confessional principle was published during the year, by Dr. Schmauk, president of the General Council. The General Synod made a declaration, which is intended to define the position of that body on the confessions of the Lutheran Church. The General Council and the Augustana Synod had representatives at the general or world conference of Lutherans in Upsala, Sweden. An arrangement was made during the year between the General Synod and the General Council for an agreement for the arbitration of differences and the division of territory in home missions. The General

Council inaugurated a movement to raise a jubilee fund of \$2,000,000 by 1917, to be a memorial for the quartocentennial of the Reformation and to be devoted to missions and ministerial relief. The 200th anniversary of the birth of Muhlenberg, the founder and patriarch of the American Lutheran Church, and the 100th anniversary of the birth of Rev. C. F. W. Walter, the founder of the large Missouri Synod, were both widely celebrated. A marked advance in theological education was made during the year. The courses at the Theological Seminary were thoroughly revised and three new professors were elected. The Chicago Theological Seminary completed and consecrated its fine new plant. The United Synod of the South dedicated its new seminary at Columbia, S. C., and a new seminary was opened at Waterloo, Ont., while a second Canadian seminary is planned for the Canadian Northwest. Augustana Theological Seminary dedicated its fine Denkman Library and reports several large bequests for seminary and library endowment.

LUXEMBURG. An independent neutral grand duchy in central Europe. Area, 998 sq. miles; population, December 1, 1910, 259,891, nearly all Roman Catholics. Capital, Luxemburg (20,848 inhabitants). Revenue (1911), estimated at 18,497,700 francs (1910, 18,299,174) including extraordinary: Expenditure, including extraordinary, 19,914,566 francs (1910, 18,656,619); annuities, 493,150. Debt, 12,000,000 francs. Reigning grand duke at the end of 1911, Wilhelm, born April 22, 1852; succeeded November 17, 1905; married June 21, 1893, Princess Maria Anna of Braganza (regent since November 18, 1908). Heiress-apparent (act of July 6, 1907), Princess Marie, born June 14, 1894.

LYALL, Sir ALFRED COMYN. An English public official and author, died April 10, 1911. He was born in 1835 and was educated at Eton. He entered the Indian civil service in 1856. During the great mutiny he saw service for which he received official commendation. He received rapid promotion and after nine years' service he was appointed commissioner of Nagpur. In 1867 he was appointed to the commissionership of Western Berar. He was selected in 1873 as home secretary to the government of India. He was appointed in 1878 foreign secretary to the government of India and held this very important office throughout the Afghan War. During his service in this capacity the attitude of Russia formed a source of constant anxiety to the government of India and to the British nation. Before laying down the office of foreign secretary in 1881 he placed on record a note dealing in an impartial but comprehensive spirit with this question and urging the expediency of endeavoring to come to an agreement with Russia for a joint diplomatic recognition of the Afghan frontier towards Central Asia. From this note dates the adoption by the British government of the policy of openly assuming the protectorate of Afghanistan and of delimiting its northwestern frontiers in concert with Russia. This culminated in the Anglo-Russian convention of 1907. Lyall was rewarded for his services by a C. B. in 1879 and a K. C. B. in 1881. In the latter year he was appointed lieutenant-governor of the North-

West Provinces and Oudh. During his administration he carried out many notable reforms. Through his influence a separate legislative council was created for what are now the United Provinces and a new university was founded at Allahabad. In 1887 he retired from the civil service. On his return to England in the following year he was appointed a member of the Indian Council and on the expiration of the ten years which formed the term of this office, he was paid the rare compliment of reappointment for the statutory limit of five years.

Although Sir Alfred Lyall achieved notable reputation as an administrator, it was rather as a thinker and as a man of unique social and personal charm that he was best known to the world at large. A number of magazine articles and reviews which he published between 1870 and 1881 were collected in 1882 under the title of *Asiatic Studies*. This placed him in the first rank of philosophical essayists. It was in recognition of his authorship no less than of his distinguished official career that in 1902, after retirement from the Indian Council, he was appointed to the Privy Council. His studies in Indian history resulted in the production of *The Life of Warren Hastings* in 1889. *The Rise and Expansion of British Dominion in India* was a notable contribution to the literature bearing on this subject. It is, in reality, a philosophical history of the Indian empire based on inductive principles. Also of great importance was the *Life of Lord Dufferin*, published in 1905. He also contributed to the "English Men of Letters Series" in 1902 a brief but valuable estimate of Tennyson's place in English poetry. He received the degree of D. C. L. from Oxford and LL. D. from Cambridge University.

MACAO. A city on the island of Macao (Chinese); a dependency, with the small adjacent islands Colôane and Taipa, of Portugal. Area, 4 sq. miles; population (1910), 74,866 (about 13,000 in Colôane and Taipa). Governor (1911), A. de Mello Machado (ad. int.).

MCCARTHY, JUSTIN. See LITERATURE, ENGLISH AND AMERICAN, *General Biography*.

MCGILL, UNIVERSITY. An institution of higher learning at Montreal, Canada, founded in 1821. In 1910-11 the students in all departments numbered 2426, of whom 867 were in the faculty of arts, 60 in law, 610 in applied science, 310 in medicine, 456 in agricultural education and household science, 50 in graduate school, and 73 in music. The faculty numbered 254. New appointments to the university staff were Prof. A. N. Alcock to the chair of physiology, and Prof. Herbert J. A. Rose, the first Rhodes scholar nominated by the university, to the associate professorship of classics. During the year the university received a donation of a tract of land valued at about \$1,100,000 from Sir William C. Macdonald. From Lord Strathcona was received a gift of \$100,000 for the equipment of a new medical building, which was built at a cost of \$600,000 and was formally opened on June 5, 1911. A gift of \$25,000 was received from James Douglas, of New York, for the purpose of research work in pathology. A commercial course extending over two years has been established in connection with the faculty of arts. The president of the university is W. Peterson.

MACHINERY, ELECTRICAL. See DYNAMO-ELECTRIC MACHINERY.

MCBRIDE, GEORGE WICKLIFFE. An American public official, former senator from Oregon, died June 19, 1911. He was born in Yamhill county, Oregon, in 1854 and for two years studied at Christian College in that State. He was admitted to the bar, but never practiced actively. For ten years he was engaged in mercantile business. He was a member of the Oregon House of Representatives in 1882 and was secretary of state from 1887 to 1895. In the latter year he was elected United States senator, serving until 1901. From 1901 to 1905 he was United States commissioner of the St. Louis Exposition.

MCCOOK, HENRY CHRISTOPHER. An American clergyman, died October 31, 1911. He was born in New Lisbon, Ohio, in 1837, and was one of the famous family which included five brothers who fought with distinction in the Civil War (see MCCOOK, JOHN JAMES). He graduated from Washington and Jefferson College in 1859 and studied at the Western Theological Seminary. In 1861 he was ordained to the Presbyterian ministry, and engaged in home missionary work in Illinois and Missouri. He assisted in organizing the Forty-first Illinois Volunteers, of which he was first lieutenant and chaplain in 1861-2. In the latter year he became a pastor in Clinton, Ill., remaining until 1864, when he engaged in missionary work in St. Louis. In 1870 he was chosen pastor of the Tabernacle Presbyterian Church, Philadelphia, and continued in this pastorate until 1903, when he was made pastor emeritus. He served as chaplain of the Second Pennsylvania Volunteers in the Spanish-American War and was founder of the National Relief Commission in that war. He was prominent as an entomologist and was president of the American Entomological Society. He was the author of *Agricultural Ants of Texas*; *American Spiders and their Spinning Work*; *Tenants of an Old Farm*; and *Old Farm Fairies*, all scientific works. He also wrote *Women Friends of Jesus*; *The Gospel in Nature*; *Teachers' Commentary on the Life of Christ*; a romance entitled *The Latiners*; and *The Senator—a Threnody*, in verse and prose, written as a memorial of the late Senator Hanna. He wrote also *Nature's Craftsmen* (1907) and *Ant Communities and How They Are Governed* (1909).

MCCOOK, JOHN JAMES. An American lawyer and soldier, died September 17, 1911. He was the youngest of the so-called "Fighting McCooks." His father, eight older brothers, and five cousins took part in the Civil War. At one time or another through the war they were all officers. He left the army with the title of colonel. Colonel McCook was born in 1855 in Carrolton, Ohio. He enlisted in the Fifty-second Ohio Infantry at the outbreak of the war. In 1862 he was commissioned as lieutenant of the Sixth Ohio Cavalry and in 1863-4 served as captain and aide. He served in the campaigns of Perryville, Stone River, Chattanooga, and Chickamauga with the western armies and with General Grant in the Army of the Potomac. He was severely wounded in May, 1864, at the battle of Shady Grove, but in spite of this, served throughout the war. At its close he entered Kenyon College, graduating in 1866. He then went to the Harvard Law School and

finished his course three years later. In 1870 he entered the law office of Alexander & Green, New York City. He rose to become senior member. His law practice dealt chiefly with corporations. He was counsel for the Equitable Life Assurance Society and was receiver for the Atchison Railroad. He was invited by President McKinley to enter his cabinet either as secretary of the interior or as attorney-general, but he declined both offers. McCook took a prominent part in the heresy trial of the Rev. Charles F. Briggs as prosecutor on the part of the presbytery. He was for many years a director of Princeton Theological Seminary and took a great interest in the development of that institution. He was made an honorary master of arts by Princeton in 1873. He also received the degree of LL. D. from the University of Kansas and from Lafayette College. He served in several administrations as the confidential diplomatic agent of the United States and was entrusted with many missions of great delicacy. At the accession of Nicholas II. as Czar of Russia, Colonel McCook and his brother, Alexander McDowell McCook, were the military representatives of the United States by an act of Congress. In 1906 the emperor of Japan conferred upon Colonel McCook the Order of the Rising Sun.

MCCULLOUGH, MYRTLE (REED). An American writer, died August 17, 1911. She was born in Chicago in 1874 and was educated in the schools of that city. She engaged in journalism and in literary work. In 1906 she married James Sydney McCullough. She was the author under the name "Myrtle Reed" of: *Love Letters of a Musician* (1899); *Later Love Letters of a Musician* (1900); *The Spinster Book* (1901); *Lavender and Old Lace* (1902); *At the Sign of the Jack O' Lantern* (1905); *The Spinner in the Sun* (1906); *Love Affairs of Literary Men* (1907); *Flower of the Dusk* (1908); *Old Rose and Silver* (1909), and *The Weaver of Dreams* (1911).

MCCONNELL, ALLEN. An American Roman Catholic clergyman and educator, died March 13, 1911. He was born in Charlotte-town, Prince Edward Island, in 1825 and at an early age took up the teachings of the Jesuits. He removed to the United States and was appointed to a professorship at Saint John's College, Fordham. From there he went to St. Francis Xavier College, New York City. After leaving this institution he made a tour of the United States as a Jesuit missionary and became widely known for his work. He spent two years on the tour and visited almost every city in the country.

MCGARVEY, JOHN WILLIAM. An American theologian and educator, died October 6, 1911. He was born at Hopkinsville, Ky., in 1829 and graduated from Bethany College in 1850. He was ordained to the ministry of the Christian Church in 1852 and in the following year was made pastor of a church in Fayette, Mo. This was followed by pastorates in Dover, Mo., and Lexington, Ky. In 1865 he was chosen professor of sacred history at the College of the Bible of Transylvania University. In 1895 he became president of the college. He retained this position until the time of his death. He contributed to newspapers as correspondent and editor for fifty years. He was the author of *Commentaries on the Acts of the Apostles*

(1863-1893); *Lands of the Bible* (1881); *Test and Canon of the New Testament* (1886); *Credibility and Inspiration of the New Testament* (1891); and *The Authorship of Deuteronomy* (1902).

McKEEN, JAMES. An American lawyer and publicist, died in February, 1911. He was born in Brunswick, Me., in 1844 and graduated from Bowdoin College in 1864. He was admitted to the bar in 1867 and from 1870 until the time of his death practiced in New York City, becoming one of the leaders of the New York bar. He served as associate counsel in the famous New York insurance investigations of 1905-6, in which Charles E. Hughes took the leading part. He served in important public capacities, and in addition to various articles, wrote *Evolution of Penal Methods and Institutions and Factors in American Civilization*.

McLANE, JOHN. An American public official, formerly governor of New Hampshire, died April 13, 1911. He was born at Lennox-toun, Scotland, in 1852. His education was obtained in the public schools of Manchester, N. H. He learned the trade of cabinet maker and from 1876 to the time of his death was manufacturer of post office furniture and equipments. He was a member of the New Hampshire House of Representatives in 1885, of the Senate in 1891 and 1893. In both years he was president of that body. In 1905 he was elected governor of the State.

McLEAN, GEORGE PAYNE. United States senator (Republican) from Connecticut. He was born in Simsbury in 1857 and was educated in the common schools and at the Hartford High School. In 1881 he was admitted to the bar and practiced law in Hartford. He was a member of the State House of Representatives in 1883-4. In 1885 he was a member of the commission to revise the Connecticut statutes. He served in the State Senate in 1886 and from 1892 to 1896 was United States district attorney for Connecticut. He was nominated for the Senate in the Republican caucus by a vote of 116 to 64 for opposing candidates, and was elected by the General Assembly by a vote of 158 to 96 for his opponents. (See CONNECTICUT). His term of service will expire in 1917.

McNAMARA, J. B. and J. J. See CALIFORNIA; INDIANA; and TRADE UNIONS.

MacWHIRTER, JOHN. An English artist, died February 1, 1911. He was born near Edinburgh in 1839. When he was fourteen years of age he exhibited his first work at the Royal Scottish Academy and about the same time entered the art schools. From 1856 onward he exhibited many pictures at the annual exhibitions. At the age of twenty-eight he was elected an associate of the Royal Scottish Academy. He was elected an associate of the Royal Academy in 1879 and in 1894 was made a full academician. The greater number of his pictures and drawings were views of the Scotch Highlands. He painted, however, Italian lake scenes and scenes of Switzerland. The best known of his paintings are "Lady of the Woods," "Lord of the Glen," "The Three Graces," "Track of the Hurricane," and "Crabbed Age and Youth."

MACKAY-SMITH, ALEXANDER. An American bishop of the Protestant Episcopal Church, died November 16, 1911. He was born in New Haven in 1850 and graduated from Trinity

College in 1872. After a course at the General Theological Seminary he pursued his theological studies in England and Germany. He was ordained to the priesthood in 1877. After serving as an assistant at All Saints' Church in Worcester, Mass., and at Christ Church in South Boston, he became rector of St. Thomas' Church in New York City in 1880. In 1886 he was made the first archdeacon or missionary superintendent of the New York diocese. In the same year he refused election as bishop-coadjutor of Kansas. In 1893 he became rector of St. John's Church in Washington. He was consecrated bishop-coadjutor of Pennsylvania in 1902. In 1907 he was forced to go abroad on account of his health and upon his return he had to administer the affairs of the diocese almost alone because of the feebleness of Bishop Whitaker. On the death of the latter in 1910 he became bishop of Pennsylvania. He announced his intention to retire from the bishopric on account of ill health in January, 1912. He was a frequent contributor to current literary magazines and other periodicals.

MACOMB, DAVID BETTON. A rear-Admiral, retired, of the United States navy, died January 27, 1911. He was born in Florida in 1827 and in 1849 was appointed third assistant engineer in the United States navy. After various promotions he became chief engineer in 1860. He served throughout the Civil War on special duty and on the *Canonicus*. In 1871 he acted as fleet engineer for the North Atlantic fleet. In 1882-3 he was president of the Engineering Board of the Navy Yard, Portsmouth, N. H. He was retired in 1889 and in 1906 was advanced to the rank of rear-admiral, retired, for services during the Civil War.

MADAGASCAR. One of the largest of the world's islands; a French colony off the southeastern coast of Africa. Capital Antananarivo (Tananarive).

AREA, POPULATION, ETC. By the act of June 27, 1908, the *cercle* (military territory) of Mahafaly was merged with the province of Tulear. Madagascar is now divided into 19 provinces, 3 *cercles*, and one autonomous district, with an aggregate area of 585,300 sq. kilometers and a population (1910) of 2,890,626. The Hova is the dominant tribe. Antananarivo has 72,000 inhabitants; Fianarantsoa, 27,000; Tamatave, the chief eastern port, 7026; Majunga, the port of the northwest coast, 4600.

PRODUCTION, COMMERCE, ETC. Agriculture is a leading industry, and rice is the staple native crop. Under cultivation by Europeans are coffee, tobacco, sugar-cane, hemp, cotton, vanilla, tea, etc. Forests of valuable timber cover large areas. Cattle are raised in considerable numbers, and sericulture is carried on. Native manufactures include silk and cotton goods, and raffia fabrics. Gold is mined.

The trade by great classes for three years is given below in thousands of francs:

	1907	1908	1909
Foodstuffs	6,691	7,234	6,706
Industrial material	2,273	3,154	2,908
Manufactures	16,359	19,576	24,526
Total imports	25,323	29,963	34,140
Foodstuffs	3,564	4,014	3,722
Industrial materials	23,125	18,345	28,024
Manufactures	581	732	1,632
Total exports	27,270	23,091	33,378

Export of gold dust: 1907, 7,982,068 francs; 1908, 9,446,715; 1909, 10,937,225. Hides: 1907, 5,709,971 francs; 1908, 3,203,007; 1909, 5,604,411. Rubber: 1907, 5,242,637 francs; 1908, 1,260,726; 1909, 4,613,920. France furnished imports valued (1909) at 29,752,626 francs and received 22,412,316 exports. Vessels entered (1909), 9345, of 1,393,000 tons. A railway runs from Brickaville to the capital (170 miles). Cost of construction, including railway station at Antananarivo, sixty million francs. There is a line (7 miles) from Tamatave to Ivondra. Regular automobile service now connects Antananarivo with Antsirabe, Miarinarivo, and Maevatanana. Telegraph lines, 5351 kilometers, wires, 9913; post offices 145.

FINANCE AND GOVERNMENT. The budget estimate for 1909 balanced at 30,780,000 francs; the debt stood, January 1, 1910, at 99,283,000 francs. The colony is administered by a governor-general (Victor Augagneurj in 1911). Diego-Suarez and the islands of Nosy-Bé and Ste. Marie are dependencies of Madagascar.

MADERO, FRANCISCO INDALECIO. A Mexican political leader, elected on October 1, 1911, president of the republic of Mexico. He was born on October 4, 1873, on the estate of his grandfather, Don Evaristo Madero, in Coahuila. Don Evaristo Madero left at his death a fortune valued at over \$25,000,000, which was divided among his descendants. During the first ten years of his early manhood, Francisco Madero devoted himself to the management and improvement of the family estates, which, under his control, came to be reckoned among the richest and most productive agricultural tracts of northern Mexico. He introduced modern agricultural methods and employed scientific irrigation, so that he was able to introduce and profitably to grow not only the Mexican products, but in addition olives and grapes. Madero also took an interest in the development of the mineral resources of the family estates and developed several rich gold and copper mines, for which he constructed modern stamp mills and smelters. His administration of properties was distinguished by humane treatment of the natives employed on the estates. He was an avowed foe of the system of peonage and contract labor in which many natives of Mexico were held in quasi bondage. In 1909 Madero removed to the City of Mexico, and began almost at once to take a lively interest in public affairs and in the political condition of his country. He declared in an interview that his criminal indifference was given a rude shock by the election massacres in Monterey, on April 2, 1903. He took up the cause of the independent voters opposed to the nomination and reelection of Diaz, first in his own state of Coahuila, and afterwards throughout Mexico. A political organization was founded under his direction, known as the Club Democratico Benito Juárez, with branch organizations in almost every state of the country. By the help of his clubs he introduced the American procedure of State conventions into Mexican politics. This culminated in the national convention of the new Democratic party in the City of Mexico. Madero had become the acknowledged leader of the independent voters of Mexico by 1905, and in that year he came out openly against the Diaz government in the campaign for the elec-

tion of a governor of Coahuila. During the progress of the campaign a warrant was issued for his arrest, but before it could be executed Diaz sent a private order from the capital staying its execution. The independent voters were defeated, but Madero immediately began work in preparation for the next presidential campaign in 1910. He was especially opposed to the reelection of Diaz as president and Ramón Corral as vice-president. In order to prepare for this campaign he wrote his famous book, *The Presidential Succession of 1910*. This at once made a tremendous sensation throughout the country. It had scarcely been issued when its sale and distribution were prohibited by the government and all copies upon which hands could be laid were destroyed. In this book Madero fearlessly attacked the existing régime. The volume was marked by a spirit of fairness and justice which increased its influence. Madero's reputation had now increased to such an extent that he was reckoned the only candidate for the presidency bold enough to run against Diaz, and he was accordingly nominated by the independent voters. For a short time this opposition was tolerated by Diaz, but no sooner had Madero begun to travel about the country organizing anti-government clubs and making open speeches against Diaz's reelection than measures were taken to suppress him. On June 27, 1910, he was arrested at Monterey. As he was being taken to the penitentiary his wife attempted to accompany him, but she was beaten back by the soldiers. The warrant upon which Madero was arrested contained no formal charge nor did it bear the signature or the seal of the judge who committed him. This was contrary to the laws of Mexico. A few days later when he was formally arraigned a mass of more or less contradictory charges were preferred against him. None of these was supported by evidence, but he was recommitted to prison on the charge of having libeled one Juan Orci, a political supporter of Corral.

Madero was kept in prison only long enough to destroy the last remote chances he might have had in his candidacy for the presidency. When Diaz was reelected the friends of Madero were allowed to bail him out in the sum of \$10,000. As soon as he was released from prison he went to San Luis Potosí, and there on October 15, 1910, published his famous "cry to arms," formulated on a definite political platform known as the "plan of San Luis Potosí." The main principles of this platform were expressed in the two catch words, "effective suffrage" and "no reelection." It contained also demands for reforms in the distribution of the land; free restitution of the land wrested from Indian tribes; liberation of all political prisoners; the abolition of the military practice of making soldiers out of condemned criminals, and positive guarantees of the constitutional rights of free speech and free press. Madero had fixed the night of November 20, 1910, as the date for a general rising. His plan was prematurely discovered, however, and he was obliged to flee from the country before that date. His principal fellow-conspirator, Alfredo Domínguez, together with several others, was arrested in the City of Mexico. On account of this premature discovery Madero's agents in Puebla thought it best to make their rising earlier than the date originally set.

The revolution broke out on November 20. Madero purchased large quantities of arms and ammunition in the United States, and then went to San Antonio, Tex., and to El Paso, where he established revolutionary juntas. After a warrant for arrest for violation of the neutrality laws of the United States had been issued against him, he, with a handful of followers, crossed into Chihuahua and entered actively into the campaign in that state, which presently extended to the neighboring states of Sonora and Sinaloa. The history of the campaign with its successful issue will be found narrated in the historical section in the article MEXICO.

MADISON, EDMOND II. An American public official, representative in Congress from Kansas, died September 18, 1911. He was born in Plymouth, Ill., in 1865 and was educated in the common schools of that State. At the age of eighteen he began teaching school. In 1885 he removed to Wichita, Kan., and began the study of law. He was admitted to the bar in 1888. In the same year he was elected county attorney of Ford county and served two terms in this office. He was appointed judge of the 31st judicial district of Kansas, in 1900, a position which he held until 1906, when he resigned to become a candidate for Congress. He was elected to the Sixtieth Congress and reelected to the Sixty-first. Mr. Madison was one of the most aggressive of the progressive Republicans or insurgents. He served on the Ballinger-Pinchot investigating committee and signed an independent report adverse to Secretary Ballinger. He took an active part in the fight against the power of former Speaker Cannon and the rules under which the latter maintained his supremacy in controlling the business of the House.

MADRIZ, JOSÉ. Former president of Nicaragua, died May 15, 1911. He was educated for the law. He achieved a reputation as a brilliant lawyer and became judge of the Central American Court of Justice. When President Zelaya was forced to give up the presidency of Nicaragua he named Madriz as his successor and the latter was elected to office December 20, 1909. He sought to have the United States recognize him as president, but Secretary Knox informed him that diplomatic relations between the two countries could not be resumed until Madriz was able to prove his government satisfactory. He was overthrown by the revolutionists under General J. J. Estrada and was forced to resign on August 20, 1910. He fled to the Island of Amapala, belonging to Honduras, but was requested to leave and went to the City of Mexico, where he remained a refugee until his death.

MAETERLINCK, MAURICE. See LITERATURE, ENGLISH AND AMERICAN, *Drama*.

MAGAZINE TRUST. See TRUSTS.

MAHLER, GUSTAV. A Bohemian musical conductor and composer, died May 19, 1911. He was born at Kalischt, Bohemia, in 1860. He studied at the University of Vienna and received the degree of doctor of philosophy. His tastes, however, were for music and he began the study of composition under Brückner. He also studied alone, and began his active musical career as conductor at the opera at Cassel. He later went into the Deutscher Theater in Prague and was successively conductor at Leipzig, Budapest, and Hamburg. He finally

became conductor at the Imperial Opera House at Vienna and under his direction the performances reached a higher point of excellence than they had maintained in years. From Vienna Mahler was called to conduct performances at the Metropolitan Opera House in New York City. This was in the last year in which Heinrich Conried acted as director of this house. He remained during the first year of the new administration under Gatti-Casazza and then became conductor of the reorganized Philharmonic Orchestra. His production of German operas at the Metropolitan Opera House was especially notable, but he also produced such well-known operas as *Fidelio*, *Don Giovanni*, and others. During the second year he made a famous production of *Le Nozze di Figaro*, in which the cast included Mmes. Sembrich, Eames, and Farrar, and MM. Scotti and Didur. Of more than ordinary interest was the production of Tchaikowsky's *Pique Dame*, which had originally been given under Mahler's direction at the Imperial Opera House in Vienna twelve years before. This production ended his connection with the Metropolitan Opera House. He conducted the Philharmonic Orchestra for two years, but for a portion of time during the second season he was too ill to preside at the concerts. As a composer he was the author of eight symphonies which were produced at many European musical festivals. He also wrote many songs and composed the music to a play called *Das klagende Lied*. His eighth symphony was produced in Munich with great ceremony in October, 1910.

MAINE. POPULATION. The Thirteenth Census, taken in 1910, showed a population in the State in that year of 742,371, as compared with 694,466 in 1900, an increase of 47,905, or 6.9 per cent. in the decade. The principal cities with their population in 1910 and 1900 are as follows: Portland, 58,571 (50,145); Lewiston, 26,247 (23,761); Bangor, 24,803 (21,850); Auburn, 15,064 (12,951); Augusta, 13,211 (11,683); Waterville, 11,458 (9,477).

AGRICULTURE. The Thirteenth Census included statistics of agriculture. The information gathered is of date April 15, 1910. The total number of farms in the State on that date was 60,016, as compared with 59,299 in 1900. The land in the State devoted to farming amounted to 6,296,859 acres, while the improved land in farms amounted to 2,360,657 acres. The average number of acres per farm was 104.9. The total value of farm property was \$199,271,998, as compared with a value of \$122,410,904 in 1900, an increase of 62.8. The average value of land rose from about \$8 an acre in 1900 to nearly \$14 an acre in 1910. Of the farms in the State, 57,453 were operated by owners and managers, and 2,563 operated by tenants. Of the 56,454 owned farms, 41,309 were free from mortgage and 14,948 were mortgaged. The value of domestic animals, poultry and bees on April 15, 1910, was \$25,161,839, as compared with a value in 1900 of \$17,106,034, an increase of 47.1 per cent. The cattle on the farms of the State numbered 256,523, with a value of \$7,784,384; horses and colts, 107,574, with a value of \$14,364,756; mules, 358, valued at \$72,446; swine, 87,156, valued at \$948,094; sheep and lambs, 206,430, valued at \$813,976. The number of fowls of all varieties was 1,735,962, valued at \$1,131,921. Of the farmers of the State, 55,041 were native white, 1973 were foreign-born

white, and 29 were negro and other non-white.

The following table gives the acreage, production, and value of the various crops in 1910 and 1911:

	Acreage	Prod., bu.	Value
Corn1911	18,000	792,000	\$713,000
1910	17,000	782,000	555,000
Wheat1911	3,000	63,000	69,000
1910	3,000	89,000	91,000
Oats1911	135,000	5,198,000	2,807,000
1910	130,000	5,512,000	2,646,000
Potatoes ..1911	118,000	21,240,000	16,355,000
1910	133,000	29,260,000	12,289,000
Hay1911	1,400,000	a 1,640,000	22,176,000
1910	1,400,000	1,750,000	22,400,000

a Tons.

MINERAL PRODUCTION. The mineral products of the State in 1910 were valued at \$4,713,123. Of this, stone, of which Maine was one of the largest producers, was valued at \$2,315,730; lime, \$893,599; clay products, \$599,881; mineral waters, \$404,539; slate, \$249,005.

EDUCATION. The total number of children between the ages of 5 and 21 years in the State in 1910 was 213,123. The number enrolled in all the schools was 132,592. Of these, 52,114 were in rural schools, 44,763 in village schools, and 35,715 in city schools. The total expenditures for the year amounted to \$1,875,605. The average salary of male teachers per month was \$91.06. The average salary of female teachers per week was \$12.03.

FINANCE. The report of the treasurer for the fiscal year ending December 31, 1910, showed receipts in that year of \$4,030,356, and expenditures of \$3,970,457, leaving a cash balance at the end of the year of \$135,722. The total valuation of property in 1910 was \$428,252,465, and the total assessed tax was \$2,143,156. The rate of taxation was 5 mills.

CHARITIES AND CORRECTIONS. The charitable and correctional institutions under the control of the State include the Eastern Maine General Hospital at Bangor, the Maine Institution for the Blind at Portland, Maine General Hospital, at Portland, School for the Deaf, School for the Feeble-minded, Home for Friendless Boys, Northern Maine General Hospital, at Eagle Lake, Central Maine General Hospital, and the State prison at Thomaston. The total expenditures for the maintenance of these and other institutions not directly under State control was \$199,353.

POLITICS AND GOVERNMENT

The legislature was in session in 1911 and passed a number of important measures, which are noted in the paragraph *Legislation* below. On January 5 Frederick W. Plaisted was inaugurated governor of the State, the first Democratic governor in thirty years. With Governor Plaisted was elected in 1910 a Democratic legislature, pledged to resubmit to the people the prohibitory amendment to the State constitution. The campaign on this question made the year a memorable one in the political history of the State. The legislature promptly passed a measure which, on March 2, was signed by Governor Plaisted submitting the question of the repeal of the prohibition amendment to the people. The most bitter and aggressive campaign in the history of the State followed. While sentiment for the repeal of the amendment was strong in

the cities, where it had been found well-nigh impossible to enforce the law, the voters of the country districts were in favor of its retention, and speakers from outside the State were employed to make a canvass. By September 11, the date on which the public election was to be held, public sentiment was thoroughly aroused on both sides of the question. The vote cast was in some respects the most remarkable ever cast in an election of the State. The first reports indicated that the law had been repealed by a popular majority of about 900 votes. Later returns indicated, however, that this majority for repeal had been changed to a small majority for the retention of the amendment. Still later reports left the question in dispute. An official recount was necessary and this appeared to indicate that the amendment had been repealed by 26 votes. It was, however, a matter of testimony and record on the part of the town clerks of Limestone, Topsfield, and Matinicus, and one or two other small towns that clerical errors had been made by the town clerks in the transmission of their reports by which the figures had been exactly reversed; that is, the yes votes had been returned as no, and the no votes as yes. While the face of the returns showed an apparent majority for repeal, it was a matter of record in the towns that the actual majority in the State with these errors corrected was over 700 "no." Several hearings were given by the governor and council at which the town clerks appeared, and after reference to legal authority the errors were corrected and the vote finally declared to be 60,095 for repeal, and 60,853 for retention of the amendment. The vote for the repeal of the law was strongest in the cities, twenty cities of the State returning a total vote of nearly 2 to 1 for the repeal of prohibition. With the single exception of the city of Calais, each city returned a majority for repeal. In Bangor, Lewiston, Biddeford, Eastport, Ellsworth, and Oldtown the majority for repeal was over 3 to 1, and in Portland, Augusta, Waterville, Bath, and other cities it was very large. Governor Plaisted in his report on the final settlement of the vote declared that the resolution which submitted the repeal amendment to the people required the reassembling of the legislature in special session to receive the report of the governor and council. He declared further that when this legislature met it should revise the law regarding the conduct of elections so that the evils revealed by this election might not recur. He declared also that an amendment to the constitution should be submitted to the popular vote which "will permit the enactment of laws concerning the liquor traffic which are capable of honest enforcement because sustained by the sentiment of the several communities to which they will be applied." A special session of the legislature was thereupon called by Governor Plaisted to convene March 20, 1912.

On the same special election September 11, the people voted also, in referendum on a direct primary law, known as the Davies Direct Primary elections. This primary election law, which was invoked by the initiative, with over 12,000 signatures and submitted to popular vote under the initiative and referendum, was confirmed by popular vote on September 11, by a vote of 65,810 for, and 21,744 against. In October Governor Plaisted proclaimed it a law, thus superseding the direct primary law enacted in the Seventy-fifth legislature in 1911. The differ-

ence between these two laws was very marked. The legislative law applied only to candidates for offices of governor, representatives in Congress, and United States senators. The so-called Davies direct primary applies not only to these above mentioned offices, but also to all other candidates for State and county office. It also includes a stringent corrupt practices provision, determining not only the amount of money which shall be expended by candidates for public office, but also the methods by which it shall be employed and penalties for infraction of the provision of this law. At the same special election of September 11 the people voted on the question of whether or not Augusta, when it had reached a population of 40,000 or more should become the permanent capital of Maine, 59,678 yes; 49,294 no. A fourth question settled by popular vote in referendum on this date was in favor of granting an increased debt limit to cities of 40,000 or more population. This was especially intended to meet the requirements of the city of Portland, the only city in Maine having a population of 40,000. The vote stood 39,242 "yes"; 38,712 "no."

The expiration of the term of Senator Hale made it necessary for the legislature to choose his successor, and on January 17, Charles F. Johnson of Waterville was elected, receiving 67 votes on the first ballot. Twenty-one votes were cast for Obadiah Gardner and 17 for William Pennell. This election gave to Maine the first Democratic senator in many years. The vacancy caused by the death of Senator Fryo (q. v.), gave opportunity for the State to be represented by two Democratic senators. On September 23 Obadiah Gardner was appointed to succeed Senator Frye by Governor Plaisted.

On March 30 the legislature ratified the income tax amendment, reversing action previously taken.

LEGISLATION. The important measures passed at the legislative session of 1911 included the following: A statute simplifying practice in equity; a measure establishing better protection of forests from fires; a corrupt practices act; the exemption of real estate mortgages from taxation, and the establishment of direct primaries.

STATE OFFICERS: Governor, Frederick W. Plaisted; Secretary of State, A. I. Brown; Treasurer, P. P. Gilmore; Adjutant-General, Elliot C. Dill; Auditor, Lamont A. Stevens; Attorney-General, Warren C. Philbrook; Superintendent of Education, Payson Smith; Insurance Commissioner, Beecher Putnam; Commissioner of Agriculture, A. W. Gilman; Commissioner of Public Lands, E. E. Ring—all Republicans except Plaisted and Stevens, Democrats.

JUDICIARY. Supreme Judicial Court: Chief Justice, L. A. Emery; Associate Justices, L. C. Cornish, Albert M. Spear, W. P. Whitehouse, G. E. Bird, Albert R. Savage, A. W. King, and Henry C. Peabody—all Republicans except Bird; Clerks, C. F. Sweet, C. W. Jones, L. Barton—all Republicans except Barton.

STATE LEGISLATURE IN 1911: Senate, Republicans, 9; Democrats, 22; House, Republicans, 65; Democrats, 86; joint ballot, Republicans 74; Democrats, 108; Democrats majority, Senate, 13; House, 21; joint ballot, 34.

The representatives in Congress will be found in the article UNITED STATES, section Congress.

MAINE, RAISING OF THE. The work of uncovering the wreck of the U. S. S. *Maine* in

Photograph by Underwood & Underwood, N. Y.

REMOVING THE WRECK OF THE U. S. S. "MAINE," HAVANA HARBOR
SHOWING THE COFFERDAM BUILT AROUND THE WRECK

Havana harbor, begun in 1910, was carried to a successful conclusion during the year 1911 by engineering officers of the United States army under the direction of Col. William M. Black, corps of engineers. The method employed was one of considerable originality, and its successful outcome was doubted in many quarters. The plan adopted was to enclose the wreck, which lay in about 35 feet of water, with a cofferdam built of sheet steel piling, this cofferdam consisting of cylinders 40 and 50 feet in diameter which were filled with mud and sand dredged from the harbor. After the wreck was surrounded by this construction, which was additionally strengthened by stone riprap, the enclosed area was pumped dry, and the mud removed so that towards the end of the year it was possible to make a complete study of the wreck. This was undertaken by a joint board of army and navy officers, and a complete report was submitted to the secretary of the navy. This report fully sustained the contention of the American navy officers that the battleship was destroyed by an outside explosion, and is summarized in the following official statement issued by the secretary of the navy on December 8:

"The board finds that the injuries to the bottom of the *Maine* were caused by the explosion of a charge of a low form of explosive exterior to the ship between frames 28 and 31, Strake B, port side. This resulted in igniting and exploding the contents of the six-inch reserve magazine, A-14-M, said contents including a large quantity of black powder. The more or less complete explosion of the contents of the remaining forward magazine followed. The magazine explosions resulted in the destruction of the vessel."

The joint army and navy board making this report consisted of Rear-Admiral Charles E. Vreeland, United States navy, chairman; Commander Joseph Strauss, United States navy, explosive and ordnance expert; Naval Constructor William B. Ferguson, who represented the navy at Havana during the uncovering of the wreck; Chief Constructor Richard M. Watt, head of the bureau of construction and repair, and Lieut.-Col. William M. Black, United States army, of the engineer corps.

In reaching its decision the board made a most careful examination of the fragments of the hull, in the course of which all the twisted pieces were identified by comparison with the original plans. Naval Constructor Ferguson made special studies in great detail and constructed a model in which the framing, plating, and other structural features of the battleship were represented, and the effect of the explosion shown. The concrete evidence afforded by the wreck was systematically and orderly arranged, so that the proof of the external explosion was beyond question. The most important item in the chain of proof was an incurred bottom plate, which was found folded in and back in such a way as only to have resulted from the explosion of a low explosive, possibly a barrel of black powder which had been placed below the ship and exploded by contact with the bomb. Such an extemporized mine easily could have been placed in the vicinity of the battleship on a dark night, and would have sufficed to cause the destruction of the ship. Had it been a high explosive, the effect of the explosion would have been to have made a clear hole in the ship's bottom and not to distribute its force over about 200 square feet,

as was found when the bottom was examined. In other words, the mine was directly beneath the point indicated in the official report, and the plate immediately above was torn loose and blown inward to the rear until it was folded back. Directly above this was the 6-inch magazine referred to, which contained black powder used for saluting purposes. This was ignited and in turn exploded the forward magazine, so that the two distinct explosions described by the survivors of the disaster were accounted for. At the end of the year the wreck, while entirely exposed, had not been removed, but it was contemplated within a few months to float the least damaged part of the ship, take it off shore and sink it in deep water. It was decided to distribute such features as remained intact, like the turret and the military mast to the various parks and cemeteries, as Havana and Arlington, and minor relics to historical and other museums.

MAINE, UNIVERSITY OF. An institution of higher education, founded in 1865 at Orono, Me. The enrollment in the various departments in 1911-12 were as follows: College of agriculture, 198; college of arts and sciences, 117; college of law, 109; college of technology, 295; summer term and special courses, 172. The faculty numbered 101. During the collegiate year Robert Judson Aley became president of the university; Leon S. Merrill became dean of the college of agriculture; M. A. Chrysler became professor of biology; E. F. Hitchings became professor of horticulture; G. E. Simmons became professor of agronomy, and A. J. Jones became professor of education. The productive funds of the university amounted to \$218,300. The university receives from the State \$100,000, and from the federal government, \$50,000 for agriculture and \$30,000 for the experiment station. The total income from all sources amounted to \$84,543. The library contains about 45,000 volumes. The president is Robert Judson Aley.

MALLALIEU, WILLARD FRANCIS. An American bishop of the Methodist Episcopal Church, died August 1, 1911. He was born at Sutton, Mass., in 1828, and graduated from Wesleyan University in 1857. In the following year he entered the New England Conference of the Methodist Episcopal Church and became pastor of the church at Grafton, Mass. He was in succession pastor of churches at Chelsea, Lynn, Charlestown, and Boston. In 1875 he studied and traveled in Europe. On his return he became pastor of the Bromfield Street Church in Boston. In 1882 he was chosen presiding elder of the Boston district and in 1884 was elected bishop. He was a delegate to three national conferences and served as president and chairman of the executive committee of the General Conference commission on aggressive evangelism. He was a voluminous writer for reviews and magazines and was the author of *The Why, When and How of Revivals* (1901); *The Full-*

ness of the *Blessing of the Gospel of Christ* (1903); and *Words of Cheer and Comfort*.

MALTA. A Mediterranean island; a British crown colony. The islands of Gozo (24½ sq. miles) and Comino, with several islets, belong to the colony; total area of colony, 117 sq. miles. Total civil population (April 2, 1911), 211,473; military population, 9023 (males and females). Capital, Valletta, with (1911) 22,882 inhabitants. Imports and exports for year ending March 31, 1911, £2,356,043 and £863,429 respectively. A large transit trade is carried on. Vessels entered at the port of Valletta, 3059, of 4,329,301 tons. Railways, 7½ miles. There are telephone but no telegraph lines. Revenue (1910-11), £441,444; expenditure, £467,373; debt, £79,115. Governor and commander-in-chief in 1911, Gen. Sir H. L. M. Rundell. Malta is the headquarters and chief coaling station of the Mediterranean fleet.

MALTA FEVER. Largely through the efforts of Gentry and Ferenbaugh of the United States army medical corps, it was learned that Malta fever has existed for a long time in Texas, being known in various localities under such names as goat fever, dust fever, Rio Grande fever, etc. The disease occurs almost exclusively among goat herders and their families. These people become infected either by drinking goats' milk or inhaling the dust from the bedding grounds which surround their homes. The herds consist almost entirely of pure-blooded Angora goats and are raised for the mohair which they produce. The Angora goats were first imported in 1867 from Asia Minor. There are also a number of Spanish and Maltese goats, and recently some have been imported from South Africa, where it is known that Malta fever exists. Altogether it is estimated that there are 175,000 goats in Edwards county, Tex., the principal goat-raising section of the State. Gentry and Ferenbaugh studied the disease in men and also examined 128 goats selected from different herds. About 20 per cent. of the animals examined showed the presence of the disease. Goats may harbor the infective organism *Micrococcus melitensis* without giving evidence of sickness themselves. Malta fever is a disease of long duration, characterized by continued fever, profuse perspiration, constipation, frequent relapses, rheumatic or neuralgic pains, swelling of the joints, or orchitis. The mortality, however, is low. The first clinical description of the disease was given by Marston in 1861. In 1887 Colonel Bruce discovered the specific bacterium, and in 1897 Wright and Semple applied the method of serum agglutination to the diagnosis of the fever. In human beings: the micrococcus is excreted in the urine in a considerable proportion of cases, and this may be a means of conveying the disease from place to place, as well as of local dissemination.

MANANGS. See ANTHROPOLOGY.

MANCHESTER AQUEDUCT. See AQUEDUCTS.

MANCHURIA. A Chinese dependency, lying east of Mongolia and Pechili and between Korea and the Amur River. Capital, Mukden.

Estimated area, 363,610 sq. miles. Estimates of the population have varied greatly. The official Chinese estimate of 1902 was 16,000,000; the figure based on the Chinese household census of 1910 is 14,917,000 (see CHINESE EMPIRE, para-

graph *Area and Population*). The Manchu population has been largely absorbed by Chinese immigration, particularly in the south. Japanese settlers (1910), 24,996 (exclusive of about 30,000 in Kwantung). Mukden has over 158,000 inhabitants; Kuanchengtzu (Changchun), 80,000; Ying-tse (sometimes called Newchwang, at the mouth of the Liao), 60,000; Newchwang (30 miles up the Liao), 50,000; Liaoyang, 40,000; Tsitsihar, 30,000.

The principal agricultural products are soy beans, kafir corn, millet, barley, corn, and tobacco. The most important is the soy bean crop, which provides most of the Chinese bean export, Manchurian commerce being included in that of the empire. No official returns of acreage and yield are available. Coal and iron ore are worked, and other minerals occur.

In 1911 there were in operation about 2150 miles of railway. There are three connecting systems though separate in management: The Chinese Eastern Railway (Russian), the South Manchurian Railway (Japanese), and the Imperial Railways of North China (Chinese). For details, see CHINESE EMPIRE, paragraph *Communications*.

Figures for revenue and expenditure later than 1910 are not available. In November of that year, the following figures by provinces were reported: Feng-tien, 16,180,000 taels revenue and 15,520,000 expenditure; Kirin, 8,480,000 and 9,540,000; Helungkiang, 540,000 and 551,000. Manchuria is administered by a governor-general appointed by the Chinese government (Tchao Ehr-siun in 1911). Russian "interests" extend from the north, and Japanese from the south, to Kuanchengtzu. See KWANTUNG.

MANDERSON, CHARLES F. An American soldier and former senator from Nebraska, died September 28, 1911. He was born in Philadelphia in 1837 and received his education in the schools of that city. In 1856 he removed to Canton, Ohio, where he was admitted to the bar in 1859. In 1860-61 he was city attorney of that city. He enlisted in the Union army in 1861 as private, but filled all grades, including brigadier-general, resigning in April, 1865, with the latter grade. He participated in nearly all the battles of the Middle West and was severely wounded at Lovejoy's Station, Ga. At the close of the war he resumed the practice of law, and was twice elected prosecuting attorney of Stark county, Ohio. In 1869 he removed to Omaha. He was a member of the Nebraska constitutional convention in 1871 and in 1874 and was city attorney of Omaha for over six years. In 1883 he was elected United States senator and served in the Senate until 1895. In the Fifty-first and Fifty-second Congresses, he was president pro tempore of the Senate. On the expiration of his service in 1895 he became general solicitor for the Burlington system of railways. He was the author of *The Twin Seven Shooters* (1902), and of many speeches and addresses on political, legal, and war topics. He was president of the American Bar Association in 1900-1901.

MANHOOD SUFFRAGE. See GREAT BRITAIN, *History*.

MANITOBA. A province of the Dominion of Canada. Capital, Winnipeg (population, preliminary returns, census of June 1, 1911, 135,430). Area, 73,732 sq. miles; the final returns of the 1911 census showed a population of

455,614, as compared with 255,211 in 1901, or an increase of 78.52 per cent. The province is administered by a lieutenant-governor (Sir Douglas Colin Cameron, appointed in 1911) appointed by the governor-general of Canada; aided by an executive council (responsible ministry), and a unicameral legislative assembly of 41 members elected for four years. Premier (1911), Rodman P. Roblin. See CANADA.

MANŒUVRES. See MILITARY PROGRESS.

MANSSELL, HENRY. An American clergyman and missionary, died November 9, 1911. He was born at Youngstown, Ohio, in 1835, and graduated from Allegheny University. After studying theology he entered the Methodist ministry. He preached for three years in Pennsylvania and in 1861 went to India, as one of half a dozen missionaries under the auspices of the Methodist Episcopal denomination. He became principal of the Theological Institute at Bareilly, India, and presiding elder of several districts in northwest India. During his stay in India he either translated or wrote forty-two books for the use of the natives. Among these were the works of *Josephus*, the *Bible*, and *Pilgrim's Progress*.

MARCH, FRANCIS ANDREW. An American philologist, died September 9, 1911. He was born at Milbury, Mass., in 1825 and graduated from Amherst College in 1845. He studied law and in 1850 was admitted to the New York bar, but he was compelled by ill health to give up practice. In 1856 he was appointed professor of English language and comparative philology at Lafayette College and remained in this position until 1906. He was a pioneer in the philological study of English classics and the historical study of the English language. He was president of the American Philological Association for two terms and of the Spelling Reform Association from 1876 to 1905 and of the Modern Language Association for two years. He was vice-president of the New Shakespeare Society of London. He was chairman of the commission of the State of Pennsylvania on amended orthography. He served as consulting editor on the Standard Dictionary and was the author of many books on English. Among these are: *Method of Philological Study of the English Language* (1865); *Comparative Grammar of the Anglo-Saxon Language* (1870); *Anglo-Saxon Reader* (1870), and an *A-B-C Book* (1880). He edited *Latin Hymns, with English Notes*, and a *Thesaurus-Dictionary of the English Language* with his son, F. A. March, Jr., and contributed many articles to encyclopædias, periodicals, and the transactions of learned societies on philosophical and philological subjects, particularly Anglo-Saxon, and on literature, particularly Shakespeare and American literature. He was given the degree of L. H. D. by Columbia University in 1887, D. C. L. by Oxford University in 1896, and Litt. D., by Cambridge and Princeton universities. From 1896 to the time of his death he was

professor emeritus of philology at Lafayette College.

MARIANNE, or LADRONE, ISLANDS. See GERMAN NEW GUINEA.

MARIA PIA, QUEEN DOWAGER OF PORTUGAL, died July 5, 1911. She was born in 1847 at Turin, the daughter of Victor Emmanuel II. of Italy. At the time of her birth, however, he was only King of Sardinia. In 1862 she was married to King Luiz I. of Portugal. She became the mother of King Carlos I., who ascended the throne of Portugal October 9, 1889, on the death of his father. Queen Maria's life was one of much sorrow. Her brother, King Humbert of Italy, was assassinated at Monza in 1900. On February 1, 1908, her son, King Carlos, and Prince Luiz, the heir to the throne, were shot down by assassins in Lisbon. After the accession of King Manuel she lived in close retirement, devoting much of her time to charitable works. When King Manuel was forced to flee from Portugal as the result of the revolution in 1910, Queen Maria went to live with her sister, Princess Clotilda, near Turin, Italy. Princess Clotilda died eleven days previous to the death of Queen Maria.

MARINE BIOLOGICAL LABORATORY. See BIOLOGICAL LABORATORY.

MARIOTTE. See NAVAL PROGRESS, Submarines.

MARSHALL ISLANDS. A German dependency consisting of two chains of lagoon islands in the Pacific and administered under the German New Guinea government. European population (1910), 179; other, 15,000. Imports (1909), 1,610,238 marks; exports, 5,217,418 (phosphate, 4,486,200). The commissioner (1911, Dr. Kersting) resides at Jaluit.

MARTINE, JAMES EDGAR. United States senator (Democrat) from New Jersey. He was born in New York City in 1850 and was educated in the public schools. He engaged in farming and never held public office until he became senator. At the primary election for the United States senator in November, 1910, he received 48,458 votes to 39,554 for Charles E. Stokes, 38,818 for Charles N. Fowler, and 36,240 for Franklin Murphy, Republicans. He was, in accordance with the primary law of the State, therefore elected United States senator by the legislature (see NEW JERSEY). His term of service expires in 1917.

MARTINIQUE. An island of the Lesser Antilles; a French colony. Area, 381 sq. miles; population (1906), 182,024. Capital, Fort-de-France (27,015 inhabitants). Pupils in primary schools (1909), 13,797. Area under sugar-cane (1909), 19,000 hectares; cacao, 1560. Coffee, vanilla, and tobacco are also grown. Sugar works, 15. Total imports (1909), 16,160,898 francs; exports, 22,111,719. Vessels entered (1909), 342, of 335,230 tons. There is external cable as well as internal telephonic communication; there are no railways. Post offices, 53. The local budget balanced (1911), at 4,645,000 francs (French contribution, budget of 1911, 2,632,272). Debt on January 1, 1911, 4,511,000 francs Governor (1911), M. Fourreau.

MARYLAND. POPULATION. The Thirteenth Census, taken in 1910, showed the population of the State in that year as 1,295,346, as compared with 1,188,044 in 1900, an increase of 107,302 or 9 per cent. in the decade. The prin-

cipal cities with their population in 1910 and 1900 are as follows (the figures in parentheses are for 1900): Baltimore, 558,485 (508,957); Cumberland, 21,830 (17,128); Hagerstown, 16,507 (13,591); Frederick, 10,411 (9296).

AGRICULTURE. The Thirteenth Census, taken in 1910, included statistics of agriculture in the State. The figures given are of date of April 15, 1910. On that date the number of all farms in the State was 48,923, as compared with 46,012 in 1900. Out of an approximate land area of 6,362,240 acres, 5,057,140 acres was land in farms. The improved land in farms was 3,354,767 acres. The average number of acres per farm was 103.4, as compared with 112.4 in 1900. The total value of farm property was \$286,167,028 in 1910, as compared with \$204,645,407 in 1900, or an increase of \$81,521,621. The average value per farm, including equipment, was \$5849. Of the 48,923 farms in the State in 1910, 34,507 were operated by owners and managers, and 14,416 by tenants. In 1900 there were 30,565 farms operated by owners and managers and 15,447 by tenants. Of the 33,519 farms owned by operators in 1910, 21,084 were free of mortgage while 12,127 were mortgaged. Native white farmers operated 40,669 farms; 1882 were operated by foreign-born whites and 6372 by negroes and other non-whites. One-eighth of the Maryland farmers are negroes.

The total value of the domestic animals, poultry, and bees of the farms of the State on April 15, 1910, was \$32,570,134, as compared with a value of \$20,855,877 in 1900. Cattle numbered 287,751, with a value of \$7,869,526; horses and colts, 155,438, valued at \$16,787,467; mules, 22,667, valued at \$3,043,581; swine, 301,583, valued at \$1,765,857; sheep and lambs, 237,137, valued at \$1,142,965. The acreage, production, and value of the principal crops in 1910 and 1911 are shown in the following table:

	Acreage	Prod., bu.	Value
Corn1911	670,000	24,455,000	\$15,407,000
.....1910	660,000	22,110,000	12,824,000
Wheat1911	605,000	9,378,000	8,534,000

a Tons. b Pounds.

MINERAL PRODUCTION. The mineral products of the State in 1910 were valued at \$15,440,207. Of this the coal produced was valued at \$5,835,058; pig iron, \$5,230,824; clay products, \$1,848,273; lime, \$377,236. Other products are mineral waters, and slate and feldspar.

The production of coal in the State in 1910 was 5,217,125 short tons, with a value of \$5,835,058. The State benefited indirectly from the six months' strike of the miners in the Central and Mississippi River Valley States. The production of coal in the State had shown a decline in the last two years as a result of the approaching exhaustion of the famous "big vein." As a result of conditions noted above, however, there was an increase over the product of 1909 of 1,193,884 tons. The coal mines of

the State in 1910 gave employment to 5889 men, who worked an average of 270 days. There were no labor troubles in the State during the year.

The iron ore mined in the State in 1910 amounted to 14,062 tons, valued at \$29,105, as compared with 23,888 tons, valued at \$46,786 in 1909.

MANUFACTURES. The Thirteenth Census included statistics of manufactures in the State. These figures cover the calendar year 1909. The following table gives a summary of the results of the census for the calendar years 1909 and 1904, with per cent. of increase from 1904 to 1909 and from 1899 to 1904:

	Number or amount		Increase 1	
	1909	1904	1909 1904	1904-1899-1904
Number of establishments	4,837	3,852	25.6	—0.9
Persons engaged in manufactures	125,489	107,303	16.9	(2)
Proprietors and and firm members	5,376	4,506	19.3	(2)
Salaried employees	12,192	8,624	41.4	27.9
Wage earners (average number)	107,921	94,174	14.6	(3)
Primary h.p.	218,244	165,449	31.9	25.3
Capital	\$251,227,000	\$201,878,000	24.4	35.3
Expenses	\$285,955,000	\$216,917,000	31.8	18.3
Services	\$9,053,000	\$4,988,000	31.3	14.6
Salaries	\$13,617,000	\$8,444,000	54.0	29.2
Wages	\$45,436,000	\$36,144,000	25.7	11.5
Materials	\$198,049,000	\$150,024,000	32.7	16.0
Miscellaneous	\$27,853,000	\$21,905,000	27.2	48.2
Value of products	\$15,669,000	\$243,376,000	29.7	15.3
Value added by manufacture (value of products less cost of materials)	116,620,000	93,352,000	24.9	14.2

1 A minus sign (—) denotes decrease. 2 Figures not available. 3 Less than one-tenth of 1 per cent.

It will be seen from this that there was a considerable increase in the number of establishments in the five-year period, 1904-1909, with a corresponding increase in the value of the product. The industry employing the largest number of wage-earners was the men's clothing industry, in which 19,784 persons were employed. In the business of canning and preserving were employed 8613 wage-earners, and in the industries connected with lumber and timber products, 7003. The copper, tin, and sheet-iron industries employed 5275, and in the manufacture of foundry and machine-shop products were employed 4798. Other industries employing over 1000 men were tobacco manufactures, cars, and general shop construction by steam railroad companies, printing and publishing, cotton goods, including cotton small wares, women's clothing, furniture, and refrigerators, straw hats, and marble and stone work. The industry in which the largest capital was invested was the clothing industry, \$36,921,000. In the manufacture of copper, tin, and sheet-iron products was invested \$16,909,000; in canning and preserving, \$13,709,000; in slaughtering and meat-packing, \$13,683,000, and in lumber and timber products, \$12,134,000. The manufacturing industry of the State as a whole showed a greater development during the five-year period, 1904-1909, than for the preceding

five-year period, 1899-1904. The persons engaged in manufactures numbered 125,489, of whom 91,239 were males and 34,250 were females. The wage-earners under sixteen years of age numbered 6548. Almost three-fourths of the total number of wage-earners employed in the industries of the State were in establishments where the prevailing hours of labor per week ranged from 54 to 60, or from 9 to 10 hours a day, and of these over one-half were employed 60 hours per week.

EDUCATION. The total school population between the ages of five and twenty years on June 30, 1911, was 415,908. The number of different pupils enrolled during the year was 237,119. The average daily attendance was 145,349. The number of schools in counties was 2394, while in the city of Baltimore there were 108. The teachers in the counties numbered 3819 and in Baltimore 1830.

FINANCE. According to the report of the treasurer for the fiscal year ended September 30, 1910, there was a cash balance in the treasury at the beginning of 1910 of \$1,328,069. The receipts during the year amounted to \$5,875,598. The disbursements amounted to \$6,328,557, leaving a cash balance of \$875,111 at the end of the fiscal year. The State debt amounted at the end of the fiscal year to \$7,529,926, an increase of \$811,000 during the year.

POLITICS AND GOVERNMENT

The State legislature did not meet in 1911, as the sessions are biennial and the last was held in 1910. The political history of the State was of unusual interest and importance. Municipal and State elections were held. For the nomination of State officers the first trial of the new State-wide primary law was made. Municipal primaries were held on April 4 in Baltimore. The contest was unusually bitter and it resulted in the victory of the organization of both parties. Interest centred in the fight for the Democratic nomination for mayor. James H. Preston was the candidate for the nomination against Mayor J. Barry Mahool. Mr. Preston had the support of the organization, but was bitterly opposed by the newspapers of the city as being the mere tool of the political managers. In spite of this he was nominated by a majority of over 9000, the total vote being 29,978 for Preston, against 20,855 for Mahool. In the Republican primaries E. Clay Timanus received the nomination. He had the support of the Republican organization and was opposed by Charles H. Torsch. He made his fight on the issue of anti-bossism. Mr. Timanus won by a vote of 17,843 to 4594. In the municipal elections held on May 2 Mr. Preston was elected.

On August 26, the first election held under the new primary law of the State, resulted in the nomination of Arthur P. Gorman as the Democratic candidate for governor, and on September 7 he was declared nominated for the office by the State convention. Phillips Lee Goldsborough was nominated by the Republicans without a contest. While the Democrats are numerically stronger in Maryland than the Republicans, the party was more or less divided on account of factional troubles. The Republicans, on the contrary, were united. Many Democrats opposed Mr. Gorman on account of his supposed connection with the political machine of Baltimore, which was charged with having

practically nominated him. Frauds in the primary at which he was nominated, but which did not involve his nomination, were charged and a large number of election officers of both parties were indicted. The frauds were perpetrated against Thomas F. McNulty, an aspirant for the Democratic nomination for sheriff, and this caused the loss of many votes to the Democratic party. The election on November 7 resulted in the election of Mr. Goldsborough by a plurality of 3997 votes. The total vote cast was: Goldsborough, 106,392; Gorman, 103,395.

The grand jury for Baltimore city, which investigated the August primaries and indicted the election officials, desired to investigate also the spring primary. The law requires the ballot boxes to remain unopened for six months, but the grand jury not being able to begin the count at once got an order from the court for the election supervisors to keep the boxes sealed until the jury was ready for them. But when this order was signed the six months had elapsed and the boxes had already been emptied for use at the coming election. The election supervisors did not tell this to the court, leaving the impression that the boxes were intact. They did this with the assent of the Republican member, believing that it would have an effect on the election if the announcement were made. When it was discovered after the election that the boxes had been emptied there was some excitement.

While a Republican was elected governor at the November election, both houses of the legislature were Democratic by large majorities. In the time between the election and the meeting of the legislature on the 3d of January, 1912, there was much talk of depriving the governor of a large part of his patronage, but nothing was done.

In December, 1910, an ordinance was passed by the mayor and council of Baltimore providing for the segregation of negroes of that city. This measure provided that no white family should move into a block where the majority of the residents were negroes, and that no negro could occupy a residence in a block that was inhabited chiefly by white people. The object of the measure was to segregate the negroes and prevent them from residing in white neighborhoods. The question arose as to the constitutionality of the measure and it was decided by the city solicitor that it was valid. The ordinance therefore went into effect December 19, 1910. Suits were at once begun to test the law, and on February 4, 1911, Judges Harlan and Duffy handed down a decision which in effect declared the ordinance invalid. Thereupon the city council passed another ordinance even more stringent than the first. This not only prevents negroes from moving into blocks now totally inhabited by white persons, but does not allow them to have churches or places of amusement in white blocks. Unlike the former ordinance, it allows blocks in which white persons and colored persons are living to remain mixed until they shall become either totally inhabited by negroes or white persons. It also prohibits white persons from moving into blocks where the majority of the inhabitants are negroes. There has been acquiescence in this ordinance and it has not been questioned in the courts. The object of the ordinance was to prevent the deterioration in the value of

property which takes place when a negro family moves into a block exclusively inhabited by whites.

During the year Governor Crothers, Democrat, preferred charges of incompetence and misconduct against the board of police commissioners of Baltimore city, which had been appointed by himself. The trial before the governor created much feeling. It was protracted and expensive and the charges were finally dismissed by the governor.

On the 17th of January there was a great meeting at the Lyric Hall, and a dinner in the evening at the Fifth Regiment Armory, in memory of Andrew Jackson. Leading Democrats, governors, senators, and representatives, editors, and others came from many States. At the dinner there were more than one thousand guests at the tables. At this dinner Mr. Blackburn of Kentucky, at the request of Mr. O. P. Baldwin of the Baltimore *Sun*, first suggested Baltimore as the place for the Democratic national convention of 1912. Later on Baltimore was selected.

STATE OFFICERS, 1912. Governor, Phillips L. Goldsborough; Secretary of State, N. Winslow Williams; Treasurer, Murray Vandiver; Adjutant-General, Henry M. Warfield; Attorney-General, Edgar Allan Poe—all Democrats except Goldsborough.

JUDICIARY. Court of Appeals: Chief Judge, Andrew H. Boyd; Associate Judges, N. Charles Burke, William H. Thomas, John R. Pattison, Hammond Urner, John P. Briscoe, Henry Stockbridge, and James A. Pearce; Clerk, Caleb C. Magruder—all Democrats except Stockbridge and Urner, Republicans.

STATE LEGISLATURE, 1912. Democrats, Senate, 19; House, 63; joint ballot, 82. Republicans, Senate, 8; House, 40; joint ballot, 48. Democratic majority, Senate, 11; House, 23; joint ballot, 34.

The representatives in Congress will be found in the article UNITED STATES, section Congress.

MASON, FREDERICK. See LITERATURE, ENGLISH AND AMERICAN, *General Biography*.

MASSACHUSETTS. POPULATION. The Thirteenth Census, taken in 1910, showed the population of the State in that year as 3,366,416, compared with 2,805,346 in 1900, a gain of 561,070 or 20 per cent. in the decade. The principal cities with their population in 1910 and 1900 are as follows (the figures in parentheses are for 1900): Boston, 670,585 (560,802); Worcester, 145,986 (118,421); Lowell, 106,294 (94,969); Springfield, 88,926 (62,059); Lawrence, 85,892 (62,559); Brockton, 56,878 (40,063); Salem, 43,697 (35,956).

AGRICULTURE. The Thirteenth Census included statistics of agriculture. These are of date of April 15, 1910. On that date the number of farms in the State was 36,917, as compared with 37,715 in 1900, a decrease of 798, or 2.1 per cent. The land in farms was 2,875,941 acres, as compared with 3,147,064 in 1900, a decrease of 271,123 acres. The improved land in farms was 1,164,501, as compared with 1,292,132 in 1900, a decrease of 127,631 acres. The average acreage per farm was 77.9, compared with 83.4 in 1900. The value of farm property, including lands, buildings, implements, and machinery, domestic animals, poultry, and bees, was \$226,474,025, as compared with \$182,646,704 in 1900. The average value of all property per farm was \$6175, as compared with \$4843 in 1900.

The average value of land per acre was \$36.69, as compared with \$27.62 in 1900. Of the 36,917 farms in 1910, 33,938 were operated by owners and managers, 2979 were operated by tenants. Of the farms operated by owners, those free from mortgage numbered 18,768; mortgaged, 13,014. Of those managing and operating farms, 28,431 were native whites, 8362 were foreign-born whites, and 124 were negroes or other non-whites. The domestic animals, poultry, and bees on the farms in the State in 1910 were valued at \$20,741,386, as compared with a value in 1900 of \$15,798,464. The cattle numbered 252,416, valued at \$9,348,076; horses and colts, 64,283, valued at \$8,671,997; mules, 268, valued at \$43,385; swine, 103,018, valued at \$978,989; sheep and lambs, 32,708, valued at \$156,498. The acreage, production, and value of the principal crops in 1910 and 1911 will be found in the table below:

		Acreage	Prod., bu.	Value
Corn	1911	47,000	2,068,000	\$1,716,000
	1910	45,000	2,048,000	1,484,000
Oats	1911	8,000	280,000	162,000
	1910	8,000	284,000	142,000
Rye	1911	3,000	48,000	46,000
	1910	3,000	51,000	48,000
Potatoes ..	1911	25,000	2,325,000	2,232,000
	1910	25,000	3,125,000	2,188,000
Hay	1911	584,000	a 631,000	14,513,000
	1910	590,000	755,000	14,420,000
Tobacco ..	1911	5,600	b 9,240,000	1,848,000
	1910	5,500	9,515,000	1,427,250

a Tons. b Pounds.

The mineral products of the State in 1910 were valued at \$6,077,370. Of this, stone, of which Massachusetts is one of the largest producers, was valued at \$3,539,794; clay products, \$1,707,413; lime, \$758,739; mineral waters, \$241,949.

CHARITIES AND CORRECTIONS. All the charitable institutions of the State fall under the supervision of the State Board of Charities, and all correctional institutions are supervised or controlled by the Board of Prison Commissioners.

The charitable institutions, with their average population in 1911, were as follows: The State Farm, 2660; the State Infirmary, 2201; the Lyman School, 324.3; Industrial School for Boys, 115.45; the State Industrial School for Girls, 274; the Massachusetts Hospital School, 214.77; Rutland State Sanatorium, 345; Lakeville State Sanatorium, 158.81; North Reading State Sanatorium, 158.23; Westfield State Sanatorium, 156.8; Penikese Hospital (for lepers), 12.

Massachusetts, like other States, is still in a period of legislative uncertainty in its fight against tuberculosis. The four State sanatoria serve as hospitals for the relief of patients, but more especially as schools where the public learns how to combat this disease. The Rutland State Sanatorium is the first of its kind in the country. Its normal capacity is 350 patients. During the past year the daily average number of patients has been five under the normal. The greatest number at any one time during the year exceeded the normal by four. The three new sanatoria, namely the Lakeville State Sanatorium, the North Reading State Sanatorium, and the Westfield State Sanatorium, have each a normal capacity of 150 patients. The daily average number of persons at each exceeded the normal by 8.81, 8.23, 6.8,

respectively. Grants of money are being sought with a view to extending the normal capacity to a point beyond this excess. A law was passed in 1911 subsidizing cities and towns for the care of tuberculosis cases wherever a municipal or town hospital for contagious diseases should be established. This policy has been entered upon with a view to encouraging local effort in fighting the disease.

FINANCE. According to the report of the treasurer for the year ending November 30, 1910, there was a balance on hand December 1, 1909, of \$1,675,173. The net receipts during the year amounted to \$11,992,395 and the expenditures to \$13,481,137, leaving a cash balance on hand at the end of the fiscal year of \$2,186,431. The total bonded debt of the State at the end of the fiscal year was \$81,077,452.

POLITICS AND GOVERNMENT

The legislature met in 1911 and passed a number of important measures. These are noted in the paragraph *Legislation* below. On January 5 Eugene N. Foss was inaugurated governor of the State. Governor Foss was elected in November, 1910. The expiration of the term in the Senate of Henry Cabot Lodge made it necessary for the legislature to elect a United States senator. Senator Lodge was a candidate for reelection and on January 18 received sufficient votes to be reelected. The lower house of the legislature on April 17 ratified the income tax amendment, but this was defeated on May 3 in the Senate by one vote. The House on June 27, by a vote of 125 to 75, refused a proposed amendment to the constitution for the initiative and referendum. The Democrats in the House supported the amendment as a unit.

State elections were held in 1911, as well as several municipal elections. On January 10 elections were held in Boston for members of the city council and other minor officers. This election was the second under the new city charter by which a mayor is chosen for four years and the city council of nine for terms of one, two, and three years each. There was little interest shown in the election. Out of a total registration of 112,000, only 52,000 votes were cast. The city voted for license by 36,855 to 17,420.

The chief political interest in the year centered in the election of governor. Governor Foss was a candidate for reelection. The leading Republican candidate was Louis A. Frothingham, who had previously served as lieutenant-governor of the State. The nominations were made under the new primary law, by which all State officers are nominated by direct nomination. The primary elections for nominations were held on September 30. These resulted in the nomination of Governor Foss by the Democrats and Mr. Frothingham by the Republicans. These nominations were afterwards confirmed by State conventions of the two parties. These conventions are purely formal under the new law. The only function of the convention is to adopt a platform. The Republican convention, held on October 4, indorsed the administration of President Taft and upheld the principle of protection. The Democratic convention, held on the same day, denounced the action of the Republican party in its attitude toward tariff revision, called for inquiries into the matter of employment of women

and children in the State, demanded a federal income tax, pledged the party to secure the constitutional amendment for initiative and referendum, and urged the adoption of the Oregon plan for the ballot for senatorial candidates at the State elections. A platform was adopted calling for the submission of the question of woman suffrage to a vote of the people. Recommendations were adopted calling for the development of seaports and inland waterways. The campaign which followed the conventions was very spirited. Although Governor Foss had been elected in 1910 by a large plurality, his election was attributed to special reasons which the Republicans believed would not again be prominent as factors in the election. Mr. Frothingham was popular throughout the State and his supporters were confident of his election. The vote, however, resulted in the reelection of Governor Foss by a plurality of 8102. The total vote was: Foss, 214,897; Frothingham, 206,795. Governor Foss received on the Democratic Progressive ticket 36,160 votes, and on tickets without designation 5759 votes. The Socialists polled in the election 13,355 votes. Governor Foss carried Boston by a plurality of about 22,000, as compared with 27,700 in 1910. The election was considered to be a great personal victory for Governor Foss. This was emphasized by the fact that the Republicans elected all the other State officers, including lieutenant-governor.

Elections were held on December 19 in North Adams, Lowell, and Lawrence. All three voted for license, as they had the year before. In Lowell and Lawrence the elections were held under a new charter, by which party names were eliminated.

OTHER EVENTS. On March 29 Governor Foss appointed a commission to consider the development of inland waterways along the Massachusetts coast. On May 19 the Supreme Court of the State declared constitutional the law imposing an excise tax on inheritances left in trust. On May 25 the city of Springfield celebrated the 275th anniversary of its founding, with appropriate ceremonies.

On December 16 a public meeting was held in Boston for the purpose of forming a progressive organization within the Republican party. The meeting was addressed by Gifford Pinchot, Governor Bass of New Hampshire, and George L. Record of New Jersey. The Rev. Samuel M. Crothers presided. No declaration was made in favor of any presidential candidate, but Mr. Pinchot declared his own personal adherence to Senator La Follette as the Republican candidate for the presidency.

LEGISLATION. The important measures passed at the legislative session of 1911 include the following: October 12, known as Columbus Day, is made a legal holiday. Persons who on being arrested for a crime are found armed with a revolver or a pistol without a license shall be punishable by imprisonment for not less than one nor more than ten years. An act to make uniform the law relating to desertion and non-support of wife by husband or of children by either father or mother was passed. Women, and children under eighteen years of age, are prohibited from being employed for more than fifty-four hours per week in manufacturing or mechanical establishments. Railroads are obliged to furnish individual drinking cups for

the use of passengers. Persons selling pistols, revolvers, or other small firearms must have a license and must keep a record of names and descriptions of all purchasers. A pension system for the employees of the commonwealth is established. A measure was passed providing for the direct nomination of candidates for substantially all the offices to be filled at a State election, such nomination to be had by means of primary elections. The number of justices of the Superior Court is increased from twenty five to twenty-eight. Every town and city of more than 10,000 inhabitants is required to maintain a dispensary for the discovery, treatment, and supervision of needy residents afflicted with tuberculosis. Any person who after being indicted is kept in jail for more than six months without trial and is finally acquitted or discharged may receive compensation from the county if the judge who presided at the trial thinks proper. Counties are permitted to establish pension systems for their employees. An act was passed providing for the development of the port of Boston at an expense not exceeding \$9,000,000. A workmen's compensation act was passed. See **WORKINGMEN'S COMPENSATION**.

STATE GOVERNMENT, 1911. Governor, Eugene N. Foss; Lieutenant-Governor, Robert Luce; Secretary of State, Albert P. Langtry; Treasurer, Elmer A. Stevens; Auditor, John E. White; Adjutant-General, _____; Attorney-General, James M. Swift; Secretary of the Board of Agriculture, J. Lewis Ellsworth; Commissioner of Insurance, Frank H. Hardison; Commissioner of Education, David Snedden—all Republicans except Foss.

JUDICIARY. Supreme Judicial Court for the Commonwealth: Chief Justice, Arthur Prentice Rugg; Justices, James M. Morton, John W. Hammond, Henry Newton Sheldon, William C. Loring, Henry K. Braley, and Charles Ambrose De Courcy; Clerk of the Court, Walter F. Fredrick—all Republicans.

STATE LEGISLATURE, 1912. Republicans, Senate, 27; House, 146; joint ballot, 173. Democrats, Senate, 13; House, 92; joint ballot, 105. Others, House, 2; joint ballot, 2. Republican majority, Senate, 14; House, 52; joint ballot, 66.

The representatives in Congress will be found in the article **UNITED STATES, section Congress**.

MASSACHUSETTS INSTITUTE OF TECHNOLOGY. An institution for technical education at Boston, Mass., founded in 1864. The number of students enrolled in the various departments of the institute in 1910-11 was 1750. The faculty numbered 99 professors, 4 instructors, and 48 assistants. There were no notable changes in the faculty during the year. Gifts were received to the amount of \$41,644. The productive funds of the institute amounted to \$1,891,627. The library contains about 85,000 volumes. Plans under way for a new site and buildings approached completion at the end of 1911. The president is Richard C. MacLaurin, LL. D.

MATANUSKA COAL FIELD. See **ALASKA**.

MATHER, ROBERT. An American lawyer, railway official, and financier, died October 24, 1911. He was born in Salt Lake City, Utah, in 1859. He attended school at Galesburg, Ill., until he was thirteen years of age, when he became employed in a factory making electrical apparatus. After three years here he took up railroading in the mechanic's office of the Chicago, Burlington & Quincy Railroad.

In 1877 he entered Knox College, graduating in 1882. After leaving the college he entered the director's office of the Chicago & Burlington road and there acquired a knowledge of railroad finances. At the same time he studied law and in 1886 was admitted to the bar in Chicago, where he practiced law for three years. He became the Chicago attorney for the Chicago, Rock Island & Pacific Railway in 1889, and in a few years was made general counsel for the road. He soon afterwards became in turn second vice-president and first vice-president of the railroad. In 1904 he became chairman of the executive committee and president of the Rock Island Railway Company. He was president of the Rock Island lines for about four years. He was connected in an executive capacity with several other important railroads. He was elected chairman of the board of directors of the Westinghouse Electric and Manufacturing Company in 1909. He reorganized this company, which had fallen into financial difficulties. He was identified with many other financial and industrial offices as official and director.

MATTHEWS, EDMUND ORVILLE. A rear-admiral, retired, of the United States navy, died January 29, 1911. He was born in Baltimore in 1836 and graduated from the United States Naval Academy in 1855. He was promoted through successive grades, becoming commodore in 1894 and rear-admiral in 1897. He served throughout the Civil War and participated in many engagements. From 1865 to 1869 he was head of the torpedo corps at the Naval Academy. He was commandant at the Brooklyn Navy Yard from 1885 to 1887 and was captain of the Boston Navy Yard from 1887 to 1890. From 1891 to 1894 he was a member of the Board of Inspection and Surveys. He was chief of the Bureau of Yards and Docks from 1894 to 1898 and was president of the Examining and Retiring Boards in 1898-9. He was retired in 1898.

MAURITANIA. A civil territory in French West Africa (q. v.). Area, 257,360 sq. kilometers (99,367 sq. miles); or, with unsurveyed areas to the north and northeast, about 890,000 sq. kilometers. Recently estimated population, 225,158 (158 French). Schools (1909): 1 official, with 45 pupils; 114 Mussulman, with 1297 (without Trarza). Telegraph lines, 455 kilometers; telephone, 21. Post and telegraph offices, 5. Revenue in 1909, 2,194,730 francs; expenditure, 1,676,454. The territory is administered by a commissioner (1911, Lieutenant-Colonel Gouraud) under the direction of the governor-general of French West Africa.

MAURITIUS. An island in the Indian Ocean; a British crown colony. Area, 705 sq. miles; population in 1901, 375,385 (261,191 of Indian, the remainder of French or mixed descent). Census of April 2, 1911, 370,381 (257,793 Indians). Capital, Port Louis (50,060 inhabitants). Imports (1910), Rs.37,258,217 (1909, Rs.28,937,065); exports, Rs. 36,154,956 (1909, Rs.32,393,453). Vessels entered (1909), 191, of 378,163 tons; cleared, 189, of 376,987. Revenue and expenditure (year 1909-10) Rs.10,799,723 and Rs.9,449,375 respectively. Public debt (June 30, 1910), £1,300,890; paper circulation, Rs.5,120,250. Governor and commander-in-chief (1911), Maj. John Robert Chancellor.

RODRIGUES, ST. BRANDON (or CARGADOS) Is-

LANDS, the CHAGOS ISLANDS, and the TROIS FRÈRES (or EAGLE ISLANDS) are dependencies of Mauritius.

A mob of natives wrecked a number of shops and newspaper offices in the course of election riots at Curepipe and Port Louis in the latter part of January. The troops were called out and in the course of the riots two civilians were killed.

MAWSON, DOUGLAS. See POLAR RESEARCH.
MAYOTTE AND THE COMORO ISLANDS. A group of islands belonging to France, administered under the government of Madagascar. Total area, 837 sq. miles; total population (1906), 96,314; of which population Mayotte (140 sq. miles) contains about one-fourth. Grande Comore, Moheli, Anjouan, and a number of smaller islands constitute the Comoro group. Vanilla is the most important cultivation; other products are sugar-cane, coffee, tea, cacao, and perfume-yielding plants. Imports (1909), 1,133,429 francs; exports, 2,700,652. The local budget balanced (1907) at 247,410 francs. French expenditure (budget of 1910), 3000 francs. Debt, January 1, 1907, 883,760 francs. Administrator for Mayotte (1911), M. Astor. A resident is appointed to each of the three principal Comoros.

MEAD, CHARLES MARSH. An American theologian and educator, died in February, 1911. He was born in 1836 at Cornwall, Vt., and graduated from Middlebury College in 1856. Graduating from the Andover Theological Seminary in 1862, he studied for four years at the universities of Halle, Berlin, and Tübingen. He was ordained to the Congregational ministry in 1866, and was professor of Hebrew at Andover Theological Seminary from 1866 to 1882. From 1882 to 1892 he lived in Germany. He was appointed professor of Christian theology at the Hartford Theological Seminary in 1892 and served in this position until 1898. He was one of the original members of the American Bible Revision Committee and was active in the work of the revision of the Old and New Testaments. Among his published works are "Exodus" (in Lange's Commentary, 1876); *The Soul Here and Hereafter* (1879); *Christ and Criticism* (1893), and *Irenic Theology* (1905). He also contributed numerous articles to magazines and encyclopædias.

MEDICAL PROGRESS IN 1911. The problems of immunity to infectious diseases and the development of serums and vaccines engrossed the attention of laboratory workers to a large extent. (See SEBUM THERAPY.) Various forms of radiation were employed more widely than ever before, both for diagnostic purposes and for the treatment of disease. (See PHOTOTHERAPY.) Many improvements were made in sanitation and the control of infectious diseases. (See HYGIENE, PELLAGRA, HOOKWORM DISEASE, INFANTILE SPINAL PARALYSIS, RABIES, TETANUS. TYPHOID FEVER, VACCINATION.) Maladies peculiar to hot climates

continued to demand a large amount of attention, and life for the white races was made more secure than ever before in the tropics. (See BERIBERI, INSECTS AND THE PROPAGATION OF DISEASE, SLEEPING SICKNESS, and TROPICAL DISEASES.) Several meritorious new drugs were exploited, among which may be mentioned ADALIN, HORMONAL, OVOGAL, SALVARSAN, and XERASE. The search for the cure of cancer and the means of limiting the spread of tuberculosis was continued. (See CANCER, TUBERCULOSIS.) Other medical items of special notice and also medical statistics will be found under their respective captions.

MERRY, WILLIAM LAWRENCE. An American diplomat, died December 14, 1911. He was born in New York in 1842 and received an academic education. He went to sea and in time became commodore of steamships on the Atlantic and Pacific oceans in the California trade. In 1874 he resigned from the Pacific Mail Steamship Company and took up his residence in San Francisco. He was for three years general agent of the Central American Transit Company and the North American Steamship Company. In 1897 he was appointed consul-general for Nicaragua on the Pacific coast of the United States. He served as United States minister to Nicaragua, Salvador, and Costa Rica from 1897 to 1907. In 1907-8 he was minister to Nicaragua and Costa Rica, and from 1908 to 1911 minister to Costa Rica. He was the author of *The Nicaragua Canal, the Gateway Between the Oceans*; and *The Problem of Cheap Transportation*. He also wrote many papers on the same subjects.

METEOROLOGY. The summer of 1911 was characterized by extreme dryness and heat in many parts of the world. In the northeastern United States the deficiency in precipitation during the spring and summer, and the prolonged hot spell from the beginning of July, caused great uneasiness in many localities on account of the consequent depletion of the water supply. In the British Isles and on the Continent of Europe, exceptional weather conditions were also recorded, the average temperature for the year being several degrees above the normal.

ORIGIN OF THE PERMANENT OCEAN HIGHS. Prof. W. J. Humphreys, in the *Bulletin of the Mount Weather Observatory*, gave an explanation of the permanent high-pressure regions on the oceans. There are five of these regions, which, while varying in intensity, remain substantially fixed in position throughout the year. Two of them lie about 35° to the north, and the other three about 32° to the south of

the equator. Of the two situated in the Pacific Ocean, one lies just west of southern California and the other near the coast of Chile; two are over the Atlantic Ocean, near Morocco and the Cape of Good Hope, respectively; and the fifth is in the Indian Ocean, about midway between the Cape and Australia. These ocean highs are extremely important on account of the close connection between their locations and intensities and the weather of the adjacent continents. Several explanations of their origin have been given, but none of them accounts fully for the observed facts. Professor Humphreys showed that the presence of the high-pressure belts could be accounted for by considering merely the temperature conditions and the rotation of the earth. These combined give rise to winds having a strong easterly component between the limits 30° N. and 30° S., while outside this zone the winds would have a decided westerly component. To the opposing thrusts of these eastward and westward winds is due the high-pressure belts north and south of the equator as well as the equatorial belt of comparative calm. Irregularities in intensity are then impressed upon the high-pressure belts by the cold ocean currents which cross them in various places and by virtue of their cooling effect, give rise to an increase of pressure somewhat to the westward. Thus the three highs of the southern hemisphere are due to the three branches of the great Antarctic Current known as the Peru, the Benguela, and the West Australian currents.

In the same way Professor Humphreys explained the Aleutian and Icelandic lows as due to the warm currents known as the Kuroshio, or Japan Current, and the Gulf Stream.

THE AURORA. The radiation producing the aurora borealis was the subject of a communication by Mr. Végard of Copenhagen. Starting with Birkeland's hypothesis that the aurora borealis and magnetic disturbances are due to an electric radiation coming from the sun, he put forward the suggestion that the phenomena of the auroral draperies could be adequately accounted for by supposing that the radiations were α rays or atomic rays of a similar nature, capable of penetrating matter along nearly straight paths, whereas the auroral arch might be due to β rays, the penetrating power of which is only slight in comparison with that of the α rays.

THE CLIMATE OF CITIES. It has been frequently asserted that the artificial heating of cities has materially changed their climates. Mr. R. P. Bolton, president of the American Society of Heating and Ventilating Engineers, claimed that the rapidly increasing consumption of fuel has lessened the number of days with a temperature as low as or lower than zero, has produced a progressive decrease in precipitation particularly in the winter months, and has lowered the relative humidity of the air over the city by 7 per cent. His statements were traversed by Messrs. Mindling and Palmer, who made an exhaustive examination of the meteorological data for the cities of New York and Boston for the past forty years and found little support for his contention.

BOOKS. Among the more important works published during 1911 may be mentioned, Shaw, *Forecasting Weather*, and the work of Bjerknes and others on meteorology and hydrography.

METALLURGY. Progress was to be noted in many branches of the mineral industry during 1911, and the following paragraphs are based in large part on reviews by leading mining engineers and metallurgists in the annual summary prepared by the *Engineering and Mining Journal* (New York). Naturally scientific and economic interest centred in the development of electro-metallurgical processes and their application to the iron and steel industry.

GOLD AND SILVER. The cyanidation process for gold extraction was being extended in many fields, and during the year became widespread in Colorado, it being stated that but one chlorination plant remained, and that was closed in November. Special metallurgical processes were being developed to treat various refractory and low-grade ores in Colorado and elsewhere, and at the Alaska-Treadwell mine on Douglas Island, Alaska, cyanidation was introduced after a costly experimental test of the availability of the process to this great plant. The concentrates, which once were sent to Tacoma, Wash., by steamer for smelting, were being cyanided at the mill, and a saving of \$6.22 per ton was reported. A system of amalgamating gold ores by electrolysis also found successful application during the year. See **GOLD AND SILVER**.

IRON AND STEEL. Improvements were made in the application of the dry blast for the blast furnace in the way of eliminating the heavy expense for the refrigerating plant for drying the air. In a Welsh blast furnace ammonia was used in place of brine, and at a Luxemburg plant the air was dried by passing over calcium chloride without the use of refrigeration, at all. The calcium chloride was subsequently dried by the heat of the flue gases from the boilers and hot-blast stoves. Turbine-blowing engines were introduced at several American blast furnaces during the year, and various turbine improvements involving the economical use of waste steel were applied.

Blast furnace gas was used more extensively in gas engines, and for burning in the coke oven flues, so that a certain proportion of the richer coke oven gas could be used in open-hearth annealing, and other furnace work, and by mixing with blast furnace gas it could be used with great economy. An important German invention was a form of construction for open-hearth furnaces that involved the removal and replacement of the ports in a few hours, instead of putting the furnace out of commission, as was previously the case, for these openings—subject to intense heat—were apt to change in size and form and thus interfere with the efficiency and uniformity of the process.

A blast roasting process invented by Arthur S. Dwight, and used with considerable success on non-ferrous ores during the year, was applied to the sintering of iron ore, and formed the subject of an interesting paper presented to the American Institute of Mining Engineers. The Dwight-Lloyd method was worked out for iron ores, with the cooperation of James Gayley, the inventor of the dry-blast process and other improvements in connection with the manufacture of pig iron. The sintering process involves the formation of cellular lumps as a furnace charge containing sufficient coke dust to secure an economical operation of the furnace without the formation of flue dust. The Baker process of ore agglomeration was also

announced during the year, as well as the Weiss process of a German metallurgist.

During the year a new and improved plant was constructed to use the Jones process of treating iron and non-ferrous ores without the aid of the blast furnace. In this process the iron ores are not fused, but are subjected to a heat treatment by which the oxides are metalized in a reducing atmosphere. It was stated that the product was 97 per cent. pure iron, which could be used direct in an open-hearth furnace, or even for melting in an ordinary foundry.

ELECTRO-METALLURGY. During 1911 tool steels of special lines were being made in the electric furnace with great advantage, and it was also being used to refine ordinary grades of steel and to manufacture steel castings. The more important types of furnace in use were the Héroult, Stassano, and Girod, of the arc type, and the Kjellin and Frick induction furnaces. A combination induction furnace was the Röchling-Rodenhauser. This furnace had a large central open hearth for refining, with side channels which surround the limbs of the transformer. Among the new types of electric furnaces was one of the resistor type, invented by Hering. Much larger furnaces of the Hiorth type were designed as the result of their successful use in Norway. Another new type of furnace which was successfully operated was the Groenwall.

The general tendency in the design of all electric furnaces was to increase the size and to consider carefully the scientific process involved in the construction. By using electrodes where the various sections were connected by screw joints economies in the material were secured. Electric smelting requires much less carbon than does the blast furnace, where coal must be used for fuel, so that the process is particularly applicable in a country where coal is scarce, as in Sweden. Here active work was in progress and a notable advance was the new plant of the Swedish Association of Ironmasters at Trollhattan. This furnace was first started in November, 1910, and was in continuous operation from August 4, 1911. The consumption of electricity was said to be 1736 kilowatt hours per ton of iron, or 5.05 tons of pig iron were produced per kilowatt year.

The development of electric methods in the United States, Germany, and Great Britain during 1911 made considerable progress in view of the great expense involved in the installation of machinery and the general condition of the industry during the year. The most marked tendency was in the use of electric methods for super-refining and the production of special steels, but in one German plant it is reported that ingots were regularly produced in the electric furnace complete from pig iron to finished steel, and this is also done in the Evans-Stansfield process.

It was reported that in June, 1910, there were in operation 29 Héroult furnaces, with a capacity of 80 tons, and furnaces with a capacity of 50 tons were in course of erection. In September, 1911, 43 furnaces, with a total capacity of 240 tons, were reported. In 1910 the output of electric steel in the United States, Germany, Austria, and Hungary amounted to about 112,000 tons, or an increase of 63,000 tons over 1909.

The progress of electric refining process in the United States was shown by the fact that in 1910 50,000 tons of electric steel were pro-

duced, and practically all of this was made by purification in the Bessemer or open-hearth furnace, and then further refined in electric furnaces. At the Homestead steel works two graphite electrodes were added to an open-hearth furnace, so that after the usual purification process has been ended, the heat effects of the electric arc could be availed of and the super-refining take place. This, of course, obviated the transfer of material from one furnace to another, and the arrangement was virtually that of the Héroult steel furnace. Another American development was the installation of an electrically heated furnace for heating steel previous to forging. This prevented the loss of material by oxidation, as with an electric furnace the steel could be heated in an unoxidizing atmosphere. This particular furnace possesses the further advantage than it can be used for annealing with a nicety of temperature regulation.

During 1911 a more serious attempt was made in Great Britain to install electric furnaces, and the output for the year was estimated at about 13,000 tons.

It was reported that in addition to considerable experimental work a Sheffield firm of steel makers had installed a double-ended Bessemer converter for treating the molten metal which had been purified by the old Bessemer process, and which could be run from one end to the other. It was stated that it was possible to make steel equal to the best ever produced in Sheffield in the electric furnace, at less cost than it could be done in the crucible.

COPPER. A new process for the hydro-metallurgical treatment of copper, invented by Charles S. Bradley, developed on an experimental scale at Bayonne, N. J., was taken up by the Copper Extraction Process Company in a plant under erection at Anaconda, Mont. In this process the metals in copper ores, after being roasted, are dissolved by the use of a chlorine compound in which certain waste products, such as calcium sulphate, are rendered insoluble, while cupric chloride, ferric chloride, and other chlorous or chloric compounds are formed, from which the metals are readily recovered. Gold, silver, and zinc are also separated in this process, which, while apparently complicated, in actual operation was said to be simple and efficient. Copper matte ores during 1911 were being treated more than ever in basic-lined instead of acid-lined converters, not only in the United States, but in Canada, Peru, Chile, and Russia, where magnesite-brick was substituted for the acid or silicious lining material previously employed. This not only gives an increased life for the converter, but a higher efficiency.

ZINC. In the metallurgy of zinc, improvements of processes were in the nature of detail rather than of a radical character, and no important changes were recorded in the practice at the best European smelters. The concentration of zinc ore by burning off the zinc, somewhat as is done by the Wetherell process of zinc oxide manufacturing, was the subject of a number of experiments, especially in Germany. This process of pyro-metallurgical concentration was thought to have some application in the treatment of ores and products that could not be concentrated mechanically. Special apparatus in small experimental plants were working these different processes and their modifications in order to develop a satisfactory method.

In many parts of the United States the treatment of zinc ores was facilitated by the availability of natural gas. The failure of this supply in certain parts of the country has occasioned the firing of furnaces with petroleum. The various types of furnaces used in the United States and Europe continued the same during the year. A mechanical reversing regenerative furnace of a new design was that of Dor-Delatré, used in Europe, which cuts down the consumption of heating coal to a lower figure than in previous furnaces of this nature. In European zinc-smelting practice higher temperatures were being employed than in the United States, and this naturally leads to more substantial furnace construction on the Continent than in America.

It was reported that the smelting of zinc ore on a commercial basis had been accomplished at Särpsborg and Trollhattan, in Scandinavia, after a series of experiments which extended over a period of five or six years. At Särpsborg the De Laval arc furnaces were employed, but at Trollhattan resistance furnaces were being used which were more economical than the older form. With an improved process, and with the low-cost power available in Scandinavia, it seemed to be commercially successful, but the difficulties in securing a single and continuous process had not been met by 1911. Numerous electric zinc-smelting experiments were conducted during the year by W. McA. Johnson at Hartford, Conn., and at the experimental plant of Imbert-Thompson-Fitzgerald at Hohenlohehütte, Silesia, and elsewhere. It was the general opinion, however, that much remained to be done in the development of a successful electro-metallurgical process of zinc smelting, and that the art was in its earliest stages.

LEAD. The Dwight-Lloyd sintering process found a permanent application in the metallurgy of lead in 1911. This is in connection with blast roasting, which has largely supplanted other methods of roasting in hand and mechanical reverberatory furnaces. It was found possible to treat not only galena concentrates, but various other lead ores, and this process is also used with fine sulphide copper ores and flue dust to prepare them for the blast furnace. By blast roasting the fine ores are collected so as to render them capable of treatment in the blast furnace, and in connection with the treatment of various copper lead ores the saving of the lead was receiving increasing attention. An electric precipitation process, invented by F. G. Cottrell, was used during the year at the Selby lead works near San Francisco, and at Coram, Cal.

BESSEMER LABORATORY. During the year there was completed the Bessemer laboratory, formerly a part of the new Royal School of Mines building in London. This is a large low, glass-covered building between the metallurgical and mining class and lecture rooms, and the new mining laboratory. Its maximum length is 250 feet, and its width 121 feet. Most of the machinery is of large size, and is arranged to demonstrate the usual processes of crushing, sampling, concentrating, magnetic separating, cyaniding, chlorinating, pan-amalgamating, etc., with plants for studying the rotation process of separation, and the drying, roasting, and smelting of ores. The machinery is electrically driven, and the entire installation, containing, as it does, the full equipment of a

plant necessary for the treatment of gold, tin, copper, and other non-ferrous ores, is one that will undoubtedly prove of the greatest advantage to students of mechanical engineering.

METHODIST EPISCOPAL CHURCH.

The total number of communicants in all conferences of the Methodist Episcopal Church, including churches in the United States, was in 1911, 3,520,197. Of these 3,198,644 were full members and 321,553 probationers. The ministers numbered 20,569 and the churches 30,398. In the Sunday schools of the denomination were 3,567,548 scholars and 374,881 officers and teachers. The church property was valued at \$183,542,603. The receipts from all the conferences of the denomination from November, 1910, to October 31, 1911, amounted to \$1,072,997. The foreign conferences of the denomination include missions in China, Korea, India, Malaysia, Philippine Islands, Africa, South America, Mexico, and nearly all the countries of Europe. The missionary work of the denomination is carried on by the general committee of foreign missions. Its publication departments are the Methodist Book Concern and the Western Book Concern. The denomination has wide educational interests, and these are conducted by the board of education. The receipts for purposes connected with education in 1911 amounted to \$1,753,000. Under the auspices of the denomination are 25 colleges and universities for white students and 8 for colored students. Many theological seminaries are also maintained for white and colored students. Among other bodies which carry on the work of the denomination are the Freedmen's Aid Society, the Epworth League, the Methodist Brotherhood, the Knights of Methodism, and the Methodist Federation for Social Service. The women of the church also carry on important home and foreign missionary work. The church maintains many benevolent institutions throughout the country.

ECUMENICAL CONFERENCE. The fourth Ecumenical Conference of the denomination was held in the Metropolitan Methodist Church in Toronto, Canada, October 14-17, 1911. There were in attendance 500 delegates. The conference included churches under the Methodist polity, twenty-one in all. Among the general topics considered at the conference were *Ecumenical Methodism*, *The Study of the Scriptures*, *The Church and Modern Life*, *The Church in the Household*, *The Church and Education*, and *The Relation Between the Methodist Churches*. The conference adopted resolutions approving the pending treaty for international arbitration.

METHODIST EPISCOPAL CHURCH.

SOUTH. This body, which includes the greater number of the Methodists in the Southern States, had, in 1911, 1,337,108 members, 15,980 local preachers, and 7877 traveling preachers. The Sunday schools numbered 4584, with 142,724 scholars.

METHODISTS, COLORED. The colored churches under the Methodist form of church government included the Colored Methodist Episcopal Church, with 233,911 members, 2863 preachers, and 2809 churches; Zion Union Apostolic Church, 3059 communicants, 49 churches and 33 ministers; African Methodist Episcopal Church, with 853,000 members, 6920 churches, and 6170 ministers; Union American Methodist Episcopal Church, Colored, 18,500 members, 138 ministers, and 255 churches.

There are also several smaller bodies, chiefly local.

METRIC SYSTEM. During the year 1912 considerable progress was made with the movement for the extended use of the international metric system of weights and measures, and a number of small countries, Nicaragua, Honduras, Costa Rica, Salvador, and Guatemala, all passed the necessary legislation to enforce the use of the metric system as from January 1, 1912. In Bosnia and Herzegovina an act making the system compulsory, to take effect from September 1, 1912, was passed. In Denmark the optional use of the system had extended so that everything was in readiness for the compulsory use of the international weights and measures, which was scheduled to occur on April 1, 1912. The king of Siam ordered the adoption of the metric system on November 15, 1911. The government was to arrange with the International Bureau of Weights and Measures for national standards and a law was to be enacted calling for the compulsory use of the metric system after a year of optional use.

METROPOLITAN MUSEUM. See GIFTS AND BEQUESTS.

MEXICO. A republic between the United States and Central America. Capital, Mexico.

AREA AND POPULATION. The republic consists of twenty-seven states, four territories, and the federal district. The total area is stated at 1,987,201 square kilometers (767,258 square miles). The population in 1900 was 13,607,259; of these, 43 per cent. were mestizo, 38 per cent. Indian, and 19 per cent. white. Foreigners numbered 57,508, of whom 15,265 were Americans and 16,258 Spaniards. The population by groups of states was: North, 1,174,341; central, 6,239,038; Gulf, 1,756,006; Pacific, 4,437,874. The census of October 27, 1910, showed a total of 15,063,207 inhabitants. The area, population, and density per square kilometer of some of the states (including those that have figured more especially in the recent revolutionary movements) are as follows:

States	Sq. kil.	Pop.	Density
Federal District	1,499	719,052	480
Chihuahua	233,094	405,265	1.7
Coahuila	165,099	267,652	2.2
Durango	109,495	436,147	4.0
Guanajuato	28,363	1,075,270	38.0
Guerrero	64,756	605,437	9.0
Hidalgo	22,215	641,895	29.0
Jalisco	86,752	1,202,802	14.0
Mexico	23,185	975,019	42.0
Michoacán	58,594	991,649	17.0
Nuevo León	61,343	368,929	6.0
Oaxaca	91,664	1,041,035	11.0
Puebla	31,616	1,092,456	35.0
San Luis Potosí	62,177	624,748	10.0
Sonora	198,496	262,545	1.3
Veracruz	75,863	1,124,368	15.0
Yucantan	42,751	337,020	8.0

The larger cities, with population (1910 census), are: Mexico, 470,659; Guadalajara, 118,799; Puebla, 101,214; San Luis Potosí, 82,949; Monterey, 81,006; Mérida, 61,999; León, 57,334; Veracruz, 45,021; Aguascalientes, 44,800; Morelia, 39,160; Chihuahua, 39,061; Pachuca, 38,620; Oaxaca, 37,469; Orizaba, 36,189; Tacubaya, 35,830; Guanajuato, 35,147; Querétaro, 35,011. In 1905 there were 57,881 marriages, 487,268 births, and 473,403 deaths; in 1906, 56,339, 460,190, and 478,857, respectively.

EDUCATION. Primary instruction is free and

nominally compulsory. The latest official figures available are for 1906. They show 8451 elementary schools (primary), with 542,539 pupils; 354 elementary schools (superior), with 51,789 pupils; 38 secondary and collegiate schools, with 4581 students; 66 professional schools, with 8734. In addition, there were 2562 private, clerical, and association schools, with a total enrollment of 163,020.

INDUSTRIES. In Mexico mining is of pre-eminent importance. Except in a zone fifty miles wide along the border, the mining laws do not discriminate against the foreigner, and large amounts of foreign capital, particularly American, have been invested in mineral exploitation. The following values of production are for the year ended June 30, 1910: Silver, 76,405,754 pesos; gold, 47,428,842; copper, 26,172,214; lead, 6,808,465; zinc, 1,150,558. In proportion to the country's capabilities, the agricultural production is small, though the annual value of agricultural products and cattle marketed is estimated at over 400,000,000 pesos. The leading crops include corn, cotton, henequen, wheat, sugar-cane, coffee, and beans. The principal manufactures are cotton textiles, tobacco goods, sugar, and spirits. In the year ended June 30, 1909, the mill consumption of raw cotton was 35,434,639 kilos and the output, 13,887,911 bolts of piece goods and prints, and 1,952,612 kilos of yarn. Cotton factories numbered 146 (of which 17 were idle), with 726,278 spindles, 25,327 looms, and 14 print machines. There are manufactures of other textiles and of paper, iron, soap, beer, etc.

COMMERCE. For fiscal years ended June 30 the values of imports and exports have been as follows, in pesos:

	1909	1910	1911
Imports	156,533,000	194,858,000	205,836,000
Exports	231,102,000	260,056,000	293,752,000

Of the imports, iron and steel manufactures, exclusive of machinery, are first in value, while machinery is second. Other leading imports are grain and other foodstuffs, chemicals, earthenware, cotton textiles, alcoholic liquors, vehicles, and woolen manufactures. The following figures show, in thousands of pesos, the values of leading exports in the fiscal years 1910 and 1911, respectively: Silver 76,349 and 80,868; gold, 42,636 and 62,091; copper, 26,171 and 26,300; henequen, 22,096 and 25,065; rubber, 16,760 and 21,188; guayule, 9468 and 11,798; hides, 12,743 and 10,850; coffee, 8007 and 8624; lead, 6808 and 6539; live animals, 5715 and 4799; hicle, 2447 and 3745; woods, 2501 and 3439; ittle, 3091 and 3191; chick peas, 3127 and 3079; vanilla, 1577 and 2630; zacatón root (for brooms and brushes), 2734 and 2361; antimony, 2187 and 2047. Imports and exports by countries, in thousands of pesos:

	Imports		Exports	
	1910	1911	1910	1911
United States	112,878	113,089	196,979	224,497
Germany	20,165	25,562	8,445	8,708
Great Britain	22,252	23,980	28,535	35,882
France	17,494	18,673	12,284	9,310
Spain	5,280	5,682	1,934	1,958
Belgium	2,462	4,313	6,689	7,362
Italy	1,034	2,377	222	165
Austria-Hungary	2,187	54
Other	13,293	9,973	4,966	5,816
Total	194,858	205,836	260,056	293,752

SHIPPING. In the fiscal year 1910 there entered 1280 vessels, of 3,802,646 tons (steam 1258, of 3,669,216) and cleared 1793, of 3,923,465 tons (steam, 1271, of 3,782,575 tons). The merchant marine in 1911 consisted of 32 steamers, of 16,648 tons net, and 50 sailing vessels of 8712 tons.

COMMUNICATIONS. In presidential messages of September 16 the total length of Mexican railways has been stated as follows: 1909, 24,161 kilometers; 1910, 24,559; 1911, 24,717 (15,358 miles). Of the total in 1911, 19,877 kilometers were government-controlled and 4840 privately controlled; of the government-controlled lines, over 14,000 kilometers are controlled by the federal government and the remainder by state governments. The national railways of Mexico were reported as having under construction in 1911 branches aggregating over 400 miles in length. Federal telegraph lines in 1911, 74,890 kilometers, with 526 offices; other lines, 8387 kilometers; total, 83,286 kilometers. The federal telephone system had about 47,700 kilometers of wire in 1910, with some 13,000 stations. Post offices in 1911, 2858; pieces of mail matter handled, 152,755,942 domestic and 48,905,426 foreign; postal receipts in the fiscal year were 4,700,010 pesos, and expenditures 5,231,893.

FINANCE The unit of value is the silver dollar, or peso, whose value is legally fixed at 0.75 gram of pure gold, or 49.8 cents. For the fiscal year 1908-9 ordinary revenue amounted to 98,775,510 pesos, ordinary expenditure 92,967,393, and extraordinary expenditure 11,437,788. The budget of 1910-11 showed estimated revenue and expenditure of 107,918,000 and 102,294,030 pesos, respectively; budget of 1911-12, 110,070,100 and 105,432,347, respectively. For the latter year customs receipts were estimated at 54,476,000 pesos, internal revenue and stamps 41,715,000, and receipts from posts and telegraphs 8,243,500. Distribution of the estimated expenditure for 1911-12: Finance and public debt, 35,071,542 pesos; war and marine, 21,307,409; communications, 16,051,157; interior, 15,115,941; public instruction, 7,773,282; fomento, 4,092,770; foreign affairs, 2,075,446; justice, 1,626,355; the legislative, 1,503,255; the supreme court, 625,411; the executive, 259,749. Public debt on June 30, 1911: External, 300,950,996 pesos; internal, 137,849,135 (the charges on both amounting to 26,251,267 pesos); non-consolidated, 273,399; total debt, 439,073,530 pesos.

NAVY. Mexico has a few small war vessels, none of them of any considerable fighting value. They included, in 1911, two gunboats (built in 1903), of 1000 tons each; 2 gunboats (1904), of 1200 tons each; 1 small cruiser (1909), of 1630 tons; 1 transport, 2 corvettes, 3 dispatch boats, and several small vessels which for efficiency in war are quite negligible.

ARMY. The Mexican army at the beginning of the year 1911 consisted of 28,515 men, of whom 2385 were officers and 26,130 composed the rank and file. The officers comprised 7 divisional generals, 41 generals commanding brigades, 55 brigadier-generals who might command battalions, regiments, or brigades; 511 superior officers, and 1771 subaltern officers. The division of arms of the service was as follows: Infantry, 17,080; cavalry, 5800; artillery, 1550; other arms and departments, 1700. The scheme of organization of the Mexican army

provided that the force could be increased by a demand on the governors of the various states. On a theoretical basis a war strength of about 84,500 was thought to be available, though by many the actual effective was considered not much greater than 50,000. For military purposes the republic was divided into ten districts and three commands, besides the independent command at Tepic. In the federal district there was a concentration of troops to maintain order, and here were assembled all the artillery, the battalion of engineers, 6 battalions of infantry, 5 regiments of cavalry, a squadron of military gendarmerie, and a squadron of presidential guards. The organization of the infantry involved 34 battalions of 4 companies, each comprising 8 officers and 140 men, in addition to 2 local companies from Lower California. The cavalry consisted of 18 regiments of 4 squadrons each, 1 squadron of presidential guards, 1 squadron of military gendarmes, 4 cadres of regiments of 2 auxiliary companies at Puebla, and in Sonora 1 squadron to act as escort for the commission of exploration. There were in addition 20 sections of rural troops of 100 men each. The artillery included 4 regiments of 4 6-gun batteries, including 1 field and 1 mountain battery. There were also a mounted detachment of 2 batteries armed with quick-firing small calibre guns to accompany the cavalry, 1 company armed with 12 machine guns, and 2 companies of heavy artillery, 3 sections of coast artillery, and 1 squadron of artillery transport. Internal conditions in Mexico during the year 1911 led to a certain amount of disorganization of the standing army, which will be found discussed below in section *History*.

On November 24, 1911, President Madero signed a provisional decree in pursuance of the law which established a compulsory military service. This decree provided active service of two years from the age of eighteen years, and fixed the annual contingent at one in every thousand, or about 15,000 men. The recruits will be obtained by lot, and the first selection was scheduled for January 1, 1912. These reforms in the recruitment of the army were considered very far reaching, and they placed the Indians on the same footing as the descendants of the Spanish.

GOVERNMENT. Mexico is a federal republic, consisting of states autonomous in local affairs, but bound together by the constitution and fundamental laws. Under the constitution the chief executive is a president, elected indirectly for six years, and assisted by a cabinet of eight members. The legislative power rests with a congress of two houses, the Senate (56 members elected indirectly, two for the federal district and each state) and the Chamber of Deputies (233 members also elected indirectly). Gen. Porfirio Diaz (q. v.) was president from 1877 to 1880 and from 1884 to 1911. On November 30, 1910, he was inaugurated for his eighth term (with Ramón Corral as vice-president). The revolution then under way, headed by Francisco I. Madero (q. v.), gathered force, and on May 25, 1911, Diaz resigned the presidency. The vice-president and cabinet also retired; but the secretary for foreign affairs, Francisco León de la Barra, who had been appointed to that portfolio on March 27, after being recalled from the post of ambassador at Washington, became acting pres-

ident under constitutional provision. A presidential election took place on October 1, when the electors for Francisco I. Madero as president were chosen by about ninety-five per cent. of the total vote, and for José Marino Pino Suárez as vice-president by about thirty per cent. of the votes cast. On October 15 the electoral college chose Madero and Suárez. Señor de la Barra resigned on November 4; Madero was inaugurated on the 6th, and Suárez on the 23d. Madero appointed the following cabinet: Secretary for foreign affairs, Manuel Calero; interior, Abraham González; justice, Manuel Vázquez Tagle; public instruction and fine arts, Manuel Díaz Lombardo; fomento, colonization, and industry, Señor Hernández; communications and public works, Manuel Bonilla; finance and public credit, Ernesto Madero; war and marine, Gen. José González Salas.

HISTORY

GENERAL CAUSES OF THE REVOLUTION. It was generally admitted that at the close of the Díaz administration, his government was as bitterly hated as ever the old régime was in France before the revolution, and it was charged that its abuses were nearly as great. When he first assumed his dictatorial powers, even his enemies thought he was justified, but it was not necessary to continue an autocracy which had degenerated into a kind of oligarchy. The progress of the country had been purely material. There had been no advance in methods of government. The president was surrounded by a group of politicians popularly called *Científicos*, because they were said to be trying to govern on scientific principles. They represented the large economic interests of the country, and to offset the corruption of their government they could point to many public improvements of a material sort. Their constant argument was that business prosperity wholly depended on the continuance of General Díaz in the presidency. They prevented any true expression of public opinion at the polls. The chief impetus to the Madero uprising was the corrupt government in the states and local divisions, where the autocracy had resulted in official abuses and extortions. His ranks were recruited by men with actual grievances, including many small land owners whose property had been confiscated, and by people who felt the heavy burden of taxation.

THE OUTBREAK OF THE REVOLUTION. During the election of 1910, popular discontent was aroused by the suppression of Francisco Madero's candidacy for the presidency, and in November there were uprisings of the Maderistas in Chihuahua and Durango. During the closing weeks of 1910 the revolution had, as recorded in the last YEAR BOOK, made considerable headway. In January, 1911, the insurgents were plainly gaining ground and government reverses were reported at San Ignacio and Galanea. Reinforcements were sent to the United States troops already on the border to preserve neutrality. By February well-organized forces of the revolutionists were in the field and the government, although it had a considerable body of troops at its disposal, was obliged to scatter them so widely that they made but little impression on the enemy. Early in March the Mexican revolutionists were threatening the cities of Chihuahua and Juárez. Uprisings were reported in Vera-

cruz and Oaxaca in the south, and Madero declared that he would not lay down his arms until President Díaz had resigned, and he was assured of a free and unintimidated suffrage. The latter was inclined at first to make light of the revolution and referred to it repeatedly in contemptuous terms. But in addressing Congress on April 1, he outlined many reforms, among which was the safeguarding of the suffrage, reform of the federal judiciary, removal of certain abuses upon the part of local officials, the division of the large estates to allay the discontent with the existing land laws, and the provision that the president should not succeed himself. The cabinet was reconstructed, new men taking the places of the *Científicos*: General Reyes, who had been banished, was urged to return; Señor de la Barra, ambassador to the United States, was recalled, and became secretary for foreign affairs; and negotiations were opened with Madero, who had been declared by the revolutionists provisional president.

These concessions, however, came too late. By this time several of the southern states were in revolt, and Yucatan, Campeche, and Guerrero were overrun by raiders. The nucleus of a revolutionary government had been formed, the Maderistas were confident of success, and there appeared to be a popular demand for the retirement of President Díaz.

MOBILIZATION OF AMERICAN TROOPS. On account of the revolution in Mexico American forces on the border were strengthened early in February, and on March 7 over 20,000 men were gathered at San Antonio and other points and four fast cruisers were dispatched to Galveston. It was announced that this mobilization was for the purpose of field exercises, but it developed that the government wished to guarantee American neutrality and protect American interests if necessary. The presence of American troops caused anxiety to the Mexican government, and friction arose over the capture by Mexicans of two Americans, whose surrender the United States State Department demanded on the ground that they had been captured on American soil. The Mexican government refused, saying that they were insurgents and had been taken on Mexican soil. Several Americans were killed or wounded in April at Agua Prieta and at Douglas, Ariz., by stray bullets, whereupon the American government gave warning to both the federalists and the insurgents that battles must not be fought so near the American line as to endanger lives and property of Americans. It was reported in Mexico and elsewhere that the United States intended to interfere, but on May 12 the secretary of state, Mr. Knox, through the American ambassador, denied positively all such "foolish stories." The Mexican president, meanwhile set free the three Americans he had seized on the charge of aiding the insurrection. In June there was much complaint in the Mexican press of the laxity of American authorities in not punishing the lynching of a Mexican boy by a mob at Thorndale, Tex. Much damage was done during the war to American property and over 500 claims against Mexico were filed with the State Department.

THE SUCCESS OF MADERO. On May 3, peace negotiations began at Ciudad Juárez between the representatives of Díaz and Madero, but they were suspended on May 6 and the war

went on. The revolt extended even to Mexico City and by May 10 the rebels had captured Juárez. Peace negotiations were resumed. General Madero agreed to the government's proposal that President Diaz and Vice-President Corral should immediately resign and Señor de la Barra should be president ad interim, with a cabinet chosen upon consultation with Madero, and that free elections should be held within six months. On May 18 peace was proclaimed, and a week later General Diaz resigned, and, going secretly to Veracruz, took ship for Spain. Señor de la Barra showed ability and tact in restoring order in the republic. There was occasional fighting between the revolutionists and federalists in July. The new arrangement was not accepted by Lower California until June. In that month a decree for special presidential elections was issued and appointed them for October 1, each state and territory to choose six electors, who in turn were to select a successor to General Diaz on October 15. The candidates in the October election were Gen. Francisco Madero, who had been nominated by the Constitutional Progressives in August, and Gen. Bernardo Reyes, but the latter, finding his election hopeless, withdrew from the contest and left the country. Señor Pino Suárez was chosen vice-president. There was occasional fighting in October between the Zapatists (followers of the rebel leader Zapata) and the federalists. General Madero entered the capital in triumph on June 7. Early in the morning of that day a severe earthquake occurred, wrecking buildings between the barracks and killing fifty or sixty persons. It was most severe in the western part of the city, but it had the unusual effect of causing the walls to fall outward instead of inward, in many cases leaving the inmates of the houses unhurt. The electric power plants were stopped, leaving the city in darkness. Madero drove through the city to his father's house amid the cheering of the crowd.

THE MADERO GOVERNMENT. On the whole, the condition of the country became more stable after the triumph of Madero, but there were frequent disturbances. A riot occurred early in July, in which eight persons were killed and fifteen wounded at Oaxaca, but it was soon put down. In July an encounter took place between the federal troops and Maderistas near Puebla, in which it was said that forty persons were killed. Some alarm was occasioned by the report that Madero's troops were unwilling to lay down their arms unless they received a certain compensation larger than they had been already receiving. Four troops of cavalry were ordered to the frontier by the United States War Department on account of the rumors of disturbances. The Mexican congress met on September 15. The chief feature of Madero's programme was constitutional government and no reelection of the president or other officials. The elections passed off peaceably, and General Madero was chosen president, his rival, General Reyes, having withdrawn from the contest. On November 6 Madero was installed as president and his new cabinet assumed office. Early in October there were some conflicts between the federal troops and the rebel leader, Zapata. On October 7 a fight was reported in which 1500 of the followers of Zapata were repulsed. A more serious engagement took place between the government forces and

the rebels at Tepoxtin, 200 rebels being killed and many others wounded, and all captured, while the government loss was 170 killed and wounded. General Reyes was arrested by United States officials at San Antonio, Tex., on November 18, on the charge of violating the neutrality laws, but was released on bail. Thereupon he returned to Mexico and tried to raise an army, but failing to find support surrendered to the Madero government (December 25). At the close of the year conditions in the republic continued to be very disturbed. See **MADERO, FRANCISCO.**

MIAMI UNIVERSITY. An institution of higher learning at Oxford, Ohio, founded in 1809. The total number of students enrolled in 1911-12 was 1072, distributed as follows: College of arts and sciences, 349; normal college, 198; summer term, 525. The faculty numbered 53. During the year Guy Potter Benton resigned the presidency to accept that of the University of Vermont, and Dean R. M. Hughes was appointed acting president for the year. The university has been made the residuary legatee of William B. Wells of St. Louis and will probably realize about \$60,000 from his estate. The productive funds amounted to \$108,000 and the income to \$200,000, chiefly from the State. During the year a new dormitory for women was completed and furnished at a cost of \$90,000. Dr. Scott E. W. Bedford, professor of sociology, resigned to accept an appointment at the University of Chicago, and Dr. Paul L. Vogt of the department of economics in the State College of Washington was appointed to fill his place. The library contains about 30,000 volumes.

MICHIGAN, POPULATION. The Thirteenth Census, taken in 1910, showed a population for that year of 2,810,173 as compared with 2,420,982 in 1900, an increase of 389,191 or 16.1 per cent. for the decade. The principal cities with their population in 1910 and 1900 were as follows (the figures in parentheses are for 1900): Detroit, 465,766 (285,704); Grand Rapids, 112,571 (87,565); Lansing, 31,229 (16,485); Jackson, 31,433 (25,180); Saginaw, 50,510 (42,345).

AGRICULTURE. The Thirteenth Census included statistics of agriculture. These are of date of April 15, 1910. According to these statistics the number of farms in the State in 1910 was 206,960 as compared with 203,261 in 1900. The land in farms amounted to 18,940,614 acres and the improved land in farms to 12,832,078 acres. The average per farm was 91.5 acres. The value of farm property, including land, buildings, implements, and machinery, domestic animals, poultry, and bees, was \$1,088,858,379, as compared with a value in 1900 of \$690,355,734. The average value of all property per farm was \$5261, as compared with a value in 1900 of \$3396. The average value of land per acre was \$32.48, as compared with a value in 1900 of \$24.12. Of the 206,960 farms in the State in 1910, 174,271 were operated by owners and managers, and 32,689 by tenants. Of the farms operated by owners, those free from mortgage numbered 88,705; mortgaged, 82,631. Of those operating and managing farms 147,790 were native whites, 52,224 were foreign-born whites, and 946 were negroes and other non-whites. The value of the various kinds of domestic animals and poultry and bees in 1910 was \$137,803,795, as compared with

MEXICO

a value in 1900 of \$79,042,644. The cattle numbered 1,497,823, valued at \$40,500,318; horses and colts, 610,033, valued at \$71,312,474; mules, 3700, valued at \$493,825; swine, 1,245,833, valued at \$9,755,042; sheep and lambs, 2,306,476, valued at \$9,646,565. The poultry of all kinds numbered 9,967,039, valued at \$5,610,958. The acreage, production, and value of the principal crops in 1910 and 1911 are shown in the following table:

	Acreage	Prod., bu.	Value
Corn1911	1,690,000	55,770,000	\$36,250,000
1910	1,670,000	54,108,000	28,677,000
Wheat1911	1,025,000	18,450,000	16,236,000
1910	936,000	16,848,000	14,995,000
Oats1911	1,500,000	42,900,000	19,734,000
1910	1,515,000	51,510,000	18,028,000
Rye1911	400,000	5,840,000	4,964,000
1910	418,000	6,395,000	4,349,000
Potatoes ..1911	330,000	31,020,000	22,024,000
1910	350,000	36,750,000	11,392,000
Hay1911	2,411,000	a 2,797,000	47,549,000
1910	2,592,000	3,370,000	45,832,000

a Tons.

MINERAL PRODUCTION. The total mineral products of the State in 1910 were valued at \$47,771,775. Of this, the copper produced was valued at \$28,125,799; coal, \$2,930,771; clay products, \$2,196,222; Portland cement, \$3,378,940; salt, \$2,231,262, and gypsum, \$668,201. Other mineral products are mineral waters, sand and gravel, and stone.

The State is one of the three largest producers of copper. It is surpassed only by Arizona and Montana. The output in 1910 was 221,462,984 pounds, as compared with 227,005,923 pounds in 1909. The decrease in output was due to voluntary curtailment resulting from the general condition of the market. The copper produced in the State comes from the so-called Lake district, which has been an active producer for 65 years.

The copper production of Michigan in 1911 showed a decrease from the output of 1910 of about 5,000,000 pounds. This decrease was attributed to the relatively low prices of copper which caused some companies either to suspend operations or to produce below their maximum capacity. No unusual development took place during the year, although several mines that have been under development made small productions.

The production of coal in the State in 1910 was 1,534,967 short tons, compared with 1,784,692 short tons in 1909, a decrease of 14 per cent. This was due largely to labor troubles. Of the 3525 men employed, 1663 were on strike from April 1 to June 1, and the average time for each man lost on strike was 52 days.

The State ranks second in the production of iron ore. In 1910 there were mined 13,303,906 long tons, valued at \$41,393,585, as compared with 11,900,384 long tons, valued at \$32,282,622 in 1909. In the State is one range and parts of two other ranges from which iron ore is taken. The Marquette range is comprised wholly in the State, while the Menominee and the Gogebic are also in Wisconsin. See IRON AND STEEL.

EDUCATION. The children of school age, between the ages of five and twenty in 1910, numbered 771,471. The school attendance during the year averaged 541,501. The number of schoolhouses was 8598, and school districts,

7333. The average monthly salary of male teachers was \$105.52 and of female teachers, \$60.10.

FINANCE. According to the report of the State treasurer, the balance on hand July 1, 1910, was \$2,487,883. The total receipts for the year 1911 amounted to \$12,344,453. The disbursements amounted to \$12,956,591, leaving a balance on hand June 30, 1911, of \$2,235,425.

CHARITIES AND CORRECTIONS. The charitable and correctional institutions of the State are as follows:

Michigan School for the Deaf, Flint; Michigan School for the Blind, Lansing; Michigan Employment Institution for the Blind, Saginaw; State Public School, Coldwater; Industrial School for Boys, Lansing; Industrial Home for Girls, Adrian; Michigan Soldiers' Home, Grand Rapids; Kalamazoo State Hospital, Kalamazoo; Pontiac State Hospital, Pontiac; Traverse City Hospital, Traverse City; Newberry State Hospital, Newberry; Michigan Home for the Feeble-minded and Epileptic, Lapeer; Ionia State Hospital, Ionia; Michigan State Prison, Jackson; State House of Correction and branch of the State Prison in the upper peninsula, Marquette; Michigan Reformatory, Ionia; Detroit House of Correction, Detroit; State Sanatorium, Howell; University of Michigan, Ann Arbor; Michigan Agricultural College, Lansing; State Normal College, Ypsilanti; Central Michigan Normal School, Mt. Pleasant; Northern State Normal School, Marquette; Western State Normal School, Kalamazoo; Michigan College of Mines, Houghton; and Psychopathic Hospital, Ann Arbor.

At the last session of the legislature a bill was passed changing the names of all the asylums and substituting the word "hospital" therefor.

A bill was introduced at the last session of the legislature to abolish the several boards of control of the State institutions, and to create a central board having supervision over all State institutions. The bill did not become a law, however, and consequently there has been no change with reference to their administration.

Under a law passed by the legislature of 1909, the contract system in the penal institutions will gradually be replaced with the State account plan. At the last session of the legislature an appropriation was made for the purpose of enabling the board of control of the Michigan State Prison at Jackson, and the branch prison at Marquette, to install industries on the State account. There are some contracts which will not expire for some time, but under the present law the contract system in this State will eventually be wiped out.

PARTIES AND GOVERNMENT

On January 17 the State legislature, which was Republican by a large majority, instead of making a caucus nomination for United States senator elected, without a dissenting Republican vote, Charles E. Townsend, who at the State primaries in the preceding September was declared by a majority of 40,587 to be the choice of the Republican electors of the State for senator.

The State elections of the year were held on April 2. Two Supreme Court justices, two regents of the State university, two members of the State agricultural college board, and a

superintendent of public instruction were then elected. The Republicans won, the average majority for their several candidates being about 125,000. At the same election 10 counties were voted dry, so that now 39 of the 83 counties of the State are dry.

The legislature held its biennial session, beginning early in January and closing April 20, but it did not enact any laws of paramount importance. See *Legislation*, below.

LEGISLATION. The important measures passed at the legislative session of 1911 included the following: The telephone lines and telephone companies within the State are declared common carriers and are under the general control of the railroad commissioner. A measure was passed regulating the assessment of mining property by which the mineral rights shall be assessed in addition to the surface value of the land. A measure was enacted regulating the rights of married women and giving them the right to all their earnings acquired as a result of their personal effort and also the right of selling or disposing of all such earnings and making contracts in relation thereto to the same extent as if they were not married. It is made a felony to carry concealed weapons or to go armed with a dagger, sword, pistol, revolver, etc., or with bat pins over ten inches long.

OTHER EVENTS. There were many forest fires in the upper part of the State during July. Au Sable, on the Lake Huron shore, was almost wholly destroyed July 12, and a few days later the town of Minersburg was partially destroyed. About a dozen persons were burned to death, upwards of \$5,000,000 of property was destroyed, and several thousand people were temporarily without homes. See *ARBITRATION AND CONCILIATION*; and *CHILD LABOR*.

STATE OFFICERS. Governor, Chase S. Osborn; Lieutenant-Governor, John Q. Ross; Secretary of State, Frederick C. Martindale; Treasurer, A. E. Sleeper; Auditor, Oramell B. Fuller; Attorney-General, Franz C. Kuhn; Adjutant-General, James N. Cox; Superintendent of Public Instruction, Luther L. Wright; Commissioner of Insurance, Calvin A. Palmer; Commissioner of State Land Office, Huntley Russell—all Republicans.

JUDICIARY. Supreme Court: Chief Justice, Joseph H. Steere; Justices, John E. Bird, Joseph B. Moore, Aaron V. McAlvay, Charles A. Blair, Flavius L. Brooke, John W. Stone, Russell C. Ostrander; Clerk, Charles C. Hopkins, all Republicans.

STATE LEGISLATURE, 1911. Republicans, Senate, 29; House, 87; joint ballot, 116. Democrats, Senate, 3; House, 13; joint ballot, 16. Republican majority, Senate, 26; House, 74; joint ballot, 100.

The representations in Congress will be found in the article *UNITED STATES, Congress*.

MICHIGAN, UNIVERSITY OF. An institution of higher learning at Ann Arbor, Mich., founded in 1837. The number of students enrolled in the various departments of the university in 1910-11 was 5381. The faculty numbered 426 and there were, in addition, sixty-five administrative officials, excluding clerks. During the year 1910-11, Prof. Gardner S. Williams, head of the department of civil engineering, resigned to go into private practice. Prof. Richard Hudson, head of the department of history, and Prof. Otis Cole Jackson, of the

chemical faculty, retired upon the Carnegie Foundation. Among the new appointments were those of Dr. Ulrich E. Phillips, in the department of American history; Edward R. Turner, European history; Herbert R. Cross, fine arts; and Charles J. Tilden, engineering and mechanics. The latter two departments are newly created. Instruction in fine arts has not been given hitherto at the university, and instruction in engineering mechanics has previously been given as part of the department of civil engineering. The university is supported almost entirely by the State and does not, as a result, receive many benefactions. A considerable number of business houses and individuals maintain fellowships from year to year. During 1910-11 the university received under the will of Emma J. Cole approximately \$15,000 for the establishment of the Emma J. Cole fellowship in botany. The productive funds amounted in 1910-11 to \$545,974 and the estimated income during 1911-12 will be \$1,400,000 with an additional \$280,000 for the purpose of constructing a new heating and lighting plant. A new building is under construction under the bequest of the late Regent Arthur Hill, an auditorium to seat over 5000 persons and to cost, exclusive of site, \$230,000. The university in 1911 embarked for the first time on the additional policy of university extension. It is expected that members of the faculty will deliver some 300 lectures in the State under the direct auspices of the university. There has also been established a course leading to the degree of doctor of public health. This is a graduate course for the purpose of preparing men to administer public health departments and similar civic work. The library contains 210,000 volumes. The president is Harry B. Hutchins.

MIGHELS, PHILIP VERRILL. An American author, died October 13, 1911. He was born at Carson City, Nev., in 1869, and was educated in the private schools and Carson City high school. He studied law and was admitted to the bar in 1890. He did not practice, however, but engaged in journalism. In 1892-3 he was employed on papers in San Francisco and in 1894 removed to New York. In the year following he retired from journalistic work and devoted himself exclusively to authorship. He spent four years in London, from 1897 to 1901. He was the author of a volume of poems, *Out of a Silver Flute* (1896), and the novels, *When a Witch is Young* (1901); *A Crystal Scepter* (1901); *The Inevitable* (1902); *Brurver Jim's Baby* (1904); *Sunnyside Tad* (1907); and *The Pillars of Eden* (1909). The last named novel was dramatized. He was the author also of several other plays.

MILES, NELSON A. See *LITERATURE, ENGLISH AND AMERICAN, General Biography*.

MILITARY PROGRESS, INTRODUCTION. Before proceeding to the review of the year 1911 it may be of interest to recall briefly the leading features of military progress during the four years immediately preceding. In 1907 all European nations strengthened their armies. In that year Germany took a definite stand on the question of the limitation of armaments, declining to take further part in The Hague conferences if that matter were to be discussed.

During the next three years the following developments may be mentioned: A more open tactical formation of infantry owing to new and more powerful small arms; increased importance of the dismounted action of cavalry; great progress in the improvement of the power of heavy guns in coast artillery; increase of the number of machine guns with mounted troops; the discarding of the lance; almost complete rearmament throughout the world with improved weapons in field artillery; the growing belief that owing to the increasing power of small arms, the old "shock tactics" should be discarded; extraordinary development in aeronautics and the rapid improvement of aeroplanes and dirigibles. The French service excelled in the aeroplane work, while the German service kept the lead in dirigible. In 1910 also there were important developments in motor transportation. It now seemed possible that, to a great extent, the motor would supplant the horse. Successful tests were held everywhere. The principal problem lay in getting the necessary increase of horsepower while at the same time decreasing the weight of the motor and vehicle. In 1910 the new pack was issued and proved a great advance in every particular over the old method of carrying the soldiers' load.

PANAMA CANAL. The question of the advisability of fortifying the Panama Canal was settled after considerable discussion by the Congress of the United States making an appropriation for that purpose and directing that the work be done under the control of the canal commission, of which Col. George W. Goethals, corps of engineers, United States army, is the chairman. Three views appeared in the discussion: (1) Not to fortify; (2) to use the navy to defend the canal; and (3) to construct fortifications. Those contending that the first view was the proper one defended their stand on the grounds that the treaties under which the United States was constructing the waterway did not permit of fortifications, and that the correct solution of the problem of "peace" required the omission of forts. Those holding to the last two views contended for the necessity of military protection, and army and navy officers and others conversant with strategic principles clearly showed that to tie the navy to the canal for the purpose of defense was to rob the fleet of one of its prime requisites—mobility.

FORTIFICATIONS. The *Scientific American* of March 11, discussing the question of the best economical method of providing efficient harbor defense, advanced an idea which has been favorably commented on, and deserves recognition. It was to utilize obsolete battleships by placing them in favorable positions at the entrances to harbors, settling them firmly on piling and concrete, building heavy protection around the hull, of concrete and other available material, removing the navigating machinery and leaving only such machinery as was necessary for operation of the plant, thus constituting the old ship, with practically its original armament or such modifications of armament as might be practicable, a fort of good value.

CANNON, SMALL ARMS, AND POWDER. In the United States some difficulty was experienced in securing satisfactory bids for the construction of the new 14-inch guns that are to be mounted, and most of these guns are being built at the Watervliet Arsenal by the ordnance

department of the army. The practicability of the 14-inch gun of 45 calibres in length having been determined, both the navy and the army have decided to utilize a considerable number of this size.

A number of accidents in using smokeless powder drew attention to its unstable character, and Sir Hiram Maxim, in an article in the *Scientific American* of January 21, 1911, pronounced that used by the American army and navy to be the best in the world. There are four desiderata for good smokeless powder: 1st, that it be stable; 2d, that it produce high velocities with low chamber pressures; 3d, that it have a minimum of erosive effect; and 4th, that it shall give regular pressures. All of these the American powder has to a large degree.

Marked improvement was made during the year in the "mufflers" for small arms. The basic principle of practically all types of silencers is the same. The endeavor is to impel the exit of the explosion gases from the muzzle, so as to convert their ordinary sudden motion to a more or less gradual process. The best types screw on the muzzle; and are of but little weight, thus disturbing the balance of the piece but little.

An important development of guns for attacking aeroplanes is the McLean-Lissak automatic machine gun capable of firing 350 shots per minute, with a muzzle elevation of 75°. The mechanism is gas-operated, and the piece is mounted on a tripod sufficiently high to enable the firer to lie on the ground and direct the gun.

A German inventor brought out a shell which is designed to act as an aerial automatic magazine gun, in order to reach an enemy behind entrenchments. The centre of the shell contains explosive materials and shrapnel, to be detonated as an ordinary shell at a predetermined moment. Before that moment, however, it is arranged to fire backwards continuously. To effect this, cartridges are set into the shell with a slope backwards, and, by means of a timing device, are fired successively. The powder charge in the cartridges is sufficient to give the bullets a backward velocity, notwithstanding the forward progress of the shell. The device is valuable only when the shell is moving with a flat trajectory, for it will be seen very readily that, if the nose of the shell is pointed downward, the greater part of the bullets will fly upwards, and vice versa.

The race in development between gun and armor progressed with startling leaps. Experiments in February and March on the old United States ram *Katahdin* showed conclusively that the gun is well in the lead. Twelve-inch shells fired at 8- and 10-inch armor plate from a distance of 8000 yards with an initial velocity of 2400 feet per second completely penetrated the plates, thus demonstrating the terrible power of the guns that all the great ships of the world now carry. When to this power is added the deadly accuracy of modern ordnance, an argument for peace is obtained more potent than most others that have been proposed. These experiments were strikingly confirmed by later ones against the old United States battleship *Texas*, renamed the *San Marcos*. Firing with the most powerful guns in the navy, with ranges varying from six to nearly twelve miles, the gallant old ship was completely riddled and her interior torn up

by the most accurate fire of heavy ordnance in the history of the world. The armor was, at no range, proof against the 12- and 14-inch armor-piercing shells. Since this firing was from the unsteady platforms afforded by vessels, this is only an indication of what would happen to a battleship subjected to the more accurate and deadly fire of fortifications.

Airships having become a reality, methods were devised to destroy them. A certain measure of success at this having been attained by the perfection of land guns, naturally the aviators sought protection for themselves, not only against land attack, but against an aerial enemy. A Swedish inventor, early in the year, produced an aerial torpedo for use by air craft, and it was manufactured by the Krupps. It is self-propelling, and acts practically without recoil on the vessel from which discharged. The principle is similar to that of a sky rocket having an explosive head and a tail chamber containing a slow burning powder charge, the gases from which, being discharged to the rear, drive the torpedo forward. The initial velocity is derived from a launching device whose motive force is either electricity or a light powder charge. A range of 5000 yards has been obtained, with fair accuracy, the torpedo carrying six pounds of explosive for the final burst. By this means the warfare of the future will take place not only on the earth and under the waters of the earth, but in the air above.

It has been found that searchlights are not at all times effective in the field, for the irregularities of the ground may still easily be able to conceal bodies of troops. This led to the invention early in the year and the production during the autumn manoeuvres of the German army of what has been styled a "self-illuminating pistol." As a matter of fact, it is not the pistol, but the projectile that is luminous. The projectile explodes after the fashion of a rocket, and produces either a red or a white light, according as it is used for signaling or for illumination. Sufficient light is developed to render comparatively small objects visible for a distance of 200 meters (nearly 220 yards), and the light lasts about ten seconds after the burst.

ELECTRICAL APPARATUS. Wireless Telegraphy. In the German army a wireless outfit was adopted to be operated by six men, and capable of being carried by cavalry. A telescope mast can be set up in a few minutes and connected with an automobile sending and receiving station. The station can be prepared for work in six minutes and has a radius of one hundred miles.

A successful equipment of the same type adopted in England consists of a small light motor driving a dynamo, a receiving and transmitting set, and a light mast, the whole handled by four men and eight horses, four horses carrying the equipment. The parts are carried so that the station can be set up in a very short time. One horse carries the generating set, another the transmitter, a third the receiving instruments, and the fourth the mast and stays. The equipment is all secured to the saddles in a way to obtain greatest ease in transportation. The generating set is fixed permanently to the saddle, which latter, when removed from the horse, stands on four legs, two supporting the dynamo and two the gaso-

line engine. There is a fuel tank on each side of the saddle. The dynamo is coupled directly to the motor by a detachable shaft. Marconi receiving and transmitting instruments are used and compactly placed on the saddles. The mast is of the jointed fishing-rod type and about fifty feet long. The practical value of this set for cavalry entirely detached from other means of transportation has been amply demonstrated, and it is also practicable for use by infantry and field artillery.

Communication between airships and the earth, and from one airship to another was the subject of great development during 1911. In January, Capt. Paul W. Beck of the United States infantry transmitted wireless messages for a considerable distance from a Wright biplane in San Francisco, Cal. He trailed a 100-foot length of copper wire from the aeroplane as a receiving wire. When through with the wire it could not be drawn up, so was cut. This entailed the loss of a considerable amount of wire for each series of messages, and the number of messages was limited by the weight of wire that could be carried. Later experiments proved the practicability of using the guy wires of the aeroplane.

In France wireless messages were transmitted fifteen miles during experiments made in January; and in England, from the dirigible *Beta*, thirty miles. On March 6 good results in wireless from aeroplanes were obtained at Palm Beach, Fla., by J. A. D. McCurdy, P. G. B. Morris, and G. W. Hoey. A light Marconi set was installed on an aeroplane and the antennae were stretched between the struts and rudder supports. A Marconi magnetic detector was connected on the "ground" side to the metal frame of the machine, and, with a number of small plates of tin foil, formed one side of the condenser, while the earth acted as the other. The aerial side of the detector was made up of rubber-covered wire running around the rudder frame and back several times. The operator carried the detector and tuning apparatus on his knees. At varying altitudes messages were clearly received and sent, and the entire practicability of the apparatus was demonstrated.

A new wireless aeroplane equipment which was adopted by the French army received a successful trial on July 29. Starting from Saint-Cyr and flying at an average altitude of 1600 feet, two operators had no difficulty in keeping in constant communication with the Eiffel tower from an average distance of thirty miles. A magneto operated by the motor of the aeroplane produced the spark, and the antennae, of steel wire, were so arranged that they could be rolled up when not in use.

Without intercommunication between airships and the land stations and between airships themselves, the service of reconnaissance remains largely a matter of individual effort. Wireless communication is always subject to disturbance from the enemy, even if the code is not known. Searchlight rays have the disadvantage of visibility at night beyond the range of necessary exchange of signals, thus vitiating their value for military purposes. During sunlight, secret communication can be maintained between an airship and the earth, for the light beam projected by the heliograph cannot be seen except in prolongation of the

beam itself. A method, however, which bids fair to exceed all others for secrecy is photophony, in which a selenium cell apparatus is employed. In this the beam of light is used exactly as a telephone wire, and in England was employed with surprisingly good results in combination with the telephone relay. Without the relay the range was about five miles, while the relay increased the range several fold.

SEARCHLIGHTS. The French army developed a traveling electric arc searchlight, carried by an automobile, which can move at the rate of nineteen miles an hour, the fuel being gasoline, alcohol, or oil, burned in an 18-horsepower engine. The light is of 7000 candlepower, with a 38-inch reflector. It can be removed from the car and set up at any point within a radius of 100 meters (328 feet), that being the length of the flexible current leads from the car to the lamp. If desired it can be operated from the car, the observer moving to one side. It is equipped with an ingenious device arranged on the principle of tuning forks, enabling the operator to manipulate it at will from a place of security however exposed the light itself may be. Positive carbon is used, and the electrodes are so placed as to give an extraordinary effect. With a 60-inch reflector the light gives good results three miles.

ELECTRIC RECORDING RIFLE RANGE TARGET. An electric recording target was perfected by Mr. S. A. M. Rose, an Australian. The apparatus can be applied with equal facility to any desired range, whether indoors or out, up to 2000 yards and more, and with either a stationary or a moving target. It shows misses as well as hits, and is very simple. The position of the hit on the target is shown on electrically operated rollers. Great interest has been taken in the invention, and it promises to be an important step in target shooting.

MOTOR TRUCKS. As noted in the YEAR BOOK for 1910, motor trucks are now practicable for military use. Continued experiments in all the armies of the world during 1911 enabled marked improvements to be effected. The leading objection, the great weight of those trucks possessing sufficient power, was gradually overcome by the improvement of the motors, enabling a development of more horsepower and a reduction of actual weight. The quartermaster's department of the United States army conducted a series of exhaustive trials, and developed the fact that it is not now a question of the practicability of the trucks, but a question purely of economical operation.

In Germany motor omnibuses were used with a carrying capacity of fifty men at a speed averaging twenty-six kilometers per hour. Smaller detachments had been conveyed in this manner in 1910, and the busses worked so satisfactorily that the same scheme was developed and used in the manoeuvres of 1911. The advantage is that men arrive at their destination much fresher than by marching, and with far greater speed. An experiment was tried during the manoeuvres of working the trucks in conjunction with the marching columns, by carrying a detachment ahead and dropping it, going back to the troops and picking up another detachment, carrying it beyond the first, and so on. The average rate of march for a considerable column was thus increased appreciably, and the entire command arrived at the end

of a day's march in much better condition than otherwise.

AVIATION—Aeroplanes. The art of flying in heavier-than-air machines, immediately on its appearance in a practical form, was seen to be one vitally affecting military operations. The progress in aviation formed by far the most spectacular and startling part of the year's development in the military art.

The United States government, although the first to recognize the possibilities of aviation as affecting military operations, has, with a singular disregard for necessary improvement, practically ignored the pleadings of aviation experts, and the only progress in the United States has been almost entirely due to private enterprise; though Glenn Curtiss, early in January, arranged with the War Department to establish a school for military aviators at College Park, Maryland, and a few officers of the United States Signal Corps made good progress.

Throughout the year bomb-dropping experiments were continued in all the armies of the world. It has been practically settled that throwing missiles by hand is too uncertain a method to be of value, especially in view of the fact that the aeroplane must go so low as to make it certain death for the operators when exposed to rifle fire. The destructive effect of bombs did not need demonstration, but the first case of the actual use of a bomb with explosive took place in some experiments that were conducted at San Francisco, Cal., by United States army officers. The bomb used weighed about eight pounds, and was charged with black powder and bullets. The explosion tore a large hole in the earth, and the bullets were scattered within a circle of radius of fifty yards, the bomb being dropped from a height of 550 feet.

An instrument was devised and tried in the United States for the accurate launching of missiles, and forms the foundation for the development of similar weapons. A telescope is fixed in a vertical quadrant, under which is carried the bomb to be thrown. The problem is practically that of calculating the portion of the trajectory in vacuo, of a mortar shell from the apex, or highest point, to the point of impact. It is easily seen that, supposing the aeroplane moving horizontally with a speed equal to that of a shell at its highest point, the bomb which is released from the aeroplane at that point will complete the unfinished trajectory, acted on by the initial momentum and by gravity. Knowing from the barometer the height of the machine, and from calculation the speed, the elements necessary to compute the trajectory are known, and the point of impact can be calculated. By this calculation the angle of depression from the point of launching to the target can be ascertained and the telescope set in the quadrant at this angle. The firer then releases the bomb at the moment the line of sight from the telescope pierces the target. In practice the elements of uncertainty are the speed of the aeroplane, the altitude, and the effect of air currents. With improved speedometers and barometers these elements can be reduced to a minimum.

In February, Lieut. B. D. Foulois, of the United States infantry, assisted by Charles K. Hamilton, a civilian, traversed a large part of the Mexican border and located bodies of

Mexican troops. On March 3 Lieutenant Foulois and Philip Parmelee flew from Laredo, Tex., to Eagle Pass, 116 miles, without a stop, at an average speed of fifty-five miles an hour, maintaining wireless communication with the detachments of American troops along the border. They carried rations for several days, and demonstrated the entire practicability of the aeroplane for scouting purposes. On March 16 these same aviators flew from the camp of the manoeuvre division at San Antonio, twenty-six miles to Leon Springs, delivered a message, and returned over a slightly longer route to the starting point in an hour and forty-five minutes. On March 18 they also made a successful flight.

On the outbreak of war between Italy and Turkey the Italian government dispatched with the fleet to Tripoli a complement of eight monoplanes and two biplanes. On October 23 Captain Piazza of the aeronautic corps flew over the fleet and then made a reconnaissance of the neighboring country in a Blériot monoplane. Among the Arabs and other Turkish troops the machine was awe-inspiring and created a great sensation, thus demonstrating its moral effect. Valuable information of the strength and disposition of the Turkish forces was secured as far as the oasis of Zanzor, a distance of fifteen miles.

The opinion from experience, up to the end of 1911, is clearly that the proper function of aeroplanes is not that of fighting, but of service of communication and information. This also eliminates from the duties of aviators the handling of explosives and the dropping of bombs. The scouting service of the aviator is for the purpose of ascertaining the strength and disposition of the enemy's forces; and the duties of communication require the transmission of messages between parts of the army widely separated and cut off from telegraphic or telephonic accessibility. In reconnaissance the minutiae cannot be picked up from an aeroplane or a dirigible. For instance, the character of roads and fords cannot be ascertained without alighting, which, in an enemy's country, may be impracticable.

Nevertheless, attention was paid during the year to the protection from rifle fire. On the Voisin biplane of France was placed a shield for the aviator, and in the construction of this protection lightness as well as impenetrability was a prime feature of the material used. Swift movement and altitude have been relied on as good protection from rifle and artillery fire, but the daring of operators will certainly bring them into danger frequently, and the provision of a material protection will not be amiss.

In Germany a luminous compass was invented for the guidance of aviators at night. The dial is covered with a luminous paint.

Messrs. Vickers' Sons & Maxim perfected during January an aluminum alloy which has the strength of mild steel, and which is only slightly heavier than aluminum. It is especially suitable for the frames of aeroplanes and the cars of dirigibles.

Louis Bréguet on March 23 carried eleven people two miles in his military biplane—a total load of 1315 lbs. This demonstrated the practicability of the machine for carrying small detachments.

The French war department started a series

of maps for military aviation purposes. The features shown are those that can be seen from an aeroplane at the height of 600 feet. Roads are shown in white, woods in green, shading indicates slopes—heavy for steep slopes and lighter for more gradual ones—towns and villages are in red, and the minor features are variously indicated. The whole of France will be mapped according to this scheme.

A tentative plan for the organization of the French aeroplane service calls for a reserve corps (not belonging to the regular army) which is to be called on in time of necessity. A great number of civilians have already made good records, and these are to be listed in the reserve. Already quite a number of these men have received military decorations for service. Inasmuch as all private citizens are nominally a part of the French military forces, in time of war it is expected to requisition not only the aviators, but their private machines, compensating them justly for the confiscation.

While the operation of aeroplanes against submarines is a long stretch of the imagination, yet this was accomplished in 1911, and pertained to army coast defense operations. Early in September important experiments were made in the harbor of Cherbourg, France, to determine whether submarines could be discovered from an aeroplane. The experiments were a complete success, and proved beyond doubt that from a height of 500 to 3000 feet the submarines looked like large black masses under the water, and, without great difficulty, could be located. While this is of greater importance to naval than to military operations, yet it possesses a great significance for land work.

The vibration of the aeroplane makes it difficult for a sketcher to make a map of the country underneath, although this was done fairly successfully in all the autumn manoeuvres. Photography will probably be the most reliable method of recording views from such heights. A camera adapted to taking cinematographic pictures was used with greater success than any other. By night this camera can be used by the aid of a searchlight.

In the latter part of October there occurred in France the preliminary tests for the prizes for military aeroplane development. These tests were made according to the announcement of the year before. There were thirty entries—nine monoplanes, nineteen biplanes, and two triplanes. In the first tests the triplanes, six monoplanes, and fourteen biplanes were eliminated. On November 4 the final test resulted in Charles T. Weyman, an American, winning the first prize with a Nieuport monoplane, covering the required distance of 186 miles in two and one-half hours. The total weight of the machine, live load, and ballast was a little over a ton. This mass was moved at an average speed of 74½ miles per hour. Weyman created a sensation by alighting with his tremendous load on, and starting with it from exceedingly rough and difficult ground, such as plowed fields, etc. His closest competitor covered the same distance in 3¼ hours.

Referring to the autumn manoeuvres of 1911, *Le Matin* of Paris observed that they furnished abundant proof of the military value of aeroplanes. Messages were delivered at points beyond the reach of any other means of communication in the time consumed. The service of com-

munication is placed first; scouting comes next; and the direction of artillery fire has assumed a great importance. *Le Matin* disputes the value of the aeroplane for dropping bombs, although admitting that such bombs might prove effective against bridges and other railroad structures. Having encouraged the development of the machine by more or less individual effort, the next proper step for the French government was considered to be the organization of the aeroplane service into an efficient military corps.

In the German autumn manœuvres work of the greatest value, so rated by conservative officers, was done on both sides by the aeroplanes, assisted by the dirigibles, but the former were easily of greatest importance. All the operators were of the military service, differing in this from the French organization. The weather was very favorable for the best work of the air craft. The Blues were equipped with one Gross-Basenach dirigible (M II.) and four Albatross-Farman biplanes. The Reds had a dirigible of the same type (M III.), and four Taube monoplanes. Each aeroplane carried two men. Each side had an aeronautic field park, which was made up of a portable airship tent and four aeroplane tents. The airship tents were 100 meters long and consisted of a framework of steel masts and cable covered with canvas, which took about a day to erect, and was very cumbersome. The aeroplane tents could be erected in a short time. The large tents required a considerable amount of transportation equipment, while the small ones needed only two automobile trucks.

A Blue aeroplane moved out one evening to the line of outposts, the tent was erected for night shelter, and, in the early morning, the machine ascending for reconnaissance, the hangar was knocked down, loaded in the automobile trucks in a few minutes, and carried rapidly to the rear to a place of safety, while the aeroplane, from this advanced position, was able to secure valuable information with a minimum expenditure of fuel and time.

At an important crisis in the manœuvre the Reds were concentrating for a decisive blow, while the Blues were scattered. The Blues tried a bluff. They purposely lost a map showing fake positions of large bodies of troops. The "scenery" was all laid, by "outlining" the positions, and by indicating them on the "lost" map. It was so well done that the Red commander issued his orders for an attack on the positions supposed to be held in force. It occurred to one of the aeroplane scouts of the Reds that it would be just as well if he verified the "information" on which his commander was acting. He immediately discovered the ruse on flying over the "outlined" positions, and, not having time to alight to deliver his report, dropped it from his aeroplane so that his commander received it in time to stop the movement. The aviator was personally complimented by the kaiser.

Dirigibles. Germany has, from the start, done more with dirigibles than any other country, and continued to do so during 1911. Larger and more manageable ships were constructed. The military air harbors at Königsberg and Thorn, on the eastern frontier, were equipped with docks for the largest vessels. These docks consist of huge permanent structures, which will serve as bases for vessels having a large radius of action. They are located within the fortress

and may be entered at night as well as by day. Stations had already been established at Dusseldorf and Baden-Baden, and others were built at Potsdam, and near Berlin, Frankfurt, Hamburg, Gotha, and Kiel. In emergencies it is planned to utilize also the smaller stations at Cologne, Strassburg, Metz, and Königsberg. Aerial beacons, as lighthouses, were, by the end of the year, very common. See also AERONAUTICS.

MILLS, ROGER QUARLES. Former United States senator from Texas, died September 2, 1911. He was born in Todd county, Ky., in 1832. In 1849 he removed to Texas. He studied law and was admitted to the bar by special act of the legislature at twenty years of age. In 1859 he was a member of the Texas House of Representatives. He enlisted in the Confederate army and took part in several important battles. He was promoted to the rank of colonel and was wounded in the battle of New Hope Church in 1864. In the same year he received another wound at Atlanta. He commanded a brigade at the close of the war. After serving in the Texas legislature he was elected to the National House of Representatives in 1873 and served continuously in that body until 1892. During his service he made a special study of tariff reform. In 1891 he was a candidate for speaker of the House, but was defeated by Charles F. Crisp of Georgia. He felt this blow keenly and retired from the chairmanship of the Ways and Means Committee which he held through several terms. In 1892 he was elected to the Senate for the unexpired term of Horace Chilton. He was re-elected for the term 1893 to 1897. As chairman of the Ways and Means Committee of the House he prepared the tariff bill known as the Mills bill, which made the issue for the presidential election of 1888. He was a man of strong convictions and unquestioned courage. He was known in both houses as an excellent speaker.

MINERALOGY. The contributions to mineralogy during the last few years have included descriptions of many new rare or otherwise interesting species and a great amount of research work upon mineral properties and relationships. Much of this work, however, has been merely routine in its character, making appeal only to the special student of the different departments. Of more general importance have been the investigations into the principles governing the formation and occurrence of minerals, for which the recently developed methods of physical chemistry have furnished the experimental basis. The contributions of the Carnegie Geo-Physical laboratory, in Washington, may be considered among the most notable that have been published lately in this field of study; the experiments by Day, Allen, and others of the staff on the thermal constants of minerals have explored much new ground and set a standard for precision that should prove of permanent value.

Among the recent discoveries of rare minerals is that of diamonds from the Tulameen River district, British Columbia. This is the second known occurrence where the stones have been found in North America in their original rock matrix. Loose diamonds have been picked

up in considerable numbers throughout many sections of this country and Canada, and their derivation has long been a puzzle to mineralogists. The discovery of diamond "pipes" in Pike County, Arkansas, reported a few years ago, has not been followed as yet by any commercial mining operations.

The theory of solid solutions, best exemplified by certain alloys and chemical compounds, has come into some prominence as a possible explanation of the apparent anomalies exhibited by some minerals. H. W. Foote and W. M. Bradley have sought to show that it may be applied to the mineral nephelite, in which case the chemical complexity can be attributed to the existence of silica, held in solid solution by the nephelite molecule. On the basis of several careful analyses they conclude that the pure compound which forms the molecule is an orthosilicate of sodium and aluminium, corresponding to the minerals eueryotite and kaliophilite, which carry lithium and potassium respectively in the place of potassium, and which are isomorphous with nephelite. An argument for this view is found also in its simplicity as contrasted with the former assumption of a series of chemical compounds present in variable proportions.

NEW MINERALS. The following minerals were described for the first time in 1911. *Ferritungstite* is a hydrous ferric tungstate, forming hexagonal plates of yellow color, an alteration product of wolframite. It occurs in the Germania mine, Deer Trail district, Washington. *Gajite* is a hydrocarbonate of lime and magnesia, white in color and of massive appearance. *Hinsdalite* belongs to the group of rare minerals that includes *svanbergite*, *corkite*, and *beudantite*. Chemically it is a hydrous salt of sulphuric and phosphoric acids, with lead and aluminium as the principal bases. The crystal form is rhombohedral. Found in the gangue of the Golden Fleece mine, near Lake City, Col. *Molengraafite*, a titano-silicate of calcium and sodium, differs from all other titanium minerals in its high content of sodium, which amounts to over ten per cent. It forms brown prisms of monoclinic habit, weathering to titanite and calcite. *Nataamolygonite*, as the name indicates, is a sodium amblygonite, greenish white in color. It accompanies tourmaline, muscovite, and lepidolite in a pegmatite from near Cañon City, Col. *Plumboniobite*, allied to samarskite and yttrantalite, contains a number of rare elements, including uranium, yttrium, tantalum, helium, niobium, etc. The type locality is a mica quarry near Mrogoro, German East Africa, where it accompanies pegmatite. *Yttriofluorite* consist of calcium and yttrium fluorides, with a small amount of cerium. It somewhat resembles fluorspar in appearance and like the latter crystallizes in the isometric system. It occurs in pegmatitic granite in northern Norway.

Sphenoclase, a supposedly mineral species and described in mineralogies as an aluminum silicate, should be dropped from the list. A more careful examination of the material from Gjellbåk, Norway, on which the species was first established, has shown it to be a fine-grained mixture of garnet and pyroxene.

MINERAL PRODUCTION. The details of the mineral production in foreign countries at the latest dates available will be found in the articles on these countries in their alphabetical order. Statistics of the production of the vari-

ous metals and minerals will be found under their own heads, as COAL, COPPER, GOLD, SILVER, etc. The mineral production of the different States will be found in the paragraph *Mineral Production* in the State articles. The accompanying table is a summary of the mineral production of the United States in 1909-10 (see pages 449 and 450).

MINERS' ANÆMIA. See HOOKWORM DISEASE.

MINERS' STRIKES. See STRIKES.

MINES, SAFETY IN. See LABOR LEGISLATION.

MINIMUM WAGES. See WAGES, MINIMUM.

MINNEAPOLIS. See MINNESOTA, and BUILDING.

MINNESOTA. POPULATION. The Thirteenth Census, taken in 1910, showed the population of the State in that year as 2,075,708, as compared with 1,751,394, an increase of 324,314, or 18.5 per cent. in the decade. The principal cities, with their population in 1910 and 1900, are as follows (the figures in parentheses are for 1900): Minneapolis, 301,406 (202,718); St. Paul, 214,744 (163,065); Duluth, 78,466 (52,969); Winona, 18,583 (19,714).

AGRICULTURE. The acreage, production, and value of the chief crops in 1910 and 1911 are given in the following table:

	Acreage	Prod., bu.	Value
Corn1911	2,200,000	74,140,000	\$39,294,000
.....1910	2,040,000	66,708,000	30,019,000
Wheat1911	4,350,000	43,935,000	40,420,000
.....1910	4,000,000	64,000,000	60,160,000
Oats1911	2,948,000	67,214,000	28,386,000
.....1910	2,977,000	85,440,000	27,341,000

Hay1911	799,000	a 799,000	9,508,000
.....1910	908,000	908,000	8,263,000

a Tons.

MINERAL PRODUCTION. The mineral products of the State in 1910, aside from iron ore, were valued at \$6,088,620. Of this, clay products were valued at \$1,901,296; sand and gravel, \$347,138; lime, \$96,150. Minnesota ranks first among the States in the production of iron ore. There were mined in the State in 1910, 31,966,769 long tons, valued at \$78,462,500. This was a considerable increase over the production of 1909, which was 28,975,149 long tons, valued at \$60,253,314. The largest quantity of iron ore was mined in the Mesabi range, from which 30,576,409 long tons were taken. From the other range, the Vermilion, were taken 1,390,360 tons. The Mesabi range produces 66 per cent. of the entire Lake Superior iron ore. See IRON AND STEEL.

EDUCATION. Statistics of education were as follows in 1911: Number of school districts, 7941; number of schoolhouses, 8841; number of teachers, 15,663; number of pupils, 443,445; amount of permanent school fund, \$22,000; money expended for various public educational purposes, \$17,000; value of public school property, \$30,000.

The most significant evidences of public school progress in Minnesota are extension of industrial courses, that is, courses for industrial training, in the public schools, and the general State movement for the consolidation of rural schools. Minnesota grants, annually, \$2500 a

a Production of iron ore. 1909: 51,155,437 long tons; value at mines, \$109,964,903. 1910: 56,889,734 long tons; value at mines, \$140,735,607. Statistics for iron ore and value of pig iron are collected by the Survey; statistics for pig iron output are furnished by the American Iron and Steel Association.

b By "spot" is meant value at the point of production.

c Long tons are tons of 2240 avoirdupois pounds; short tons are tons of 2000 avoirdupois pounds.

d Average price per troy ounce in 1909, 52 cents, in 1910, 54 cents.

e Since 1906, coining value, \$20.671834625323.

f The product from domestic ores only.

g Of 76½ avoirdupois pounds net; of 76 avoirdupois pounds net since June, 1904.

i Includes antimony smelted from imported ores, and also antimony contained in hard lead, except in 1907, 1908, 1909, and 1910.

j Includes nickel in copper-nickel alloy, and in exported ore and matte.

k Including brown coal and lignite, and anthracite mined elsewhere than in Pennsylvania. Coke, 1909: 39,315,065 short tons; value at ovens, \$89,965,483. 1910: 41,708,810 short tons; value at ovens, \$99,742,701.

m Of 42 gallons.

n Value of clay mined and sold as unmanufactured clay. 1909: \$3,449,707. 1910: \$3,625,485.

o Of 380 pounds net.

p Includes limestone for iron flux, but not grindstones.

q Included under feldspar and quartz.

r Of 280 pounds net. Value is for net product exclusive of cost of packages.

v Includes nitrate of soda, carbonate of soda, sulphate of soda, and alum clays used by paper manufacturers; and bismuth, cadmium, lithium, selenium, and vanadium, valued together in 1910 at \$277,000.

year to each of thirty high schools which maintain courses in agriculture, manual training, and home economies. One thousand dollars annually is granted to another class of fifty high schools, for maintaining courses in agriculture, and one other industrial line. The standard required of teachers in this work is that they must be graduated from a four-year technical course. The rural schools are aided by grants of money from the State, ranging from \$100 to \$300, for each individual school.

CHARITIES AND CORRECTIONS. In the legislature, which convenes in January, 1912, an attempt will be made to secure the enactment of a bill establishing a juvenile reformatory, juvenile courts, and a probation system. There is a growing public interest in the matter of prison reform in the State. The legislature will be asked also to pass a bill providing for the parole system. The work of the Mississippi Juvenile Reformatory Association has been of great value in arousing interest in these reforms.

The charitable and correctional institutions under the control of the State, and their populations in 1911, were as follows: Anoka Asylum, insane, 517; Hastings Asylum, insane, 564; Fergus Falls Hospital, insane, 1630; Rochester Hospital, insane, 1234; St. Peter Hospital, insane, 1021; School for the Blind, 82; School for the Deaf, 165; School for the Feeble-minded, 1246; Owatonna, State Orphans' Institution, 222; Red Wing Training School, 364; Home School for Girls, Sauk Centre, 63; St. Cloud Reformatory, 362; Stillwater Prison, 700; Sanatorium for Consumptives, Walker, 78; Crippled Children, Phalen Park, St. Paul, 29; total, 8324.

During the year a separate building for the dangerous and criminal insane was opened at the

St. Peter State Hospital. At present there are 54 inmates.

Detention hospitals for the insane were opened at the Fergus Falls and St. Peter State hospitals. During the year ending August 1, 1911, 459 patients have been committed by the courts to the Fergus Falls Detention Hospital, and 39 patients received on voluntary commitment. The detention hospital at St. Peter has been in operation four months, during which time 101 patients have been received. A detention hospital will also be opened at the Rochester State Hospital in the near future. The State Hospital Farm for Inebriates at Willmar, established by the legislature of 1907, is making rapid progress. Building contracts have been let for about \$210,000. The institution is located on a tract of land of 495 acres, and is designed at the outset to take care of about 60 patients. For some years an indeterminate sentence law (with a minimum and maximum term) has been in operation at the St. Cloud Reformatory. The last legislature passed a law which makes the indeterminate sentence apply at Stillwater. The new law is wider in its scope, especially in matters relating to the parole of prisoners, permitting parole at any time after commitment, doing away with the minimum sentence, but retains the provision as to the maximum term of imprisonment. A new parole board has been created to administer the law, consisting of the chairman of the State Board of Control, the warden of the State prison at Stillwater *ex officio*, and a citizen of the State appointed by the governor. An amendment was also passed prohibiting the commitment of any but male prisoners to the St. Cloud Reformatory. As formerly there was no specific prohibition, female prisoners were occasionally committed

by the courts to the reformatory, where there was no proper provision for their care and custody.

FINANCE. The report of the treasurer showed a balance in the treasury, August 1, 1910, of \$4,261,231. The receipts during the year amounted to \$15,612,048, and the expenditures to \$16,364,789, leaving a cash balance in the treasury, July 31, 1911, of \$3,508,491. The bonded debt of the State at the end of the fiscal year amounted to \$1,518,000.

POLITICS AND GOVERNMENT

The State legislature met in 1911 and the most important measures passed are noted in the paragraph *Legislation* below. On January 17 the legislature reelected Moses E. Clapp to the United States Senate. There was no opposition to his election. All of the Republican members and two-thirds of the Democrats voted for him. On April 22 Governor Eberhart signed a bill providing for the nomination of United States Senators by direct vote. On April 8 a decision was handed down by Judge Sanborn on the long-pending railway rate cases. This decision, in the main, accepted the findings handed in by the master in chancery in September, 1910. The decision was to the effect that the acts of the Minnesota legislature and the orders of the State Railway and Warehouse commission lowering certain passenger fares and freight rates on the Northern Pacific, Great Northern, Minneapolis and St. Louis railroads were null and void. He declared that these rate reductions, although applied only to commerce within the state, actually discriminated against, burdened, and directly regulated interstate commerce, thereby usurping the prerogative of the federal government and violating the Constitution. He declared further that the acts denied to the railroads that fair return upon reasonable valuation of their property, which is guaranteed to them by the Constitution, and was, in effect, confiscation. See **RAILROADS**.

On February 17 President Taft annulled portions of old treaties, which prohibited the sale of liquor in the so-called Indian lands of the State. The interpretation placed upon these treaties by the secretary of the interior gave rise to serious complications in 1910 and previous years. Under these treaties the government reserved the right to regulate the liquor traffic on ceded lands, which passed into the possession of white settlers, for as the land was settled, it was found necessary to place checks on the sale of liquor to the Indians. The State also assisted in the work by passing laws prohibiting the sale of liquor to the Indians even if they had qualified as citizens. In spite of these precautions, liquor continued to be sold to them and they became a source of annoyance to the white people dwelling in the small towns as the result of squandering the funds which they received from the government in the purchase of liquor. Conditions reached such a point in 1908-9 that the government threatened to invoke the provisions relating to the introduction of liquor, pointing out that as the term "Indian country" had been construed it concluded a large area embracing many hundreds of towns and cities. During the summer of 1910 government agents carried on an investigation and as a result of their report the Commissioner of Indian Affairs issued an order di-

recting the closing of saloons in some portions of the country and permitting them to run in others. This action created considerable excitement throughout the State. Representatives of the towns where saloons were closed protested, asserting that it was unfair to prescribe what was equivalent to prohibition in some towns and to permit the sale of liquor in others. Protest was made to Mr. Ballinger, at that time secretary of the interior, who, after considering the matter, ordered the Commissioner of Indian Affairs rigidly to enforce the law, but gave at the same time unofficial assurances that liquor might be sold in the "Indian country" if the local officials saw to it that the traffic did not touch the Indians. President Taft, as noted above, annulled portions of the old treaties which prohibited the sale of liquor in the so-called "Indian country" of the State.

OTHER EVENTS. On March 5 a fire in Minneapolis caused a loss of property valued at \$1,500,000. Several large mercantile establishments were destroyed. This is the second fire within two years in Minneapolis in which the loss has approached \$1,000,000.

LEGISLATION. The important measures passed at the legislative session of 1911 include the following: A measure was enacted relating to drunkenness on railroad trains, prohibiting the drinking of intoxicating liquors on trains, forbidding any person while intoxicated to enter railroad trains, and giving the conductor of any such railroad train authority to arrest, with or without warrant, any person violating the provisions of the law. Measures were passed providing for indeterminate sentence at the State prison and State reformatory in all cases except treason or murder. Provision is made that the court shall not fix a definite term of imprisonment, but shall sentence each person to the State reformatory or State prison, and the sentence shall be without a limit as to time, except that it shall not in any case exceed the maximum provided by law and the prison sentence shall be subject to release on parole and to final discharge by the Board of Parole. A measure was enacted abolishing capital punishment, leaving only imprisonment for life in the State prison for murder in the first degree.

STATE OFFICERS. Governor, Adolph O. Eberhart; Lieutenant-Governor, S. Y. Gordon; Secretary of State, Julius A. Schmah; Auditor, S. G. Iverson; Treasurer, Walter J. Smith; Attorney-General, George T. Simpson; Adjutant-General, Fred B. Wood; Superintendent of Education, C. G. Schultz; Commissioner of Insurance, J. A. Preus; Commissioner of Agriculture, George Welsh—all Republicans.

JUDICIARY. Supreme Court: Chief Justice, Charles M. Start, Republican; Associate Justices, Calvin L. Brown, Republican, C. L. Brunn, Democrat, P. E. Brown, Republican, David F. Simpson, Republican, Clerk, I. A. Caswell, Republican.

STATE LEGISLATURE, 1911. Republicans, Senate, 42; House, 89; joint ballot, 131; Democrats, Senate, 19; House, 26; joint ballot, 45; Independent, Senate, 2; House, 5; joint ballot, 7. Republican majority, Senate, 21; House, 58; joint ballot, 79.

The representatives in Congress will be found in the article **UNITED STATES**, section *Congress*.

MINNESOTA, UNIVERSITY OF. An institution of higher learning at Minneapolis, Minn., founded in 1869. The college and school of

agriculture are in the city limits of St. Paul. The university maintains agricultural schools at Morris and Crookston, experimental farms at Grand Rapids and Duluth, and forestry stations at Itasca and Cloquet. The total attendance in the collegiate departments of the university in 1910-11 was 3227; in the professional departments, 929; and the secondary schools, 1868, making a total of 6024. In the collegiate department the distribution was as follows: College of Science, Literature and Arts, 1621; College of Engineering, 415; College of Agriculture, 425; College of Education, 94; School of Chemistry, 73; School of Mines, 105; Graduate School, 131; Summer School, College Section, 363. The students in the professional schools were distributed as follows: College of Law, 442; College of Medicine and Surgery, 191; College of Dentistry, 206; College of Pharmacy, 90. On April 1, 1911, Cyrus Northrop, president, whose resignation had been handed in two years before to take effect whenever his successor should be chosen, retired, and George Edgar Vincent, Ph. D., LL. D. (q. v.) was unanimously chosen his successor. The university lost by death during the year Dean W. S. Pattee of the College of Law, and Prof. C. W. Hall, head of the department of geology. William Reynolds Vance of Yale University succeeded Dean Pattee as head of the College of Law, and Dr. William Harvey Emmons of Chicago University was elected to succeed Professor Hall. Among the benefactions received during the year was one of \$60,000 from Hon. Thomas H. Shevlin of Minneapolis. Of this \$40,000 is to be used for the establishment of four fellowships in the Graduate School. During the last three years the university has expended \$840,000 in enlarging its campus. There have recently been erected a hospital, costing \$200,000, and two women's dormitories, at \$50,000 and \$25,000 respectively. Four other buildings, the main engineering building, to cost \$200,000, the experimental engineering building, to cost \$125,000; the general medical building, to cost \$200,000, and the anatomical and histological building, to cost \$200,000, are in progress of erection. The permanent fund of the institution amounts to \$1,448,798. Its income amounts to \$1,410,000. The library contains about 150,000 volumes.

MIQUELON. See ST. PIERRE.

MISSISSIPPI. POPULATION. The Thirteenth Census, taken in 1900, showed a population in the State in that year of 1,797,114, as compared with 1,551,275 in 1900, an increase of 245,844, or 15.8 per cent. in the decade. The principal cities with their population in 1910 and 1900 are as follows. The figures in parentheses are for 1900: Meridian, 23,285 (14,054); Vicksburg, 20,814 (14,834); Natchez, 11,791 (12,210); Hattiesburg, 11,733 (4175).

AGRICULTURE. The Thirteenth Census included statistics of agriculture. These are of date of April 15, 1910. On that date the farms in the State numbered 274,382, compared with 220,803 in 1900. The land in farms was 18,557,533 acres, compared with 18,240,736 in 1900. The improved land in farms was 9,008,310 acres, compared with 7,594,028 in 1900. The average acreage per farm was 67.7, compared with 82.6 in 1900. The value of farm property, including land, buildings, implements and machinery, domestic animals, poultry, and bees, was \$426,314,634, compared with \$204,221,027 in 1900. The average value of all property per farm was

\$1554, compared with \$925 in 1900. The average value of land per acre was \$13.69 (\$6.30 in 1900). Of the total number of farms, 92,891 were operated by owners and managers, 181,491 by tenants. Of the farms operated by owners, those free from mortgage numbered 60,543; under mortgage, 29,693. The native white farmers numbered 108,909; foreign-born whites, 736; negro and other non-white, 164,737. The value of the various kinds of domestic animals, poultry, and bees in 1910 was \$75,247,033, compared with \$42,657,222 in 1900. The cattle numbered 1,012,632, valued at \$15,269,364; horses and colts 216,220, valued at \$20,303,851; mules, 255,760, valued at \$32,028,421; swine, 1,292,119, valued at \$94,913,166; sheep, 195,245, valued at \$416,716. The poultry of all kinds numbered 5,070,116, valued at \$1,346,751. The acreage, production, and value of the principal crops in 1910 and 1911 will be found in the following table:

		Acreage	Prod., bu.	Value
Corn1911	2,850,000	54,150,000	\$38,988,000
1910	2,590,000	53,095,000	33,450,000
Wheat1911	9,000	108,000	108,000
1910	5,000	70,000	81,000
Oats1911	130,000	2,392,000	1,555,000
1910	120,000	2,304,000	1,267,000
Rice1911	2,100	76,000	59,000
1910	2,800	84,000	59,000
Potatoes1911	9,000	747,000	859,000
1910	9,000	765,000	719,000
Hay1911	100,000	a 150,000	1,650,000
1910	100,000	142,000	1,732,000

MINERAL PRODUCTION. The mineral products of the State in 1910 were valued at \$840,152. Of this, clay products were valued at \$632,997; sand and gravel, \$159,482; mineral waters, \$43,975; other products, \$3696.

POLITICS AND GOVERNMENT

The State legislature did not meet in 1911, as the sessions are biennial, and the last was held in 1910. The chief event of political importance and interest in the State during the year was the primaries held for the nomination of United States senator, State, and county officers. The term of Senator Percy, elected in 1910 to fill out the term of Senator A. J. McLaurin, deceased, expires in March, 1913. He was a candidate for reelection at the primaries. His chief opponent was James K. Vardaman, former governor of the State, whom he had defeated before in the legislature. The campaign for the primary nomination was bitterly fought out by both candidates. Mr. Vardaman, during his term as governor, achieved a national celebrity by his utterances against negroes. Mr. Vardaman received a large majority of the votes cast.

In 1910 Theodore Bilbo, a State senator, went before the grand jury and lodged information that he had been paid a bribe for his vote. At the time of the election of Senator Percy in February, 1910, as the result of his statement L. C. Dulaney was indicted. Senator Percy at once went before the legislature and demanded an investigation. At its conclusion a supporter of Vardaman offered a resolution of absolute exoneration, which was unanimously adopted. Another resolution in the Senate for

Bilbo's expulsion for perjury only lacked one vote of a two-thirds majority. Immediately after the election in August, 1911, Senator Percy in a card announced that he would resign in January unless the campaign abusiveness was so continued that he would feel compelled by self respect to serve out his term. In a personal privilege speech in the Senate December 11 Senator Percy replied to attacks made upon him in magazine articles and speeches. He challenged a partisan State legislature to an investigation of the charges against himself and the legislature that had elected him, and recalled his expressed intention of resigning.

In November papers were filed at Jackson in a suit brought by the commonwealth against Senator-elect Vardaman, alleging misuse of public moneys. The suit was brought in behalf of the attorney for the State. Its object was to compel an accounting with respect to the contingent fund of the State, the Spanish-American War fund, and other public moneys, alleged to have been received by Mr. Vardaman during his term of office as governor, 1904-1908, and also to recover interest on certain State bonds, sold in 1906 and antedated. It was also alleged in complaint that Mr. Vardaman had made overcharges in connection with his visits to State institutions, and that the State moneys were combined with his private funds during his term of office. The suit in relation to these charges was pending at the end of the year.

A large majority of the legislature and some of the State officers were elected on this senatorial issue. The governor, Earl Brewer, was not, as he had no opposition.

OTHER EVENTS. An industrial movement of significance in the year's annals of the State was the adoption of a colonization policy by some of the large lumber companies, which had bought up pine lands in northeast Mississippi years ago. Having cleared large tracts of this timber, they now prepared to settle the "cut over" lands with "small farmers" from the North and from Europe. Settlements have already been effected under favorable auspices and will probably tend to important and beneficial changes in this pine land section.

The most serious labor strike that ever occurred in the State was called by the machinists and boilermakers' unions, after the Harriman line railroads, including the Illinois Central and the Yazoo & Mississippi Valley had refused federation recognition.

The men walked out of the shops at Vicksburg, McComb City, and Water Valley with remarkable alacrity and unanimity in September. Although they alleged no grievance as to wages, time of labor, or anything affecting their personal interests, many surrendered pension claims, in some cases where they had almost been earned. The introduction of other labor was violently resisted, especially at McComb, where nearly a thousand men went on strike. Several hundred of the State National Guard were stationed at McComb, with a smaller body at Water Valley. Deputy United States marshals were also stationed at these points to enforce a federal injunction against interference with railroad employees and operations. In Vicksburg the local authorities dealt with the troubles, but not with the best results, the shop men not daring to leave the shops without risk of assault. Though the strike proved fruitless,

the men were still out at the end of the year, under orders of the federation, without hope of winning the contest. The conduct of the militia, both men and officers, was most creditable during their long and trying garrison duty at McComb and Water Valley.

STATE OFFICERS. Governor, Earl Brewer; Lieutenant-Governor, Theodore G. Bilbo; Secretary of State, J. W. Power; Treasurer, P. S. Stovall; Auditor, D. L. Thompson; Superintendent of Education, J. N. Powers; Attorney-General, Ross A. Collins; Adjutant-General, Arthur Fridge; Land Commissioner, M. A. Brown; Commissioner of Agriculture, H. E. Blakeslee; Commissioner of Insurance, T. M. Henry—all Democrats.

JUDICIARY. Supreme Court: Chief Justice, Robert B. Mayes; Associate Justices, Sydney Smith and William C. McLean; Commissioners, Albert H. Whitfield and Frank A. McLean; Clerk, George C. Myers—all Democrats.

STATE LEGISLATURE, 1912. The State legislature is wholly Democratic.

The representatives in Congress will be found in the article UNITED STATES, Congress.

MISSISSIPPI VALLEY, DRAINAGE OF. See DRAINAGE.

MISSOURI. POPULATION. The Thirteenth Census, taken in 1910, showed the population of the State in that year as 3,392,335, as compared with 3,106,665 in 1900, an increase of 186,670, or 6 per cent. in the decade. The principal cities, with their population in 1910 and 1900, are as follows (the figures in parentheses are for 1900); St. Louis, 687,029; (575,238); Kansas City, 248,361 (165,752); Hannibal, 18,341 (12,780); Joplin, 32,073 (26,023); Sedalia, 17,822 (15,231).

AGRICULTURE. The Thirteenth Census included statistics of agriculture. These are of date of April 15, 1910. On that date the farms in the State numbered 277,244, as compared with 284,886 in 1900, a decrease of 7642. The land in farms was 34,591,248 acres, as compared with 33,997,873 in 1900. The improved land in farms was 24,581,186, compared with 22,900,043 in 1900. The average acreage per farm was 124.8, compared with 119.3 in 1900. The value of all farm property, including land, buildings, implements and machinery, domestic animals, poultry, and bees, was \$2,052,917,488, as compared with \$1,033,121,897 in 1900, an increase of 98.7 per cent. The average value of all property per farm was \$7405, as compared with a value of \$3626 in 1900. The average value of land per acre was \$41.80 (\$20.46 in 1900). Of the 277,244 farms in the State, 194,286 were operated by owners and managers, and 82,958 by tenants. Of the farms operated by owners, those free from mortgage numbered 102,514; those under mortgage, 88,486. The native white farmers numbered 259,111; foreign-born whites, 14,467; negroes and other non-whites, 3666. Of the non-whites all excepting 9 Indians and 1 Japanese were negroes. The value of the various kind of domestic animals, poultry, and bees in 1910 was \$285,839,108, as compared with a value of \$160,540,004 in 1900. The cattle numbered 2,561,482, valued at \$72,883,664; horses and colts, 1,073,387, valued at \$113,976,563; mules, 342,700, valued at \$43,438,702; swine, 4,438,194, valued at \$31,937,573; sheep and lambs, 1,811,268, valued at \$7,888,828; poultry of all kinds numbered 20,-

897,208, valued at \$11,870,972. The acreage, production, and value of the principal crops will be found in the following table:

	Acreage	Prod., bu.	Value
Corn1911	7,400,000	192,400,000	\$115,440,000
1910	7,500,000	247,500,000	108,900,000
Wheat1911	2,300,000	36,110,000	31,777,000
1910	1,881,000	25,958,000	22,583,000
Oats1911	1,200,000	17,760,000	7,992,000
1910	1,200,000	40,320,000	12,902,000

a Tons. b Pounds.

MINERAL PRODUCTION. The total mineral products of the State in 1910 were valued at \$52,640,054. Of this, the lead produced was valued at \$14,225,992; zinc, \$15,190,416; clay products, \$7,087,766; coal, \$5,328,285. Other important products are sand and gravel, stone and glass-sand.

The production of coal in 1910 was 2,982,433 short tons, compared with 3,756,530 short tons in 1909, a decrease of about 20 per cent. This was due to the strike which began on April 1, and was not officially ended until September 15. The total number of men employed in the coal mines of the State during the year was 9691. Of these 7774 were on strike.

The iron ore mined in the State in 1910 amounted to 78,341 tons, valued at 168,697 (\$89,954 tons, valued at \$210,853, in 1909).

FINANCE. The report of the State treasurer for the year 1910 showed a balance at the end of the year of \$1,403,648. The receipts for the year amounted to \$10,005,610, and there was a balance in the treasury on January 1, 1911, of \$200,557.

EDUCATION. The total number of pupils of school age in the State was 1,003,434. Of these 960,535 were white. The total enrollment was 707,031. The teachers employed numbered 18,365, of whom 17,582 were white. The annual salary for male teachers was \$543.93; for female teachers, \$406.55. The total expenditure for schools during the year was \$13,905,188.

CHARITIES AND CORRECTIONS. The charitable and correctional institutions of the State include the State hospitals, School for the Blind, School for the Deaf and Dumb, Industrial Home for Girls, Missouri State Sanitarium, and a colony for feeble-minded.

POLITICS AND GOVERNMENT

The State legislature met in 1911, and the most important measures enacted are noted in the paragraph *Legislation* below. On January 17 James A. Reed was elected United States senator by the legislature to succeed Senator Warren, whose term had expired. Senator Reed was the successful candidate in the Democratic primaries of 1910, defeating David R. Frances for the nomination. The action of the legislature was therefore in ratification of the votes of the people. There were no State elections during the year.

On January 9 the Supreme Court of the United States, in an opinion written by Associate Justice Harlan, upheld the constitutional-

ity of the statute of the State of Missouri making it a misdemeanor for a broker to deduct from the actual weight of grain, seed, hay, or coal or any other articles for sale for alleged loss in dirt or handling. The statute was passed in 1909. At the same time the court upheld the constitutionality of the State law imposing a stamp tax on board of trade transactions.

LEGISLATION. The important measures passed at the legislative session of 1911 included the following: The proposed amendment to the Constitution of the United States, giving Congress the power to levy and collect taxes on incomes was ratified and assented to. Two important measures relating to convicts in prisons were passed. One of these provides for the partial support of poor women whose husbands are dead or convicts, when such women are the mothers of children under the age of fourteen, and reside in counties having not less than 250,000 inhabitants and not more than 500,000 inhabitants, and now or hereafter having a juvenile court. The second act abolished the letting, farming out, or selling in any manner by contract convict labor in the penitentiary of the State and provides for the employment of the convicts in the making of supplies and products to be disposed of to the State or any political subdivision thereof, or to any public institution owned or controlled by the State or any political subdivision thereof. It provides also for the employment of convicts not to exceed 300 upon the public road, and takes steps for a gradual change in the system of using convict labor. Public tuberculosis hospital districts are created and provision is made for the establishment and maintenance of public tuberculosis hospitals and dispensaries. The employment of children under fourteen years of age is prohibited, with the exception of agricultural pursuits and domestic service. The employment of children between fourteen and sixteen years of age is regulated by this act. (See *CHILD LABOR*.) All corporations are required to pay their employees as often as semi-monthly. The juvenile court system is extended to smaller counties. An act was passed making untruthful statements derogatory to a bank, trust company, or other financial institution punishable by a fine not exceeding \$1000, or imprisonment not exceeding one year, or both. Intoxicated persons are prohibited, under punishment of a fine, from entering a schoolhouse or church. In all primary elections the names of the candidates are required to be arranged so that by equal rotation each candidate's name shall in turn head the list. Cities having over 500,000 inhabitants are authorized to create a board of child guardians, with power to manage public institutions for the care of delinquent, defective, and dependent children, and to place such children in institutions or with families.

STATE OFFICERS. Governor, Herbert S. Hadley; Lieutenant-Governor, J. F. Gmelich; Secretary of State, Cornelius Roach; Auditor, John P. Gordon; Treasurer, James Cowgill; Attorney-General, Elliott W. Major; Superintendent of Education, William P. Evans; Adjutant-General, F. M. Rumbold; Commissioner of Insurance, Frank Blake—all Democrats except Hadley, Gmelich, Rumbold, Blake, and Evans, Republicans.

JUDICIARY. Supreme Court: Chief Justice, Leroy B. Valliant, Democrat; Associate Justices, Henry Lamm, Republican; Walter W. Graves, Democrat; Franklin Ferriss, Republican; A. M. Woodson, Democrat; John Kennish, Republican; John C. Brown, Republican; Clerk, J. D. Allen, Democrat.

STATE LEGISLATURE, 1912. Democrats, Senate, 22; House, 82; joint ballot, 104. Republicans, Senate, 12; House, 60; joint ballot, 72. Democratic majority, Senate, 10; House, 22; joint ballot, 32.

The representatives in Congress will be found in the article UNITED STATES, section Congress.

MISSOURI, UNIVERSITY OF. An institution of higher learning at Columbia, Mo., founded in 1839. The students enrolled in the various departments of the university, including the School of Mines, in the year 1910-11 was 3114. The members of the faculty of regular teaching grade numbered 259. During the year 1910-11 chairs of preventive medicine, forestry, and poultry husbandry were established at the university, together with a special course for women leading to the regular bachelor of science degree in agriculture. New chairs were also added in political science, economics, and Latin. A veterinary building, at a cost of \$32,500, has been completed at Columbia, and a new wing has been added to the ore dressing building at the School of Mines. A unique departure is the adoption of a rule that no student having less than twenty-four hours credit toward graduation can become a member of any fraternity or sorority, or live in any fraternity or sorority chapter house. Among the additions to the faculty were the following: Walter Miller was appointed professor of Latin; J. A. Ferguson of the Yale Forestry School was made the head of the newly established chair of forestry; R. H. Baker, formerly of Brown University, was appointed assistant professor of astronomy and director of the Laws Observatory; G. S. Dodds was appointed instructor in zoölogy. The productive funds of the university amounted to \$1,258,839, and the total income to about \$850,000. The larger portion of this was appropriated by the State. Beginning with the autumn of 1911, two years of college work in addition to a four-years high school course or its equivalent are required for entrance to all departments except the College of Arts and Sciences and the College of Agriculture. The library contains about 110,000 volumes. The president is Albert R. Hill, LL. D.

MITCHELSON, JOSEPH C. An American tobacco grower and numismatist, died September 27, 1911. He was born in 1855. Although he was known as the first man in the United States to take up scientific tobacco growing on an extensive scale, he was more widely famous as a keen collector of coins, and was one of the foremost authorities on this subject. His collection of United States coins and presidential medals is said to have been the most complete in existence. His collection, valued at \$100,000, has become a permanent exhibit at the Connecticut State Library at Hartford. Mr. Mitchelson was twice made a member of the Assay Commission and he was the first American to become a member of the British Numismatic Society. He was also a member of the American Numismatic Society and of many other scientific and social organizations. As a tobacco grower he was the first

to employ the services of an expert and to take up the scientific growing of tobacco. His crops were all raised under cheese cloth and he adopted and perfected the now approved method of nipping off poor and immature leaves so as to get a perfect uniformity in leaf growth. He discovered that rocky land and apparently poor soil is as good as more costly land for tobacco raising.

MOBILE. See ALABAMA.

MOFFAT, DAVID HALLIDAY. An American banker and railroad builder, died March 18, 1911. He was born in 1839 in Orange county, N. Y. He was educated in the public schools with some instruction from a private tutor. At fifteen years of age he went to New York City, where he secured a position in a bank. He was successively promoted until he became assistant teller. In 1855 he went to Iowa, where he obtained a position in a bank in Des Moines. He left this to accept a position as cashier in the Bank of Nebraska. Hearing stories of the finding of gold in Colorado in 1860 he started in a prairie schooner for that State. Arriving at Denver, he established a book-selling firm under the name Moffat & Woolworth. He prospered in business, and in the meantime made a great deal of money by buying gold bullion to ship East. At the end of the Civil War the First National Bank had been established in Denver, and Moffat was, two years after its founding, made cashier. He became its president and continued in this office until the time of his death. The bank is, at the present time, the richest in Colorado. In the late seventies he entered the mining field and acquired mining properties until he was the owner of several of the richest mines in Colorado. It was said that he was interested in nearly one hundred mines and had holdings in nearly every mining camp in the State. He was best known, however, as a railroad builder. He built as an independent enterprise the Denver Northwestern Pacific Railroad, which is known as the Moffat Road. He also coöperated in the building of the Denver Pacific in 1869. He was president of the Denver & Rio Grande Railroad until 1891. He built also the Denver & South Park Railroad. He was a director of the Equitable Life Assurance Society and of several financial institutions in New York City. He was at the time of his death one of the wealthiest financiers of the country.

MOLTKE. See BATTLESHIPS.

MOLLUSKS. See ZOÖLOGY.

MONACO. A Mediterranean principality 3 miles long by 1½ broad. Population 19,121; yearly average of visitors, 1,250,000. The town of Monaco has 2410 inhabitants; La Condamine, 6218; Monte Carlo, 3794. Reiging prince, Albert, born November 13, 1848. Heir-apparent, Prince Louis, born July 12, 1870. The new constitution, drawn up by three French jurists, was promulgated January 7, 1911. It provides for a national council of twenty-one members, elected by universal suffrage every four years. The prince as executive acts through a ministry, assisted by a council of state. The three communes into which the principality is divided are governed by municipal bodies in whose election women participate.

MONARCH. See **BATTLESHIPS.****MONETARY COMMISSION.** NATIONAL.

This commission, which consisted of nine Senators and nine Representatives, with ex-Senator Aldrich of Rhode Island as chairman, was authorized by the Aldrich-Vreeland Emergency Currency act of 1908. It carried on a most elaborate and thoroughgoing investigation into the banking and currency methods and organization in all principal countries. On the basis of these investigations it issued numerous reports and studies forming a complete library of money and banking. Considerable dissatisfaction developed, however, on account of the slowness with which the commission formulated a plan for legislation. On August 20, 1911, Congress passed the Cummins bill providing for the disestablishment of the commission. It was required to submit a full and comprehensive report not later than January 8, 1912, and its existence was to terminate March 1, thereafter. The salaries of members and of government employees serving the commission were terminated at once. Previous to this time the chairman of the commission had presented for public discussion a plan of banking reorganization, generally known as the Aldrich plan, providing for the formation of a national reserve association. Immediately after the passage of the Cummins bill the commission arranged for a series of hearings on this plan. It also appointed a subcommittee to formulate a bill. It was understood that this bill would incorporate the Aldrich plan with possible minor changes. No legislation was anticipated in 1912, however, owing to the far-reaching importance of the plan of reform and the necessity of a long campaign of education. Moreover, an investigation into the so-called Money Trust was about to be ordered by the House at the close of the year. (See **TRUSTS.**) In addition the country was not satisfied that sufficient safeguards had been made against Wall Street control of the national reserve association through the ownership of stock of one bank by another. See section on *National Banks and Trust Companies* under **NATIONAL BANKS.** For a statement of the *Aldrich Plan* see *Banking Reform* under **BANKS AND BANKING.**

MONEY. According to data compiled by the Director of the Mint the following amounts of money existed in forty-six principal countries of the world, including dependencies of the British empire, France, and Holland: Gold, \$6,604,000,000; silver, \$2,599,000,000; and uncovered paper currency, \$3,127,600,000. The amount per capita for all of these states was: Gold, \$6.40; silver, \$2.53; and uncovered paper currency, \$3.02, or an aggregate of \$11.95. The United States, Russia, France, the United Kingdom, Austria-Hungary, and Italy held 71 per cent. of the total stock of gold, the United States, with \$1,710,000,000, or 26 per cent. of the total, having the largest amount, and Italy, with \$264,100,000 having the least amount. These same countries hold 57 per cent. of the stock of silver, the United States with \$729,500,000 or 28 per cent. of the total being the greatest amount, and France, with \$411,100,000, or about 16 per cent., the next greatest amount. These six countries held 46 per cent. of the uncovered paper currency, the United States, with \$786,600,000, or about 35 per cent. of the total. ranking first, and France, with \$223,000,000, ranking second. The per capita stock of metallic and

paper money was greatest in France—\$39.71; in the United States the per capita amount was \$34.59; in the United Kingdom, \$17.38; in Italy, \$13.88; and in the Austro-Hungarian monarchy, only \$12.47.

MONTANA. POPULATION. The Thirteenth Census, taken in 1910, showed a population in the State in that year of 376,053, as compared with 243,329 in 1900, an increase of 132,724, or 54.5 per cent. The principal cities, with their population in 1910 and 1900, are as follows (the figures in parentheses are for 1900): Butte, 39,165 (30,470); Great Falls, 13,948 (14,930); Missoula, 12,869 (4366); Helena, 12,515 (10,770); Anaconda, 10,134 (9453).

AGRICULTURE. The Thirteenth Census included statistics of agriculture. These figures are of date of April 15, 1910. On that date the number of farms in the State was 26,214, compared with 13,370 in 1900. The land in farms was 13,545,603 acres. The improved land in farms was 3,640,309 acres. The average acreage per farm was 516.7. The total value of farm property, including land, buildings, implements and machinery, domestic animals, poultry and bees, was \$347,828,770. Of the 26,214 farms 23,870 were operated by owners and managers and 2344 by tenants. Of the farms operated by owners, those free from mortgage numbered 18,014; mortgaged, 4820. The native white farmers numbered 18,165; foreign-born white, 6853, and negro and other non-white, 1196. Of the non-white farmers, 1146 were Indians. The value of the various kinds of domestic animals, and of poultry and bees in 1910 was \$85,663,187, as compared with a value of \$52,161,833 in 1900. The cattle numbered 943,147, valued at \$27,474,122; horses and colts, 315,956, valued at \$27,115,764; mules, 4174, valued at \$445,278; swine, 99,261, valued at \$858,829; sheep and lambs, 5,380,746, valued at \$29,028,069. The poultry of all kinds numbered 966,690, valued at \$628,436. The acreage, production, and value of the principal crops in 1910 and 1911 are shown in the following table:

		Acreage	Prod., bu.	Value
Corn	1911	20,000	530,000	\$424,000
	1910	16,000	368,000	350,000
Wheat	1911	429,000	12,299,000	9,470,000
	1910	350,000	7,700,000	6,622,000
Oats	1911	425,000	21,165,000	8,466,000
	1910	390,000	14,820,000	6,817,000
Rye	1911	8,000	184,000	132,000
	1910	6,000	120,000	82,000
Potatoes ..	1911	27,000	4,050,000	2,997,000
	1910	22,000	2,640,000	2,244,000
Hay	1911	612,000	a 1,224,000	12,240,000
	1910	600,000	840,000	10,500,000

a Tons.

MINERAL PRODUCTION. The mineral products of the State in 1910 were valued at \$54,388,117. Of this, the copper produced was valued at \$35,950,966; gold, \$3,720,400; silver, \$6,632,700; coal, \$5,329,322; lead, \$147,520; zinc, \$1,340,064.

The State ranks second in the production of

copper, being surpassed only by Arizona. The output in 1910 was 283,078,473 pounds, as compared with 314,858,291 pounds in 1909. The production of the metal in the State has steadily increased since 1880. In total production since the beginning of mining the State ranks first. The reduction works at Anaconda and Great Falls treated 4,337,688 tons of ore and other cupriferous material yielding 266,608,461 pounds of copper, 9,534,888 ounces of silver, and 57,259 ounces of gold.

The copper production in 1911 fell about 10,000,000 tons short of the output for 1910. This decrease was due to the policy of curtailment adopted by the companies in the Butte district. Extensive developments were carried on in this district, and special attention was given to improving the mine equipment of the units composing the Anaconda Copper Company. These improvements are expected to reduce materially the cost of producing copper.

The coal production of the State in 1910 was 2,920,970 short tons, valued at \$5,329,322. This was the greatest amount of coal ever produced in the State in any one year. There were employed in the coal mines of the State 3817 men.

The State is a large producer of gold and silver. The production of gold in 1910 was 179,975 fine ounces, valued at \$3,720,400. This was a slight increase over the output for 1909. The decrease was in the output from dry or siliceous and coppers ores. The production from placer, lead, and zinc, and copper-lead ores increased. The output of silver in 1910 was 12,162,857 fine ounces, valued at \$6,632,700. In 1911 the production of gold was 153,341 fine ounces, valued at \$3,169,840. The silver produced in 1911 was 11,116,778 fine ounces, valued at \$6,114,228. Montana ranks second to Utah among the States in the production of silver.

MANUFACTURES The Thirteenth Census included statistics of manufactures in the State. These figures cover the calendar year 1909. The chief results of the census will be found summarized in the table below. It will be seen from this that there was a great increase in the number of establishments during the five-year period 1904-1909. Although the State is not relatively important as a manufacturing community, manufactures have shown on the whole a considerable increase. The principal industries of the State are mining, agriculture, and stock-raising, and the principal manufacturing industries are those supplemental to its mining interests. The largest number of persons employed in a single industry are those connected with lumber and timber products. In these industries 3106 persons were engaged. In these industries also the largest amount of capital was invested, \$6,334,000. Next in point of number are the industries related to cars and general shop construction and repair by steam railroad companies, employing 1913 persons. In the manufacture of malt liquors 246 persons were employed, with a capital of \$2,440,000; flour and grist-mill products, 105, with a capital of \$2,175,000; printing and publishing, 691 persons, with a capital of \$2,111,000; in slaughtering and meat-packing, 105, with a capital of \$2,054,000; in bread and other bakery products, 214 persons, with a capital of \$1,096,000. Of the 13,694 persons engaged in manufactures, 13,387 were male and 307 female. The persons employed under 16 years of age numbered over 30. For the great majority of the wage earners

employed in the manufacturing industries of the State the hours of labor ranged from 54 to 60 hours per week, or from 9 to 10 hours per day. The following table gives the number of establishments and persons engaged, amounts involved (1909 and 1910), and the per cent. of increase, 1904-1909:

	1909	1904	P.C.
Number of establishments	677	382	77.2
Persons engaged in manufactures	13,694	10,196	34.3
Proprietors and firm members...	659	334	97.3
Salaried employees...	1,380	905	52.5
Wage earners (average number)...	11,655	8,957	30.1
Primary horsepower.	90,402	46,736	93.4
Capital	\$44,588,000	\$52,590,000	-15.2
Expenses	66,830,000	55,140,000	21.2
Services	12,955,000	10,168,000	27.5
Salaries	2,054,000	1,506,000	36.4
Wages	10,901,000	8,652,000	26.0
Materials	49,180,000	40,930,000	20.2
Miscellaneous	4,695,000	4,052,000	15.8
Value of products...	73,272,000	66,415,000	10.3
Value added by manufacture (value of products less cost of materials).	24,092,000	25,485,000	-5.5

CHARITIES AND CORRECTIONS. The charitable and correctional institutions of the State included the State Prison at Deer Lodge, the State Reform School at Miles City, a home for orphans, foundlings, and destitute children at Twin Bridges, a soldiers' home at Columbia Falls, the State Hospital for the Insane at Warm Springs, and the State School for the Deaf and Blind and Feeble-minded at Boulder. These are all under the supervision of the State Board of Charities and Reform.

POLITICS AND GOVERNMENT

The chief political event in the history of the State during the year was the attempt, finally successful, to elect a United States senator to succeed Thomas H. Carter. After a deadlock, which lasted from early in January to March 2, Henry L. Myers, judge of the District Court of Ravalli county, was elected. The legislature was Democratic as a result of the 1910 elections. The Republican votes were cast for Senator Carter.

LEGISLATION. The important measures passed at the legislative session of 1911 included the following: A stringent white slave law; an act imposing liability upon railroads for injuries sustained by employees, the provisions being similar to those of the federal act on the same subject; an act fixing the rate of interest which may be charged to wage earners; an act authorizing municipalities to adopt the commission form of government; an act to improve the ventilation and sanitary conditions of mines; an act making further provision for the conservation of State lands; an act regulating coal mining; an act establishing juvenile courts and prescribing procedure against juvenile delinquents; an act establishing a tuberculosis sanitarium; a pure food law; a joint resolution approving the income tax amendment to the constitution; a joint resolution asking for the convocation of a convention to propose an amendment to the Constitution of the United States which shall provide for the election of senators by a direct vote of the people. An important measure was also passed in relation to the

election of United States senators. This provides that political factions shall make nominations for United States senators at the same time and in the same manner as nominations are made for State officers; that each candidate for member of the legislature may sign and file with the county clerk a certificate to the effect that if elected he will vote for that candidate who has the greatest number of votes at the general election, regardless of political affiliations, or a certificate to the effect that if elected he will regard the popular vote as merely in the nature of a recommendation, practically statement No. 1 and statement No. 2 of the Oregon act; that the party candidates for United States senator shall find a place upon the official ballot of the general election with other candidates to be elected thereat, the votes for these candidates to be canvassed and returned in the same manner as is provided for other candidates.

STATE OFFICERS: Governor, Edwin L. Norris, Dem.; Lieutenant-Governor, William R. Allen, Rep.; Secretary of State, T. M. Swindlehurst, Dem.; Treasurer, Elmer E. Esselstyn, Rep.; Auditor, H. R. Cunningham, Rep.; Attorney-General, A. J. Galen, Rep.; Adjutant-General, Philip Greenan, Dem.; Superintendent of Education, W. E. Harmon, Rep.; Commissioner of Agriculture, J. H. Hall, Dem.

JUDICIARY: Supreme Court: Chief Justice, Theo. Brantley, Rep.; Justices, Henry C. Smith, Rep.; Wm. L. Holloway, Rep.; Clerk, John T. Athey, Rep.

STATE LEGISLATURE, 1911: Senate, Republicans, 16; Democrats, 12; House, Republicans, 32; Democrats, 42; joint ballot, Republicans, 48; Democrats, 54; Republican majority, Senate, 4; Democrats, House, 10; joint ballot, Democrats, 6.

The representatives in Congress will be found in the article UNITED STATES, Congress.

MONT CENIS TUNNEL. See SWITZERLAND. *Communications.*

MONTENEGRO. One of the Balkan states; a hereditary constitutional monarchy. Area, 34,86 sq. miles; population, about 225,000 (Muslimans, 13,000; Roman Catholics, 14,000; remainder, Eastern Church). Capital, Cetinje (5000 civil, 600 military population). Agriculture and stock-raising are the principal industries. Corn, oats, barley, buckwheat, potatoes, and tobacco are raised. The uplands are heavily forested. Imports 1909, 6,181,369 kronen (salt from Turkey, petroleum from Russia, cereals, hardware, sugar, coffee, etc.); exports, 2,435,550 (sumac, pyrethrum, smoked sardines, animals and animal products, olive oil, wine, tobacco, etc.). Miles of railway, 11; of telegraph lines, 528; offices, 23; post offices, 21. The estimated revenue and expenditure balanced (1910) at 3,423,847 perspers, or £142,660. Public debt (1910), £250,000.

The army of Montenegro is a militia in which every male inhabitant of the state is liable for service from his 18th to his 62d year, with this time divided between various forms of service from the recruit class to the reserve. The king is the commander-in-chief of the army, which is under the actual command of the prince royal. It is organized in 4 divisions of infantry, and a brigade of artillery, the headquarters of which are located at Cetinje, Podgoritz, Niksitch, and Kolashine. Three of the divisions are made up of 3 brigades and one of 2 brigades, with a total of 57

battalions. Twelve batteries form a brigade of artillery. The total war strength of the kingdom was estimated at between 30,000 and 50,000 men. The military forces do not form an army in the sense of being a drilled and armed body of troops, according to European standards, but a certain number of armed men can be mobilized in time of war and every male inhabitant may be called to arms. There were various organizations of cavalry and field artillery, the latter provided with modern guns, and infantry armed with Mauser rifles, the total strength being estimated at about 30,000 men of arms. A certain number of French and Spanish officers have served as instructors of the police organization, which is said to comprise about 2500 men.

Reigning king, Nicholas, born October 7 (September 25), 1841. Prime minister, minister of justice and of foreign affairs (1911), Dr. L. Tomanovitch.

The main feature of the year's history was the friction with Turkey in the course of the Albanian revolt. Montenegrin sympathy with the insurgent Malissori on the border led to threats of retaliation by Turkey, and King Nicholas appealed to the powers for protection. It was largely through his intercessions for the Malissori that Turkey made peace with them in August. For details, see TURKEY, paragraphs on *Albanian Revolt* under *History*.

MONTESSORI SYSTEM. See EDUCATION.

MOORE, GEORGE. See LITERATURE, ENGLISH AND AMERICAN, *Fiction*.

MORAN, PATRICK FRANCIS. A Roman Catholic cardinal and archbishop of Sydney, died August 16, 1911. He was born at Leighlin-bridge, County Carlow, Ireland, in 1830. He was admitted to the Irish College of St. Agatha at Rome and was ordained by special dispensation as to age in 1853. He was for some time vice-president of the Irish College and professor of Hebrew in the College of the Propaganda in Rome. He returned to Ireland as private secretary to his uncle, Cardinal Cullen. From 1874 to 1884 he was professor of Hebrew and Scripture at Clonliffe College, Dublin. He had previously been appointed Bishop of Ossory. He went to Sydney, Australia, in 1884 as archbishop of Sydney. In the following year he was appointed first Australian cardinal. During his residence in Rome he made a special study of Celtic ecclesiastical history and was a leading antiquarian authority. Among his published works are *Essays on the Origin, etc., of the Irish Church* (1863); *History of the Catholic Archbishops of London* (1864); *Historical Sketch of the Persecutions under Cromwell and the Puritans* (1865); *Irish Saints in Great Britain* (1879); *Letters on the Anglican Reformation* (1890); *History of the Catholic Church in Australasia* (1894); and *Reunion of Christendom and its Critics* (1896).

MORANT CAYS. See JAMAICA.

MORAVIANS, called also The United Brethren (*Unitas Fratrum*), and the Moravian Church. An evangelical denomination which began among the followers of John Huss in Bohemia and Moravia in 1457. It was first established in the United States in 1735. The Moravians of North America had, at the beginning of 1911, 18,561 communicants, of whom the American Moravian Church, North, included 14,333, and the American Moravian Church, South, 4228. There were 123 churches and 143

ministers. In the Northern Province there were 42 missionary societies, with a membership of 3570. In the Sunday schools of the denomination there were at the beginning of 1911, 15,411 scholars and 1539 officers and teachers. The denomination maintains funds for retired ministers and widows of ministers. Missions are sustained in Africa, Alaska, Asia, Australia, Labrador, Nicaragua, South America, West Indies, and Bohemia. A home for lepers is supported at Jerusalem. Among the educational institutions which are maintained by the Moravians are the Moravian College and Theological Seminary, the Moravian Parochial School for boys and girls, and the Moravian Seminary for girls, all at Bethlehem, Pa.; Linden Hall Seminary for Girls at Lititz; Nazareth Hall for Boys at Nazareth, Pa., and an academy for girls at Salem, N. C. The English official organ of the church is *The Moravian*, and the German official organ is *Der Brueder Botschafter*. The last provincial synod of the American Moravian Church, North, was held at Lititz, Pa., in 1908. The general synod of the church throughout the world was held at Herrnhut, Germany, in 1909. The next general synod will convene in 1914.

MORGAN, MICHAEL RYAN. An American soldier, died September 16, 1911. He was born in Nova Scotia in 1833, and received his early education in Paris. He entered the United States Military Academy, graduating in 1854. After service in the Third United States Artillery, he became captain in the Eleventh Infantry in 1861 and served throughout the war in the commissary department, rising to the rank of major. He was appointed lieutenant-colonel and assistant commissary-general in 1888, colonel in 1890, and brigadier-general in 1894. He was several times brevetted for distinguished and gallant services during the Civil War. He was a member of the Harper's Ferry Expedition to suppress John Brown's raid in 1855. He took part in the siege of Petersburg and the engagements in that section in 1864. He was commissary of subsistence in the United States army from 1894 to 1897. In the latter year he was retired by operation of law.

MORENO. See **BATTLESHIPS**.

MOROCCO. The largest of the Barbary states; a nominally independent Mohammedan empire on the northwestern coast of Africa; practically, though not, at the end of 1911, technically a French protectorate. Estimated area, 234,000 sq. miles; population, variously estimated at from 4,500,000 to 8,000,000—Berbers, Tuaregs, Bedouin and Mued Arabs, Jews, and negroes. Europeans in 1910, 19,243. The sultan and his subjects belong to the Malekite sect of the Sunnite Mohammedans. There are three capitals: Fez (120,000 inhabitants); Morocco, (50,000), the southern capital; and Mequinez (56,000). Tangier (35,000) is the residence of the foreign representatives, and a leading port.

Agriculture is undeveloped, and the abundant mineral resources are neglected. The manufactures are slippers and carpets. Total imports and exports in 1910, £4,190,987 and £2,272,246. Imports, 1909, £3,787,041 (1908, £3,050,814), of which £2,809,597 came through the ports, £380,480 through Melilla, and £596,964 across the Algerian frontier. The chief articles of import were: Cottons, £1,087,752; sugar, £856,272; tea, £235,559; machinery and hardware, £120,626; flour and semolina, £104,186; candles,

£102,689; tobacco, beverages, foodstuffs, etc. Exports, £2,127,555 (1908, £2,484,670); of which £1,807,549 through the ports, £294,960 through Melilla, £25,046 across the Algerian frontier. Chief exports: Barley, £490,203; hides and skins, £283,715; wool, £133,536; oxen, £127,883; eggs, £245,433; almonds, £136,359; beans, £85,438; wheat, £80,450; slippers, £34,869; olive oil, £16,079.

France contributed imports valued at £1,565,291, and received exports valued at £629,818; Great Britain (including Gibraltar and Malta), £1,404,741 and £800,030; Spain, £305,096 and £218,619; Germany, £224,719 and £339,428. Vessels entered 1909, exclusive of Melilla, 3175, of 2,426,921 tons; 1910, 3194, of 2,562,549. There are telegraphic submarine cables, four wireless stations, and a courier service; but no railways. The postal service is subject to control by the British, French, Spanish, and German governments.

The revenue from customs is estimated at £440,000. The debt amounts to £8,200,000, detailed as follows: French and German loans, £3,040,000; war expenditure and indemnities, £2,060,000 (Spain, £240,740); miscellaneous, £2,200,000. French loans amount to £2,480,000. A new loan (from the Moorish State Bank) of 101,124,000 francs was obtained in 1910.

The sultan is an absolute despot, spiritual as well as temporal. Six ministers counsel or serve him, as the occasion may demand. Mulai-Abd-el-Hafid, the reigning sovereign (1911), who dethroned his brother in 1908, was recognized by the powers January 5, 1909.

HISTORY.

THE FEZ EXPEDITION. Discontent with the sultan's government became manifest early in the year and in March hostile tribes to the southeast of Fez began to ravage the country. On March 26 the sultan's troops who had been sent to attack a rebel camp in the vicinity of Fez were repulsed and driven in a panic back into the city. By the end of March all the tribes from Taza, ninety miles east of Fez, to the Atlantic coast were reported to be in revolt, and the native sentiment was said to be generally in favor of the rebels. On April 2 the tribesmen attacked the southeastern walls of Fez, but were driven back by the artillery. The rebel movement gained ground, however, during April, and in the latter part of the month the situation was serious, Mequinez having fallen into the hands of the rebels and the sultan's brother having been proclaimed sultan. Alarm was felt for the safety of the European colonies. By April 20 it was reported that Fez was besieged on all sides. Meanwhile the French government had decided to send an expedition to the relief of Fez and for the restoration of order. The first French column reached Fez on April 26, and by the first of May additional reinforcements were ready to start from Casablanca. By May 11 a complete brigade was on its way to Fez from Casablanca. Meanwhile it was reported that the situation in the city was desperate and that the tribesmen had established a virtual blockade. The grievances of the tribesmen were outlined by one of their chiefs as follows: The sultan was blamed for doing nothing since his accession but extort money, pillage, rob, and kill, and as a result of his tyranny there was starvation and misery everywhere. The European nations had merely aided

him in his policy of extortion and oppression. The government had issued loans and the money for their redemption must be wrung from the tribesmen, and now to cap the climax a French army was coming against them. After the arrival of the second French body of troops the city was occupied and the safety of the foreigners assured. General Moinier, who commanded the expeditionary forces, after waiting a few days until his troops had rested, began operations for the restoration of order in the region about Fez. He left the capital on May 29 with three columns, and after overrunning the territory of some of the hostile tribes, occupied Mequinez, where the pretender, the sultan's brother, tendered his submission. The lines were kept open from Mequinez to Fez, the coast was rendered secure, and everything was done to enable the French to advance rapidly and insure the pacification of the region. The Moinier expedition was completely successful. It now remained only to give the sultan the means of governing, to organize his army under French instruction, to conclude the projected loans, and to carry out the proposed works of public improvement. These several objects had been set forth by the French foreign secretary as comprising the policy of the government in Morocco (see FRANCE, paragraphs on *History*).

Reprisals were desired by Mulai Hafid as soon as the tide turned with the arrival of the French troops, and he was reported to have sent out avenging expeditions of native troops under French officers. An unfortunate incident was reported to have occurred just before the siege was raised and while the first French column was in the city. Angered by rumors of cruelty on the part of tribesmen towards certain couriers, a part of the Fez garrison started out on May 21 to punish the offenders. In the Lemta district, where they alleged resistance on the part of the laborers, they began plundering and killing and soon dispersed the people and left the villages in ruins. It was said that about eighty women and children were afterwards sold as slaves in the markets of Fez. As the tribesmen had for some time past been assured of safety if they would peaceably return to submission, the effect of a policy of vengeance would be disastrous, and General Moinier promptly put a stop to reprisals.

THE SPANISH AT ALCAZAR. Early in June, despite the assurance of the premier, Canalejas, that the government would not embark on any foreign adventure, Spain sent a vessel to the port of Larache and a column was thence dispatched to Alcazar, which lies about twenty miles inland. It had been reported that mysterious horsemen had been seen on the walls of Alcazar on the night of June 7, and on June 8 the Spanish troops landed at the port and advanced toward Alcazar. The region was apparently calm, and the reasons which were given for the act appeared, in France at least, to be mere pretensions. It was said that the mysterious horsemen were merely men of a former pasha who had been a protégé of Spain and that among them were soldiers of the Spanish police. In France Spain's action was believed to proceed from a desire of showing her own power and bestirring herself in her own zone of influence as France had been doing at Fez. And it was pointed out that the Fez situation was altogether different, the French having gone there at the sultan's request and be-

cause his own sovereignty and even safety were threatened. Spain, on the other hand, had taken no account of his sovereignty, and her course was regarded by the sultan himself as an aggression. The French government asked Spain for an explanation, and the Spanish foreign office replied on June 10 that the act was in perfect conformity with the treaties and aimed simply at the defense of the city against the hostile pretender. It declared that the troops had landed only to help the Shereefian police and defend an exposed city in which Spanish families were in danger from the hostile tribesmen.

GERMAN INTERFERENCE. At the end of June Europe was greatly startled by the news that Germany, following the precedent of Spain in occupying Alcazar, had sent a warship to Agadir, a southern port of the Atlantic coast, ostensibly to protect the persons and property of German subjects. Agadir is situated about 500 miles south of the Straits of Gibraltar on an open roadstead and is not esteemed a port of any importance, its inhabitants numbering only about 500. The German press in announcing the government's decision on July 1, declared that German firms interested in the south of Morocco had sought protection in view of the dangers which threatened important German interests. This sudden stroke by Germany caused the greatest uneasiness in France. The Paris government was first apprised of this action on July 1, when the German ambassador, von Schoen, informed the French foreign minister, M. de Selves, that a gunboat had been sent to Agadir as a result of the repeated demands from German business houses on account of the disorders in that region. M. de Selves had at that time merely declared that such a decision without notice would seem strange to the French as inconsistent with the act of Algeciras and the Franco-German convention of 1909. The French press denied that there were any disorders in Agadir or that there were extensive German interests there. They regarded the action as the final seizure by Germany of a port that she had for some time past been coveting. It was remarked that when a few months before the commander of a French cruiser patrolling the coasts to prevent contraband had paid a simple visit of courtesy to the pasha, the German journals had protested that France had no right to send a vessel to Agadir, which was a closed port, and that such a course was in violation of the act of Algeciras. It was also remarked that when the French went to Fez the German papers had spoken of a compensation and had referred significantly to Agadir. It was argued that Germany had on two occasions, that is to say, in the act of Algeciras and in the 1909 convention, recognized that France had an especial interest in establishing order and peace in Morocco and had bound herself not to thwart it. The act of the German foreign minister, von Kiderlen-Waechter, was characterized as a blow of the fist on the table in the manner of Bismarck to demonstrate Germany's power.

Germany's course made a strong impression in England and early in July, Mr. Asquith, in reply to the question of the Opposition on the Moroccan policy, said that the government recognized that a new situation had arisen in which it was possible that British interests would be more seriously affected than hitherto,

but declared its belief that the problem could be solved by diplomacy.

THE MOROCCAN NEGOTIATIONS. A series of "conversations" between the German foreign office and the French ambassador now began and it was soon rumored in the press that Germany was insisting on excessive demands as a condition for the withdrawal of the *Panther* from Agadir. According to earlier reports Germany demanded the cession of the Gabun region of the French Congo, comprising the entire coast and extending as far as the Sanga River, along with the contingent reversion held by France over the Belgian Congo. The territory in question joined the German Kamerun, making its coast continuous nearly as far as the mouth of the Congo, and the total area was estimated at 200,000 square miles. This report caused great anxiety, not only in France but in England, where the cession was condemned as unwarrantable and as encroaching upon British interests. The Gabun territory was regarded as of great importance, and the cession of two ports, Libreville and Loango, was held to be a serious sacrifice on the part of France.

ENGLAND'S ATTITUDE. Mr. Lloyd-George made an important declaration in the course of a speech on July 21, at a banquet at the Mansion House. The speech was in general terms, but it was clearly understood as referring to the international situation. He said that he believed it essential to the highest interests of Great Britain that she should maintain her place and her prestige among the great world powers. He did not believe that anything would justify the disturbance of the international good will except matters of the gravest moment, but "if a situation were to be forced upon us in which peace could only be preserved by the surrender of the great and beneficent position Great Britain has won by centuries of heroism and achievement, by allowing Britain to be treated, where her interests were vitally affected, as if she were of no account in the cabinet of nations, then I say emphatically that peace at that price would be a humiliation intolerable for a great country like ours to endure." The speech was received with great satisfaction in France. It had been suspected there and elsewhere that the German movement had been timed in order to take advantage of English party dissensions and the declaration by Mr. Lloyd-George that "national honor is no party question" was very reassuring. Meanwhile the conversations were going on in Berlin between the French representative and the foreign office and many rumors were circulated concerning their substance, but no official reports were given out. Popular feeling in France was at high tension and in many quarters it was believed that war was unavoidable. Mr. Asquith made a statement in the House of Commons on July 27. He said that the situation had reached a serious point and that the question bristled with difficulties. While the British government claimed no predominant position in Morocco, it could not let the situation drift without an assertion of its interests and therefore it had thought it right to make it clear from the first that if France and Germany failed in a settlement, Great Britain must become an active party to the discussion. Mr. Balfour in reply said he had no criticism to offer, but declared that if there were any outside persons who believed that British absorption in home politics

and in party differences would admit of the adoption at that time of a policy which the country would not accept at any other time, they would find themselves mistaken. Mr. Asquith referred to the subject again a little later. He said conversations in which Great Britain took no part were going on between France and Germany. These might not affect the interests of Great Britain and he hoped they would not, but he must repeat what he had already said, namely, that failing a settlement honorable to both parties and not prejudicial to British interests, it would be the duty of the British government to take an active part in the discussions. Again the leader of the Opposition, Mr. Balfour, said that the government's policy would have the support of his party. It appeared that Germany's demands were at first excessive, but after August 1 became more moderate. There was a brief period in September when an *impasse* seemed probable. A fall of prices on the Bourse and a run on the municipal savings banks in Germany were thought to have disposed the government to a compromise.

GERMAN PUBLIC OPINION. Although the negotiations were officially kept secret it leaked out that France aimed at securing a free hand in Morocco and was willing in return to concede to Germany a considerable amount of territory in the French Congo. German public opinion was greatly stirred up by the declaration of Mr. Asquith, and especially by that of Mr. Lloyd-George, as to Great Britain's attitude and in a large part of the German press an effort was made to arouse German sentiment against England. It was pointed out that the hostile policy of England was constantly blocking the path of Germany. Her policy in this instance was declared to be a deliberate interference. Reports of an imaginary interview with a British diplomat, sharply criticising the German government, were widely circulated in the press. During the first weeks of September the feeling over the Moroccan crisis became very tense. It was believed that Germany, though willing to accept the offer of part of French Congo, was not willing to grant the free hand in Morocco which France demanded. The true nature of the replies to French proposals and the rejoinder of France were not known and there was much anxious speculation as to their terms. An interesting feature of the affair in Germany was the attitude of the Socialists who were in session in their congress at Jena. The extreme members of the party condemned the central committee for its acquiescence in the government's policy, but the great majority approved its defense by Herr Bebel and others, who held that where grave national interests are concerned, the Social Democratic party must have consideration for their own country. At the session of September 12 the congress adopted a resolution condemning the attempt of those who were trying to involve civilized nations like France, Germany, and England in war on account of Morocco, and urging the German working classes to use every means in their power to prevent war. In introducing the resolution, Herr Bebel made a speech saying that the Socialists were fully aware of the political realities. He said that the whole series of ideas and tendencies which had hitherto occupied the attention of the Socialists had been brushed aside and the main question before them was not that of disarmament,

but that of increased armaments both by sea and land. He declared that the country was moving toward a situation which could only end with a great catastrophe. In an address on September 14, Herr Bebel, while admitting that the colonization of Morocco would immensely promote German trade and bring her profit, said it was not worth the bones of a Prussian grenadier. The Socialists would make every effort to prevent an outbreak of war. If war should break out they would do what they could to remove the ruling class. A resolution protesting against any attempt to provoke a war and demanding an immediate summoning of the Reichstag was unanimously passed by the House on September 14.

On October 11 some of the essential features of the Moroccan agreement became known. These were the acquiescence of Germany in a French protectorate, with provisions for the administration of justice and concerning the status of the native protégés of the powers. Another feature was the provision for economic equality of Germany with France, and finally it was agreed that the Moroccan part of the agreement must be submitted to the treaty powers for their approval. Great dissatisfaction was expressed among all classes of society with the policy of the government. One Conservative journal summed up the matter as a "French Morocco, and the concession of a portion of the Kameruns in return for which we receive worthless Congo land," and declared that such an arrangement greatly damaged German prestige and estranged Germany from the Mohammedan world.

GERMANY AND ENGLAND. Although British and German public opinion was wrought to a high pitch in the summer time, especially after Mr. Lloyd-George's speech of July 21 which referred to the possibility of British intervention in the Moroccan negotiations, it was not realized how close the two countries were to war till speeches of the respective ministers in November reviewing the situation in the Reichstag and in Parliament brought the facts to light. In Germany, as the terms of the arrangement with France became known, there was a strong feeling in certain quarters that the government had not made a good bargain, and had let itself be influenced by the threat of British intervention, and there was a corresponding bitterness against England for meddling in a matter that concerned Germany and France alone. The Radicals and Socialists on the one hand attacked the government for having embarked on a dangerous adventure. The Conservatives, on the other hand, accused it of having allowed itself to be bullied by England into a settlement disadvantageous to Germany. On the publication of the treaties, Herr Lindequist, the colonial secretary, and Herr von Danckelmann, the permanent official in the colonial office, resigned, because they were not in accord with the terms of settlement. In the Reichstag resolutions were moved requiring the consent of that body to similar treaties in future. The German chancellor, von Bethmann-Hollweg, answered his critics in an address in the Reichstag on November 9. He said Germany had successfully carried out its programme of negotiating with France alone, and had not been diverted in her policy by the influence of a third power. The *Panther* had been sent to Agadir as a plain announcement of Germany's determination to

protect German subjects, and in no wise as a threat or provocation. The powers were informed of the dispatch of the ship just before her arrival at Agadir. The use made of Mr. Lloyd-George's speech by the government's accusers was, he said, unwarrantable. Certain journals chose to give it a chauvinist construction, but there was no evidence in it of anti-German feeling. As it had received this interpretation the German government had thought it necessary to bring it to the attention of the British foreign office, and to point out that Germany was negotiating with France in matters that did not primarily touch British interests, and that if Great Britain felt that her interests were affected, Germany expected her to discuss the matter through the usual diplomatic channels. The British government had not thereafter shown any desire to take part in the Franco-German conversations. He said the settlement in Morocco was an enormous gain and cleared the way to a better understanding in future with England as well as with France. The chancellor's speech was received with marked coldness in the Reichstag, and in the debate that followed the government was sharply criticised and feeling against England ran high. Herr von Heydebrand, the Conservative leader, declared that the new treaties gave France the complete mastery in Morocco while Germany's compensation was of doubtful value. He ridiculed the official account of Mr. Lloyd-George's speech, which he said was "a humiliating challenge of a kind that the German people would not put up with." He added that "the German people now know who it is that wants to hold universal sway when Germany desires to expand in the world." The chancellor in a short but vigorous reply declared that he had yielded nothing of the honor of the people, and that such passionate words had more to do with the coming elections than with Morocco or the Congo. He referred contemptuously to the class of patriots who find it necessary always to carry their swords in their mouths.

In the meantime there had been various reports as to what had actually occurred between the German and British governments during the Moroccan negotiations. There was a persistent belief in Germany on the one hand that the British government had sought to frustrate these negotiations, and in England that the German government had shown gross indifference to the desire of the British foreign office for information as to German plans in Morocco. Much resentment was caused in Germany by the report of an interview with the British ambassador in an Austrian newspaper, and by an alleged speech of a member of the cabinet, which were taken as signs that the British government was distinctly hostile to Germany, but it was officially announced later that no such interview or speech had been made by those officials. According to the British version the foreign office had had to wait fourteen days before the German government answered its inquiry as to Morocco, and in the interval between July 1 and July 24, the British government had been left completely in the dark as to Germany's intentions. Mr. Lloyd-George's speech which was made on the latter date, with the full approval of the government, was necessary on account of the great anxiety as to the effect on Great Britain of a failure of the Franco-German

negotiations. As the nature of Germany's demands during the earlier conversations became known in Great Britain, it was thought to be impossible for France to accept them, and it was feared in that case that Germany would exact large claims from Morocco by way of compensation and, specifically, would seize the port of Agadir and close the hinterland to foreigners. It was reported that at the time of Mr. Lloyd-George's speech the relations between the two countries were so strained that war seemed possible, and on two later occasions within the next two months the turn which the negotiations took led to similar alarms in Great Britain and were even said to have caused the government to begin military preparations. There had been much discussion and speculation as to the course of the affair when the German chancellor made the speech above outlined.

VERSION OF THE GERMAN FOREIGN SECRETARY. This speech was followed by a specific account of Germany's relations with Great Britain by the foreign secretary, Herr von Kiderlen-Waechter, on November 17. This presented the German point of view, which was in many respects contradictory to that which had gained currency in England. In the first place, he said that on June 30 the foreign office had sent word to all the powers signatory to the act of Algeciras, announcing the dispatch of the *Panther* and giving the reasons, and stating that the British government received a special communication from the German ambassador on July 1 saying that Germany had no intention of opposing the action of France in advancing to Fez, but had been compelled to undertake the protection of German subjects in southern Morocco until orderly conditions had been restored. It pointed out that the present situation rendered the provisions of the act of Algeciras illusory, and that Germany was ready, in common with France, to come to a final understanding on the Moroccan question. The foreign secretary declared that the British government made no inquiry in regard to the communication until July 21, when the foreign secretary, Sir Edward Grey, discussed the question unofficially with the German ambassador. On this occasion the former had said that since France could not accept the German demands, it was probable that the actual Moroccan question, in which British interests were concerned, would come to the front, and therefore the question of Germany's intention as to the closed port of Agadir and its hinterland had again become acute. The German ambassador said that he could not assume that Germany's demands were unacceptable to France and that the British government ought to wait until it was clear that British interests were affected. He declared that Germany had no intention of injuring British rights and interests. Germany was entitled to compensation if France were to set up a North African empire extending from the Tripolitan frontier to Senegambia with a predominant position in Morocco. England had been compensated in Egypt, but Germany had not been compensated at all. Sir Edward Grey replied that he did not wish to oppose in any way the extension of Germany's colonial possessions in Africa, but feared that English interests might be affected by the Moroccan question itself. It was only in the undesired event of the failure of France and Germany to reach an agreement in the negotiations that England

would have to insist on an explanation between Germany and herself. The German government returned an answer immediately expressing regret at England's apparent belief in intentions that Germany had never entertained. She had not thought of a naval port on the Moroccan coast, and had no designs upon Moroccan territory. Germany simply demanded that France should either adhere strictly to the Algeciras treaty or enter into explanations with the German government. If the negotiations failed, Germany had no designs upon Moroccan territory, but must, in that case, demand the execution of the Algeciras act in letter and spirit. Meanwhile, Mr. Lloyd-George had delivered a speech on July 21. This was the occasion for violent attacks upon Germany in both the French and British newspapers, and was generally construed as a warning to Germany. Accordingly, on July 24, the German ambassador in London was instructed to point out to the British government the dissatisfaction which such a speech must cause in Germany. Germany was now negotiating with France in a matter that concerned British interests neither directly nor indirectly. If Great Britain held a contrary opinion she should make it known through the ordinary diplomatic channel. There could be no better way of complicating and confusing the situation than by such a speech as that of Lloyd-George's. Sir Edward Grey in reply defended Mr. Lloyd-George's speech as moderate. He protested against the view that the British government wished to prevent a Franco-German agreement, but he repeated that if British rights were touched in the Moroccan question, the British government must defend them. Herr von Kiderlen-Waechter concluded with a historical review of the Moroccan question. The purport of this was that France had persisted in the violation of the act of Algeciras, France regarding herself as the mandatory of Europe for the restoration of order. On each occasion of such violation France had insisted that the measures were merely temporary and were in accord with the spirit of the act. In this position England generally agreed with France. It had been Germany's policy to come to terms with France in regard to these violations. She was willing to give to France a free hand politically, but must demand better guarantees for the maintenance of the principle of the open door and also a compensation as indemnity for the violation of the Algeciras act by France in establishing herself in Morocco. These views were communicated to the French government, but no additional proposals were forthcoming from France. Meanwhile, the French army having advanced to Fez and complaints having come from German subjects, especially in the Sus region, the German government had taken the step of sending a warship to Agadir.

This statement by the German foreign secretary occasioned much excitement and comment in the press in both countries.

SIR EDWARD GREY'S VERSION. The speech of the British foreign secretary, Sir Edward Grey, was awaited with intense interest as its tone was likely to affect seriously the relations between the two countries. It was delivered on Monday, November 27. Seldom in recent years has any public address been so widely quoted and commented upon. Its tone was measured,

candid, and altogether conciliatory. It began with a narrative of what had occurred between the British and German governments from the receipt by the former on July 1 of the announcement that Germany had sent the gunboat *Panther* to Agadir. This announcement, which declared that the action was taken to protect the lives and property of German subjects from the tribesmen, who were at that time in a state of ferment, was accompanied by an explanation which the foreign secretary regarded as more important. This explanation indicated that the German government intended to reopen the whole Moroccan question as it regarded a return to the *status quo* as doubtful, if not impossible, and contemplated a definite solution of the problem. If this end were attained it intimately concerned the British government, to whom it was most important that the nature of any solution of the Moroccan question should be known. Such a solution might, for example, be the partition of Morocco, in which case Great Britain was deeply concerned. Then followed the interview of July 4 between Sir Edward Grey and the German ambassador, in which the former declared that future developments might affect British interests and that therefore the British government could not recognize any new arrangement in which it did not take part. Thereupon followed an interval of silence and during this time information reached the British government that Germany might intend a partition of Morocco through negotiations to which it was not meant that Great Britain should be a party. On July 12, the British ambassador in Berlin brought to the German foreign secretary's attention the fact that mention had been made of negotiations between Germany, France, and Spain, implying that the British government would be excluded from it. To this the German foreign secretary replied that Germany had never had any such intention. From that time until July 24 the British government had received no further communication from the German government on the subject. During this interval it appeared that Germany had made demands of France in regard to the French Congo, "to which it was obvious to everybody who thought of it that neither the French government nor the French chamber could agree." That at once raised the question whether Germany, having failed to come to terms with France as to the French Congo, might not fall back on some other basis of settlement as, for example, the partition of Morocco. In view of this danger, therefore, Sir Edward Grey asked the German ambassador to meet him on July 21, and in the interview that followed informed him of his anxiety at the news as to the demands made on France—demands which it would be impossible for the French government to concede. He told him that the British government hoped that the negotiations would have a satisfactory result, but that it must be understood that if they were unsuccessful a very embarrassing situation would arise. The Germans were in the closed port of Agadir, and according to rumors were landing and negotiating with the natives, and it might be that they were obtaining concessions there or would hoist the German flag at the port. It was necessary to say this now because if it were not said the German government might feel resentment later on at having been led to suppose, from the silence of the British government on the subject,

that Great Britain had no concern in the matter. To this the ambassador replied that he was assured that his own government had no intention of acquiring monopolies or prejudicing British interests. On that same day, July 21, the chancellor of the exchequer, Mr. Lloyd-George, was to make a speech at the Mansion House. For a cabinet minister of first-rate importance to make a speech on an informal occasion without saying a word about foreign affairs after that interval would have been, in Sir Edward Grey's opinion, misleading to public opinion both in England and abroad. Mr. Lloyd-George's speech was in the most general terms. It contained no threat to anyone and claimed no preëminence for Great Britain in international affairs; nor did it say that any single demand of Germany was inconsistent with British interests. Its whole point was that if British interests were affected, Great Britain must not be treated as if she were of no account. "If the time ever comes," said Sir Edward Grey, "when this cannot be said by a minister speaking in the position the chancellor of the exchequer was in, then we shall have ceased to exist as a great nation."

Three days later, on July 24, the German ambassador announced that Germany had not changed her intention in sending a ship to Agadir and had not landed a man there. He added that Germany regretted the credence given to insinuations that emanated from a source hostile to her. She had never thought of creating a naval port on the coast of Morocco and never would think of it. If German demands of France had been rather high the German government was ready to make concessions in Morocco as well as in colonial matters. To Sir Edward Grey's inquiry as to whether he might inform Parliament that not a man had been landed at Agadir, the ambassador replied that that information must, in view of the speech of the chancellor of the exchequer, be regarded as confidential. The ambassador then read a communication from his own government very stiff in tone criticising the speech of Mr. Lloyd-George. Sir Edward Grey defended the speech, saying that if it had created surprise in Germany that was in itself a justification of the speech, "for it could not have created surprise unless there had been some tendency to think that we might be disregarded." He added that the tone of the German government's communication made in inconsistent with British dignity to give explanations as to the speech of the chancellor of the exchequer. In conclusion, Sir Edward Grey said on this occasion that nothing had been said or would be said by the British foreign office to embroil the negotiations between Germany and France, but that on the contrary, the British government sincerely desired that the negotiations should succeed. This was followed on July 27 by a very friendly communication from the German government, which acknowledge with pleasure the statement that Great Britain desired an agreement between Germany and France. It pointed out that the territories that would be eventually exchanged were exclusively German and French and that special English interests would not be touched.

Having told what had passed between the two governments, Sir Edward Grey proceeded to comment on the general foreign policy of the country and on some of the criticisms that had been made in regard to it. In general, he

characterized the recent foreign policy as a continuance of Lord Lansdowne's, which had removed difficulties with France and resulted in an *entente*. The present government had gone forward in the same direction and promoted friendship with Russia. The policy of "splendid isolation," advocated by some, was impossible at the present time and even if it could be followed it would result in confronting the united hostility of the other powers. A further expansion of Great Britain in Africa was, in his opinion, undesirable, and Great Britain should not be regarded as an ambitious competing party to large territorial changes on that continent.

Sir Edward Grey's statement was received with marked approval both in England and France, and although there was some criticism upon it in Germany, the comment, on the whole, was moderate.

STATEMENT BY THE FRENCH FOREIGN SECRETARY. On December 14, the French foreign secretary, M. de Selves, contributed his share to the discussion of the Moroccan negotiations and the final agreement. After an attack by the members of the Right on the government's course in surrendering to a rival power part of a French colony which equaled in extent two-thirds of France and for resorting to secret methods in diplomacy, M. de Selves set forth the government's position. He traced the history of the negotiations and made some further revelations in regard to them. He said among other things that at the beginning of the crisis Germany had declared that she would not accept or abide by a new Algeiras conference to settle the Moroccan question. There was, M. de Selves admitted, a moment of tension between the two nations owing to the excessive demands of Germany, but after this the negotiations were conducted on a reasonable basis. He denied that Germany had shown any desire to provoke a conflict. He said, on the contrary, that her attitude had been conciliatory. He maintained that French interests had been guarded throughout and that the results proved that France had not been worsted. The main advantage, however, was that it took the Moroccan question out of foreign politics where it had long been a source of conflict. The specific motion brought in by the Right was that the ratification of the Franco-German accord in regard to Morocco should be postponed until after the negotiations that were then going on with Spain should be concluded. This motion was defeated by a majority of 448 to 98.

In general, French criticism of the Congo treaty took the following lines: It lost to France the region fought for and won by her colonial hero, De Brazza, it broke the connection between the two parts of the Congo remaining to France, and it brought in a competitor for the Belgian Congo succession.

THE GERMAN CHANCELLOR'S REPLY TO SIR EDWARD GREY. The final session of the German Reichstag was held on December 5. It carried by a large majority and with the full consent of the government, only a few Conservatives dissenting, the resolution declaring that henceforth imperial legislation would be necessary for any further acquisitions or cessations of colonial territory. The chancellor, Herr von Bethmann-Hollweg, made a speech concerning the course of the government during the recent negotiations and took up several points in the recent statement of Sir Edward Grey.

He referred to the fact that the latter had been fully informed as to the nature of the negotiations through his own admission, since France during the whole course was engaged in intimate exchange of opinions with England and asked England's advice in regard to any question that affected her interests. It was therefore hard to see how England could regard her interests as menaced. It was singular that the latter power regarded with anxiety the sending of the *Panther* to Agadir, but appeared to feel no sort of alarm at the procedure of Spain or at the advance of the French to Fez. As to the period of silence to which Sir Edward Grey referred, the silence had been on both sides. Any question could readily have been answered by Germany if the British government had asked it. Looking back over the whole Moroccan trouble the chancellor declared that Germany rather than England seemed in danger of being swept out of the way. England and France had disposed of Morocco in 1904 without regard to German interests and it was necessary for their protection that Germany should go to Agadir as she had gone to Algeiras. The chancellor, however, concluded in a very conciliatory vein, acknowledging the evident desire of the British government for peace and saying that Germany also desired peace and friendship with England. Other nations, however, said he, must reckon with the progressive development of Germany as shown during the last forty years. On the whole, considering that the elections were approaching and that it was necessary for the government to defer to the national sentiment, the speech was considered very moderate in tone.

During the Moroccan negotiations and while the treaties were under discussion there were persistent rumors of secret intrigues on the part of private persons to bring about an international adjustment in their own interests. The Socialists alleged secret understandings between French and German financiers and accused the government of letting itself be made the catspaw of capitalists. In certain quarters the Moroccan question and its settlement were declared to have been the affair of financiers actuated by motives of private gain. Toward the close of the year these rumors of a great public scandal in connection with the affair increased and became more definite.

THE FRANCO-GERMAN TREATIES. The text of the treaties between France and Germany with respect to Morocco was published on November 4. The first concerned Morocco alone, the second, or colonial treaty, dealt with the territorial compensations. The treaty dealing with Morocco was in the form of a supplement to the Franco-German agreement of February, 1909. Germany, for her part, declared that she had no interests in Morocco other than economic, that she would not interfere with the action of France in carrying out necessary reforms in military, financial, or administrative matters and would, in fact, approve the establishment of a French protectorate in Morocco. France, on her side, guaranteed freedom and equality of treatment to foreign trade and commerce, and that mining concessions should be bestowed without discrimination against any nation. The new railways, especially that from Tangier to Fez, were to be managed by the Moroccan government under the guidance of France and with proper precautions against

— favoritism in the treatment of contractors. Before regular courts were established a provisional system of arbitration under French control was to be provided for the settlement of civil disputes. Other features were Germany's agreement to suppress ultimately the consular jurisdictions, the guarantee of fishing rights on the coast, the recommendation of the opening of closed ports, and finally the requirement that the treaty should be signed by the powers signatory to the act of Algeciras, and that Germany would support France in requesting their adherence.

The colonial treaty arranged for concessions of territory to the French Congo and the German Kamerun. The territories ceded by France to Germany comprised a region in Equatorial Africa of about 230,000 sq. kilometers, with a population estimated at from 600,000 to 1,000,000. The ceded territory included a strip running east and west from the coast and eastern border of Spanish Guinea to the River Sanga, and a large strip running north and south from the so-called "duck's bill" to Bonga on the Congo River. In return France received from Germany the portion of the "duck's bill" that lies north of Kamerun, with an area of about 14,000 square kilometers. It was agreed that the delimitation of the new frontier should be made by a mixed commission six months after the ratification of the treaty. The boundary should follow as nearly as possible the natural frontiers. France had a right to build a railway across German territory to connect Gabun and the Middle Congo and also the Middle Congo and the Ubangi. She also retained certain privileges concerning the establishment of posts, the transit of merchandise, etc., in the ceded territory. The telegraph line along the Ubangi remained French. It was provided that there should be no obstacle to the passage of French or German troops with their arms and ammunition either along the rivers or by land. Finally it was agreed that in accordance with the spirit of the act of Berlin of 1885, any future changes that might be made affecting the status of the Congo Basin should become the subject of exchange of views between the signatories to the act of Berlin.

Both powers agreed to submit to arbitration at The Hague all disputes or differences arising out of the treaty; and France agreed to permit the association of French and German interests in business enterprises for which they had secured contracts.

After the conclusion of the treaties with Germany it remained for France to come to an agreement with Spain. The German government in an explanatory letter accompanying the treaty agreed not to interfere in the French negotiations with Spain concerning Morocco.

THE SECRET ARTICLES OF THE ANGLO-FRENCH AGREEMENT. At the end of November, 1911, the British government published the text of the Declaration of 1904 between Great Britain and France as to Egypt and Morocco, together with the secret articles which had been signed at that time. It will be remembered that the main point of the treaty of 1904 between France and England was that France should have a free hand in Morocco and England a free hand in Egypt. There had been much talk in regard to the secret articles that formed a part of that treaty and in view of the present situation the government at last made them public. They

were not, however, of any great importance. They provided that in case of possible political developments in Africa certain points agreed upon in the published declaration should be maintained. Article 1 declares that if either government should find itself obliged to change its policy in respect to Egypt or Morocco it pledges itself to maintain the agreement stated in Article 4 of the declaration, that there should be no inequality in the treatment of each other's traders, that the authority of the State should be maintained in all concessions for roads, railways, etc., and that both should also abide by the article of the declaration that guaranteed the free passage of the Suez Canal and the article that prohibited the fortifying of any part of the Moroccan coast between Melilla and Sebu except the places on the Mediterranean which the Spaniards held in 1904. Article 2 of the secret agreement declared that Great Britain had no present intention to make changes in the system of the capitulations or in the judicial administration of Egypt, and that if she introduced reforms in Egypt as to the legislative system she would not refuse to entertain suggestions from France as to similar reforms in Morocco. Article 3 declared that whenever the sultan's authority ceased in the region about Melilla, Ceuta, and other *présides* it should come within the sphere of influence of Spain, but the latter power could not alienate any part of the territories under her authority or in her sphere of influence and would be obliged to give formal assent to the articles of the declaration in regard to free passage of the Suez Canal, equality of treatment of the French and English traders, etc. Article 4 provided that if Spain when invited to consent to these provisions declined the arrangement, the agreement between France and Great Britain was none the less applicable. Article 5 declared that if the consent of the other powers to the decree mentioned in Article I of the declaration were not obtained, the French government would not oppose the repayment at par of the guaranteed, privileged, and unified debts after July 15, 1910.

SPAIN AND MOROCCO. On January 7 King Alfonso, with the prime minister, Señor Canalejas, and the minister of war, General Aznar, paid a visit to Melilla, where he received an enthusiastic popular welcome, and appeared at a review of the Moors. Spain's course in sending troops to Alcazar in June has been discussed in a preceding paragraph. (See also *SPAIN*, paragraph on *History*.) An incident that tended for the moment to increase the indignation of the French occurred on July 15, when Spanish soldiers seized a French consular agent and brought him before the officer of the guard, who released him, but without apology for the indignities he had suffered. But on the demand of the French government, Spain promptly rendered an explanation expressing regret for the occurrence, and offering a formal apology to the consular agent. In the autumn trouble broke out afresh among the Riff tribesmen. Early in October the Spanish troops at Melilla proceeded against the Riffs. An engagement took place on the 7th, resulting in a loss to the Spaniards of 50 killed and 212 wounded. It was estimated that the tribesmen in the field numbered over 10,000. The government was blamed for the unsuccessful action of October 7. Upon the demand for reinforcements in the Riff country from the general com-

manding in Melilla, the government sent a number of troops, and as the demands continued the minister of war paid a visit to the region himself. This visit caused jealousy and it was said that the minister of war had assumed command of the army, and they held him responsible for the unsuccessful action of October 7. The Riffs showed increasing violence in attacking the Spaniards, and severe fighting was reported in the closing days of December, although peace had been announced a short time before. The government decided to send further reinforcements of 8000 men. For the first time since the beginning of hostilities in 1909 the Moors were said to be deliberately taking the offensive.

The secret treaty of 1905 with Spain, published in a French newspaper on November 8, defined the respective spheres of influence of the two powers. Spain engaged not to take any action in her zone except in accord with France, but it was stipulated that "In the event that the Moroccan state, and the Shereefian government could not subsist by reason of the weakness of that government . . . and the maintenance of the *status quo* should be impossible, Spain should have a free hand in her sphere." On the basis of the former provision France criticized Spain's occupation of Alcazar. On the basis of the latter, Spain defended it.

MORTGAGE LOANS. See INSURANCE.

MORTIMER, JAMES. An American public official and playwright, died February 23, 1911. He was born in 1832, and was educated in the United States Naval Academy. He served as a midshipman at the time of the war with Mexico in 1847. At the conclusion of the war he left the navy and began work as a journalist in Philadelphia. In 1850 he started the *Frankford Journal*. Shortly after, however, he was appointed an attaché of the United States legation in Paris. He remained in the diplomatic service for some years, being stationed for a considerable time in St. Petersburg as secretary to the United States minister. Returning to Paris he gave up diplomacy and acted as Paris correspondent for a number of American newspapers and contributed articles on American subjects to many Paris daily papers. The emperor Napoleon III. happened to read some articles by Mortimer, in which his own schemes were very sympathetically treated, and he sent for the writer and expressed his gratitude. From this time until his death the relations between Mortimer and the emperor were very friendly. He acted as messenger between the emperor and the empress Eugénie. Before the war of 1870 the emperor provided Mortimer with the funds to establish the London *Figaro*, which first appeared in May, 1870, and was owned and edited by him for thirteen years. During this time he devoted a great deal of his attention to writing plays and between thirty and forty plays written by him were produced in London, the first being a comedy entitled *Joy is Dangerous*, which was played in the early seventies. The best known of his dramatic works was the comedy *Gloriana*, which was first produced in 1891 and was revived under the name *The Artful Valet*. In the adaptation by Mr. Mortimer of *La Dame aux Camélias*, entitled *Heartsease*, Mme. Modjeska made her first appearance in London in 1880. The last play of his acted in London was entitled *My Bache-*

lor Past. Mr. Mortimer was well known as a chess player.

MORTON, PAUL. An American public official and life insurance president, died January 19, 1911. He was born in Detroit, Mich., in 1857, the son of J. Sterling Morton, who was secretary of the interior under President Cleveland. His only formal education was in the public schools and that ended when he was fifteen years of age, when he went to work as a clerk in a railroad freight office. After several promotions he became in 1890 general freight agent of the Chicago, Burlington & Quincy Railroad. Two years later he became vice-president of the Colorado Fuel & Iron Company. In 1896 he was chosen vice-president of the Atchison, Topeka & Santa Fé Railroad, with special charge of the traffic. During this period he became the friend of Theodore Roosevelt, who was at that time president of the National Civil Service Commission. The friendship thus formed was increased after Mr. Roosevelt was elected Vice-President. He made frequent trips to the Southwest and was usually entertained by Mr. Morton. When Mr. Roosevelt became President he offered Mr. Morton appointment to the first cabinet office that became vacant. This proved to be the portfolio of Secretary of Commerce and Labor. Mr. Morton declined this, but in a short time accepted the invitation to enter the cabinet as secretary of the navy. His term began July 4, 1904, and ended exactly a year later. During this period, although he had had no previous experience in naval matters, he showed a ready grasp of the problems of the department, and his application of the energetic methods of a railroad man in the work of construction and improvement of the naval equipment resulted in greater expedition in the building and equipment of ships than had ever been witnessed before. As a member of the cabinet Secretary Morton closely coöperated with President Roosevelt in plans for the development of the interior portions of the country. He was an enthusiastic advocate of the development of water-power and plans for irrigation. He was a trusted adviser of the President on railway matters and through this became involved in charges that he had allowed rebates while he was vice-president of the Atchison Railroad. The charges were investigated at great length, but in the end the President declared himself convinced that Mr. Morton was in no way responsible for any infraction of the law. The Interstate Commerce Commission also held that he was free from blame. Mr. Morton's great executive ability led to many offers of lucrative business positions, and at the conclusion of the life insurance investigation of 1906 he was chosen president of the Equitable Life Assurance Society. From that time until his death he was almost entirely identified with his work in this office. At the time of his election the company was threatened with serious loss of business both abroad and at home. By his energetic and intelligent administration he succeeded in rehabilitating the company and restoring it to its former prosperity. He was director in several financial institutions and was vice-president of the Panama-American Railroad.

MOSELEY, EDWARD AUGUSTUS. An American economist and authority on railways, died April 18, 1911. He was born at Newburyport, Mass., in 1846. When sixteen years of age he

shipped on a vessel in the East Indian trade and made many voyages. Returning to Newburyport he studied law and was admitted to the bar of the Supreme Court of the United States. He served for some time in the legislature and held several public offices. In 1887 he was appointed secretary of the Interstate Commerce Commission. He helped organize the commission under the law of 1887 and also acted as disbursing officer. At the time of the American occupation of Cuba Mr. Moseley, at the request of the governor-general, was sent there to assist in drafting a railroad law to fix a classification of freight, to formulate rules of practice, and to fix railroad rates. He was appointed by President Roosevelt assistant recorder of the anthracite coal strike commission. He was known as a leading authority on questions relating to the safety of railroad employees and patrons. He received the thanks of the Commonwealth of Massachusetts for disinterested services in the cause of humanity. He was a member of several learned and patriotic societies. He was the author of *Arbitration as Applied to Railways and Their Employees*; *Safety Appliances on Railroads*; *One Hundred Years of Interstate Commerce*; *John Boyle O'Reilly, the Man*; *Railway Accidents in the United States*, and numerous articles on safety appliances on railroads.

MOTTL, FELIX. A German musician and musical conductor, died July 2, 1911. He was born in Vienna in 1856. As a boy he sang in a church choir in that city, where his fine soprano voice created a sensation. He studied in the conservatory under Hellmesmerger, from whom he learned conducting. He studied under Brückner for theory and Dessau for composition. He also studied pianoforte at the conservatory. He graduated with high honors and was called to conduct the Wagnerian Verein, as well as some performances at the short-lived Vienna Opéra Comique. In 1880 he was called to the Grand Ducal Opera House at Carlsruhe, and thirteen years later was made general musical director of the Grand Duchy of Baden. His talent as a musician and conductor soon brought the small opera house in Carlsruhe to a foremost place in the musical activities of Germany, and artists of the first rank were glad to have an opportunity of appearing there. In 1886 Mottl went to Beyreuth, where he conducted *Tannhäuser*. He was afterwards there for nearly every succeeding festival and was a noted champion of Wagner's music. He received calls from Berlin and Munich, but he preferred to remain at Carlsruhe. He conducted Wagnerian concerts at Paris, and also a performance of Berlioz's opera, *Les Troyens*, in that city. In 1893 he produced his one-act opera, *Prince and Singer*, at Carlsruhe, and it was cordially received. He had previously produced *Agnes Bernauer* at Weimar

in 1880, and *Elenstein*, a pastoral play, at Carlsruhe in 1881. Mr. Mottl was engaged by Heinrich Conried as general musical conductor of the Metropolitan Opera House for five years. He remained, however, but one year, declaring himself so dissatisfied with the conditions that he encountered in New York that he was glad to depart. His efforts to establish classical Sunday night concerts at the Metropolitan Opera House were too great an innovation to meet with success. He demonstrated his remarkable versatility while in New York and made an excellent impression as a conductor. On his return to Germany he went to Munich, where he was in charge of the Prince Regent and of the Residenz theaters; he also conducted the annual Wagner and Mozart performances held in that city.

MUDD, SYDNEY EMANUEL. An American public official, former congressman from Maryland, died October 21, 1911. He was born in Charles City, Md., in 1858 and graduated from St. John's College in 1878. He studied law and was admitted to the bar in 1880, practicing at La Plata, Md. In 1879, 1881, and 1896 he was a member of the Maryland House of Delegates. In the latter year he was speaker. He served in the Fifty-first Congress from 1889 to 1891, and in the Fifty-fifth to Sixty-first congresses, 1897 to 1911. It was largely through his efforts that the United States government expended \$10,000,000 on the United States Naval Academy at Annapolis.

MUNICIPAL ACCOUNTING. See MUNICIPAL GOVERNMENT.

MUNICIPAL GOVERNMENT. The centre of the stage of municipal government for a number of years past has been occupied by charter and allied municipal reforms. These reforms have included a variety of measures designed to secure more thoroughly representative government, greater accountability to voters and taxpayers, and greater efficiency in all branches of municipal endeavor. Accordingly, much has been attempted in the way of primary and election reforms, the short ballot, election at large instead of by wards, the recall of public officials by popular vote, direct popular legislation through the initiative, popular veto power through the referendum, clear-cut responsibility of city officials by making each official definitely responsible for some branch of administration, and last but not least, full and prompt publicity through carefully framed annual budgets, and through frequent, prompt, and full balance sheets and financial and physical operating reports. All these and other reforms are being effected almost daily, some in one city, some in another, and many all in one. The most sweeping and comprehensive reforms have been wrought in the many cities and towns which have adopted the commission plan of city government during the past four or five years; for the commission plan generally brings with it, as charter provisions, if not always in practice, all

the reforms indicated instead of waiting for their adoption piecemeal.

Besides reforms in charters and the machinery of government generally there have been, of course, many recent and notable changes in the character of the personnel of city government. Steady progress is also being made in the physical development of cities and towns, including the broad field of city planning and such departmental activities as street cleaning and maintenance, sewerage and sewage disposal, garbage and refuse disposal, sanitary and economic supervision of milk and other food supplies, fire and police protection, and parks and playgrounds. These topics are dwelt upon at length elsewhere under their respective headings.

NATIONAL MUNICIPAL LEAGUE SURVEY. Before taking up in more detail some specific features of municipal government, a brief further survey of the whole field, but confined more particularly to 1911, may be made. This cannot be done more effectively than by drawing upon the annual survey submitted to the National Municipal League, at Richmond, Va., in November, 1911, by Mr. Clinton Rogers Woodruff, secretary of the league (published at length in the *National Municipal Review* for January, 1912—the new quarterly established by the league). For the seventeen years of the life of the league, Mr. Woodruff said, the most important changes in municipal government had been an expansion of functions and a simplification of machinery. At present the most notable tendency in American municipal life is that toward hopefulness. More specific mention of tendencies included: The growing movement for municipal home rule; the scrutiny of franchise grants for public service corporations; the recent creation of local commissions to regulate such corporations in 14 cities, and the increase of State commissions of like character from only two (Massachusetts and New York) five years ago to 27 in 1911; the extension of the civil service or the merit system, including the provision of better means for selecting and retaining in office experts, as well as clerks and other departmental subordinates. The latter, like the increase in bureaus of municipal research, is a part of the strong present movement for increased municipal efficiency already noted. "Some of these bureaus," Mr. Woodruff states, "have the tendency to overstress accounting, as a means of reorganizing municipal administration." The election of many Socialists to municipal office in November, 1911, was also noted. Incomplete returns, Mr. Woodruff stated, indicated the election of full Socialist tickets in Schenectady, N. Y., Barberton, Cuyahoga Falls, Lima, Lorain, Mansfield, Saint Mary's, and Salem, O.; Dearborn, Ind. (except clerk); Eureka, Manti, and Murray, Utah; while at Crookston, Minn., the Socialists elected a mayor and one alderman, at Rockaway, N. J., a mayor, besides various officers in municipalities in Connecticut, Pennsylvania, Kentucky, Michigan and other States. Some hundreds of Socialists, it is believed, were holding office already, before the elections of 1911. Perhaps quite as notable as the fact just stated is a list of the cities where women hold municipal office—in nearly twenty States, extending from Massachusetts, New York, and New Jersey, to Oregon, Washington, and California, and from Louisiana and Kentucky to Michigan and Wisconsin, and including such

positions as mayor, city clerk, treasurer, auditor, health officer, city bacteriologist, school superintendent, member of school board, and patrolman.

MUNICIPAL ACCOUNTING. One by one American cities are substituting for mere cash-book entries well-devised systems of accounting designed to show their actual financial status. Reforms to this end are largely due to the initiative of the National Municipal League, which has been followed up by the work of the federal Census Bureau and of State boards in Massachusetts, New York, Ohio, Indiana, and Iowa, all of which are engaged in the collection and publication of uniform financial statistics. The Ohio board has the power of audit of municipal accounts, as well as that of compelling the adoption of a system of uniform accounts throughout the State. Recent Massachusetts legislation authorizes the State Bureau of Statistics to aid cities in installing accounting systems, on request from the cities. The Metz Fund for Promoting Efficient Municipal Accounting and Reporting has been provided by Ex-Controller Metz, New York City, to serve as a school and publicity bureau to the end indicated by the title.

COMMISSION PLAN. During 1911 nearly a hundred cities and towns voted to adopt the commission plan, or nearly as many as had previously voted for it since the plan came into use at Galveston, Tex., in 1901. Exact numbers of commission cities are not easily determined, owing to the rapid progress of the movement, and to the absence of a uniform standard by which to determine whether a new charter is or is not of the commission type. There is a general agreement that the essentials of the commission plan include a small council, elected at large instead of by wards, in which single body is vested all the legislative and executive power of the city, with each commission at the head of a great department or group of departments of the city government, but subordinate to the council as a whole. Non-partisan primaries and elections are the rule, the better to ensure representative government, as free as possible from boss or partisan control. Still further devices to ensure popular control and to serve as a check on the actions of a small body of men, exercising all municipal functions, are the initiative, the referendum, and the recall, as also various publicity measures. Obviously, any one or more of these features may exist independently of commission government. The prime essential is the small all-inclusive council, which has been named a commission, although it is elected, while commissions, as previously understood, have generally been appointive officers, accountable to some higher official or officials, rather than directly accountable to the people. Aside from the all-inclusive commission, which embraces the mayor, shorn of all or practically all powers not shared equally with other members of the council, all the other features of the commission plan are, as it were, accessories to this as the main fact, or checks upon possible evils which might arise from so great a concentration of power. It should be understood that the members of the commission or council are the only elective city officers, unless it be the members of the board of education and possibly the city treasurer or the auditor. But the mere restriction of the elective officials to a few men (or the short ballot) does not

constitute commission government, unless all executive and legislative powers are lodged in one self-contained body, responsible only to the electorate. Thus, a small council possessed only of legislative powers of appointment and all other executive control, would be the very antithesis of the commission plan; in fact, it would be an extreme type of that separation of legislative and executive functions recommended in the municipal programme of the National Municipal League before the beginning of the commission plan movement.

With the exception of those States in which cities have been granted the right to form their own charters, commission government is possible only under a specific charter to that effect, or under a general State law applying to certain or all classes of cities. As a rule, cities vote in either case on the adoption of the commission charter or general statute. The accompanying table presents the best available list of cities and towns which had adopted the commission plan so far as reported up to the second week in January, 1912. The list (see left hand column) is a combination of records kept by the Short Ballot Organization, of New York City, and the National Municipal League, of Philadelphia, checked and supplemented by a list, not so recent within a few months, given in Bradford's book (B) on the commission plan (mentioned further on). A summary by States and groups of States is given just below. Of the 48 States, the commission plan appears to have been adopted in 34, but in only one place in nine of these States. Texas leads with 29 cities, and Kansas and Illinois follow with 26 and 19, respectively.

	N. W. 54	

By groups, the totals increase progressively from 7 for New England to 54 for the South-western States, then fall sharply to 28 for the Pacific and Rocky Mountain States, as compared with 29 for the North Central States. By years of adoption, as nearly as can be determined, the showing is:

Years	Years	
1901 1	1909 29	
1905 1	1910 58	
1907 9	1911 95	
1908 29	Not given 7	
Total	206	

In size, the commission cities and towns range from Margate City, N. J. (129), to Oakland, Cal. (150,174 inhabitants). Six cities of more than 100,000 population have adopted the commission plan: Lowell, Mass., Birmingham, Ala., Memphis, Tenn., Omaha, Neb., Spokane, Wash., and Oakland, Cal. Of the 60 or more cities which had rejected the plan to the close of 1911 the largest was Jersey City, with a population of 267,779 in 1900. A much larger city (Buffalo, 423,715 population) has cast a decided "public opinion" vote in favor of a commission plan charter, but was unable to secure the necessary legislation in either 1910 or 1911.

From a considerable number of summaries given by Bradford, it appears that quite generally the mayor is elected to fill a specified commissionership, while the other commissioners are more commonly assigned to their departments by a majority vote or all the commissioners or councilmen, after election. The number of commissioners appears to be only three for most of the small places and generally five for the larger ones. About half the cities listed by Bradford elect all the commissioners at one time. The disadvantage due to possible change in personnel is partly offset by the relatively long term of office, which generally averages over three years. In only a small proportion of the places are the commissioners required to give all their time to their official duties. The salaries paid commissioners show a wide range. Alabama stands highest with \$7000 per year to the mayor and other commissioners in cities of 100,000 and over, which includes only Birmingham. The initiative and referendum are generally authorized, but are sometimes limited in scope. The recall is quite commonly a feature, but has seldom been used as yet. Non-partisan primaries and elections are generally in force. The civil service, strangely enough, is often limited, both quantitatively and qualitatively.

Judged by its popularity where tried and its rapid spread the commission plan is highly successful, but it is still in its early stages of trial in most of the cities that have adopted it. Moreover, even if scientific, financial, and physical records are being kept in a few of the commission cities since the plan was adopted, that was certainly not the case before, so that exact comparisons are impossible and judgment must be based chiefly on impressions and opinions. These, so far as reported, are almost always highly favorable, but it should be remembered that the comparisons are generally drawn between an old, discredited, and discarded type of government at its worst and a novel type which, if not at its best, still has all the advantages of the "new broom." What is needed for judgment is accurate figures for comparing results under the two types of government at either their worst or their best—unless it can be proved that one is inherently bad and the other inherently good.

OTHER CHARTER TYPES. Boston appears to have made favorable progress under the new charter, which provides for a small council (9) with full legislative powers and a mayor with large executive powers, including those of appointment of nearly all administrative offices. The vote in November, 1911, to determine whether Mayor Fitzgerald should stand for reelection or complete the last half of his four-

THE PROPOSED IMPROVEMENT OF CITY HALL PARK, AND THE ESTABLISHMENT OF A MUNICIPAL CENTER, NEW YORK
SHOWING THE APPROACH TO THE BROOKLYN BRIDGE, THE REMOVAL OF THE COUNTY COURT HOUSE AND POST OFFICE AND OTHER IMPROVEMENTS

year term (a modified form of recall), resulted in his favor. At St. Louis, Mo., a charter framed with great care, under the State home-rule law, was defeated in 1911. It provided for a small city council, an independent mayor, referendum on franchise grants to utility companies, and the recall.

The year passed without the enactment of a new charter for New York City. This was a distinct gain in view of the fact that the wholesome movement for genuine charter reform along carefully wrought and honest lines, which was begun several years ago, gradually degenerated into a struggle between political parties and finally, in 1911, resulted in a boldly partisan attempt to force a charter upon New York City which few seemed to want except party bosses and their followers at Albany, and the consequences of which scarcely anyone could understand.

EFFICIENCY BUREAUS. The New York and other private bureaus of municipal research carried on their work of investigation and publicity during the year with gratifying results. A new bureau at Walla Walla, Wash., was reported. The temporary work of the (official) Chicago Commission on City Expenditures is being continued by the (private) Chicago Bureau of Public Efficiency, under the auspices of the City Club of Chicago. The (official) Milwaukee Bureau of Economy and Efficiency has published and projected a valuable series of reports on various municipal and social conditions in Milwaukee. The bureau has the co-operation of the University of Wisconsin, the State Tax Commission, and has the assistance of numerous engineering and other technical experts, both in a general advisory capacity and for such work as tests of the efficiency of the city refuse incinerating plant.

TAXATION REFORM has come in for a share of attention, but is largely a State rather than a municipal function. The national conferences on taxation, begun in 1907, have been continued, as have been the activities of the National Tax Association. The movement for the separate taxation of land and improvements is making progress. A constitutional amendment, permitting full local option in taxation methods, has been defeated recently in Oregon, but county local option has been secured. In Canada, Vancouver and Edmonton, B. C., are reported as having discontinued taxation on improvements.

CITY PLANNING. Many notable papers and discussions were presented at the third City Planning Conference held in Philadelphia in 1911. Several speakers from Great Britain participated. Seattle, St. Louis, and other cities have had city planning commissions at work and various studies have been made by, or for, private organizations.

Limitations on the height of buildings, a subject closely allied to city planning, were given in the annual report of the City Planning Commission of Hartford, Conn., for 1910-11. Of 30 large cities listed, 19 had set no limits on building heights, while 11 had more or less rigid regulations.

Public comfort stations, according to the report just cited, had been established by Atlantic City, N. J., Baltimore, Md., Boston, Mass., Cincinnati, O., Denver, Col., Detroit, Mich., Lawrence, Mass., New York, N. Y., Washington, D. C., and Worcester, Mass.

A Berlin metropolitan district was created by the Prussian government, to take effect April 1, 1912. Besides Berlin and Charlottenburg, six other communities will be included. The district will be governed jointly by an assembly of 100 members, elected for seven years by the local councils and by a council of 17 members, elected by the assembly, subject to approval by the king. The district authorities will have broad town-planning powers, including the layout of streets, parks, and playgrounds, and the establishing of railways. Its control over the street and city plan will be subject to the approval of the Prussian minister of public works. See article by J. Stübgen, *Zentralblatt der Bauverwaltung*, September 13, 1911.

In Great Britain considerable progress is being made under the Housing and Town Planning act passed two or three years ago. Local authorities are authorized to lay out new building areas in accordance with future community needs, subject to the approval of the local government board.

An important international city planning competition for the new capital city of the Commonwealth of Australia was announced in 1911, to close on January 31, 1912. The capital will be located in the district of Yass-Canberra, New South Wales, within a government district of 900 square miles, the center of which is 204 miles southwest of Sydney, 429 miles north east of Melbourne, and about 75 miles from the eastern coast of Australia. The site is 3000 feet above the sea level, and is divided into two parts by the Molonglo River. The competition called for plans which would take into account the fact that the city was to be political centre of Australia, and would provide for buildings accordingly, as well as parks, gardens, and residence, commercial, and industrial building zones.

The New Jersey legislature of '911 passed an enabling act which permits cities of the first class (Newark and Jersey City) to establish an unpaid planning commission of not over nine members to prepare a plan for the systematic development of the city, and to have authority to employ experts. The expenditures of such a commission in any one year might run to \$10,000, provided the city authorities saw fit to supply that sum. Newark has appointed such a commission, with David Grotta as chairman. St. Louis, also, has an official city planning commission, created at the close of 1911.

* So given by Bradford.

* This list is based primarily on one kindly supplied by The National Municipal League, which included for most of the places all the classes of information given in the table except the dates the plan went into operation. The league list was checked and slightly extended by a list of names of cities only, supplied by The Short Ballot Organization, which list was understood to include only such cities as comply with a fixed standard for commission government, as verified by correspondence or by study of charters or other statutes. Both the lists named had been revised to about January 12, 1912. The table formed as thus far stated was further checked, some gaps in "date voted" and "charter or general law" columns filled and the "date in effect" column added from one of the many detailed tables in Bradford's "Commission Government in American Cities," which tables appear to have been brought down to about the middle of 1911. The first or left-hand column of the accompanying table indicates which one, two or three of the authorities cited include the various cities in their list, but does not indicate what other of the information given is thus vouched for. As a rule, it will be noted that all three authorities list each city, except for cities reported as having adopted commission government in 1911. Many of such adoptions were too late for the Bradford list; while some appearing in the league but not in the short ballot list were doubtless absent from the latter pending verification.

¹ S=Short Ballot Organization; L=National Municipal League; B=Bradford; all as explained in the preceding note.

² Date voted generally means the date of acceptance by the locality, by popular vote; but in some cases it is the date of final action in framing a home rule charter (see next note) or possibly of the enactment of a legislative charter.

³ As a rule Charter means a State legislative grant, subject to local adoption by popular vote. Home Rule Charter means a charter framed by a popularly authorized local charter commission, instead of one passed by the State legislature. State Law means a general act, usually subject to adoption by any municipal corporation within the class or classes specified in the act.

REFERENCES. On the Commission Plan see Beard's *Loose-Leaf Digest of Commission Plan Charters* (New York, 1911); Woodruff's *City Government by Commission* (New York, 1911); Bradford's *Commission Government in American Cities* (New York, 1911); symposium on commission government in *Annals of the American Academy of Political and Social Science* (Philadelphia, 1911); and MacGregor's *City Government by Commission* (Madison, Wis., 1911). On City Planning see Mawson's *Civic Art* (London and New York, 1911), a sumptuously illustrated folio. During the year there was published the second volume of Wilcox's *Municipal Franchises*, a comprehensive review of the subject, with classified digests of many franchises of various classes. For the officials and activities of British cities see *Municipal Year Book of the United Kingdom*, an annual of many years' standing (London) and for information on health administration in Great Britain see *The Public Health Directory* (1911). British water-works and gas-works directories are published annually in London; and American gas, electric lighting, and street railway directories in New York. The Bureau of the Census is continuing its *Statistics of Cities 30,000 Population and Upwards*, but 1908 was the latest of these bulletins available to the close of 1911. State collections of municipal statistics are issued annually by Massachusetts, New York, Ohio, Indiana, and Iowa, and by the Province of Ontario, Canada. Child's *Short Ballot Principles* (Boston, 1911) may be consulted by those interested in the movement to secure greater responsibility and efficiency in municipal government by reducing the number of elective officers.

MUNICIPAL LEAGUE, NATIONAL. The annual meeting for 1911 was held in Richmond, Va., November 13-17. President Foulke's annual address was devoted to a discussion of efficient municipal government, describing the administration of the city of Frankfort-on-the-Main, Germany, the mayor of which, Dr. Addicks, is a member of the National Municipal League.

Extended reports were read from the committees on excess condemnation, the selection and retention of experts in city government, liquor, the commission government of cities, civic education, city finances, municipal health and sanitation, municipal reference libraries and archives. Among the questions discussed at length were housing and morals, civic surveys, a model street railway franchise, the initiative, referendum, and the recall. Dr. Albert Bushnell Hart, the chairman of the executive committee, reported a membership of about 2500. The first issue of the *National Municipal Review* was published on January 1, 1912, under the editorship of Clinton Rogers Woodruff.

The league has also begun to issue through D. Appleton & Co. volumes in a National Municipal Series. Three have been published, *City Government by Commission*, *Municipal Utilities*, and the *Initiative, Referendum, and Recall*.

The following are the officers of the league for 1911-1913: President, William Dudley Foulke, Richmond, Ind.; vice-presidents, Jane Addams, Chicago; H. D. W. English, Pittsburgh; William Kent, Kentfield, Cal.; Camillus G. Kidder, New York; A. Lawrence Lowell, Harvard University; George McAneny, New York; Charles Richardson, Philadelphia; treasurer, George Burnham, Jr., Philadelphia; secretary, Clinton Rogers Woodruff, Philadelphia.

The next annual meeting will be held in Los Angeles in July, 1912. A Cincinnati prize was established for the best annual essay presented by a student of the University of Cincinnati. The Baldwin prize essay for 1911 was awarded to George Herbert McCaffrey, of the junior class, Harvard University, for his essay on *The Administration of the Police Department in Some City of the United States with a Population of over 200,000*. The first school prize was awarded to Philip Wager Lowry, of the Erie high school, for the best essay on *The Immigrant in My City*, and the second prize to Miss Flora Harrington, of the Kansas City, Kan., high school.

MUNICIPAL OWNERSHIP. Few notable changes in the municipal ownership field have taken place for some years past. There continues to be a strong, but generally quiet movement for municipal ownership, particularly of water-works. The movement in all classes of municipal utilities would doubtless be more rapid were it not for the increasing number and efficiency of public utility commissions. These boards have increased in five years from two or three to as many score, and most of them increase yearly in strength through added powers, funds, experience, public confidence, and improvement in technical staff.

A notable tribute to the efficiency of public utility commissions and the relief they afford to the courts, and also a pronounced declaration in favor of municipal ownership as a means of lessening the work of both commissions and courts, was expressed in an opinion of a federal judge, handed down late in 1911, in a water rate case which involved the city of Des Moines and the Des Moines Water Works Company. The remarks of the judge were all the more pertinent because these two parties have been in more or less constant litigation over water rates for the past twenty years.

The agitation for municipal ownership of water works of San Francisco, noted in previous issues of this YEAR BOOK, continues. The city has continued its preliminary work on developing a supply from the Tuolumne River. Towards the end of his term of office, late in 1911, Mayor McCarthy, who on assuming office was largely responsible for the adverse popular vote on buying the works of the Spring Valley Water Company, caused a resolution to be introduced in the board of supervisors (city council) looking to negotiations for buying the works.

The successful operation of municipal garbage reduction plants at Cleveland and Columbus, Ohio (see GARBAGE AND REFUSE DISPOSAL) is noteworthy because until recently all such plants were privately owned and operated, and data as to financial and other operating results were not available. Garbage reduction works recover grease and fertilizer base for sale, and hence conduct manufacturing operations on a considerable scale—a thing which it has been held is beyond the capabilities of city governments. Another unusual but increasing kind of public ownership is municipal asphalt plants for the construction of street pavements. This work was for many years largely monopolized, both through ownership of certain asphalt deposits, which alone, it was claimed, were suitable for street pavements, and through alleged proprietary knowledge of methods of preparing and laying the asphalt. The commissioners of

the District of Columbia, in presenting their report for 1910-11, included an allowance for an asphalt plant in their estimates for the fiscal year 1912-13, and stated that municipal asphalt plants are now in use in Detroit, Mich.; Columbus and Dayton, Ohio; Indianapolis, Ind.; Kansas City, Kan.; Denver, Col.; Seattle, Wash., and elsewhere.

MUNKITTRICK, RICHARD KENDALL. An American author and humorist, died October 17, 1911. He was born in Manchester, England, in 1853, and was educated in public and private schools. He removed to the United States, and from 1881 to 1889 was on the staff of *Puck*. He was the editor of *Judge* from 1901 to 1905. He was the author of *Farming* (1891); *The Moon Prince and Other Nabobs* (1893); *New Jersey Arabian Nights* (1893); *The Acrobatic Muse* (1896), and *The Slambangaree* (1898). He was a contributor of prose and verse to the leading periodicals.

MURPHY, EDWARD, Jr. A former United States senator from New York, died August 3, 1911. He was born in Troy, N. Y., in 1836, and was educated in the parochial schools of that city, and studied for a time at Montreal College with the intention of entering the Catholic priesthood. He abandoned this idea, however, and entered Fordham University, from which he graduated with high honors. Returning to Troy, he entered his father's brewing business and at once began to take an active part in politics. In 1875 he was elected mayor of Troy and was reelected in 1877, 1879, and 1881. His friends included Grover Cleveland, Roswell P. Flower, David B. Hill, and other leaders of the Democratic party of that period. In recognition of his services to the party he was sent to the United States Senate in 1893. On the expiration of his term he returned to Troy and devoted himself to business enterprises, which were of considerable magnitude. Several years before his death he retired from active business.

MUSIC. It may be useful to preface the record of events connected with music in 1911 with a few notes of the most important happenings in the few years previous. In 1907 Strauss's *Salome* was produced for the first time in America at the Metropolitan Opera House, and aroused such opposition that it was withdrawn after one performance. In 1908 Heinrich Conried retired as director of the Metropolitan Opera House, and was succeeded by Giulio Gatti-Casazza and Andreas Dippel as joint directors. In the same year Oscar Hammerstein opened a new opera house in Philadelphia, while at his Manhattan Opera House two new singers appeared for the first time before an American audience, Tetrizzini and Mary Garden. In 1909, owing to the keen rivalry between the Manhattan and the Metropolitan Opera House in New York City, the latter greatly increased its forces in all departments. A feature of this year was a series of more intimate operas given at the New Theatre. The New York Philharmonic Society was entirely reorganized under Gustav Mahler. In this year also a new opera house was opened in Boston. In 1910 the rivalry between the two opera houses in New York was ended by the sale of Mr. Hammerstein's interests to the Metropolitan Opera House, with the understanding that Mr. Hammerstein was not to give grand opera again

in the United States for a period of years. New opera houses were opened in Chicago and Montreal. The \$10,000 prize offered by the Metropolitan Opera House in 1908 for the best opera written by an American was won in 1910 by Horatio Parker for his opera, *Mona*.

THE OPERA TRUST. Aside from matters purely artistic, the chief interest of the musical world was centred, in 1911, upon the activities of the great Milan operatic trust, which is controlled by the publishing house of Ricordi. For years this trust had quietly increased and strengthened its influence, until it was in absolute control of all affairs regarding Italian opera throughout the world. It was this combination that forced all the leading opera houses to give such undue prominence to the works of Puccini, and practically shut the doors of Italian opera houses against all works of foreign composers. Wolf-Ferrari, an Italian by birth, whose music was written to Italian texts, but who happens to have a German publisher, was kept successfully out of Italy. The significant event that weakened the power and undermined the influence of the trust was the refusal of Italian audiences to accept Puccini's latest work, *The Girl of the Golden West*. Some enterprising German publishers saw their opportunity, and at once invaded Italy. In spite of these drawbacks the trust became more arrogant than ever by raising their terms for the production of Puccini's works. The American opera houses were asked not only to pay \$500 for each performance, but also to guarantee a certain number of performances, irrespective of the box office receipts. The Metropolitan Opera House at once withdrew *The Girl of the Golden West*, which had been selected for the opening night of the season, and substituted *Aida*. Mr. Dippel, the director of the Chicago-Philadelphia Opera, protested even more emphatically; he at once notified the trust that all of Puccini's operas would be eliminated from his repertoire for the coming season, and he has kept his word.

SOCIÉTÉ DES AUTEURS, ETC. In striking contrast to the methods employed by the Milan trust are those of the *Société des Auteurs, Compositeurs et Editeurs de Musique* of Paris. This society was originally established about sixty years ago for the protection of French composers and publishers, but has gradually grown into an international association. Its object has always been to enforce payment of fair royalties for the public performances of works by its members. After the passage, in 1909, of a new and more stringent copyright law in the United States the French society established on January 1, 1911, a branch at New York. Before that time America had been notoriously lax in the payment of royalties for public performances of works by foreign composers, and the attempted enforcement of the law met with violent opposition. Several law suits resulted. By the end of the year the Supreme Court handed down a decision sustaining the claims of the French organization. During the past year the *Société* collected almost five million francs. It may be of interest to note that one of the American members, Mr. Sousa, received a check of 14,000 francs for public performances of his works in France.

THE UNITED STATES

ARTISTS: INSTRUMENTAL. A newcomer was the Russian violinist, Efrem Zimbalist, who made

his American début in Boston with the Boston Symphony Orchestra. Although he had chosen a rather uninteresting and little known work, Glazounow's *Concerto in A minor*, he at once demonstrated that he belongs in the same class as his compatriot, Elman, who was again heard in 1911. It was interesting to hear these two artists (neither of whom is much over twenty) in succession. Both are not only marvelous technicians, but consummate artists. Elman is perhaps more richly gifted by nature; he plays with greater brilliancy and dash. What Zimbalist lacks in this respect he makes up in concentration and intensity.

After an absence of two years Albert Spalding was heard again. It was evident that his style had broadened. Kubelik again drew record houses. This tour was announced as a farewell tour, for it was stated that all seasons until 1915 were already booked and that then he would retire.

The year offered much variety in piano recitals. While no new pianists were heard, the public was well pleased to hear established favorites. First of all was Busoni, who if such a thing were possible, added to his fame. He gave a recital of Liszt's compositions, which was characterized as stupendous. Hitherto, Friedheim was regarded as the unequaled Liszt player; henceforth he must share his laurels with Busoni. But the public did not desert the older idol. Whenever Friedheim appeared he was greeted by large and enthusiastic audiences. A noteworthy event was the masterly performance by Harold Bauer of Brahms's *D minor concerto, op. 15*. Although first played by Brahms himself in 1859, New York had heard only two performances, by Ansoerge and Joseffy. Sigismund Stojowski heightened his enviable reputation by the scholarly rendition of a series of five historical recitals, which covered the entire field of piano composition from Bach to Debussy. De Pachmann, Hofmann, Borchard, and Mmes. Merö and Bloomfield-Zeisler also delighted their audiences by their well-known mastery. The 'cello was represented by Boris Hambourg, Alwin Schroeder, Leo Schulz, and Hans Kronold. Hambourg attracted special attention by his performance of older compositions, which he had discovered in various museums, and played in his historical recitals in London.

VOCAL. This year America made the acquaintance of another great German lieder singer, whose reputation in Europe equals that of Wüllner. This artist was Ludwig Hess. His first appearance was made in a Wagner programme with the New York Philharmonic Society, when he at once met with emphatic success. Each subsequent appearance, whether in recital or with orchestra, was a veritable triumph. By nature the artist is gifted with a beautiful tenor voice, which he handles with perfect art. The few concerts given by Wüllner (only one recital in New York) proved that this rare artist has lost none of his extraordinary drawing power. Von Warlich's art also found many warm admirers. Mmes. Sembrich and Schumann-Heink added to the attractions of the season. The success of the lieder singers seems to continue to attract the stars of the opera, for Clément, Whitchill, Renard, and MacCormack made their first appearance in recital. The latter confined himself to a programme of Irish songs, while in regard to Renard, the consensus

of opinion was that his art shows to better advantage on the stage. Mme. Gadski celebrated triumphs, both in recital and as soloist with orchestra. Mme. Nordica sang only in orchestral concerts. Both these artists appeared in New York within the same week as soloists in a Wagner programme, the former with the Philharmonic, the latter with the Symphony Society. Elsa von Wolzogen aroused considerable interest by her recitals of folk-songs of all nations, when she accompanied herself on the lute.

ORCHESTRAL CONCERTS. The New York Philharmonic Society sustained a severe loss through the death of its renowned conductor, Gustav Mahler (q. v.), who had brought the organization to a high degree of efficiency. Owing to Mahler's protracted illness, the last concerts of the spring season were directed by the concert master, Theodore Spiering. In the fall the society began its new season under Josef Stransky, one of the conductors of the Hamburg Opera, who gives every promise of being capable of following out the policy of his illustrious predecessor. If there is one thing in which he excels in particular, it is the art of accompanying a soloist. At the opening concert in the fall a fitting tribute was paid by the society to the memory of its departed leader, with the rendition of the funeral march from Mahler's *Fifth Symphony*.

Walter Damrosch, the conductor of the Symphony Society, has always shown a rare gift in arranging programmes. In 1911 he gave Wagner's early *Symphony in C* as the principal number. The concert began with Beethoven's *First Symphony*, and ended with excerpts from Wagner's last work, *Parsifal*. One concert was devoted entirely to works by Dvořák, the first time that the Bohemian master was honored in this way. The Russian Symphony Orchestra, Modest Altschuler conductor, began the new season with Karl Klein as concert master. The presence of this remarkable artist was evident at once in a marked improvement of the strings. The concert tour of the Cincinnati Symphony Orchestra, under Leopold Stokowski, was a tour of triumphs. Although only in its third season, this organization is regarded as the equal of the best symphony orchestras in America. The Theodore Thomas Orchestra of Chicago, under Frederick Stock, was heard in New York and Boston. In both cities it met with decided favor. Those who had heard this organization on its last visit under Thomas, some fifteen years ago, commented on the vast difference in the methods of the two conductors. San Francisco once more has a symphony orchestra, of which Henry Hadley is the musical director. Since the late Fritz Scheel left San Francisco, more than ten years ago, the city has been without an orchestra. As a result of Hadley's accepting the conductorship of the new organization, the Seattle Symphony Orchestra was left without a conductor, and unable to secure one for the new season. It is announced, however, that the concerts will be discontinued only for one season, and that the directors hope to have a new conductor for the fall of 1912. The Russian Balalaika Orchestra met with so much favor on their first tour that they made a second tour with equal success.

NOVELTIES. The much-heralded *Second Symphony in E flat*, by Elgar, had its first hearing in America by the Cincinnati Symphony Orchestra, under Stokowski, on November 24. Five days later it was performed by the Boston Symphony Orchestra, under Fiedler, and within

the same fortnight New York heard the work from Damrosch with the Symphony Orchestra. The verdict of competent critics pronounces this symphony less interesting than the first; and it may be remembered that the first one made very little impression. The new work is dull. Most of the themes lack physiognomy; some really good themes are spoiled in the development. The orchestration is monotonous and rather heavy. The entire work is singularly devoid of contrasts and climaxes. Practically the same opinion is expressed in regard to this composer's concerto for violin, which was played by Albert Spalding with the Theodore Thomas Orchestra, under Stock (in New York). The great promise held out by *The Dream of Gerontius* has not been fulfilled by Elgar.

A work that is a real addition to the literature of music is a new concerto, or rather Concertstück, for violin, by the veteran Max Bruch. This composition was played first by Maud Powell, at the Norfolk Music Festival, and received with great enthusiasm. It is one of the best works of Bruch, and might be ranked almost with this master's immortal first concerto. The New York Philharmonic Society, under Mahler, introduced an early work of Bizet, *Roma*, a suite for orchestra, which was well worth hearing. It is beautiful, graceful music, full of subtle and graceful touches. Mahler also played a charming overture by Pfitzner, *Das Käthchen von Heilbronn*, which was inspired by Kleist's drama. Under Stransky the same orchestra brought out Weingartner's *Third Symphony in E minor*. The composition did not reveal any new side of the distinguished Vienna conductor. He employs, as usual, an enormous orchestral apparatus, adheres to classical forms, and shows that he is a master of all technical resources. Unfortunately, nature has denied him the divine gift of melody. From the Symphony Society, under Damrosch, several novelties were heard. A *Symphony in C*, by Dukas, attracted more than passing attention. In form it follows the older methods, and shows splendid workmanship in the development of the thematic material. In its harmonic and rhythmic variety it is wonderful. A work of even greater promise was a *Symphony in E flat* by the young Rumanian, Enesco. The chief merit of this composition, aside from its masterly technical finish, lies in the inherent power of its themes. A *Symphonic Rhapsody* for piano and orchestra, by Stojowski, shows the composer as a refined, scholarly musician, who expresses himself in an artistic manner. The Boston Symphony Orchestra, under Fiedler, performed a *Comedy Overture* by Reger, which proved itself a sort of Chinese puzzle to many an intelligent musician. A novelty of considerable merit, which was heard from the Russian Symphony Orchestra, under Altschuler, was a *Finnish Rhapsody* by Kajanus. Kubelik, in a special concert, when the orchestra was directed by Nahan Franko, introduced a new concerto for the violin, in C minor, by his countryman, J. B. Förster. The work was very long and very difficult, but rather uninteresting.

CHORAL SOCIETIES. The Oratorio Society of New York, Frank Damrosch conductor, brought out Franck's monumental *Les Béatitudes*, a work full of dramatic intensity. It was sung in English. Only once before was this composition heard in New York, in German (1900). The same society sang Saint-Saëns's *150th Psalm*.

FOUR MUSICAL ARTISTS PROMINENT IN 1911

which was a real novelty for America, and created a deep impression. The choral writing is remarkably effective. Occasionally the composer took advantage of opportunities to introduce some Oriental coloring, of which he seems not only very fond, but has proven himself an unsurpassed master. Damrosch also gave an acceptable performance of Grell's seldom-heard and extremely difficult *Missa Solemnis*. The Apollo Club of Chicago, under Wild, introduced Woyrsch's *Totentanz*, a work that gave great pleasure in spite of the fact that it lacked originality. The MacDowell Club of New York, under Schindler, revived Liszt's *Legend of St. Elizabeth*, in honor of the Liszt centenary.

CHAMBER MUSIC. In reviewing the musical events of former years, attention has been called to the steady growth of musical culture and appreciation throughout the States, a growth that manifested itself through the establishment of permanent orchestras. From these orchestras, almost invariably chamber-music organizations were formed, which generally received hearty encouragement. It may safely be asserted, that to-day chamber-music constitutes an integral and important part of our musical life. In looking over the programme of the past year, one might almost be tempted to say, that the whole range of chamber-music literature of the last hundred years is represented. Among the many novelties some are worthy of notice. The Barrère ensemble of New York, an organization of wind instruments, introduced a very interesting quintet in B flat for piano, flute, clarinet, horn, and bassoon, by Rimski-Korsakoff. The Flonzaley Quartet brought out a string quartet by Ravel. The composition, of the ultra-modern French school, is designated as being written in the key of F; just why, it is difficult to tell. The composer modulates incessantly and revels in unresolved dissonances. Yet the work has much grace and piquancy. Reger's *Suite, op. 93*, was heard in one of the Beebe-Déthier sonata recitals. It met the usual fate of this composer's works: extravagant praise from some, absolute rejection from others.

A concert of unusual interest was given by Arthur Whiting. Works by Purcell, Bach, Handel, and Corelli were played upon the old instruments. Mr. Whiting played the harpsichord, Constance Edson, the violin, Georges Barrère the flute, and Paul Kefer the viola da gamba.

MUSIC FESTIVALS. At the fifty-fourth annual Worcester Festival, a new choral work by Reger, *The Nuns*, was heard under the direction of Arthur Mees. For once the critics agreed that here was a really beautiful work by that abstruse composer. A piano concerto by an unknown composer, G. F. Boyle, played by Ernest Hutcheson, found very marked favor. The seventh biennial festival of the National Federation of Musical Clubs was held at Philadelphia, and the prizes offered three years ago were distributed as follows (two prizes in each class): 1. Symphonies and Symphonic Poems: G. W. Chadwick, A. Oldberg. 2. Chamber music: H. A. Lang, H. V. Stearns. 3. Songs with orchestra, H. Parker, C. W. Cadman. The centenary of Liszt's birth was observed everywhere by both orchestral and choral societies, but especially by the pianists.

OPERA. At the Metropolitan Opera House, 160 performances were given from a repertoire of forty-two operas by twenty-two composers. Ac-

cording to nationality, these were divided as follows: Italian, fifteen works by eight composers; French, ten works by eight composers; German, fourteen works by four composers; American and Bohemian, one work each. Wagner, represented by nine works, led with thirty-three performances. Next in order came Puccini, four of whose works achieved thirty performances. Third ranked Verdi, with five works and twenty-one performances. The work most frequently given was Humperdinck's *Königskinder*, ten times. Next came Puccini's *Girl of the Golden West*, nine times; Puccini's *La Tosca* and Leoncavallo's *Pagliacci* were each given eight times; Verdi's *Aida* and Humperdinck's *Hänsel und Gretel*, seven times; Wagner's *Lohengrin* and *Tristan und Isolde*, Puccini's *La Bohème* and *Madama Butterfly*, and Ponchielli's *La Gioconda* each six times. Only two novelties were produced. Dukas' *Ariane et Barbe Bleue* (March 29), with Farrar and Wickham in the principal rôles, under Toscanini, was staged with lavish magnificence, but received with indifference. In the first place, there is no action. The music is a strange mixture of the established major and minor modes and the free tonality of Debussy, but it is lacking in form and melody. Thuille's *Lobetanz* (November 18), with Gadski and Jadowker as principals, and Hertz as conductor, met with a cordial reception. The work is not remarkable in any respect, but it is full of light, graceful music. By virtue of the system of exchange with the Chicago-Philadelphia company the subscribers of the Metropolitan House heard also *Il Segreto di Susanna*, *Natoma* and *Quo Vadis*.

A new departure that met with considerable favor was the introduction of a series of ballet performances given at popular prices on Tuesday nights. Several new artists were heard, among whom Heinrich Hensel, a heroic tenor, aroused the greatest enthusiasm. He made his début as Lohengrin, and at once was acclaimed as the legitimate successor of Alvary. Mme. Matzenauer made a splendid impression as Amneris, but it was not until she appeared in the Wagner rôles that her marvelous voice and dramatic powers were fully exhibited. No greater contralto has ever been heard at the Metropolitan. Meses. Langendorff and Orridge and Messrs. Weil and Griswold also proved themselves to be stars of the first magnitude. The conductors were Toscanini, Hertz, Sturani, Pasternaek, and Rothmeyer.

The Chicago-Philadelphia Opera Company gave 103 performances from a repertoire of thirty-one works by twenty composers. Verdi and Massenet, the former represented by six, the latter by three works, led with eighteen performances each. Four works of Puccini were given twelve times. These were heard in the spring, before Mr. Dippel eliminated this composer's works from his repertoire. Four novelties were produced, of which Wolf-Ferrari's *Il Segreto di Susanna* was the most important. The première took place (March 14) at the Metropolitan Opera House, under Campanini, with Caroline White and Sammarco as principals, and met with immediate favor. The composer goes back to the style of the old opera buffa, but employs modern methods. The music is very melodious, graceful, and sparkling. Concerning Victor Herbert's *Natoma* the most important item to be chronicled is the fact, that

the work is by an American composer, and was sung in English. It was first heard in Philadelphia (February 25), under Campanini, with Mary Garden and MacCormack in the leading rôles. The work itself is very conventional, harmonically uninteresting, and too often sinks to the level of the operetta. Some interesting local color is obtained through the employment of real Indian melodies. In Nougues' *Quo Vadis* (March 25), the attention is almost wholly absorbed by the gorgeousness of the stage pictures. The work had a magnificent production under Campanini, with almost all the stars of the company in the cast, which calls for not less than twenty-nine characters. The music impresses one as rather incidental than interpretative, although at times it rises to effective climaxes. The orchestration is rich and varied. Massenet's *Cendrillon* (November 6), under Campanini, with Maggie Teyte, Mary Garden, Dufranne and Scotti, proved a great popular success. Yet the work can hardly be called a grand opera, nor is it one of Massenet's best works. The music is very melodious and suave.

The Boston Opera Company gave eighty-seven performances from a repertoire of twenty-six operas by sixteen composers. Puccini led with twenty-four performances of five works. Verdi, who came next, had thirteen performances of five works. Only one novelty was heard: Converse's *The Sacrifice* (March 3), with Alice Nielsen and Constantino in the chief rôles and Wallace Goodrich as conductor. The music of this opera does not differ materially from that of the same composer's *Pipe of Desire*. While the influence of Wagner predominates, there are also reminiscences of other masters. The orchestration throughout is too heavy. Wagner's works, which are not included in the enumeration of the year's performances, were given in accordance with the system of exchange by the Metropolitan company.

EUROPEAN COUNTRIES

GERMANY. What dimensions the cultivation of music has assumed in Germany may be seen from the following statistics for 1911 compiled for the city of Berlin alone. Four operatic institutions gave over 800 performances; the number of concerts totaled 1096. These are classified as follows: Orchestral concerts, 173 (of which twelve were devoted exclusively to the purpose of introducing novelties); choral concerts, with orchestra, 100; chamber-music, 125; song recitals, 328; piano recitals, 240; violin recitals, 64; cello recitals, 15; organ recitals, 12. Together with this formidable record comes also the news of the establishment of a new operatic institution at Berlin, the Kurfürsten Oper, which was opened on December 8, with an excellent performance of Nicolai's *Merry Wives of Windsor*. The operatic event of the year was the première of a new opera by Richard Strauss, *Der Rosenkavalier* (Dresden, January 26), which was received with genuine enthusiasm. The work marks a return to the natural style and to acknowledged standards of musical beauty. There is a great deal of exquisite lyric melody; especially a trio for female voices in the last act is praised as one of the most beautiful strains written since the incomparable quintet from *Meistersinger*. It would be superfluous to comment on the marvelous skill of the orchestration in a work by the greatest of all orchestral colorists. Only one objection was

raised against the text; in certain portions the dialogue is spun out too long. Strauss himself subsequently made cuts, which reduced the time of performance by twenty minutes. In other German cities the Dresden success was repeated, with the only exception of Halle and Worms. In Berlin *Der Rosenkavalier* was not heard until November, when it was given again in its complete form. Massenet's *Don Quichotte* had its German Première at Nuremberg, and scored a genuine success. The same composer achieved another triumph with one of his earlier works, *Mamou*, which had not been heard before in Munich. A strong impression was made at Leipzig by Julius Bittner's *Der Musikant*, a work abounding in splendid dramatic situations. Humperdinck's *Königskinder* had its German première at Berlin, and was received with marked favor, though not with the enthusiasm that it had aroused in New York. Leoncavallo's *Maja*, in Berlin, was another addition to this composer's already long list of failures.

In looking over the programmes of the orchestral organizations, the admirers of Brahms cannot but feel gratified when they see how frequently that master's name appears. All the symphonies were played many times, and there was scarcely one violinist of note who did not offer his audience the violin concerto. Even the double concerto for violin and cello had several performances. This rising in popular favor—though by no means sudden—seems to be traceable to the remarkable success of the first great Brahms festival held in Munich during the preceding year. With the Berlin Philharmonic Orchestra, Liapunoff gave a memorial concert devoted to the works of Balakireff, some of which were heard for the first time in Germany. The deepest impression was made by a concerto for piano and orchestra, rendered by Leonid Kreutzer. With the same orchestra, Bruch conducted the first rendition of his new concerto for the violin, played by Willy Hess. Dvořák's *First Symphony in D minor* (written in 1874) was heard for the first time in Germany. A remarkable novelty was brought out by Nikisch in one of the Gewandhaus concerts. This was an *Ouverture zu einem Schauspiel*, op. 4, by Erich Korngold, that fourteen-year-old prodigy from Vienna. The work shows not only wonderful inspiration, but an astonishing skill in the development of the thematic material and the treatment of orchestral instruments. As yet the boy employs the Strauss idiom, but there are touches of decided originality. In Berlin he created nothing less than a sensation by his Trio for piano, violin, and cello in D, a piano sonata in E, and a suite for piano, *Märchenbilder*. Among those who heard this concert were Dr. Muck, Humperdinck, Sinding, and Mme. Sembrich. A unique work heard in Dortmund was Busoni's *Fantasia Contrapuntistica* (originally written for piano), arranged for organ and orchestra by Stock and Middel-schulte. Busoni has taken the last composition of Bach, a fragment intended to be a quadruple fugue, and completed it in Bach's spirit.

In Munich, Bruno Walter gave a memorial concert devoted to works of Mahler (q. v.). On this occasion Mahler's last completed composition was heard for the first time, *Lied von der Erde*, for tenor and alto solo with orchestra. The text is a German translation made from an English rendering of a Chinese original. The composer has divided this really excellent poem

FOUR OPERA SINGERS PROMINENT IN 1911

into six parts, and treated the whole in his free symphonic style. The performance created a deep impression, and it is said that in this work are found some of Mahler's finest inspirations. The recent publication of Wagner's early *Symphony in C*, was followed by numerous performances in the principal cities. At Leipzig, Winderstein gave a Beethoven programme, containing a *Symphony in C*, the manuscript score of which was discovered during the summer by Fritz Stein in the archives of the University of Jena. Although the score contains no name, the name of Beethoven was found on one of the orchestral parts, and experts agree that it is not at all improbable that the symphony may be an early work of the great master. The work was also heard in Berlin. A concert of very unusual character was given by Dr. F. Behn in Mainz. From the fragments of ancient instruments contained in the Roman-Germanic Museum of that city, Dr. Behn had made faithful reproductions of instruments used by the Jews, Assyrians, Babylonians, Greeks, and Romans. The actual performance was interspersed with comments on the history and use of each instrument.

The musical festivals of the year were devoted principally to the works of Liszt, in honor of the centenary of the master's birth. The most elaborate of these was the annual festival of the *Allgemeiner Deutscher Musikverein* held at Heidelberg in October. Almost all the important orchestral and choral works were produced, and in the piano and song recitals many rarely heard compositions were revived. The conductors were Strauss, Schillings, Wolftrum, and Hansegger. Among the other artists were Busoni, Friedheim, Rislér, Kwast and Madame Kwast-Hodapp (pianists) and Weil, Schüller, Fischer and Mmes. Cahier, Dietz, Durigo (vocalists). Saint-Saëns had come specially from Paris to honor his former master. He played Liszt's transcription of his own famous *Danse Macabre*. By a curious coincidence this centenary celebration served at the same time to commemorate the fiftieth anniversary of the foundation of the association by Liszt. Weimar also observed the centenary in a worthy manner. Munich had the annual Mozart and Wagner festivals. The works selected were *Don Giovanni*, *Nozze di Figaro*, *Così fan Tutte*, *Il Seraglio*, *Bastien et Bastienne*, *La Clemenza di Tito*; *Tristan*, *Meistersinger*, and the Ring dramas. At Bayreuth the same works were given and *Parsifal*. Last, but not least, an event must be recorded that is not likely ever to be eclipsed in the annals of pianistic achievements. In Berlin Busoni gave a cycle of six recitals, in which he played almost all the original piano works and transcriptions of Liszt.

AUSTRIA-HUNGARY. The most important event was the five-day Liszt celebration in the Hungarian capital during October 21-25. Never before were so many of the world's greatest pianists heard in a single concert. Of course all were former pupils of the master. Those who appeared were Friedheim, D'Albert, Stavenhagen, Sauer, Rosenthal, Lamond, and Madame Menter. Siegfried Wagner conducted his grandfather's *Faust Symphony*. Liszt's songs were sung by Tilly Koenen, Lulu Mysz-Gmeiner, and Burrian. The Vienna première of Strauss's *Rosenkavalier* was made the occasion of a Strauss festival week. Franz Steiner, with

Strauss himself at the piano, gave a song recital. At the opera *Salome* and *Elektra* were performed. The new work (in its shortened version) met with considerable success, but did not arouse the enthusiasm it has called forth everywhere in Germany. A new work heard at the opera, Guecchi's *Cassandra*, disclosed many points of similarity with the operas of Strauss, especially the *Rosenkavalier*. This fact in itself would call for no special comment, but it is known that *Cassandra* was finished before the *Rosenkavalier* was begun. After an absence of twelve years from the conductor's chair at the Imperial Opera, Hans Richter once more returned to his former place amid tumultuous applause. At a memorial concert Nedbal performed Mahler's first and fourth symphonies. At the Music Teachers' Convention in Vienna an interesting programme was rendered, which consisted of nothing but chorals and canons written five hundred years ago. The Männer-gesangverein produced for the first time Bruckner's *Abendzauber* (written in 1878). The work is described as very beautiful. The newly published symphony of Wagner was also heard. Although Weingartner has left Vienna, he still conducts the concerts of the Philharmonic Society.

ENGLAND. On November 13 Oscar Hammerstein opened his new London Opera House with a splendid performance of Nougès' *Quo Vadis*. As far as can be judged now, his policy seems to be the same as the one he pursued in his Manhattan Opera House in New York. Two of his American singers, Felice Lyne and Orville Harrold, immediately became popular favorites. At Covent Garden Franz Schalk of Vienna succeeded Richter as conductor of the Wagner works. Although his performances were criticised as lacking in brilliancy, the Wagner series proved the most satisfactory from a financial point of view. A new tenor, Heinrich Hensel, achieved extraordinary success by his interpretation of Siegfried. Both the public and the critics expressed their dissatisfaction with the poor ensemble and careless staging of the French and Italian works. Puccini's *Girl of the Golden West* was given with practically the same cast as in New York, and achieved the same success. Massenet's *Thais* was produced again after a lapse of twenty years. The Irish tenor, MacCormack, proved a great drawing card. Under the conductorship of Balling Leeds, Edinburgh, Manchester, and Glasgow heard for the first time the entire cycle of Wagner's Nibelungen dramas; in fact, it was the first time that the cycle was ever performed in Great Britain outside of London. Mr. Quinlan formed a new English opera company on the same scale as the Beecham company of the preceding year. He began his season in October in Liverpool and visited the principal towns of the provinces. For the first time in nine years London had again a great Music Festival at which a large number of works by English composers was heard. The feature of the festival was Elgar's *Second Symphony*, heard then for the first time. (See *United States, Orchestral Concerts*.) It was received rather coldly. Of the new works Granville Bantock's *Dante* and *Beatrice* made the most favorable impression. The larger works produced were Bach's *St. Matthew Passion*, *B minor Mass*, Elgar's *Dream of Gerontius*, Reger's *100th Psalm*, and Strauss's *Also Sprach*

Zarathustra. The soloists were Julia Culp, Kreisler, Casals, Bauer, Elwes, and Ben Davies. Henry Wood conducted. At the sixth triennial Festival of the Sheffield choir only one novelty, a dramatic cantata by Georg Schumann, *Ruth*, was heard and very well received. The Three Choirs' Festival at Worcester brought out four novelties by English composers, none of which made much impression. The past year was the last of Hans Richter's activity in England. In what esteem the veteran conductor is held was shown by the demonstrations and tumultuous scenes enacted at each of his farewell concerts in different cities. Richter's influence on the cultivation and development of musical taste in England has been greater than that of any other man, and can never be overestimated. When he first came to London, as Wagner's assistant, in 1877, musical conditions seemed hopeless. Beyond the oratorios of Handel and Mendelssohn practically nothing was known of music. Under such circumstances the young conductor began his career as the apostle of Beethoven and Wagner, with what success, the whole world knows to-day.

BIBLIOGRAPHY. Among the important books published during the year are the following:

BIOGRAPHICAL. A. W. Thayer: *Ludwig van Beethovens Leben*, translated by H. Deiters, revised by H. Riemann, Vol. III. (Leipzig). The work is now complete, Vols. IV. and V. having appeared in 1907 and 1908. It is the standard authority on the life of Beethoven. P. Bekker; *Beethoven* (Berlin). Chiefly an æsthetic and critical appreciation of the works. Profusely illustrated. J. A. Fuller-Maitland: *Brahms* (London). Scholarly and exhaustive. F. Graefinger: *Anton Bruckner: Bausteine zu seiner Lebensgeschichte* (Leipzig). F. Helouin and J. Picard: *Un Musicien Oublié, Catel, de l'Institut de France* (Paris). J. G. Prud'homme and A. Dandelot; *Gounod; Sa Vie et ses Œuvres* (Paris). The most comprehensive biography yet published. Cosima Wagner: *Liszt: Ein Gedenkblatt von seiner Tochter* (Munich). Contains personal reminiscences and some hitherto unpublished letters. A. Hervey: *Liszt* (London). Rather panegyric. J. Huneker: *Liszt* (New York). Authoritative. P. Stefan; *Mahler: Eine Studie über Persönlichkeit und Werk* (Munich). C. F. Glasenapp: *Das Leben Richard Wagners*. Vol. VI. (1877-1883) (Leipzig). This volume completes the most comprehensive life of Wagner, but not the most authoritative. Too diffuse. The older volumes, published many years ago, require revision. F. Pfohl: *Richard Wagner: Sein Leben und Schaffen* (Berlin). Comprehensive, appreciative, sane. One of the best and most reliable biographies of the master. Richard Wagner: *Mein Leben* (Munich). Published simultaneously in five languages, English translation in New York. A great disappointment. Many facts distorted. Goes only to 1864.

HISTORY OF MUSIC. M. Brenet: *Musique et Musiciens de la Vieille France* (Paris). R. Batka: *Allgemeine Geschichte der Musik* (Stuttgart), Vol. II. Very readable, and excellent as a reference book. C. Stumpf: *Die Anfänge der Musik* (Leipzig). A Schering: *Geschichte des Oratoriums* (Leipzig). Authoritative. A. Weissmann: *Berlin als Musikstadt* (Berlin). Profusely illustrated. Practically a history of German music from 1740 to 1911.

PHILOSOPHY, ÆSTHETICS, AND CRITICISM OF MUSIC. F. Auerbach, *Die Grundlagen der Musik* (Leipzig), an excellent scientific treatise; L. von Schroeder, *Die Vollendung des Arischen Mysteriums in Bayreuth* (Munich), a very scholarly and able comparison of the fundamental philosophical and ethical principles in the works of Wagner and the ancient Vedas; E. de Rey-Pailhade, *Essai sur la Musique et l'Expression Musicale, et sur l'Esthétique du Son* (Paris); M. Hehemann, *Max Reger* (Munich), a valuable study of modern musical thought; J. Hey, *Richard Wagner als Vortragsmeister* (Leipzig); M. Seiling, *Richard Wagner: Der Künstler und Mensch, der Denker und Kulturträger* (Leipzig).

MUSICAL INSTRUMENTS, INSTRUMENTATION. A. Dodge, *Pianos and their Makers* (London), an excellent and very full history of the instrument from its earliest beginnings to the modern electric automatic player; Charles Welch, *Six Lectures on the Recorder* (London), a complete history of the recorder and allied flutes; H. E. Krehbiel, *The Pianoforte and its Music* (New York); E. Teuchert and W. Haupt, *Musikinstrumentenkunde in Wort und Bild* (Leipzig), both historical and practical. A very remarkable feature is the addition of a full bibliography of each instrument.

MISCELLANEOUS. F. Prelinger, *Ludwig van Beethovens sämtliche Briefe und Aufzeichnungen*, Vol. V. (Vienna). The publication is now complete. W. Altmann, *Richard Wagners Briefwechsel mit seinen Verlegern*, Vol. I. (Leipzig). Vol. II. (Mainz). The volumes are uniform.

MUTUAL SAVINGS BANKS. See SAVINGS BANKS.

MYERS, HENRY L. United States senator (Democrat) from Montana. He was born in 1862 in Cooper county, Mo. He was educated in private schools, and for a time taught school, at the same time studying law. He was admitted to the bar, and in 1893 removed to Hamilton, Mon., and there engaged in the practice of his profession. He served as prosecuting attorney, State senator, and district judge. He was serving his second term in the last named office when, on March 2, 1911, he was elected United States senator to succeed Senator Carter, Republican (see MONTANA). His term of service will expire in 1917.

MYTHOLOGY, BOOKS ON. See PHILOLOGY, CLASSICAL.

NANKING. See CHINESE EMPIRE.

NASH, EDWIN A. An American jurist, died July 23, 1911. He was born at Bedford, Conn., in 1836 and was educated at the Genesee Wesleyan Seminary, Lima, N. Y. In 1861 he was admitted to the bar in New York State. He was district-attorney from 1869 to 1873 and from 1878 to 1896 was county judge of Livingston county, N. Y. He served as justice of the Supreme Court of New York for the seventh district and justice of the Appellate Division for the fourth district from 1896 to 1906.

NASH, FRANCIS PHILIP. An American scholar and educator, died February 3, 1911. He was born in 1836 and graduated from Harvard College in 1856. He studied law at the Harvard Law School and in 1871 became professor of Latin at Hobart College. He remained

in this position until 1876. He again filled the same chair there from 1882 until he was made professor emeritus. He received the degree of LL. D. from Union College.

NASSAU. See **BATTLESHIPS.**

NATAL. A province of the Union of South Africa (q.v.). Provincial capital, Pietermaritzburg.

AREA, POPULATION, ETC. Area (estimate), 35,371 sq. miles. Population (1904), 1,108,754; census of May 7, 1911, 1,191,958 (98,582 white, 1,093,376 colored). Pietermaritzburg had (1911), 20,347 inhabitants; Durban, 60,187.

European pupils in government and inspected schools (1909), 12,444; schools for natives, 178 (15,335 pupils); schools for East Indians, 30 (3671 pupils).

INDUSTRIES. Estimated area under cultivation by Europeans, 451,638 acres; by natives, 500,000; by Indians, 42,000; total, 993,638. Area (European) under corn (1909), 155,215 acres (yield, 79,782 tons); under sugar-cane, 24,512 (86,790 tons); kafir corn, 4460 (2824 tons); oats, 900 (13,983 bushels); tea, 5909 (1,773,202 lbs.); tobacco, 642 (277,012 lbs.). Acres under orchards, 35,912. Livestock (1909): 31,586 horses, 210,412 cattle, 916,996 sheep, 135,848 goats, 25,738 swine. Wool clip (1909), 2,669,088 lbs. Coal output (1909), 1,786,583 tons (value at the mines, £633,604); of which 404,322 tons were exported, 152,018 were sent to neighbor colonies, and 835,496 tons were bunkered. Gold mined (1909), 1595 oz. (£6697).

COMMERCE, FINANCE, ETC. The oversea trade for calendar years and financial statistics for fiscal years ending June 30 of the year next following, are given below:

	1907	1908	1909
Imports	£ 7,765,029	£ 6,920,206	£ 7,789,919
Exports	3,168,850	3,062,479	3,916,476
Revenue	3,471,932	3,510,350	4,293,737
Expenditure ..	3,681,914	3,689,762	3,530,349
Debt	20,760,992	21,135,534	21,534,925

Leading imports (1909): Machinery, £727,385; haberdashery, £659,033; hardware, etc., £374,833; clothing, £352,186; cottons, £316,005; cereals and flour, £321,009; leather and manufactures, £285,270; beverages, £185,428. Exports: Bar gold from overland, £1,101,374; wool, £967,098; coal (bunker and cargo), £756,663; corn, £420,780; hides and skins, £260,777; bark wattle, £192,950; angora hair, etc., £52,569. Great Britain supplied imports and received exports valued at £4,258,783 and £2,027,785 respectively. Vessels entered (1909), 1175, of 3,123,776 tons; cleared, 1176, of 3,114,598. Railways (1909), 1034 miles; telegraph lines, 1996 (wires, 7151); telephone lines, 186 (wires, 2458); telegraph offices, 213; post offices, 404.

The province is governed by an administrator (1911, C. T. Smythe), aided by a provincial council and an executive committee.

ZULULAND (10,461 sq. miles) and the **NORTHERN DISTRICTS** territory (6931 sq. miles) are annexed to Natal.

NATION, CARRIE. An American woman suffragist and temperance enthusiast, died June 9, 1911. She was born in Kentucky. In 1900 she became conspicuous through a militant method of expressing her disapproval of the liquor traffic, when at Kiowa, Kan., she demolished three saloons. She at once became a national charac-

ter, and extended her activities to Topeka and Wichita, Kan., and then to other cities. She was imprisoned three times in Topeka and seven times in Wichita. She afterwards conducted a temperance paper at Oklahoma and lectured throughout the country. She also visited Great Britain, where she achieved considerable notoriety. She acquired a rather large amount of money and settled on a farm in Arkansas, where she remained until the time of her death.

NATIONAL BANKS, RESOURCES AND LIABILITIES. On September 1, 1911, the report of the Comptroller of the Currency showed that there were 7301 national banks in the United States, having total resources of \$10,379,000,000. The loans and discounts amounted to \$5,863,000,000; of these one-third were time loans secured by paper with two or more individual or firm names; one-fifth were time loans secured by single-name paper; and one-fifth were time loans secured by stocks, bonds, and mortgages, the remaining one-fourth being demand loans. Slightly more than one-half of all the loans were credited to the reserve cities; 16.1 per cent. to New York, 7.7 per cent. to Chicago and St. Louis, and 26.7 per cent. to other reserve cities. These banks held \$707,204,000 of United States bonds to secure circulation; and \$42,152,000 of United States bonds to secure United States deposits. They held \$1,018,000,000 of bonds and securities other than United States bonds, this being an increase of 20 per cent. during the year. Of these bonds \$164,000,000 were State, county, and municipal bonds; \$361,000,000 were railroad bonds, and \$182,000,000 were other public-service corporation bonds. Among the resources of the national banks were \$744,614,000, due from approved reserve agents; \$399,509,000 due from national banks not reserve agents; and \$162,271,000 due from State banks and bankers. They held also \$298,180,000 of exchanges for the clearing-houses; they had \$479,140,000 in gold coin and gold certificates, the total specie, including gold, silver, and clearing-house certificates, was \$711,522,000. They held besides this \$183,953,000 of legal tender notes. Among the liabilities were capital stock paid in to the amount of \$1,025,000,000 and surplus and undivided profits to the amount of \$904,430,000. The national bank notes outstanding amounted to \$696,982,000, a change of little more than 2 per cent. during the year. The total amount due to other national and State banks was \$2,050,000,000. The individual deposits subject to check were \$4,479,000,000, other deposits being \$862,700,000.

OTHER STATISTICS. The amount of national bank circulation redeemed during the year was \$587,339,000, of which nearly one-half came from New York City and most of the remainder from principal reserve cities. The profits on national bank circulation ranged from .986 per cent. to 1.42 per cent., depending on the price of bonds upon which the circulation was passed. The expenses of maintaining the circulation included \$3,567,000 of semi-annual tax to the government and \$443,000 as the cost of redemption of notes at the treasury. In addition to these expenses the national banks paid \$492,000 as the

cost of examinations and about \$1,250,000 as the special corporation tax under the act of 1909. The total reserve held against deposits on September 1 was \$1,428,000,000, being 21.36 per cent. of the deposits. The greater part of this enormous sum was idle under the present system of requiring each bank to maintain its own reserve, but would be brought into use by the proposed reform of the banking system contained in the Aldrich plan. (SEE BANKS AND BANKING.) When classified according to capital, 27 per cent. of the banks were in the \$25,000 class; 36 per cent. had more than \$25,000, but less than \$100,000 capital; and 9 per cent. had more than \$250,000 capital. The total gross earnings of all national banks for the year ending June 30, 1911, were \$428,973,000; when losses and expenses were deducted net earnings to the amount of \$156,985,000 were left; this equalled 9.35 per cent. on the combined capital and surplus. The amount of dividends actually paid was 6.83 per cent. on the combined capital and surplus. The average annual net earnings for the past forty-two years were 9.07 per cent. on the average capital stock. During the year 99 national banking associations were closed voluntarily; of these 46 were absorbed by or consolidated with other banks; 22 reorganized as State institutions and 10 as new national banks; 19 were closed to discontinue business. Three national banks were placed in the hands of receivers, but of these only two were classed as failed banks. Since 1865 the affairs of 466 national banks have liquidated, an average of 76.2 per cent. being paid on the claims of creditors.

SAVINGS DEPARTMENTS. Considerable attention has been given during the past few years to the development of savings bank activities by national banks. This has in large part taken the form of an agitation favoring the organization by such banks of savings departments, the deposits of which may be loaned in part on real estate. National banks at present are not permitted to make such loans, though they are permitted to receive savings deposits. On September 1 there were 3039 national banks with savings deposits aggregating \$659,501,000, or 12 per cent. of all deposits. During the year the comptroller sent a questionnaire to the national banks on the subject of savings departments. Eighty-one per cent. of the banks favored an amendment to the banking law permitting national banks to loan a part of their deposits on real estate, most of them believing that as much as 25 per cent. of all deposits, savings, and demand, could be thus invested safely. Sixty-eight per cent. favored an amendment specifically authorizing national banks to establish savings departments. Fifty-nine per cent. favored the restriction of such savings department loans on real estate to about 40 per cent., while 30 per cent. favored no restriction. Thirty-three per cent. of the banks favored the segregation of savings deposits and the restriction of their investment as provided by the mutual savings bank laws of certain States, while 54 per cent. did not favor this restriction.

NATIONAL BANKS AND TRUST COMPANIES. Just as there has been agitation to allow national banks to do a savings bank business so there has been agitation to permit them to do trust company business. In July Attorney-General Wickersham rendered a decision holding that a trust company or other State bank and a national bank could not be controlled jointly by the

same set of stockholders. This was his interpretation of the national banking act. This decision was made at the request of the Secretary of the Treasury for an interpretation on that point. The secretary was seeking guidance for action in view of a published account of steps being taken by the National City Bank of New York to organize the National City Company as a holding corporation for a number of national and State banks. Investigation was then instituted by the comptroller, who found that in some 300 cases State banks or trust companies were controlled jointly with national banks. It was found also that such control had been recognized by the comptroller for about twelve years, during which time many such cases had been called to the attention of that office. The comptroller had taken the position that such affiliation rendered less likely violations of the national banking act, since national banks could turn over to the associated trust company or State bank business it was not allowed to handle. The Secretary of the Treasury in August prepared an opinion adverse to that of the Department of Justice. Both opinions were then transmitted to the President for final decision, which had not been given at the close of the year. It was evident that if the Attorney-General's view should prevail either considerable banking reorganization, or a modification of the national banking law, would be necessary. Without such affiliation, the national banks would not be able successfully to cope with the competition of State banks and trust companies in certain lines of business. The original form of the Aldrich plan provided for the organization of a special kind of national banks to do a trust company business; this was not incorporated, however, in the revised plan. In a public address on the Aldrich plan in November Secretary MacVeagh declared that if national banks could not be authorized to do a trust business, owing to laws forbidding such business to be done in a State without a State charter, then he favored giving national banks the right to organize and control State banks and trust companies.

POICIES OF THE COMPTROLLER. The present Comptroller of the Currency, Lawrence O. Murray, has sought in various ways to raise the tone of banking methods and better the manner and method of bank examinations. Among other notices sent out during 1911 was one informing bankers and bank examiners that those banks having directors who do not attend strictly to the bank's affairs would be classed as "weak" and subjected to extra and rigid examinations. He also sent to examiners on November 10 a letter containing the laws of the various States and the judicial opinion of the Supreme Court of the United States with reference to the overdraft. He also began a more rigid examination of applications for bank charters. He took the position that applicants must first show the real need for a bank in the community affected. On the basis of a detailed letter of instructions to bank examiners an unusual number of applications were refused during the year. The number of charters granted during the first seven months was 146, as compared with 200 during the same time in 1910 and 230 in 1908. Among the new conditions imposed was the assessment of the cost of local examination preliminary to the grant of a charter upon the applicants therefor. Another

matter to which the comptroller has been giving special attention is the unreasonable delay by some banks in making remittances for collection. He has also encouraged the formation of national currency associations under the law of 1908. During 1911 associations were formed in Alabama and Colorado, making the total of such associations seventeen, including 284 banks representing nearly 30 per cent. of the capital of all national banks.

NATURAL HISTORY, AMERICAN MUSEUM OF. The chief aim of the administration of the museum during 1911 was to enhance the educational influence of the exhibition halls through a rearrangement of the collections. Through these efforts the attendance at the museum has increased within the year by 100,000 and the attendance at lectures rose to nearly 90,000. The number of pupils studying the circulating sections of the museum increased by over 300,000, reaching a total of 1,253,435. During the year 349 new members were enrolled, the total membership of the museum being at the end of the year 2856. In May the board of trustees recommended to the board of estimate and apportionment of the city that the southern half of the museum surrounding the two south courts be completed in 1919 in time to celebrate the fiftieth anniversary of the founding of the museum, which occurs in that year. The sum of \$200,000 was appropriated on July 17 for the excavation and foundation of the new south-east wing and court building. There were several important changes in the organization of the staff of the museum during the year. Prof. Hermon C. Bumpus resigned to accept a post in the University of Wisconsin. In May Dr. Frederick A. Lucas, curator-in-chief of the Brooklyn Institute Museum, was chosen director of the museum. There were important acquisitions in all departments of the museum during the year. The only notable gift received was one of \$25,070 from the estate of Charles E. Tilford. The total endowment of the museum at the close of 1911 was \$2,364,750.

NAVAL PROGRESS. The improvement and changes in the general field of naval affairs during the year 1911 are here grouped under the following main heads, and treated by countries: *Naval Aeronautics, Armor, Guns and Gunnery, Aerial Guns, Projectiles, Torpedoes, Powder, Submarines, and Propulsion of Naval Vessels*. The changes and improvements in **BATTLESHIPS** in particular are discussed under that title.

NAVAL AERONAUTICS

GREAT BRITAIN. In England the war office has undertaken the aeroplane branch of aero-

nautics; and the admiralty is experimenting with dirigibles. Four Valkyrie monoplanes have been presented to the government. None of the naval officers being instructed in aeroplanes has had any practice in map-drawing from balloons, but two of the officers employed with airships have had this experience. The naval airship was launched at Barrow on May 22; 512 feet long; beam (over her flat sides), 48 feet; lifting power, 21 tons; propelled by two eight-cylinder motor engines; designed to float on water or fly in the air.

FRANCE. Experiments with wireless telegraphy from aeroplanes have been carried out at Buc, in France, by M. Maurice Farman, using an apparatus of the Ance! type, with a four-inch spark coil supplied by four storage battery cells. The total weight of the wireless outfit was 45 pounds. Signals were sent a distance of eight miles. New experiments are being made to increase the range, using an eight-inch spark and a 300-foot aerial. In order to make reconnoitring flights at night, M. Farman experimented at Buc with an aeroplane fitted with two electric searchlights, one on each side of the pilot's seat. The current is provided by a dynamo using the power of the motor. A battery of accumulators is carried on the biplane, so that the light will not fail if the dynamo does not work. The searchlight throws rays downward 400 meters, so that, when flying at a height of 150 meters, everything below the aviator can be seen distinctly. A muffler for the motor, reducing the noise of the engine to a minimum, is so efficient that the biplane cannot be heard when flying above 100 meters. With the muffler in use, the pilot and the observer can converse freely without the use of special speaking tubes. France will soon lead the world in the efficiency and number of both airships and aeroplanes; it was claimed that on January 1, 1912, she would have 120 monoplanes and 80 biplanes. Sixteen large dirigibles were ordered in 1910; they have against them their great cost (\$125,000, plus \$50,000 for shed, and \$25,000 for annual upkeep), their relatively low speed (55 kilometers), and their inability to make headway against moderate winds. The *Adjutant Réau*, for instance, displacing nearly 9000 cubic meters, has remained over 21 hours in the air in making the 900 kilometers of the Paris-Verdun-Nancy-Paris flight. She carries over three tons weight in men (crew of 12 men), fuel, and explosives, besides wireless appliances. She can rise to 2000 meters, and cruise by night; and can, therefore, accomplish long-distance reconnoitring, and also inflict considerable damage on an enemy. Six similar airships are now ready. Though built for the war office, they would be of service to the navy.

As a result of experiments at Cherbourg, it is believed that an aeroplane can discover a submarine from a height of over 3000 feet, whereas the periscope of the submarine does not reflect the image of the aeroplane after more than half that height. But it will never be easy for the most practiced air pilot to pick up a submarine at sea. For scouting, a slow machine, making about 45 miles an hour, is deemed best. An extensive programme of experiments will be held, including the search for submarines at different depths in different conditions of the weather; the search for floating and fixed mines; combined action of aeroplanes, cruisers, and tor-

pedo boats; and torpedo firing from the aeroplane.

UNITED STATES. The United States navy now has an aviation school at Annapolis, with winter quarters at San Diego, Cal. The Curtiss and Burgess-Wright hydro-aeroplanes have been frequently tested. On February 17, 1911, Mr. Glenn Curtiss flew from North Island to the U. S. S. *Pennsylvania*, lying in the vicinity of San Diego, Cal. He landed in the water alongside. His aeroplane was hoisted aboard; and later was hoisted out, when he quickly rose from the water, and flew back to North Island. He had merely applied the required floating power to one of his old standard machines, by attaching extemporized hydroplanes, with a view to studying the attachments necessary to convert his machine into an effective hydro-aeroplane, capable of alighting on and starting from either land or water. The Curtiss hydro-aeroplane now in use is equipped with the dual control, which allows for the shifting of the steering wheel to either man while in the air, without any effect on the machine. Tests were made in November with a Burgess-Wright hydro-aeroplane. The purpose was to rise above the water from a station, making a flight to and alongside a ship, hoist the machine aboard, put to sea, and launch the hydro-aeroplane again with the use of a crane, and then make a flight. The aviator, Lieut. John Rodgers, United States navy, stated that his experiments convinced him that it was impracticable to launch an aeroplane from a battleship by means of a crane; and that the flight must be made directly from the deck of a vessel, either by the use of a monorail or some other contrivance. On October 11 Lieutenants Ellyson and Tower, United States navy, started at the aviation station, Annapolis, Md., and landed on the beach at Smith's Point, Va., 65 miles south of Annapolis, an hour and a half later. The time to their destination, Buckroe Beach, Va., a distance of 145 miles, was 147 minutes. When near Buckroe Beach "the engine was stopped and the big hydro-aeroplane was allowed to settle in the water" and then "the gear was changed to the propeller shaft and the machine was run ashore." Mr. Glenn H. Curtiss is building a flying lifeboat, to carry 12 men, and to be propelled by a motor of 30 horsepower. Lieut. John Rodgers has devised a life preserver for the use of pilots of hydro-aeroplanes. It is similar to a baseball player's breast protector, and attached in the same way. The straps which go around the neck and waist to keep the life preserver on are rubber tubes, to be inflated with the preserver. See **AERONAUTICS**.

ARMOR

UNITED STATES. In the United States no marked improvement is noted in thick armor. Increase in the severity of the tests has not been warranted. There has been a steady improvement in the quality of thin plates made of special treatment steel. In order to obtain armor plate of greater resistance, plate both hard and tough, demanded by the increasing power of rifled guns, compound armor was introduced, in which a face of hard steel was welded upon a backing of softer metal of great toughness, but it was found impossible to make a satisfactory weld. At the proving grounds, the hard face would split up and break away

from the backing. Then came Harvey's invention; in which the plate was made homogeneous throughout its thickness and the necessary hardness obtained by carburization of the front face.

GERMANY. Krupp improved upon Harvey's process by using gas in place of solid carbonaceous material. But the face-hardening could only be made to reach a certain depth; so that continued improvements both in the energy of the projectile and its ability to remain intact while penetrating the hard face again gave superiority to the gun.

GREAT BRITAIN. In England recently a new system of face-hardening, named after its inventor, Simpson, has been developed. He has adopted the Cammel process, but makes a plate with a perfect weld. It is claimed that this result is obtained by interposing a thin plate of copper between the two plates before welding them together. In the course of some experiments Simpson found that copper and steel could be made to form a molecular mixture or solid solution of the two metals. Later he found that, if two plates of steel with a sheet of copper between them were placed in a mixture of carbon, brown sugar, and water of the consistency of compressed snow, and the whole mass heated to 2500° Fahrenheit, the copper melted away into the steel, and not only formed a perfect weld, but increased the tenacity of the steel. The copper seam is so completely soluble in the steel that the weld, in the ordinary meaning of the term, has disappeared, there being absolute molecular continuity. The thickness of the hard face of armor can therefore be increased at will. It is claimed that by this process the resistance of a given weight of armor has been raised from 20 to 25 per cent. The British dreadnought *Thunderer*, launched February 1, 1911, 22,880 tons, will carry twelve inches of Simpson armor.

JAPAN. Armor plate for Japanese vessels built in Japan is supplied from the Kure navy yard, where a plant was started in 1902. The plates are made by a special process invented by Japanese engineers. The *Tsukuba* is armored with Japanese plates; and the output is now equal to all requirements.

GUNS AND GUNNERY

GREAT BRITAIN. Great Britain has abandoned the 12-inch guns for 13.5-inch, 45 calibre gun in the main batteries of battleships and battle cruisers. The battleship *Orion* and the battle cruiser *Lion*, armed with the 13.5-inch gun, have been completed. The 13.5-inch gun is nine tons heavier than the 12-inch of 50 calibre. The weights of the shell are 1250 pounds and 850 pounds, respectively; muzzle energies 70,000 and 48,000 foot tons. There is practically no diminution in the danger space.

UNITED STATES. All future United States battleships will carry the new 14-inch gun, with the 5-inch gun for torpedo defense.

ITALY. *Le Yacht* gives the following characteristics of the latest Italian 12-inch gun: Length, 46 calibre; weight of projectile, 895 pounds; muzzle velocity, 2825 foot seconds; elevation for 10,000 meters range, 6° 30'; angle of fall for same range, 8° 40'; remaining velocity, 1490 foot seconds; penetration of Krupp armor at 10,000 meters, 11.1 inches.

REVIEWING THE FLEET FROM THE U. S. S. "MAYFLOWER" AS THE
SHIPS PASS OUT TO SEA

Copyright by Underwood & Underwood, N. Y.

PRESIDENT TAFT, SECRETARY OF THE NAVY MEYER, AND STAFF BOARDING THE
U. S. S. BATTLESHIP "CONNECTICUT"

THE NAVAL REVIEW OF 1911

AERIAL GUNS

UNITED STATES. A new 3-inch aeroplane gun for the United States navy is being built at the Washington navy yard. A 6-pdr. gun has been designed to fire an explosive shell about 20 times a minute, using a time fuse. Target practice is being held with one-pounders against aerial targets.

GERMANY. The Ehrhardt Ordnance Works of Germany has offered for sale aeroplane guns firing high explosive ammunition, using time fuses. When the target aeroplanes come within range the guns fire time-fuse shell exploding several seconds apart, releasing gases of extremely high temperature which set the aircraft on fire.

PROJECTILES

UNITED STATES. In the United States the quality of the projectile is being slowly improved. High explosive bursting charges are now a necessity in modern armor-piercing shell. The soft cap is still used to enable the point of the shell to "bite" on impact. Experiments with the monitor *Puritan* did not demonstrate the value of shell exploding on impact.

TORPEDOES

UNITED STATES. The torpedo of to-day is effective at 8000 yards; and a range of 10,000 yards at 27 knots is confidently expected in the near future. The United States is now building two types of torpedoes which will fulfill these conditions.

GERMANY. The largest torpedo now used in the German navy has a diameter of 19½ inches, and a maximum range of 4200 yards at 21 knots; and compares very favorably with the British 21-inch model. The new German torpedo will have a diameter of about 22 inches, with a charge weighing about 300 pounds; the maximum range is given as over 5000 yards. The Krupps have taken out patents for a self-propelling torpedo to be fired from an aeroplane; and it can be used not only against objects on earth, but also against hostile aircraft.

POWDER

UNITED STATES. In the United States, by the introduction of a stabilizer, the life of smokeless powder has been increased to from twelve to fifteen years, and possibly longer. The stabilizer is also an efficient and automatic detector of irregularities in manufacture. The experimental firings of powder mixed with ozokorite and graphite have given no definite results in determining the reduction in erosion of guns.

FRANCE. On September 25, 1911, the French battleship *Liberté*, 14,868 tons displacement, was destroyed by fire and explosion in the harbor of Toulon, the vessel becoming a mass of twisted and entangled metal. This disaster resulted in 204 men killed or missing, 136 wounded, and 48 slightly injured. Official investigation proved that "spontaneous ignition of a charge in the forward starboard upper 7.6-inch magazine was the cause of the disaster," and that "the oldest 'B' powder to which the explosion can be attributed was aged but five years; and that, by deduction, powder of the 'B' type, five or more years old, can spontaneously ignite." "B" powder is composed of two kinds of nitro-cellulose, soluble and insoluble, of 11.60 and 13.23 per cent. nitration respectively. Amyl alcohol was, until recently, the solvent; but has been abandoned in favor of ethyl alcohol, with diphenylamine as a stabilizer.

PROPULSION OF NAVAL VESSELS

RECIPROCATING ENGINES VS. TURBINES. The decision of the United States Navy Department to abandon turbines for reciprocating engines in the new battleships *Texas* and *New York* has caused great surprise in the naval world. All the other naval powers have adopted the turbine. In his annual report to the Secretary of the Navy, the engineer-in-chief says: "This decision was arrived at after an extensive investigation, including the comparative trials of the two types of machinery in the scout cruisers *Birmingham*, *Chester*, and *Salem*, and in the battleships *Delaware* and *North Dakota*, which render available more exact data on the subject than are available to any other government. It is found that the reciprocating engine is about 30 per cent. more economical at cruising speed than the turbine and has about the same economy at high speeds."

In the *Scientific American* of December 9, 1911, he writes, in substance, as follows: "The turbine is especially suited to high speeds. The reciprocating engine shows greater reliability than the turbine. The present problem is to provide a method of propulsion in which a high-speed turbine can be made to drive a slowly revolving propeller, thus conserving both turbine and propeller efficiencies. One method is to employ reduction gear machinery, as in the collier *Neptune* (19,300 tons). Reduction gearing as installed in the cargo steamer *Vespasian* (5400 tons) by the Parsons Company, has successfully completed a year's trial. In the naval collier *Jupiter* electric propulsion will be tried. One turbo-generator, maximum speed about 2000 revolutions a minute, delivers current with a

Calibre	Length in calibres	Length in feet	Weight in tons	Muzzle velocity, foot seconds	Weight of shell, pounds	Muzzle energy, foot tons	Extreme range, ship mounting, yards	Penetration in Krupp armor, inches
5	40	17	3.1	2,300	50	1,852	7,000	2.3 at 6,000 yards
5	51	22	5.0	3,150	50	3,439	12,000	3.0 at 6,000 yards
12	45	46	53.6	2,850	870	48,984	22,000	15.2 at 10,000 yards
12	50	51	56.1	2,900	870	51,644	24,000	15.6 at 10,000 yards
14	45	54	63.3	2,600	1,400	65,687	21,000	15.9 at 10,000 yards

potential of 2300 volts to induction motor, one on each propeller shaft. The power from the turbine will be transmitted to the propeller shafts electrically, with a speed reduction in the ratio of 18 to 1. The efficiency of transmission is expected to be about 91 per cent. The water rate for this installation is stated to range from 12.15 pounds per shaft horsepower at 14 knots to 15.55 pounds at 10 knots.

"The combination of a reciprocating engine working the steam from boiler pressure down to nearly atmospheric pressure and a turbine which works from the exhaust pressure of the reciprocating engine down to the vacuum is a particularly efficient one, its principal value being economy of coal consumption at full power in a medium-speed vessel.

"The remarkable development of heavy oil engines of the Diesel type in Europe will probably prevent previous methods of propulsion from enduring. Superior economy of the oil engine, with elimination of the steam boiler and condenser, will cause us to be patient with defects while it is being perfected. Oil supply is a great factor in which the United States is especially fortunate, producing two-thirds of the world's supply.

"All our new destroyers are oil burners. The advantages are: Reduction of personnel and of weight and space required for boilers; the elimination of coal and ash-handling gear; easier stowage and handling of oil; steam for full power can be as readily maintained as for low power; a vessel burning oil is capable of prolonged runs at full speed limited in length only by supply of fuel; no reduction of speed due to dirty fires or to difficulty in trimming coal from remote bunkers; no cinders; smoke can be controlled. With oil, an evaporation per pound of fuel greater than with coal in the ratio of 14 to 9, and per square foot of heating surface in about the ratio of 10 to 8 is obtained. Mechanical supply of fuel to boilers gives prompt and delicate control of the steam supply, permitting more sudden changes in speed than with coal—a tactical advantage." He questions whether the combined system of reciprocating engines and turbines, or geared turbines, or indeed any of the proposed methods for improving the efficiency of the turbine at low speeds are worth the extra complications involved.

COMBINATION SYSTEM. Sir Charles Parsons says that the combination system opens up many possibilities; but it has its limitations, and lack of elasticity prevents its application to certain classes of warships. He has no doubt as to the advantages of gearing from many points of view, particularly for the realization of high efficiency under all conditions. No extra space is required for the geared turbine; and it presents no disadvantage on the score of cost. He is not in favor of the floating cradle (Westinghouse type); it is sufficient if provision be made to allow end movement of the pinion shaft.

FIRST LORD'S STATEMENT. Extracts from the statement of the First Lord of the Admiralty: "All war vessels completed during the present year, and at present under construction, have been designed with water-tube boilers and turbine engines, the latter being either of the Parsons or Brown-Curtis type. The boilers of all armored vessels building are being fitted to burn oil in conjunction with coal,

the full power being obtainable in these vessels by the use of coal only. Satisfactory full power trials have been carried out in the second-class cruisers of the *Bristol* and *Blanche* type, the boilers of which vessels are designed to burn oil in conjunction with coal when obtaining full power. The torpedo-boat destroyers of this year's programme are designed to burn oil only; and improvements have been made in the oil-burning fittings."

UNITED STATES. The two new American battleships *Nevada* and *Oklahoma* will be oil burners and will carry no coal. Tests made on the *North Dakota*, equipped for either oil or coal, are largely responsible for this decision.

DIESEL OIL ENGINE. There are over 250 vessels either fitted or to be fitted with Diesel plants. Submarine torpedo boats form a large part of this number. The Diesel engine is now almost universally adopted for this type of vessel, except in Great Britain and the United States. The number of Diesel submarines is about 150 of from 300 to 5000-horsepower. In the last two years the radius of action and the power of these boats has been so much increased that they are no longer merely defensive boats, but are extremely dangerous high-sea weapons. A certain number of gunboats and very small cruisers, especially for Russia, have been built.

This year began the era of the large cargo boats, such as the 9000-ton boat at Hamburg. There is already one battleship with Diesel engines in existence, the German battleship *Ersatz Odin*; the oil engines will supply one-third of the power for the ship, driving the middle screw; while the others will be driven by the existing type of engine. France is now building submarines having two oil engines of 2500-horsepower each. Italy is building a destroyer equipped entirely with oil engines. England has ordered a destroyer having oil engines for cruising purposes and steam turbines for high speed. Austria has a cruiser with two 900-horsepower two-cycle engines. Generally speaking, as extreme limits, the oil consumption may be said to vary from 0.4 to 0.6 pounds per horsepower hour. Therefore, for a given weight of fuel, a ship propelled by oil engines would have from four to six times the radius of action of a similar ship propelled by steam. See INTERNAL-COMBUSTION ENGINES.

SUBMARINES

FRANCE, GREAT BRITAIN. The French submarine *Mariotte*, the largest in the world, with a displacement of 1100 tons, length 214 feet, was launched at Cherbourg on February 2, 1911. The displacement of the "D" class of the British navy is 804 tons. "E" class (six boats), to be completed in 1912-13, will displace 800 tons; length 176 feet; surface speed 15 knots.

UNITED STATES, RUSSIA, ITALY. The latest United States submarines ordered will displace about 525 tons; the new Russian boats 500 tons; but Italy, where some very successful boats have been built in recent years, prefers small boats of 225 tons displacement. The United States boat *Seal*, launched February 8, 1911, has the following characteristics: Length over all, 161 feet; extreme beam, 13 feet; submerged displacement about 525 tons; armament, 6 torpedo tubes, with stowage for ten torpedoes; contract surface speed, 14 knots, but a speed of 16 is expected; contract submerged speed, 9½

knots; cruising radius at economical speed on surface, over 2500 knots. She is designed for long cruises in rough weather without a tender.

SALVAGE LIGHTER

GREAT BRITAIN. The British salvage lighter for submarines is fitted with a salvage plant capable of lifting a submarine of the "C" class; length, 115 feet; beam, 31 feet; displacement at load draft, 790 tons. She is fitted with a 15-inch centrifugal pump; and has four trunkways fitted with capstans for lifting a weight of 300 tons. She also has an air pump for working pneumatic tools; and an electric light plant. Cost \$26,846.

NAVY LEAGUE, GERMAN. See GERMANY, *History*.

NAZRO, ARTHUR PHILLIPS. A rear-admiral, retired, of the United States navy, died February 15, 1911. He was born in Milwaukee in 1850 and in 1865 entered the United States Naval Academy. After his graduation he served as a midshipman on board the *Sabine* under Franklin, until he received his promotion as ensign. He was promoted to be lieutenant in 1874 and cruised on board the *Hartford*, in the North Atlantic Squadron. After this service he became recorder of the Board of Inspection at Washington, and after making a study of torpedoes in the War College at Newport, was placed on ordnance duty in the Washington navy yard. He filled various assignments on sea and shore until at the time of Aguinaldo's insurrection in the Philippines he was placed in command of the gunboat *Manila* as commander. His last active duty was in command of the naval station at Cavite. He was retired for disability in 1910.

NEBRASKA. POPULATION. The Thirteenth Census, taken in 1910, showed the population of the State in that year as 1,192,214, compared with 1,066,300 in 1900, an increase of 125,914, or 11.8 per cent. in the decade. The principal cities, with their population in 1910 and 1900, are as follows (the figures in parentheses are for 1900): Omaha, 124,096; (102,555); South Omaha, 26,259 (26,001); Lincoln, 43,973 (40,169); Grand Island, 10,326 (7554).

AGRICULTURE. The Thirteenth Census included statistics of agriculture. These are of date of April 15, 1910. On that date the farms in the State numbered 129,678, compared with 121,525 in 1900. The land in farms was 38,622,021 acres, compared with 29,911,779 acres in 1900. The improved land in farms was 24,382,577, compared with 18,432,595 in 1900. The average number of acres per farm was 297.8, compared with 246.1 in 1900. The value of all farm property, including land, buildings, implements and machinery, domestic animals, poultry, and bees was \$2,079,817,647, compared with \$747,950,057 in 1900, an increase of 178.1 per cent. in the decade. The average value of property per farm was \$16,038, compared with \$6155 in 1900. The average value of land per acre was \$41.80, compared with \$16.27 in 1900. Of the total number of farms, 80,237 were operated by owners and managers and 49,441 were operated by tenants. Of the farms operated by persons owning all or part of the land, those free from mortgage numbered 47,435, and those under mortgage 30,839. The native white farmers numbered 93,509; foreign-born white, 35,707; negro and other non-white, 49,462. The value of the various kinds of domestic animals, poultry,

and bees in 1910 was \$222,222,004, compared with \$145,349,587 in 1900. The cattle numbered 2,932,350, valued at \$73,074,057; horses and colts, 1,008,378, valued at \$102,804,907; mules, 83,405, valued at \$10,374,076; swine, 3,435,734, valued at \$29,649,482; sheep, 293,500, valued at \$1,480,948. The acreage, production, and value of the principal crops in the State in 1910 and 1911 will be found in the following table:

		Acreage	Prod., bu.	Value
Corn	1911	7,425,000	155,925,000	\$85,759,000
	1910	7,425,000	191,565,000	68,963,000
Wheat	1911	3,098,000	41,574,000	36,169,000
	1910	2,394,000	38,760,000	31,008,000
Oats	1911	2,500,000	34,750,000	14,942,000
	1910	2,532,000	70,895,000	19,851,000
Rye	1911	52,000	676,000	507,000
	1910	59,000	944,000	566,000
Potatoes ..	1911	116,000	6,032,000	5,649,000
	1910	115,000	6,900,000	5,796,000
Hay	1911	1,350,000	a 1,148,000	11,136,000
	1910	1,500,000	1,500,000	13,350,000

a Tons.

MANUFACTURES. The Thirteenth Census included statistics relating to manufactures of the State. The results are given in the table below. These figures are for the calendar year 1909. While Nebraska is not preëminently a manufacturing State, its manufacturing interests have developed considerably in the last five years, as will be seen by this table. The industries in which the largest capital is involved and whose products have the largest value are those connected with slaughtering and meat packing. Of these there were in 1909 eighteen establishments, employing 6015 wage-earners and manufacturing products valued at \$92,305,000. Next in order of value are the industries connected with flour-mill and grist-mill products. These establishments numbered 249 and employed 839 wage-earners. They produced products valued at \$17,836,000. The products of butter, cheese, and condensed milk factories were valued at \$7,681,000; printing and publishing, \$6,667,000; malt liquors, \$3,335,000; bread and other bakery products, \$3,014,000; foundry and machine shop products, \$2,930,000; lumber and timber products, \$2,021,000; other industries whose product was valued at \$1,000,000 or over and less than \$2,000,000 were leather goods, clothing, illuminating and heating gas, paint and varnish, artificial stone, confectionery, brick and tile, and tobacco manufactures. The total number of persons engaged in the manufacturing industries of the State in 1910 was 31,966, of which 27,577 were male and 4409 female. The largest number of persons engaged in manufactures related to slaughtering and meat packing. For the great majority of the wage-earners employed in the manufacturing industries in the State, the prevailing hours of labor ranged from 54 to 60 a week, or from 9 to 10 a day. The following table gives the summary of the results of the census for the calendar years 1909-1904:

	Number or amount	
	1909	1904
Number of establishments	2,500	1,819
Persons engaged in manufactures	31,966	25,356
Proprietors and firm members	2,522	1,904
Salaried employees.....	5,108	3,192
Wage earners (average number)	24,336	20,260

	Number or amount.	
	1909	1904
Primary horsepower.....	64,466	46,372
Capital	\$ 99,901,000	\$ 80,235,000
Expenses	183,587,000	146,639,000
Services	19,439,000	14,097,000
Salaries	5,491,000	3,075,000
Wages	13,948,000	11,022,000
Materials	151,081,000	124,052,000
Miscellaneous	13,067,000	8,490,000
Value of products.....	199,019,000	154,918,000
Value added by manufac- ture (value of products less cost of materials).	47,938,000	30,866,000

EDUCATION. The total enrollment in the public schools of the State in the year ended July 11, 1910, was 278,936. The average daily attendance was 192,454. The total number of graduate scholars in 1911-12 was 543. There were 4489 teachers employed in the schools of the State. The total expenditures for education in 1910 amounted to \$7,454,215. The average monthly salary of teachers was \$55.24.

FINANCE. The biennial report of the State treasurer for the period 1908-10 showed a balance in the treasury December 1, 1908, of \$384,437. The receipts from December 1, 1907, to November 30, 1910, inclusive, amounted to \$10,960,919, and the disbursements to \$10,744,066, leaving a balance at the end of the fiscal year 1910 of \$601,290. The trust funds of the State, including school funds, college, and university funds, amounted to \$8,863,690.

POLITICS AND GOVERNMENT

The legislature met in 1911, but no statutes of general interest were passed. The most important transaction from a national standpoint was the election on November 17 of Gilbert M. Hitchcock, Democrat, as United States senator to succeed Elmer J. Burkett, Republican. Mr. Hitchcock was nominated in the primaries of November, 1910, in which the Democrats changed the majority in the legislature from a Republican to a Democratic, thus insuring the election of a Democratic senator. On January 17 the legislature took a formal vote, and of 133 votes cast 117 were given Mr. Hitchcock. Of the votes which elected him forty-five were cast by Republicans, some of whom had signed a pledge previous to the primary election to abide by the result of the popular vote for senatorial candidate. An interesting fact in connection with the election of Senator Hitchcock was the fact that just forty years previous to the day on which he was elected his father, Phineas W. Hitchcock, was elected senator from the then new State of Nebraska as a Republican by a combined vote of Democratic and Republican voters.

On February 15 the Senate passed by a unanimous vote a resolution instructing the Nebraska delegation in the national Senate and House to support President Taft's Canadian reciprocity agreement. The House had previously voted twice to lay on the table a resolution against reciprocity. On February 8 county option in the State was defeated in the Senate by a vote of 17 to 16. This measure in 1910 had the strenuous support of William J. Bryan. He did not, however, actually support the bill during its consideration in the legislature.

There were no elections for higher State officers in 1911. The elections were for candidates for the Supreme Court bench and for a representative in Congress from the Third Congressional District. On July 25 the Democrats held a State convention for the nomination of these officials.

The convention was controlled by a combination of leaders whose chief effort was to bring about harmony between the conflicting elements in the party. The convention was divided into representatives of William J. Bryan and those who opposed him. Mr. Bryan's representatives agreed to the elimination of his name from the resolution adopted by the convention and it was agreed that no condemnation of any other party leader be included. This was accepted by the opposition element and formed the basis of the peace agreement. The platform was, in the main, an indorsement of the Democratic national platform of 1908 and included a condemnation of the Republican administration. It also indorsed the constitutional amendment providing for the initiative and referendum, and the early passage of a service pension bill was commended to the Democratic representatives of the State in Congress. The Republican convention met on July 25. It was a purely formal session and occupied scarcely three hours. The convention selected no candidates, but was called to construct a platform and instruct campaign officials. The advocacy of Senator La Follette as a presidential candidate gained considerable strength in the convention. This was so apparent that the supporters of President Taft did not introduce a resolution indorsing the President for renomination. On the other hand, the delegates favorable to Senator La Follette were not numerous enough to risk asking the indorsement of their candidate. The elections held on November 7 resulted in a majority of about 10,000 votes for the Republican candidates for the Supreme Court. Daniel V. Stephens, a Democrat, was elected from the Third District, to succeed the late Representative James Latta. Mr. Stephens was given a plurality of about 4000 votes over his Republican opponent.

On December 19 a mass convention of 250 Republicans met at Lincoln in response to a call for supporters of President Taft to organize and pledge the sixteen Nebraska delegates to the national convention for President Taft's renomination. A State organization was formed and local clubs will be organized. Resolutions adopted declared that the members of the convention are heartily, earnestly, and sincerely in favor of the renomination and reelection of President Taft.

On September 2 the voters of Omaha, at a special election, voted for the commission form of government. This election was held in accordance with the law enacted by the legislature providing that cities of the metropolitan class and other cities may vote on the question of adopting the commission form of government. The votes for the commission plan were about 3 to 1. The Omaha plan is similar in some respects to the Des Moines plan, but differs from it in important details. At the regular spring election in April, 1912, people will choose seven commissioners from fourteen men to be nominated at a primary to be held one month before the election. Candidates for nomination and election will have no party designation. The seven commissioners elected will choose from their own number a mayor. The mayor will be paid a salary of \$4500 and each of the six commissioners \$4000 a year. The commissioners will appoint all other city officials, levy taxes, and conduct all the other business of the city. The law under which they will be

elected provides for the initiative, referendum, and recall. If 25 per cent. of the voters who voted at the last election petition for the recall of a commissioner he will be suspended until a special election can be held, when, if he shall receive a majority vote, he will continue in office. Several smaller cities in Nebraska have voted for this form of government.

STATE OFFICERS. Governor, Chester H. Aldrich, Republican; Lieutenant-Governor, M. R. Hopewell; Secretary of State, Addison Wait; Treasurer, W. A. George; Auditor, Silas A. Barton; Attorney-General, Grant G. Martin; Superintendent of Education, J. C. Crabtree; Secretary of Agriculture, S. R. Mellor; Commissioner of Public Lands, E. C. Cowels—all Republicans.

SUPREME COURT. Chief Justice, Manoah B. Reese; Justices, Charles B. Letton, Jesse L. Root, Jacob Fawcett, William B. Rose, John B. Barnes, and Samuel H. Sedgwick; Clerk, H. C. Lindsay—all Republicans.

STATE LEGISLATURE, 1911. Senate, Republicans, 14; Democrats, 19; Democratic majority, 5. House, Republicans, 46; Democrats, 54; Democratic majority, 8. Joint ballot, Republicans, 60; Democrats, 73; Democratic majority, 13.

NEBRASKA, UNIVERSITY OF. An institution of higher learning at Lincoln, Neb., founded in 1867. The number of students in all departments of the university in 1910-11 was 4624. The total instructional force, including professors, instructors, fellows, scholars, and assistants was 333. During the year Prof. James Le Rossignol was appointed head professor of political economy to succeed W. G. L. Taylor, resigned; J. H. Frandson was appointed head professor of dairying to succeed A. L. Haecker, resigned; J. D. Hoffmann was appointed head professor of mechanical engineering to succeed Charles R. Richards, resigned; and F. M. Hunter was appointed principal of the School of Agriculture to succeed A. E. Davisson, deceased. A loan fund was established for the encouragement of worthy students by the donations of Hon. John R. Webster of Omaha, W. G. Whitmore, Valley, Neb., and Hon. J. A. L. Waddell of Kansas City, Mo. The income for the year was \$655,000. This does not include special appropriations for new buildings, repairs, and State enterprises, and bureaus under the control of the board of regents of the university. The library contains about 100,000 volumes. The chancellor is Samuel Avery, Ph. D.

NECROLOGY. The following list contains the names of persons who died during 1911. An asterisk prefixed to a name indicates that there is a separate biography in proper alphabetical order, in the body of the book:

- * Abbey, Edwin Austin. American artist.
- * Abbey, Henry. American poet.
- Abdul Ahad, Sayid. Ameer of Bokhara. Died January 4; born 1859.
- * Abraham, Abraham. American merchant. Died June 28; born 1843.
- * Adams, George B. American jurist.
- * Adler, Hermann. Jewish rabbi.
- Agius, Ambrose. Roman Catholic prelate, papal delegate to the Philippines. Died December 13.
- * Aiken, Charles Frederick. American editor.
- * Aird, Sir John. English engineer.
- * Albro, Addis. American clergyman.
- * Alexander, William. Irish prelate.
- * Allen, Amos L. American public official.
- * Allen, Ethan. American lawyer.
- Amory, Arthur. American merchant and capitalist. Died August 10; born, 1841.
- * Andrade, Cipriano. American rear-admiral.

- * Angell, Henry Clay. American ophthalmologist.
- Anton, Peter. Scotch minister and historian. Died December.
- * Arabi Pasha. Egyptian revolutionist.
- Ashley, Edward F. American bacteriologist. Died, March; born, 1876.
- * Ashmore, Sidney G. American educator.
- Aston, William George. English writer and philologist. Died, April; born, 1841.
- Atterbury, William Wallace. American clergyman. Died August 6; born, 1823.
- Attfield, John. English chemist. Died March; born, 1836.
- Aumonier, James. English landscape painter. Died October 4; born, 1832.
- Avery, Mary Ogden. American philanthropist. Died April 29; born, 1825.
- Bachman, Reuben K. Former member of Congress from Pennsylvania. Died September 19; born, 1834.
- Baedecker, Karl. German guidebook publisher. Died May 12.
- * Bailey, Mark. American elocutionist.
- * Balrd, Julian William. American chemist.
- * Baker, George Hall. American librarian.
- Baker, Martha S. American miniature painter. Died December 28.
- * Baker, Sir Richard Chaffey. Australian public official.
- Balcells, Mariam. American clergyman and educator. Died October 7.
- * Baldwin, Caleb Cook. American missionary.
- * Ball, Thomas. American sculptor.
- * Banffy, Desiderius, Baron. Hungarian public official.
- * Banks, David. American publisher.
- Barnes, Henry Burr. American publisher. Died January; born, 1846.
- * Barr, Charles. Scotch yachting expert.
- Bartlett, Frederick E. American painter. Died June 8; born, 1856.
- * Bascom, John. American educator.
- * Batchelor, Egerton Lee. Australian public official.
- Beach, Joseph P. American editor. Died January 8; born, 1829.
- * Beck, Carl. American surgeon.
- Beddoe, John. English anthropologist. Died July 19; born, 1826.
- Beddome, Col. Richard Henry. English botanist. Died February; born, 1848.
- * Begas, Reinhold. German sculptor.
- * Bell, Charles Frederic Moberly. English journalist.
- * Bell, Joseph. Scotch surgeon.
- * Bellew, Harold Kyrie Money. English actor.
- * Benedict, Robert Dewey. American lawyer.
- * Bennett, Madeline (Schiller). German-American pianist.
- * Benton, Joel. American poet.
- * Berteaux, Henri Maurice. French cabinet officer.
- * Bigelow, John. American author.
- Binet René. French architect. Died August; born, 1867.
- * Bird, John T. American jurist.
- Blane, Sir Seymour. British major-general. Died June 26; born, 1833.
- * Bliss, Cornelius Newton. American merchant and public official.
- * Bloxam, William Dunnington. American public official.
- * Bogert, Edward Strong. American rear-admiral.
- * Boggs, William Robertson. American soldier.
- Bonner, Frederic. American editor. Died January 3; born, 1857.
- Bornemann, Frederick. American opera singer. Died December 27; born, 1833.
- Bouche, Louis Alexandre. French artist. Died March; born, 1848.
- * Bougtillier-Chavigny, Charles Marie Claude, Marquis de. French lecturer.
- Bourgeois, Urbain. French artist. Died February; born, 1843.
- * Bowditch, Henry Pickering. American physiologist.
- * Boynton, George B. American soldier.
- * Brackett, Anna Callender. American educator.
- Brackett, James W. American public official and editor. Died June 24; born, 1865.
- * Bradford, Amory Howe. American clergyman.
- * Bradford, Gamaliel. American publicist and banker.
- * Brady, Francis Xavier. American Roman Catholic clergyman.
- Brainerd, James T. American silk manufacturer. Died July 11; born, 1826.

- * Brinckerhoff, Walter Remsen. American pathologist.
- * Brinkerhoff, Roeliff. American banker.
- * Broadhurst, Henry. English labor leader.
- Bruce, Alexander. Scotch nerve specialist. Died June.
- Bruce, Elizabeth N. American pastor and philanthropist.
- Bruce, Leslie Coombs. American publisher and sportsman. Died August 2; born, 1849.
- * Bruff, Lawrence Laurensen. American soldier.
- Brun, Gen. Jean Jules. Former French minister of war. Died February 23; born, 1850.
- * Bryan, Nathan Philemon. United States senator.
- Buchanan, Thomas Ryburn. English official and member of Parliament. Died April 7; born, 1846.
- Buchanan, William. American tobacco manufacturer. Died November 14; born, 1843.
- Bulkley, Henry Wheeler. American engineer and inventor. Died November 7; born, 1841.
- * Bull, Charles Stedman. American physician.
- * Bullis, John Lapham. American soldier.
- * Bunting, Sir Percy William. English editor.
- Burke, Daniel Webster. American brigadier-general. Died May 30; born, 1841.
- * Butler, George Prentiss. American banker.
- * Cabell, William Lewis. American lawyer and soldier.
- * Cáceres, Ramón. President of the Republic of Santo Domingo.
- Cady, Sarah Louise. American educator. Died November 8; born, 1829.
- Cagniard, Emile. French painter. Died March; born, 1856.
- Camel, Théophile. French sculptor. Died February; born, 1862.
- * Camidge, Charles Edward. English bishop.
- Campbell, Sir Charles. English admiral. Died February 8; born, 1847.
- Campbell, Lady Colin. English writer and editor. Died November 8.
- Capron, Adin Ballou. Former member of Congress from Rhode Island. Died March 17; born, 1841.
- Carey, Henry Westonsrae. American financier and public official. Died April 28; born, 1850.
- Carey, Michael. American educator. Died December 20.
- Carlisle, George James Howard, ninth Earl of. English nobleman. Died April 15; born, 1843.
- * Carrère, John Mervin. American architect.
- Carroll, John F. American political writer. Died November 17; born, 1853.
- * Carroll, John Lee. American public official.
- * Carter, Thomas Henry. United States senator.
- Cavicchioni, Beniamino. Roman Catholic cardinal. Died April; born, 1836.
- * Cawdor, Frederick Archibald Vaughan Campbell, third Earl of. English nobleman and public official.
- * Chadborn, Charles L. American inventor.
- * Chaillé, Stanford Emerson. American physician.
- * Chamberlain, Abiram. American public official.
- * Chamberlain, Henry Richardson. American newspaper correspondent.
- * Chawner, William. English educator.
- * Chilton, Robert S. American public official.
- Chrystal, George. Scotch mathematician. Died November 3.
- Clark, George Chever. American merchant. Died January 11; born, 1843.
- * Clark, J. Scott. American educator.
- * Clarke, Albert. American soldier.
- * Clarke, Sir Caspar Purdon. English art director.
- * Clarke, Richard M. American lawyer.
- * Clotilde, Princess of Savoy. Died June 25; born, 1843.
- * Cockroft, James. American publisher and editor.
- Coleman, Enrico. English artist. Died February 15; born, 1846.
- Colgan, Joseph. Roman Catholic archbishop of Madras. Died February; born, 1824.
- * Collingwood, Francis. American engineer.
- * Collins, Richard Henn. Baron. British jurist.
- Collins, William Edward. Anglican clergyman, Bishop of Gibraltar. Died, March; born, 1867.
- * Colman, Norman Jay. American agriculturist.
- Cooch Behar, Sir Nripendra Narayan, Maharajah of Indian prince. Died September 15; born, 1862..
- Correoso, Buenaventura. Public official of Panama. Died January 10; born, 1831.
- * Corson, Hiram. American critic.
- Costa, Joaquín. Spanish writer and politician. Died February.
- Courteney, Henry Reginald. British major-general. Died March; born, 1823.
- Covington, George. Former member of Congress from Maryland. Died April 6; born, 1839.
- Cranbrook, John Stewart Gathorne-Hardy, Earl of. English nobleman. Died July 19; born, 1839.
- Crimmins, Thomas Emmet. American contractor. Died September 8; born, 1851.
- * Critchfield, George W. American promoter and financier.
- * Crofts, Ernest. English artist.
- * Cromwell, Edward Payson. American clergyman and teacher.
- * Cronje, Piet Arnoldus. Boer soldier.
- Curtin, John J. American soldier. Died January 1; born, 1839.
- * Curtis, William Eleroy. American journalist.
- * Curson-Howe, Sir Assheton Gore. British admiral.
- * Damon, William Emerson. American naturalist.
- * Dandy, George Brown. American soldier.
- Danford, Henry B. American organist and instructor in music. Died September 12; born, 1839.
- Davenport, Ira Erastus. American spiritualist. Died July 8; born, 1838.
- * Davidson, George. American geodesist.
- Davis, Josephine Griffith. American physician. Died November 8; born, 1839.
- * Davis, Robert. American political leader.
- Davis, Thomas B. American financier, former member of Congress from West Virginia. Died November 26; born, 1828.
- De Forest, John H. American Congregational clergyman. Died May 8.
- Dennis, John. English writer. Died, February; born, 1835.
- * Denmore, Emmet. American physician and inventor.
- De Rialp, Frank. Teacher of singing. Died September; born, 1840.
- Dernburg, Friedrich. German writer. Died December; born, 1833.
- * Devins, John Bancroft. American clergyman and editor.
- Devonshire, Louise Fredericke Auguste, Duchess of. British peeress. Died July 15.
- * de Vyver, Augustine. Roman Catholic bishop.
- De Wet, Sir Jacobus Albertus. British South African official. Died March; born, 1840.
- * Dicey, Edward. English author.
- Dieulafoy, Paul Georges. French physician. Died August 16; born, 1837.
- Dilke, Sir Charles Wentworth. Died January 26; born, 1843.
- Dimock, Henry F. American financier. Died April 10; born, 1842.
- Dix, Edwin A. American Author. Died Aug. 24; born, 1860.
- Dobson, John. American carpet manufacturer. Died June 28.
- Doll, Jacob. American piano manufacturer. Died November 13; born, 1848.
- * Dominguez, José Lopez. Spanish statesman.
- Doonan, James A. Roman Catholic clergyman and educator. Died April 12; born, 1842.
- Doran, Robert E. American alienist. Died September 24; born, 1870.
- * Drawbaugh, Daniel D. American inventor.
- * Dresser, Solomon Robert. American public official.
- * Dryden, John Fairchild. Former United States senator.
- Ducaruge, Léon. French artist. Died February; born, 1842.
- * Dudley, Edgar Swartout. American army officer.
- * Dudley, Irving Bedell. American diplomat.
- * Dudley, William Russell. American botanist.
- Du Moulin, John Philip. Canadian bishop of Niagara. Died March; born, 1836.
- Durand-Morimbeau, Henri. French journalist and educator. Died February; born, 1849.
- * Durham, Milton Jamison. American lawyer and public official.
- * Dwight, Thomas. American anatomist and educator.
- * Earle, Alice (Morse). American author.
- Eastman, Julia Arabella. American educator and writer. Died January 1; born, 1837.
- Eaton, John. Pioneer of the Pennsylvania oil field. Died September 16; born, 1840.

- Eccleston, James Houston. American Protestant Episcopal clergyman.
- Eddy, William H. American soldier. Died August 9; born, 1855.
- Edison, Jarvis Bonesteel. American engineer and inventor.
- Edwards, John Passmore. English editor.
- Egan, J. C. American physician, chief surgeon in charge of the Confederate military hospitals. Died December 15; born, 1842.
- Eggleston, George Cary. American journalist and writer.
- Eliot, Augustus G. American physician.
- Elkins, Stephen Benton. Former United States senator.
- Ellis, Robert Wheelock. Canadian geologist. Died May 23; born, 1848.
- Ellis, Rowland. Bishop of Aberdeen. Died December 7; born, 1841.
- Ely, Smith. American public official.
- Emmons, Samuel Franklin. American geologist.
- Erdmann, C. J. Former member of Congress from Pennsylvania. Died January 15; born, 1847.
- Erlanger, Baron Friedrich. German banker. Died May 22; born, 1832.
- Erskine, Sir James Elphinstone. English admiral.
- Evans, Elizabeth Edson. American author.
- Ewald, Paul. German theologian and educator. Died June; born, 1857.
- Eytting, Rose. American actress.
- Farman, Elbert Ell. American lawyer.
- Faunce, Daniel Worcester. American Baptist clergyman.
- Fenn, Henry. American artist.
- Ferguson, Henry A. American landscape painter.
- Ferris, John Mason. American clergyman.
- Fertig, John. A pioneer in the petroleum industry. Died March 19; born, 1837.
- Filley, Charles C. American traveler and explorer. Died February 3.
- Firmin, Antenor. Former Haitian official and revolutionary commander. Died September 19.
- Fitzgerald, Oscar Penn. American bishop.
- Flameng, Léopold Josef. French etcher and engraver. Died September 5; born, 1832.
- Fleming, Williamina Paton. American astronomer.
- Fluegel, Maurice. American Jewish rabbi, historian, and political economist. Died February; born, 1832.
- Fogazzaro, Antonio. Italian novelist.
- Follett, Martin Dewey. American jurist.
- Folts, J. Philo. American philanthropist. Died November 9.
- Forest, John Anthony. American Roman Catholic bishop.
- Foss, Sam Walter. American librarian and poet.
- Foster, Frank Pierce. American physician and teacher.
- Francis Charles Spencer. American public official.
- Franklin, Walter Simonds. American financier. Died December 3; born, 1835.
- Fraser, Alexander Hugh Ross. American librarian. Died May 10; born, 1866.
- Freeborn, George C. American physician and educator. Died October 30; born, 1849.
- Freeden, John Pierre. American educator. Died December 2; born, 1844.
- Freeman, John Charles. American scholar and educator.
- Frémont, John Charles. Rear-admiral of the United States navy.
- Frere, Mary Eliza Isabella. English writer. Died February; born, 1847.
- Frey, Friedrich Hermann, "Martin Greif." German lyric poet.
- Frye, William Pierce. United States senator.
- Fyles, Franklin. American playwright.
- Galton, Sir Francis. English scientist.
- Gamboa, José María. Former assistant secretary of state of Mexico, and Mexican minister to Argentina. Died September 12.
- Gansbacher, Josef. American musician.
- Gibb, Arthur. American merchant. Died January 13; born, 1858.
- Gibson, William Campbell. Rear-admiral of the United States navy.
- Gilbert, Sir William Schwenck. English humorist.
- Gilman, Edwin Robinson. American engineer and manufacturer. Died February 9; born, 1864.
- Gilroy, Thomas F. American public official.
- Glick, George Washington. American public official.
- Girouard, Désiré. Canadian jurist. Died March; born, 1836.
- Goldberg, Hirsh. A Hebrew rabbi. Died December 24.
- Gordon, George Washington. American soldier.
- Gorst, Sir Eldon. British administrator.
- Gower, Merritt Melville. American missionary. Died February 3; born, 1833.
- Greene, William Cornell. American capitalist.
- Greenleaf, Charles Ravenscroft. American physician.
- Gregory, Robert. English clergyman.
- Greif, Martin. See Frey, F. H.
- Griggs, William. English artist. Died December; born, 1832.
- Grünhagen, Colmar. German historian. Died August; born, 1827.
- Guild, Curtis, Sr. American journalist.
- Guillot, Anatole. French sculptor. Died February; born, 1866.
- Gullmant, Félix Alexandre. French musician and composer.
- Haase, Friedrich. German actor.
- Haidarabad, Mir Mahbub Ali Khan Bahadur, Nizam of. An Indian prince. Died August 29; born, 1866.
- Haines, Edward B. American editor and publisher. Died May 3; born, 1846.
- Hall, Thomas. American inventor. Died November 19; born, 1834.
- Hallowell, Susan Maria. American botanist.
- Halsey, N. Whitmore. American banker. Died July 1; born, 1856.
- Ham, Thomas J. American editor. Died February 11; born, 1837.
- Hamlin, Charles. American lawyer.
- Harlan, John Marshall. Associate justice of the Supreme Court.
- Harpster, John Henry. American clergyman.
- Harrigan, Edward. American actor and playwright.
- Harrison, James Albert. American philologist.
- Hart, Sir Robert. Former inspector-general of the Imperial Maritime Customs, China.
- Haskell, Ella (Knowles). American lawyer and public official.
- Hastings, Thomas Samuel. American theologian.
- Hayne, Joseph Elias. Afro-American clergyman.
- Hedges, Henry P. American jurist.
- Henry, John Edgar. English theologian and educator. Died February 13; born, 1841.
- Hepburn, James Curtis. American physician.
- Herrmann, Esther. American philanthropist and club woman. Died July 4; born, 1823.
- Hieronymi, Karl von. Hungarian minister of commerce. Died May 4.
- Higginson, Thomas Wentworth. American clergyman and author.
- Hill, John Lindsay. American lawyer. Died January 16; born, 1840.
- Hilterman, Justin. American educator, and priest of the Franciscan Order. Died February 23; born, 1839.
- Hinckley, John Franklin. American engineer and bibliophile. Died February 20; born, 1849.
- Hinkle, Anthony Howard. American philanthropist. Died May 25; born, 1843.
- Hires, George. Former congressman from New Jersey. Died February 16; born, 1844.
- Hitchcock, Edward. American physician and teacher.
- Hochstein, Anthony. American artist. Died November 2; born, 1829.
- Hodges, Charles Libbens. American soldier.
- Hoff, Jacobus Hendricus van't. Dutch chemist.
- Hofmann, Casimir. German musician. Died July.
- Holly, James Theodore. Bishop of the Protestant Episcopal Church in Haiti. Died March 26; born, 1833.
- Holmes, Sir Richard Rivington. English librarian and archaeologist. Died March 22; born, 1835.
- Hooker, Frank Arthur. American jurist.
- Hooker, Sir Joseph Dalton. English botanist.
- Hopewell, Melville R. American public official, lieutenant-governor of Nebraska. Died May 2.
- Hopps, John Page. English Unitarian clergyman. Died April 7; born, 1834.
- Horton, Marcus. American educator.
- Houssaye, Henry, Count. French historian.
- Howell, Edwin Eugene. American geologist.

Howland, Edward Cole. American journalist. Died July 10.

* Hughes, Charles James, Jr. United States senator.

Hunt, Charles Wallace. American engineer and inventor. Died March 27; born, 1841.

* Inch, Richard. Rear-admiral of the United States navy.

* Israels, Josef. Dutch painter.

* Ives, Halsey Cooley. American art director.

* Jaggard, Edward Ames. American jurist.

* Janeway, Edward Gamallel. American physician.

* Jansen, Wilhelm. German novelist.

* Janvrin, Joseph Edward. American physician.

* Jelly, George Frederick. American alienist.

Jessup, Samuel. American clergyman. Died February; born, 1833.

Joannon, Etienne. French artist. Died May; born, 1858.

John, Prince of Denmark. Died May 27; born, 1825.

* Johnson, Tom Loftin. American public official.

* Johnston, Samuel. American inventor.

* Jones, George William. American mathematician.

Jones, Thomas Rupert. English geologist. Died April; born, 1820.

Jordan, Richard. The world's champion checker player. Died October 8.

Judic, Anne-Marie. French opera singer. Died April 14; born, 1850.

Kawakami Otojiro. Japanese actor. Died December.

* Keith, William. American artist.

Kelly, Aloysius Oliver Joseph. American pathologist. Died February 23; born, 1860.

Kelly, George E. M. American army officer and aviator. Killed May 10, 1911.

* Kester, Vaughan. American novelist.

* Kildare, Owen Frawley. American author.

* King, Franklin Hiram. American agricultural scientist.

King, Thomas M. American railway official. Died September 13; born, 1845.

NEPTUNE (Collier). See NAVAL PROGRESS, *Propulsion*.

NERUDA (NORMANN-NERUDA), WILMA MARIA FRANCISCA. A European violinist, died April, 1911. She was born at Brünn, Moravia, in 1839. Her father was organist of the cathedral of that city. She became a pupil of Jansa on the violin, and made her first appearance in Vienna in 1846. In 1849 she went to London to play at the Philharmonic in one of Berlioz's concerts. She then returned to the continent

and for several years traveled as a soloist, chiefly in Russia. In 1864 she visited Paris, and played with great success at the conservatory and elsewhere. In the same year she was married to Ludwig Normann, a Swedish musician. She returned to London in 1869, again playing at the Philharmonic. In the following year she played the first violin at the Monday Popular Concerts. In 1888 she married Sir Charles Hallé, with whom she made a tour of Australia in 1890-91. In 1899 she visited the United States.

NETHERLANDS, THE (or HOLLAND, KINGDOM OF). A constitutional monarchy of western Europe. Capital, The Hague.

AREA AND POPULATION. Area, 12,648 sq. miles. Population (census of December 31, 1909), 5,857,949 (2,898,941 males, 2,959,008 females); estimated December 31, 1910, 5,945,155. The 1909 census returns 5,788,193 Dutch, 37,534 Germans, 18,338 Belgians, 2645 French, 2102 English, 1223 Austro-Hungarians, 3908 of other, and 4152 of unindicated nationalities. According to religion the population is divided into Protestants, 3,334,487; Roman Catholics, 2,063,103; Jews, 106,409; other sects, 63,008; unindicated, 291,168. The rural population constituted 62.6 per cent., and the communal 37.4 per cent. of the total population. The Hague had (December 31, 1909), 270,109 inhabitants (estimated December 31, 1910, 280,515); Amsterdam, 568,130 (573,983); Rotterdam, 417,780 (426,888); Utrecht, 118,386 (120,208); Groningen, 76,282 (75,341); Haarlem, 70,299 (69,594); Arnhem, 58,221 (64,168); Leiden, 58,221 (59,114); Nimeguen, 55,828 (56,035); Tilburg, 50,326 (51,600); Dordrecht, 46,295 (46,862); Maastricht, 37,502 (37,653); Leeuwarden, 36,511 (37,014); Delft, 34,234 (34,388); Breda, 27,976 (27,445). In 1910 the marriages numbered 42,740; births (including still-births), 175,741; deaths (incl. st. bths.), 86,831; still-births, 6847; excess of births, 88,910; emigrants, 3220.

EDUCATION. Primary instruction is compulsory, and free in the public schools. The state, however, encourages and subsidizes private rather than public elementary instruction, though supplying the latter in districts lacking private schools. In 1908-9 there were 1037 private infant schools with 97,822 pupils (public, 161, with 28,289); 3273 public elementary schools, with 18,049 teachers and 563,438 pupils (1943 private, with 10,568 and 328,208); 334 schools for working people (not free), with 2579 teachers and 33,398 students; 90 middle-class schools, 1456 and 14,207; 30 classical schools, 455 and 2150; 4 public universities, 300 and 3564 (583 females). Special schools are numerous; and there is a private university with (1908-9) 168 students. The percentage of illiteracy in the 1909 conscripts was 1.4 (in 1875, 12.3). State expenditure (1908) on education £2,207,500; communal, £1,340,750.

AGRICULTURE. The total cultivated area (1909) was 2,408,866 hectares (arable land, 867,178; pasture, 1,206,491; gardens and orchards, 75,501; forest, 259,696); uncultivated (heath), 548,880; inland waters and morass, 124,008; dykes and roads, 5711; untaxed land, 78,224; building and other lands, 47,293. Area under cereals follows, with yield, for two years (1911 preliminary), and per hectare in 1910:

	1000 hectares		1000 quintals		Qs. per ha.
	1910	1911	1910	1911	
Wheat	55	57	1,190	1,537	21.7
Rye	225	225	3,842	4,423	17.3
Oats	141	132	2,924	2,687	20.7
Barley	28	28	675	798	24.0

A livestock census taken in June, 1910, shows 2,026,943 cattle (1,690,463 in 1904), 1,259,844 hogs (861,840), 889,036 sheep (606,785), 327,377 horses (295,277), and 224,231 goats (165,497). (The 1904 figures relate to December.) The growing of bulbs and the manufacture of cheese for export are important industries. See AGRICULTURE.

OTHER INDUSTRIES. Output of coal from the state mines (1909), 1,120,852 metric tons, valued at 7,355,000 guilders. Distilleries in 1909, 482; sugar refineries, 11; beet sugar refineries, 28; salt works, 33; breweries, 444; vinegar manufactories, 74. The herring catch (North Sea) was valued (1909) at 11,207,618 guilders; oyster catch, 2,816,596 kilos. Vessels engaged in all fisheries (1909), 5366, carrying 20,378 persons.

COMMERCE. The special trade, great classes and totals, is given below in thousands of guilders for two years (C. & B.=coin and bullion):

	Imports		Exports	
	1909	1910	1909	1910
Foodstuffs .	776,700	843,100	754,100	822,200
Raw mat'ls.	1,141,400	1,273,000	838,900	921,000
Mfrs.	508,300	572,700	442,900	508,400
Misc.	681,300	544,000	411,900	365,800
Tot. mdse.	3,107,700	3,232,800	2,447,800	2,617,400

Total ...	3,137,400	3,265,200	2,454,700	2,632,300

A few duties of a fiscal character are levied, the Netherlands being otherwise a free-trade country. Vessels entered (1910), 1271 sailing, of 1,131,694 cubic meters (Dutch, 748, of 323,811); 13,603 steam, of 38,585,928 (Dutch, 3545, of 10,385,550). Cleared, 1535 sailing, of 1,412,102 cubic meters (Dutch, 888, of 442,291); 14,723 steam, of 44,429,824 (Dutch, 3665, of 11,526,449). Merchant marine, January 1, 1910: 764 vessels, of 1,512,046 cubic meters (steam 324, of 1,382,369).

COMMUNICATIONS. Railways in operation January 1, 1911, 3234 kilometers. State telegraph lines, 7526 kilometers; wires, 36,883; offices, 1392 (state, 1041). Telephone wires, 161,515 kilometers urban, 66,380 inter-urban. Railway receipts and expenditure (1909), 57,539,000 and 50,304,000 guilders respectively; state telegraph, 2,529,000 and 3,943,000; post office, 15,176,000 and 13,083,000; telephone (inter-urban and international), 1,090,000 and 1,527,000.

FINANCE. The monetary unit is the guilder (or florin), worth 40.2 cents. In the table following, budget estimates for three years are given:

	1910	1911	1912
Revenue	188,326,473	194,237,010	202,068,215
Expenditure	207,187,206	213,756,101	222,017,863

Final figures for 1909 place the revenue at 190,789,054 guilders (ordinary, 188,783,954); the expenditure at 197,229,209 (war, 46,737,505; debt, 36,358,529; public works, 13,069,857; general, 101,063,318). The principal items of the budget for 1912 are as seen below:

Revenue	1000 gl.	Expenditure	1000 gl.
Excise	59,630	Int. adm'n'tion...	39,711
Direct taxes ...	47,433	Public debt	37,843
Stamps, etc.	29,500	Interior (dept.)...	37,137
Posts	16,688	War	30,299
Customs	13,825	Finance, etc.	29,080
Telegraphs, etc...	4,573	Navy	20,365
Railways	4,188	Justice	10,964
Pilot dues	3,300	Agriculture, etc...	10,876
Domains	1,652	Colonial Office ...	2,714
Lottery	655	Foreign Affairs...	1,265
Mine duties	85	Civil list	945
Misc.	20,474	Cabinet, etc.	768
Total	202,068	Misc.	50
Total	202,068	Total	222,018

The public debt stood (1912) as follows: 1,163,237,700 guilders capital, 32,462,363 interest; amortization, 5,381,000.

NAVY. The effective naval strength at the end of 1911 was as follows: 9 armored and 6 protected cruisers (66,431 aggregate tons), 3 armored coast-defense vessels (8713), 3 river gunboats (1144), 11 gunboats (2965), 2 torpedo-boat destroyers (about 900) for the colonies, 30 torpedo boats (3250), and 9 additional for the colonies, 2 mine layers and 1 for the colonies, and 2 submarines.

Two destroyers (*Fret and Wolf*) for service in the Dutch East Indies (displacement 415 tons) were completed in 1911 and two more were building. A submarine was launched January 30, 1911, and completed within the year; and another was ordered. Personnel (including the marine infantry), 11,000 officers and men.

ARMY. The army of the Netherlands is really

a national militia in which recruits serve for short enlistments. Every citizen is liable for 15 years service, 8 of which is spent in the militia and 7 in the landwehr. In practice an annual contingent of about 17,500 is obtained by lot in addition to a certain number of men secured by voluntary enlistment. The field army as permanently organized would mobilize with 4 divisions, including all arms of the service, each division consisting of 423 officers, 18,333 non-commissioned officers and men, 2544 horses and 561 wagons.

The war budget for 1912 was raised on July 1, 1911, to 30,299,000 guilders and provided for a total effective strength as in the following table:

	Officers	Men
Active army	2,025	21,558
Reserve	729	104,536
Cadre reserve	1,368
Landwehr	426	50,235
Total	3,180	177,694

This table shows an increase of 5000 men over the year 1910. Compared with the budget of 1911 there is an increase of 2,284,090 francs for the improvement of the officers' pay. The improvement of the fortifications about Amsterdam was provided for in the allowances. A royal decree of October 6, and a ministerial circular of November 9, in reference to the contingent for 1912, preserved the arrangement of 1911 as follows: 17,500 men, of whom 12,300 (including 400 for the navy) were to serve eight months and a half, and 5200 are to serve four months.

GOVERNMENT. The sovereign (in 1911, Queen Wilhelmina) is the executive and acts through a responsible ministry. The States-General, consisting of an upper or first chamber of 50 members, and a second chamber of 100 directly elected deputies, is the legislative body. The ministry (1911) constituted February 12, 1908, was as follows: Minister of the Interior, Dr. Th. Heemskerk; Foreign Affairs, Jhr. Dr. R. de Marees van Swinderen; Finance, Dr. M. J. C. M. Kolkman; Justice, Dr. E. R. H. Regout; War, Capt. H. Colijn; Marine, Vice-Admiral J. Wentholt; Internal Administration, Dr. L. H. W. Regout; Agriculture, Industry, and Commerce, A. S. Talma; Colonies, J. H. de Waal Malefijt.

HISTORY. A Customs Tariff Amendment bill was submitted by the government to Parliament early in April. This left coal, ore, wheat, yarn, and certain other raw materials duty free, but subjected to an import duty of 3 to 6 per cent. ad valorem, half-finished articles, and taxed nearly finished articles 10 per cent., and wholly finished articles 12 per cent. The measure gave the government power of retaliation when necessary. The revenue from it was estimated at 10,000,000 florins, of which 9,000,000 were to be annually applied to provisions for old age pensions. The Coast Defense bill took up much of the time of the States-General. This scheme, involving a heavy expenditure for the renewal of the coast defenses, including the fortification of Flushing, caused much comment in the European press. Some regarded it as the result of Germany's pressure to secure the coast against Great Britain in the event of a war between that country and Germany. The fact that the

bill made no provision for the defense of the eastern frontier was regarded as significant. The Dutch foreign minister, however, denied any interference in Dutch internal affairs on the part of any foreign power.

NETTLETON, ALFRED BAYARD. An American soldier, journalist, and author, died August 11, 1911. He was born in Berlin, Delaware county, O., in 1838, and attended Oberlin college 1858-61. Before he had finished his college course he enlisted in the federal army and served throughout the Civil War, rising to the rank of brevet brigadier-general, which he was given for gallant and meritorious service. He took part in seventy-two battles and minor engagements during the war. At the close of the war he studied law and in 1867-1868 was editor of the Sandusky Daily Register. In the following year he became publisher of the Chicago Advance. From 1870 to 1875 he was associated with Jay Cooke in the projection and construction of the Northern Pacific Railroad. He was for the year following editor of the Philadelphia Inquirer, and then for three years engaged in mining and manufacturing. In 1880 he founded the Minneapolis Daily Tribune, of which he remained editor until 1885. From 1884 to 1889 he was assistant secretary of the United States Treasury and was acting secretary for several months following the death of Secretary Windom. In 1909 he retired from business to do literary work. He was the author of *Trusts or Competition?* (1900), and of many pamphlets and magazine articles.

NEVADA. POPULATION. The Thirteenth Census showed a population in 1910 of 81,875, as compared with 42,335 in 1900, an increase of 93.4 per cent. in the decade. The only city of considerable size in the State is Reno, with a population in 1910 of 10,867.

AGRICULTURE. The acreage, production, and value of the leading crops in 1910 and 1911 were as follows:

	Acreage	Prod., bu.	Value
Corn1911	1,000	30,000	\$27,000
.....1910	1,000	30,000	30,000
Wheat1911	36,000	1,018,000	968,000
.....1910	30,000	795,000	866,000
Oats1911	8,000	360,000	223,000
.....1910	7,000	313,000	197,000
Potatoes ..1911	8,000	1,280,000	1,197,000
.....1910	6,000	900,000	720,000
Hay1911	254,000	a 864,000	8,208,000
.....1910	231,000	785,000	8,478,000

a Tons.

MINERAL PRODUCTION. The State is one of the largest producers of gold and silver. In the production of the former the State ranked third in 1910, being surpassed only by California and Colorado. In that year the output was 913,015 fine ounces, valued at \$18,873,700. The production of silver in 1910 was 12,366,000 fine ounces, valued at \$6,677,600. This was the largest amount of silver produced in any State in that year. The output of gold in 1911, according to the preliminary figures of the Director of the Mint, was 917,605 fine ounces, valued at \$18,968,578. This was almost precisely the value of the product of 1910. The silver produced in 1911 was 10,651,571 fine ounces, valued at \$5,858,364, a considerable decrease from the product and value of 1910. In 1911 Nevada lost place in the production of silver as its output was surpassed by that of Utah and Montana.

The State produces a considerable amount of copper. The output in 1910 was 64,494,640 pounds, as compared with 53,849,281 pounds in 1909. The increase was entirely from the Ely district in White Pine county. In this district is produced practically all the copper mined in the State.

The output of copper in the State in 1911 showed a slight increase over the production of 1910. The main production as in the previous years was in the Ely district by the Nevada Consolidated Copper Company. The smelting plant of this company was remodeled for the use of oil as fuel instead of coal.

MANUFACTURES. Statistics relating to the manufactures of the State were included in the Thirteenth Census, taken in 1910. These figures cover the calendar year 1909. The results will be found summarized in the table below. As will be seen from this table, the State has a small number of manufacturing establishments and they are not of great individual importance. The largest number of men in any one industry are employed in the car shops of railroad companies. These number 818. Second in point of numbers were the lumber and timber products, and third, printing and publishing. Of the total number of persons engaged in the manufacturing industries, 8.8 per cent. were proprietors and officials, 6 per cent. clerks, and 85.2 per cent. wage earners.

The following table gives a summary of the results of the census for the calendar years 1909 and 1904, with per cent. of increase 1904-9:

	Number or amount 1909	1904	In- crease
Number of establishments	177	115	53.0
Persons engaged in manufactures	2,650	1,016	160.8
Proprietors and firm members	137	108	26.9
Salaried employees	256	160	141.5
Wage earners (average number) ..	2,257	802	181.4
Primary horsepower ..	7,765	2,334	174.0
Capital	\$ 9,807,000	\$2,892,000	239.1
Expenses	11,082,000	2,632,000	321.0
Services	2,360,000	819,000	188.2
Salaries	378,000	126,000	200.0
Wages	1,982,000	693,000	186.0
Materials	8,366,000	1,628,000	413.9
Miscellaneous	356,000	185,000	92.4
Value of products	11,887,000	3,096,000	283.9
Value added by manufacture (value of products less cost of materials)	3,521,000	1,468,000	139.8

EDUCATION. In 1910 there were in the State 12,319 children of school age. Of these 6375 were boys and 6060 girls. Special attention was given during the year to securing teachers who were better qualified. More than \$250,000 was expended in 1909-10 for new school buildings in Reno, Elko, Ely, and other towns of the State. There has been noted an increased attendance in high schools. Over 800 pupils are doing high school work in the State, as compared with 600 in 1908.

FINANCE. The total receipts for the fiscal year 1911 amounted to \$994,882, and the disbursements to \$1,128,347. On January 1, 1911, there was a balance on hand of \$655,531, and on December 31, 1911, a balance of \$522,065.

CHARITIES AND CORRECTIONS. The charitable and correctional institutions of the State included the Orphans' Home, the State Prison, and the Hospital for Mental Diseases.

POLITICS AND GOVERNMENT

Aside from the meeting of the State legislature there was little of political importance in the State during the year. The most important measures passed at the session are noted in the paragraph *Legislation*, below. On January 24 the legislature reflected George S. Nixon to the United States Senate. The election of Senator Nixon is unusual, in that he is a Republican, while the legislature which elected him was Democratic on joint ballot. Senator Nixon received a majority of the popular vote for the nomination in November, 1910, in spite of the fact that the legislature elected at that time was Democratic. In accordance with the registered will of the people he was chosen senator. On March 14 the Senate adopted a measure submitting to the people the question of woman suffrage.

LEGISLATION. The important measures passed at the legislative session of 1911 included the following: Provision was made for a new policy in the penal system of the State, including the employment of convict labor on the public roads and highways. A State bureau of industry, agriculture, and irrigation was created. The duty of this commission is to study the industrial problems of the State, to conduct experiments in reclamation, to supervise the operations of the State statute supplementing the federal Carey act, to advertise the State in all proper ways, and generally to promote industry, agriculture, and irrigation. An act was also passed supplementing the federal Carey act. This is designed to stimulate the reclamation of public lands in the State. The powers and duties of the State mine inspector were enlarged. Compulsory school education between the ages of 8 and 16 years was provided for. A comprehensive measure was enacted regulating banks, banking, and other matters relating thereto. It is made unlawful to persuade workmen to come into the State or to change from one place to another in the State through false representations concerning the kind or character of the work to be done or the compensation to be paid, or sanitary or other conditions of their employment, or as to the existence or non-existence of strikes or other labor troubles. The power of the State Railroad Commission was enlarged, making that commission ex officio a public service commission for the regulation and control of certain public utilities. The existing primary law of the State was elaborately amended. A workmen's compensation law was enacted, and a juvenile court was created.

STATE OFFICERS: Governor, T. L. Oddie; Lieutenant-Governor, G. C. Ross; Secretary of State, George Brodigan; Treasurer, William McMillan; Comptroller, Jacob Eggers; Superintendent of Public Instruction, J. E. Bray; Attorney-General, C. H. Baker—all Democrats, except Oddie, Eggers, and McMillan, Republicans.

JUDICIARY. Supreme Court: Chief Justice: James G. Sweeney, Dem.; Justices, George F. Talbot, Dem.; Frank Norcross, Rep.; Clerk, Joe Josephs, Dem.

STATE LEGISLATURE, 1911: Senate, Democrats, 13; Republicans, 7; House, Democrats, 24; Republicans, 25; joint ballot, Democrats, 37; Republicans, 32; majority, Senate, Democrats, 6; House, Republicans, 1; joint ballot, Democrats, 5.

The representatives in Congress will be found in the article UNITED STATES, *Congress*.

NEVIUS, HENRY M. An American lawyer and soldier. He was born in Monmouth, N. J., in 1841 and received an academic and high school education in Freehold, N. J., and Grand Rapids, Mich. He served throughout the Civil War as private, second and first-lieutenant. While serving in the last named rank he lost an arm in front of Washington. He was honorably discharged in 1865. He engaged in the insurance business and held several government appointments. He was admitted to the bar in 1873 and practiced at Freehold and Red Bank, N. J. He served from 1888 to 1890 in the New Jersey Senate. In the last year he was president. He was appointed judge of the Circuit Court of Hudson county in 1896, serving until 1903. During 1904-8 he was prosecuting attorney of Monmouth county. He was elected commander-in-chief of the Grand Army of the Republic in 1908.

NEWARK, N. J. See BUILDING.

NEW BEDFORD, MASS. PUBLIC LIBRARY. See LIBRARY PROGRESS.

NEW BRUNSWICK. A maritime province of the Dominion of Canada. Area, 27,985 sq. miles. Population (final returns, census of 1911, 351,889). Capital, Fredericton (population, 1911 preliminary, 7208). The executive authority rests in a lieutenant-governor (in 1911, Lemuel John Tweedie, appointed March 2, 1907) appointed by the governor-general of Canada and acting through an executive council (responsible ministry) and a unicameral legislative assembly of 44 members elected for four years. Premier in 1911, J. K. Flemming.

Early in the spring the discovery of natural gas and oil was reported near the town of Moncton. The supplies of natural gas were said to be very abundant and of exceptionally high grade. The oil was tested by experts who declared it to be equal to the best lubricating oil. Arrangements were made for piping the gas to Moncton, an important railway centre.

NEW CALEDONIA. A Melanesian island, constituting with its dependencies a French colony. Area, 7650 sq. miles. Population (1906), 55,886 (penal population, 7034); 1911 census, 50,680. Capital, Nouméa, with (1901) 6968 inhabitants. There are primary schools and a college at Nouméa. The state domain, the penal settlement, and the native reserve make up the settled area; more than half the country is wild and uncultivable. Coffee, corn, tobacco, sugar, grapes, manioc, and pineapples are raised, besides wheat, rubber, and cotton on a small scale. Value of mineral output (1909), 3,623,254 francs. The mines produced nickel ore (79,995 metric tons), cobalt ore (748), chrome ore (32,136), copper ore (8), and iron ore (10). Imports (1909), 9,418,645 francs; exports, 7,714,958. Vessels entered (1909), 102, of 155,944 tons; cleared, 99, of 144,200. A railway of 90 miles (Nouméa to Bourail) is under construction; 10 miles are completed. Telegraphs, 580 miles; telephone, 115; post offices, 40. Revenue and expenditure balanced (1909) at 3,588,000 francs; debt, January 1, 1910, 10,361. French expenditure (budget of 1911), 3,220,472 francs (1,533,700 for the penal settlement). Governor (1911), J. Richard.

Administratively dependent on New Caledonia

are the ISLE of PINES (area, 58 sq. miles, pop. about 600); the WALLIS ARCHIPELAGO (40 sq. miles; about 4500 inhabitants); the LOYALTY ISLANDS (800 sq. miles); the HUON ISLANDS, almost barren; FUTUNA and ALOFI (about 1500 inhabitants).

NEWCOMB, HORATIO VICTOR. An American capitalist and railway official, died November 2, 1911. He was born in Louisville, Ky., in 1844. While still a young man he engaged in the coffee business in that city with his uncle. Following this he went to England, where he finished his education. When he was about thirty years of age he succeeded his father as president of the Louisville & Nashville Railroad. He showed his ability in railroad administration by organizing a belt line system connecting the terminals of thirteen railroads. In 1881 he became president of the Louisville & Nashville road and removed to New York. He at once took a leading place in official circles in that city. Among his enterprises was the organization of the United States National Bank. Of this bank he was president for fourteen months, when he was obliged to resign on account of ill health. He developed mental trouble and was confined in a sanitarium until 1895, when he was released as cured. Four years later he was again taken to the sanitarium, from which he was released as a result of legal measures in 1901.

NEW ELEMENTS. See CHEMISTRY.

NEWFOUNDLAND. An island lying off the northeast coast of North America; the oldest British colony. Capital, St. John's. The island has an area of 42,734 sq. miles, and a population (end of 1909) of 234,588. The part of Labrador dependent on Newfoundland covers 120,000 sq. miles and has 4026 inhabitants. St. John's had (1901) 31,501 inhabitants; Harbour Grace, 5184. Birth rate (1900) 30.01, death rate 15.43 per thousand. Immigrants (1909), 793; emigrants, 5457. Between forty and forty-five thousand children attend the various schools.

Fishing and agriculture are the important industries. Total value of fisheries products (1910), \$9,578,984. Unexploited mineral deposits of great wealth exist. The pulp and paper mills at Great Falls are among the most extensive and best equipped in the world.

Trade and finance statistics are given below for three years:

	1907-8	1908-9	1909-10
Imports	\$11,516,111	\$11,402,337	\$12,799,696*
Exports	11,815,769	10,848,913	11,824,997†
Revenue	2,829,019	2,947,869	3,447,989
Expenditure ..	2,785,835	2,947,869	3,137,775

* Flour, textiles, provisions, coal, kerosene and other oils, machinery, molasses, hardware, leather, and animals. † Codfish, \$6,544,604; copper ore, iron pyrites, etc., \$1,363,576; cod, whale, and seal oils, \$1,299,047; sealskins, \$460,222; tinned lobsters, \$337,835.

Great Britain furnished imports and received exports valued at \$2,940,401 and \$1,824,235 respectively.

Public debt, June 30, 1910, \$22,943,197. Governor (1911), Sir Ralph Champneys Williams. Premier, Sir Edward Morris.

Difficulty arose in the beginning of 1911 over the demand of the Americans to purchase herring cargoes at Placentia Bay. The attitude of

the government was said to be adverse to any concessions to the Americans unless they were ready to make reciprocal concessions. The execution of the fisheries treaty of 1908 was brought to a standstill by the action of the United States Senate. The treaty provided for the drafting of regulations concerning fishing rights in the internal waterways by a committee. The committee drew up the regulations, but they were so changed by the United States Senate that Canada would not accept them, and in September declared that she would withdraw altogether from the treaty.

NEW GUINEA. An island (the largest) of the East Indies, divided into British, Dutch, and German dependencies. See **DUTCH EAST INDIES**; **GERMAN NEW GUINEA**; **PAPUA**.

NEW HAMPSHIRE. POPULATION. The Thirteenth Census showed a population in the State in 1910 of 430,572, compared with 411,588 in 1900, an increase of 4.6 per cent. in the decade. The principal cities, with their population in 1910 and 1900 are as follows (the figures in parentheses are for 1900): Manchester, 70,063 (56,987); Nashua, 20,005 (23,898); Concord, 21,497 (19,362); Berlin, 11,780 (8886); Portsmouth, 11,269 (10,637).

MANUFACTURES. The Thirteenth Census included statistics of manufactures in the State. These are for the calendar year 1909. The chief results are given in the table below. The greater number of the manufacturing establishments are located in the southern part of the State, which possesses marked advantages for manufacturing, among which are an abundance of water power afforded by the Merrimac River, close proximity to the markets and business centres of New England and excellent transportation facilities. The industry whose products had the largest value in 1909 was that which included boots and shoes with cut stock and findings. In this there were 68 establishments, employing 14,211 wage earners. The value of the product was \$39,440,000. Next in point of value was the product of industries connected with cotton goods, including cotton small wares. There were 21 such establishments, employing 22,290 wage earners, and turning out a product valued at \$33,602,000. The industry connected with the manufacture of woolen, worsted, and felt goods, and wool hats numbered 39 establishments, employing 9486 wage earners, and turning out a product valued at \$16,731,000; lumber and timber products, 589 establishments, employing 8464 wage earners, with a product valued at \$15,284,000; paper and wood pulp industry, 34 establishments, employing 3413 wage earners, with a product valued at \$13,094,000; foundry and machine shop products, 81 establishments, employing 2396 wage earners, with a product valued at \$4,947,000; hosiery and knit goods, 21 establishments, employing 3129 wage earners, with a product valued at \$4,764,000; flour-mill and grist-mill products, 105 establishments, employing 116 wage earners, with a product valued at \$3,187,000; marble and stone work, 99 establishments, employing 1527 wage earners, with a product valued at \$1,818,000. Other industries whose product was valued at more than \$1,000,000 and less than \$2,000,000 were malt liquors, furniture and refrigerators, tobacco manufactures, and printing and publishing. The total number of persons en-

gaged in the manufactures of the State was 84,191, of whom 58,925 were male and 25,267 were female. The largest number of persons were employed in the manufacture of cotton goods. The great majority of the wage earners employed in the manufacturing industries of the State worked from 54 to 60 hours per week, or from nine to ten hours a day. Only 7 per cent. of the total worked less than nine hours a day. In 1909 1122 industries were owned by individuals, 396 by firms, and 424 by corporations. These included only the most important of the industries. The following table gives the summary of the results of the census for the calendar years 1904 and 1909, with per cent. of increase.

	Number or amount 1909	1904	In- crease
Number of establishments	1,961	1,618	21.2
Persons engaged in manufactures	84,191	69,758	20.7
Proprietors and firm members..	2,014	1,726	16.7
Salaried employees	3,519	2,666	32.0
Wage earners (average number)	78,658	65,366	20.3
Primary horsepower	293,991	218,344	34.6
Capital	\$139,990,000	\$109,495,000	27.8
Expenses	149,215,000	112,888,000	32.2
Services	40,391,000	30,665,000	31.7
Salaries	4,191,000	2,972,000	41.0
Wages	36,200,000	27,693,000	30.7
Materials	98,157,000	73,216,000	34.1
Miscellaneous	10,667,000	9,007,000	18.4
Value of products..	164,581,000	123,611,000	33.1
Value added by manufacture (value of products less cost of materials.	66,424,000	50,395,000	31.8

AGRICULTURE. The Thirteenth Census, taken in 1910, included the statistics of agriculture in the State. The figures given are of date of April 15, 1910. On that date the number of farms in the State was 27,053, as compared with 29,324 in 1900, a decrease of 7.7 per cent. The land in farms in the State amounted to 3,249,438 acres, as compared with 3,609,864 acres in 1900. The improved land in farms amounted to 929,185 acres. The average number of acres per farm was 120. The value of farm property on April 15, 1910, was \$103,704,196, as compared with a value in 1900 of \$85,842,096, an increase of 20.8 per cent. in value. The average value of land per acre was \$13.70 in 1910, as compared with \$9.83 in 1900. The average value of the farms in the State in 1910 was \$3800. The farms operated by owners and managers numbered 25,174; by tenants, 1879. The total number of farms decreased 2271 in the decade from 1900 to 1910. Of the farms operated by owners, those free from mortgage in 1910 numbered 18,119; mortgaged farms, 6234. Of the total number of farms owned, 24,347 were owned by native white farmers, 2691 by foreign-born white farmers, and 15 by negro and other non-white farmers.

The value of the domestic animals, poultry, and bees on the farms in the State on April 15, 1910, was \$11,910,478. There were 167,831 cattle, valued at \$5,240,122; 46,229 horses and colts, valued at \$5,266,389; 195 mules, valued at \$29,681; 45,237 swine, valued at \$504,174, and 43,772 sheep and lambs, valued at \$192,346. The various kinds of poultry numbered 924,859, valued at \$649,121. The acreage, production, and value of the principal crops in 1910 and 1911 are shown in the following table:

	Acreage	Prod., bu.	Value
Corn1911	23,000	1,035,000	\$849,000
.....1910	22,000	1,012,000	698,000
Oats1911	12,000	406,000	248,000

EDUCATION. The total number of children between the ages of 5 and 16 in the State in 1909 was 37,575 boys and 37,349 girls. The average attendance in 1910 was 50,101. The number of public schools was 2113, graded schools, 1255, and high schools, 65. The average salary of teachers per month was \$52.78.

The State encourages by financial assistance the growth of a specially trained corps of teachers and professional supervision of schools. It guarantees every child an education in a high school or academy of college preparatory grade, or the equivalent. The State government also guarantees the academic efficiency of all secondary institutions. High schools and academies are rapidly opening their doors to higher education in agriculture, in the domestic and mechanic arts, and in commerce, but no school is allowed to undertake such lines of work unless it can first show a faculty specially trained for the work which it undertakes. The State stands well toward the head of the list of States, if not indeed at the very top, in the proportion of its pupils who complete the entire round of public schooling, from the primary school through high school, and later through college.

The State makes a large appropriation, calculated to stimulate purely rural communities, in the direction of more efficient public schools. This appropriation has been increased nearly 300 per cent. in the last five years. As an actual result, it is not uncommon to find a remote country town of excellent agricultural possibilities, but as yet sparsely settled, possessing a central schoolhouse, to which all the children in the township are conveyed in comfortable barges, where they are under the instruction of specially trained teachers, who are themselves supervised by a specially trained superintendent of schools, who gives his entire time to the work.

FINANCE. The total receipts for the fiscal year 1911 amounted to \$2,612,077 and the disbursements to \$2,707,535, leaving a balance on hand at the end of the year of \$283,987. The indebtedness of the State at the end of the fiscal year was \$463,867.

CHARITIES AND CORRECTIONS. The charitable and correctional institutions of the State, with their population, August 31, 1911, are as follows:

State hospital for insane, 489 male, 449 female, total, 938; State prison, 176 male, 2 female, total, 178; industrial school, 114 male, 32 female, total, 146; school for feeble-minded, 90 male, 90 female, total, 180; State sanatorium (tuberculosis), 18 male, 18 female, total, 36; almshouse population for the year ending August 31, 1911, 1173 male, 774 female, total, 1947; houses of correction, 1387 male, 89 female, total, 1476; county jails, 686 male, 39 female, total, 725.

The legislature of 1911 enacted many laws for the advancement of charities, correction, and general welfare of the State.

An appropriation of \$20,000 for each of the next two years was made for the treatment, in such sanatoria as have been approved by the State board of health, of indigent persons afflicted with tuberculosis in advanced stages, the board of charities and correction to have power to engage free beds for such persons.

POLITICS AND GOVERNMENT

The most important political events of the State during 1911 related to the session of the legislature, January 4 to April 15; the most notable measures enacted are mentioned in the paragraph *Legislation* below.

The platform of both parties in the campaign of 1910 demanded progressive legislation of a definite character. There had been no contest in the Democratic primaries which renominated Clarence E. Carr, but in the Republican primaries there had been an earnest contest between Robert P. Bass, the candidate of the progressive faction, and Col. Bertram Ellis, supported by the old machine leaders, including the members of the congressional delegation. Mr. Bass won, receiving about twice as many votes as his opponent. At the subsequent State convention the issues advocated by the progressive faction were written into the platform without opposition.

In his inaugural message Governor Bass called attention to the progressive legislation promised in the platforms of both parties, and reminded the legislators that they were bound in honor to do all in their power to carry out those pledges. Measures fully meeting all of the promises of the majority party became law except two—one providing that delegates to national party conventions should be elected by direct primaries, and the other a ratification of the proposed constitutional amendment authorizing Congress to impose a tax on incomes. Such bills passed the house, but failed in the senate, the latter by a close vote, the governor sending a special message urging affirmative action. The divisions on these questions were not along party lines.

A question that overshadowed all others before the legislature was focused in a bill of the Boston & Maine Railroad repealing clauses of acts of 1883 and 1889, forever forbidding the raising of fares and freights on railroad lines which were authorized to unite or consolidate, over those then in effect, if such union or consolidation was made. By virtue of such legislative authority, the Boston & Maine had come into control of practically all the railroad mileage of the State. In 1908 R. W. Pillsbury, who had been prominent in an agitation for legislation to reform the abuses in politics practiced by corporations, formally complained to the attorney-general that in 1903 certain freight rates had been advanced beyond such legal limit, and were being collected, and asked that the railroad be enjoined from such collections. The attorney-general brought action, but before the matter was finally determined by the court the railroad managers publicly declared their purpose to restore the rates of 1883 and 1889, unless the legislature should grant relief. A special legislative committee began an investigation, but as it developed the

time of the ordinary session was too short to make it thorough, the rates now in force were validated for the period from January, 1910, to July, 1913, and the subject referred to the new public service commission to investigate and report prior to the assembling of the legislature in January, 1913. The legislature also passed an act looking to the purchase of the Crawford Notch in the White Mountains, appropriating \$100,000 therefor.

LEGISLATION. Among the important measures passed at the legislative session of 1911 were the following: Acts were passed subjecting the State trust and banking companies to a stricter supervision by the State bank commissioner; corporations are prohibited from making contributions to political campaign funds; a measure was passed requiring publication of the names of all contributors to campaign funds and the amount given by each. In prosecutions for bribery no witness is to be excused because his testimony would tend to incriminate him, but in such a case he is not to be prosecuted. An important employers' liability act was passed, by the terms of which the employer is made liable for the negligence of other employees. The State board of public health was authorized to prohibit the use of common drinking cups in public places. A public service commission, to succeed a railroad commission, was created, with powers similar to those conferred by the New Jersey law. Enactments also provided for a tax commission, to succeed a board equalization; a registration fee for automobiles graded by horsepower; the filing by candidates of sworn statements of campaign expenses and receipts before and after the election. See **CHILD LABOR**; and **ARBITRATION AND CONCILIATION, INDUSTRIAL**.

STATE OFFICERS. Governor, Robert P. Bass; Secretary of State, Edward N. Pearson; Treasurer, Solon A. Carter; Auditor, Frank A. Musgrove; Adjutant-General, Herbert E. Tutherly; Attorney-General, Edwin G. Eastman; Superintendent of Education, Henry C. Morrison; Commissioner of Agriculture, Nahum J. Bachelder; missioner of Insurance, George H. Adams—all Republicans.

JUDICIARY. Supreme Court: Chief Justice, Frank N. Parsons, Rep.; Associate Justices, Robert J. Peaslee, Dem.; Reuben E. Walker, Rep.; John E. Young, Rep.; George H. Birgham, Dem.; clerk, A. J. Shurtleff, Rep.

STATE LEGISLATURE, 1911. Senate, Republicans, 16; Democrats, 8. House, Republicans, 218; Democrats, 174. Joint ballot, Republicans, 234; Democrats, 182. Republican majority—Senate, 8; House, 44; joint ballot, 52.

The representatives in Congress will be found in the article **UNITED STATES**, section *Congress*.

NEW HEBRIDES. A group of Melanesian islands, under the joint administration of France and Great Britain, with an area of 5166 sq. miles; population, 70,000. The islands are governed by the French and English high commissioners for the Pacific, acting through resident commissioners. French resident commissioner (1911), M. Noufflard (M. Repiquet, acting); English, M. King. The imports are estimated at about £53,000, and the exports at £43,000. Joint expenditure (1908), £30,060.

The debate on the colonial estimates in the French Chamber brought out a complaint of the former governor-general of Madagascar in regard

to the course taken by the Presbyterian missionaries in the New Hebrides. They were accused of having established a state of their own within the state and of combating French influence. In certain parts of the islands they had assumed administrative powers and established their own courts and prisons, thus violating the Anglo-French *condominium*. The critic pointed to the superiority of the British administrative service in the islands and declared that the French administration ought to be improved. The minister for the colonies declared his intention to enforce strictly the labor regulations in the islands.

NEW JERSEY. POPULATION. The Thirteenth Census showed a population in the State in 1910 of 2,537,167, compared with 1,883,669 in 1900, an increase of 34.7 per cent. in the decade. The principal cities with their population in 1910 and 1900 are as follows (the figures for 1900 are in parentheses): Newark, 347,469 (246,070); Jersey City, 267,779 (206,432); Paterson, 125,600 (105,171); Trenton, 96,815 (73,307).

AGRICULTURE. The Thirteenth Census, taken in 1910, included statistics of agriculture. These statistics are of date of April 15, 1910. According to these statistics there were on that date 33,487 farms in the State, as compared with 34,650 in 1900. The land in farms amounted to 2,573,557 acres, and the improved land in farms to 1,803,336 acres. The average acreage per farm was 76.9 acres. The total value of farm property, including land, buildings, implements, machinery, domestic animals, poultry, and bees, was \$254,832,665, as compared with a value of \$189,533,660 in 1900. The average value of all property per farm was \$7610; of land per acre, \$48.23. Of all the farms, 25,193 were operated by owners and managers, and 8294 by tenants. Of the farms operated by owners 11,983 were free of mortgage and 11,793 mortgaged. Of those owning and operating farms, 26,796 were native whites, 6215 were foreign-born whites, and 476 were negroes and other non-whites. The value of the various kinds of domestic animals and of poultry and bees was \$24,558,639, as compared with a value of \$17,612,620 in 1900. The cattle numbered 222,999, valued at \$8,393,117; horses and colts, 88,922, valued at \$12,012,512; mules, 4041, valued at \$621,774; swine, 147,005, valued at \$1,127,040; sheep and lambs, 30,683, valued at \$161,138. The fowls of all kinds numbered 2,597,448, valued at \$2,221,610. The acreage, production, and value of the principal crops in 1910 and 1911 will be found in the following table:

		Acreage	Prod., bu.	Value
Corn1911	270,000	9,936,000	\$7,055,000
1910	267,000	9,612,000	5,767,000
Wheat1911	84,000	1,462,000	1,404,000
1910	84,000	1,554,000	1,523,000
Oats1911	71,000	2,024,000	1,012,000
1910	72,000	2,671,000	1,175,000
Rye1911	72,000	1,181,000	980,000
1910	74,000	1,332,000	1,026,000
Potatoes	..1911	84,000	6,132,000	6,439,000
1910	87,000	9,135,000	5,938,000
Hay1911	428,000	4,449,000	9,878,000
1910	437,000	656,000	11,939,000

a Tons.

MINERAL PRODUCTION. The iron ore mined in the State in 1910 amounted to 521,832 long tons, valued at \$1,582,213, as compared with 543,720 long tons, valued at \$1,807,003.

The State produces a considerable quantity of zinc. The chief mines are the Mine Hill zinc mines in Sussex county. From these mines were taken 308,353 short tons of zinc in 1910, in addition to 67,324 short tons of crude oil.

EDUCATION. The total number of pupils between the ages of four and twenty enrolled in the schools on June 30, 1910, was 429,797. Of these 217,102 were boys and 212,695 were girls. The total expenditures of the year amounted to \$11,963,279, of which \$8,647,804 was for teachers' salaries. The number of male teachers employed in the State was 1483; female, 10,604. The average salary per year paid to all teachers was \$715.46.

FINANCE. The report of the treasurer for the fiscal year 1911 showed a balance on hand November 1, 1910, of \$4,545,188. The total disbursements during the year amounted to \$9,250,283 and the total receipts to \$8,014,876, leaving a balance on October 31, 1911, of \$3,301,781.

POLITICS AND GOVERNMENT

The political history of the year in New Jersey was of unusual interest, partly on account of the importance of the events themselves and partly because of the prominence of Governor Wilson as a candidate for the presidential nomination in 1912. With Governor Wilson there was elected in 1910 a Republican senate and it was anticipated that he would have difficulty in having measures which he advocated passed by the senators who were politically opposed to him. He was able, however, by force of his personality, to exercise an influence upon Republican senators in sufficient number to pass all the important measures which he proposed to the senate. These measures will be found noted in the paragraph *Legislation* below.

On January 25 the legislature elected James E. Martine United States senator. This was a signal victory for Governor Wilson, who had insisted that Mr. Martine was the proper candidate for the votes of the legislature. The New Jersey direct primary law in force at that time provided for an advisory vote at the primary election on candidates for United States senator. This vote, however, did not in any way bind the legislature. At the primary in the fall of 1910 there were two candidates for the Democratic nomination and three for the Republican nomination. Of the Democratic candidates Mr. Martine received a very large majority of votes. As soon as it was apparent that the new legislature was to be Democratic on joint ballot Governor Wilson declared that the vote for Mr. Martine at the primary made it the duty of the Democratic members of the legislature to vote for him for senator. The governor declared that this action would finally commit the State to the practice of electing to the Senate men indorsed at the polls by the people. Governor Wilson was opposed in this action by James Smith, Jr., who controlled the Democratic organization for the State. Mr. Smith had been formerly a United States senator and was again a candidate for the nomination. He urged that the primary vote for Mr. Martine was only a fraction of the total Democratic vote of the State and this could not be taken as representing the real sentiments of the party. He urged, furthermore, that the vote was only advisory and could not in any way bind the legislature, and finally, that it was unconstitutional for the

people to have anything to do with electing a senator, since that was the function solely of the legislature. Governor Wilson at once set about stirring up public opinion to bear on the legislators. When the two houses met separately to vote for senator, Mr. Martine received 40 votes, which was only one less than was necessary for a choice. Mr. Smith received ten votes. He thereupon withdrew as candidate and on the following day the legislature in joint session elected Mr. Martine by a vote of 47 to 21 for the leading Republican candidate, former Gov. Edward Casper Stokes.

Perhaps the most important measure enacted by the legislature was the so-called Geran bill, which is designed to extend the application of the direct primary law, provide the blanket Massachusetts ballot, and prevent fraud at elections. This bill was passed under the active leadership of Governor Wilson.

The act provides that the members of the election boards who have charge in each district of the registering and polling of voters, must be selected from such party members as have passed a civil service examination. The selection of these members must be made under the supervision of the judges of the Courts of Common Pleas and it must be made by lot. In cases of vacancies in these boards or removals for non-compliance with the law the places shall be filled through appointments by the judges. In presidential primaries provision is made for the election of delegates to national party conventions committed to specific candidates for the presidency. In the election of senators each candidate for the legislature is required to say whether he will or will not vote for the candidate who is nominated at the primaries of his party. All officials, including the governor and congressmen, must be nominated by direct primaries. The State committees of the parties are to be chosen by the members of the parties at the primaries. Party conventions shall consist of the party's legislative candidates its hold-over senators, and in a year when a governor is not to be elected, the governor is a member of his party convention. In years when a governor is elected, the gubernatorial candidates are members of the convention of their own party. Voters may enroll as members of one party or the other, but no voter can change from one party to another at the next succeeding primary. The ballot in use in the primaries must accord with certain specified provisions and in elections it must be a blanket ballot, containing the names of the candidates in alphabetical order, each name being printed but once and being accompanied with party designations.

The new primary law of the State was put into operation for the first time on September 28. The results of the election were diverse. In cases where nominees for legislatures and local officials were nominated, the party organizations were, in the main, successful. In Jersey City, however, both Republican and Democratic organizations were defeated. This is the first instance on record where an organization choice was defeated for the mayoralty of Jersey City. In these primaries were nominated 8 senators and a complete lower house. As a result of the elections held on November 7, 5 Republican and 3 Democratic senators were elected. As the result of a Republican victory in Essex county, the legislature chosen was Republican by a majority of 15 on joint ballot.

This gives control of both houses for the Republicans in 1912.

In addition to the State election on November 7, a number of important municipal elections were held during the year. These were, for the most part, on the question of commission government, which was authorized by the legislature of 1911. On June 13 the voters of Bayonne voted down the plan by 5 majority, and on June 20 it was adopted by Trenton. On June 27 the voters of Hoboken and New Brunswick rejected the commission plan. The vote taken in Jersey city on July 17 resulted in defeat for the commission government, but it carried in Passaic on July 25, and was defeated in Paterson on August 29. Altogether, 6 municipalities adopted the plan and 13 rejected it.

Several investigations for fraud in municipal and State elections were conducted in 1911, and in September it was discovered through the operation of the Geran act that several thousand persons registered fraudulently in Newark in 1910. A grand jury investigated the frauds alleged to have been practiced in Atlantic City, and 16 indictments were returned in August and 10 in September. In October a wealthy merchant and a clerk in the office of the city controller were convicted of buying votes.

LEGISLATION. Among the important measures passed at the legislative sessions of 1911 were the following: Acts prohibiting the publishing of indecent words, and making it a misdemeanor to bribe a duly appointed representative of a labor organization; an act providing for challenging jurors in civil and criminal cases; an act prohibiting the use of common drinking cups; an act regulating the expenditure of campaign funds; a measure creating a board of public utility commission; measures establishing a commission on old-age insurance and pensions, and an act providing for the commission government of cities and towns. Provisions were made for employers' liability and workmen's compensation, and an employers' liability commission was created. For a discussion of the election law passed by the legislature, see above. See **CHILD LABOR**; and **ARBITRATION AND CONCILIATION, INDUSTRIAL**.

STATE OFFICERS. Governor, Woodrow Wilson; Secretary of State, S. D. Dickinson; Treasurer, Daniel S. Voorhees; Auditor, William E. Drake; Comptroller, Edward I. Edwards; Attorney-General, Edmund Wilson; Adjutant-General, Wilbur F. Sadler, Jr.; Superintendent of Education, Calvin N. Kendall; Commissioner of Insurance, Vivian M. Lewis—all Republicans except Woodrow Wilson and Edward I. Edwards.

JUDICIARY. Supreme Court, Chief Justice, W. S. Gummere, Rep.; Justices, Charles W. Parker, Rep.; T. W. Trenchard, Rep.; Samuel Kalisch, Dem.; C. G. Garrison, Dem.; James J. Bergen, Dem.; Willard P. Voorhees, Rep.; James F. Minturn, Dem.; F. J. Swayze, Rep.; Clerk, William Riker, Jr., Rep.

STATE LEGISLATURE, 1912: Republicans, Senate, 11; House, 37; joint ballot, 48. Democrats, Senate, 10; House, 23; joint ballot, 33. Republican majority, Senate, 1; House, 14; joint ballot, 15.

The representatives in Congress will be found in the article **UNITED STATES**, section *Congress*.

NEW MEXICO. POPULATION. The Thirteenth Census showed a population in the State

in 1910 of 327,301, as compared with 195,310 in 1900, a gain of 67.5 per cent. in the decade. The principal cities with their population in 1910 and 1900 are as follows (the figures in parentheses are for 1900): Albuquerque, 11,020 (6238); Roswell, 6672 (2049); Santa Fé, 5072 (5603).

AGRICULTURE. The acreage, production, and value of the leading crops in 1910 and 1911 were as follows:

	Acreage	Prod., bu.	Value
Corn1911	94,000	2,322,000	\$1,950,000
1910	89,000	2,047,000	1,842,000
Wheat1911	55,000	1,262,000	1,262,000
1910	41,000	820,000	820,000
Oats1911	48,000	1,862,000	1,061,000
1910	42,000	1,151,000	714,000
Potatoes ..1911	10,000	800,000	800,000
1910	13,000	611,000	635,000
Hay1911	221,000	5,575,000	7,475,000
1910	194,000	407,000	4,680,000

a Tons.

MINERAL PRODUCTION. The State is a producer of copper. In 1910 the output was 3,784,609 pounds, as compared with 5,031,136 pounds in 1909. The principal production is from the districts in Grant county. The production of copper in the State in 1911 showed a slight increase over the output of 1910. The most important event in the copper industry of the State during the year was the starting in October of the first unit of the Chino Copper Company's mill. The remaining units of the mill will be placed in commission in 1912 and the Santa Rita district will become an important producer.

The production of coal in 1910 showed a notable increase over that of former years. The output was 3,508,331 short tons, with a value of \$4,877,151, as against 2,801,128 tons in 1909, a gain of 707,103 short tons, or 25.25 per cent. The increased production was attributed partly to the strike in the coal mines of the Middle West and the northern district of Colorado and partly to the growth of population and the settlement of new lands in New Mexico, Arizona, and California. Both the bituminous and sub-bituminous coals of the State are rapidly growing in favor for domestic uses.

The State produces a considerable amount of gold and silver. The production of gold in 1910 was 23,337 fine ounces, valued at \$482,424. The silver production in the same year was 843,987 fine ounces, valued at \$455,753. Both the gold and silver production increased considerably over that of 1909. The gold production in 1911, according to the preliminary estimates of the Director of the Mint, was 30,955 fine ounces, valued at \$639,897. The silver produced in the same year was 1,142,335 fine ounces, valued at \$628,284, a continued increase over the production of 1910 in both gold and silver.

EDUCATION. The school system of New Mexico includes the institutions which are supported by general funds. These are the University of New Mexico, New Mexico College of Agriculture and Mechanic Arts, New Mexico Normal School, New Mexico Spanish-American Normal School, New Mexico Normal University, New Mexico School of Mines, New Mexico Military Institute, Institute for Deaf and Dumb, and Institute for the Blind. There are about 1200 public schools in the State supported by the regular school taxes, with an

enrollment of 56,000 pupils, 20,000 of whom are Spanish-Americans and 100 negroes. There are nearly 70 sectarian schools with an enrollment of 5000 pupils and about 20 private schools with an enrollment of 300 pupils. In addition there are 25 Indian schools under the direct federal supervision, with a total enrollment of 2000 pupils.

CHARITIES AND CORRECTIONS. The charitable and correctional institutions of the State, with their populations in 1911, are as follows: Penitentiary, Santa Fé, 378; Insane Asylum, Las Vegas, 259; Miners' Hospital, Raton, 125; Blind Institute, Alamogordo, 34; Deaf and Dumb Asylum, Santa Fé, 39; Orphans' School, Santa Fé, 111; St. Vincent's Hospital, Santa Fé, 115; Reform School, Springer, 18; Children's Home Society, Albuquerque, no report; Grant Hospital, Silver City, 20; Sisters of Mercy Hospital, Silver City, 53; Ladies' Hospital, Deming, no report; Eddy County Hospital, Carlsbad, no report; Relief Society, Las Vegas, 127; Sisters' Hospital, Albuquerque, monthly average, 55; Gallup Hospital, Gallup, no report; St. Mary's Hospital, Roswell, no report.

POLITICS AND GOVERNMENT

The year 1911 saw New Mexico, in all essential details, admitted to the sisterhood of the States after many years of ineffectual effort directed to that end. That there was a delay in the approval by Congress of the joint resolution formally declaring the Territory a State was the result of the objection of President Taft to certain features in the constitution of Arizona, as the joint resolution included both Arizona and New Mexico. The general details in relation to this will be found discussed more fully in the article ARIZONA.

The constitution prepared by the convention which met at Santa Fé, on August 4, 1910, and continued its deliberations until November 21, 1910, followed the older models, differing in this respect from the proposed constitution of Arizona, although a modified referendum was included in its provision and an elective corporation commission was provided. The initiative, recall, direct primaries, and constitutional prohibition were not included. It was known that President Taft had no objection to any of the provisions of this act and had it not been involved with the constitution of Arizona it would doubtless have been passed without difficulty by Congress and would have been signed by the President. The constitution was submitted to the popular vote on January 21, 1911, and it was approved by the people by a majority of more than 18,000. The most pronounced opposition was on the part of those who had advocated the inclusion of a clause providing for Statewide prohibition. There were certain provisions in the act which prevented an easy amendment and President Taft and certain senators found some objection to this. In the final resolution which was passed by Congress following the veto by the President of the original resolution, a condition was made that at the election held on November 7 the voters of the State should decide whether or not the constitution should be so changed as to make it easier to be amended.

Conventions for the nomination of officers to be elected on November 7 were held by the Republican and Democratic parties. The Re-

publican convention on September 30 pledged the party, if victorious, to repeal Section 5 of Article XXI. of the constitution, which stipulates that all persons to be qualified to hold a State office, including a legislative office, must be able to read and write and speak good English sufficiently to be able to conduct the affairs of the office without an interpreter. This provision was inserted as a result of criticisms made in the United States Senate, where great stress was laid on the fact that many New Mexican officials were unable to speak English. As Statehood had been practically granted, the Republican party declared its intention of returning to the old rules. Resolutions also were adopted declaring against the adoption of the measure to make the constitution easier of amendment, on the ground that the constitution was ratified by a majority of 18,000 people. The Democrats nominated for governor William C. McDonald, while the Republican nominee was Mr. Bursun. The election held on November 7 was in the nature of a surprise to those who had forecast its results. As a Territory New Mexico had been Republican and it was admitted to Statehood under Republican auspices, and the general impression was therefore that the Republican party would be victorious in the elections. A coalition was formed, however, between the Democrats and Progressive Republicans which resulted in the defeat of the regular Republican candidate for governor. The vote cast was, McDonald, 30,424; Bursun, 27,605. The Republicans, however, elected a majority of the members of both houses of the legislature, while the Democrats elected all State officers except auditor and attorney-general. The election of a Republican legislature insures two Democratic senators from the new State. The amendment to the constitution making that instrument subject to amendment at any time was carried by a vote of practically two to one. The Republicans and Democrats each elected one representative to Congress.

The proclamation declaring New Mexico a State, which is the last step to be taken in the final consummation of the act, had not been made by President Taft at the end of the year, but as the voters had complied with the conditions exacted by the President and Congress, there was no question of the prompt issuance of the proclamation.

NEW SOUTH WALES. A state of the Commonwealth of Australia. Capital, Sydney. Area, 310,372 sq. miles. Population (exclusive of aborigines), according to final returns of the census of April 3, 1911, 1,648,448. This figure includes 1714 persons in the new federal capital territory (area about 900 sq. miles). The per cent. of increase from 1901 was 21.67. There are a governor appointed by the British crown, a responsible ministry, and a parliament of two houses—the appointive Legislative Council and the elective Legislative Assembly. Governor in 1911 (appointed May 28, 1909), Rt. Hon. John Napier, Baron Chelmsford; premier (in the ministry constituted October 21, 1910), J. S. T. McGowen. See AUSTRALIA.

HISTORY. Parliament was opened on May 16 by Sir William Cullen, the lieutenant-governor. Increased estimates were announced for the ensuing year and increased taxation was declared to be inevitable on account of the falling off of state returns in customs and excise. Pro-

gress had been made in building railways and opening up unoccupied crown lands. The government's land policy as summed up in the words of the minister of lands, was "Land users before land speculators." An extensive work of development had been planned, including the bringing in of settlers and the expenditure of a large sum on railways and roads. A serious strike occurred among the wharf laborers, resulting in a temporary stoppage of shipping at Sydney. New South Wales rejected the referenda submitted by the federal government by a majority of over 100,000. A large number of the labor men declared that the questions involved in the referenda had no place in the party platform. Efforts of the national party by disciplinary measures to bring them into line were unavailing, and served only to embitter the dissidents. As the Labor party was in control of the New South Wales government, this defection was regarded as a serious blow to the national organization.

In response to a request of the Commonwealth government New South Wales declared its readiness to undertake the building of a cruiser and four destroyers for the Australian navy, the Commonwealth government to pay 8 per cent. on the outlay.

NEW THEATRE. See DRAMA.

NEW YORK. POPULATION. The Thirteenth Census showed a population in the State in 1910 of 9,113,614, as compared with 7,268,894 in 1900, an increase of 25.4 per cent. in the decade. The principal cities with their populations in 1910 and 1900 are as follows (the figures in parentheses are for 1900): New York, 4,766,883 (3,437,702); Buffalo, 423,715 (352,287); Rochester, 218,149 (162,608); Syracuse, 137,249 (108,334); Albany, 100,253 (94,151); Schenectady, 72,826 (31,682); Utica, 74,419 (56,383).

AGRICULTURE. The Thirteenth Census included statistics of agriculture. These are of date of April 15, 1910. On that date there were 215,597 farms in the State, compared with 226,720 in 1900, a decrease of 11,123 in the decade. The land in farms was 22,030,367 acres, compared with 22,648,109 in 1900, a decrease of 617,742. The improved land in farms was 14,844,039 acres, compared with 15,599,986 acres in 1900. The average acres per farm in 1910 was 102.2, compared with 99.9 in 1900. The value of all farm property, including land, buildings, implements and machinery, domestic animals, poultry, and bees, was \$1,451,481,495, compared with \$1,069,723,895 in 1900, an increase of \$381,757,600, or 35.7 per cent. The average value of all property per farm was \$6732 (\$4718 in 1900). The average value of land per acre was \$32.13 (\$24.34 in 1900). Of the total number of farms in the State, 170,725 were operated by owners and managers, and 44,872 by tenants. Of the farms operated by owners, those free from mortgage numbered 93,118, and those under mortgage, 72,311. The native white farmers numbered 187,629; foreign born whites, 27,029; negroes and other non-whites, 939. Of the non-white farmers 635 were Indians, 295 negroes, 5 Japanese, and 4 Chinese. The value of the various kinds of domestic animals, poultry, and bees in 1910 was \$183,090,844, compared with a value of \$125,583,715 in 1900. The cattle numbered 2,423,003, valued at \$83,062,242; horses and colts, 59,008, valued at \$80,043,342; mules, 4052, valued at \$650,497; swine, 666,179, valued at \$5,905,272; sheep and lambs,

930,300, valued at \$4,839,651. Poultry of all kinds numbered in 1910, 10,678,836, valued at \$7,879,388. The acreage, production, and value of the principal crops in 1910 and 1911 will be found in the following table:

	Acreage	Prod., bu.	Value
Corn1911	530,000	20,405,000	\$15,712,000
.....1910	525,000	20,108,000	12,668,000
Wheat1911	345,000	6,728,000	6,392,000
.....1910	355,000	8,414,000	8,077,000
Oats1911	1,310,000	38,645,000	19,709,000
.....1910	1,320,000	45,540,000	19,127,000
Rye1911	135,000	2,254,000	2,006,000

.....1910	4,000	5,000,000	425,000

a Tons. b Pounds.

MINERAL PRODUCTION. The State ranks fourth in the production of iron ore. There were mined in 1910 1,287,209 tons, valued at \$3,848,683, as compared with 1,015,333 tons, valued at \$3,072,323 in 1909. See IRON AND STEEL.

EDUCATION. The year 1911 marked the 100th anniversary of the establishment of the State system of schools. In that year were 11,777 school districts and 12,094 school houses. The total attendance of pupils between the ages of 5 and 13 years was 1,421,443. The total appropriation for educational work during the fiscal year ended July 31 was \$7,051,074. The number of teachers employed in the public schools during the year was 40,280 women and 5086 men. There were paid in salaries to teachers \$36,169,810. In addition to those enrolled in the public schools the attendance in academies was 47,481; in normal schools, 6965; in teachers' training classes in schools, \$36,215; in Indian schools, 851; in evening schools, 146,222, and an estimated attendance of 225,000 pupils in private schools. The total amount paid for educational purposes during the year was \$76,863,712. The new education building in course of construction at Albany will be ready for occupancy early in 1912.

CHARITIES AND CORRECTIONS. The State Board of Charities in its annual report for 1911 points out the need of more public hospital beds in New York City. The hospitals in the city are greatly overcrowded. The Board of Estimate and Apportionment authorized for expenditure in 1912 over \$3,000,000 in the Department of Public Charities in New York City. In the institutions under the control of the State Board of Charities there were in 1911 over 80,000 people, classified as follows: Aged and friendless persons, 3501; almshouse inmates (exclusive of those classified below), 15,061; blind in almshouses, 417; blind in other institutions, 314; deaf in almshouses, 191; deaf in other institutions, 1791; dependent children, 31,931; Indian children (at Thomas Indian School), 182; disabled soldiers and sailors, 1967; epileptics in almshouses, 240; epileptics in Craig Colony, 1420; hospital patients, 11,034; idiotic and feeble-minded in almshouses, 1656; idiotic and feeble-minded in State institutions, 2632; juvenile delinquents, 3438, and reformatory inmates, 2250.

Appropriations for maintenance to the amount of \$1,890,993.90 are recommended for the seven-teen State institutions under the jurisdiction of

the board and the sum of \$2,100,880 for improvements, many of them greatly needed as well as long deferred.

CARE OF THE INSANE. The Psychiatric Institute of the State hospitals for the insane is situated on Ward's Island, in connection with Manhattan State Hospital, and is under the directorship of Prof. August Hoch, M. D. The number of inmates in the various hospitals at the close of the fiscal year, September 30, 1911, was as follows: Utica, 1522; Willard, 2389; Hudson River, 3011; Middletown, 2008; Buffalo, 1995; Binghamton, 2375; St. Lawrence, 1968; Rochester, 1459; Gowanda, 1109; Kings Park, 3436; Long Island, 758; Manhattan, 4598; Central Islip, 4377; Mohansic, 48; Matteawan, 796; Dannemora, 403; total, 32,298. There were also 1062 patients in the private hospitals licensed by the Commission in Lunacy, making a grand total of 33,360 patients. The total expenditure for maintenance was as follows: Officers' salaries, \$296,857.10; employees' wages, \$2,026,692.21; provisions, \$1,982,660.71; stores, \$96,527.44; commutation, \$81,428.15; ordinary repairs, \$152,286.71; farms and grounds, \$140,655.42; clothing, \$209,460.18; furniture and bedding, \$149,853.11; books and stationery, \$36,392.09; fuel and light, \$600,792.05; medical supplies, \$38,074.79; miscellaneous, \$182,500.17; transportation of patients, \$28,885.56; making a total of \$6,023,071.69. The receipts from partly or fully reimbursing patients, stewards' sales, and miscellaneous sources amounted to \$514,971.10. The commissioners are Albert Warren Ferris, M. D., Herbert P. Bissell, and William Cary Sanger.

POLITICS AND GOVERNMENT

The legislature met in 1911 and the most important measures, in addition to those referred to in the notes following, will be found in the paragraph *Legislation*, below.

Governor Dix, who was elected in November, 1910, sent his first message to the legislature on January 2. The greatest emphasis in the paper was placed upon the necessity for economy in the administration of the State. By detailed figures he showed the increase in the expenditures in recent years and pointed out that the State was facing a large deficit for 1911. He advised the abolition of several unnecessary boards and commissions, the removal of useless employees, and a careful scrutiny of every demand for appropriation. In particular, he advised the abolition of the Advisory Board of Consulting Engineers in charge of the construction of the barge canal, of the Highway Commission, of the State Board of Parole, and the Board of State Fair Managers. He also advised the consolidation of the Forest, Fish and Game Commission, and the State Water Supply Commission. Of especial interest was his recommendation for the adoption of a system of State-wide nominations "which shall insure to the people the right to choose members of political committees and nominate candidates for public office." His recommendations included the adoption of an election law which would permit the name of any candidate to appear in but one place upon the ballot. He urged enlargement of the scope of the law regulating employers' liability to workmen, and more stringent restrictions on child labor. He declared in favor of the proposed amendment to the federal Con-

stitution permitting the imposition of an income tax, thereby taking a stand opposed to that of Governor Hughes in 1910. He favored the passage of legislation calling on Congress for the adoption of the parcels post and for a resolution to Congress to submit a constitutional amendment providing for the popular election of United States senators.

On March 31, after a deadlock extending over ten weeks, James A. O'Gorman, justice of the New York Supreme Court, was elected United States senator to succeed Chauncey M. Depew. On the final vote Mr. O'Gorman received 112 ballots, while 97 were necessary for a choice. The election of Senator O'Gorman marked one of the most stubborn contests ever known in the New York legislature. At its beginning two candidates for the senatorship were conspicuous. These were Edward M. Shepard (q. v.) of Brooklyn and William F. Sheehan of Buffalo. Mr. Shepard was the candidate of the conservative element, of which he was the most conspicuous type. Mr. Sheehan was the avowed candidate of Tammany Hall, which controlled a large proportion of the legislators either directly or indirectly. A number of the Democratic legislators sufficient to prevent the necessary number of affirmative votes, bound themselves not to vote in favor of the election of Mr. Sheehan, but not actually binding themselves to any candidate. After a number of futile ballots, Mr. Shepard withdrew, leaving Mr. Sheehan the only strong candidate in the field. A number of others received at various times a small number of votes. In spite of the pressure brought to bear upon them, the insurgent Democrats refused to vote for Mr. Sheehan and he in turn refused to withdraw. Finally, Tammany Hall found it necessary to abandon Mr. Sheehan as a candidate, and after a series of conferences between the insurgents and the regular Democrats, it was agreed that Mr. O'Gorman should be the candidate upon whom all should unite. The result was a compromise. Justice O'Gorman has throughout his political life been identified with Tammany Hall and has held more than one office in that organization. On the other hand he served for twelve years as justice of the State Supreme Court and was known as an able and an impartial jurist. A feature of the campaign was the refusal of Governor Dix to commit himself to either faction, on the ground that it was the function of the legislature to elect a senator and that he could take no active part in such an election.

The most important measures passed by the legislature were those amending the election law of the State, and measures relating to direct elections. The election law, called the Levy law, after the representative who introduced it into the Assembly, provides that only registered and enrolled voters may nominate candidates independently by petition and that the name of a single candidate shall appear only once on the official ballot. In communities of less than 5000 the bill permits the names of voters who actually voted at the preceding election to be kept on the registry rolls by the election officials, but those who did not vote at the previous election must register personally. In order to prevent practically compulsory straight party voting in presidential years, it is provided that presidential electors shall be voted for separately from the State ticket. Four uniform days of

registration are provided throughout the State. Bipartisan boards of election are established in every county. These are to include two or four members. In New York City the chairmen of the two party committees, the New York and Kings county committees, are to name the members of the election board.

The election law as passed by the legislature contained two amendments which were declared unconstitutional by the Court of Appeals. The constitution of the State provides that in communities of less than 5000 inhabitants, voters shall not be required to register personally on the first registration day. The legislature sought to compel all persons whose names were not on the last year's election lists to register personally. But the court held that in this provision the legislature exceeded its power. The other amendment provided that the candidate's name should appear only once on the ballot. The object of this amendment was to prevent fusion tickets in New York City. The court held that this was discriminating between electors as to the opportunities and facilities afforded for voting for candidates of their choice and hence was unconstitutional.

The bill for direct election was a compromise measure and did not satisfy either the advocates or opponents of such legislation. The measure continues with the State convention the power to nominate the State ticket, but establishes the direct primary in the congressional, judicial, State senatorial, and assembly districts, and for county and city officers. In the primary elections only enrolled party voters can participate. Large powers are retained by the State machines. One of the features of the bill is the preference given the regular organization ticket. Candidates on this ticket have the preferential position on the ballot and the use of the party emblem is permitted to cover these candidates' names, as well as the names for committeeman. It is further provided that party funds may be used by committees to nominate their own members as well as to secure the naming of their candidates for office and for getting out the vote for the regular ticket at the primary.

The legislature took a recess on July 21 until September 6. In addition to the measures mentioned above, important action was taken on other proposed legislation. A bill designed to rehabilitate race tracks was defeated. Previous to the recess Governor Dix sent a message to the legislature in which he recommended that the State return to the direct tax and proposed other measures for increasing the income of the State.

A committee appointed in 1910 to inquire into the alleged charges of bribery in connection with the passage of the Hart-Agnew bill of 1908 reported on February 1. The committee failed in general to substantiate any of the charges made, but recommendations were submitted that the penal law of the State be changed so as to compel members to report attempts at improper influence. The committee also drew attention to abuses in the fire insurance business and recommended remedies. Among the defeated measures was the proposed charter for the city of New York (see below). A woman suffrage bill was also defeated.

ELECTIONS. On February 15 elections were held in the smaller towns of the State. The chief interest centred in the question of liquor regulation. Richfield Springs and Norwich

voted for license and nine towns in Chenango county voted for no license. The elections on November 7 resulted throughout the State in general in Republican successes. The Republicans elected 26 more than a majority of the members of the State Assembly which convened in January, 1912. Of 150 members of the Assembly the Republicans have 102, the Democrats 47, and the Socialists 1. In 1911 the Democrats had 87 votes in the Assembly and the Republicans 63. One of the most interesting results of the election was the success of the Socialist party in Schenectady, where the Rev. Dr. George R. Lunn was elected mayor by a plurality of 2052, and the entire Socialist ticket with the exception of the candidate for city judge, was successful. Dr. Lunn was for several years pastor of the First Dutch Reformed Church in Schenectady, but resigned on account of his Socialistic tendencies.

NEW YORK CITY. The chief public interest during the year centred in the attempts to bring about the solution of the problem of additional subways (see TUNNELS). A proposed new city charter was defeated in the legislature in October. This charter contained provisions for radical changes in the city government. It had the support of Mayor Gaynor, but the public sentiment in general was opposed to it. The charter gave additional powers to the mayor, provided for a paid school board, and took away certain powers in the financial administration of the city which belonged to the controller.

On September 26 Governor Dix removed from office Lawrence J. Gresser, president of the Borough of Queens, as a result of the examination made into the charges against him by a commissioner especially appointed by the governor. Morris P. Connolly, a municipal justice, was elected president of the borough to succeed Mr. Gresser. The city budget for 1912, as approved by the Board of Estimate in New York, amounted to about \$189,000,000.

The city elections held on November 7 were for judicial candidates and for members of the legislature. The most notable result in New York City was the success of the Fusion ticket in Brooklyn, a combination of Republicans and Independents elected the entire county ticket by pluralities of 8000 to 11,000.

OTHER EVENTS. On March 24 the Court of Appeals declared unconstitutional the State Workmen's Compensation act. (See WORKINGMEN'S INSURANCE.) On March 29 the State Capitol at Albany was partially destroyed by fire. Many valuable historical documents in the State Library were burned.

LEGISLATION. In addition to the measures noted above, the legislature of 1911 passed a law reapportioning the congressional districts of the State; measures amending the penal law in relation to false weights and measures; an act reducing from 5 to 3 years the term of enlistment of men in the national guard or naval militia; a measure establishing at Buffalo a State institute for the study of malignant diseases; an amendment to the penal law in relation to the sale and carrying of dangerous weapons; measures creating a commission to investigate the conditions under which manufacturing is carried on in cities of the first and second class (New York and Buffalo); an act establishing a commission of eleven members to investigate the prices, purity, production, distribution,

and consumption of food and foodstuffs and of farm and dairy products.

STATE OFFICERS, 1911: Governor, John A. Dix; Lieutenant-Governor, Thomas F. Conway; Secretary of State, Edward Lazansky; Comptroller, William Sohmer; State Treasurer, John J. Kennedy; Attorney-General, Thomas Carmody; State Engineer and Surveyor, John A. Bensel; Adjutant-General, William Verbeck; Superintendent of Insurance, William H. Hotchkiss; Superintendent of Banking Department, Orion H. Cheney, succeeded by George C. Van Tuyl, Jr.; Superintendent of State Prisons, Cornelius V. Collins, succeeded by Joseph F. Scott; Superintendent of Public Works, Charles E. Treman; President State Commission in Lunacy, Albert Warren Ferris; Chairman Public Service Commission, First District, William C. Wilcox; Second District, Frank W. Stevens; President, State Board of Charities, William Rhinelander Stewart; Commissioner of Education, Andrew S. Draper; Chairman Conservation Commission, George E. Van Kennan; State Architect, Franklin B. Ware.

NEW YORK STATE LIBRARY. See **LIBRARY PROGRESS.**

NEW YORK UNIVERSITY. The number of students enrolled in all departments of the university in 1911-12 was 4044. The faculty numbered 381. The most noteworthy event in the history of the university during the year was the inauguration of Dr. Elmer Ellsworth Brown (q. v.) as chancellor on November 9. Among the noteworthy changes in educational policy was the uniform requirement for a three-year course of twelve hours per week in all classes for the LL. B. degree. Beginning with the class entering in October, 1912, the university and Bellevue Hospital Medical College will require for entrance one year of college work in addition to high school graduation. This year must include courses in chemistry, physics, biology, and modern languages. The productive funds of the university amounted in 1911 to \$1,200,000 and the annual income to \$50,000. See also **UNIVERSITIES AND COLLEGES.**

NEW YORK ZOOLOGICAL PARK. See **ZOOLOGICAL PARK, NEW YORK.**

NEW YORK ZOOLOGICAL SOCIETY. The New York Zoological Society was incorporated in 1895 under a special charter granted by the legislature of the State of New York. The objects of the society are: A public zoological park; the preservation of our native animals and the promotion of zoölogy. Control of the Zoological Park, which comprises the southern part of Bronx Park, 264 acres in extent, was assumed by the society in July, 1898. In area, elaborateness of structures, and number of specimens, it is the largest and most highly developed zoölogical park in the world. The city of New York provides an annual maintenance fund. The animal collections, which numbered on January 1, 1912, 1251 species, 4838 specimens, are provided by the society.

The attendance during 1911 was 1,481,905, and the total attendance from 1899 to 1911 in-

clusive was 13,926,619. Record attendance for one day, May 28, 1911, was 40,724. The park is open every day of the week the entire year, free, except Monday and Thursday of each week. When either Monday or Thursday is a legal holiday there is no admission charged upon such days.

The society controls and manages the Aquarium in Battery Park, and through its efforts has greatly increased the interest in that institution. Plans are now being developed, for which the board of estimate and apportionment has appropriated money, to greatly enlarge the Aquarium; making additional exhibition tanks and many educational features, such as a biological laboratory, lecture hall, etc. When these improvements are completed the Aquarium will be by far the largest and most elaborate institution of its kind in the world. Attendance at New York Aquarium for 1911, 2,011,544. Average daily attendance, 5511. The society is actively engaged in the protection of animal life throughout the world, particularly the preservation of the native animals. It has been instrumental in establishing a herd of bison in southwestern Oklahoma, presenting to the United States government fifteen bison from the large collection in the Zoölogical Park, as the nucleus of a herd established in the Wichita Forest and Game Preserve. During 1912 the eagle and vulture aviary and a house for wild equines will be completed; a series of ten new bear dens is all ready for occupancy. The society contemplates a hospital and quarantine for the proper care of wild animals; pathological laboratory for the study of comparative pathology and anatomy; the Fordham entrance, an elaborate stone structure; an atelier for modeling and mounting specimens, and a house for anthropoid apes.

The membership of the society in 1911 was nearly 2000 of all classes. The officers of the society are: Henry Fairfield Osborn, president; Samuel Thorne and John L. Cadwalader, vice-presidents; Madison Grant, secretary and chairman of the executive committee; and Percy R. Pyne, treasurer. Dr. William T. Hornaday is director of the Zoölogical Park and Dr. Charles H. Townsend of the Aquarium.

NEW ZEALAND, DOMINION OF. A group of islands in the South Pacific; an autonomous dependency of Great Britain. Capital, Wellington.

AREA, POPULATION, ETC. Total area, 104,751 sq. miles (North Island, 44,468; South, 58,525; Stewart, 665). Population (census of April 2, 1911), 1,008,468 Europeans (53,910 males, 476,558 females); Maoris, 49,884 (26,475 males 23,369 females), chiefly in North Island. Total population, including 12,340 (6224 males, 6116 females) in the Cook and other Pacific islands, 1,070,652. Births (1909), 26,524; deaths, 8959; marriages, 8094; immigrants, 38,650; emigrants, 33,931. Population of chief towns, with suburbs (1911): Auckland, 102,676; Christchurch, 80,193; Wellington, 70,729; Dunedin, 64,237.

Public primary schools (1909), 2057, with 4310 teachers and 152,416 pupils. Private schools about 300, with about 17,900 pupils; Maori village schools, 94. There are secondary and collegiate as well as special schools. Total expenditure for public education in 1909-10, £1,166,000.

PRODUCTION. Agriculture and stock-raising occupied, in 1906, 96,957 persons. Land under

crop and broken in 1910, 1,914,487 acres, besides 13,600,000 in sown grasses, and 20,000,000 acres under forest. Area sown to wheat in 1909, 311,000 acres (yield, 8,783,000 bu.); oats, 377,000 acres (13,527,000 bu.); barley, 41,500 (1,228,000). Livestock (1910): 404,284 horses, 2,020,171 cattle, 24,269,620 sheep, and 245,092 swine (1909). Wool clip (1909), 194,886,524 pounds (of which exported, 189,683,703). Timber cut (1909), 413,868,919 feet. Kauri gum produced, 8250 tons (£552,698). Mineral production (1909): 506,371 oz. gold (value, £2,006,900), 1,911,247 tons coal (£1,038,742), 1,813,830 oz. silver (£180,872). Other industries are meat freezing and preserving, tanning, wool scouring, etc.; there are saw mills, grist mills, butter and cheese factories, and iron and brass works.

COMMERCE, FINANCE, ETC. Trade and finance statistics are shown in the following table for three successive years:

	1908	1909	1910
Imps. (total) . . .	£17,471,284	£15,674,719	£17,051,583
Exps. (dom.) . . .	15,894,530	19,462,936	21,994,163
Exps. (total) . . .	16,317,494	19,661,996	22,180,209
Revenue* . . .	9,063,989	9,001,185	9,238,917
Expenditure* . . .	8,213,965	8,785,513	8,990,922

* Fiscal years 1907-8, 1908-9, 1909-10.

Principal imports (1909): Clothing and materials therefor, £3,491,526; iron and steel goods, machinery, etc., £2,900,372; paper books, etc., £630,013; sugar, £613,950; alcoholic beverages, £408,552; tobacco and cigars, £353,612; oils, £329,289; specie, £857,257. Exports: Wool, £6,305,888 (1910, £8,308,410); frozen meat, £3,601,093 (1910, £3,850,777); butter and cheese, £2,744,770 (1910, £3,007,348); gold, £2,007,043 (1910, £1,896,453); hides, skins, etc., £1,022,778; grain, flour, etc., £834,058; tallow, £648,452. Great Britain furnished imports and received exports valued at £9,287,786 and £16,193,188 respectively; Australia, £2,764,210 and £1,918,115; United States, £1,643,937 and £684,810; Pacific islands, £654,016 and £258,164. Vessels entered (exclusive of coasting) 1909, 605, of 1,263,935 tons; cleared, 596, of 1,253,878; 1910, 609 (1,389,031 tons) and 588 (1,367,207). Merchant marine: 589 vessels, of 150,840 tons net (steamers, 327, of 110,677).

The principal sources of revenue are customs, railways, and stamps. The main items of expenditure, public debt charges, railways, education, and posts and telegraphs. Revenue for 1910-11, £10,297,023; expenditure, £9,343,106. Public debt, March 31, 1911, £81,078,122; accrued sinking fund, £3,380,542. Total railways in operation March 31, 1911, 2753 miles of government, and 29 miles of private lines. The total new construction opened to traffic amounted to but 45 miles on seven small lines, but a large mileage under construction was reported. Government telegraph lines (1910), 10,901 miles; wires, 34,788.

GOVERNMENT. The executive authority is vested in a governor (1911, Sir John Poynder Dickson-Poynder, appointed 1910 and created first Baron Islington the same year), appointed by the crown and acting through a responsible ministry. A parliament of two houses, elected triennially by universal adult suffrage, exercises the legislative power. Prime minister in 1911, Sir Joseph George Ward.

Attached to New Zealand are the AUCKLAND ISLANDS (uninhabited), CHATEAU ISLANDS (375 sq. miles, about 400 population), KERMADEC

ISLANDS (15 sq. miles), and COOK ISLANDS and others (upwards of 280 sq. miles).

HISTORY. Parliament, which was opened on July 27 by Lord Islington, closed in October without enacting any measures of especial importance. The electoral campaign which followed aroused much interest, as a poll under the licensing act of 1910 was to be taken at the same time that the election was held for members of the House of Representatives. The licensing act provides that if 60 per cent. of the electors vote for prohibition, intoxicating liquor shall cease to be sold or manufactured in or imported into New Zealand. The elections in December showed great gains for the opposition and especially for the Labor party. See AGRICULTURE.

NICARAGUA. A Central American republic between Honduras and Costa Rica. The capital is Managua.

AREA AND POPULATION. The estimated area is 49,552 sq. miles. The population is estimated at 600,000, mostly Indians and mestizos. There are very few persons of unmixed white blood. For 1908 there were reported 1261 marriages (that is, 2522 persons married), 23,828 births, and 9598 deaths. The larger towns, with estimated population, are: León, 63,000; Managua, 40,000; Granada, 25,000; Matagalpa, 16,000; Masaya and Bluefields, 15,000 each; Chinandega, 13,000. The number of elementary schools is reported at 356. There are several institutions for secondary education. Roman Catholicism is the prevailing form of religion.

INDUSTRIES AND COMMERCE. The people are engaged chiefly in agriculture. The forests contain cabinet and other valuable woods, and these are exploited to some extent. The mineral resources are considerable, but mining is almost restricted to gold. There are a few manufacturing industries, confined practically to articles of domestic consumption, as boots and shoes, furniture, sugar, rum, beer, candles, cigars, soap, etc. The principal crops are coffee, bananas, and sugar-cane; there are also produced cacao, corn, beans, and tobacco. The coffee crop for 1909-10 was estimated at 22,300,000 pounds.

Import and export values are reported as follows: 1907, \$3,224,173 and \$3,363,522 respectively; 1908, \$2,958,878 and \$3,647,984; 1909, \$2,583,257 and \$3,989,428. Figures later than for 1909 are not available. The leading imports are cotton textiles, flour, and provisions. The principal exports in 1909 were: Coffee, \$1,546,919; gold, \$1,037,892; woods, \$415,575; rubber, \$229,871; sugar, \$182,123; bananas, \$163,828; hides, \$146,253. In 1909 imports from and exports to the United States were valued at \$1,341,692 and \$1,677,010 respectively; Great Britain, \$625,668 and \$843,453; Germany, \$286,408 and \$423,579; France, \$131,826 and \$776,429.

COMMUNICATIONS. There is one railway line, which, with its branches, has a total length of 171 miles. It connects the Pacific port Corinto with Chinandega, León, Managua, Masaya, Granada (on Lake Nicaragua), and Diriamba. Steamer traffic is carried on between Granada and San Juan del Norte, on the Caribbean coast. Telegraph, 130 offices, with 3637 miles of wire; post offices, 135.

FINANCE. Revenue and expenditure, in paper pesos, for 1907, 10,219,248 and 10,286,519 respectively; 1908, 13,119,503 and 12,502,592. For

1910, the revenue was 15,182,852 pesos, and the ordinary expenditure, 12,052,848; extraordinary expenditure on account of the revolution amounted to 22,520,279 pesos. The paper peso has been worth about 16 cents, but in 1910 it was only about 10 cents. Of the revenue in 1910, 9,793,717 pesos was derived from customs, 1,427,095 from liquor taxes, and 1,319,025 from tobacco taxes. On June 8, 1911, a convention between Nicaragua and the United States was signed at Washington, providing for the refunding of the foreign debt, the reform of the monetary system, and railway construction, by means of a loan to be made by American bankers and secured by a guarantee of 50 per cent. of the customs duties. The convention was ratified by the Nicaraguan congress on October 9, but was pending in the American Senate at the close of the year. It was expected that the loan would amount to about \$15,000,000.

ARMY. The president of the republic of Nicaragua is commander-in-chief of the army, which is maintained at varying strength, depending upon political conditions. It is formed by obligatory service on the part of every male inhabitant of the republic between the ages of seventeen and fifty-five, and active service normally is restricted to one year. The army is maintained at a nominal strength of 3500 men in time of peace, though often this number falls as low as 2000. In time of war there may be available as many as 40,000 men for military service.

GOVERNMENT. The constitution of March 30, 1905, was suspended as a result of the revolution of 1910, and in the latter part of that year and in 1911 the country was administered under a law issued September 15, 1910, by Gen. Juan J. Estrada, provisional president. As leader of the eventually successful faction in the civil war supervening upon the resignation of President José Santos Zelaya December 16, 1909, General Estrada assumed the duties of provisional president on August 29, 1910. On December 31 a national congress chose him president for two years and Adolfo Díaz vice-president. Estrada resigned May 11, 1911, and was succeeded by Díaz. On October 7, 1911, the congress elected Gen. Luis Mena president for four years beginning January 1, 1913. In January diplomatic relations with the United States were resumed, Mr. Elliott Northcote having been appointed United States minister. See **UNITED STATES, Foreign Relations.** See also **MADRIZ, JOSÉ.**

NICHOLSON, AUGUST S. An American soldier, died November 7, 1911. He was born in 1830. He was the youngest officer ever appointed to the service of either the army or the navy. He served in the Mexican War and was brevetted first lieutenant for gallant conduct in the storming of Chapultepec and the capture of the City of Mexico, September 13, 1847. He was engaged in special duty at Fort Washington, remaining there until 1861, when he was put in command of one hundred marines in the expedition under Admiral Paulding which destroyed the Norfolk Navy Yards. He was appointed adjutant and inspector, with the rank of major, on May 6, 1861, and was on duty with the battalion of marines that was engaged in the battle of Bull Run. On the day following this battle he returned to headquarters and resumed his duties as adjutant and inspector.

He was retired on May 1, 1894, after forty-seven years of honorable service.

NIGER, MILITARY TERRITORY OF THE. A French West African possession, with an area of 1,500,000 sq. kilometers (579,000 sq. miles). Recently estimated population, 1,147,024 (195 French). Schools (1909): 22 official, with 313 pupils. Chief town, Niamey. Revenue in 1909, 1,758,636 francs; expenditure, 1,629,189. The lieutenant-governor of Upper Senegal and Niger (q. v.) administers the territory. See **FRENCH WEST AFRICA.**

NOBEL PRIZES. The Nobel prizes are awarded annually from a fund of \$8,400,000, left by the will of Dr. Alfred Bernhard Nobel. By this bequest the interest from this fund is to be distributed annually to "those persons who shall have contributed most materially to benefit mankind during the year immediately preceding." Prizes are distributed in accordance with statutes signed by King Oscar of Sweden on January 29, 1900. The value of each prize is approximately \$40,000. They include work in physics, chemistry, medicine, literature, and for the advancement of peace. The prizes awarded since the foundation of the fund, including those of 1911, are given in the table below:

Name	Year	Nationality
Physics		
Wilhelm Konrad Röntgen	1901	German
{ H. A. Lorentz	1902	Dutch
{ Pieter Zeeman	1902	Dutch

Of the recipients of the Nobel prizes in 1911, M. Maeterlinck and Madame Curie are too well known to need comment. The others are less familiar. Dr. Wien is a member of the faculty of the University of Würzburg. He was born in 1864 and studied at Göttingen, Heidelberg, and Berlin. He became assistant to Helmholtz and later held professorships at Aachen and Giessen. A large part of the recent knowledge of the radiation of light and electricity is due to him. He is the discoverer of the Wien's law, that the wave lengths of maximum energy vary universally with the temperature. Professor Gullstrand holds the chair of ophthalmology at the University of Upsala. His chief contributions have been to mathematical optics, in which he is an authority. He has published many profound works on ophthalmology. Dr. Asser, one of the recipients of the peace prize, was born in 1838 and served as the Dutch representative in the Hague Conference of 1899 and the International Court of Arbitration, 1900. He is the author of several important works on international law and is founder of the Institute of International Law, which received the Nobel prize in 1904. Alfred Fried was born in Vienna in 1864, but has spent most of his life in Berlin, where he founded the German Peace Society. He is editor of the Vienna *Friedenswarte*.

NORTH ADAMS. See MASSACHUSETTS.

NORTH CAROLINA. POPULATION. The Thirteenth Census showed a population in the State in 1910 of 2,206,287, compared with 1,893,810 in 1900. The principal cities with their population in 1910 and 1900 are as follows (the figures in parentheses are for 1900): Charlotte, 34,014 (18,891); Wilmington, 25,748 (20,976); Raleigh, 19,218 (13,643); Asheville, 18,762 (14,694); Durham, 18,241 (6,679).

MINERAL PRODUCTION. A small quantity of gold and silver is produced in the State. The gold output in 1910 was 1601 fine ounces, valued at \$33,100. The silver output was 7900 fine ounces, valued at \$4300. In 1911, according to the preliminary estimates of the Director of the Mint, the production of gold was 3710 fine ounces, valued at \$76,693, and the production of silver was 2227 fine ounces, valued at \$1225.

AGRICULTURE. The Thirteenth Census included statistics of agriculture. These are of date of April 15, 1910. On that date the farms in the State numbered 253,725, compared with 224,637 in 1900. The land in farms was 22,439,129 acres, compared with 22,749,356 acres in 1900. The improved land in farms was 8,813,056 acres, compared with 8,327,106 acres in 1900. The average acreage per farm is 88.4, compared with 101.3 in 1900. The total value of farm property, including land, buildings, implements and machinery, domestic animals, poultry, and bees, was \$537,716,210 in 1910, compared with \$233,834,693 in 1900. The average value of all property per farm in 1910 was \$2119, compared with \$1041 in 1900. The average value of land per acre was \$15.29 (\$6.24 in 1900). Of the farms in this State 146,438 were operated by owners and managers and 107,287 by tenants. Of the farms operated by owners, those free from mortgage numbered 117,028; mortgaged, 26,642. The native white farmers numbered 187,657; foreign-born white, 412; negro and other non-white, 65,656. The value of the various kinds of domestic animals and poultry in 1910 was \$62,649,984, compared with \$30,106,173 in 1900. The cattle numbered 700,861, valued at \$12,550,054; horses, 166,151, valued at \$18,428,134; mules, 174,711, valued at \$23,669,687; swine, 1,227,625, valued at \$4,628,446; sheep, 214,473, valued at \$559,217. Poultry of all kinds numbered 5,053,870, valued at \$2,212,570. The acreage, production and value of the principal crops in 1910 and 1911 are shown in the following table:

	Acreage	Prod., bu.	Value
Corn1911	2,700,000	49,680,000	\$40,738,000
.....1910	2,650,000	49,290,000	37,460,000

a Tons. b Pounds. c Bales.

The State produces copper in small quantity. The output in 1910 was 181,263 pounds, as compared with 120,451 pounds in 1909. The output is chiefly from the Virgilina district in Granville and Person counties. The iron ore mined in the State in 1910 amounted to 65,278 tons, valued at \$114,237, as compared with 61,150 tons, valued at \$107,013 in 1909. The production of gold in the State in 1910 was 3291 fine ounces, valued at \$68,045. There were produced 9053 fine ounces of silver, valued at \$4620. North Carolina is first among the Eastern States in the production of gold.

EDUCATION. The total school population in 1910 was 735,168. Of these 497,077 were whites and 238,091 were colored. The total enrollment in 1910 was 520,404, of whom 360,121 were white and 160,283 were colored. The total number of teachers employed in 1910 was 11,162. Of these, 8369 were white and 2793 were colored. The amount paid to all teachers was \$1,951,153. The average annual amount for each white teacher was \$174.80, and the average annual

amount paid to each colored teacher was \$113.52.

CHARITIES AND CORRECTIONS. The charitable and correctional institutions in the State, with their population in 1911, are as follows:

Hospital at Morganton, 1544; hospital at Raleigh, 908; hospital at Goldsboro, 951; Dangerous Insane Department (in penitentiary grounds), Raleigh, 57; School for the Feeble-minded, Kinston, not opened; School for the White Deaf, Morganton, 305; School for White Blind, Raleigh, 241; School for Colored Blind and Deaf, Raleigh, 214; Soldiers' Home (Confederate), Raleigh, 194; Oxford Orphanage for White Children (under Masons, aided by the State), Oxford, 389; Oxford Orphanage for Colored Children (chiefly supported by the State), 231; Stonewall Jackson Training School (Reform School), Concord, 60; North Carolina Tuberculosis Sanatorium, Aberdeen, 66; Epileptic Colony at State Hospital, Raleigh, State's Prison, Raleigh, 978.

During the year \$76,500 was appropriated for improvements at several of the institutions. The State's prison more than supports itself. Receipts for the year were \$206,037.27, and expenditures were \$181,196.18. Some of the expenditure was for improvements on the State farm.

The most important act of the legislature of 1911 was the establishment of a school for the feeble-minded. A bond issue of \$60,000 was made for this purpose. The site has been chosen at Kinston, one thousand acres of land, light, and water for five years being furnished by that town. Dr. Ira M. Hardy is superintendent. This school will take children and adults.

A law was passed prohibiting the placing of stripes on misdemeanants. Commutation time increased for the State prison inmates. There was no change in the policy of administering these institutions.

STATE OFFICERS. Governor, W. W. Kitchin; Lieutenant-Governor, W. C. Newland; Secretary of State, J. B. Grimes; Treasurer, B. R. Lacy; Auditor, W. P. Wood; Attorney-General, T. W. Bickett; Superintendent of Education, J. Y. Joyner; Commissioner of Agriculture, W. A. Graham; Commissioner of Insurance, J. R. Young; Adjutant-General, R. L. Leinster—all Democrats.

JUDICIARY. Supreme Court: Chief Justice, Walter Clark. Justices, George H. Brown, William A. Hoke, William R. Allen, P. D. Walker. Clerk, Thomas S. Keenan—all Democrats.

STATE LEGISLATURE, 1911: Senate, Democrats, 43; Republicans, 7; House, Democrats, 99; Republicans, 20; joint ballot, Democrats, 142; Republicans, 27; Democratic majority, Senate, 36; House, 79; joint ballot, 115.

The representatives in Congress will be found in the article UNITED STATES, Congress.

NORTH CAROLINA, UNIVERSITY OF. An institution of higher learning at Chapel Hill, N. C., founded in 1789. The students enrolled in the various departments of the university in 1911-12 numbered 787. The faculty numbered 84. There were no notable changes among the members of the faculty during the year. The invested funds of the university amounted to \$215,000, and the income to \$172,000. During the year there were erected medical laboratories at a cost of \$50,000, a dormitory at a cost of \$50,000, and a school of education at a cost of \$40,000. The library contains about 60,000 vol-

umes. The president is Francis P. Venable, Ph. D.

NORTHCOTE, Sir HENRY STAFFORD NORTHCOTE, first Baron. An English nobleman and administrator, died September 29, 1911. He was born in 1846, the second son of the first Earl of Iddlesleigh, who was, before his promotion to the peerage, Sir Stafford Northcote. He was educated at Eton, and Merton College, Oxford. Following his graduation from the latter he entered the foreign office as a clerk in 1868. His father, in 1871, went to Washington as one of the British members of the general commission to which was referred the *Alabama* question, and other issues then in dispute between Great Britain and the United States. Young Northcote accompanied him and subsequently visited Canada in 1873. In 1876 he went with Lord Salisbury as private secretary to a conference which sought to arrange for the pacification of the Turkish provinces. At the general election of 1880 he was returned to Parliament for Exeter and he represented that city for nineteen years. After the death of his father in 1887 he was created a baronet, but he did not again hold a parliamentary office. He held several administrative offices, however, and in 1899 he was made governor of Bombay. He was elevated to the peerage under the title of Baron Northcote of Exeter. His administration of the governorship of Bombay was very successful. During his administration occurred several of the great famines which have devastated India in recent years. He took means to alleviate the conditions and was especially praised for his efforts to preserve and increase the herds of cattle which were rapidly disappearing. In 1903 he resigned his office in Bombay after a tenure lasting three years and nine months, in order to become third governor-general of the Australian commonwealth. He held this post for the full term of five years, beginning in 1904. He was obliged to face many ministerial crises during his administration, but he enjoyed the confidence of the leaders of all parties to an unusual degree. He played no small part in producing a marked growth in the desire for greater imperial unity, which became so conspicuous in Australia during the first decade of the twentieth century. He was eager to promote the development of the commonwealth and traveled widely in order to inform himself at first hand of its needs. Following his return to England he took his seat in the House of Lords in 1909. He was rarely heard in debate, though he contributed useful speeches to the discussion on South African union and the Asiatic immigration question.

NORTH DAKOTA. POPULATION. The Thirteenth Census showed a population in the State in 1910 of 577,056, compared with 319,146 in 1900. The principal cities with their population in 1910 and 1900 are as follows (the figures in parentheses are for 1900): Fargo, 14,331 (9589); Grand Forks, 12,478 (7652); Minot, 6188 (1277); Bismarck, 5443 (3319).

MINERAL PRODUCTION. The coal production in the State in 1910 amounted to 399,041 short tons, valued at \$595,139. This is a slight decrease from the production of 1909. All the coal produced in the State is lignite and does not enter into competition with the coals of other States except as these are brought into the North Dakota markets.

AGRICULTURE. The acreage, production, and value of the principal crops in 1910 and 1911 are shown in the following table:

	Acreage	Prod., bu.	Value
Corn1911	290,000	7,250,000	\$4,350,000
.....1910	210,000	2,940,000	1,705,000
Wheat1911	9,150,000	73,200,000	65,148,000
.....1910	7,700,000	38,500,000	34,650,000
Oats1911	2,180,000	51,230,000	21,004,000
.....1910	2,165,000	15,155,000	5,607,000
Rye1911	36,000	598,000	454,000
.....1910	30,000	255,000	161,000
Potatoes ..1911	42,000	5,040,000	2,772,000
.....1910	40,000	1,640,000	1,492,000
Hay1911	192,000	2,211,000	1,477,000
.....1910	188,000	103,000	783,000

a Tons.

EDUCATION. The enrollment in the schools of the State in 1910 was 135,203. Of these 70,018 were boys and 65,095 were girls. The average daily attendance was 88,139. The number of male teachers employed during the year was 1440, and female teachers, 5118. The average monthly salary of male teachers was \$58.41 and of female teachers, \$49.28. The average salary for both was \$50.28.

POLITICS AND GOVERNMENT

The year was uneventful in the political history of the State. The legislature met and passed several important measures. These are noted in the paragraph *Legislation*, below. In January the legislature reelected Porter J. McCumber United States senator, and chose A. J. Gronna, formerly a congressman, to serve for the unexpired term of Senator Johnson, who died in the latter part of 1909. Fountain L. Thompson was first appointed to fill this vacancy caused by Senator Johnson's death, after serving a few months he resigned and the governor appointed W. E. Purcell, who served until the legislature elected Senator Gronna, who had been nominated for the unexpired term in the senatorial primaries. There were no elections in the State during the year.

The sensation of the year in politics was the attempt of Governor Burke and a portion of the Republican party to impeach John F. Cowen, the judge of the Devils Lake district. The State senate was in special session for about two months on this case, and the accused was found not guilty on every one of the hundred or more counts brought against him. The expenses of this trial reached about \$100,000.

LEGISLATION. The important measures passed by the legislative session of 1911 included the following: A juvenile court was created, similar to that which has been for some time in operation in Colorado. A measure was passed materially raising the standards of the medical profession in the State. The study required preliminary to taking a State examination is two years of college and four years of medical school work. An exception is made in the case of an osteopath who, though not allowed to administer drugs, may perform minor surgical operations. The osteopaths have a separate board of examiners, and the only preliminary education required is a two years' course in one of their high schools. Cities are authorized to adopt the so-called commission form of government with the initiative, referendum, and recall features. A very drastic anti-lobbying bill was passed. A resolution was adopted for submission to the people, which seeks to amend the constitution of the State so as to provide a general system of

initiative, referendum, and recall. The question as submitted to the people will be presented in the form of two propositions, first, whether they desire the initiative and referendum to be applied to the State constitution as well as to the acts of the State legislature, and second, whether they desire the system to apply merely to legislation. A comprehensive anti-pass bill was enacted.

STATE OFFICERS. Governor, John Burke; Lieutenant-Governor, U. L. Burdick; Secretary of State, P. D. Norton; Treasurer, Gunder Olson; Auditor, D. K. Brightbill; Attorney-General, Andrew Miller; Superintendent of Education, E. J. Taylor; Commissioner of Agriculture, W. C. Gilbrath; Commissioner of Insurance, W. C. Taylor—all Republicans, except Burke, Democrat.

JUDICIARY. Supreme Court: Chief Justice, David E. Morgan; Justices, Charles J. Fisk, B. F. Spalding, E. T. Burke, E. B. Goss; Clerk, R. D. Hoskins—all Republicans, except Fisk.

STATE LEGISLATURE, 1911: Senate, Republicans, 44; Democrats, 5; House, Republicans, 87; Democrats, 13; joint ballot, Republicans, 131; Democrats, 18; Republican majority, Senate, 39; House, 74; joint ballot, 113.

The representatives in Congress will be found in the article UNITED STATES, *Congress*.

NORTH DAKOTA (SHIP). See **BATTLESHIPS**.

NORTH DAKOTA, UNIVERSITY OF. An institution of higher learning at Grand Forks, N. D., founded in 1883. The number of students enrolled in all departments in 1910-11 was 967. Of these 169 were in the College of Liberal Arts; 45 in the College of Mining Engineering; 40 in the College of Mechanical and Electrical Engineering; 39 in the School of Medicine; 64 in the Law School; 18 in the course in civil engineering; 113 in the Teachers' College; and 7 in the graduate department. The faculty numbered 23 professors, 1 associate professor, 14 assistant professors, 32 instructors, 13 lecturers, and 6 student assistants. Dr. Harley E. French was appointed professor of anatomy and dean of the School of Medicine, and Roger W. Cooley was appointed professor of law in the Law School. The total property of the university amounts to \$2,430,000. Two new buildings were completed during the year, one for the Teachers' College and the other for the university commons. A new department of ceramics and a course for nurses were established. The university maintains a quarterly publication known as *The Quarterly Journal of the University of North Dakota*. The library contains about 45,000 volumes. The president is Frank L. McVey.

NORTHERN NIGERIA. A British west African protectorate. Area (official estimate), 255,700 sq. miles. Population (rough estimate 1908), 7,164,751. Europeans (1909), 544 (death-rate per 1000, 23.89). The Fulani, Hausas, and other prominent tribes are Mohammedans; the rest, pagans. Cattle- and horse-raising are carried on by the Fulani in the north. Forest products are collected by the natives and bartered to the Nigeria and other companies for earthenware, hardware, and cotton goods. Other products are fruits, rubber, kola nuts, cotton, tobacco, capsicums, peanuts, etc. Iron, potash, and tin are mined. As much of the trade is by barter, complete export statistics are unavailable; a large part of the imports

are consigned to the ports of Southern Nigeria. Declared imports for 1909, £909,905; exports, £309,742. Railways open (1910), 130 miles (see SOUTHERN NIGERIA); telegraphs, 2297. Revenue (local) and expenditure 1909-10, £213,436 and £566,843 respectively; 1910-11, £274,990 and £565,760. Grant-in-aid 1910-11, £200,000; 1911-12, £286,158. Southern Nigeria contributes £70,000 annually in addition. Governor and commander-in-chief, Sir H. Hesketh Bell. See EXPLORATION.

NORTHWESTERN UNIVERSITY. An institution of higher learning at Evanston and Chicago, Ill., founded in 1851. The number of students enrolled in the various departments of the university in 1910-11 was 4705. The faculty numbered 388. During the year Dr. Albert H. Wilde, professor of history in the College of Liberal Arts, resigned to become president of the University of Arizona. Other resignations were those of Dr. Alfred N. Richards, professor of pharmacology; Dr. James M. Neff, associate professor of surgery; Dr. Fred Wilbur Thyng, assistant professor of anatomy. Charles E. Hammett was appointed director of athletics in the College of Liberal Arts; Dr. Hugh McGuigan professor of pharmacology, and Mr. George A. Grant-Schaefer instructor in voice culture. The total benefactions received during the year amounted to \$288,175. This includes the endowment of \$250,000 by Mr. James A. Patten for research in the Medical School, and \$8064 by Judge E. R. Gary for the library of the Law School. The amount of the productive funds of the university is \$4,622,751 and the income from all sources is \$714,000. The library contains 145,000 volumes. The president is Abram W. Harris, LL. D.

NORTH-WEST TERRITORIES, THE. All that part of British North America not included within the provinces, the Yukon territory, or the colony of Newfoundland and its dependencies; composed of the districts of Keewatin, Mackenzie, Ungava, and Franklin. Area, 1,933,715 sq. miles; population census of June 1, 1911, 16,951. The country is administered by the comptroller of the Royal Northwest Mounted Police (1911, Lieut.-Col. Frederick White), who is the commissioner for the territories, with full executive, legislative, and administrative powers. He is aided by a council of not more than four members. The seat of government is Ottawa, Ont. See CANADA.

NORTON, CHARLES STUART. A rear-admiral retired, of the United States navy, died June 24, 1911. He was born in Albany, N. Y., in 1836 and graduated from the United States Naval Academy in 1855. He served throughout the Civil War and in 1862 was promoted to the rank of lieutenant-commander. He was made commander in 1880 and captain in 1881. In 1898 he was promoted to the rank of rear-admiral. During the Civil War he participated in the blockade of Charleston, S. C., and in several engagements. He was present at the battle of Port Royal. After the war he commanded several vessels and served on the board of inspection and survey. In 1894-96 he was rear-admiral, commanding the South Atlantic station. From 1896 to 1898 he commanded the Washington navy yard and station. In the latter year he was retired by operation of law.

NORWAY. A constitutional monarchy of northern Europe. Capital, Christiania.

AREA AND POPULATION. Land area, 309,

986.40 sq. kilometers; water, 13,000.17; total, 322,986.57 sq. kilometers, or 124,707 sq. miles. Population (census of December 1, 1910), 2,392,698 (1900, 2,240,032). Marriages (1909), 14,051; births, 61,234; deaths, 31,641; emigrants, 16,281. Christiania had (census of December 1, 1910), 243,801 inhabitants (227,626 in 1900); Bergen, 76,917 (72,251); Trondhjem, 45,228 (38,180); Stavanger, 37,118 (30,613); Drammen, 24,904; Fredrikstad, 15,624; Christian sand, 15,154; Christiansund, 13,012.

EDUCATION, ETC. Public elementary schools (1907): 5970 rural, with 275,155 pupils; 2808 town classes, with 90,129. Total expenditure on primary instruction (1907), 12,293,000 kroner (state, 3,969,000). Secondary schools, 91, with (1907-8), 15,563 pupils. Communal and private schools, 91, with 3690 pupils. Normal schools, 10, with 902 students. The University of Christiania had 1550 students in 1909. Primary instruction is compulsory. The evangelical Lutheran is the national and only state-endowed church, though all creeds (excepting Jesuitism) are tolerated.

AGRICULTURE. Of the total area, 3.5 per cent. only is under cultivation; 21.5 is under forest, and 75 is unproductive. The following table gives the final returns of cereal area and production in 1911 as compared with 1910, and the yield per hectare in 1910:

	Hectares		Quintals		Per ha.
	1910	1911	1910	1911	
Wheat ..	5,021	5,021	85,666	73,513	17.1
Rye	15,056	15,056	269,801	240,615	17.9
Barley ..	35,916	35,916	647,218	584,024	18.0
Oats	106,279	106,279	1,737,570	1,479,373	16.3

The total cereal crop in 1909 was valued at 37,506,200 kroner; the potato crop, at 30,652,000; the hay crop (2,903,237 tons), at 130,645,700.

The staple crops are as follows in thousands of kilograms (a = sown; b = harvested; c = imported; d = exported):

		1900	1907	1908	1909
Wheat	a.....	1,131	1,131	1,091	1,091
"	b.....	8,846	7,876	8,955	8,501

"	b.....	22,082	20,877	22,045	25,662
"	c.....	275,216	253,422	255,774	299,174
"	d.....	2,681	1,401	4,687	7,146
Barley	a.....	9,133	9,133	8,063	8,063
"	b.....	100,926	63,248	4,390	63,376
"	c.....	98,227	120,79	110,172	124,892
"	d.....	404	963	655	735
Oats	a.....	22,961	22,961	23,870	23,870
"	b.....	177,334	123,044	198,825	154,711
"	c.....	14,417	29,983	11,560	18,728
"	d.....	1,892	456	417	527
Potatoes	a.....	79,862	79,862	89,709	89,709
"	b.....	581,650	430,221	711,206	560,337
"	c.....	5,645	5,495	4,386	6,734
"	d.....	234	413	343	282

Livestock 1907 as compared with 1900: 172,468 horses (172,999 in 1900), 1,094,101 cattle (950,201), 1,393,488 sheep (998,819), 296,442 goats (214,594), 318,556 swine (165,348), 142,623 reindeer (108,784).

FISHERIES, ETC. In the cod fisheries, 21,001 vessels were engaged in 1909; dories, 10,403; persons, 93,638. The catch (56,207,800 hectoliters) was valued at 18,145,600 kroner; the

herring catch (2,674,000 hectoliters) at 9,903,000; mackerel (14,931,163), at 1,394,000; whiting and so forth, at 7,397,200; salmon and sea trout (850,039 kilograms), at 1,208,100; lobsters (1,249,533), at 1,148,000; oysters, at 10,300; making a total value in 1909 of 39,206,100 kroner.

Persons engaged in mining (1908), 6174; output from all mines, 470,378,000 kilograms; value, 10,339,000 kroner. The metallic industries employed 21,651 persons; paper mills, 12,250; textile industries, 10,309.

COMMERCE. The trade as given below shows imports, exports of Norwegian produce, and re-exports, and total exports (in thousands of kroner):

	Imports	Ex. Nor.	Re-ex.	Total
1909	386,617	234,641	29,685	264,326
1908	376,129	211,248	28,829	240,077
1907	385,708	219,972	33,129	253,101
1900	310,653	162,745	10,201	172,946

The principal articles of special trade are in 1909 in thousands of kroner as follows: Imports—cereals, 64,300; textiles, 40,600; oils, 32,600; colonial products, 31,300; coal, 30,200; minerals, 24,700; metal manufactures, 21,500; skins, etc., 17,300; metals, 16,600; yarns, 11,700; animals, etc., 13,400. Exports—animals, etc., 84,100; wooden wares, 42,600; timber, 34,800; minerals, 25,300; paper, etc., 22,000; skins, etc., 15,000; oils, 9000; metals, 4400; cereals, 3400; textiles, 1500; miscellaneous, 16,700.

Following are the principal countries of origin and destination, with the value of their trade in 1909 in thousands of kroner: Germany, imports 117,223 and exports 46,565; Great Britain, 89,323 and 85,145; Sweden, 41,687 and 16,817; Denmark, 19,739 and 5980; Russia, 28,484 and 9844; United States, 28,306 and 18,986; Netherlands, 12,878 and 8391; Belgium, 12,093 and 9212; France, 9473 and 12,401.

The merchant marine, January 1, 1909, included 5742 sailing vessels, of 725,392 tons; 2810 steamers, of 855,154. Vessels entered (1909), 10,684, of 4,466,009 tons; cleared, 11,181, of 4,546,810.

COMMUNICATIONS. Miles of railway in operation (1911), 1849. The state owns the majority of the railroads, and projects the construction of new lines as follows: Otta-Dombaa, to be opened 1912; Aamli-Tveitsund, 1913; the Dovre Railway, 1916; Kongsberg-Gvarv-Notodden, 1918; Myrdal-Fretheim, 1919; Gvarv-Kragero, 1922; and Sunan-Grong, 1922. Cost of construction to be in the neighborhood of 60,700,000 kroner. State telegraph and telephone lines (officially reported together, 1909), 11,725 miles; stations, 1052. Post offices, 3307.

FINANCE. The krone (worth 26.8 cents) is the unit of value. Financial statistics are given for three successive years in the table below, in kroner:

	1907-8*	1908-9†	1909-10†
Revenue	114,936,824	144,588,364	122,243,829
Expenditure	108,118,864	137,459,221	116,751,005

* To March 31, 1908. † To June 30, 1909 and 1910.

The 1909-10 budget is detailed as follows:

Rev.	1000 kr.	Expend.	1000 kr.
Customs	48,909	Public Works	36,222
Railways	19,984	Finance	20,983
Indirect taxes	9,376	Defence	20,979

Rev. (cont.)	1000 kr.	Expend. (cont.)	1000 kr.
Posts	8,028	Instruction, etc.	13,357
Direct taxes	7,601	Justice	8,266
Tels. & tels.	5,331	Agriculture	3,075
From capital	4,102	Council, etc.	1,875
Instruction	3,652	Commerce, etc.	1,524
State domains	2,209	For. Affairs	910
Various	6,467	Storthing	800
		Civil list	747
		Various	679
Total ord.	115,669	Total ord.	109,419
Extraord.	6,575	Extraord.	7,332
Total	122,244	Total	116,751

The national debt stood, June 30, 1910, at 329,298,353 kroner.

ARMY. The army of Norway was still in process of reorganization in accordance with the legislation of 1909, which provided for compulsory service in the national militia, maintained on a skeleton, or "cadre," basis. There is a *ligne* in which there is 12 years of service, a *Landvaern* with 8 years' service, and a *Landstorm* where service up to the age of 50 years is required. The army is made up of volunteers and of those serving for various short periods of time, amounting usually to 72 days for the infantry, and 126 days yearly for the artillery. With the first line filled up the armed strength for service beyond the frontier is estimated at about 30,000, while a total of 70,000 men could be mobilized. The regiment is the unit, but there is also a brigade organization which permits of easier mobilization.

NAVY. The number of effective vessels in 1911 was 59, of 29,920 aggregate tons, detailed as follows: 4 coast defense vessels (16,300 aggregate tons), 2 monitors (3500), 3 first-class gunboats (3250), 8 second-class gunboats (2270), 2 torpedo-boat destroyers (1100), 1 torpedo dispatch boat (410), 10 first-class torpedo boats (1020), 27 second-class torpedo boats (1840), 1 third-class (30), 1 submarine (200).

The plan submitted to the Storthing by the committee of defense (December, 1910), provided for the construction of 8 ironclads, 6 destroyers, 40 torpedo boats, 12 submarines, 4 gunboats, and 10 miscellaneous vessels. In 1911 3 destroyers and 1 torpedo boat were building. Another submarine has been authorized. Personnel, about 3400.

GOVERNMENT. The executive is vested in the king (in 1911, Haakon VII.), acting through a council of state. The representative Storthing, composed of the Lagthing and the Odelsting, is the legislative body. The council (constituted February 1, 1910) was composed in 1911 as follows: Premier and Minister of State, W. Konow; Foreign Affairs, J. Irgens; Worship and Instruction, J. Qvigstad; Justice, H. Scheel; Commerce, Navigation, and Industry, B. Braenne; Agriculture, B. Holtsmark; Public Works, H. Darre-Jenssen; Finance, A. Berge; Defense, Col. S. Bull.

HISTORY. During the session of the Storthing, which ended August 9, the most discussed measure was that concerning the improvement of the lakes and water courses. The Left demanded that such improvements should eventually revert to the state, while the Conservatives held that this was an infringement on the right of private property. The government measure did not provide for the state's recovery of possession, but in view of the opposition to it it was referred to an extraordinary commission, which framed a

compromise bill which was finally accepted. Another measure that was passed in this session was that relating to the direct taxes. The municipal taxes were heavier than those of the state, and in some localities were steadily increasing. The new law limited the share of the communes in the revenue to 10 or 12 per cent. It also required the taxpayers to render an exact report of their income and fortune, under severe penalty for intentional misrepresentation. For the first time in the history of the Storting a woman held a seat in Parliament. Mlle. Anna Rogstad was elected as supplementary deputy and sat in the Storting for a short time during the absence of a deputy from Christiania.

NOTE ISSUES. See BANKS AND BANKING.

NOVA SCOTIA. A maritime province of the Dominion of Canada. Capital, Halifax (population, preliminary returns, census of April, 1911, 46,081). Area, 21,428 sq. miles. Population (1911 final), 492,338. The province is administered by a lieutenant-governor (in 1911, appointed October 18, 1910, James Drummond McGregor), a lieutenant-governor, appointed by the governor-general of Canada. He is aided by an executive council (responsible ministry), and a legislature of two houses—the Legislative Council (17 appointed members) and the Legislative Assembly (38 elected members). Premier in 1911, George Murray. See CANADA.

NUTRITION STUDIES. See FOOD AND NUTRITION.

NYASSALAND PROTECTORATE.

A British African dependency, with an area of 43,608 sq. miles; population (1910 estimate), 587 Europeans (mostly in the Shiré province), 435 Asiatics, and about 922,000 natives. Capital, Zomba. The chief town is Blantyre, with about 200 Europeans and 6000 natives. Pupils enrolled in mission schools, 96,000. The main crops are coffee (in the Shiré province), of which in 1909-10 748,410 pounds were exported; tobacco, 1,084,757 pounds exported; cotton, 858,296 pounds grown; tea, 36,281 pounds exported. Livestock, mostly native-owned, in 1909-10: 57,658 cattle, 17,840 sheep, 111,973 goats, 14,221 swine. Imports and exports (1910-11), £193,490 and £147,340, exclusive of transit.

Revenue and expenditure (1910-11), £94,980 and £112,360. Grant-in-aid in 1909-10, £30,000. Miles of railway, 113. Steamers ply the lake and the rivers. A telegraph line connects with Ujiji, on Lake Tanganyika. Governor and commander-in-chief (1911), Col. Sir. W. H. Manning.

OAKLAND (CAL.). See MUNICIPAL GOVERNMENT.

OATS. The world's oat crop in 1911 was about 10 per cent. short of the crop of 1910. The heaviest reductions in yield occurred in the United States, Russia, Rumania, and the United Kingdom. This shortage was generally due to dry weather and excessive heat at a critical time in the growth of the crop. The International Institute of Agriculture at Rome reports the total production in 20 countries of the northern hemisphere at 3,746,493,000 bushels in 1911 and at 4,122,825,000 bushels in 1910. The area devoted to oats in the two years was about the same. Russia, which rivals the United States in leadership, produced 858,356,000 bushels in 1911 and 1,045,991,000 bushels in 1910. Germany yielded 530,764,400 bushels in 1911 and 544,286,500 bushels in 1910, the acreage in 1911 being the greater by about 95,000. The

Spanish yield in 1911 was 350,815,000 bushels, an increase of 5.5 per cent. over 1910, which was due mainly to a larger acreage. The production of the United Kingdom in 1911 was 194,270,000 bushels, which was 9.5 per cent. below the previous year's production, while the acreage had decreased only a little over 1 per cent. Austria yielded 156,630,000 bushels and Hungary including Croatia and Slavonia 90,200,000 bushels in 1911. The yield in Austria was 10 per cent. above last year's crop, and the yield of the other three countries 28 per cent. higher, due partly to larger acreages and partly to a better yield. A more complete list of yields by countries is given under AGRICULTURE.

In the United States the oat crop suffered in nearly every section of the country in which it was grown and in no other country was the reduction in yield so great. In general, lack of moisture and high temperature coming either singly or in combination at critical times during the period of growth caused the injury. Only few sections produced a normal crop and over a large portion of the oat-growing territory not even a fair yield was secured. A large acreage of the crop was cut for hay when it became apparent that the hay crop also would be one of the shortest on record. This practice reduced the average yield per acre as the average is figured on the acreage seeded, and no determination of the acreage not harvested for grain was made. The dry weather produced the greatest reduction in yield in South Dakota, Oklahoma, Nebraska, Kansas, and Missouri. The total crop of the United States in 1911 was only 922,298,000 bushels, as compared with 1,186,341,000 bushels in 1910. The acreage of 1911 was 37,763,000, the highest on record. The total value of the crop, based on the average farm value of 45 cents per bushel on December 1, 1911, was \$414,663,000, also the highest value on record. The leading States and their yields in 1911 were as follows: Iowa, 126,225,000 bushels; Illinois, 121,536,000 bushels; Minnesota, 67,214,000 bushels; Wisconsin, 67,050,000 bushels; Ohio, 54,570,000 bushels, and North Dakota, 51,230,000 bushels. The average yield for the entire country was 24.4 bushels per acre in 1911 and 31.6 bushels in 1910. The highest average yield for any State was 51.7 bushels per acre, which was secured in Washington.

OBERLIN COLLEGE. An institution of higher learning, at Oberlin, O., founded in 1833. The students enrolled in the various departments in 1910-11 numbered 2043, divided as follows: College of arts and sciences, 1004; theological seminary, 71; conservatory of music, 479; academy, 539; drawing and painting, 70; summer session, 60. During the year Prof. Charles Nelson Cole, Ph. D., was elected to the office of dean of the college of arts and sciences. In the theological seminary was erected a new chair of comparative religion, occupied by Prof. F. S. MacLennan. The year saw the completion of a half million dollar fund to which two years of effort had been given. This includes one gift from an anonymous donor of \$200,000, another of \$125,000 from the general education board, one of \$50,000 from an anonymous donor, and one of \$40,000 from Dr. L. C. Warner. About half the fund will be used for endowment. The system of professional athletic coach was abolished and a recent graduate was employed as instructor in physical training and as athletic coach. This officer has been made a regular

member of the faculty. The library contains about 115,000 volumes. The president is Henry C. Keene, D. D.

OCCUPATIONAL DISEASES. The dangers to health and life and the losses attending special trade diseases have been given considerable attention for several years in this country. This has been due primarily to the activities of the American Association for Labor Legislation, which has not only carried on investigations on its own behalf, but has also given publicity to the results of European investigations. It is needless to say that the legislation in the United States for the protection of workers from industrial diseases is greatly behind that of the more advanced European countries. The view that the burden of industrial accidents should be borne by the industry rather than by the individual workers, which has wrought considerable changes in the employers' liability laws (q.v.), has been applied also to the matter of diseases inherent in various trades. Either conditions which produce these diseases must be eliminated, or, this being impossible, the industry must bear the burden rather than the individual employee. The United States Bureau of Labor published a list of thirty industrial poisons, including antimony, arsenic, chlorine, mercury, lead, phosphorus, picric acid, and prussic acid. Usually these poisons enter the system through the inhalation of dust; less frequently through the skin or mucous lining of the mouth. There are many dangers in the manufacture of chemicals, dye stuffs, and colors, certain parts of the metal, glass, rubber, and leather industries, in the manufacture of explosives, in mining and smelting, in hat making, and some other trades. Pulmonary tuberculosis and pneumonia are very common trade diseases, that is, numerous occupations so weaken the resisting powers of the lungs that these diseases readily secure a hold. This applies to all such trades as those of potters, cutlers, file-makers, glass-makers, and many others where dust particles organic or inorganic are common. Dr. George M. Kober in preparing the report for the United States Bureau of Labor, presented data showing that in all dusty trades lung diseases are fully twice as frequent as in other trades. What is required is regular medical inspection and respirators to protect the lungs from dust, blowers and exhausts to carry away dust and fumes, safety hoods, shields, masks, and gloves to protect the worker from flying dust, intense heat, and dangerous gases.

ILLINOIS COMMISSION'S REPORT. The Illinois Commission on Occupational Diseases of nine members appointed in March, 1910, transmitted its report to Governor Deneen in January. This was a committee of the highest order, including the president and secretary of the Illinois State Board of Health, two members of Rush Medical College, two representatives of State labor departments, and Prof. Charles R. Henderson of the University of Chicago, who acted as secretary. The committee limited its inquiries primarily to industrial poisons, upon which it presented a report of 200 pages. The following poisons were studied: Lead, phosphorus, zinc, turpentine, carbon monoxide gas, anthrax, cyanide of potash, nitrate of silver, hydrofluoric acid, metal platinum, the chromates, and chronic acid. nystagmus or oscillation of the eyeball. Special investigators were employed for each line of in-

quiry. Lead was found to be by far the most important of the industrial poisons, being employed in thirteen trades and twenty-six lines of manufacture. Of these the most dangerous are lead smelting, the white lead trades, paint factories, the painting trade, and the manufacturing of storage batteries. The bad effects of white lead upon painters, of whom there were 30,000 in Illinois, included painters' colic, paralysis, loss of weight, diseases of the blood vessels, liver, kidneys, and heart, insanity and senility. The report also brought out marked differences in the protection afforded by medical inspection and otherwise in England and Germany, as compared with the United States. Thus, in an English factory employing 90 men, no case of lead poisoning was found in five years, while in an American factory employing 94 men, 28 per cent. had been poisoned. Various sorts of diseases were found to be common to workers in brass, in addition to the very frequent "brass founder's ague." The workers in compressed air were found to be injured in very large proportions. In completing the Hudson tunnels at New York the proportion of deaths was 25 per cent. for the first employees, but by means of proper methods of introducing workers into and gradually removing them from the compressed atmosphere, the proportion of deaths was reduced to 1 per cent. of the employees. The commission recommended protection of workers in occupations where trade diseases were found, considerably enlarged responsibilities in this respect to be imposed upon employers.

PHOSPHORUS POISONING. Following the completion of its investigation into phosphorus poisoning in match factories in the United States in 1910, the American Association for Labor Legislation began an agitation for the enactment of a law forbidding the use of white phosphorus in matchmaking. This substance produces the loathsome disease known as phosphorus necrosis, or "phossy jaw." This disease eats away the bones of the jaws, causing an almost unbearable odor and terrible disfigurement. European countries have uniformly forbidden the use of white phosphorus since the discovery of a harmless substitute, the sesquisulphide of phosphorus. The Diamond Match Company, sometimes called the match trust, held an exclusive patent right to the use of this substance in this country. It, however, generously agreed to surrender its exclusive rights and place the control of this substance in the hands of a board of trustees. The following trustees were selected in January: Prof. E. R. A. Seligman of Columbia University, Commissioner of Labor Charles P. Neill, and Jackson Ralston, an attorney for the American Federation of Labor. Following their appointment President Taft wrote them suggesting that the use of the patented substance be open to all. The trustees were given full power to fix whatever conditions they deemed fair under which all match manufactures could use the non-poisonous phosphorus. Previous to this there had been introduced in Congress the Esch bill forbidding the use of the white phosphorus. The passage of this bill would have given the Diamond Company a monopoly of match manufacturing in this country; it was therefore vigorously opposed by independent match concerns. The action of the large company, however, in surrendering its exclusive control removed this objection. Meanwhile other bills were introduced and action was prevented in 1911. The Esch bill, with tre-

mendous public backing, was again introduced in December with every probability of passage. A hearing on it was set for January 10, 1912. The aim of the bill is to prohibit the manufacture and sale of poisonous phosphorus matches by taxing them heavily under the internal revenue system.

LEGISLATION. The American Association for Labor Legislation is endeavoring to secure the enactment of uniform laws in the various States requiring the report of all diseases arising from occupations. The model law provides a small fee for each case reported, and a penalty for failure to report. It was adopted, with slight variations in some cases, in California, Connecticut, Illinois, Michigan, New York, and Wisconsin in 1911. The diseases which must be reported are the following: Anthrax, compressed air illness, and poisoning from lead, phosphorus, arsenic, or mercury, or their compounds. The law requires that the name, postal address, and place of employment of the sufferer, together with the name of the disease, be reported to the State Board of Health or the State Department of Labor. Penalties for failure to report are provided in all the States except Connecticut; and California and Connecticut provide a fee of fifty cents for each report to the physician making it.

At the conference of the American Association for Labor Legislation (q.v.), in Chicago there was considerable discussion of the question whether physicians should be given a fee for reporting cases of trade diseases. Some physicians had declared it to be an insult to offer only fifty cents, while others had said that one effect would be to stimulate false reporting for the sake of the fee. The consensus of opinion at the conference was that a fee should be paid.

OCEANIA, FRENCH. See **FRENCH ESTABLISHMENTS IN OCEANIA.**

OCEANS, ORIGIN OF. See **GEOLOGY.**

O'CONNELL, WILLIAM HENRY An American prelate of the Roman Catholic Church, created cardinal in November, 1911. He was born at Lowell, Mass., in 1859 and graduated from Boston College in 1881. In the same year he entered the North American Collège at Rome. He was ordained priest in that city in 1884 and was appointed rector of the North American College in the following year. In 1897 he was appointed domestic prelate and in 1901 was appointed bishop of Portland, Me. He was consecrated bishop at the church of St. John Lateran, Rome, on May 19, 1901. In 1905 he was named assistant at the pontifical throne, and in the same year was appointed special papal envoy to the emperor of Japan. In 1906 he was appointed archbishop of Constance and coadjutor with succession of Boston. He succeeded to the see of Boston on the death of Archbishop Williams (1907). He was one of the three American cardinals created at the consistory of 1911.

ODIN, ERSATZ. See **NAVAL PROGRESS, Propulsion.**

O'GORMAN, JAMES ALOYSIUS. An American public official, United States senator from New York. He was born in New York City in 1860 and was educated in the College of the City of New York and in the New York University Law School, where he received his degree in 1882. In the same year he was admitted to the bar. He took an early interest in politics and before he reached his majority was a prominent

member of Tammany Hall. In 1893, partly through the influence of Richard Croker, he became justice of the District Court of New York. He held this place until 1900, when he was elected justice of the State Supreme Court on the Democratic ticket. While he was a justice he was elected grand sachem of Tammany Hall to succeed Lewis Nixon. His election was regarded as a perpetuation of the influence of Richard Croker of that organization. He held the office of grand sachem until 1905. The election of Justice O'Gorman was a compromise between the regular Democratic members of the legislature and the body of insurrectionists who were opposed to the election of William F. Sheehan. For details of the contest which led to the election of Senator O'Gorman, see **NEW YORK.**

OHIO. POPULATION. The Thirteenth Census showed a population in 1910 of 4,767,121, as compared with 4,157,545 in 1900. The principal cities with their population in 1910 and 1900 are as follows (the figures in parentheses are for 1900): Cincinnati, 363,591 (325,902); Cleveland, 560,663 (381,768); Toledo, 160,497 (131,822); Youngstown, 79,066 (44,885); Dayton, 116,577 (85,333); Akron, 69,067 (42,728).

AGRICULTURE. The Thirteenth Census included statistics of agriculture. These are of date of April 15, 1910. In that year the farms in the State numbered 272,545 compared with 276,719 in 1900. The land in farms was 24,105,708 acres, compared with 24,501,985 acres in 1900. The improved land in farms was 19,227,969 acres, compared with 19,244,472 acres in 1900. The average acreage per farm was 88.6, compared with 88.5 in 1900. The value of farm property, including land, buildings, implements and machinery, domestic animals, poultry, and bees, was \$1,902,694,589 in 1910, compared with \$1,198,923,946 in 1900. The average value of property per farm in 1910 was \$6994, compared with \$4333 in 1900. The average value of land per farm per acre in 1910 was \$53.34, compared with \$33.35 in 1900. Of all the farms in the State in 1910 194,857 were operated by owners and managers, and 77,188 by tenants. Of the farms operated by owners, those free from mortgage numbered 135,616, those under mortgage 54,997. The native white farmers numbered 252,654; the foreign-born white 17,450; negro and other non-white, 1950. Total value of domestic animals of all kinds in 1910 was \$197,332,112. The cattle numbered 1,837,607, valued at \$51,403,344; horses and colts, 910,224, valued at \$93,910,638; mules, 22,850, valued at \$2,775,831; swine, 3,105,627, valued at \$19,412,730; sheep, 3,909,162, valued at \$14,941,381; poultry of all kinds numbered 17,342,289, valued at \$9,532,672. The acreage, production, and value of the principal crops of 1910 and 1911 are shown in the following table:

		Acreage	Prod., bu.	Value
Corn	1911	3,900,000	150,540,000	\$87,313,000
	1910	3,960,000	144,540,000	66,488,000
Wheat	1911	2,265,000	36,240,000	32,978,000
	1910	2,125,000	34,425,000	30,982,000
Oats	1911	1,700,000	54,570,000	24,556,000
	1910	1,770,000	65,844,000	23,045,000

MINERAL PRODUCTION. The production of coal in the State was 34,209,668 short tons, valued at \$35,932,288. Although more than half the coal miners of the State were on strike in 1910 for a period equivalent to 25 per cent. of the average number of days' work, the increase in production over 1909 was the largest gain ever made in one year. In 1909 the State produced 27,939,641 short tons. The increase in 1910 was 6,270,027 short tons. This was due chiefly to the long-continued idleness in the States to the west; and in addition to the influences exerted by the strike, the cold winter of 1909-10 had cleared the lake docks in the Northwest of coal, so that the year opened with a good demand for Ohio coal. There was unusual activity during the year, except for the comparatively short time of the strike of the organized men and during two local strikes. Ohio was first in the percentage of the total production of coal by the use of machines. In 1910, 28,887,241 short tons, or 84.44 per cent. of the total, were machine mined. The total number of men employed in the coal mines of the State in 1910 was 46,641. These averaged 203 working days. During the year 161 men were killed and 471 injured in the coal mines.

The iron ore mined in the State in 1910 amounted to 22,320 tons, valued at \$135,866, as compared with 16,527 tons, valued at \$28,547 in 1909.

The coal output in 1911 showed a considerable decrease from that of 1910. This was estimated at the end of the year to amount to between 10 and 15 per cent. The smaller output was due to the fact that in 1910 the production in Ohio was stimulated by the strike in Illinois and the southwestern fields. In the latter half of the year the demand for coal in Ohio was very light and in some sections the shipment was hardly more than 50 per cent. of the normal, while the lake trade was 25 per cent. or more below normal during the greater part of the year.

POLITICS AND GOVERNMENT

The political history of the year in Ohio in 1911 was of unusual importance. There is much that is painful in the record, as it deals largely with political corruption, but the results achieved point to a remedy for these conditions and a more healthful atmosphere in the future. The legislature met and passed some important measures, many of them enacted at the instance of Governor Harmon. A record of these acts will be found in the paragraph *Legislation* below.

On January 9 Judson Harmon was inaugurated governor for the second time and W. Atlee Pomerene was sworn in as lieutenant-governor. On the following day Mr. Pomerene was elected United States senator to succeed Senator Dick, whose term had expired. Mr. Pomerene received every Democratic vote in the legislature. On January 19 the legislature ratified the income tax amendment to the constitution.

ELECTORAL CORRUPTION. Following the elections held in November, 1910, charges of wholesale fraud in the elections in Adams and Scioto

counties were made. As a result of these charges a grand jury carried on an investigation in Adams county early in January, and a remarkable condition of political corruption was revealed. As a result of the investigation over one-third of the voters in the county were indicted, and on the invitation of Judge A. Z. Blair of the court of common pleas, that those under indictments confess and receive light sentences, nearly 2000 voters came to the county seat and were fined and given a workhouse sentence, which was suspended. The knowledge that those who confessed would receive mild sentences, while those who endeavored to evade the law would be heavily punished, induced the indicted men to accept the terms offered by the court. In these indictments only the sellers of votes were affected. No effort was made to indict those who had offered the bribes. Among those indicted were well-to-do farmers and several clergymen. It was found that for years from \$10,000 to \$25,000 had been distributed at every election held in the county. Governor Harmon, in his message to the legislature, commented severely on the conditions and emphasized the fact that the briber is a more dangerous and a more disreputable person than the one bribed, and urged that the law be administered with this principle in view. He deplored the repeal of the Garfield corrupt practices law and recommended its reenactment. He also made the suggestion that the State undertake to provide for all the necessary expenditures of election and make all party expenses for such purposes illegal. An investigation carried on in February in Scioto county resulted in the indictment of forty persons for corruption in the elections.

LEGISLATIVE CORRUPTION. Scarcely had the revelations of the corruption in elections ceased to be a sensation when deplorable conditions were revealed in the State legislature. Rumors of alleged corruption had become common and William J. Burns was employed to carry on an investigation. This he did in March and April and a scandalous condition in the legislature was revealed. The detectives claimed to have discovered the fact that some sixty members of the legislature were apparently engaged in corrupt practices. Pretended bribery negotiations were carried on by the detectives with certain legislators, and by this means evidence was obtained of the willingness of these men to accept bribes for passing or defeating particular measures. On the revelation of these conditions a grand jury was convened. An attempt was made by the members of the legislature to have a committee of legislators appointed to investigate these charges, but this was prevented by Governor Harmon for the reason that under the laws of Ohio guilty persons would win immunity from prosecution by confessing before a committee of legislators. A grand jury was convened, and it was urged by Governor Harmon to make the most thorough investigation possible. The governor declared that the legislature must remain in session until the investigation reached the last recesses of legislative corruption. On May 2 every member of the calendar committee of the House, against which much suspicion had been directed, resigned, except Dr. George B. Nye, who, several days before had brought about the arrest of three detectives employed by Mr. Burns, who, he declared, had paid him bribes. On May 3 the grand

jury brought in indictments against five members of the legislature and against Rodney J. Diegle, sergeant-at-arms in the senate. The five were: Dr. George B. Nye and A. C. Lowrey of the house and George K. Cetone, Isaac E. Huffman, and L. R. Andrews of the senate. On May 5 these men were arraigned and all pleaded "not guilty." The first trial to be held on these indictments was that of Dr. George B. Nye. This began on May 23. He was charged with soliciting a bribe of \$500 to vote for the Kimble bill, which was designed to legislate out of office Judge A. Z. Blair, who exposed the vote-buying scandal in Scioto and Adams counties. He was also charged with soliciting other bribes. Dr. Nye was acquitted on June 1, but was indicted a week later on another charge. Rodney J. Diegle was, in the same month, put on trial on the charge of aiding Senator L. R. Andrews in soliciting a bribe. F. H. Smiley testified that he had bribed Senators George K. Cetone, Isaac E. Huffman, and L. R. Andrews to vote an insurance bill out of the committee. Smiley was one of the detectives employed by Mr. Burns, who testified to having given each of these men four \$50 bills. He claimed that Diegle had introduced him to these senators. Diegle was convicted on July 3 and was sentenced to three years in the Ohio penitentiary. On June 9 the grand jury indicted three members of the legislature and an assistant sergeant-at-arms of the senate. One of these indicted was Dr. George B. Nye, who, as mentioned above, had been acquitted. The others were Senator Thomas A. Dean of Fremont and Stanley F. Harrison of Cleveland, an attaché of the senate.

On June 5 Representative Owen J. Evans, a Democrat of Canton, was indicted and shortly after the indictment had been found he confessed to having received a bribe of \$100 from L. C. Miller of Akron, a loan agent. He was fined \$500. He pleaded guilty with the understanding that he would go before the grand jury and tell all that he knew of the bribery scandals.

Up to the time of these revelations Governor Harmon had found it impossible to have passed the important measures which he advocated. After these scandals had been laid bare, however, most of the measures were passed without difficulty. They included a central board of control for State institutions, a measure for direct nomination of United States senators on the Oregon plan, a public utilities and an employers' liability act.

INDICTMENT OF GEORGE B. COX. On February 22 George B. Cox, the veteran Republican "boss" of Cincinnati and president of the Cincinnati Trust Company, was indicted on the charge of perjury. This charge was based on the fact that Cox, testifying before the grand jury on May 21, 1906, denied that he had ever received any of the illegal interest money collected by county treasurers. The grand jury charged that he had received \$48,500 and had therefore violated the statute against perjury in testifying as he did. A few days following a second indictment was reported for a similar transaction in which Cox was alleged to have received \$17,500. Following the first indictment Cox demanded an immediate trial and criticised Judge Gorman, a Democrat, who had instructed the grand jury, and also severely criticised the grand jury itself, for which he narrowly escaped trial for contempt of court.

A series of remarkable incidents followed in the attempt to bring Cox to trial. On March 31 Judge Gorman made an order for a change of venue to Clermont county. Judge Dickson, on April 7, disregarding the protest of Henry T. Hunt, prosecutor, held that this change was void and a usurpation of power. Mr. Hunt charged that Judge Dickson had been nominated and elected by Mr. Cox. On May 20 Judge Dickson quashed the two indictments and Mr. Cox was set free. The judge gave as his reason for this action that Cox's constitutional rights were violated when he was called before a grand jury in 1906 and forced to give the testimony in which it was charged in the indictments he had perjured himself. A writ of mandamus was thereupon issued against Judge Dickson in order to save one of the indictments. This was for the purpose of compelling Judge Dickson to permit the prosecutor to elect one of the two indictments on which to try Cox. The circuit court granted an alternative writ. This decision temporarily tied up the proceedings in Judge Dickson's court, but on June 16 final action was taken and the two indictments were finally quashed by Judge Dickson in spite of the action of Mr. Hunt in filing affidavits charging bias against the judge. Judge Dickson declared that the indictments against Mr. Cox had been faultily drawn.

ELECTIONS. There were no elections for State officers in 1911, but the municipal elections were of unusual interest. Mayors were elected in the larger cities, including Cincinnati, Columbus, Cleveland, and Toledo. In Cincinnati, Henry T. Hunt, the prosecutor who, as noted above, carried on the case against George B. Cox, was elected mayor of the city on the Democratic ticket, in spite of the efforts of the Republican machine, headed by Mr. Cox, to defeat him. Mr. Hunt was elected in the face of a letter written by President Taft supporting the Republican ticket. This action of the President, who had in previous years bitterly attacked Mr. Cox and the machine, was severely criticised. The Democrats were successful also in Columbus, where George J. Karb defeated Mayor George S. Marshall, a reform Republican, by a plurality of 6000 votes and a total vote of 43,000. In Toledo Brand Whitlock was elected mayor for the fourth time, with the entire Independent ticket which he represented. The Socialist vote in the city was large, reaching about 5000. The election in Cleveland resulted in the success of Newton D. Baker by a plurality of about 20,000. Mr. Baker had been city solicitor for ten years, most of the time under the late Tom L. Johnson as mayor, and was an advocate of the principles which made Mr. Johnson famous.

Perhaps the most notable feature of the election in the State was the success of the Socialists, who elected mayors in ten towns and cities, together with many members of city councils throughout the State. Delegates to the constitutional convention were chosen at this election. The convention is to meet at Columbus in January. A majority of delegates are pledged to adopt the initiative and referendum, upon which issue the campaign was fought throughout the State. The new constitution will be submitted to popular vote, perhaps in the fall of 1912.

OTHER EVENTS. There was dedicated at Cleveland in March the second of the great public buildings to be erected in that city, com-

posing the so-called group plan. The city centres at the public square and the area opening out of the square is to be remodeled at a total cost of \$30,000.00. Around a wide esplanade are to be grouped not only the municipal buildings, but also the county court house and federal building as well as the public library. The first of the group to be dedicated was the court house, the ceremony occurring October 15, 1910. The building was not occupied, however, until the fall of 1911. The corner-stone of the city hall, a third building of the group, was laid on July 22, 1911, the anniversary of the city's founding. The first of the group plan structures to be completed and fully occupied is the federal building, erected at a cost of \$4,000,000. This edifice contains the federal post office, court house, the customs house and internal revenue offices, and the offices of other government bureaus. The building contains mural decorations by Blashfield, Low, Millet, Cox, Zogbaum, and Crowninshield. The chief agency in bringing about this plan has been the Cleveland chamber of commerce.

A committee representing the progressive Republicans of the State met in Cleveland in November and adopted a platform which is to be the basis for the formation of the Progressive leagues throughout the State before January 1, 1912, when a State conference will be held at Columbus. While the platform supported no candidate for President or governor, it was known that members of the committee who drafted the resolution opposed the renomination of Mr. Taft. The platform demanded a downward revision of the tariff, the initiative and referendum, commended the short ballot, called for legislation to remedy trust evils, and advocated the direct election of senators, direct nomination and the continuance of the conservation policy, and an income tax.

LEGISLATION. The most important measure passed by the legislature was the utilities bill. This bill converts the State railway commission into a public service commission, broadening its powers so as to control not only railway and traction lines, but all other public utilities. The commission is especially empowered to regulate the issuing of securities, to value the physical properties of companies and corporations, and to decide just and reasonable rates for service. In making the valuation for rate-fixing purposes franchises and monopoly values are not to be considered, but only the value of the property used or useful for public convenience. Municipal councils are to retain the power of renewing rate contracts for utilities; while any referendum is prohibited in such contracts, either the people or the utility company may appeal to the State board. With regard to gas and electric light rates, joint State and local municipal control is provided. The local councils are to take the initiative in prescribing rates for periods not in excess of ten years. Street railways are excluded from the otherwise general State control. Other important bills passed at this session were the workingmen's compensation act, the corrupt practices act, a limited initiative and referendum for cities, a nine-hour work-day for employed women, the requirement that agriculture shall be taught in all village and country schools, and a central board of control for nineteen State institutions, replacing nineteen separate boards of trustees

and placing the subordinate employees of these institutions under the civil service.

STATE OFFICERS. Governor, Judson Harmon; Lieutenant-Governor, Hugh L. Nichols; Secretary of State, Charles H. Graves; Treasurer, E. M. Fullington; Auditor, David S. Creamer; Attorney-General, Timothy S. Hogan; Adjutant-General, Charles C. Weybrecht; Commissioner of Insurance, Edmond H. Moore; Superintendent of Education, Frank W. Miller—all Democrats, except Fullington.

JUDICIARY. Supreme Court: Chief Justice, William T. Spear; Associate Justices, James G. Johnson, Maurice H. Donohue, John A. Shauck, William Z. Davis, James L. Price; Clerk, Frank McKean—all Republicans, except Johnson, Donohue, and McKean.

STATE LEGISLATURE, 1911. Republicans, Senate, 15, House, 49, joint ballot 64; Democrats, Senate 19, House, 70, joint ballot 89; Democratic majority, Senate 4, House 21, joint ballot 25.

The representatives in Congress will be found in the article UNITED STATES, *Congress*.

OHIO STATE UNIVERSITY. An institution of higher learning at Columbus, O., founded in 1870. The number of students enrolled in the various department of the university in 1910-11 was 3439. The teaching staff numbered 241 men and 26 women. The faculty lost by death Nathaniel Wright Lord, professor of metallurgy and mineralogy and director of the school of mines and Benjamin Franklin Thomas, professor of physics. William McPherson, professor of chemistry, was appointed dean of the graduate school. During the year a new library building was erected at a cost of \$250,000, and an archaeological and historical association building at a cost of \$100,000. The centre of student social life and activities, known as the "Ohio Union," built and equipped at a cost of \$100,000, was also opened at the beginning of the new year. The graduate school was reorganized and enlarged to include work in the seven colleges. The library contains about 100,000 volumes. The president is W. O. Thompson, D. D., LL. D.

OHIO UNIVERSITY. An institution of higher learning founded in 1804 at Athens, Ohio. The number of students enrolled in all departments of the university in 1900-11 was 1678. The faculty numbered 75. In June, 1911, eight new members were added to the faculty. No notable gifts were received during the year. The productive funds amounted to \$1,214,813, and the annual income to about \$200,000. The library contains about 35,000 volumes. The president is Alston Ellis, Ph. D., LL. D.

OHIO WESLEYAN UNIVERSITY. An institution of higher learning at Delaware, O., founded in 1842. The students enrolled in the various departments of the university in 1911-12 numbered 1345. The faculty numbered 65. There were no notable changes among the members of the faculty during the year. A movement has been in progress for a year or more to increase the endowment of the university. During 1910-11 there was pledged an additional endowment of \$500,000, of which \$125,000 was placed by the General Education Board. Of this endowment fund, \$150,000 has been paid. The present productive funds of the university amount to \$540,000. From this is received about \$27,000 annually. The total income in 1910-11 was \$111,500. The library contains

about 60,000 volumes. The president is Herbert Welch, D. D.

OIL BURNERS. See NAVAL PROGRESS, *Propulsion*.

OIL ENGINES. See NAVAL PROGRESS, *Propulsion*, and INTERNAL-COMBUSTION ENGINES.

OKLAHOMA. POPULATION. The Thirteenth Census showed a population in 1910 of 1,647,155, as compared with 398,331 in 1900. The latter figure includes Oklahoma and Indian Territory. The principal cities with their population in 1910 are as follows: Oklahoma City, 65,205; Muskogee, 25,278; Tulsa, 18,182; Shawnee, 12,474; Chickasha, 10,320; Guthrie, 11,654.

AGRICULTURE. The Thirteenth Census included statistics of agriculture. These are of date of April 15, 1911. On that date farms numbered 190,192, compared with 108,000 in 1900. The land in farms was 28,850,353 acres, compared with 22,998,338 acres in 1900. The improved land in farms was 17,551,337 in 1910, compared with 8,574,187 in 1900. The average acreage per farm was 151.7, compared with 212.9 in 1900. The value of farm property, including lands, buildings, implements and machinery, was \$918,198,892 in 1910, compared with \$277,525,433 in 1910. The average value of all property per farm was \$4828 (\$2570 in 1900). The average value of land per acre was \$22.49 (\$6.50 in 1900). Of all the farms in the State 86,055 were operated by owners and managers, 104,137 by tenants. Of the farms operated by owners, those free from mortgage were 46,889, those under mortgage 36,036. The native white farmers numbered 161,773, foreign-born whites 7748, negro and other non-white 20,871. The total value of cattle of all kinds, poultry, and bees was \$152,432,792. The cattle numbered 1,953,560, valued at \$43,187,601; horses and colts 742,959, valued at \$63,651,631; mules 257,076, valued at \$28,618,224; swine 1,839,030, valued at \$11,907,641; sheep and lambs 62,472, valued at \$253,864. Poultry of all kinds numbered 8,501,237, valued at \$3,713,943. The acreage, production, and value of principal crops in 1910 and 1911 are shown in the following table:

	Acreage	Prod., bu.	Value
Corn1911	5,675,000	36,888,000	\$25,822,000
.....1910	5,735,000	91,760,000	46,798,000
Wheat1911	1,122,000	8,976,000	8,258,000
.....1910	1,567,000	25,542,000	22,222,000
Oats1911	909,000	8,181,000	3,927,000
.....1910	699,000	25,514,000	9,440,000
Rye1911	4,000	38,000	40,000

MINERAL PRODUCTION. The coal production of the State in 1910 was 2,646,226 short tons, valued at \$5,867,947, a decrease of 473,151 short tons, as compared with the tonnage for 1909. Oklahoma was one of the States most seriously affected by the prolonged strike of 1910. The suspension of mining in the Southwestern States gave exceptional opportunity for coal from Colorado, New Mexico, and Alabama to make heavy inroads upon the markets naturally tributary to Oklahoma, and the adjoining States. The most serious result of the strike, however, was the migration of the miners to other States

where mining was not interrupted. As a consequence, when mining was resumed, the supply of labor was entirely inadequate. The number of men employed in the coal mines of the State in 1910 was 8657. These worked on an average of 144 days. The number of men on strike was 8213, and the average time lost by each man was 152 days.

In the production of petroleum Oklahoma ranks second, being surpassed only by California in 1910. From the fields of the State were taken 52,028,718 barrels, as compared with 47,859,218 in 1909. According to estimates of the United States Geological Survey, the production of 1911 exceeded that of 1910. In the Kansas-Oklahoma field the fields of Oklahoma furnished by far the largest quantity. This authority estimated the production to be about 56,000,000 barrels in 1911. Several new wells, producing large quantities of oil, were opened during the year.

The State produces a small amount of gold and silver. The gold production in 1911 was 1485 fine ounces, valued at \$30,698. The production of silver was 168,245 fine ounces valued at \$92,535.

EDUCATION. The total school population in the State (between the ages of 6 and 21 years) in 1911 was 566,852. Of these 509,577 were white and 470,275 were colored. The total enrollment in the public schools was 443,227, of whom 405,873 were white and 37,354 were colored. The white male teachers numbered 2874 and the white female teachers, 6350. The colored male teachers numbered 268 and colored female, 528. The total expenditures for the year for education amounted to \$6,759,412.

POLITICS AND GOVERNMENT

The State had little political history of importance in 1911. The legislature met and passed a number of important measures which are noted in the paragraph *Legislation* below. On February 9 a decision of the Supreme Court of the State declaring that the act of the legislature which made Oklahoma City a permanent capital was within its powers, settled the contest which began in 1910 between Guthrie and Oklahoma City as to which should be the seat of the State government. The constitution of the State made Guthrie the capital until 1913, but an election was held on June 11, 1910, providing for the removal of the capital to Oklahoma City. This election was held invalid by the State Supreme Court on the ground that the title of the ballot did not conform to the law. Thereupon Governor Haskell called a special session of the legislature to remove the capital to Oklahoma City. The decision of the Supreme Court on February 9 finally settled the question.

On March 29 the United States Circuit Court at St. Louis declared the two-cent passenger law of the State unconstitutional.

On April 3 two important decisions were rendered by the United States Supreme Court relating to the enforcement of the laws forbidding the sale of intoxicating liquors in the State. The court held that it could not be invoked to enforce the prohibition laws of the State. One of these cases was against the Atchison, Topeka & Santa Fe Railway Company, and about twenty other common carriers including railways and express companies, to

enjoin them from interfering with the enforcement of the State's prohibition law. The other case was a petition for a writ of prohibition to prevent the federal courts for the district of Oklahoma from issuing writs of injunction on the application of the railways and the express companies to enjoin the Oklahoma State officers from enforcing writs of search and seizure and thereby interfering with interstate commerce. The court held that a writ of prohibition was seldom issued by the Supreme Court and when issued is a matter entirely within the discretion of the court. In both these cases the opinions were unanimous.

There were no elections in the State during the year.

LEGISLATION. The important measures passed in the legislative session in 1911 include the following: Measures were passed relating to the organization of trust companies and the existing law was amended in respect to the amount of capital stock that must be subscribed in cities of various populations. The office of State fire marshal was created, with supervisory powers over all fire chiefs and mayors of towns and cities in connection with the management of fire departments. His duties are chiefly to investigate the causes of fire, making an examination of places considered dangerous. Several important measures relating to the regulation and control of the sale of liquor under the prohibition law of the State were enacted, and provision was made for the use of liquor for medicinal and scientific purposes. The law also imposes heavy additional penalties in cases of second and third convictions, and imposes restrictions upon common carriers handling liquors. The governor is made the agent to carry out these additional restrictions, and added authority to make searches and seizures is given to the State officers. An act relating to the admission of foreign corporations to do business in the State was amended by requiring that the amount of paid up capital shall be \$500,000. A Supreme Court commission of six members was created. This commission is to assist the Supreme Court in making findings, submitting opinions, etc. There were important enactments relating to the pure food law, an act providing for the establishment of municipal libraries, and various acts relating to schools for the blind, deaf, orphans, and indigents.

STATE OFFICERS. Governor, Lee Cruise; Lieutenant-Governor, J. J. McAlester; Secretary of State, Benjamin F. Harrison; Treasurer, Robert Dunlop; Auditor, Leo Meyer; Attorney-General, Charles West; Commissioner of Insurance, P. A. Ballard; Commissioner of Education, R. H. Wilson; President Board of Agriculture, G. T. Bryan—all Democrats.

JUDICIARY. Supreme Court: Chief Justice, John B. Turner; Associate Justices, Mathew J. Kane; Robert L. Williams, Jesse J. Dunn, and Samuel W. Hayes; Clerk of the Court, W. H. L. Campbell—all Democrats.

STATE LEGISLATURE, 1911. Republicans, Senate 15, House 33, joint ballot 48; Democrats, Senate 29, House 76, joint ballot 105; Democratic majority, Senate 14, House 43, joint ballot, 57.

The representatives in Congress will be found in the article UNITED STATES, *Congress*.

OKLAHOMA (SHIP). See BATTLESHIPS.

OLD-AGE PENSIONS. The movement for

the establishment of old-age pensions which has been going on in numerous countries in the past few years continued to make progress during 1911. In some cases, as in the German system (as to revision of which see *WORKINGMEN'S INSURANCE*), old-age insurance is a part of a general system of insurance for the industrial population. In England and many other countries, on the other hand, the old-age pension system is separately administered. In addition to pensions for industrial workers there has been an extension also of the old-age pension idea to new classes of civil service employees. In the United States the movement has taken the form of the establishment of retiring pensions by corporations for their workers, and by cities, States, and the nation for civil-service employees. Old-age pension systems are classed as contributory and non-contributory. Under the contributory plan, which is by far the more general, the fund from which the pensions are paid is contributed in part by employers and in part by employees, usually with a supplementary contribution by the State. Even the majority of schemes for civil service employees of the government are on the contributory basis. Contributory plans are compulsory or not, according as the class affected is compelled or not compelled to enter the scheme. The non-contributory plan, the most conspicuous example of which is the English system, is generally favored by workers, but is still opposed by a very powerful body of opinion which fears the gradual pauperization of workers who receive pensions which they have not assisted in providing.

MASSACHUSETTS. The investigation of old-age pensions was begun in Massachusetts in 1907. Following the report of a commission of investigation submitted in January, 1910, laws were passed providing for the establishment of voluntary, coöperative, retirement, annuity pension systems by the coöperation of employers and employees; and also authorizing cities and towns to establish such systems for their civil service employees. In 1911 an act similar to this latter was passed applying to the public civil service employees of the State. This was founded on a strictly actuarial basis and is in fact a partial contributory old-age pension plan. Persons employed by the commonwealth at the time the act went into effect may participate in the plan at their pleasure, but all subsequent employees are required to do so, except that any officer elected by popular vote is excluded from the provisions of the act. The public employees are virtually formed into a mutual insurance association. Any member who reaches the age of 60 and has been in the continuous service of the State 15 years may retire or be retired by the Board of Retirement. Retirement is compulsory at the age of 70. Anyone completing 35 years of continuous service may retire or be retired at any age. The Board of Retirement having charge of the administration of the system consists of the State treasurer, a representative of the employees, and one chosen by these two or appointed by the governor. This board determines the percentage of wages that the employees must contribute to the insurance fund, but such percentage shall not be less than one per cent. nor more than five per cent. Assessments must be made regularly. Upon retirement an annuity equal to double the amount which the

recipients' payments would provide is granted, the State treasury paying the second half.

NEW JERSEY. Following the impetus given to the public old-age pension movement in the United States by Massachusetts, the State of New Jersey appointed a commission in 1910 to investigate the subject. The report of that commission was followed in 1911 by a law directing the governor to appoint five persons to act as a committee for investigation and the drafting of a bill on industrial old-age pensions. This commission is also to act as a bureau of information and assistance for employers and employees who consider the establishment of insurance systems. Both employers and employees must be represented on the commission which will have a paid secretary. The preamble of this resolution said: "The so-called civilized industrialism of our day can be subject to no stronger criticism than the charge, fortified by universal experience, that the men and women whose productive energy has contributed so much to our wealth, progress, and development, leading simple, inexpensive lives, become, in their declining years, powerless, principally because they are penniless."

NATIONAL. The agitation by the Retirement Association, including a large proportion of the civil service employees of the United States government, which led to the introduction in Congress of the Goulden bill in 1910 was still being maintained at the close of the year. This bill set forth a non-contributory plan for the retirement of employees at the age of 60, after 30 years of service, or at the age of 65 after 25 years of service. In one of his messages to Congress in December President Taft said: "I am very much opposed to a civil pension system that involves no contribution from the employees; but the crying necessity for some such contributory system, with possibly a preliminary governmental outlay, in order to cover the initial cost and to set the system going at once while the contributions are accumulating, is manifest on every side. Nothing will so much promote the economy and efficiency of the government as such a system."

CORPORATION PLANS. So far as employees are concerned the principal old-age pension benefits in the United States have been provided by railroad, industrial, and commercial corporations. The Massachusetts commission on old-age pensions, which reported in 1909, obtained information concerning 50 of these corporation pension schemes, 28 of which were maintained by railroad companies, and 22 by industrial or commercial establishments. Practically all of the principal railroads and most of the very large industrial corporations have now established retiring pensions. Among the companies which have recently established pensions for aged employees are: the United States Steel Corporation, the Standard Oil Company, the National Harvester Company, Armour & Company, and the American Sugar Refining Company.

Practically all of these corporation plans are non-contributory; the amount of the pension is proportionate to the length of service, that is, it is equivalent to one per cent. of the average annual wages or salary during 10 years preceding retirement, multiplied by the number of years of service; retirement usually takes place at the age of 65 or 70 for men

and 60 for women; retirement may also take place upon the completion of 30 years of continuous service in the case of men and of 25 years in the case of women without regard to age; the employees may retire voluntarily or at the request of the company, the age of compulsory retirement being five or ten years greater than that of voluntary. These plans usually include also a system of pensions for permanent disablement.

The reason why these retirement pensions are provided without contributions from the employees is because this plan is generally believed to be the better business policy. Humanitarian motives have no doubt stimulated the old-age pension movement, but so far as private employers are concerned the fundamental reasons are economic. A retirement system eliminates the waste involved in retaining worn-out and inefficient workers; it promotes a greater degree of efficiency throughout the entire ranks of the workers by increasing the opportunities for promotion all along the line. The chief effect, however, is the stimulation of a sentiment of loyalty on the part of the working force; the increased volume and quality of output more than offsets the cost of the system. An almost equally cogent reason is that a non-contributory system can be made to act as a powerful preventive of strikes. Employees under that system cannot afford to jeopardize their claim on the pension fund. An employee who leaves loses this prospective benefit. It is this feature to which organized labor most vigorously objects, since non-contributory pension schemes chain the workers to their jobs. Workers are thus forced to be well-behaved and docile however unjust they may feel some conditions of employment to be. Under a contributory pension system, on the other hand, no such obligation on the part of the worker exists, for, upon leaving the service, he draws out the amounts of the accumulated contributions which he has made to the pension fund. Another objection to the non-contributory plan which is often made is that it almost certainly depresses the wage level. It may not actually bring about a reduction of wages, but it will almost inevitably prevent an advance in wages in a normal manner.

The plan of the American Sugar Refining Company was placed on a non-contributory basis ostensibly because a contributory plan would have been a burdensome tax on wages. This reason was not believed satisfactory by many who held that if wages paid are so low that employees cannot be expected to save anything then wages should be raised. For carrying out its plan the Sugar Trust set aside \$300,000 at once with provision for further additions in the future. The plan applies to 7500 employees. The maximum pension will be \$5000 a year and the minimum \$20 a month. The maximum is practically the same as that in the Steel Corporation and the Harvester Company plans, but the minimum in the former is \$12 a month and in the latter \$18 a month. The minimum of \$12 is the rule for these corporation plans. The Steel Corporation set aside \$8,000,000 for the pensioning of aged and permanently disabled employees. This was combined with the \$4,000,000 fund created by Mr. Andrew Carnegie for a similar purpose.

The railroad plans vary more than do those of industrial corporations. The years of consecutive service required vary from 10 years on

the New York Central lines, the Canadian Pacific, the Atlantic Coast Line, and the Illinois Central to 30 years on the Pennsylvania Railroad. The age limit for new employees is 35 on about one-half of the roads and 45 on the other half, though the New York Central has none. The age of compulsory retirement is usually 70 and for voluntary retirement 65 for about two-thirds of the roads and 60 or 61 for the others. The amount annually set aside for the pension fund varies of course with the number of employees and other conditions. It is \$600,000 for the Pennsylvania Railroad, besides \$222,500 for the Pennsylvania lines west of Pittsburgh, \$450,000 for the New York Central, \$200,000 for the Chicago & Northwestern; some roads set no limit; but it is only \$18,000, or about \$1 per employee for the Atlantic Coast Line. The number of pensioners varies from 3160 for the Pennsylvania, 800 for the New York Central, 622 on the Baltimore & Ohio, and so on down to 13 for the Oregon Railroad & Navigation Company.

GREAT BRITAIN. The old-age pension law enacted in 1908 was extended in scope on January 1, 1911, by the removal of the disqualification that had attached to persons receiving poor relief since January, 1908. The number thus previously excluded who now began to receive pensions was 122,415. Of these 86,000 were women and 36,000 men; and of the total about 117,338 had been in receipt of outdoor relief. It was estimated that the transfer of these persons to the old-age pension fund would effect a saving of \$110,000 per week in the poor rates. The total expenditure for old-age pensions in 1911 was approximately \$9,700,000 or \$48,500,000. It was estimated that the expenditure for 1911-12 would be \$12,350,000 or \$61,600,000. The total number in receipt of pensions at the beginning of the year ending March 31, 1911, was 699,352, distributed as follows: 638,147 received 5s. (\$1.25) per week; 22,870 received 4s.; 22,239 received 3s.; 10,536 received 2s.; and 5560 received 1s. There were 441,489 pensioners in England and Wales; 76,889 in Scotland; and 180,974 in Ireland. The average weekly number receiving pensions during the first six months of 1911 was 901,605, an increase of about 30 per cent. over the preceding year. It was generally expected that the age limit will be reduced from 70 years to 65; the cost of this change was estimated by Mr. Lloyd-George at £7,750,000.

OLDENBURG. See GERMANY.

OLDENBURG (SHIP). See BATTLESHIPS.

OLIN, WILLIAM MILO. An American public official, died April 15, 1911. He was born in Warrenton, Ga., in 1845 and was educated in the common schools of Worcester and Grafton, Mass., and the high school of Leicester, Mass. He served in the Civil War from 1862 to 1865 and from 1865 to 1879 was reporter and editor of the *Boston Daily Advertiser*. After serving as secretary to several State and national officials he was, in 1890, elected Secretary of State of Massachusetts and continued in this office until the time of his death. He was a prominent member of the Grand Army of the Republic and of several other patriotic and historical societies.

OLIVER, CHARLES AUGUSTUS. An American ophthalmologist, died April 8, 1911. He was born in Cincinnati in 1853 and graduated from the University of Pennsylvania in 1876. He

studied medicine and became prominent in his profession. He was surgeon to Wills Eye Hospital, Philadelphia, and the Philadelphia Hospital. He was a member of several learned societies. He was the author of *Correlation Theory of Color Perception*; and *Ophthalmic Methods in Recognition of Nerve Diseases* (1895) and was co-author of *Text-Book of Ophthalmology*. He aided in editing several important works on diseases of the eyes and contributed largely to medical magazines.

OLIVES. See HORTICULTURE.

OMAHA. See NEBRASKA, and MUNICIPAL GOVERNMENT.

OMAHA TRIBE. See ANTHROPOLOGY.

OMAN. An independent Mohammedan state in southeastern Arabia, with an estimated area of 82,000 sq. miles; population, about 500,000, chiefly Arabs. Capital, Muscat, with 25,000 inhabitants. Imports (1910-11), Rs. 5,917,238, (1909-10, Rs. 8,305,863), consisting mainly of cereals, clothing, and arms and ammunition. Exports, Rs. 4,065,512 (1909-10, Rs. 4,163,707); the main articles being dates (Rs. 1,978,115), pearls (Rs. 532,000), limes (Rs. 80,326), mother-of-pearl (Rs. 50,250), fruits (Rs. 47,720), fish (Rs. 46,620), and hides and skins (Rs. 40,306). Vessels entered (1910-11), 262, of 355,325 tons. Transport is by pack animals. The sultan (1911, Seyyid Faysal bin Turki) receives a subsidy from the government of India. Maj. A. P. Trevor was the British political agent in 1911.

ONTARIO. A province of the Dominion of Canada. Area, 260,862 sq. miles; population (final returns, census of June 1, 1911), 2,523,208. Capital, Toronto (population, 1911 preliminary, 376,240). The province is administered by a lieutenant-governor (in 1911, appointed September 22, 1908, John Morison Gibson), appointed by the governor-general of Canada. He is aided by an executive council (responsible ministry) and a unicameral legislative assembly of 106 members. Premier (1911), Sir James P. Whitney. See CANADA.

ONTARIO LIBRARY ASSOCIATION. See LIBRARY PROGRESS.

OPERA. See MUSIC.

OPIUM. Customs house records show that the amount of opium and cocaine imported into this country vastly exceeds the quantity required for legitimate purposes. Unquestionably the excess is used for the gratification of drug habits and the creation of new victims. The suppression of this revolting traffic can be accomplished only by rigid regulation of the legitimate trade.

The Boylan bill to prohibit the sale of hypodermic syringes or needles at retail without an order from a physician or veterinary surgeon, passed the New York legislature in 1911 and became a law. The measure is an effort on the part of the State of New York to control the growing use of morphine and cocaine (see COCAINE HABIT). The availability of the hypodermic syringe has been a factor in the widespread use of morphine, cocaine, etc., and a good many hypodermic syringes and needles are used to give morphine and cocaine in a harmful way. The fact that drug habitues can obtain syringes and needles through the mails from druggists in other States is the weak point in all State legislation designed to control the use of habit-forming drugs. This situation will probably be met by appropriate federal legislation pro-

hibiting interstate commerce in hypodermic syringes, needles, and habit-forming drugs except by responsible and properly authorized individuals.

After the close of the international opium conference at Shanghai in 1909, over which Bishop Brent of the Philippine Islands presided, Dr. Hamilton Wright of Maine, who had been active in the proceedings, was commissioned by Secretary Knox to gather materials for the better knowledge of the situation as to opium and other habit-forming drugs. Dr. Wright's investigations brought to light some rather startling facts. The international opium conference was originally devised to prevent the exploitation of the Oriental peoples, and particularly to save the Chinese and Filipinos from those who were willing to make money out of them by the sale of opium; but Dr. Wright found that the people of the United States are consuming as large a per capita amount of habit-forming drugs as the Chinese. Our consumption of opium is nearly 500,000 pounds, while it is calculated that less than one-seventh of this amount would supply all medical requirements. It is also alleged that we are using nearly 200,000 ounces of cocaine, and that one-twelfth of this would be quite sufficient for all legitimate needs; so that while we are endeavoring to save the Orientals from exploitation, we are confronted with the same problem at home. See CHINA, paragraph *Opium Trade*.

ORANGE FREE STATE. (Formerly the ORANGE RIVER COLONY.) A province of the Union of South Africa (q. v.). Provincial capital, Bloemfontein.

AREA, POPULATION, ETC. Area (estimate), 50,392 sq. miles; population, 1904, 387,315; census of 1911, 526,906 (175,435 white, 351,471 colored). Bloemfontein had (1911) 26,929 (14,760 white, 12,169 colored) inhabitants; Kronstadt (1904), 5797; Harrismith, 5306; Ladybrand, 3848. Education is generally compulsory, but fees are charged. English and Dutch are taught, and about 19,000 pupils are enrolled in the various government and government-aided schools.

INDUSTRIES. Stock-raising is the principal industry; but other branches of agriculture are developing. Livestock (1909): 133,296 horses, 724,542 cattle, 7,621,162 sheep, 835,589 goats, 53,988 hogs. Under wheat (1909), 162,449 acres (yield, 701,519 bu.); oats, 133,180 acres and 1,566,993 bushels; barley, 7076 acres and 90,715 bushels; under tobacco, 1729. Coal mined (1908-9), 470,591 tons, valued at £125,627; diamonds, 654,319 carats, £1,048,607; salt, 1456 tons, £17,100.

COMMERCE, FINANCE, ETC. The trade statistics given in the following table are for calendar years and inclusive of specie; the financial, for fiscal years ending June 30 the next year:

	1907	1908	1909
Imports	£3,672,591	£2,945,860	£3,662,696
Exports	3,751,049	3,558,373	4,777,126
Revenue	740,367	915,286	952,860
Expenditure	733,233	952,513	957,741
Debt	400,000

Exclusive of specie, Great Britain supplied (1909) imports valued at £1,300,795. The total exports are detailed thus: South African produce, £3,166,420; reexports, £137,049; diamonds, £1,386,908; by post to other colonies, £13,916; specie, £72,833.

Railways, 1026 miles; telegraph lines, 6958; telephone lines, 555. The provincial government is in the hands of an administrator, (1911, A. E. W. Ramsbottom), aided by a provincial council and an executive committee.

ORANGES. See HORTICULTURE.

ORCHESTRA, SYMPHONY. See MUSIC.

ORE DEPOSITS. See GEOLOGY.

OREGON. POPULATION. The Thirteenth Census showed a population in the State in 1910 of 672,765, as compared with 413,536 in 1900. The principal cities with their population in 1910 and 1900 are as follows (the figures in parentheses are for 1900): Portland, 207,214 (90,426); Salem, 14,094 (4248); Eugene, 9009 (3236); Astoria, 9599 (8381).

AGRICULTURE. The Thirteenth Census included statistics of agriculture. These are of date of April 15, 1910. On that date the farms in the State numbered 45,502, as compared with 35,837 in 1900. The land in farms was 11,685,110 acres, as compared with 10,071,328 acres in 1900. The improved land in farms was 4,274,803 acres, compared with 3,328,308 acres in 1900. The average acreage per farm in 1910 was 256.8, compared with 281 in 1900. The total value of farm property, including land, buildings, implements, and machinery, domestic animals, poultry, and bees, was \$528,243,782, compared with 172,761,287 in 1900, an increase of \$355,482,495 or 205.8 per cent. The farms operated by owners and managers numbered 38,643; those operated by tenants, 6859. Of the farms operated by the owners, those free from mortgage numbered 24,855; those mortgaged, 12,632. The native white farmers numbered 35,819; foreign-born white, 9056; negro and other non-white, 697. Of the non-white, 452 were Indians, 83 Japanese, 65 Chinese, and 27 negroes. The total value of the domestic animals, poultry, and bees in 1910 was \$59,461,828, compared with a value in 1900 of \$33,917,048. The cattle numbered 725,255, valued at \$17,570,686; horses and colts, 271,708, valued at \$25,181,143; mules, 9927, valued at \$185,788; swine, 217,577, valued at \$1,570,949; sheep and lambs, 2,699,135, valued at \$12,213,942. Poultry of all kinds numbered 1,823,680, valued at \$1,067,743. The acreage, production, and value of the principal crops will be found in the following table for 1910 and 1911:

	Acreage	Prod., bu.	Value
Corn1911	20,000	570,000	\$456,000
.....1910	18,000	459,000	367,000
Wheat1911	796,000	16,726,000	12,546,000
.....1910	719,000	15,853,000	13,317,000
Oats1911	359,000	12,457,000	5,481,000
.....1910	355,000	12,248,000	5,767,000
Rye1911	18,000	351,000	316,000
.....1910	15,000	226,000	226,000
Potatoes ..1911	46,000	5,980,000	4,007,000
.....1910	42,000	4,100,000	3,087,000
Hay1911	452,000	a 949,000	9,110,000
.....1910	439,000	922,000	11,156,000

a Tons.

MINERAL PRODUCTION. The production of coal in the State is small, and the amount mined in 1910 showed a decrease from the production of 1909. In the former year there were produced 63,241 tons, as compared with 87,276 tons in 1909. The decrease is due to the great increase in the production of petroleum in California and its use for fuel for domestic needs, as well as for railroads and manufacturing.

The State produces a small amount of gold and silver. In 1910 the gold production was 32,870 fine ounces, valued at \$697,488. The silver output was 35,978 fine ounces, valued at \$19,428. The gold production in 1911 was 28,988 fine ounces, valued at \$599,235. The silver production was 69,116 fine ounces, valued at \$38,014.

POLITICS AND GOVERNMENT

In the general election of November, 1910, the electors of Oregon enacted under the initiative four important measures, as follows: Presidential preference, single tax, employers' liability, and three-fourth jury verdict.

The presidential preference law gives to each voter in the primary election the opportunity of expressing his preference as to candidates of his party for President and Vice-President; permits the voters in the political parties (Democrat and Republican, only) to elect delegates in the primary election to their national political conventions, and also to nominate in the primary election and elect in November candidates for presidential electors. This law will be tried out for the first time in this year's elections. The primary nominating election will be held April 19, 1912, and the general election in November.

The single tax measure consisted of a constitutional amendment which authorizes each county in the State to prescribe its own method of taxation. It amounts to submitting the question of single tax in each county. This will be done at the general election in several of the principal counties of the State. In the same election, another constitutional amendment proposed by the legislature will be submitted for the repeal of the original single tax amendment. The single taxers and the anti-single taxers are both well organized and are conducting vigorous campaigns both for and against the Henry George plan.

It has not been noticeable just what has been the effect of the operation of the employers' liability law. This is a drastic measure, prepared and submitted to the people by organized labor after it had sought the enactment of a less objectionable bill by the legislature and met defeat. It is not believed the industrial activity of the State has been affected any more than would result from an increase in the rates for indemnity insurance which has been made.

The fourth law, enacted by popular vote, permits a three-fourths jury verdict in civil cases. In its operation, it is generally believed that this statute has assisted in a measure to relieve a badly congested condition in the courts and at the same time has reduced the number of mis-trials and appeals to the State Supreme Court.

Most important of the measures that will be submitted in the general election in November, 1912, as relating to the politics of the State, is a constitutional amendment extending the right of suffrage to women. The same amendment has been submitted under the initiative in three preceding elections and defeated each time with increased majorities. There is a possibility that it will be adopted in 1912. The women have formed an effective statewide organization in which the services of many of the prominent men and leading politicians of the State have been enlisted. There is in the State an anti-

suffrage organization which rendered much aid in defeating the issue in former campaigns.

LEGISLATION. Important measures passed at the legislative session of 1911 include the following: The constitution was amended so that now in civil cases three-quarters of the jury may render a verdict instead of twelve. A measure was also passed providing for the direct vote of the people upon the candidates for President and United States senators. The presidential electors are nominated by the people. The white slave traffic is made a felony. A measure was passed prohibiting unjust discrimination and rebating by railroads and other common carriers. A parole board was created and given control of all prisoners serving indeterminate sentences. A State board of fish and game commissioners was established, as well as a State banking department which has charge of the laws relating to the banks and banking business of the State. A joint resolution was passed recommending for adoption at the November election of 1912 an equal suffrage amendment to the constitution. See **CHILD LABOR**; and **ARBITRATION AND CONCILIATION, INDUSTRIAL.**

STATE OFFICERS. Governor, Oswald West, Democrat; Secretary of State, F. W. Benson, Republican; State Treasurer, Thomas B. Kay, Republican; Superintendent of Public Instruction, L. R. Alderman, Republican; Adjutant-General, W. E. Finzer, Democrat; Attorney-General, A. M. Crawford, Republican; Commissioner of Insurance, S. A. Kozar, Republican.

SUPREME COURT. Chief Justice, Robert Eakin; Justices, Thomas A. McBride, Frank A. Moore, Henry J. Bean, and George H. Burnett; Clerk, J. C. Moreland—all Republicans.

STATE LEGISLATURE, 1911: Republicans, Senate, 27; House, 58; joint ballot, 85. Democrats, Senate, 3; House, 2; joint ballot, 5. Republican majority, House, 56; joint ballot, 80.

The representatives in Congress will be found in the article **UNITED STATES, Congress.**

OREGON, UNIVERSITY OF. An institution of higher learning at Eugene, Ore., founded in 1876. The total enrollment in 1910-11 was 1482. Of this number 514 were in the department of science and arts; 185 in the school of law; 138 in the school of engineering; 209 in the school of music; 378 in the correspondence school; 74 in the school of medicine, and 9 in the graduate school. Among the changes in the faculty during the year were the following: Prof. I. M. Glen, dean of the school of music, resigned the chair to accept a similar position in the University of Washington; Dr. H. D. Sheldon, dean of the school of education, went to the University of Pittsburgh. Dr. Edmund S. Conklin of Clark University was appointed head of the department of psychology, and Montana Hastings of Columbia University, assistant professor in the department of education. During the year the legislature appropriated half a million dollars for new buildings and equipment for the university. This appropriation, however, was held up by referendum petitions, and a suit was instituted to declare the petitions void on account of fraud in securing the signatures. The library of the university contains about 30,000 volumes. The president is Prince L. Campbell, B. A.

ORION. See **NAVAL PROGRESS, Guns and Gunnery, and BATTLESHIPS.**

ORNITHOLOGY. **BIRD PROTECTION.** No very noteworthy contributions to ornithology seem to have been made during the year. The Audubon and other societies for bird protection carried on their work with a fair degree of success. It was reported that the countries of Europe are showing more interest in this subject, Hungary having a model law. Italy, on the other hand, is the least interested, and an amount of song bird shooting is done there that would not be tolerated in any other country. Venezuela and Brazil have also begun to legislate on this subject, which is the more important since Venezuela has been the source of a large part of the aigrettes sold in the North. Statements in the public press that these are collected with no cruelty to the adult birds are said to have been untrue, and were probably inspired by dealers in these articles.

PASSENGER PIGEON. A reward of \$1000 for the discovery of an undisturbed nest of the passenger pigeon was not claimed, and it is probable that in the wild state the bird is extinct. The only known living specimen is in the Zoölogical gardens at Cincinnati.

EXPEDITIONS. Important expeditions of the year were those of Mr. and Mrs. Beebe through parts of Asia in search of material for a monograph of the pheasants, and of Chapman to South America to collect material for more habitat groups for the American Museum of Natural History.

COLOR CHANGE IN LINNETS. Grinnel in *A Problem in Speciation* discussed a peculiar color change shown in the Hawaiian linnets, *Carpodacus frontalis*, which were introduced into the Islands about forty years ago. In the United States these are usually red, with occasional yellow, orange, and red with yellow or orange intermixed. All male linnets collected in Hawaii were of the yellow or orange type. Grinnell thought this color change was not due to climate, but to change of habitat. The birds were closely inbred until (possibly) the enzyme produced was not able to carry the oxidation of tyrosin in the color production beyond the yellow, or at most the orange stage.

ORT, SAMUEL ALFRED. An American theologian and educator, died January, 1911. He was born in Lewistown, Pa., in 1843, and graduated from Wittenburg College in 1863. In 1865 he was ordained to the Lutheran ministry. He was pastor in Louisville, Ky., from 1874 to 1878 and from 1878 to 1880 in New York City. From 1880 to 1910 he was professor of Christian theology in Wittenburg Theological Seminary. He was president of the Wittenburg College 1882-1900. From 1887 he was president of the general synod of the Lutheran Church.

OSBORNE DECISION. See **TRADE UNIONS.**

OSGOOD, HOWARD. An American theologian and educator, died November 28, 1911. He was born at Plaquemine Parish, La., in 1831. He studied at Harvard College from 1846 to 1849. Having studied theology he was ordained to the Baptist ministry in 1856. For two years he was pastor at Flushing, L. I., and for six years, from 1860 to 1866, in New York City. He became professor of Hebrew in the Crozer Theological Seminary in 1868, holding the chair until 1874, when he went to the Rochester Theological Seminary as professor of Old Testament literature. He resigned this chair in 1901 and retired from active work. From

1874 to 1901 he was one of the American company for the revision of the Old Testament.

OVOGAL (ALBUMEN CHOLICUM). Ovogal is a combination of bile acids with egg albumen. It is a greenish-yellow powder, insoluble in water, dilute acids, ether, benzol, fats, etc. It is soluble in alkalies, splitting up into albumen and bile acids (glycocholic and taurocholic acids). Ovogal is said to pass through the stomach without appreciable decomposition and to be dissolved and absorbed in the intestine. It is given, as are the bile salts, as an intestinal antiseptic purgative and cholagogue.

PAGET, FRANCIS. A bishop of the Church of England, died August 2, 1911. He was born in 1851, son of the famous surgeon, Sir James Paget. He received his education at various schools and at Christ Church, Oxford. After serving as teacher and as vicar in several parishes, he was appointed in 1885 regius professor of pastoral theology and canon at Christ Church. During this period he attracted attention by a suggestive essay on the Sacraments, published in *Luz Mundi*. In 1892 he was appointed dean of Christ Church, succeeding Dr. Liddell. On the death of Dr. Stubbs, bishop of Oxford, 1901, Dr. Paget was nominated by Lord Salisbury to succeed him. He proved an able administrator of the bishopric, but he came to a time when he found difficulties increasing between himself and the extreme section of the Anglican Church. In 1903 he declined Mr. Balfour's offer of translation to the see of Winchester, but in the following year accepted a membership on the royal commission on ecclesiastical discipline. The testimony taken by this commission revealed to him the lengths to which the extreme ritualists had gone even in churches with which he himself was concerned. Thenceforward there was a coldness between the bishop and the heads of the newspapers of the extreme party and it became intensified by his outspoken charge at his visitation in 1906 when he insisted on the need of a return to a sense of law, and by his action in depriving the incumbent of Wolverton St. Mary who persisted in the practice of reservation. Among his published works are: *Concerning Spiritual Gifts; The Redemption of Work; The Spirit of Discipline; Studies in the Christian Character; The Redemption of War; and A Primary Charge.*

PAINTING. Neither the spring nor winter exhibitions of New York's National Academy of Design offered much that called for special enthusiasm upon the part of visitors. Professional critics treated both exhibitions as rather beneath than above the average of the last few years. Lack of adequate exhibition room was once more given as the reason for rejecting two-thirds of the pictures offered to the jury of selection. While the need of a new fine arts building available for exhibition purposes is universally conceded, no solution of the problem is in sight. The result is that, while

the yearly art exhibitions held in Philadelphia, Pittsburgh, Buffalo, and Washington, are constantly growing in interest and importance, the largest city in the country, the home of its foremost artists, makes no advance. Meanwhile, new schisms threaten the venerable academy, and the close of 1911 saw a new art society launched as a protest against the alleged ultra-conservatism of the academicians.

PRIZES. Prizes at the spring academy were awarded as follows: The Thomas B. Clarke prize of \$300 for the best American figure composition went to Charles W. Hawthorne for his picture of a young girl being measured for her trousseau, a picture which had the strength of beauty and simplicity in both theme and technic. The Hallgarten prizes of \$300, \$200, and \$100 for the best pictures in oils fell respectively to Lillian Genth for a nude study; to Joseph T. Pearson, Jr., for a group of geese; and to Leslie P. Thompson for a portrait of two young girls taking tea. The Inness gold medal for the best landscape went to W. Elmer Schofield for his "February Morning." John C. Johanson won the Saltus medal with "In a Garden," a group of women, life-size, under trees. The Julia A. Shaw memorial prize of \$300 for the best work by an American woman was awarded to Mary Van der Vwer for a child at study.

SPRING EXHIBITION. Of the 371 pictures shown 214 were by non-members of the academy. Among the notable contributions was George de Forest Brush's "Portrait of Betty Holter," an excellent example of this painter's work, strongly characteristic and, as usual, suggestive of classic influence. Irving R. Wiles offered a good portrait of Charles A. Schieren, and S. J. Wolf one of David Warfield that was equally interesting. Sergeant Kendall had a capital portrait of two little girls. There was good color in Andrew T. Schwartz's decorative composition, "Hope, Destiny and Despair." F. Luis Mora's "Studio Tea" showed very graceful figures. Robert MacCameron's important portrait of Rodin, and Mrs. Prellwitz's "Sleepy Boy" deserved mention.

As usual landscapes predominated in the exhibition. Ernest Lawson, Fred J. Mulhaupt, Charles Rosen, R. W. Van Boskerck, Walter Granville-Smith, Gardner Symons, C. C. Cooper, were all well represented. Of special value were A. L. Groll's "Golden Cloud," Gifford Beal's "Foot of Crow Nest," Daniel Garber's "Barnyard." George M. Bruestle's "Hilltop Farm," Fred J. Waugh's "Cape Ann," and William Ritschel's "Moonlit Breakers." George Bellows and Guy C. Williams both showed New York scenes, the first with skyscrapers and hurrying crowds, the second a "City Square in Winter." Charles Mielatz had a view of the Hudson at night. John F. Carlson's "Silvered Acres," George H. Macrum's "Catskill Valley," and Guy Rose's "November" attracted attention. J. Francis Murphy and Ben Foster, two of our strongest landscape painters, were as effective as usual, the latter with a glimpse of fading sunset through sombre pines that Mr. Foster has painted so often and so well. Walter Palmer's snow scene, "Hillside," was full of wintry peace. A daring and brilliantly painted figure of a dancer by Ben Ali Haggin, entitled, "Stanice," aroused admiration or the reverse according to one's temperament and training. It was certainly one of the score of pictures in the show that are remembered.

WINTER EXHIBITION. For the winter academy exhibition held in December, 1712 works were offered, 661 were accepted, and 412 found places. Of the 412 placed, 345 were paintings and the rest sculpture. More than half the works placed—242 to be exact—were by non-members. The Carnegie prize of \$500 for the best picture not a portrait by an American went to Edwin H. Blashfield for an immense allegory of fairly decorative quality entitled "Life." The Proctor prize was won by Eugene E. Speicher for a portrait of Miss Helen Appleton. E. Irving Couse took the Isidor medal for the best figure composition. His "Indian" was well worth the honor.

The notable picture of the exhibition was John S. Sargent's portrait of the Hoosier poet, Riley, owned by the Indianapolis Art Institute, a work in which the famous painter's incomparable skill found splendid expression. It was not the best Sargent seen here of late years, but it is a masterpiece. A Russian, Nicholas Fechin, held the place of honor in the exhibition with a large canvas entitled, "L'Enlèvement d'une Nouvelle Mariée," a picture confused with a wealth of vaguely painted detail comprising a score of figures, horses, etc., that called for long study to make clear and then remained a puzzle to most observers.

Besides the Sargent mentioned, the portraits were not impressive. Neither William M. Chase, who was not happy with his "Lady in Black," nor Irving Wiles, with his portrait of two sisters, reached the standard of their usual work. Neither did J. Alden Weir's portrait of a lady sitting awkwardly upon an oak chest suggest mastery except in unessential detail. Ben Ali Haggin's portrait of Miss Marjorie Curtis, owing perhaps to its theatric pose and an unfortunate background, just missed distinction. Sergeant Kendall's "Allison" was a delightful study of a child. Eugene E. Speicher's portrait of Charles Dana Gibson; C. C. Cooper's portrait of Aage Fredericks, something of a departure for this painter of city sky-scrapers; Howard R. Butler's portrait of Theodore Weston, Sergeant Kendall's "Rosemary," a woman in a most unpicturesque and uncomfortable attitude; a nice head of a Spanish peasant by Gertrude V. Whitney, and William Cotton's portrait of Miss Dvořák completed the list of portraits calling for mention.

The veterans among the landscapists showed to better advantage than their younger rivals. Charles Warren Eaton's "Forest Lands," Alexander Harrison's "Moonlight upon the Ocean," Arthur Parton's "Nightfall," Ben Foster's "Early Moonlight," and C. P. Gruppe's flock of sheep, "The Hour of Peace," were all good pictures that did credit to their painters. Also Jesse Whitsit's "Clouds on Windward Mountain," Walter Griffin's "Breton Village," and Walter Granville-Smith's "River Idyl," deserve mention. Admirable snow scenes were shown by Walter Palmer and by Gardner Symons, whose snow-clad field was full of atmosphere. Ernest Lawson's "New Road" was another bold attempt to make seemingly haphazard splashes of pigment tell a story. Jonas Lie had a vigorous winter scene showing the approaches to one of the great city bridges.

J. W. Breyfogle's "Ballet Girl Knitting." C. C. Curran's graceful figure of a young girl en-

JOSEF ISRAELS

TWO PROMINENT PAINTERS WHO DIED IN 1911

titled "On the Pinnacle," Lillian Genth's "The Promenade," F. L. Frieseke's "Parrots," and John C. Johanson's "On the Beach" were all figure pieces that attracted more or less attention. E. L. Blumenschein had an ambitious canvas of several figures around a child. Mrs. Amanda Brewster Sewell's three children in a row were rather too pretty for latter-day taste, which might also be said of Douglas Volk's "Little Mildred," and Adelaide Cole Chase's figure of Master Ralph Cram with his canary. William M. Paxton's nude figure "Glow of Gold" may have caused some of the academy's patrons to gasp, but had its merits.

WATER COLOR EXHIBITIONS. Both the New York societies devoted to water color work held exhibitions during the year. At that of the Water Color Society, held in April, an interesting feature was a memorial group of pictures by Winslow Homer, an artist who achieved almost sensational realism without resorting to grotesque methods. Childe Hassam had a storm scene of uncommon strength. Frederick Wagner's "Old Market Place," with its group of snow roofs, Hopkinson Smith's Dutch sketches, and Charles W. Eaton's Italian views were all characteristic. C. C. Cooper contrasted the charms of a little French village with the impressiveness of Broadway's cañon. Walter Granville-Smith, Edward H. Potthast, Bruce Crane, Alonzo Klaw, and Gifford Beal were other artists represented. The notable portrait of the show was Hilda Belcher's "Mrs. John Richard and her Daughter."

At the show of the Water Color Club, held in October, C. C. Cooper took the Beal prize of \$300 for his picture of an old Salem house upon the pink brick walls of which the sunlight plays with delicate effect. The house itself is one of the most imposing of colonial mansions. Ross Turner, C. C. Curran, Olive Rush, and E. L. Warner, who found his subject in a Broadway scene on a misty night, were other contributors. William Ritschel's "Morning on the Pacific" was a capital study of huge waves. Childe Hassam's marines were also noteworthy. "Gossips," by Alice Schille, was a good study of two old women.

PITTSBURGH. A large number of the best of the American pictures shown in the Pittsburgh exhibition of the Carnegie Institute had been seen in New York and already mentioned in recent YEAR BOOKS. Among them were Charles W. Hawthorne's "Refining Oil," Gari Melcher's "Maternity" and "The Smithy," John Solan's "Clown Making Up," E. W. Redfield's "On the River Banks," R. E. Miller's "Chinese Statuette," Daniel Garber's "Lumberville," Childe Hassam's "The Open Window," Sergeant Kendall's "Reflection," and Mary Cassatt's "Little Girl Reading." Nearly forty paintings by J. Alden Weir were shown as a group. Foreign work of value was contributed by Emile Blanche (portrait of Henry James), Gaston La Touche, Henri Le Sidaner, Henri Martin, Maxime Maufra, Emile Ménard, Lucien Simon, William Orpen, and William Nicholson. The gold medal and \$1500 were awarded to J. W. Alexander for his "Sunlight," the graceful figure of a girl previously shown in New York; Frank Craig took the \$1000 prize with his portrait of Sir John Jardine, and Algernon Talmage that of \$500 for "The Kingdom of the Winds."

PHILADELPHIA. One of the best pictures in

the Philadelphia Academy exhibition opened in February was by common consent J. Alden Weir's "The Spreading Oak," a magnificent canopy of foliage. Childe Hassam was also at his best with his "New Haven Green," a brilliant achievement in all senses of the word. Daniel Garber received the Lippincott prize for his "River Bank," and Joseph T. Pearson the Sesnan prize for a landscape of cattle somewhat dull in tone. Gardner Symons, Ernest Lawson, and James M. Preston showed that impressionism may not always mean incoherence. Other good landscapes were signed by Jonas Lie, W. L. Metcalf, and W. E. Schofield. Lionel Walden's "View of Times Square at Night" was one of the most graphic of such scenes exhibited of late. E. C. Tarbell's portrait of Dr. Dwight (which took the Beck medal) and Wilton Lockwood's portrait of Dr. Eliot had both been exhibited in New York shows and duly praised. Robert Henri had a strong and vivid sketch of a fisherman. Other portraits worthy of note were by Adolphe Borie, Joseph de Camp, and John C. Johanson. F. W. Benson's study of a girl reading, a success of flickering sunlight, was contrasted with William M. Paxton's highly finished "Housemaid."

BUFFALO. Buffalo held an important and interesting exhibition in November devoted to French art, chiefly the work of members of the Paris Société des Peintres et Sculpteurs. Ten pictures by René Ménard, including "The Judgment of Paris," from the Carnegie Institute, and a number of superb landscapes were shown. Henri Martin, Henri Le Sidaner, Antonio de la Gandara, Paul Albert Besnard (portrait of William A. Clark), Edmond Aman-Jean, Cottet, Gaston La Touche and Lucien Simon were some of the artist representatives. Of American work Sargent's beautiful portrait of Mrs. George Austin, dating back to 1882, was conspicuous.

FOREIGN EXHIBITIONS. The Paris Salon of the Société des Artistes Français in April opened with more than 3000 paintings, drawings, and miniatures. One large room was devoted to a series of important decorations by Fernand Cormon for the Petit Palais. The subjects are historical, beginning with Charlemagne and coming down to Hugo, Pasteur, Littré, and Curie. Jules Grün had an enormous canvas, entitled "Varnishing Day at the Salon," containing more than one hundred portraits of persons conspicuous in Paris life. Jean Paul Laurens showed an unpleasant scene from Inquisition annals. Besson's picture of a tramp sitting on a bench in the Tuilleries Gardens, surrounded by a happy throng of aristocratic children told a pathetic story. Léon Comerre's "Le Déluge" was especially impressive to the Parisians who had been through last year's floods. Other French artists whose work attracted attention were Marcel Berroneau, Robiquet, Eugène Chigot, Gabriel Ferrier, François Flameng, and Lauth. The Marquise de Wentworth showed an uninteresting portrait of President Taft. Among one hundred Americans represented were Lionel Walden, H. S. Hubbell (portrait of Dr. Seelye), Richard Miller, W. E. Cook, Parke C. Dougherty, Howard M. Hartshorne, George Holland, Max Bohm, Lawton Parker, George A. Picknell, Robert W. Vonnoh, Frank Boggs, Henry Mosler, and C. A. Slade.

In the Beaux Arts Salon a vast decorative canvas by René Ménard for the Marseilles

Savings Bank divided the honors with Besnard's ceiling for the Théâtre Français. Ménard's composition is a classic landscape with a lake in the foreground and mountains in the distance; a man is plowing with oxen. Besnard's ceiling is a triumph of delicate color. Cartoons by Alfred Roll for Gobelin tapestries had for subject the glorification of San-Martin, the liberator of the Argentine Republic. *L'Enterrement en Hollande* by Augustin Hanicotte, four gravediggers carrying a coffin through the snows of a sad Dutch landscape, and Henri Deluermoz's "*La Ruée*," depicting a flight of prehistoric animals before the deluge, were impressive pictures. Blanche had a delightful portrait of the Russian dancer, Nijinski. *La Touche*, Raffaelli, *Lhermitte*, and *Dauchez* were some of the others represented in an exhibition not notable for startling excellence.

An exhibition by the American artists in Paris was held there in February, when most of the men who had exhibited in the two salons showed their work. Others not already mentioned were George C. Aide, Myron Barlow, Joseph Pennell, Henry Steichen, and Charles H. Fromuth.

London's Royal Academy show opened in April with nearly 2000 pictures on the walls. The exhibition was unusually rich in good portraits, but while the average British standard for solid conscientious work was maintained, there was little that could be called brilliant. John S. Sargent, with a portrait of the archbishop of Canterbury, was hardly at his best. J. J. Shannon's "Viscountess Ingestre and her Daughter," and John Lavery's "Amazon," a woman on horseback that might have done for a suffragette banner, were both much praised. Herkomer had four portraits, the most successful being that of Admiral Lord Fisher. Sir E. J. Poynter, Frank Dicksee, and Sir Luke Fildes also contributed notable portraits. The veteran American artist, Bridgman, had a fine bit of color in his "Breakfast in a Cairo Harem," and Tadema offered his usual academic decorations.

The International Society of Sculptors and Gravers had its usual exhibition in London with a collection of works by such men as Rodin, Forain, Degas, Monet, Nicholson, Philpotts, Orpen, and Lavery. Lavery's portrait of Pavlowa was capital in its airy grace and suggestion of delirious movement. Philpotts's self-portrait was also highly praised. "The Plague," by Charles Ricketts, with a groping blind man as its central figure, had power.

Munich's yearly show was made of unusual importance as a testimonial to the venerable Prince Regent Luitpold who celebrated in 1911 his 90th birthday. The Münchener Kunstler Genossenschaft organized a jubilee exhibition in which all Germany took part. Eduard von Gebhardt, Walter Firlé, Theodore Bohenberger, Eugene L. Hoess, Hans Best, Fritz Erler, Gustav Bechler, and Ernst Liebermann were represented by important pictures.

Edwin A. Abbey, the veteran Josef Israels, who died in August at the age of eighty-seven, Félix Ziem, the painter of Venice scenes, and Fritz von Uhde, the German painter, were the noted artists whose deaths occurred during the year.

PALESTINE, EXCAVATION IN. See **ARCHÆOLOGY.**

PANAMA. See **ANTHROPOLOGY.**

PANAMA. A republic occupying the Isthmus of Panama. Formerly a department of Colombia, it declared its independence November 4, 1903. Capital, Panama.

AREA AND POPULATION. The area is variously estimated at from 31,570 to 33,776 sq. miles. No definitive figure for area can be accepted until the settlement of the boundary dispute with Costa Rica, which at the end of 1911 was under the arbitration of the chief justice of the United States. In October, 1911, it was decided to send a commission of engineers to gather additional information concerning the northern part of the region in dispute. By the treaty of November 18, 1903, the United States guaranteed the independence of Panama, and the latter granted to the United States, in perpetuity and with sovereign rights therein, a strip of land (the Canal Zone) extending to a width of five miles on either side of the Panama Canal. Considerable uncertainty has existed in regard to the population of the republic, which is mostly a mixed race of Spanish, Indian, and negro origin. An estimate of 1909 was 419,029; an estimate of the following year, however, was only 361,000; and near the close of 1911 preliminary census returns showed even fewer inhabitants, namely, 336,742. This was exclusive of the Canal Zone population, which was thought to be about 75,000. The city of Panama was reported to have 35,368 inhabitants and Colón 17,748. The town of David has about 12,000 inhabitants, and Bocas del Toro 10,000. In 1910 there were 238 public schools, with 14,305 pupils enrolled and 396 teachers. On June 18, 1911, President Arosemena dedicated the new buildings of the National Institute (high school, college of commerce and languages, and normal school) in the city of Panama.

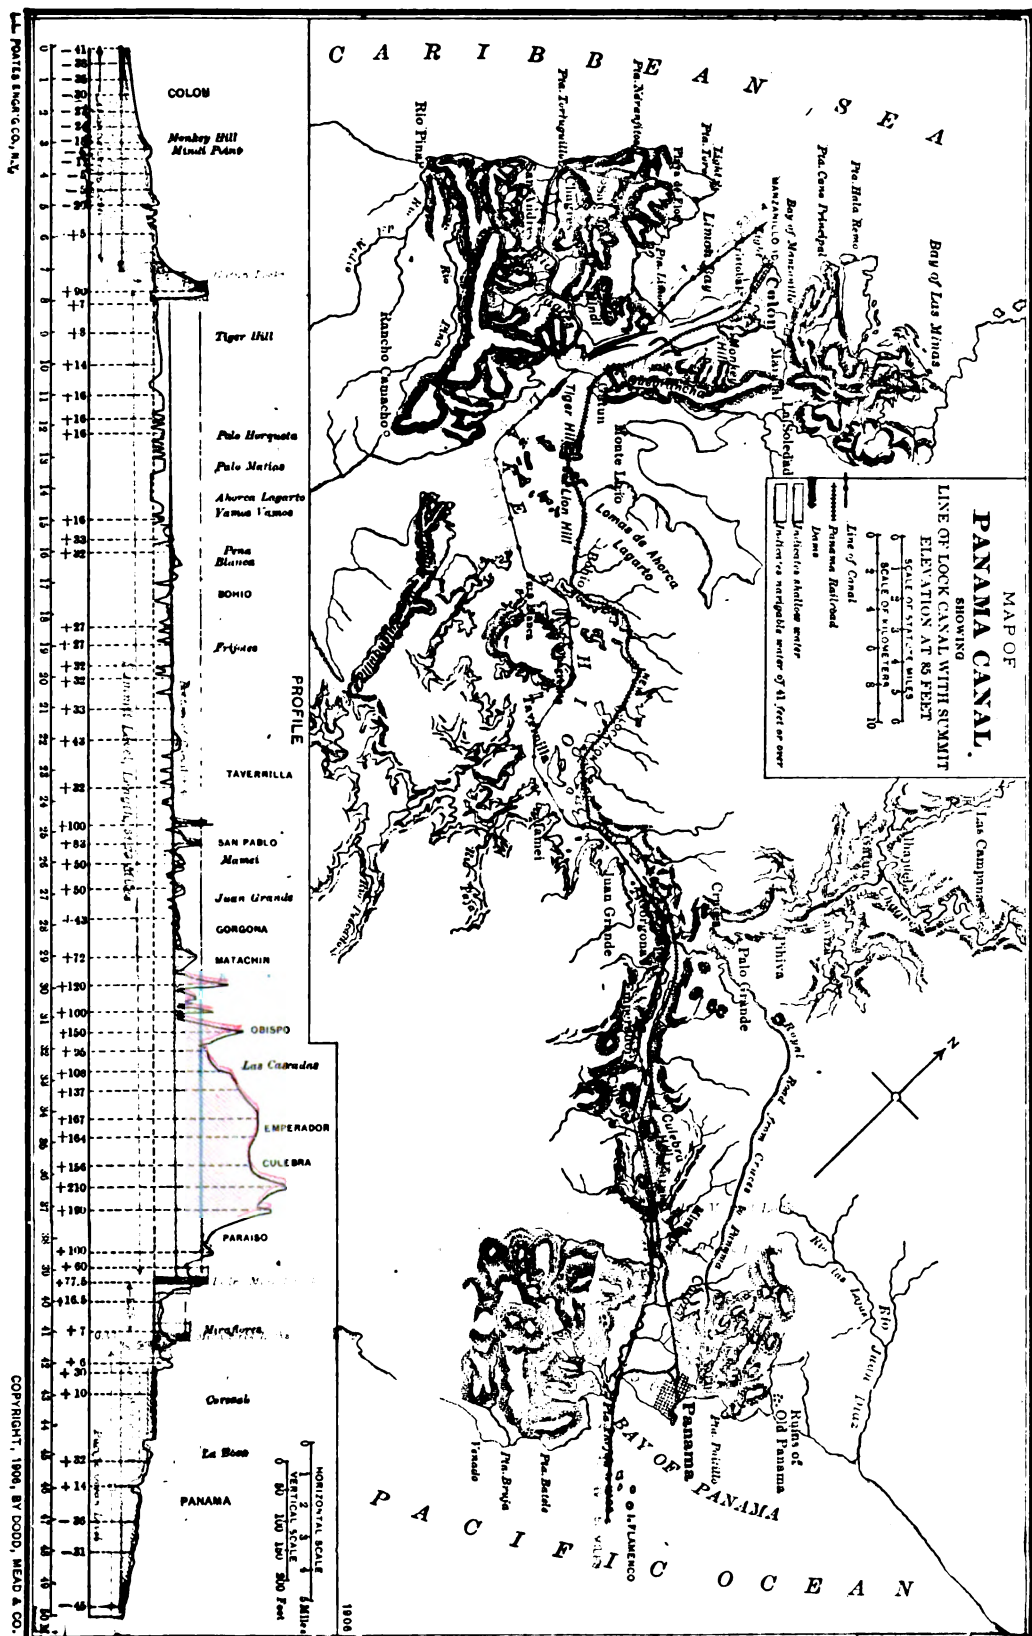

PRODUCTION, COMMERCE, ETC. Only a small part of the country is under cultivation, and the government in 1911 was making special efforts to increase immigration in order to hasten the development of natural resources. The principal crop is bananas; other products, raised in small quantities, are sugar-cane, cacao, coffee, rice, corn, yams, and sweet potatoes. There are numerous mineral deposits, but mining is little developed.

Imports (exclusive of non-dutiable supplies for the Panama Canal) and exports have been valued as follows:

	1908	1909	1910
Imports	\$7,806,812	\$8,756,308	\$10,056,994
Exports	1,827,050	1,502,475	1,769,330

The principal classified imports in 1910 were: Vegetable products, \$2,722,869; textiles, \$1,847,182; animal products, \$1,700,813; mineral products, \$976,413. Of the exports, bananas amounted to \$921,286, rubber \$172,634, coconuts \$157,671, bar gold \$134,975, and ivory nuts \$132,636. In 1910 the United States sent imports and received exports valued at \$5,652,653 and \$1,508,422 respectively; Great Britain, \$2,166,989 and \$105,273; Germany, \$966,151 and \$93,669.

The Panama Railway crosses the isthmus from Colón to Panama, 48 miles; there is a branch of three miles to Balboa. There is a railway system in the territory about Bocas del Toro principally for the banana industry, with 151 miles of track. Total railway mileage, 202. In

1910 a railway was projected from Panama to David (274 miles). A loan of \$10,000,000 was authorized for its construction, and bids were invited; they were opened August 31, 1911, but were not satisfactory. Modifications of the financial conditions were then enacted by the National Assembly, but were vetoed by President Arosemena on October 15. Telegraph offices (1910), 37; post offices, 96.

FINANCE AND GOVERNMENT. The revenue in 1909 was reported at \$2,973,292; 1910, \$3,544,338. Figures for expenditure are not available. Revenue is derived largely from customs.

The chief executive is a president elected by popular vote for four years and assisted by a cabinet of five members. The legislative power is vested in the National Assembly, a unicameral body of 32 members. José Domingo de Obaldía, president for the term ending October 1, 1912, died March 1, 1910. The executive duties were assumed by Carlos Antonio Mendoza, second *designado*, the first *designado* having died in 1909. The *designados* (successors in case of presidential vacancy) are elected not by the people, but by the assembly. On September 14, 1910, the assembly chose as first *designado* Pablo Arosemena, who thus became acting president for Obaldía's unexpired term. Second *designado*, Federico Boyd. There is no army, but the government maintains a national police corps of about 1000 men.

PANAMA CANAL. The work of completing the canal had progressed so far by the beginning of 1911 that discussion had passed from engineering problems entailed in the work to questions relating to the operation of the canal after it had been completed and to its fortification by the United States government.

The estimated date for the completion of the canal, based upon the report of the International Board of Engineers, submitted in 1905, was fixed at January 1, 1915. In the meantime, however, the work advanced more rapidly than had been anticipated and it became apparent that it would be possible to pass vessels through the canal at least a year earlier than this date. The shipping interests of the world, becoming aware of this tendency and realizing the necessity for commerce to adjust itself to the new conditions, raised the question of canal operation in July, 1910, and urged an early submission of the question. Attention was called by these interests to the fact that at least eighteen months' notice of the rates should be given in order that steps might be taken in time to change routings that would follow if the canal were put into use. To determine the approximate date when the canal would be ready for use and to report what steps should be taken to expedite the work a board was convened composed of those charged with the work in progress and in contemplation. Based upon the report of this board announcement was made that all the concrete in the lock at Gatun would be laid by June 1, 1912, and in the locks on the Pacific side by October 1, 1912; that, assuming the gates were completed by June 1, 1913, the locks would be ready for use on this date if the operating machinery were installed; that the work on the spillway at Gatun would be completed to an elevation of fifty feet by April 1, 1912, and the entire dam would be finished by the close of the dry season 1912-13; that the excavation through Culebra Cut would

be completed by July 1, 1912, if no more material due to slides had to be removed than was estimated at the time of the report; and that the exterior channels would be sufficiently advanced to pass the shipping that would use the canal. Upon the basis of this report, Col. George W. Goethals, chairman and chief engineer, recommends in his annual report for the fiscal year ended June 30, 1911, the importance of legislation fixing the proposed toll charges. Although the question had been discussed informally in Congress and outside, no legislative steps had been taken at the close of the year 1911.

Another matter connected with the ultimate operation of the canal is the organization for its operation and for the government in the canal zone. The existing law provides for the construction of the canal and also for the exercise of the military, civil, and judicial powers necessary for the government of the canal zone during the period of construction. Colonel Goethals recommends that the operating force of the canal be obtained by the selection of suitable men from the present organization. The total outlay for maintaining the canal will be for wages of the force engaged in its operation, the expense of engineering work connected therewith, and the cost of sanitation and civil administration. The land comprised in the canal zone is, in Colonel Goethals's opinion, of little or no value outside the canal itself. The canal zone comprises 436 square miles, of which 73 square miles are owned privately and 363 by the government. A large part of the government land will be required for military and naval purposes. The position of the republic of Panama and its two cities, Panama and Colon, with respect to the zone, makes it necessary in the interest of harmony that the Spanish laws now in force shall obtain. Colonel Goethals recommends that the rules and regulations for the government of the zone made effective subsequent to the Fifty-eighth Congress should be approved, and that changes should be authorized to meet new conditions as they arise. He does not favor the leasing of lands for the reason that they are not suitable for farming or other occupations. The greater the amount of land leased and the number of town sites established and occupied, the greater will be the cost of sanitation and civil government.

OPERATIONS IN 1911. The total amount of excavation in the three divisions, the Atlantic, Central, and Pacific divisions, during the fiscal year 1910-11 was 31,804,120 cubic yards. In the Atlantic division, embracing the construction of the locks and dam at Gatun and the excavation between the locks and deep water in the Caribbean, there were excavated 6,738,513 cubic yards. The total excavation in the Central division, embracing all the excavation between the Gatun dam and Pedro Miguel locks, amounted to 18,522,692 cubic yards, of which 16,221,672 cubic yards were removed from the Culebra section, known as Culebra Cut. The remainder was taken from the Chagres River section. The excavation in the Pacific division, which embraces the construction of the locks and dam at Pedro Miguel and the locks and dams at Miraflores, aggregated 6,642,915 cubic yards. In addition to the amounts above mentioned there were removed in the preparation of foundations 399,426 cubic yards

in excavation. The excavation for the calendar year 1911 in the various divisions will be found in the table at the end of this article.

The total amount of concrete laid during the fiscal year 1910-11 was 1,742,928 cubic yards. Of this amount there were laid in the Atlantic division 970,788 cubic yards, of which 59,651 cubic yards were laid in the spillway and 911,137 cubic yards in the locks. In the Central division there were laid in connection with the flume constructed for the Obispo division 1020 cubic yards. In the Pacific division, 771,120 cubic yards were laid, of which 498,187 cubic yards were placed in the Pedro Miguel locks and 272,933 cubic yards in the Miraflores locks.

The work in the various divisions during the fiscal year 1910 is noted with some detail below. The first division, under Col. H. F. Hodges, assistant chief engineer, is concerned chiefly with the design of the locks, dams, regulating works, and accessories. The scope of the division was increased during the year so as to add to its duties the design and construction of aids to navigation, the inspection of the manufacture and erection, under contract or otherwise, of the lock gates, operating machinery, gates and valves, emergency dams, and of the placing of such concrete in the locks as must be omitted until the machinery is installed. During the year the general plans of all the locks were practically completed, as were also the contracts for valves, frames, and bulkheads. During the fiscal year new contracts were entered into or advertisements issued for the remaining frames, valves of all descriptions, and other machinery necessary.

During the year all the material under contract for the fixed parts pertaining to the miter lock gates was delivered. Under the contract completed January 21, 1910, work was in progress on the construction of the gate leaves proper. Eight of these leaves are 54 feet 8 inches high. These comprise the upper guard gates in Gatun and Pedro Miguel locks; eight leaves each seventy-seven feet high are for the upper and middle gates in the upper lock at Gatun; and eight others, each seventy-seven feet high, are for the safety and lower gates in the same lock. The erection of the gates, which was to have been begun on January 1, 1911, at Gatun and on March 1, 1911, at Pedro Miguel, was somewhat delayed.

The plans for emergency or movable dams were completed in the early part of December, 1910, and the work of constructing and erecting them in place was advertised in January, 1911. The contract was awarded to the United States Steel Products Company for the sum of \$2,238,988. These dams are to be completed by June 15, 1913.

Much study was given during the year to the electrical devices which will be used for the operation of the canal after completion. This contemplates a hydro-electric station on the Gatun dam with a reserve generating station at Miraflores to be operated by steam. The two stations are to be connected by a transmission line and a current from either or both can be used for any of the operations of the canal. A scheme for lighting the canal has been prepared and adopted. It contemplates the use of range lights for establishing the direction on the longer tangents and of side lights spaced about a mile apart to mark each side of the channel.

Lighted beacons are also to be used. These are to be built of reinforced concrete. The sailing lines, marked by the range lights except at the entrance to the canal, will be so placed that all ships will follow a course 125 feet to their starboard of the axis of the canal; thus two passing ships, if on their ranges, will have their centre line 250 feet apart. For locating and referencing the gas buoys and providing an unrestricted view of the range and reference targets, 1000 acres of land must be cleared. Work was begun on April 20 and at the close of the fiscal year 375 acres had been cleared.

ATLANTIC DIVISION. This division is in charge of Lieut.-Col. William L. Sibert of the United States army. As noted above, it embraces the construction of the locks and dam at Gatun and other important work. At the close of the fiscal year 1910 the excavation for the Gatun locks was practically completed. During 1911 the excavation of the lower lock was completed to include the location of the caisson sills. A total of 475,875 yards of excavation were removed by steam shovels. Work on the Gatun dam progressed steadily during the year. It is estimated that at the close of the fiscal year 74 per cent. of the dam was completed. A total of 2,726,094 cubic yards of dry fill was placed in the toes of the dam during the year, making a total of 6,881,042 cubic yards replaced since the beginning of the work. The total wet fill placed in 1911 amounted to 3,758,870 cubic yards, making a total of 7,411,992 cubic yards.

CENTRAL DIVISION. The Central division, embracing all the excavation between the Gatun dam and the Pedro Miguel locks, is in charge of Lieut.-Col. D. D. Gaillard. The district includes the Chagres River and the Culebra Cut. During the fiscal year there were excavated from Culebra Cut 16,221,772 cubic yards and there remained for excavation, according to estimates prepared on July 1, 1911, 23,929,140 cubic yards to be removed in order to complete this section of the canal. This estimate was considerably increased by several slides which occurred during the year. The slides will exceed the excavation by about 5,000,000 additional cubic yards. The largest slides that have occurred in this section have been those at Cucaracha, which covered 47.1 acres and the Culebra slide, covering 46.6 acres. From the former up to July 1, 1911, 2,722,164 cubic yards of material had been removed, leaving a remainder of 400,000 cubic yards. From the Culebra slide on the east bank 2,329,784 cubic yards had been removed at the end of the fiscal year, leaving about 1,664,350 cubic yards to be removed. On the west bank, 3,714,562 cubic yards had been removed, leaving 3,391,300 cubic yards. There the slides have been of less importance.

The average cost for excavation including all items which entered into its accomplishment was 58.8 cents per cubic yard. At the close of the year the Culebra Cut was 73.25 per cent. completed.

PACIFIC DIVISION. This division, in charge of S. B. Williamson, included the construction of the locks and dam at Pedro Miguel and the locks and dams at Miraflores, and other minor work. The excavation of the lock chamber at Pedro Miguel was completed during the fiscal year by the removal of 16,423 cubic yards of excavation. In addition, 76,847 cubic yards were removed in preparing the foundations for

PEDRO MIGUEL LOCKS, EAST CHAMBER, LOOKING NORTH, JULY 15, 1911

EAST CHAMBER, AUGUST 5, 1911

PANAMA CANAL

the locks and dam. The total amount of concrete laid during the fiscal year at Pedro Miguel was 498,187 cubic yards. The total amount of concrete laid in the Pedro Miguel locks at the close of the year was 665,065 cubic yards, and the estimated amount remaining July 1, 1911, was 172,345 cubic yards. The lock was 79.42 per cent. completed on that date.

The excavation by steam shovels in the upper lock at Miraflores was completed during the year. The total amount of concrete laid in these locks was 272,933 cubic yards. The total amount of masonry (concrete and large rock) laid in the locks on the Pacific side up to the end of the year was 771,120 cubic yards.

TERMINALS. The increase in the number of vessels touching at the ports on either side of the Isthmus has made it necessary to extend the existing docking facilities. A board was appointed on April 24, 1911, to consider and report on the facilities necessary in connection with the use of the completed canal. The chief facilities were to include the storing and furnishing of coal and other fuel for use both afloat and ashore, the furnishing of fresh water to shipping, the furnishing of adequate and convenient facilities for the repair of all vessels as well as of rolling stock, equipment, and machinery ashore; and the question of storehouses and storing of material and supplies on the Isthmus other than fuel for all other purposes after the completion of the canal. A comprehensive scheme was outlined by this board having in view the construction at the Pacific terminus of a dry dock, the permanent shops, and a storehouse for supplies. A coaling station at each end is contemplated, together with an arrangement of docks which will permit of subsequent additions. The dry dock is to conform in its dimensions to the locks, and the wharves are to be of sufficient dimensions to care for any shipping which can use the canal. In other words, the docks are to have a length of 1000 feet and depths of water equal to the depths provided in the channels of approach. It was decided that on the Atlantic side the docks should be within the limits of the canal zone, located so as not to interfere with the traffic through the canal and at the same time to enable shipping to lie in them in safety during storms. To accomplish these objects negotiations have been undertaken to secure part of the waterway north of Cristobal Point which at the present time is under the jurisdiction of the Republic of Panama. Designs were prepared for the construction of a mole extending in a general westerly direction to the canal prism from the intersection of the shore by a line separating the zone from Colon and of dimensions sufficient to protect against storm both the docks and the basin which will be excavated to the south of them. The necessary borings to determine the depths of rock were made during the year. Trestles were built for the mole and for the first slip of the new dock. On the Pacific side a provisional location was selected for dry docks and for the permanent shops and an arrangement was made for a scheme of docks. As the docking facilities of the Panama Railroad at Balboa are very much restricted there was immediate necessity for additional wharves and under an allotment from the Panama Railroad of \$428,700 a reinforced concrete dock 706 feet long and 55 feet wide was begun.

PANAMA RAILROAD. The construction of the relocated line of the Panama railroad was continued during the year. All grading on the line from Gatun to Gamboa was practically completed at the beginning of the fiscal year. Filling was made at the Gatun River bottom involving the dumping of 932,238 cubic yards. Reinforced concrete piers for the permanent bridge across the Gatun River were built during the dry season. The construction of permanent telegraph and telephone lines was undertaken during the year. This was built of fifty-six pound steel rails for poles, each equipped with four cross arms. On June 30, 1911, the line from Gatun to Gamboa Bridge was 50 per cent. completed.

CIVIL ADMINISTRATION. The civil administration of the canal zone is in charge of Maurice H. Thatcher. Fifteen executive orders of the President and Secretary of War, having the effect of law, were issued during the fiscal year. Most of these were of minor importance.

During the year 364 vessels entered the port of Ancon having a tonnage of 457,746, and 263 vessels cleared, with a tonnage of 454,572. At Cristobal 263 vessels entered, with a tonnage of 722,870, and 264 vessels cleared, with a tonnage of 727,955. On June 30, 1911, there were in force in the canal zone 2251 leases, of which 984 were for building lots and 1261 for agricultural lands. The rents collected amounted to \$23,469.

In accordance with an agreement with the United States government and the Republic of Panama, municipal improvements in the cities of Panama and Colon were carried on during the year. These were chiefly in connection with water mains and sewers.

In the schools under the control of the American government in the canal zone there were enrolled on October 1, 1910, 1837 children, of whom 931 were white and 916 were colored. In June, 1911, 1410 children were enrolled in the white schools and 1568 in the colored schools. There were ten schools in operation for white children and fifteen for colored children. The canal zone high school was transferred from Cristobal to Gatun and a branch high school was established in the school building at Ancon.

SANITATION. The sanitary work, under the direction of a commission, embraced work in the cities of Colon and Panama in the canal zone. The department is in charge of Col. W. C. Gorgas, as chief sanitary officer. In the canal zone there were expended during the year, under the direction of this department, \$114,725 for grass and brush cutting, and \$42,144 for the removal of night soil and garbage. In the maintenance of existing ditches and the construction of new ones for drainage purposes, there was expended the sum of \$81,407.

The total admission to hospitals and sick camps, including those sick in quarters, amounted to 53,534. The daily average of sick was 24.47 out of every 1000 employed, as compared with 23.01 in 1909-10 and 23.49 in 1908-9.

EXPENDITURES. The total amount appropriated by Congress for the construction of the canal and the purchase of canal rights up to June 30, 1911, was \$288,012,468. In addition there was appropriated in 1911 under the armament of fortifications, \$1,000,000; and for sea coast batteries, \$2,000,000. Of the amount

appropriated, \$225,470,053 had been expended at the end of the fiscal year. These expenditures are classified as follows: Department of civil administration, \$4,891,521; department of sanitation, \$13,194,372; excavation and construction, Atlantic division, \$33,860,373; Central division, \$67,938,114; Pacific division, \$21,587,641; general items, including all other work, \$83,998,029. The disbursements for the fiscal year 1911 amounted to \$37,830,278. There was an available balance June 30, 1911, of \$19,307,698.

quoted the instance of the International Paper Company, which has on all its land in the United States less than 0.2 of a cord per acre, or less than the new growth, so that on its forests in Maine, New Hampshire, Vermont, and New York it has standing to-day fully as much timber as in 1898. At the same time it had established a nursery, and done considerable planting of areas that had been burned over or otherwise devastated, and had introduced timber culture on abandoned farms. It was stated that this was the custom of other manufacturers owning wood pulp lands.

The legislation of the American Congress and the failure of the reciprocity agreement in Canada encouraged paper manufacturing in the Dominion, and not only were extensions and new companies contemplated, but considerable American capital was going across the border for investment in this field. The new mills were receiving the best possible equipment and prospects were most encouraging for great developments in the Canadian industry. A few new paper mills were completed during the year in territory near the border on the American side, while a large machine news mill was built

PANAMA-PACIFIC INTERNATIONAL EXPOSITION. See EXPOSITIONS.

PAPER. The paper industry during the year 1911 was largely concerned with political and legislative events. These concerned in particular trade relations between the United States and Canada, as affected by the reciprocity agreement and tariff legislation, while at the same time the investigation of the cost of production in the United States and of various combinations in the industry all figured as subjects of prime importance. See **TARIFF**.

In connection with the discussion of wood pulp and the tariff, it was announced during the year by an officer of the International Paper Company that if no Canadian wood pulp whatever were imported here "it would not jeopardize either our paper industry or our forests, provided we were protected in our market by a foreign duty." Forty per cent. of the annual output in the United States was made from rags, old paper, manilla straw, and other materials than wood, and the only paper made altogether of wood is news print paper, which is about 28 per cent. of the total production. As other woods than spruce can be used in paper making as soon as scientific methods are developed, and there are available various agricultural and industrial wastes, the question of the day, in the opinion of this expert, depended entirely on the sufficiency of the material for news print paper. In his opinion, adequate supplies of this material remained, and he

on the water front of Brooklyn, New York harbor, with the object of making paper from pulp imported either from Canada or from Europe. The English paper-making industry enjoyed a good year during 1911. Increased dividends were paid by most of the companies, while the number of persons employed was between 2 and 4 per cent. higher than in the corresponding months of the year 1910. A large number of mills were installing new machines with a width of 165 inches. The drought in Europe served to increase prices during the year. The lockout in Norway had the effect of restricting the production of paper, and the changed customs duty in the United States on products in Canada had the effect of decreasing European exports to the United States. Norway and Sweden were most anxious to secure the same treatment as had been conceded to Canada, and favorable action was awaited with interest.

The experimental paper plant established by the Forestry Service of the United States govern at Wausau, Wis., began operations during the year. The special problem to which the laboratory addressed itself was to ascertain what domestic species of wood could be used to supersede spruce in the manufacture of mechanical pulp, and during the year scientific studies were made with hemlock and jack pine, from both of which pulps were manufactured under the same conditions as ordinarily employed in making news print paper from spruce pulp. Papers were secured with the same strength, fin-

CULEBRA CUT LOOKING NORTH BETWEEN CONTRACTORS' HILL AND GOLD HILL, JUNE, 1911

ish, and appearance as those possessed by standard news print paper, and a production of pulp was secured which approximated the averages obtained in the grinding of spruce, while pulps composed of mixtures of wood in various combinations were obtained which compared very favorably with the general run of spruce ground wood. An interesting result of these investigations was that lodgepole pine, a wood grown in Montana and other Western States, where water power was abundant and cheap, would make mechanical pulp which could be delivered to the mills in Wisconsin and Michigan at prices enabling it to compete with pulp imported from Canada, and with pulp made from foreign wood.

During the year compulsory legislation requiring the use of individual drinking cups brought the paper drinking cup before the public with increased demand, while the paper bag for cooking, paper towels, and paper handkerchiefs were receiving greater use.

During the year the statistics dealing with the pulp and paper production of the United States, compiled by the Thirteenth Census of manufactures, were published. These show an increase in the industry for the ten years 1900 to 1909 inclusive. In the former year there were 763 factories, representing a gross value of \$44,321,000, while at the end of the ten-year period there were 787 establishments, with a value of plants amounting to \$107,607,000, or an increase of nearly 150 per cent. Even greater was the increase in the total value of the products of these establishments, the figures for 1899, 1904, and 1909 being respectively \$127,327,000, \$188,716,000, and \$287,869,000. This increase is significant when the various grades of paper are considered. The production of news print in rolls increased from 455,000 tons, valued at \$15,755,000 in 1899, to 1,091,000 tons, valued at \$42,807,000 in 1909, which would indicate that the cost of a ton of newspaper had increased in the decade from \$34.82½ per ton to \$39.23½. The product of the big paper mills had increased in similar ratio. In 1899 it was 262,000 tons, valued at \$19,467,000, and in 1909 there was an increase to 575,000 tons, with a value of \$42,803,000. Here, also, there was an increase in the cost per ton at the mill, as in 1899 this was given at \$69.03, and in 1909 at \$74.44 per ton. The production of fine writing paper increased in the period under review from 90,000 tons to 169,000 tons, and in value from \$12,223,000 to \$24,906,000, which gives an average cost of \$135.81 per ton in 1899, as compared with \$147.72 in 1909. On the other hand, there has been a decrease in the production of manila wrapping paper, the production of which amounted to 89,000 tons in 1899, with a value of \$5,930,000, to 74,000 tons, valued at \$7,012,000. Heavy wrapping paper increased from 83,000 tons, costing \$4,143,000 in 1899, to 109,000 tons, costing \$4,431,000 in 1909, while straw wrapping paper fell from 92,000 tons, costing \$2,028,000, to 33,000 tons, costing \$871,000. The production of boxwood manila paper increased from 204,000 tons, costing \$9,149,000 in 1899, to 368,000 tons, costing \$19,780,000 in 1909, while the output of tissue paper increased from 28,000 tons, valued at \$3,487,000, to 78,000 tons, amounting to \$8,534,000 in value. The total production of wrapping paper in 1911 as reported to the American Pulp and Paper Association by 63 companies was 408,938 tons, or 83

per cent. of normal, of which 99 per cent. was shipped. In 1911 there was produced, an average of 522 tons of writing paper per day, or about 89 per cent. of the normal capacity of the mills. Of this about 97 per cent. was shipped. The amount of news paper produced in 1911, as reported, was 1,204,079 tons, or 98,360 tons more than in 1910. This was equal to about 93 per cent. of the capacity of the mills reporting, and practically the entire production was shipped.

PAPER FROM SAWDUST. See CHEMISTRY, INDUSTRIAL.

PAPUA, TERRITORY OF. A British possession, dependent upon the Commonwealth of Australia; composed of the southeastern portion of the island of New Guinea and the Trobriand, Woodlark, D'Entrecasteaux, and Louisiade groups. Total area, 90,540 sq. miles, European population (1910), 879; colored, other than Papuans, 451; half-castes, 273. The native population is placed at 500,000, but no estimate can be made for unexplored areas in the hinterland. Capital, Port Moresby. Chief crops are coconuts, rubber, sisal-hemp, coffee, cotton, vanilla, tobacco, cacao, tea, etc. Sago, sugar-cane, tobacco, ginger, bamboos, and valuable timbers are indigenous. Gold and copper are mined, and other minerals occur. Imports (1909-10), £120,177; exports, £100,599. Tonnage entered and cleared (1909-10), 294,584. Revenue (1909-10), £35,918; grant-in-aid, £26,000; expenditure, £64,874. Revenue (1910-11), £48,454; grant-in-aid, £30,000; expenditure, £70,699. Lieutenant-governor (1911), J. H. P. Murray.

PAPYRUS, DISCOVERIES OF. See ARCHAEOLOGY.

PARAGUAY. An interior republic of South America. Capital, Asunción.

AREA AND POPULATION. As there is an unsettled boundary dispute with Bolivia, involving a large territory, the actual extent of the republic cannot be accurately stated. For the present the best estimate is 97,722 sq. miles. The census of 1899 showed 643,852 inhabitants; the estimate of December 31, 1906, was 715,841. It is not unlikely that the latter figure is too high even for 1911, as it is believed that, on account of political disturbances, the population has decreased since 1904. The population is mostly a mixture of Spanish, Guarani Indian, and negro origin. Immigration is small, amounting in 1909-10 to only 634 and in 1910-11, 418. The larger towns are: Asunción, with about 60,000 inhabitants; Villa Rica, 30,000; Concepción, 25,000; Carapeguá, 13,000.

Primary instruction is free and nominally compulsory. The presidential message of April 1, 1911, stated that there were 485 public schools, with 45,000 pupils and 861 teachers, and 57 private schools. The state religion is Roman Catholicism, but religious toleration prevails.

PRODUCTION AND COMMERCE. Unfortunately for the country, the small agriculturist has not made much progress; much of the land has been alienated to foreign capitalists and syndicates. But stock-raising has become important, and there are probably some 5,500,000 cattle. Yerba maté is raised in considerable quantities; other products of some importance are tobacco, corn, alfalfa, beans, manioc, and various fruits, especially oranges. Cotton also is raised, and it is hoped that this product, to which the country is excellently adapted, will show a profitable

development. The quebracho tree affords an industry of considerable importance.

Imports and exports, in thousands of pesos (the gold peso is equivalent to the Argentine peso, worth 96.5 cents):

	1906	1907	1908	1909	1910
Imports	6,267	7,513	4,073	3,789	5,473
Exports	2,695	3,236	3,732	5,137	4,099

The leading imports are textiles and food-stuffs; next in importance are hardware and liquors. In 1910, however, railway material and rolling stock amounted to 1,269,165 pesos. Principal exports in 1909: Hides, 1,134,606 pesos; timber, 979,740; quebracho extract, 634,186; yerba maté, 553,629; tobacco, 534,085; oranges, 258,517. The imports come chiefly from Great Britain, Germany, and Argentina, and to the latter two countries is sent the greater part of the exports.

COMMUNICATIONS. Railway in operation in 1911, 232 miles (373 kilometers). The only line is the Paraguay Central, which, until the completion of the extension to Villa Encarnación, had a length of 155 miles, connecting Asunción with Pirapó. During 1910 construction work on the extension (77 miles) progressed rapidly, and the gauge of the older section of the line was changed to conform to that of the Argentine railways. By July 1, 1911, the entire line was open to traffic, thus affording direct rail communication between Asunción and Buenos Ayres (except for the ferry across the Paraná River between Encarnación and the Argentine town Posadas). This makes the trip about 75 hours, including stops, as five days by river steamer. The time was reduced to 53 hours by the end of 1911, when a bridge across the Parana was under construction. During 1911 there was under construction in Brazil a line starting at São Francisco, in Santa Catharina, and projected to the Paraguayan frontier, whence, it was proposed, an extension would finally be made westerly across Paraguay to Asunción. The line, aggregating with the extension about 869 miles, will be, if completed, of much economic importance to the republic. Telegraph, over 60 offices, with nearly 2500 miles of line; post offices (1910), 385.

FINANCE. The budget for 1910 placed the revenue at 1,771,000 pesos gold and 6,236,000 pesos paper; expenditure, 710,552 gold and 27,094,948 paper. The actual revenue for 1910, as reported in the presidential message of April 1, 1911, was 1,480,615 pesos gold and 22,002,226 paper. The gold peso coincides in value with the Argentine peso, 96.5 cents; the paper peso in 1910 was worth $7\frac{1}{2}$ to 8 cents. The budget for 1911 showed estimated revenue of 2,738,000 pesos gold and 9,190,500 paper; estimated expenditure, 999,412 gold and 32,687,228 paper. The English funded debt, December 31, 1910, was 3,920,717 pesos gold; floating debt, 600,000; paper money (1908), 35,000,000. Negotiations were successfully concluded in September, 1911, for a loan of 25,000,000 from Brazilian and French bankers.

ARMY. A small permanent army, consisting of a uniform organization of 4 battalions of infantry, 6 squadrons of cavalry, 5 batteries of field artillery, 2 machine-gun sections, and the coast defense battalions, or a total of about 100 officers and 2500 men, is maintained, in which every citizen between the ages of 20 and 25 is

liable for service. The army is armed with modern weapons, and is under the instruction of German officers. Like other South American republics, the strength of the army varies with political exigencies.

GOVERNMENT. The president is elected indirectly for four years and is assisted by a cabinet of five members. The National Congress consists of two houses, the Senate and the Chamber of Deputies, both senators and deputies being elected by direct vote. In 1910 Manuel Gondra was elected president, being inaugurated in December. He was forced to resign on January 16, 1911, and Col. Albino Jara, the minister of war, assumed office as acting president. On July 5 Jara was seized and expelled from the country, and on the following day Liberato Rojas, president of the Senate, was elected provisional president by the National Congress. Disturbed political conditions, amounting at times practically to civil war, persisted to the end of the year.

HISTORY. The president and vice-president of the republic resigned in January, and the congress in joint session elected as president Colonel Jara, minister of war. It was reported in the first week in July that the officers of the garrison at Asunción had risen against the government, that President Jara was taken prisoner and made to resign, and that congress made a choice, as provisional president, of Señor Rojas, and arranged for a new election later.

PARCELS POST. For more than a decade there had been more or less demand in the United States for the organization by the Postal Department of a parcels post system. When John Wanamaker was postmaster-general of the United States he declared that there were four reasons, and only four, why we do not have a government parcels post in this country, these reasons being the four principal express companies. Since then the subject has been widely discussed, to this Wanamaker statement being added a variety of arguments for and against. The principal proposals which have been discussed during the past year are: 1. An extension of the rural free delivery service to include the delivery of parcels weighing as much as eleven pounds; this proposal takes various forms especially as to the weight limitation. 2. The introduction of a general parcels-post system, including packages of all weights up to one hundred pounds or more. This second proposal also has various modifications depending not only on the various limits which may be set to the weight of packages but also on the system of charges. Shall the charge be a flat rate without regard to distance or shall the zone system of making charges be introduced? 3. The purchase of the express companies and the organization by the government of a single uniform express service to be operated by the postal department. 4. To these three most common proposals has been added the proposition that the government organize a fast freight system in connection with delivery service in cities and in the country for the handling of heavy packages in the transmission of which the element of time is not so important.

INTERSTATE COMMERCE INVESTIGATION. At the request of 211 business organizations throughout the country the Interstate Commerce Commission instituted an inquiry in December into the rates, rules, and practices of the

leading express companies. Hearings were held in New York and elsewhere. It was shown that the express companies give equally good rates on packages of three pounds or less and better rates on heavier packages than the present postal rates. Congressman Lewis of Maryland, who has investigated the parcels post service abroad and who was a principal witness, declared the present express and postal rates on parcels to be prohibitive. He declared the express rates in the United States to be sixteen times the freight rates, whereas abroad they were only five times as great. He thought the scheme to organize a general parcels post, with charges ranging from eight to twelve cents a pound, would prove futile, since these rates are higher than present express rates in many cases. He thought the chief reason why the government must charge such rates is because it pays an average of four cents a pound to the railroads for carrying mail matter, whereas the express companies pay but three-quarters of a cent a pound for a like service. He thought that with equally favorable railroad contracts a government parcels post would prove of superior efficiency. He pointed out that American postal employees in 1909 handled 54,000 pieces of mail each, whereas the average in Germany was only 26,000, and in France and England, 32,000. He pointed out that in 1909 the total express receipts were \$132,000,000, of which \$56,000,000 went to operating expenses, \$64,000,000 to railroads, and \$11,000,000 to profits; yet the total valuation of express company equipment was only \$10,000,000. He thought the government should be able to purchase the express companies for \$40,000,000 of 2½ per cent. bonds, thus entailing a fixed charge of only \$1,000,000. By then reducing the duplicate administrative forces now maintained by five or six principal companies, unifying the plants, eliminating the expenses of some 8000 duplicate offices, and otherwise securing the advantages of consolidation and the elimination of the costs of competition, the government would be able to reduce all rates by one-third and the rates on packages up to fifteen pounds by two-thirds.

OTHER ARGUMENTS FOR. Among the other arguments presented in favor of the government parcels post is the statement that a parcels post service now exists in 43 foreign countries. It is also shown that packages of eleven pounds may be sent through the American post office for foreign delivery, but packages of only four pounds may be sent for domestic delivery. Moreover, the charge on packages sent abroad is less than on packages of the same weight delivered in this country. To the argument that the parcels post is socialistic it is answered that so also is the post office and the school system. It is answered also that the cry of socialism is merely a bugaboo, that the real question is whether the government could render the service demanded with efficiency and economy. It was asked why, if the government can carry four-pound packages, it could not carry seven-pound or eleven-pound packages? It was declared that there is no adequate reason why packages costing twelve cents in England should cost eighty cents in the United States, or why a ten-pound package costing twenty cents in England should cost eight times as much in the United States.

Two associations designed to promote a parcels post are the Postal Progress League and the Postal Reform League. Both organizations

have carried on a campaign of publicity through letters, pamphlets, and reprints of articles and editorials. One of their circulars declared that the government charges 8000 per cent. more for delivery of parcels than the German government; that a German can send a 110-pound package of merchandise from one end of Germany to the other, or even to Austria, for thirty cents; that the charge for registration of such packages is only two to six cents in Germany as against ten cents for a letter in the United States. Although the retail dealers were generally opposed, the agricultural population was generally favorable to the parcels-post idea. It seems clear that the parcels post would extend to the farmers many of the market advantages of cities. Some held that the numerous small retailers increase the cost of goods and should be eliminated by large centrally located concerns with the cheap delivery service of a general parcels post.

THE OPPOSITION. The opposition to the parcels post is led by the American League of Associations, with branches in New York, Chicago, and other principal cities. This is composed of representatives of merchants' associations, department stores, and such organizations as the National Association of Retail Grocers, the National Retail Hardware Association, and the National Association of Retail Druggists. It claims a membership of 300 firms. Its plan has been to arouse the country storekeepers to the danger of their elimination through the rural parcels post and the subsequent creation of a mail-order trust. They point out that at present the retail mail-order houses must pay nearly twenty-five cents for the transmission of their catalogues, whereas under a parcels-post system these would be delivered for five or ten cents. They circulated generally among country merchants a petition containing the following arguments against the parcels post: "It would foster the development of an enormous trust, create an oppressive monopoly, destroy the prosperity of all country towns, ruin thousands and tens of thousands of jobbers and country merchants, drain the rural communities of their capital and population, aggregate the evils of centralized wealth and congested cities, and benefit no one but the great retail catalogue mail-order houses in the big cities and the express companies." They argued that in every town the mail-order agents would spring up for the distribution of catalogues and the solicitation of business.

Retail dealers throughout the country expressed more or less opposition to the inauguration of a government parcels post. Trade associations in Iowa, Nebraska, and Wisconsin held meetings to condemn it on the ground that it would destroy local trade. This opposition of the small dealer was sufficiently general to be considered by some students of the matter the chief source of opposition and the prime cause of government delay in advancing the proposition. Some opponents held that the introduction of this system would be followed by the purchase of the express companies and then of the railroads by the government, thus introducing state socialism.

TAFT'S RECOMMENDATION. In one of his December messages President Taft urged that steps be taken for the immediate establishment of a rural parcels post. He pointed out that the postal service estimates for the ensuing year included \$150,000 for the initiation of the rural

parcels post and for a preliminary investigation cels post. He did not think the latter would injure the country storekeepers, but rather would injure the country storekeepers, but rather would benefit them by putting them in easy and frequent communication with their more distant customers.

PABET, WILLIAM. A Protestant Episcopal bishop, died January 18, 1911. He was born in New York City in 1826 and graduated from Hobart College in 1849. He was ordained a deacon in 1852 and a priest in 1853. From 1852 to 1854 he was pastor at Clyde, N. Y., and from 1854 to 1865 at Pierrepont Manor, N. Y. He was rector of the church in East Saginaw, Mich., from 1865 to 1867 and occupied a pastorate at Elmira, N. Y., from 1867 to 1869. After serving from 1869 until 1876 as rector of a church in Williamsport, Pa., he was pastor in Washington, D. C., from 1876 to 1885. In the latter year he was consecrated bishop of Maryland.

PARKER, QUANAH. An Indian chief of the Comanche tribe, died February 23, 1911. At the age of fourteen, on the death of his father, he became chief of the tribe and he led it on many raids against the whites in Oklahoma and Texas. He finally surrendered to General McKenzie in 1877. He became one of the leaders of his people.

PARMELE, MARY PLATT. An American writer, died May 26, 1911. She was born at Albany, N. Y., in 1843 and received an academic education. She was married to S. J. Agnew and after his death to Theodore W. Parmele. From 1892 she was an extensive contributor of philosophical articles and stories to reviews and magazines. She was the author of a series of short histories of England, France, United States, Germany, etc. from 1892 to 1902. She wrote also *The Kingdom of the Invisible*; *Answered in the Negative*; and *Ariel*.

PATERSON. See NEW JERSEY.

PATRIOTIC SOCIETIES. These societies have as their object the preservation of the records of important historical events and especially of the wars in which the United States has participated; the encouragement of the love of country and the saving and restoration of historical sites and objects, and kindred matters. The most important societies of this nature, including societies of men and women, with the date of their foundation and their membership in 1911, when it could be ascertained, are given in the table in next column:

PATTEN, SIMON N. See LITERATURE, ENGLISH AND AMERICAN, *Religion*.

PATTERSON, JAMES O'HANLON. An American official, former congressman from South Carolina, died October 25, 1911. He was born at Barnwell, S. C., in 1857 and was educated in the Barnwell School and Houghton Institute. He studied law and in 1886 was admitted to the bar. He was for two years probate judge and a member of the State House of Representatives from 1898 to 1904. He was a member of the Fifty-ninth to Sixty-first Congresses, 1905-1911, from the Second South Carolina District.

PAVEMENTS AND ROADS. In paving work the use of close-jointed granite blocks, the extension of brick in some sections, the continued popularity of rectangular wood block and sheet asphalt under some conditions, the growing use of Portland cement concrete and also, and more notably, of asphaltic concrete, have been features during the past few years. In the less costly and generally less permanent improvement of light traffic and of country roads, to substitute a bituminous-bound for water-and-dirt or mud-bound broken stone in new work and to lay the dust and preserve the surface of old macadam or broken stone roads with surface applications of specially prepared tar, or with liquid asphalt or asphaltic oils, or less commonly and less satisfactorily with oil having paraffine instead of an asphaltic base. Tar, asphalt, and oil have also been and are still being used, both for mixing with and surface application on gravel, sand, and even whatever ordinary earth may be found in the roadbed; but obviously, while such roads are cheaper than those of broken stone, they are less permanent and satisfactory, the degree of difference depending upon local conditions, and particularly upon the volume and weight of traffic.

Two needs, far from being met, are more specific information as to (1) the relations between the chemical and physical characteristics of the various classes of road and street materials, and the kind and volume of the traffic; and (2) what the traffic amounts to on various roads and streets, both in volume and kind. Much laboratory work is being conducted by the federal, State, and local governments to satisfy the first, and here and there censuses of traffic are being taken to satisfy the second. It still

remains true that the most frequent causes of failure in both pavements and roads are imperfect drainage and deficient foundations, each of which contributes to the destruction of the best roads and pavements. Macadam roads, whether water-bound or bituminous-bound, are particularly liable to damage if penetrated by water from below or from above.

In bituminous road construction there appears to be a growing consensus of opinion that longer life is secured when the tar or asphalt is mixed with the stone (mixing method) than when it is poured on the stone layers and percolates into them (penetration method). It is also being found that the life of water-bound macadam, subjected to motor traffic, may be prolonged quite satisfactorily by building up a relatively thin "mat" or layer of fine road material bound with one of the bituminous cementing methods.

It should be appreciated that each street or road improvement and each class of material used demand special study to meet ever-varying local conditions, if efficiency and economy are to be secured; and that to meet these varying local conditions, as well as the many technical questions involved, the services of the road or pavement engineer and chemist are imperatively demanded.

ROAD CONGRESSES. Many congresses or conventions and sectional meetings of engineering societies were held in 1911 to discuss roads and pavements. Some of these were devoted chiefly to "good roads" propaganda, like the American Road Congress, held at Richmond, Va., in November; while others were strictly or chiefly technical in character. Among the latter were the road section of the American Society of Civil Engineers, and the Organization of City Officials for Standardizing Paving Specifications, each of which met in New York City in January, 1911, and the American Road Builders' Association (composed of State and federal road officials and engineers), which met in Rochester, N. Y., in November, 1911.

STATE ROAD BUILDING. State highway construction and State aid for local highway improvements are being prosecuted on a large scale by a considerable number of States. Massachusetts and New Jersey, which began State highway aid or work in the early nineties, still continue it in a moderate way, while New York, Pennsylvania, Maryland, and California have recently been carrying on very extensive State operations, and altogether more than half the States in the Union have taken up highway improvement in one way or another. Up to November 30, 1911, Massachusetts had built about 880 miles of State road, at a total cost of \$8,013,360, or some \$9000 a mile, including tree planting. Of 42 miles of road improved by Massachusetts in 1910-11, 7% were water-bound macadam, by the bituminous-bound macadam; 14½ miles water-bound macadam with an oil-treated surface; 5½ miles plain gravel, and 4 miles gravel, with a bituminous-bound surface; 4½ miles sand, bound with oil. A total of \$500,000 was spent during the year for the maintenance of roads by the Massachusetts Highway Commission, of which \$300,000 was appropriated by the legislature and \$300,000 derived from automobile fees. The commission recommended the legislature to appropriate \$5,000,000 for road improvement, \$1,000,000 to

be used each year in order that the State might keep pace with its neighbors. Large road bond issues have been authorized by counties in California and other States. An unfortunate feature of road expenditures in a number of States is that the money is being raised by the sale of long-term bonds, sometimes running fifty years, while all past experience indicates that the road surface being put down will not last more than ten years at the most.

THE DELAWARE ROAD. A cross-State highway was started in Delaware in 1911 at the expense and under the direction of Gen. Coleman du Pont. The road will extend from a point on the southern boundary to a point near Wilmington, in the northern part of the State, and will be about a hundred miles long. Elaborate surveys and detailed laboratory tests of road material were conducted in 1911 and some construction was begun late in the year. Thomas Aitken, a Scottish road engineer of note (of Cupar, Fife), and Ernest Storms, of Brussels, Belgium, have been employed as consulting engineers, and Frank M. Williams, lately State engineer of New York, as chief engineer.

ROAD MILEAGE OF THE UNITED STATES. Statistics given out by the United States Office of Public Roads late in 1911 show that the total length of public roads in the United States (not including Alaska and insular possessions) increased from 2,151,379 miles in 1905, to 2,199,387 in 1909, and that the mileage of "improved roads" increased from 153,357 in 1904 to 190,467 in 1909, the corresponding percentages of improved roads to all roads being 7.14 and 8.66, respectively. "Improved roads," as here used, included roads which have been properly graded and drained and surfaced with some hard material.

PELLAGRA. There were indications from many sources during 1911 that this disease was spreading in the United States. More than thirty States reported cases, of which there were altogether over 5000, and in Kentucky, Tennessee, North and South Carolina, there was not only an increase in the number of cases, but the disease was discovered in localities never before infected. The situation in North Carolina was considered alarming and the uneasiness was increased by the fact that up to the present the true cause has not yet been found and to the further fact that little or no progress has been made in the prevention and treatment of the malady. Less and less attention was given to spoiled corn as an exciting cause. The general opinion inclined to the belief in a parasitic origin. Sambon's view that a sand fly of the genus *Simulium* carries the germ was confirmed by Roberts of Atlanta, Ga., who found in his section of the country similar conditions to those described by Sambon in Italy. The latter investigator found that the sand fly breeds in water and does not enter the houses; and that lagra to a trematode of the filaria family, which courses. Alessandrini, of Rome, attributed pellagra to a trematode of the filaria family, which is carried in drinking water. Dozzoni believed

the disease to be due to a specific streptobacillus. Another observer, Reed, suggested, as a result of numerous observations, the fungus *Diplodiaeae* as a possible factor. Observers were agreed, however, that pellagra is not contagious. It was noted that pellagra is a much more serious disease in the United States than in Europe, where it has existed for two hundred years. The mortality in some institutions was as high as 90 per cent. The death rate is naturally higher among the insane than among people of otherwise unimpaired health. The treatment has been generally unsatisfactory, although many cures have been reported. Good results have been obtained from the use of hexamethylenamine, an antiseptic drug, which can be taken internally in large doses. Elrod reported symptomatic cures after injecting cacodylate of soda. Salvarsan (q. v.), another arsenic preparation, was also used with reported success. The transfusion of healthy blood into the veins of pellagrins was also tried with some measure of success. In Italy, an official commission was appointed to study the application of the newer views of the etiology of pellagra. The commission reported that the disease had been very much reduced during the last few years by the sanitary regulations adopted by the government. In 1888 Italy had 117 pellagrins to the 1,000,000 of inhabitants, and in 1903 it had only 80 per 1,000,000. In that year the anti-pellagra law was passed and by 1908 the ratio was reduced to 39 per 1,000,000. The pellagrins formed 7.9 per cent. of the inmates of the insane asylums in 1908, while in 1908 they were only 3.5 per cent. In Hungary, on the contrary, a recent report of the public health service announced the appearance of pellagra and its rapid spread in Transylvania (the southeastern part of Hungary). In this country it is generally believed that the disease is due to eating damaged corn, and its prevalence is not surprising in view of the fact that maize is the staple food of the peasantry in this district. This maize is rendered unwholesome by the modern intensive method of cultivation, the grain being cut before it is ripe, with the result that fermentation occurs. The government of Hungary distributed wheat flour among the poorer inhabitants with the hope of limiting the spread of the disease, and it has been found that many of the sick pellagrins recover when they are supplied with wholesome food.

PELLETIER, Sir CHARLES ALPHONSE. A Canadian public official, died in April, 1911. He was born in 1837 of French-Canadian parents. In 1860 he was called to the bar and in 1892 was made president of the Quebec bar. He was elected to the Canadian Senate in 1877 and in 1896 became speaker. He abandoned politics in 1902 and was appointed a justice of the supreme court. In 1908 he was appointed lieutenant-governor of Quebec. He was a Liberal in politics and was, for a short time, in 1877-8 minister of agriculture in the Mackenzie administration.

PELOPPONESUS. See **ARCHÆOLOGY**.

PENANG. See **STRAITS SETTLEMENTS**.

PENNSYLVANIA, **POPULATION**. The Thirteenth Census showed a population in the State in 1910 of 7,665,111, as compared with 6,302,115 in 1900. The principal cities, with their population in 1910 and 1900, are as follows (the figures in parentheses are for 1900): Philadelphia, 1,549,008 (1,295,697); Pittsburgh, 533,905 (321,

616); Scranton, 129,067 (102,026); Wilkesbarre, 67,105 (51,721); Harrisburg, 64,186 (50,167); Johnstown, 55,482 (35,926); Lancaster, 47,277 (41,459).

MINERAL PRODUCTION. The coal production of the State in 1911, according to the United States Geological Survey, was 236,006,762 short tons, valued at \$313,304,812. Of this amount, 84,485,236 short tons was anthracite, valued at \$160,275,302, and 150,521,526 short tons were bituminous, valued at \$153,029,510. In 1910 the total production of the State amounted to 219,037,150 short tons, valued at \$270,266,824. The increase in 1910 was, therefore, 15,969,612 short tons, or 7 per cent. in quantity, and \$34,037,988 or 12.2 per cent. in value. Although the quantity of bituminous coal exceeded that of anthracite by nearly 80 per cent., the value of the anthracite product was larger than that of the bituminous output by nearly 7,250,000. The anthracite mines of the State in 1910 gave employment to 169,497 men, while the bituminous mines employed 175,403 men. The average production of each man employed in the anthracite region was 498 short tons during the year. In the bituminous mines the men averaged 325 tons each. There were 601 men killed and 1050 injured in the anthracite mines of the State in 1910. The fatal accidents in bituminous mines numbered 539 and the non-fatal accidents 1142. In the combined production of anthracite and bituminous coal, Pennsylvania outranks any of the coal-producing countries of the world except Great Britain and Germany, and in 1910 it came within 10,000,000 short tons of equaling the output of Germany.

The iron ore mined in the State in 1910 amounted to 739,799 long tons, valued at \$911,847, compared with 666,889 tons, valued at \$792,672, in 1909. See **IRON AND STEEL**.

The State produces some copper. In 1910 the output was 740,826 pounds of blister copper, as compared with 994,089 pounds in 1909. The output was from the iron mines of Lebanon county.

AGRICULTURE. The Thirteenth Census included statistics of agriculture in the State. These are of date of April 15, 1910. On that date the number of farms in the State was 219,295, as compared with 224,248 in 1900. The land in farms was 18,586,832 acres, as compared with 19,371,015 in 1900. The improved land in farms was 12,673,519 acres, as compared with 13,209,183 acres in 1900. The average acres per farm was 84.8, as compared with 86.4 in 1900. The value of all farm property, including land, buildings, implements and machinery, domestic animals, poultry, and bees, was \$1,253,274,862, as compared with \$1,051,629,173 in 1900. The average value of all property per farm was \$5715, as compared with \$4690 in 1900. The average value of land per acre was \$33.92, as compared with \$29.70 in 1900. Of the 219,295 farms in the State, 168,190 were operated by owners and managers, 51,105 by tenants. Of the farms operated wholly or in part by owners, those free from mortgage numbered 112,156, and those mortgaged, 50,899. The native-born white farmers numbered 204,917, foreign-born whites, 13,832; negroes and other non-whites, 546. Of the non-whites, 543 were negroes and 3 Indians. The various kinds of domestic animals, poultry and bees in the State in 1910 were valued at \$141,480,052, as compared with a value in 1900 of

\$102,439,183. The cattle numbered 1,586,519, valued at \$47,229,894; horses and colts, 549,756, valued at \$68,055,489; mules, 44,323, valued at \$6,424,039; swine, 977,637, valued at \$7,624,494; sheep and lambs, 883,074, valued at \$3,934,144. Poultry of all kinds numbered 12,728,341, valued at \$7,674,387. The acreage, production, and value of the principal crops in 1910 and 1911 are shown in the following table:

		Acreage	Prod. bu.	Value
Corn	1911	1,435,000	63,858,000	\$43,423,000
	1910	1,430,000	58,630,000	34,592,000
Wheat	1911	1,289,000	17,402,000	16,010,000
	1910	1,309,000	23,300,000	21,436,000
Oats	1911	1,121,000	31,724,000	15,862,000
	1910	1,144,000	40,269,000	16,510,000
Rye	1911	285,000	4,304,000	3,443,000
	1910	288,000	4,896,000	3,574,000
Potatoes ..	1911	270,000	15,120,000	14,062,000
	1910	275,000	24,200,000	12,584,000
Hay	1911	3,148,000	a 3,148,000	62,960,000
	1910	3,212,000	4,433,000	66,495,000
Tobacco ..	1911	46,000	b65,320,000	6,205,400
	1910	43,000	64,500,000	5,998,500

a Tons. b Pounds.

EDUCATION. The number of school districts in the State in 1911 was 2599. The whole number of pupils was 286,273. The average daily attendance was 1,028,290. There was paid in teachers' salaries, \$20,244,715. The total expenditure for educational purposes was \$42,137,647. The whole number of teachers employed was 36,180. The average salary of male teachers per month was \$160, and of female teachers, \$80.

FINANCE. The receipts for the fiscal year ending November 30, 1911, amounted to \$32,146,978. The expenditures were \$29,132,646. There was a general fund balance at the end of the fiscal year of \$10,526,687. The indebtedness at the close of the fiscal year was \$2,295,510. The assessed value of the personal property in the State for the year 1911 was \$1,198,861.

POLITICS AND GOVERNMENT

There were no important events in State politics proper in 1911, as elections were not held for State officers. There were, however, important municipal elections, which will be described below. The legislature met in 1911, and the most important measures enacted will be found in the paragraph *Legislation* below.

On January 17 John K. Tener was inaugurated governor of the State. Mr. Tener was elected in November, 1910. On January 17 George T. Oliver of Pittsburgh was reelected to a full term (to expire 1917) in the United States Senate, where he was serving the unexpired term of Philander C. Knox, Secretary of State.

The election for mayor in Philadelphia attracted a national interest on account of the peculiar situation developed. The city has been for many years the stronghold of the Republican organization, which always has been under fire of reform elements. Yet charges that corruption had been flagrant under the administration of Mayor Reyburn, a Republican, were made by Republican organization forces, which brought about an investigation by a committee of the State senate. A principal complaint against the several city administrations for many years has been the awarding of contracts by the authorities. The charge was made that large contractors associated with the Republican party had

profited largely through contracts in the city for street cleaning, street paving, the building of boulevards, and the construction of a filtration plant. The investigation ended without notable results. The primaries for the nomination of candidates for mayor were held on September 30. These were the first elections held under the new law providing for State and national elections only in even numbered years; municipal elections only in odd numbered years. In each party were two candidates for the nomination. The candidates for the Republican nomination were William S. Vare, a brother of a contractor largely interested in city contracts, and George H. Earle, Jr., a well-known lawyer of the city. Mr. Vare had the support of Mayor Reyburn, while supporting Mr. Earle was the established Republican organization, headed by Senator Penrose. A combination had been formed by the Democratic party with an independent organization known as the Keystone party, which had for two years fought alleged corruption in State and city politics. The followers of this fusion organization were asked to choose between D. C. Gibboney and Rudolph Blankenburg, who announced themselves candidates for the nomination for mayor. The primary elections resulted in the nomination of Mr. Earle by the Republicans and Mr. Blankenburg by the Democrats. Mr. Earle had a majority of 23,000 over Mr. Vare, and Mr. Blankenburg was chosen by a majority of 37,000 over Mr. Gibboney. In the election campaign the right of Mr. Earle to serve, if elected, was questioned, it being discovered he had voted outside of Philadelphia within five years, and the law requiring that a mayor shall have been a resident of the city continuously for five years next preceding the beginning of his term of office. This cost Mr. Earle many votes. On November 7 Mr. Blankenburg was elected by a plurality of about 4000 votes. Elsewhere in the State the Republicans were successful in electing their candidates for municipal and judicial officers, except in Pittsburgh, where the Keystone-Democratic party succeeded in electing Ambrose B. Reid for judge of the common pleas court. In the city of New Castle the Socialists elected a mayor, 11 councilmen, and 2 assessors. In Wheatland they elected the entire ticket and in Pymatuning township Socialist school directors were elected. Two constitutional amendments were ratified. One empowered the city of Philadelphia to increase its bonded indebtedness from 7 to 10 per cent. of its assessed valuation for improvement of transportation facilities within the city. The other consolidated the common pleas courts of Allegheny county.

Under an amendment to the Second Class City Charter act, Governor Tener on June 5 appointed for Pittsburgh a council of nine business and professional men to serve until January 1, 1912, when their successors, elected in November, 1911, would take office. These councilmen succeeded the bi-cameral councils abolished by the amendment to the charter, which amendment provides that all councilmen shall be elected at large and shall serve four years, a part of the membership being elected every two years. The important change in the system of government is the reduction in the size of the council. The mayor's office is not disturbed. Old councils, elected to represent wards, served without pay; the new small council receives salary

(in Pittsburgh, \$6500 per annum each). Scranton is the other city of the second class and its government underwent a change similar to that of Pittsburgh, but the same importance did not attach to the change there. Governor Tener justified the hopes of the people of Pittsburgh when he appointed the new council for that city; not a man closely identified with politics was in the list. Two of them resigned after a couple of months' service owing to pressure of private business. Their places were filled by men of calibre equal to that of the sitting members and the whole council as then constituted was elected by the people on November 7 by practically unanimous votes, they having on September 30 received the nomination in the primary election of the Republican, the Democratic, and the Keystone parties.

In addition to the measures noted under *Legislation* below, the legislature enacted a school code, revising the school laws of the State. Under it school districts are classified, and control of schools is centralized; in cities the small districts are abolished, taxation is made uniform, and opportunities for graft existing under the old system are wiped out. In Pittsburgh three women were appointed to membership on the board of public education, which controls the schools of the city. Upon advice of Governor Tener, the last interest-bearing debt of the commonwealth having matured and interest payments thereon having ceased, the legislature passed a proposal for a constitutional amendment to permit the issuance of 50,000,000 of State bonds for road improvements and adopted the governor's plan of highway improvements providing for good roads to connect all county seats in the State. A county court of five judges to have jurisdiction in minor cases in Allegheny county was created. The State insurance laws were revised and the State insurance department was reorganized. The consolidation of the State penitentiaries on a farm was authorized and a tract of about 4300 acres has been purchased upon which necessary buildings will be erected by convicts, who also will till the land.

Another step in the prosecution of city officers and others, which for two years had been carried on in Pittsburgh, was the trial of Frank N. Hoffstot, president of the Pressed Steel Car Company, on the charge of conspiracy growing out of the graft exposures of 1909-10. After a disagreement by the jury in one trial, Mr. Hoffstot was acquitted on May 16.

The series of events connected with the Harrisburg capitol frauds came to a conclusion during the year by the restitution of \$1,300,000, and the surrender of warrants aggregating \$200,000, upon which payment had been stopped, by the men implicated by the State in these frauds. In consideration of this payment the State agreed to drop all further criminal action against the defendants indicted. An attempt to bring about a new trial for Joseph M. Huston, the architect of the capitol, who was convicted of fraud, was defeated by the action of the supreme court on May 23, which confirmed the decision of the superior court in denying a new trial. Huston subsequently was paroled.

On September 13 a grand jury at Butler indicted 20 labor leaders and former employees of the Pittsburgh, Harmony, Butler & New Castle Railway Company on the charge of perpetrating dynamiting outrages and other acts of violence

along this road. Sixteen other men were charged with conspiracy to dynamite cars and several were charged with conspiracy to soap or grease the tracks.

On April 7 over 70 miners were killed by suffocation following a fire in the Dunmore, some times called the China vein, of the Pancoast colliery at Throop. On July 16 21 miners were killed in an explosion at the Cascade mine at Sykesville. On August 18 occurred the lynching of a negro at Coatesville. The man had killed a policeman in attempting to escape arrest, and was himself badly injured. He was taken to a hospital, where the leaders of the mob, breaking in, seized him, and carried him a short distance from the town, where he was burned to death. The State constabulary was sent to maintain order, and Governor Tener insisted on a thorough investigation. Nine indictments were found against leaders of the mob, five of whom were acquitted on trial. The others were not tried.

On September 30 the great storage dam of the Bayless Pulp and Paper Company's mill, above the town of Austin, in the north central part of the State, collapsed. The water released from the dam, swept down, destroying the towns of Austin and Costello, with a loss of over 100 lives. More than 500,000,000 gallons of water were released by the breaking of the dam, and the flood was followed by fire. See DAMS.

LEGISLATION. The important measures enacted at the legislative session of 1911 include the following: A measure was passed establishing an insurance department in the State, together with the appointment of an insurance commissioner, who shall have general regulation of insurance companies. A bureau of medical education was established as one of the bureaus of the department of public instruction. An act was passed regulating the practice of medicine and surgery. Fire drills in establishments where women and girls are employed were made compulsory. Measures were passed providing for the health and safety of persons working in and about the bituminous coal mines of the State and for the protection and preservation of property connected therewith. A commission was appointed to inquire into the cause and results of industrial accidents, and to study advanced methods for safeguarding against the same; and to inquire into the subject of fair compensation for those injured or killed as a result of such accidents. An act was passed providing a system of parole and probation for certain convicts convicted of a first offense.

STATE OFFICERS. Governor, John K. Tener; Lieutenant-Governor, John M. Reynolds; Secretary of the Commonwealth, Robert R. McAfee; Treasurer, C. F. Wright; Auditor-General, A. E. Sisson; Adjutant-General, Thomas J. Stewart; Attorney-General, John C. Bell; Superintendent of Public Instruction, N. C. Schaeffer; Insurance Commissioner, S. W. McCulloch; Commissioner of Agriculture, N. B. Critchfield—all Republicans, except Schaeffer, Democrat.

JUDICIARY. Supreme Court: Chief Justice, D. Newlin Fell; Associate Justices, J. Hay Brown, William P. Potter, John Stewart, Robert Von Moschizker, S. L. Mestrezat, and John P. Elkin—all Republicans, except Mestrezat. Prothonotary, Eastern District, James T. Mitchell; Prothonotary, Middle District, William Pearson; Prothonotary, Western District, George Pearson.

STATE LEGISLATURE, 1911. Republicans, Senate 38, House 161, joint ballot 169; Democrats, Senate 12, House 45, joint ballot 57; Independent, House 1, joint ballot 1; Republican majority, Senate 26, House 115, joint ballot 141.

The representatives in Congress will be found in article UNITED STATES, *Congress*.

PENNSYLVANIA TUNNEL. See ELECTRIC RAILWAYS.

PENNSYLVANIA, U. S. S. See NAVAL PROGRESS, NAVAL AERONAUTICS.

PENNSYLVANIA STATE COLLEGE. An institution of higher learning at State College, Pa., founded in 1856. The total enrollment of students in 1911-12 was 2002. The faculty numbered 189. Among the important changes in the faculty taking effect at the beginning of the collegiate year 1911-12 were the following: Dr. Edwin E. Smith was appointed assistant professor of mathematics; Dr. Henry R. Richards was appointed assistant professor of Greek language and literature; Dr. Charles L. Kinslow was appointed third associate professor of electrical engineering. Gifts were received during the year to the amount of about \$10,000. The amount of the productive funds of the university was \$567,000 and the income amounted to about \$450,000. The library contains about 40,000 volumes. The president is Edwin E. Sparks, LL. D.

PENNSYLVANIA, UNIVERSITY OF. There were in all departments of the university in the college year 1911-12 5196 students, divided as follows: College, 3400; graduate school, 408; law school, 374; school of medicine, 385; school of dentistry, 463; school of veterinary medicine, 148; evening school, 239. The faculty numbered 531, of whom 267 were in the college, 112 in the graduate school, 35 in the law school, 170 in the school of medicine, 56 in the school of dentistry, 30 in the school of veterinary medicine, and 5 emeritus professors. The student body was represented by nearly every foreign country. There were 12 from China, 16 from Australia, 7 from New Zealand, 15 from Mexico, 3 from Turkey, 4 from the Philippine Islands, and 16 from Porto Rico. The total productive funds of the university amount to \$6,277,483, and the total income to about \$1,000,000. The provost is Edgar F. Smith, Ph. D. For additional notes relating to the university, see UNIVERSITIES AND COLLEGES.

PENNYCUICK, JOHN. An English engineer, died March 9, 1911. He was born in 1841 and was educated at Cheltenham College and at a military school. Joining the military service he became a lieutenant of the royal engineers in 1858. He served in the Abyssinian campaign in 1867 and received a medal for gallantry. He was for thirty-four years in the public works department at Madras, India. His name as an engineer is chiefly associated with the great Periyar Diversion, for the construction of which he had the chief responsibility. This was a huge masonry dam across the upper waters of the Periyar in the territory of Travancore. By the construction of this dam the river was transformed into a great lake. A tunnel was also constructed for carrying the waters of this lake through the Western Ghat Mountains to the eastern slope of that range to supply the areas of the Madura district. The foundations of the dam were carried away repeatedly before they had proceeded sufficiently

to be out of reach of the floods. Pennycuick was made a colonel in 1887. He was a member of the faculty of engineering in the University of Madras, and was for several years president of the Royal Engineering College in that city.

PENOLOGY. One of the most interesting phases of the new humanitarian movement, which includes in its scope better conditions of life for all of the less fortunate members of society, is the change in the attitude of the public and of prison officials toward the treatment of persons convicted of breaking the laws. Starting from the proposition that criminals are, on the whole, not responsible for what they become, since they are what their inheritance and their environment have made them, there is a tendency to treat them with greater humanity and to control them by more constructive methods. The reformatory with its opportunities to learn trades tends to displace the penal prison with its instruments of torture. New types of prisons are being constructed. Perhaps the most notable in this country is the new circular prison begun by the State of Illinois in 1911. The parole and the probation system and the indeterminate sentence are being gradually extended to practically all classes of even adult male criminals. Farm colonies and opportunities to engage in outdoor labor are being perfected. One of the most notable reforms in this line was the betterment of the conditions of the prisoners in the county jails of several counties in Vermont. Under privileges granted by the law the sheriff of Washington county began to pay county prisoners at the rate of seventy-five cents per day, in addition to keep, for work on the public roads and other public improvements. The result was a remarkable transformation in the attitude of the prisoners.

In other States equally remarkable results followed the treatment of prisoners as human beings. In Oregon, Governor West was directly responsible for a complete revolution in the policy of prison regulation. He began by placing prisoners on their honor within the prison walls and then without. He put men at work on the highways and in making improvements at six other State institutions. Gov. W. Donaghey of Arkansas threw the force of his influence against the cruelties and injustices of the convict lease system. Another line of reform is in the assistance given released convicts to enable them to secure a firm foothold in the social and industrial world. The separation of the sexes in county jails and detention pens; the control and training of delinquent boys and girls; the reclamation of wayward girls and women; the sterilization of certain classes of habitual or congenital criminals—these are among the many movements for raising the level of the lives of those who usually have not had half a chance and who constitute burdens and dangers to society.

STATISTICS. Census Director Durand issued a statement showing that the prison population of the United States January 1, 1911, was 113,579, and that the commitments during the year preceding numbered 479,763. The latter figure includes every class of offense from vagrancy to murder in the first degree. The ratio of prisoners to population was 125 to 100,000, being smallest in South Dakota, 48, and largest in Nevada, 353. The number of commitments was smallest in North Carolina, 123 per 100,-

000, and largest in Arizona, 2992. These differences do not indicate such excessive differences in criminality, but are primarily due to the differences in laws and police vigilance.

PRISON LABOR LEGISLATION. The proper method of utilizing the labor power of prisoners in penal institutions has been given unusual attention in the United States for several years. There have been exposures of shocking conditions in the convict lease systems of some of the Southern States; there have been a number of studies showing the intolerable conditions due to idleness in county jails and some State prisons; there has been a gradual decline of the feeling that prisoners should be made to work as a form of punishment and the development of a rather insistent demand that prisoners shall be allowed to work at useful occupations for their own physical and moral welfare, as well as for their own and the State's economic advantage. Prison labor is employed under various systems known as the lease, contract, piece-price, public account, and State use systems. In general these systems may be classified under State or private management. There is an undoubted tendency toward the reduction of the latter and the extension of the former. State management removes the incentives for exploitation of prison labor by removing the opportunities for private profit which prevail under the control of convict labor by private managers. The tendency is for the State to employ prisoners for its own purposes on State lands, in State mines, or in State factories. Along with this has gone a tendency to pay convicts small wages which may be credited to their own accounts or paid regularly to persons previously dependent upon them. Moreover, the State of Nevada gives the prisoner the right to choose between working on the roads or working indoors. The wages thus paid are in some countries, as in England and Germany, viewed as a privilege, whereas, in others, as in France, they are viewed as a right. Both of these views found expression in American legislation in 1911. Another matter connected with prison labor is the distribution of the product. Organized labor has taken strenuous exception to the sale of prison-made goods in the public markets in competition with the products of private enterprise; such sale forces a competition between free and prison labor. This view has been accepted by the general public. The tendency is, therefore, for goods made by prisoners to be used by the State for its own purposes. In such a case the prisons are credited with the value of such goods at prices as near as possible to prevailing market prices.

The legislation by American States in 1911 may be briefly summarized from the report of the American Association for Labor Legislation. No State extended the powers of leasing or contracting for the labor of prisoners by private employers, though the State of Idaho did extend the field of present leases. This same State, however, provided that convicts might be employed on all public works under direct control of the State. The following twenty-one States made more or less extensive provision for the operation of State industries, whether farms, mines, or factories, with prison labor: California, Florida, Idaho, Indiana, Kansas, Maine, Massachusetts, Michigan, Minnesota, Missouri, New Jersey, Nevada, North Dakota, Ohio, Oklahoma, Pennsylvania, South Car-

olina, Utah, Washington, Wisconsin, and Wyoming. The following eight States made some provision for the consumption of prison-made articles by the State itself: California, Idaho, Indiana, Missouri, New Jersey, North Dakota, Ohio, and Wyoming. The following six States established rules for the regulation of prices and for the standardization of commodities to be made by convict labor: California, Indiana, Missouri, New Jersey, Ohio, and Wyoming. The following six States provided that the prisoner shall receive some compensation for his labor: Florida, Kansas, Michigan, Nevada, Rhode Island, and Wyoming. These wages are of varying amounts. In Michigan a maximum of fifteen cents a day may be paid the prisoner; in Nevada a wage of twenty-five cents a day is allowed; in Rhode Island prisoners confined for inability to pay fines may be allowed fifty cents a day for such work for the first thirty days and one dollar for ensuing days; in the other States mentioned the wages are at the discretion of some board, but in Wyoming the aggregate wages paid to all prisoners cannot be more than 10 per cent. of the total earnings of the prison. The following five States provided that persons dependent on the prisoners might be given assistance: Colorado, Maine, Massachusetts, Missouri, and New Jersey. In Massachusetts and New Jersey such compensation is contingent on the existence of poverty, the contribution amounting to fifty cents per day that the prisoner works. Florida, in which State a number of charges of peonage have arisen in recent years, endeavored to obviate such conditions in the future by providing that prisoners may work off their fines during imprisonment. Montana, Oregon, and California required the branding of prison-made goods. New Jersey organized a prison labor commission to regulate the manufacture of articles by convicts so as to proportion their production to the amount consumable by the preferred market afforded by the institutions of the State and its subdivisions. The New Jersey law also required a uniform system of accounting and the standardization of commodities and the fixing of a fair price.

THE NATIONAL COMMITTEE ON PRISON LABOR had its origin in the discovery that prison-made goods to the value of \$10,000,000 were being annually shipped into New York City from other States. This raised questions as to the legality of such sales and as to the conditions under which such goods were made. Through the suggestion of Commissioner Williams of the New York State Labor Department a broadly representative committee was appointed. It began the collection of information from the entire country by means of questionnaires and agents and the coöperation of prison contractors and labor unions. The ultimate aim of the committee is to bring about such a condition in prison industry that these shall be carried on under standard conditions with a view to the education and increased efficiency of the prisoner. While the market should be protected from the unfair competition of prison-made goods, the State should not aim to profit by the labor of its prisoners. The committee thus took the position that whatever return over and above costs, including interest on investments, was secured from the sales of such goods should be credited to the prisoners.

NEW YORK PRISONS. Owing to evidence of

inefficiency and even corruption in the management of the State prisons demand arose early in the year for an investigation. The prison commissioner, Cornelius V. Collins, was asked by Governor Dix to resign, but he refused until an investigation was actually started. He then resigned with alacrity and was succeeded by Col. Joseph F. Scott, who had been superintendent of the Elmira and Napanoch reformatories. The governor appointed a commission consisting of M. C. Osborn, D. E. Van Kennan, and John D. McMahon to investigate the State Department of Prisons. They declared in their final report that the prison industries showed "a riot of mismanagement, waste, and wrongdoing," and recommended that their report be submitted to the attorney-general as a basis for prosecution. They found the discipline to be "incredibly lax." This they declared to be the cause of "ineffective operation of shops," "demoralization of the prison population," and "many murderous assaults and revolting crimes." Guard signals in prisons were found to be very generally out of order. "Of a possible market to the State and municipal departments of not less than \$20,000,000 per annum, the prison industries with the free labor of 4400 men and no overhead charges except supervision have supplied less than \$1,000,000 per annum. With an ample field for labor, prison industry has paid only 15.5 per cent. of the cost of prisoners' maintenance." The committee declared that failure to fill orders kept one-third of the men in idleness. They found that wrongdoing had gone hand in hand with waste and mismanagement. Supplies and materials had been handled with criminal carelessness. Prison labor and materials had been used for private purposes by the superintendent of industries at Sing Sing, who moreover was absent one-third of the time, in addition to vacations, and who included a trip to Europe among his traveling expenses.

CANADA. Governor Wilson of New Jersey commissioned Dr. John Handley to visit Canadian prisons and report on their methods and structure. He reported that the Canadian prison system was far in advance of that in the United States. He found that each prison has a large farm attached to it on which at least one-half of the prisoners are regularly employed. He noted the absence of prison walls and the relatively few guards maintained. At the same time investigation showed that escapes were very few. He found that the Canadian idea is that a state prison should be a custodial school, to which a young man or boy may be committed without special disgrace.

GREAT BRITAIN. Following the enactment of the Prevention of Crimes act, Home Secretary Churchill in February set forth certain rules for the administration of that portion of the criminal code. This law made it possible to pass sentences of preventive detention against persons deemed vicious or otherwise likely to commit social nuisances. The secretary stated that the act was not designed to increase the severity of punishment. Under the new rules persons undergoing preventive detention were to be grouped in three grades: Ordinary, special, and disciplinary. After every six months passed in the ordinary grade with exemplary conduct, zeal, and industry, the prisoner will receive a certificate, four of which entitle him to be advanced to the special grade. He will

also get a good conduct stripe with each certificate, carrying privileges or a small money payment. The disciplinary grade is for those punished for misconduct or bad influence. All prisoners under this act will be employed at useful labor in trades or agriculture, or in the prison service. Those of the ordinary and special grades may earn by such labor, and earnings may be used to buy additional food or be sent to families. Rules also allow those showing merit to associate more or less, depending on the grade; a certain freedom for evening association is given to those of the special grade. The rules also prescribe that special religious work shall be carried on. Secretary Churchill also proposed the amelioration of the treatment of prisoners committed for offenses not involving moral turpitude; the reduction of the period of separate confinement of persons sentenced to penal servitude; and the organization of a system of lectures and musical entertainments for these last named prisoners.

Among the other activities of the home secretary relating to the criminal class was an investigation and the trial of experimental methods with reference to the treatment of juvenile offenders. He also accorded recognition to various societies endeavoring to find work for and improve the position of convicts, and brought these societies together into a general council for more effective and economical work. He also appointed a commission to make a general inquiry into the constitution, management, discipline, and educational methods of reformatory and industrial schools in England and Wales.

STATISTICS. The report of the commissioners of prisons and directors of convict prisons for the year ending March 31, 1911, showed a large decrease in the number of persons received in local and convict prisons in both England and Wales. Including persons in prison on civil process the total number of prisoners under sentence during the year was 396,395, a decrease of 13,870 as compared with the previous year. The number convicted on indictments was 167,695, or 464.8 per 100,000 of the population, this being the lowest ratio in thirty years, except in 1900-01. The number of offenders under twenty-one convicted of offenses against property fell 7 per cent. between 1898 and 1911. The number between sixteen and twenty-one years of age committed has fallen 46 per cent. in the last seventeen years. Selecting Stafford Gaol for examination the report stated that one out of every three received for the first time returns a second time; one out of every four becomes an habitual petty offender; but two out of every three find one term a sufficient deterrent to keep them out of prison in the future. The convict class seems to be on the increase partly owing to the improved means of identification and the greater chance of receiving sentence. A large per cent. of the prisoners are feeble-minded or at least below the normal, and accident often determines whether a person is committed to the workhouse, the asylum, or the prison.

PERSIA. A constitutional monarchy in western Asia. Capital, Teheran.

AREA, POPULATION, ETC. Estimated area, 628,000 sq. miles. Population, about 9,500,000; of whom a quarter of a million are Arabs, three-quarters of a million Turks, more than half a million Kurds, and the remainder Persians properly so-called, with various Mongolian admixtures. Less than 1500 Europeans reside in the country. Teheran has about 280,000 inhabitants; Tabriz, 200,000; Meshed, 130,000; Isfahan, 70,000; Kerman, 60,000; Yezd, 45,000.

The children of the higher classes are taught religion and Persian and Arabian literature in Persian colleges; private tutors are employed by the wealthy, and European institutions are maintained by private subscription. Instruction in the Koran is considered sufficient for the people. Nearly 90 per cent. of the population (including the shah) are Mohammedans of the Sh'ah sect; 800,000 belong to the Sunnî sect. The rest are Armenians, Jews, Nestorians, and Parsis.

PRODUCTION. About one-third only of the total area is cultivable; the remainder is desert. Wheat, barley, rice, fruits, silk, wool, cotton, gums, tobacco, and opium are produced in great quantities, and the mineral wealth is incalculable; but trade in these commodities and proper development of resources is hampered by lack of adequate means of transportation and communication. Hand-made carpets are produced. A British company works oil-fields in the south.

COMMERCE. In the table below is given the trade for four years in thousands of krâns (the krân being equal in 1906-7 to about 8.11 cents; in 1907-8, to 9.73; in 1908-9, to 9.05; in 1909-10, to 8.8; and to 8.85 cents in January, 1911).

	1906-7	1907-8	1908-9	1909-10
Imports . . .	431,040	408,434	372,484	442,428
Exports . . .	353,377	317,081	326,207	371,526

The principal articles of special trade in 1909-10 were (in thousands of krâns): Imports: Cotton, 124,170; sugar, 107,267; tea, 27,603; yarn, 10,434; petroleum, 8016. Exports: Raw cotton, 70,015; fruits, 53,200; carpets, 48,441; rice, 24,215; fish, 17,913. Russia sent imports and received exports valued at 226,581,000 and 262,523,000 krâns respectively; Great Britain, 153,327,000 and 31,572,000; Turkey, 16,989,000 and 41,804,000.

Tonnage entered at Bushire, Lingah, Bender

Abbas, and Mohammerah (1909-10), 1,410,891 (British, 1,154,222); at Caspian ports, 718,765 (all Russian). Merchant marine (1909): 1 sailing vessel, of 107 tons (net).

COMMUNICATIONS. Persia's relatively small commerce is largely due to the fact that good roads and railways are few, and transport to points of distribution is slow, difficult, and uncertain. Bands of robbers infest the caravan routes, and for years Great Britain has threatened to interfere unless the trade routes in the south (the British sphere of influence) were properly policed and life and property secured against brigands.

In October, 1910, a British note informed the Persian government that unless order was restored on the southern roads within three months Great Britain would organize a body of local police and pay them out of a surcharge on the Persian Gulf customs. Conditions were so bad that the roads were practically closed. The British course in this matter was approved by Russia, but aroused suspicion in Germany, where the press saw in it an attempt to bring about the partition of Persia. Throughout the Moslem world there was great anxiety as to a British invasion. At the end of October, 1910, a British gunboat landed bluejackets at Lingah on the Persian Gulf. Notes between the two governments followed and the British government, while insisting on the necessity of restoring order in the region, disclaimed any intention of encroaching upon Persian sovereignty. Early in 1911 conditions improved. See below, *History*.

A light railway (Belgian) runs south from Teheran (about six miles). The telegraph system (mainly under the management of India) includes 6312 miles of line, 10,754 of wires; and 131 stations. Post offices reported, 160. There is a Persian minister of posts and telegraphs, who is a member of the cabinet.

FINANCE. The monetary unit is the krân, which fluctuates in value (January, 1911, 8.85 cents). Official statistics for revenue and expenditure are wanting. About half the revenue is from taxes levied in cash or kind upon laboring classes. The remainder accrues from customs, posts, telegraphs, fisheries, mines, and other concessions—in 1907-8 about 80,000,000 krâns. Customs receipts 1909-10, 36,251,000 krâns (1908-9, 32,121,000; 1907-8, 35,885,000). The expenditure regularly exceeds the income, and the burden of indebtedness toward Russia and Great Britain has long been so great as to threaten to crush Persia's independence. Upon the appeal of the Mejliss to the United States government in March, 1911, W. Morgan Shuster was appointed treasurer-general to reorganize the finances, in the face of open opposition from the Russian government, which compassed his removal in December of the same year. Besides a British loan in 1911 of £1,250,000 at 5 per cent., and British, Russian, and French indemnity claims, the debt amounts to \$5,470,000 (£3,300,000 to the Russian government, £1,160,000 to the Bank of Russia, £320,000 to the British government, £690,000 to the Bank of England).

ARMY. The reorganization and reform of the army which had been in progress since 1905 was seriously interfered with by internal political disturbances in Persia. The theoretical plan adopted by imperial decree in 1905 involved a more or less formal organization of 12 divisions,

each composed of infantry, artillery, and cavalry, so that a peace strength of 115,000 men, exclusive of the irregular cavalry obtained by tribal levies, would be maintained. That there is no permanence to this force will be obvious from the record of internal troubles given below in the section devoted to *History*.

NAVY. One screw steamer of 600 tons, and some small vessels of little use in war compose the navy.

GOVERNMENT. The reigning monarch is Ahmed Shah Kajar; regent, Abou'l Kassim Khan Nasr-el-Mulk.

HISTORY

INTERNAL POLITICS. Nasr-el-Mulk, who had been elected regent in September, 1910, declared in the middle of February that owing to the prevailing group system constitutional government was impossible, and he demanded the assurance of a stable majority before taking his oath of office. The Mejliss gave him a unanimous vote of confidence.

In a significant address on taking his oath of office on March 4, he pointed to the necessity of developing an efficient government under the constitution. He declared that he would on no account transgress his limited functions as regent, although he was requested from innumerable sources to undertake work which did not properly pertain to him. He said, however, that unless effective action were taken by the authorities he would not sit idly at his post. The cabinet resigned and a new ministry was announced as follows: Premier and Minister of War, the Sipahdar; Minister of Public Works and Education, Ala-es-Sultaneh; Minister of the Interior, Mushteshar-ed-Dowleh; Minister of Finance, Mumtaz-ed-Dowleh; Minister of Posts and Telegraphs, Muavvin-ed-Dowleh; Minister of Foreign Affairs, Moteshem-es-Sultaneh, who already held that office. The Mejliss passed the British loan on May 1. Dissensions soon arose in the cabinet concerning its expenditure. The minister of the interior resigned and was succeeded by Sardar Assad. Political conditions throughout the country were disturbed. Several assassinations, attributed to political motives, were reported, including that of the governor of Ispahan and his nephew on February 1, and of Sani-ed-Dowleh, minister of finance on February 7.

RELATIONS WITH FOREIGN POWERS. The British warning of October, 1910, that unless order were restored on the trade routes in southern Persia within three months Great Britain would take measures to police them, was followed by another note in January, 1911, saying that British officers would be employed for this purpose if necessary. At the expiration of the three months conditions had so far improved as to make this intervention unnecessary at present and on February 6 the British government announced its intention to await further developments. In October, however, tribal disputes caused renewed disorder in the region and the British government dispatched a body of troops from the Indian forces to reinforce the consular escorts. Tribesmen attacked a consular officer and his escort in December. (See concluding paragraph.) In April the Russians withdrew their troops from Kazvin whither they had been sent two years before. The Turco-Persian Boundary Conference agreed to submit to a

Hague conference any points on which it could not agree.

THE EX-SHAH'S INVASION. On July 18 great alarm was caused by the news that the ex-shah had landed on the Persian coast. On the overthrow of Mohammed Ali in the summer of 1909, he and his supporter, Arshad-ed-Dowleh took refuge at the Russian legation. From the first the ex-shah resolved to raise the flag again in Persia. He went to Odessa and later to Vienna, where the Russian minister from Belgrade, on being asked to aid him, replied that Russia, owing to her agreement with England, could not intervene in any way in the internal affairs of Persia. He gathered, however, from the minister that nothing would be done to check him. Upon the request of the royalists for a loan of money, the Russian minister declared it to be impossible, but money was raised on the queen's jewels, and this, together with Mohammed Ali's pension, sufficed for the purchase of a small amount of ammunition and some guns which were brought through the Russian customs labeled "mineral water" and not opened. It was planned that the ex-shah's brother, Salar-ed-Dowleh, should enter the country from the Turkish side. Mohammed Ali, and his faithful retainer, Arshad-ed-Dowleh, succeeded in reaching the country in an oil-boat which they took at Petrovsk, Mahammed Ali having a Persian passport under the name of Khalil. They recruited their forces from among the Turcomans, with whom, according to report, he had been intriguing constantly since 1909, despite Russia's express agreement to prevent it. On the news of his arrival the Mejliss placed a price of 100,000 tomans on his head, and toward the end of July a force was sent against him. A government victory was reported in August, inflicting a loss of 300 men on the ex-shah's forces. By September 4 Arshad, in command of a Turcoman force, had come within forty miles of Teheran and taken a strong position near Imanzadeh Jaffar. He was there surprised by Yeprem Khan with a force of about 650, mainly consisting of Bakhtiari, and after a two hours' fight was completely defeated. He was captured with 250 men and a number of guns. On the morning of September 6, after a conversation with his captors, Arshad was executed, displaying marked heroism to the end.

The government troops were equally successful against Salar-ed-Dowleh at Baghishah on September 27, inflicting a loss of 200 killed and 400 wounded, and capturing a number of guns. Within a few days the insurgent forces of this division were completely dispersed. There were reports of some Turcoman successes, but on November 17 Salar-ed-Dowleh was defeated about 65 miles south of Hamadan by one of the Bakhtiari chiefs with a loss estimated at 500.

AMERICAN FINANCIAL ADVISERS. A plan for the reorganization of the financial administration under American supervision having been approved, the Persian minister conferred with the State Department at Washington in January, asking for the appointment of American financial experts, including a treasurer-general and a director of taxation. At the recommendation of President Taft Mr. W. Morgan Shuster, formerly of the Philippine service, was appointed treasurer-general. With him were associated Mr. F. S. Cairns of the Philippine customs service, as director of taxation, Mr. Charles I. McCaskey of the New York customs house as inspector of

provincial revenues, and Mr. Bruce C. Dickey, formerly of the Manila custom house, as inspector of taxation. It was understood that the Russian government would raise no objection. The powers accorded to the new treasury-general were very extensive, giving him full control in every financial measure, including the right to supervise the expenditure of the new loan, according to the supply vote of the Mejliss, on his own responsibility and without the mixed commission. One of his earliest acts was to propose the organization of a gendarmerie to enforce the collection of the revenue. Early in his administration he encountered a difficulty in carrying out his plans through the attitude of the Russian officials. A difference arose owing to the latter's demand that certain Russian charges should be paid through the customs department instead of through the treasurer-general, but this was soon settled. There was more serious friction over Mr. Shuster's appointments, the Russian authorities objecting to his choice of British subjects for certain offices. The chief instance was Mr. Shuster's selection of Major Stokes of the British army, who had been serving as military adviser, for the post of organizer of the new revenue gendarmerie. Russia objected to the appointment as violating the Anglo-Russian agreement of 1907, in that a British officer would be charged with executive duties in northern Persia, the Russian sphere of influence, and the British government supported this objection, and withdrew its consent to the appointment. Mr. Shuster issued a vigorous public statement protesting against the action of both the British and the Russian governments in the matter.

THE SHUSTER AFFAIR: THE RUSSIAN DEMANDS. In the latter months of the year the energetic measures taken by the young American treasurer-general to enforce the law led to a serious break with Russia. The great landlords who sought to evade the payment of taxes and the corrupt members of the upper and official classes were compelled to obey the law and pay what was due the government. The treasury gendarmes seized the property of Prince Firman Firma and threatened that of the Sipahdar for arrears of taxes. The Mejliss showed its intention to stand by Mr. Shuster in his determination to secure an honest administration. The Russian government, however, pronounced his measures too drastic. It, moreover, objected to Mr. Shuster's appointment of British subjects to administrative positions, as in the case of Major Stokes, above mentioned, and of another official who was appointed treasury inspector at Tabriz, in the autumn, and in both these instances the British foreign office supported the Russian objection to the appointments. In reply Mr. Shuster accused Russia of hostility to his plans for reform and blamed the British government for its acquiescence in the Russian aggressions. Finally matters came to a crisis when the treasury gendarmes seized the property of Shuaes-Sultaneh, which had been confiscated on account of his participation in the attempt of his brother, the ex-shah, to regain the throne. Early in November Russia sent a protest, alleging that the gendarmes had insulted two Russian consular officers and demanding an apology and the removal of the gendarmes, who should leave the property in the hands of Cossacks till the matter was adjusted by the Russian bank. The Persian government was unwilling to tender an apology,

but offered to make a complete investigation, whereupon on November 16 Russia decided to occupy Kasvin.

Meanwhile, Mr. Shuster, in a long communication to the *London Times*, had set forth his views of the situation. He said the only way of reforming the Persian finances was to restore order and maintain a central government strong enough to enforce its decrees. If foreign governments continued to checkmate on one pretext or another all efforts at reform and to ruin the Persian government's prestige, while keeping the country in a state of financial collapse, financial regeneration would be impossible. He complained of "flagrant bullying by outsiders, varied by 'finger-on-the-nose' diplomacy," of the difficulties thrown by foreign governments in the way of raising money, of the requirement that the railways, if built, must be coterminous with Russian and British spheres of influence, and of the demand that "if officers of experience are to be taken into the Persian service they must come from a minor power, or prove themselves to have been of the spineless, nerveless type of which the tools of foreign interests are produced." His attitude was highly commended by the press, especially in the United States. In official and semi-official British quarters it was generally assumed that Mr. Shuster had gone too far and had not recognized the actual situation as it concerned the relations of Great Britain and Russia. As to Russia's course in sending an ultimatum in this matter, Sir Edward Grey, when asked in the House of Commons on November 14 whether it was not in violation of the Anglo-Russian agreement for the maintenance of Persian integrity and independence, said that it was not and declared that Great Britain had no direct concern in the question that had caused the trouble. As to Mr. Shuster's appointments, he said that the choice of British subjects for posts in northern Persia was against the spirit of the understanding with Russia and would provoke counter-measures on Russia's part. Neither British nor Russian subjects ought to be appointed on the respective Russian and Indian frontiers. The public generally sympathized with Mr. Shuster throughout the affair, and there was no little criticism of Sir Edward Grey even among the members of his own party for his conduct in regard to this and other important foreign questions.

THE RUSSIAN ULTIMATUM. On November 29 a Russian ultimatum was issued requiring the immediate dismissal of Mr. Shuster, the consent to Persia to follow the advice of Russia and Great Britain in choosing foreign advisers, and an indemnity for the expenses of the Russian troops in Persia. There was at first a feeling in certain quarters in the United States that the government ought to intervene on behalf of Mr. Shuster, but as it became evident that his personal safety was not in question, such action was not taken. In Great Britain, Sir Edward Grey, in an address on foreign policy to the House of Commons on December 14, declared that while Mr. Shuster's intentions in making his appointments were good, the result of that policy would be to Auglicize the Persian service, and he said that he agreed with Russia's demand that Persia should obtain the formal consent of the British and Russian legations to the appointment of foreign advisers, and that Mr. Shuster should immediately be replaced by a financial adviser acceptable to both Great

Britain and Russia. He said that he had heard from St. Petersburg that the Russian force would not advance from Kasvin except in very extraordinary circumstances. In regard to the alleged designs of Russia for the restoration of the ex-shah, the foreign secretary said that Russia had given a categorical assurance that she had no intention of that kind and had declared that that she would not recognize the ex-shah's government if he were restored. The British government was criticised by a member of the Liberal party for its course in regard to Mr. Shuster, whose exact crime, he said, was merely that he did not call at the Russian legation as often as he ought to have done.

On December 1 the Mejliss passed resolutions to the effect that whatever might result to Persia by a foreign power's recourse to *force majeure* the independence of the country must not be voted away. Thereupon the foreign minister, who urged immediate assent to the Russian demand, resigned. The answer to the Russian ultimatum was a refusal to dismiss Mr. Shuster. Russian troops thereupon began their advance from Resht. Up to the last moment the British government urged the Persian government to yield to the Russian requirements. There were public demonstrations of hostility against Great Britain, who was accused of having acted in bad faith and against the cause of Persian integrity and independence. In regard to the charge of Sir Edward Grey that Mr. Shuster had tried to Anglicize the Persian service, the latter said he had chosen his officials simply on account of their abilities and their knowledge of the Persian language. He had found several Englishmen with the necessary qualifications, and two Belgians, but no Russians. But he had since dismissed his British officials, with the exception of one who was under contract. Major Stokes had been released from his engagement, though it had been made under conditions formulated by the British government. He further said he had never appointed any officers to whom Russia objected. Major Stokes's contract was never signed owing to Russia's objections. The Tabriz treasury inspector, Mr. Lecoffre, was not a new appointment. He had already been two years in the Persian service and in the so-called Russian sphere, and was merely transferred to another post.

PERSIA'S SURRENDER. On December 24, the regent, announcing that the Mejliss hampered the action of both the external and internal administration of the country, pronounced the session at end. A coup d'état was executed that afternoon by a number of irregular troops supporting the cabinet, and the deputies were forcibly driven out and dispersed. The cabinet took the affair with Russia into its own hands and decided to accept the Russian demands and to order the dismissal of Mr. Shuster. A conciliatory reply was dispatched to Russia saying that the Persian government regretted what had occurred and would henceforth appoint no advisers without an exchange of views with the Russian and British legations. The Russian advance, however, continued and despite the Persian submission the Russians took summary vengeance on the natives who had attacked their troops. There were reports of severe fighting at Tabriz where it was said that the Russians had killed 500 persons, and were butchering women and children. The Russians denied the charges of inhumanity as calumnies, and retorted that the

Persian tribesmen were committing atrocities. On December 26 an attack on a British force was reported in the south. The British consul, W. A. Smart, with his escort of Indian troops, was attacked near Kazerun by about 700 Kashgai tribesmen, while on his way to Shiraz, and he himself slightly wounded. Prompt apologies were tendered to the British representatives and exemplary punishment of the offenders was promised. Meanwhile, Mr. Shuster had been notified of his dismissal, but delayed until he could arrange for the appointment of his successor. He named his principal American assistant, F. S. Cairns, to hold office in the interval, but the government refused to recognize him.

PERSIMMONS. See HORTICULTURE.

PERU. A South American republic, on the Pacific coast between Ecuador and Chile. The capital is Lima.

AREA AND POPULATION. Neither the territorial extent nor the number of inhabitants has been accurately determined. The boundaries with Bolivia were fixed in 1909 and with Brazil in 1910, but there remain boundary disputes with Ecuador and Colombia. At present the most plausible estimate of the country's area seems to be about 679,000 sq. miles. The population has been estimated at 4,500,000, but this figure is doubtless excessive; there appears to be some doubt as to whether the population is increasing. About one-half of the population is Indian, and most of the remainder mestizo. The larger cities are: Lima (140,884); Callao, 34,436; Arequipa, 35,000; Cuzco, 30,000; Ayacucho, 20,000; Iquitos, 20,000.

Primary instruction is free and nominally compulsory. Recent educational statistics are not available; at the beginning of 1909 there were 2339 public primary schools, with 3105 teachers and 162,298 pupils. Some provisions are made for higher instruction. Recently, it is reported, considerable attention has been given to educational development; in 1910 the old University of San Marcos (founded 1551) at Lima was enlarged and the university at Cuzco, for a time inactive, was reopened. The State religion is Roman Catholicism; the public exercise of other religious forms is unlawful.

INDUSTRIES, COMMERCE, ETC. Peru is distinctively a mining country. The most important metals worked are copper and silver; but many minerals occur, and to some extent are exploited, including petroleum, coal, gold, and lead. Leading crops are sugar-cane, cotton, rice, and coffee. Other products are rubber, coca, and cacao. The raising of sheep, alpacas, and llamas is of increasing importance.

Imports and exports (except those of the department of Loreto) are reported as follows, in thousands of soles:

	1904	1907	1908	1909	1910
Imports	42,980	55,198	52,956	43,565	46,313
Exports	40,666	57,445	53,757	61,334	64,083

The leading imports are cotton and woolen textiles, and machinery and metal wares. The leading exports for 1908 and 1909 respectively were valued as follows, in thousands of soles: Minerals and metals, 16,380 and 16,010; cotton, 7980 and 12,460; sugar, 10,480 and 11,600; rubber, etc., 6090 and 11,370; rice, 5990 (in 1909); wool, 2970 and 3940. The trade is largely with Great Britain and the United States, with Ger-

many ranking third. In 1909 there entered, in the foreign trade, at the port of Callao 649 vessels, of 1,299,439 tons.

At the end of 1910 the reported length of railways in operation was 2665 kilometers (1656 miles), of which 2040 kilometers (1268 miles) were standard and 625 kilometers (328 miles) narrow gauge. About 1800 kilometers are operated by the Peruvian Corporation, Ltd. This corporation also owns and operates a line of steamers on Lake Titicaca, by which, together with the Guaqui-La Paz railway in Bolivia (purchased by the corporation in 1910), direct communication is maintained between La Paz and the corporation's line which reaches the coast at Mollendo. Important contracts were let during the spring of 1911 for the construction of the Repartición-Alpas extension of the Supe-Barranca line, while three new lines were opened, the Sicuani to Cuzco, the Oroyo to Huanuco, and the Yonan to Chilata. The president of Peru approved the law passed by the Peruvian Congress relating to the construction of railway branches from Trujillo to the mining camps at Salpo and Quiruvilca. This line was of especial importance, as it would open up for rapid development a large area of rich coal deposits. The branch line of the Oroyo-Taena Railway to Puerto Wertheman was also approved. Telegraphs (1910), 11,381 kilometers of line, with 254 offices; post offices, 664.

FINANCE. The monetary standard is gold. The Peruvian libra is equivalent to the English sovereign (\$4.8665) and is divided into ten soles. In 1910 the revenue amounted to 27,987,750 soles, and the expenditure 26,853,220 soles. The principal receipts were: Customs, 12,435,720 soles; taxes, 10,507,450; monopolies, 990,320; posts and telegraphs, 1,214,030. The larger items of ordinary expenditure: War and marine, 5,438,310; administration, 5,134,720; finance and commerce, 4,126,490; justice and public instruction, 3,745,210; public works 1,147,370; legislative, 873,380. The budget for 1911 balanced at 27,845,130 soles. The present foreign debt, contracted in 1909, amounts to £1,680,000. The interior debt, in July, 1911, stood at £2,660,645 with interest and £1,142,585 without interest.

ARMY. The reorganization of the army of the Republic of Peru was being carried on under the direction of Colonel Clément and other French officers. Service is compulsory, and the annual contingent of recruits is fixed by the ministry of war to meet existing conditions, both military and economic. The organization in 1911 on a peace basis consisted of 6 battalions of infantry, comprising about 160 officers and 2300 men, 6 squadrons of cavalry with 72 officers and 750 men, 3 batteries of field artillery armed with Schneider guns, 4 mountain batteries with 36 Krupp guns, having a strength of 50 officers and 800 men, and an independent section, and a mixed battalion of foot artillery. There were also a cadet troop and garrisons at Loreto and at Madre de Dios. From this army it was estimated that 24,000 men could be mobilized, and, in addition, there were reserves, and a territorial force with but little military training and discipline.

GOVERNMENT. The executive authority is vested in a president, who is elected by direct vote for four years and may not be reelected for a second consecutive term. The legislative power devolves upon a congress of two houses,

the Senate (52 members) and the House of Representatives (116 members), both senators and representatives being elected by direct vote for six years. The president in 1911 was Augusto B. Leguia, who was inaugurated September 24, 1908; first vice-president, Eugenio Larrabure y Unanue; second vice-president, Belisario Sosa.

HISTORY. In January, 1911, it was announced that the rebels in the south had been dispersed and that the government believed that order throughout the republic had been restored. Bolivian and Peruvian representatives signed a protocol for the settlement of all difficulties between the two governments, and it was understood that any differences of opinion should be referred to the Hague Court of Arbitration. It was reported early in August that a battle had taken place between the Peruvian and Colombian troops at Caqueta, news of the agreement between the two countries not having arrived in time to avert the conflict. The frontier dispute with Ecuador remained unsettled on account of the latter's refusing to refer it to the Hague Tribunal in accordance with the advice of the United States, Brazil, and Argentina. A new cabinet under the presidency of Señor Austin Ganoza took office on August 30.

PETROLEUM. The petroleum industry of the United States has been characterized for the four years from 1906 to 1910 inclusive by a phenomenal increase. In 1907 the output reached 166,000,000 barrels, in 1908, 178,000,000 barrels, in 1909, 183,170,874 barrels, and in 1910, 209,556,048 barrels, a gain of 14.4 per cent. over the production of 1909. This brings the total output since the beginning of the industry in the United States to more than 2,000,000,000 barrels. That the output is in excess of the normal demand is shown by the fact that 209,000,000 barrels in 1910 brought a smaller total value (\$127,896,328) than 183,000,000 barrels in 1909 (\$128,328,487). As the production has gone up, the average price per barrel has gone down from more than \$1 per barrel in 1900 to 61 cents in 1910.

The cause of this great increase in production has been the successive development of four great fields to the west of the old production centres. In rapid succession came the development of the Gulf field in Texas and Louisiana, the Mid-Continent field in Kansas and Oklahoma, and the Illinois field. In the meantime, the production in California had increased so rapidly that in 1909-10 it was the dominant centre of interest in the industry, outstripping the production of any other State. The total quantity, in barrels, and value of petroleum produced in the United States in 1909-10, with the average price per barrel, are shown in the table on next page:

For the first time in many years there was no change from the previous year in the rank of the principal oil-producing States.

The increase of the use of fuel oil by railroads has come in recent years to be an important development. During the year 1910 the quantity of fuel oil consumed amounted to 24,586,103

State	1909			1910		
	Barrels	Value	Per bar.	Barrels	Value	Per bar.
California	55,471,601	\$30,756,713	\$0.544	73,010,560	\$35,749,473	\$0.490
Colorado	310,861	318,162	1,023	239,974	243,402	1,016

barrels, as compared with 19,939,394 barrels in 1909. The average number of miles operated per barrel of oil consumed was 3.74. The increasing use of fuel oil is due to many causes. It has been demonstrated by tests made on some of the railroads accessible to the oil fields and refineries of the West, where fuel oil can be purchased cheaply, that the cost of operating with oil is less and its use equally efficient as with coal, especially in those localities where the price of coal for one reason or another is high. Another reason for the use of oil is the prevention or the elimination of forest fires. Oil is also much safer and cleaner for travelers, as there is no smoke or cinders. Experiments have been carried on with great success as to the use of fuel oil in the United States navy. In the construction of new vessels fuel oil is now more and more extensively used. Several torpedo-boat destroyers burn oil exclusively, and the eight must recent battleships constructed burn oil as auxiliary to coal. The battleships authorized by the Sixty-first Congress will burn oil only. Six steel tanks for fuel oil for the use of the navy will be erected, one each at Bradford, R. I., Norfolk, Va., Charleston, S. C., Key West, Fla., Guantanamo, Cuba, and San Juan, Porto Rico.

FOREIGN COUNTRIES. In Canada there were produced in 1910 315,895 barrels of petroleum, valued at \$388,540. In Mexico the production in 1910 was 3,313,807 barrels. Peru produced petroleum to the amount of 1,330,105 barrels.

The production of petroleum in Russia is second to that of the United States. In 1910 the output from all fields was 70,336,574 barrels, as compared with 65,970,350 barrels in 1909. This was due to the increase in the Grosny field. The Baku district remained almost stationary, contributing, however, the greater part of the production. The production of petroleum in Austria-Hungary amounted in 1910 to 12,673,688

barrels, a decrease of about 2,000,000 barrels from the output of 1909. The production of the oil fields in Rumania was 9,722,957 barrels, as compared with 14,932,799 barrels in 1909. Petroleum in smaller quantities is produced also in Germany, Great Britain, Italy, British India, Japan, and the Dutch East Indies. The world production of petroleum from 1906 to 1910 is shown by countries in the table at the foot of this page (in barrels of 42 gallons), together with (1910) production in metric tons and percentage of total production.

The production of petroleum in 1911, according to the preliminary estimates of the United States Geological Survey, slightly exceeded that of 1910. The total production was in round numbers, 217,000,000 barrels, as compared with 209,556,048 barrels in 1910. Of the total in 1911, 81,000,000 barrels came from the California fields, 56,000,000 barrels from the Kansas and Oklahoma fields, 38,000,000 barrels from miscellaneous fields, 28,000,000 barrels from the Appalachian field, 10,000,000 barrels from Louisiana, and 9,000,000 barrels from Texas. The most striking feature of the year in the industry was the development of the Electra oil field in northern Texas.

During the year the use of oil in place of coal continued to increase. Oil as a fuel was experimented upon in many industrial establishments with success. The exports of oil increased from about 165,000,000 gallons for the first eleven months of 1910 to 183,000,000 gallons for the corresponding period of 1911. There were large importations of crude oil, especially from Mexico, which was imported into Texas and Louisiana ports. This was the result of placing crude oil and certain products on the free list. In 1911 gasoline was for the first time imported into the United States, 7,639,125 gallons being brought from the Dutch

a Estimated.

East Indies. The importation of other oils, chiefly crude oil from Mexico, amounted to 3,831,295 gallons for the first eleven months of the year.

PETROPAVLOSK. See BATTLESHIPS.

PHARMACY SCHOOLS. See UNIVERSITIES AND COLLEGES.

PHILADELPHIA. See BUILDING, ARCHITECTURE, AND PENNSYLVANIA.

PHILADELPHIA ACADEMY. See ART.

PHILIPPINE ISLANDS. POPULATION. The latest available figures for population of the Philippine Islands is for 1903, when the total population was 7,635,426, of whom 647,740 were wild peoples. The average density of population was 67 per square mile.

AGRICULTURE. The agricultural development of the islands had been prevented by epidemics among cattle, destructive hurricanes, and other causes. An attempt was made by the United States government to alleviate financial difficulties by the establishment of an agricultural bank in 1908. This, however, has not met with the success that was anticipated on account of the difficulty of providing capital. The principal agricultural products of the islands are sugarcane, rice, hemp, and tobacco. Coconut oil is also made in considerable quantities. Coffee was formerly produced, but efforts to raise it have been abandoned, and hemp has been substituted as more profitable. In general, the value of the agricultural products of the islands is shown in the paragraph on *Commerce*.

COMMERCE. The total exports for the fiscal year 1911 were \$39,778,629, as compared with \$39,864,169 in 1910. The total imports for the year amounted to \$49,833,722, compared with \$37,067,630 in 1910. The imports included government supplies, and railroad supplies. Cotton and manufactures were imported to the value of \$10,395,480, and constituted 20 per cent. of all imports. The United States led in the value of imports, and was followed by Great Britain. Imports of iron and steel manufactures amounted to \$5,887,185, of which the greater portion came from the United States. In the exports of the year manila hemp retained its foremost place, but declined both in actual value and relative importance in the face of substantial gains made by copper and sugar, each of which established new high record values in 1911. The cigar trade suffered a heavy decline from the abnormal figures created by the first year of the free access to the American market. Exports of hemp amounted to 163,033 long tons, valued at \$16,141,340; copper exports were 113,775 long tons, valued at \$9,899,457. The sugar exports were 147,016 long tons, compared with 125,699 long tons in 1910. The value was \$8,014,360, or about \$1,000,000 more than in 1910. The export of cigars in 1911 was 22,974,000, compared with 83,931,000 in 1910.

EDUCATION. The annual enrollment for the school year 1910-11 reached 610,493 (this figure does not include 5302 pupils enrolled in the schools on the Moro province, whose administration is independent of the Bureau of Education), as against 587,317 for the preceding year; the highest enrollment in any one month was 484,689, as against 451,938 for 1909-10; the average daily attendance was 395,537, an increase of 31,489 over that of the preceding year. The total number of schools in operation was 4404, and the total number of American and Filipino teachers on duty at the close

of the school year was 9086. Of the total annual enrollment of 610,493, 582,115 are in the primary classes, 24,974 in the intermediate classes, and only 3404 are enrolled in the secondary course. There were 38 secondary schools, 245 intermediate, and 4121 primary schools, making a total of 4404 schools. Of those enrolled, 298,200 were boys and 186,489 girls. Of these, there were in the primary schools 278,900 boys and 181,117 girls, a total of 460,026; in the intermediate, 16,778 boys, 4822 girls, a total of 21,700; in the secondary schools, 2513 boys and 450 girls, a total of 2963. The proportion of males to females is as 3 is to 2.

The total number of American teachers was 683; Filipino insular teachers numbered 1054; Filipino municipal teachers numbered 7190; apprentices, 159, making a total of 9086. The American and Filipino teachers receive salary from the insular government. The Filipino municipal teachers receive salary from the towns which employ them. Apprentice teachers are Filipinos serving without salary. Of the Filipino teachers, 148 men were engaged in district supervision; 8 men and 7 women were giving secondary instruction, and 273 men and 93 women were teaching in intermediate schools, while 429 men and 93 women were teaching in primary schools. The arts and trades, normal, domestic science, agricultural, and special insular schools are included in intermediate or secondary schools. The highest number of schools in operation at any time during the school year was 4606, in September, 1910. The schools in the non-Christian provinces of Agusan, Mountain, and Nueva Viscaya numbered 101, with 136 teachers. The total expenses for the year were P198,924.61. Total enrollment was 13,061. Average daily attendance was 8830. Number of non-Christian schools in provinces was 41, with 59 teachers, for which the total expenses was P23,608.16. Total enrollment, 2983, and average daily enrollment, 1974.

During the year 1911 the Philippine legislature voted the sum of 4,954,432 pesos for the bureau of education.

During the fiscal year the University of the Philippines was organized in its definite form and now includes the following colleges: College of Liberal Arts, College of Medicine and Surgery, College of Agriculture, College of Veterinary Science, College of Law, College of Engineering, and the School of Fine Arts. The total registration of students in the various departments in August, 1911, was 1220.

RAILROADS. The effect of the construction of railroads has been very beneficial. The Manila Railroad Company during the year has opened up its lines to the following points: Batangas, on the Manila-Batangas line; Mojon, on the Calamba-Santa Cruz line; Santa Cruz, on the Noveleta-Naic line; and Rosales, on the Paniqui Tayug line. The opening of these lines has had an almost magical effect in stimulating industry and fostering production; territory in which crops had not been harvested for years is now being cared for, and particularly in the provinces of Batangas, La Laguna, and Tayabas, the advent of the railroad seems to have made the difference between a backward and a progressive situation.

The total kilometerage of railway lines authorized by law is 1804.7, of which 923.5 kilometers have been constructed and are in operation, and 51.1 kilometers constructed and not in

operation, leaving 830.1 kilometers to be constructed.

The Manila Railroad Company. Progress in the northern (unguaranteed) and southern (guaranteed) lines of Luzon continued in the construction work along the approved routes and in surveying and locating new extensions and branches recently authorized.

The Dagupan and San Fernando extension is nearly completed and is in full commercial operation to Aringay.

The branch of the main line from Paniqui to Tayug was extended to Bued and Rosales, and there is but little more construction necessary to complete this line and put it in operation its entire length.

The line south from Manila to Cavité and Naic is complete to Calibuyo, within a very short distance of Naic, and construction is progressing well. The line is open to commercial operations to Cavite and in construction operation as far as built.

The Manila-Batangas line has been completed and is in full commercial operation. The extension from Batangas northwest to Bauan is in progress.

From the main line from Manila to Batangas a branch is being built from Calamba to Santa Cruz, Magdalena, and Pansanjan. This line is complete to Manual, nearly to Magdalena, and a considerable portion of this mileage is in operation. This line should be completed in the near future.

Another branch line from the Batangas road is to extend from Luta to Lucena. This line has been completed to Macampo, near San Pablo. A further extension of this line has been authorized from Lucena southeast to connect with the line in Camarines Sur and Albay, from Nueva Caceres to Lagonoy, Albay, Legaspi, and Tabaco. This connecting link has been surveyed its entire length, and a route recommended, with alternate routes for portions of the distance, but has not yet been definitely located and approved. It will be about 137 miles in length and connect with the line in the southern provinces about seven miles north of Nueva Caceres.

POSTS AND TELEGRAPHS. On June 30, 1911, 572 post offices were in operation, as compared with 556 at the beginning of the fiscal year. Free delivery letter carrier service has been established at 181 additional offices, making a total of 296 offices at which this service is now in operation. Money order service was established at 91 additional post offices during the year, making a total of 209 money order offices. There were on June 30, 1911, 3328.15 kilometers of insular telegraph lines, 25.75 kilometers of telephone lines, and 1842.076 kilometers of cables, and 2968.78 kilometers of provincial telephone lines. There were in the Philippine Islands, including government and private lines, 2974.696 kilometers of cable lines, 3950.55 kilometers of land telegraph lines, with 7787.252 kilometers of wires, 3655.23 kilometers of telephone lines, with 13,618.03 kilometers of wires. At the close of the fiscal year 1911 there were 414 postal savings bank offices in operation, a net increase during the year of 121. There were 28,804 accounts, as compared with 13,102 at the close of the year 1910, an increase of 15,702 accounts. The amount of deposits in the bank on June 30, 1911, was P2,099,474.49, as compared with P1,679,246.35 on June 30, 1910. Of the

28,804 depositors in these banks, 23,174 were Filipinos.

HEALTH. Health conditions in the archipelago during the past year were better than ever before. There have been practically no epidemic diseases, cholera having been confined to one case in Laguna province, 27 in Union province, and one case in Manila. Owing to the largely increased number of inhabitants who have been vaccinated, there have been very few cases of smallpox during the year and nearly all in an extremely mild form. The General Hospital was in successful operation and giving general satisfaction. The Southern Islands Hospital was nearly completed during the year and it is expected to bring to the southern islands the advantages which have so far been confined to those who are able to attend the Philippine General Hospital. The segregation of lepers has been so successfully prosecuted that the number collected each year is much reduced and the efforts of the bureau of health are now largely devoted to making the Culion leper colony more comfortable and beautiful.

In the matter of rinderpest, owing to the very active and cordial coöperation of Major-General Bell, the government has been able to maintain an effective quarantine and has practically succeeded in stamping the disease out of the great province of Pangasinan, after a campaign lasting many months and involving the use of a great many scouts. While progress can be noted in the control of rinderpest, and especially of getting record of cases whenever they appear, a great deal has yet to be done and the government is not in a position to reduce its forces or its expenses or to lessen its activities in this direction.

CONSTABULARY. The strength of the constabulary at the close of the fiscal year 1911 was 303 officers and 4167 men. The director, four of the assistant directors, and three inspectors are detailed from the United States army.

FINANCE. The total revenues for the fiscal year 1911 amounted to \$21,931,572. The expenditures were \$13,688,559. The chief revenues were from customs, from internal revenue, and from miscellaneous sources. The chief expenditures were for the maintenance of bureaus and offices, for aid to provinces, and for public works.

POLITICS AND GOVERNMENT

LEGISLATION. The first regular session of the second Philippine legislature convened on October 17, 1910, and continued in session until and including February 3, 1911. This was the only session of the legislature held during the fiscal year. During this session there originated in the Commission as a Chamber of the Philippine legislature 63 bills, of which 48 were passed by the commission and sent to the assembly. During the same period there were considered by the commission 98 bills which originated in the assembly. The total number of bills finally agreed upon by both houses and enacted into law was 50, of which 17 originated in the Commission and 33 in the Assembly. Of these the following are the more important: An act to provide for an exposition of Philippine products in the city of Manila; an act providing for an appropriation of one million pesos for the construction of schools in the municipalities and barrios of the Philippine Islands; an

act entitled "The Negotiable Instruments Law;" an act authorizing the granting of a franchise to construct, maintain, and operate a street railway in the municipality of Cebu; an act to provide that all elective provincial and municipal offices shall be for four years, to prohibit a second reelection to the same, to change the date of the general elections from the first Tuesday after the first Monday in November to the first Tuesday in June.

The legislature having failed to pass the appropriations for the current expenses of the government for the fiscal year 1912, section 7 of the act of Congress of July 1, 1902, became operative and the expenses necessary for the support of government are being paid in accordance with the provisions of said section. The two houses were unable to come to an agreement in the matter of the election of resident commissioners to the United States for the term beginning March 4, 1911, as then provided by law. This failure, however, was remedied by the act of Congress of February 15, 1911, providing that the present resident commissioners shall hold office until their successors are elected and qualified. Mr. W. H. Phipps of Ohio was appointed auditor on March 4, 1911, appointment to be effective April 1, 1911.

TAAL VOLCANO DISASTER. On the morning of January 30 a violent eruption of Taal volcano, which had been active for a number of days previous, occurred. The volcano is situated about 64 kilometers (40 miles) south of Manila, and the eruption was plainly visible from that city. It was accompanied by a series of earthquake shocks which continued with more or less violence for fifteen days. In all 1014 shocks were registered, of which a very considerable number were of sufficient violence to be felt in Manila. Taal volcano is situated in a lake about 26 kilometers (16 miles) long and 15 kilometers (9 miles) wide, the crater being on an island about 5 kilometers (3 miles) in diameter. The eruption, which occurred at half-past two o'clock in the morning, was accompanied by a violent display of lightning, great blasts of hot gas, which swept the neighboring region, and a fall of mud, which in ravines and low places accumulated to a depth of many feet on the island and points near it. According to the observations at the observatory, ashes even reached Manila. The hot gases and fall of ashes killed all but about 21 of the 300 odd people living on the volcano island. Certain barrios situated on the west coast of the lake were obliterated, and all people and animals perished. Other barrios were only partially destroyed. In some barrios a great many people were injured, some being burned by the hot blasts of air. The total estimated loss of life amounted to about 1300.

In general, peace prevailed throughout the islands in 1911, but an exception was found in the island of Basilan, off the Mindanao Peninsula, where, in a clash between natives and a detachment from the gunboat Pampanga, Ensign Charles E. Hovey was killed and three enlisted men were injured. This island is inhabited by primitive Moros and for several years a naval base has been maintained at Isabela, where small vessels have made their headquarters.

OFFICERS. The personal of the commission on June 30, 1910, was as follows: Hon. W. Cameron Forbes, Governor-General, ex-officio

President; Hon. Newton W. Gilbert, Vice-Governor, Secretary of Public Instruction; Hon. Dean C. Worcester, Secretary of the Interior, member; Hon. José R. de Luzuriaga, member; Hon. Gregorio Araneta, Secretary of Finance and Justice, member; Hon. Rafael Palma, member; Hon. Juan Sumulong, member; Hon. Frank A. Brangan, member; Hon. Charles B. Elliott, Secretary of Commerce and Police, member.

PHILLIPS, DAVID GRAHAM. An American author, assassinated by Fitzhugh Coyle Goldsborough, January 24, 1911. He was born in Madison, Ind., in 1807 and graduated from Princeton University in 1837. His talent for writing showed itself while he was in college and he contributed to the university publications, as well as endeavoring, without success, to sell several of his stories to magazines. Shortly after graduation he took up newspaper work in Cincinnati and after a short time removed to New York, where he became a reporter on the *Sun*. He showed unusual ability as a reporter and writer. After a time he left the *Sun* to become London correspondent to the *New York World* and while he was abroad acted for a time as private secretary to Joseph Pulitzer, proprietor of that newspaper. Returning to the United States he did general work for the *World* and was for some time one of its editorial writers. At this period his first book, *The Great God, Success*, was published (1901) and soon after its publication he gave up newspaper work and went seriously at the business of writing novels and articles for periodicals. He was an indefatigable worker and produced at least one and sometimes two novels every year to the time of his death. His books were usually concerned with some present-day problem. He was a conscientious writer and his novels, although not of the first order, were invariably readable and at times showed glimpses of remarkable talent. His published writings are as follows: *Her Serene Highness* (1902); *A Woman Ventures* (1902); *Golden Fleece* (1903); *The Master Rogue* (1903); *The Cost* (1904); *The Plum Tree* (1905); *The Social Secretary* (1905); *The Deluge* (1905); *The Reign of Gilt* (1905); *The Fortune Hunter* (1906); *The Second Generation* (1907); *Light-Fingered Gentry* (1907); *Old Wives for New* (1908); *The Worth of a Woman* (1908); *The Fashionable Adventures of Joshua Craig* (1909); *The Hungry Heart* (1909); *The Magic* (1910); *The Grain of Dust* (1911). He wrote on political and social matters for the magazines. A series of articles entitled *The Treason of the Senate*, published in 1906, caused much discussion. He was accused of distorting the facts and of making sensational statements which he could not prove. This, however, he denied.

PHILLPOTTS, EDEN. See LITERATURE, ENGLISH AND AMERICAN, Fiction.

PHILOLOGICAL ASSOCIATION AMERICAN. See PHILOLOGY, Classical.

PHILOLOGY, CLASSICAL. A marked characteristic of work in classical philology in the past five years has been the activity of the various classical associations, especially in England and the United States. The primary object of some of these associations, e. g., The American Philological Association, is research; many, however, are chiefly interested in the pedagogical aspects of classical work. One impor-

tant result of this pedagogical activity is the report of the commission on entrance requirements in Latin, which recommended two or three years ago uniform entrance requirements in Latin for American colleges, with special emphasis on the power to read the language at sight. The report has been widely adopted; see J. H. Kirtland, "The Consequents of the Commission's Report," in *The Classical Journal*. Papers presented at various classical conferences at Ann Arbor were published in *Latin and Greek in American Education*.

The movement for uniform grammatical terminology has attracted attention in this country; a commission of fifteen members is considering the subject.

For the progress of American scholarship see in the proceedings of the American Philological Association for 1909 the abstract of an address by Prof. B. L. Gildersleeve on the "Range and Character of the Philological Activity of America," and P. Shorey's article, "American Scholarship," in *The Nation* for May 11 and the *Educational Review* for October.

One other interesting development of the year is the Loeb Classical Library, which is to embrace all Greek authors down to the fall of Constantine (including Critoboulos) and all Latin authors to Charlemagne's age (including Alcuin). Twenty volumes a year are to appear, each containing the Greek or the Latin text, carefully revised, and an English translation, usually in prose; the volumes will contain from 320 to 608 pages, of about 250 words (of English) per page. Two English scholars are to serve as editors-in-chief, assisted by an advisory board of English, German, French, and American scholars. The library is made possible by the generosity of Mr. James Loeb, whose objects are to produce a comprehensive and uniform series of classical texts with fine translations in handy form and of moderate price, to give those who have not studied Latin and Greek an opportunity to become familiar with the beauty and learning, the philosophy and wit of the classical writers, and "to revive interest in classical literature in an age when the Humanities are being neglected more, perhaps, than at any time since the Middle Ages, and when men's minds are turning more than ever before to the practical and the material." It is probable, however, that the library will be most serviceable to persons who once enjoyed training in Greek and Latin, and who yet retain some knowledge of those languages, though not enough to enable them, unassisted, to read widely in the original.

The chief repositories of classical work in the United States, *The American Journal of Philology* and *Classical Philology*, contained in 1911 many articles of importance. In the former note "Vahlen's Ennius," C. Knapp, an exhaustive examination of part of the Prolegomena to Vahlen's great edition of the fragments of Ennius (first published in 1854, revised in 1903); Vahlen's views on the life and writings of Ennius, and of the extent to which Ennius was studied and known by other Roman authors, were summarized, criticized, corrected, and supplemented; "Masks on the Roman Stage," Catherine Saunders, a useful summary of the available evidence on the subject, and criticism of the views based on that evidence; "Horatian Urbanity in Hesiod's Works and Days," E. K. Rand; the author abides by our text of the poem, accepts the poem as a unit, and finds that Hesiod had a calm

and lofty mind, and the placidity of a Horatian satirist; "The House-Door in Greek and Roman Religion and Folk-Lore," M. B. Ogle (the writer believes that the cult concerned with the door—such practices as binding the doorposts with wool, fastening laurel, etc., on or near the door—was originally connected with the worship of the spirits of the dead); "Lucilius on EI and I," R. G. Kent, an acute discussion of difficult passages in Lucilius; "The Conventions of Pastoral Elegy," G. Norlin, dealing with conventions borrowed by modern pastoral poetry from ancient times; "Repeated Verses in Homer," J. A. Scott, an argument that repeated verses furnish no indication of the relative antiquity of the Iliad and the Odyssey (Professor Scott is publishing much important work on Homer, in the two journals under discussion here, *The Classical Weekly*, etc.; see also the last YEAR BOOK. He holds that the Iliad and the Odyssey belong to the same era of linguistic development and are surely the product of the same age); "The Parodoi in the Greek Theater," K. Rees; the writer holds, that for the classical drama of Greece no convention obtained concerning the side-entrances to the Greek theatre, but that in the New Comedy of Athens and in Roman Comedy there was such a conventional significance (a useful discussion, which, however, disregards certain important material relating to the Roman theatre); "The Date of Aristophanes's Georgoi," E. Capps (the date given is, 424 B. C.) Professor Gildersleeve's notes under "Brief Mention" are as valuable as ever.

From *Classical Philology* we may name "Administration of Justice in the Age of Homer," R. J. Bonner; "The Identity of the Child in Virgil's Pollio" (Eclogue 4); the author holds that the Romans freely discussed prenatal matters and predicted the sex of an expected child, commonly counting on the birth of a boy: in Vergil's case the prediction concerning the sex of Octavian's expected child proved wrong, to the confusion of generations of interpreters of the poem; "Satira—the Genesis of a Literary Form," G. L. Hendrickson, an attempt to support former papers in which the author attacked the Roman tradition that there were at Rome forms of the drama prior to the time of Greek influence on the Romans in literature: he holds that the term *Satura* as a designation of a form of literature was neither known nor needed before 40-30 B. C., since satire had not yet claimed a place as an independent form of literature needing a name (one asks what bearing this has on the question of the existence of a *dramatic satira*). The paper has importance not so much in itself as in the fact that it is part of a movement to deny the existence of forms of early Roman drama, a denial which has direct bearing on the capacity of the Romans for independent mental effort of any kind, and on the whole development of early Latin literature. For the other side of this general discussion see a paper in abstract, "The Dramatic *Satura* among the Romans," in the proceedings of the American Philological Association, for 1909, published late in 1910; "Two Linguistic Tests of the Relative Antiquity of the Iliad and the Odyssey," J. A. Scott; "The De Compositione of Dionysius of Halicarnassus considered with reference to the Rhetoric of Aristotle," H. P. Breitenbach; "Studies in Greek Noun-Forma-

tion," E. H. Sturtevant; "Kelts and Ligurians," R. W. Husband: the author, having urged in a previous paper that the greater part of what is called Ligurian is strictly Gallic, seeks now to determine the times of Gallic migration into Liguria, and the routes taken by the Ligurian-Gallic tribes; "The Origin of the Realistic Romance among the Romans," F. F. Abbott; the author makes it the invention of Petronius; "The Manuscripts of Propertius," B. L. Ullman; "Concerning the Oratory of Brutus," E. J. Philby, an argument that in the *Brutus* Cicero misrepresents Brutus's views on oratory and his oratorical style. Much good work, as usual, appeared in reviews in both *The American Journal of Philology* and *Classical Philology*.

Two volumes of the *Transactions and Proceedings* of the American Philological Association, 40 and 41, published late in 1910 and 1911, contained articles of importance: "On Certain Euphonic Embellishments of Propertius" (rime, repeated vowel, alliteration, onomatopoeia, etc.), B. O. Foster; "Lucilius and Persius," G. C. Fiske, urging that for Persius Lucilius was a source second in importance to Horace alone; "On the Eclogues of Baptista Mantuanus" (a writer of the fifteenth century, who knew and imitated Vergil), W. P. Mustard: this paper the author reinforced by an edition of the Eclogues, with notes, etc. (American scholars are much given to tracing the influence of the classics on modern literature, especially English: witness, e. g., Mr. Norlin's paper, named above, and the revised edition of C. A. Gayley's *Classio Myths in English Literature and Art*); "Structural Variety in Greek Tragedy," T. D. Goodell; "The Necessity of Ritual Purification After Justifiable Homicide," J. H. Hewitt; "Notes on Etiam in Plautus," C. Knapp; "The Treatment of Dactylic Words in the Rhythmic Prose of Cicero," F. W. Shipley (this matter of rhythmic prose is attracting much sympathetic attention in America: for a sobering warning on the other side see P. Shorey's review of Zander, "Eurythmia, vel Compositio Rythmica Prose Antiquæ," in *Classical Philology* 6, 494-497; "Dionysiac Magic and the Greek Land of Co-caigne," C. Bonner.

Of much value in the field of bibliography is R. Klussmann's *Bibliotheca Scriptorum Classicorum et Græcorum et Latinorum*, part 2 of volume 1, giving a conspectus of books and articles, published between 1878 and 1896, on Greek authors (Hybrias to Zosimus: Part 1 appeared in 1909). Note also *Altclassische Philologie und Altertumskunde, Antiquariats Katalog* 379, by H. Kerler, Ulm, Germany, not previously mentioned in the YEAR BOOK. In *Imagines Philologorum* A. Gudeman published portraits of 160 classical scholars, all foreign.

In the field of inscriptions we may notice the *Bulletin annuel d'épigraphie grecque*, by A. J. Reinach, covering 1908-1909; *L'Année épigraphique romaine*, for 1910, by R. Cagnat and M. Besnier; Volume 4, Fascicule 3 of *Inscriptiones Græcæ ad res Romanas pertinentes*, by R. Cagnat and G. Lafaye. In *The American Journal of Philology* we have an article, the sixth in a series, by H. L. Wilson, on "Latin Inscriptions at Johns Hopkins University"; in *The American Journal of Archaeology* D. M. Robinson described a Panathenaic vase containing an archon's name earlier than any archon's name borne by such vases heretofore published.

The Catalogue of Greek Papyri in the John

Rylands Library, Manchester, England, and volume 8 of the *Oxyrhynchus Papyri* deserve special notice. The former contains theological papyri (among them is the oldest extant version of the Nicene Creed), and some new classical texts, e. g., a fragment of an epic giving a story of Linus, a part of Apion's Homeric Glosses, and parts of Homer, Hesiod, Bacchylides, Herodotus, Demosthenes, Polybius, and Isocrates. One part of the Homeric fragments comes from a vellum book which dates from the third or fourth century, and so is one of the oldest vellum books known. In the *Oxyrhynchus Papyri* are fragments of *melambi*, by a certain Cercidas, cynic and poet both, of the third century B. C. Both volumes make some additions to our small store of Latin papyri, giving parts of Cicero and Vergil. An important find recently announced is that of about 40 lines of a Satyric play by Sophocles, the *chneuta*, the Trackers or Trailers.

An important work on coins is *Die antiken Münzen Nord-Griechenlands*, published by the Royal Academy of Sciences at Berlin; Part II. of the first half and Part I. of the second half of Volume I., dealing with the coins of Dacia, Mæsia, Odessos, and Tomi, have appeared. B. L. Head's *Historia Numorum*, a manual of Greek numismatics, has been revised and enlarged.

In religion and mythology note *The Religious Experience of the Roman People*, W. W. Fowler, a large and valuable work: the author seeks to get behind cult and custom to the ideas and feelings which prompted them; *The Religious Life of the Roman People*, J. B. Carter; *Culti e miti nella Storia dell' Antica Sicilia*, which involves also a careful study of survivals in certain contemporary Sicilian festivals of the saints of ancient rituals and beliefs; the author, in opposition to Freeman and Holm, minimizes the Phœnician element in ancient Sicilian religion. Interesting articles are "Roman Prayer and Its Relation to Ethics," G. J. Laing, in *Classical Philology*: the author holds that, though originally there was among the Romans no connection between moral ideas and the gods in general and though in some cults that connection was never developed, yet in some cults a tendency to connect the two appears early, though it never became very strong; "The Omen of Sneezing," A. S. Pease, in *Classical Philology*; and the papers by Professors Ogle and Hewitt, named above in the account of classical work published in *The American Journal of Philology* and *Classical Philology*. *Opferbräuche der Griechen* is a collection of 28 papers published by P. Stengel at various times in the past 28 years, all now revised. In *Neue Jahrbücher für das klassische Altertum* is an article by L. Deubner, "Zur Entwicklungsgeschichte der altrömischen Religion," a study of survivals in Roman cults from a time when man felt able to interfere in the workings of nature without help from gods or spirits. Franz Cumont's *Les religions orientales dans le paganisme romain* (1906, 1909) has now been translated into English, under the title *The Oriental Religions in Roman Paganism*.

In philosophy we have E. V. Arnold's *Roman Stoicism*, which lays special stress on the development of stoicism in the Roman empire; *Varia Socratica: First Series*, by A. E. Taylor, studies preliminary to a work on Plato's philosophy, in which the author seeks to show that much more of Platonism than is commonly sup-

posed goes back to Socrates or even to the Pythagoreans and other pre-Socratics: for a review of the book, not altogether favorable, see P. Shorey in *Classical Philology*; "Antecedents of the Greek Corpuscular Theories," W. A. Heidel, in *Harvard Studies* 22.

The very valuable Latin lexicons undertaken by American scholars, the *Thesaurus Linguae Latinae Epigraphicae*, by G. N. Olcott, and the *Lexicon Plautinum*, G. Lodge, both made progress, the former into *ara*, the latter into *facio* (of the one 408, of the other 576 pages, have now appeared). Progress was made, too, with the *Thesaurus Linguae Latinae*, the most exhaustive dictionary of the Latin language ever attempted (yet to be supplemented in many ways by the works of Professors Lodge and Olcott). Of great usefulness and of distinct credit to American scholarship is M. N. Wetmore's *Index Verborum Vergilianus* (554 pages); its value may be most readily learned from the review of it by E. K. Rand in *Classical Philology*. An *English-Greek Dictionary* of 1038 pages was published by S. C. Wodenhouse in 1910.

In syntax we have space to notice only three elaborate reviews of Bennett, *Syntax of Early Latin: The Verb*, by W. G. Hale, C. Knapp, and A. L. Wheeler, in *Classical Philology*, *The American Journal of Philology*, and *The Classical Weekly*. A new *Latin Grammar*, meant especially for schools, by H. E. Burton, appeared. Note also *Syntax of Classical Greek from Homer to Demosthenes, Second Part*, by B. L. Gildersleeve, with the coöperation of C. W. E. Miller, in which Professor Miller presents the most accurate and complete treatment of the article in Greek thus far published.

Schanz's *Geschichte der römischen Litteratur*, Part 2, First Half, in Müller's *Handbuch*, covering the Augustan Period, reached its third edition. A new addition to Müller's *Handbuch* is M. Manitius's *Geschichte der lateinischen Mittelalters*, Part I. Another part of W. Christ's *Geschichte der griechischen Litteratur*, as revised by W. Schmid, appeared. Note also H. Jordan, *Geschichte der altchristlichen Litteratur*; J. W. Mackail's *Lectures on Poetry*, which contains chapters on "Virgil and Virgilianism," and "The Æneid"; Murray's *The Rise of the Greek Epic* (second edition); "The Oresteia of Æschylus as illustrated by Greek Vase Painting," Hetty Goldman, in *Harvard Studies* 21; "The Influence of Local Theatrical Conditions upon the Drama of the Greeks," R. C. Flickinger, in *The Classical Journal*; "Homeric Armor and Mr. Lang," G. M. Bolling, in *The Catholic Bulletin* for 1910; "Homeric," J. Van Leeuwen, in *Mnemosyne*, emphasizing the collapse of objective and subjective arguments against the unity of the Iliad and the Odyssey.

In the fields of classical history and Greek and Roman life, which may conveniently be grouped together, note the following books: *A History of the Ancient World*, G. W. Botsford; *Thucydides and the History of his Age*, G. B. Grundy, a very elaborate volume in which the author, well known for his personal examination, through visits to the districts involved, of the accounts of famous Greek battles, maintains that the Peloponnesian War was due mainly to sparring by the various Greek states for economic advantages; *Hellenistic Athens*, W. S. Ferguson, a connected history of Athens from the death of Alexander the Great to the sack of Rome by Sulla; *The International Law and*

Custom of Ancient Greece and Rome, C. Phillipson; *Essays on Roman History*, by H. Pelham, a posthumous collection, edited by F. Haverfield, of many scattered pieces, previously published, with three new papers; nearly all deal with questions of imperial policy, including the frontier system; *Annals of Caesar*, E. G. Sihler, a critical biography, with a survey of the sources; *Cæsar's Conquest of Gaul*, T. Rice Holmes, second edition, revised throughout and largely rewritten; *The Cambridge Mediæval History*, Volume 1, a collection of papers from various hands treating the Christian Roman empire and the foundation of the Teutonic kingdoms (754 pages, with 14 maps). The third and final volume of Gercke and Norden's *Einleitung in die Altertumswissenschaft* is a fresh treatment of "Griechische und römische Geschichte," and "Griechische und römische Staatsaltertümer," by competent German scholars. Note, finally, *Lo Stato e l'istruzione pubblica nell'impero romano*, C. Barbagallo, in which the author discusses various acts of the emperors from Augustus to Justinian, relating to education; he holds that public instruction in Europe is wholly of Italian origin; *Die römischen Privataltertümer*, H. Blümner, in Müller's *Handbuch*. V. Hehn's well-known work, *Kulturpflanzen und Haustiere*, appeared in a new edition, the eighth, by O. Schrader, with botanical appendix, by A. Engler and F. Pax.

PHILOLOGY, MODERN. INTRODUCTION. The general progress of modern philology since 1907 has been one of quiet development and summarization of data already available. No new principles of deep effect on the underlying basis of the science have been discovered; indeed, the last work in any department of Indo-Germanic linguistic science that can be truthfully characterized as marking a new epoch in philology was Hermann Hirt's *Indogermanischer Ablaut* published as far back as 1900. Even the establishment of new periodicals has almost ceased, although mention may be made of *Wörter und Sachen*, published at Heidelberg since 1909, and of the *Münchener Museum für Philologie des Mittelalters und der Renaissance*, founded in 1911. The most noteworthy project for the summarizing of knowledge of the whole domain of Indo-Germanic philology, both ancient and modern, is that planned by the firm of Karl Winter in Heidelberg. This is to include a series of "Indo-Germanic handbooks," of which, within the scope of modern philology, R. Thurneysen's *Altirisches Handbuch* has already appeared (1909) and the *Slavisches etymologisches Wörterbuch* of E. Berner has reached the eighth fascicle, extending to *kuk-uruz*; a series of Germanic text-books, thus far including grammars of Pre-Germanic, Gothic, Old and Middle High German, Icelandic, Anglo-Saxon, and Old Frisian; a series of Romance, including W. Meyer-Lübke's *Einführung in das Studium der romanischen Sprachwissenschaft* (1900) and *Romanisches etymologisches Wörterbuch* (this carried as far as far in 1911), B. Wiese's *Altitalienisches Elementarbuch* (1904), and S. Puscariu's *Etymologisches Wörterbuch der romanischen Sprache* (1900); and a series of Slavic, including A. Leskien's *Grammatik der altbulgarischen (altkirchenslavischen) Sprache* (1909), and O. Brooh's *Slavische Phonetik* (1911).

PROGRESS IN 1911: IN GENERAL. A consider-

able part of the contributions to modern philology in 1911 was in the shape of dissertations for the doctorate in philosophy. This type of work has the advantage of being confined to a very specific field, thus encouraging close attention to details. On the other hand, much of the work is immature, particularly in the case of the Germans, French candidates for the doctorate usually being men already approaching middle life. In the majority of cases the titles of the works indicate their character, so that a bibliographical synopsis will be sufficient; and for the sake of completeness those books will be included which, although published in 1910, were recorded too late to be noted in the YEAR BOOK of that date.

GERMANICS. In the Germanic field the works of most general interest are the opening sections of the *Reallexikon der germanischen Altertumskunde*, edited by J. Hoops (Strassburg, 1911) and of the third edition of H. Paul's great *Grundriss der germanischen Philologie* (Strassburg, 1911). The subject of personal names receives discussion in G. Werle's *Die ältesten germanischen Personennamen* (Strassburg, 1910) and M. Schönfeld's *Wörterbuch der altgermanischen Personen- und Völkernamen* (Heidelberg, 1911), while another interesting department of lexicography is considered in K. Guntermann's *Herrschaftliche und genossenschaftliche Termini (für Gott, Christus, den Teufel und ihre Umgebung) in der geistlichen Epik der Westgermanen* (Kiel, 1910). More general problems of Germanic grammar are treated by A. von Söbbe in his *Ausgleichung des Rückumlauts* (Heidelberg, 1911) and by O. Gröger in his *Althochdeutsche und altsächsische Kompositionsfuge mit Verzeichnis der althochdeutschen- und altsächsischen Komposita* (Zurich, 1911).

OLD AND MIDDLE HIGH GERMAN. The domains of Old and Middle High German have received their share of attention. W. Braune published at Halle in 1911 the fourth edition of his *Althochdeutsche Grammatik* and the seventh of his *Althochdeutsches Lesebuch*, while L. Armitage issued at Oxford an *Introduction to the Study of Old High German* and R. Vian edited at Halle in 1910 two interesting manuscripts of the fourteenth and fifteenth centuries under the title of *Mondwahragebuch*. E. Witzig's *Zum Gebrauch des Artikels im Althochdeutschen* (Bonn, 1910) deserves mention, and grammatical aspects of the famous Old High German authors Otfrid and Notker were discussed in P. Igel's *Das gi-Präfix als Perfektivierungsmittel in Otfrids Evangelienbuch* (Heidelberg, 1911), I. Weinberg's *Zu Notkers Anlautgesetz* (Tübingen, 1911), and E. Weismann's *Form und Verbreitung des Compositions-vokals in Nominalcompositen bei Notker* (Erlangen, 1911). In Middle High German W. Hertz edited the *Parzival* of Wolfram von Eschenbach (Stuttgart, 1911), and the same author is studied by S. A. Bacon in his *Source of Wolfram's Willenhalm* (Tübingen, 1910) and by J. L. Boysen in his *Ueber den Gebrauch des Genitivs in den Epen Wolframs von Eschenbach* (Würzburg, 1910). Among other editions of Middle High German texts should be mentioned E. Eichler's *Die mittelhochdeutsche Apocalypse in den münchener Handschriften Cgm. 292 und Cgm. 111* (Greifswald, 1910) and K. Burchardt's *Das mittelhochdeutsche Gedicht von der "Frauentreue"* (Berlin, 1911). New

light is cast upon the cycle of the legend of Apollonius, prince of Tyre, by A. Bockhoff and S. Singer's *Heinrichs von Neustadt Apollonius von Tyrland und seine Quellen* (Tübingen, 1911), and upon Rudolph of Ems by V. Lüdicke's *Zur Quellenfrage von Rudolfs Willenhalm von Orleans* (Halle, 1910). The poetry of the period receives attention in A. Angermann's *Der Wechsel in der mittelhochdeutschen Lyrik* (Marburg, 1910). E. Gärtner's *Die Epitheta bei Walther von der Vogelweide* (Kiel, 1911), and J. Bruch's *Zur Sprache der Rede vom Glauben des armen Hartmann* (Prague, 1910), nor should B. Wiesotzky's *Untersuchungen über das mittelhochdeutsche "Buch der Rügen"* (Strassburg, 1911) be overlooked. More strictly linguistic studies in this sphere are A. Weller's *Die Sprache in den ältesten deutschen Urkunden des deutschen Ordens* (Königsberg, 1911), Wagner's programme *Die Kanzleisprache Reutlingens von 1300-1600* (Stuttgart, 1910), E. Wellander's *Bedeutungsentwicklung der Partikel ab in der mittelhochdeutschen Verbal-komposition* (Upsala, 1911), and H. Herchenbach's *Das Präsens historicum im Mittelhochdeutschen* (Berlin, 1911).

GERMAN DIALECT STUDIES. Turning to the modern period of the German language, we find that investigation has been chiefly devoted, except for the fifth edition of O. Behagel's *Deutsche Sprache* (Leipzig, 1911), to dialect study. The great *Siebenbürgisch-sächsisches Wörterbuch* and the *Schwäbisches Wörterbuch* continued to make progress, the former having reached the first fascicle of the second volume and the latter its thirty-third fascicle. Other considerations of special dialects are O. Schachtschabel's *Mundart von Kranichfeld in Thüringen* (Strassburg, 1910), O. Kürsten and O. Bremer's *Lautlehre der Mundart von Buttstedt bei Weimar* (Leipzig, 1910), F. Enderlin's *Mundart von Kessvil in Oberthurgau* (Frauenfeld, 1911), and E. Abegg's *Mundart von Urseren* (Frauenfeld, 1911). More general in scope is E. Hommer's *Studien zur Dialektgeographie des Westervaldes* (Marburg, 1910), and a phase of German argot is treated by the veteran F. Kluge in his *Seemannssprache* (Halle, 1911).

LOW GERMAN. Passing to the Low German region, we may note first R. M. Garrett's translation of U. Lindelöf's *Elements of the History of the English Language* (Seattle, 1911). In Anglo-Saxon G. Oess has edited the *Arundel Psalter* (Heidelberg, 1910) and to K. Wildhagen is due the editio princeps of the *Cambridge Psalter*, contained in manuscript (Ff. 1. 23 of the library of the University of Cambridge (Hamburg, 1910), while mention must also be made of A. S. Cook's *Concordance to Beowulf* (Halle, 1911). Interest in Anglo-Saxon lexicography is evinced by C. Braach's *Namen der Werkzeuge im Altenglischen* (Kiel, 1910), T. Kross's *Namen der Gefässe bei den Angelsachsen* (Kiel, 1911), and C. Leydecker's *Angelsächsisches in althochdeutschen Glossen* (Bonn, 1910). Among more technical studies may be noted R. Mettig's *Die französischen Elemente im Alt- und Mittenglischen (800-1258)* (Marburg, 1910), A. Braun's *Lautlehre der angelsächsischen Version der Epistola Alexandri ad Aristotelem* (Heidelberg, 1911), H. C. A. Carpenter's *Deklination in der nordhumbrischen Evangelien-Uebersetzung der Lindis-*

jarner Handschrift (Bonn, 1910), H. Weyhe's *Zu den altenglischen Verbalabstrakten auf nes und-ing-ung* (Halle, 1911), and J. M. Burham's *Concessive Constructions in Old English Prose* (New York, 1911). In Middle English J. F. Royster edited *A Middle English Treatise on the Ten Commandments* (Chapel Hill, 1911), and in Icelandic G. T. Flom edited *Konungs Skuggja, Fragment RA 56 O* (Urbana, 1911). Apart from this latter work little has been done in the Norse group, though A. Musinowicz published *Die Stellung des attributiven Adjektive im Altisländischen und Altnorwegischen* (Riga, 1911), H. Falk and A. Torp issued a revised version of their *Norwegisch-dänisches etymologisches Wörterbuch* (Heidelberg, 1911), and A. Kock's *Svensk-Ljudhistoria* reached the second fascicle of the second volume (Lund, 1911).

ROMANCE. Turning from Germanic to Romance, two works concern the field in general, the first volume of W. Meyer-Lübke's *Prinzipienfragen der romanischen Sprachwissenschaft* (Halle, 1910) and the *Romance Studies in Honor of A. Marshall Elliott* (Baltimore, 1911). In 1911 the *Dictionnaire étymologique de la langue française* of J. Sanneg, published at Hanover, reached its third fascicle, and general historical phases of the French language were discussed in L. de Anna's *Verbo francese e la sua teoria dal xii al xiv secolo* (of which the third volume appeared at Rome in 1911) and E. Hartmann's *Syntaktische Studien über die Temporalsätze im Französischen* (Marburg, 1911).

OLD FRENCH. The interest manifested in Old French during the period under consideration was very great. Special importance attaches to the numerous editions of Old French texts. Here belongs the second part of the fourth volume of H. O. Sommer's *Vulgate Version of the Arthurian Romances*, dealing with *Le livre de Lancelot del lac* (Washington, 1911), with which is connected G. Bräuner's edition of *La reine as granz dolors*, the first "branch" of his *Altfranzösischer Roman von Lancelot del lac* (Marburg, 1911), while another member of the Arthurian cycle is treated in R. T. Hill's *La mule sans frain: An Arthurian Romance by Poien de Maisieres* (Baltimore, 1911). Chrestien de Troyes is also represented by more than one title, his epic on William the Conqueror having been edited by both W. Forster (*Kristian von Troyes Wilhelm von England* (*Guillaume d'Angleterre*), (Halle, 1911) and H. Suchier (*La chanson de Guillaume: französisches Volksepos des xi. Jahrhunderts*, Halle, 1911), and the relation of the same poet's work to the kindred Celtic cycle is discussed by R. Edeus in his *Erec-Geraint: der christliche Versroman und das wälische Mabinogi* (Rostock, 1910). Other editions of Old French texts are A. Stimming's *editio princeps* of the first recension of the Romance version of the cycle of Bevis of Hampton (*Der festländische Beuve de Hantou*, Halle, 1911), E. Farel's *Courtois d'Arras, jeu de aiiiie siècle* (Paris, 1911), C. Oulemont's *Les débats du clerc et du chevalier dans le littérature poétique du moyen-âge* (Paris, 1911), O. Schultz-Gora's *Zwei altfranzösische Dichtungen, La Chastelaine de Saint-Gill, Du Chevalier au barisel* (Halle, 1911), E. Höpfner's *editio princeps* of *La Prise amoureuse von Jehan Acart de Hesdin, allegorische Dichtung aus dem vierzehnten*

Jahrhundert (Halle, 1910), W. Suchier's *L'enfant sage: Das Gespräch des Kaisers Hadrian mit dem klugen Kind Epitus* (Halle, 1911), and P. Champion's *La vie de Charles d'Orléans (1394-1465)* (Paris, 1911). The French accounts of Edward the Confessor have been studied by R. Fritz in his *Ueber Verfasser und Quellen der altfranzösischen Estoire de Saint Aeduard le rei* (Heidelberg, 1910), and other dissertations on Old French poetry are R. Halpersohn's *Ueber die Einleitungen in altfranzösischen Kunstepos* (Berlin, 1911), and P. Erfurth's *Die Schlachtschilderungen in den älteren Chansons de Geste* (Halle, 1911). Linguistic studies of special texts are the first part (rhyme and phonology) of F. Mainone's *Laut- und Formenlehre in der Berliner franko-venezianischen Chanson de Geste von Huon von Auvergne* (Greifswald, 1911) and C. Neumann's *Formenbau des Nomens und Verbums in den Dramen Adams de la Hale: "Li gicus de Robin et de Marion" und "Li Jus Adan"* (Kiel, 1910), as well as A. Wittmann's *Flexion in den altfranzösischen Miracles de Nostre Dame* (Heidelberg, 1911). Old French morphology finds consideration in F. Schönenberger's *Beiträge zur Geschichte der altfranzösischen Nomina mit wechselndem Accent und wechselnder Silbenzahl in dem Zeitraum von 1200 bis 1500* (Heidelberg, 1910), E. Dietz's *Zur Geschichte der französischen si- und i-Perfecta nach Tezlen des vierzehnten und fünfzehnten Jahrhunderts* (Heidelberg, 1911), the first part (dealing with the article) of J. Storm's *Större fransk syntax* (Christiania, 1911), O. Richters's *Zur historischen Syntax von interrogativem quel* (Göttingen, 1910), P. Schächtelin's *Passé Défini und Inparfait im Altfranzösischen* (Halle, 1911), E. W. Knickerbocker's *Ellipsis in Old French* (New York, 1911), D. Rubin's *Beiträge zur Geschichte der Anrede im Altfranzösischen gegen Ausgang des Mittelalters (ca. 1350-1500)* (Heidelberg, 1911), and C. Oulemont's *Étude sur la langue de Pierre Gringoire* (Paris, 1911), the latter work marking the transition to the modern period of the French language.

FRENCH DIALECTS. Much interest has also been shown in French dialects. To the older *mannischen Schweizerromane* (Halle, 1910), S. Mondon's edition and translation of the twelfth-century Gascon *La grande charte de Saint-Gaudens (Haute-Garonne)* (Paris, 1910), and G. Millardet's Gascon studies, *Recueil de muns de la Grand' Combe (Doubs)* (Paris, 1910), *Études de dialectologie landaise (Toulouse, 1910)*, and *Petit atlas linguistique d'une région des Landes (Toulouse, 1910)*. Turning to the modern dialects, we note C. Beszard's *Étude sur l'origine des noms de lieux habités du Maine* (Paris, 1911), the fourth volume of A. Leduc's *Ede quoi rire à se teindre, quatrième chant de contes picards (patois de Santerre)* (Paris, 1911), F. Boillot's *Patois de la commune de la Grand' Combe (Doubs)* (Paris, 1910), H. A. Viez's *Vocalisme du patois de Colombert (Boulonnais)* (Paris, 1911), and *Le parler populaire (patois) de Roubaix* (Paris, 1911, this volume being devoted entirely to the phonology of the dialect), A. Revanet's *Dictionnaire du patois des environs de Grenoble* (Grenoble, 1911), F. Frankhauser's *Das Patois von Val d'Illicz (Unterwallis)* (Hamburg, 1911), and L. Odin's *Glossaire du patois de Blonay* (Lausanne, 1910).

OTHER ROMANCE STUDIES. A gratifying amount of work, although naturally smaller in volume, has been done on the other members of the Romance group. Some account of Provençal studies in Italy is given by S. Debenedetti in his *Gli studi provenzali in Italia nel cinquecento* (Turin, 1911). As in Old French, much has been done in editing texts. Here belong M. L. Dejeanne's edition and translation of *Les poésies complètes du troubadour Marcabru* (Paris, 1910), S. Stronski's edition and translation of *Le troubadour Folquet de Marseille* (Cracow, 1910), G. Bertoni's edition of *Il canzoniere provenzale di Bernart Amoros* (Freiburg, Switzerland, 1911), and E. Bondurand's editio princeps of a little poem of local interest, *Description des bains de Saint-Laurent, faite en 1687* (Saint-Laurent-des-Bains, 1911). Raimon Feraut's Provençal "Life of St. Honoratus" has been made the subject of two dissertations, W. Schäfer's *Das Verhältnis von Raimon Ferauts Gedicht La Vida de Sant Honorat zu der Vita Sancti Honorati* (Halle, 1911) and A. Krettek's *Die Ortsnamen der Vida de Sant Honorat von Raimon Feraut und ihrer lateinischen Quelle* (Halle, 1911). In Italian two contributions to our knowledge of the dialects deserve mention, G. Bistolfi's *La poesia dialettale piemontese* (Turin, 1911), and T. Zanardelli's *Saggi folklorici in dialetto di Baai (Appennino bolognese)* (Bologna, 1911). Spanish is more fully represented than Italian. Special mention should be made of E. Cotarelo y Mori's edition of Spanish dramas under the title *Colección de entremeses, loas, bailes, jácara y mojigangas desde fines del siglo xvi á mediados del xviii* (Madrid, 1911). Linguistic studies of Spanish are given in S. Padilla's *Gramática histórico-crítica de la lengua española* (Madrid, 1911) and M. A. Colton's *Phonétique castillane* (Paris, 1911), and the very interesting subject of Judæo-Spanish is responsible for R. Gil's *Romancero judeo-español* (Madrid, 1911). Within the sphere of American Spanish the great *Diccionario de chilenismos y otras voces y locuciones viciosas*, of M. A. Roman published at Santiago de Chile, reached in 1911 the end of the letter F, another valuable contribution being C. Bayo's *Vocabulario criollo-español sud-americano* (Madrid, 1910). Internal conditions in Portugal have scarcely been conducive to language study, yet J. Leite de Vasconcellos has been able to publish his *Licções de philologia portuguesa dadas na Bibliotheca Nacional de Lisboa* (Lisbon, 1911). To the more outlying branches of the Romance group are devoted, for Rhetoromanic, T. Gärtner's *Handbuch der rhätoromanischen Sprache und Literatur* (Halle, 1910), and for Rumanian G. Pascu's *Etimologii românești* (Jassy, 1910).

CELTIC. Celtic studies have flourished less well, owing to the death of two of their leading representatives, Stokes and Strachan. Nevertheless A. Holder continues his monumental *Altceltischer Sprachschatz* at Leipzig, reaching the twentieth fascicle in 1911, while K. Meyer has published *Selections from Ancient Irish Poetry, with Translations* (London, 1911), and a second, posthumous, edition of A. MacBain's *Etymological Dictionary of the Gaelic Language* was issued (Stirling, 1911). In the Slavic group almost the only publication of interest, apart from those already noted, was A. J. Sobolewsky's Russian treatise on the phonology

of Old Church Slavic (Kiev, 1910), and for another family of Indo-Germanic, Albanian, A. Buseti's *Vocabulario italiano-albanese* (2 vols., Scutari, 1911) is to be recorded.

PHILOSOPHY. IDEALISM. Since the revival of the study of Kantianism fifty years ago and the reaction against materialism, philosophy has shown a marked tendency towards an idealistic epistemology and a gradually increasing predilection for a spiritualistic metaphysic. Some thinkers accepted Kant's *Critique of Pure Reason* and busied themselves with the criticism of the principles of knowledge, regarding metaphysics as an expression of man's constructive impulse of little scientific value. Others, following the example of Kant's successors, Fichte, Schelling, and Hegel, also turned their attention to system-building; but common to nearly all the leaders of latter-day philosophy is their relationship with the great German criticist and the schools which grew out of his teachings. We have only to recall the names of prominent philosophers and scientists of our generation in the different countries to understand the preponderance of this influence in recent modern thought: Royce, Ladd, Ormond, Howison, Watson, in America; Green, the Cairds, Bradley, Hodgson, J. Ward, Bosanquet, Huxley, Pearson, Clifford, Maxwell, in England; Hartmann, Wundt, Paulsen, Dilthey, Rickert, Windelband, Eucken, Münsterberg, Cohen, Natorp, Riehl, Schuppe, Rehmknecht, Mach, Ostwald, Hertz, in Germany; Renouvier, Pilon, Fouillée, Secretan, Boutroux, Poincaré, in France; and Mamiani, Barzellotti, Croce, Chiappelli, and Tocco, in Italy.

OPPOSING SCHOOLS. There have always existed alongside of the dominant dynasty, and even within its own household, groups of thinkers who opposed the doctrines of an older idealism in whole or in part—its monism, its rationalism, its intellectualism, its absolutism, or its pantheism—and emphasized factors which the traditional schools neglected or refused to accept. Herbart taught pluralism and realism, and insisted on making philosophy scientific; Schopenhauer introduced voluntarism and pessimism; Lotze sought to reconcile idealism and realism, teleology, and mechanism, pantheism and pluralism; Schleiermacher supported the claims of feeling and faith; the followers of Comte and Mill advocated empiricism and positivism, Spencer evolutionism, Nietzsche individualism and instrumentalism. Nearly all of these men have exercised a beneficial influence, and many of their tenets have been incorporated in idealism. Within recent years, however, the opposition has grown in strength under the leadership of philosophers possessing literary gifts and personal charm who have been able to appeal to wider circles of educated persons, especially in the United States, England, and France—Germany being less affected by the revolution than any other country. Pragmatism, instrumentalism, humanism, positivism, radical or immediate empiricism, psychologism, natural realism, pluralism, voluntarism, irrationalism, intuitionism, mysticism, and evolutionism are some of the labels which have come into use, and the philosophical world to-day is in a state of fermentation. Most prominent in the movement are James, Dewey, Woodbridge, Schiller, B. Russell, G. E. Moore, and Bergson. The interest is intense, the discussion warm, but good-tempered and straightforward. We seem to be passing through a

philosophical renaissance which is characterized by dissatisfaction with the traditional conceptions and a desire to blaze new trails, but is not agreed as to the direction to take. Some of the reformers are seeking to introduce the methods of natural science into philosophy, or to leave to science the construction of our conception of reality; others consider science and conceptual thought utterly incapable of grasping the real. Some are for the suppression of metaphysics, others for its revival; some are for identifying philosophy with epistemology, others reject epistemology as futile and barren; some are pragmatists, others anti-pragmatists; some are realists, others idealists; some are pluralists, some monists—but all are interested in the question of knowledge and its relation to other human activities, in the relation of science and philosophy, and kindred problems. For a number of years the international congresses of philosophy, the two American philosophical associations, the Aristotelian Society of London, and similar bodies in other countries have been debating the "new" issues—the Heidelberg Congress (1908) has been called the "pragmatist" congress—the periodicals are full of articles and discussions advocating and attacking them; and the number of books dealing with them is increasing.

LITERATURE OF THE NEW SCHOOLS. The most striking figures in the reform camp are William James (died 1910) and Henri Bergson. In many articles and books (*Pragmatism*, 1907, *A Pluralistic Universe*, 1909, *The Meaning of Truth*, 1909, *Some Problems of Philosophy*, 1911, *Memories and Studies*, 1911), James vigorously attacked absolute idealism, monism, rationalism, and intellectualism, from the standpoint of a never completely rounded-out system of pluralism, pragmatism, radical empiricism, and voluntarism. Bergson is interested in the larger, human problems: What are we? What are we doing here? Whence do we come and whither do we go? For him consciousness is action that continually creates and multiplies; matter action which continually unmakes itself and wears out; and matter and consciousness have a common source. Philosophy cannot reach mathematical certainty, but must be content with a high degree of probability. Science and logic abstract from the life of reality, give us a corpse instead of a living thing. Philosophy can grasp the life or core of being only by an immediate and simple intuition, a kind of direct feeling. Reason is not a mere instrument, but the source of life and action, and as such embraces feeling and will. Bergson has been called the philosopher of intuition, mysticism, and irrationalism. His books *Time and Free Will*; *Creative Evolution*; and *Laughter, an Essay on the Meaning of the Comic*, have recently been translated into English. The *Hibbert Journal*, October, 1911, contains an interesting article, *Life and Consciousness*, by Bergson, and a criticism of him by Balfour, *Creative Evolution and Philosophic Doubt*. Recent literature on Bergson: Lindsay, *The Philosophy of Bergson*; Stewart, *Critical exposition of Bergson's Philosophy*; Coignet, *De Kant à Bergson*; articles by Dolson (*Phil. Rev.*), Solomon (*Mind*), Perry (*Jour. of Phil.*), Carr (*Proc. Arist. Society*, 1910). Literature on Pragmatism: Royce, *W. James and Other Essays*; Flournoy, *La philosophie de W. James*; B. Russell, *Philosophical Essays*; Boutroux, *W.*

James; Ménard, *Analyse et critique des principes de psychologie de W. James*; Dauriac, *Le pragmatisme et le réalisme*; Positivisme, criticisme, pragmatisme (*Rev. Phil.*); Pères, *Pragmatisme et esthétique* (*Rev. Phil.*); Berthelot, *Un romantisme utilitaire*; Busch, *W. James als Religionsphilosoph*; articles by Lovejoy (*Int. J. of Ethics*), Perry (*Phil. Rev.*), Riley (*J. of Phil.*). Schiller offers a humanistic metaphysics in *Riddles of the Sphinx*, 2d ed. The book of the well-known Kant scholar Vaihinger, *Die Philosophie des Als Ob*, is the most significant German contribution to pragmatism. (Cf. Petzold, *Das Weltproblem vom relativistischen Standpunkte aus*.) Gaultier, *La pensée contemporaine*, and Fouillée, *La pensée et les écoles anti-intellectuellistes*, and Goldstein, *Wandlungen in der Philosophie der Gegenwart*, discuss the new schools. There are interesting accounts of the Bologna Congress (1911) by Creighton (*J. of Phil.*), Rey (*Rev. Phil.*), Ruge (*Zeitschrift f. Phil.*), and Falter (*Kantstudien*). Neo-realism is fully discussed, particularly in American and English journals, in the *Proceedings of the Aristotelian Society*, and in a supplement of *Rev. Met. et Morale*, by S. Alexander, Bode, Dewey, Joseph, Lovejoy, McGilvary, Miller, Perry, B. Russell, Spaulding, Stout, and others. Besides these authors and the idealists mentioned below, Drake, Fullerton, Hicks, Hollands, Montague, G. E. Moore, Nunn, and Wolf have contributed to the discussion in preceding years.

RECENT IDEALISM. Most of the followers of the new philosophy have come under the influence of the great movement that dates back to Kant; and there is no radical difference between many of them and the so-called idealists of recent times. The majority of the latter are not idealists in the old sense of that term, but in the sense of being opposed to materialism and mechanism as a comprehensive world-view; they are not subjectivists, phenomenologists, apriorists, and intellectualists; for them "the laws of knowledge, like the norms of the world of values, of morality, and art, do not constitute a principle foreign to the laws of nature" (Chiappelli), indeed, the subjective and objective sides of experience complete each other; experience is an organic whole which it is our business to resolve into its logical co-efficients. All this is particularly true of the younger generation of idealists, of Albee, Bakewell, Baillie, Bauch, Creighton, Gaultier, Hibben, Hicks, Messer, Rey, A. Rogers, Stout, and many others; it is likewise true, in the main, of the idealists already mentioned.

METAPHYSICS. With the exception of the translations of Bergson's works and of James's *Problems of Philosophy* nothing of importance has come from the new schools in the way of theories of the universe. The German and French translations of the Italian Enriques's *Problems of Science*, 2 vols., are interesting as representing the views of a modern scientist with pragmatic leanings. German idealistic thought is represented in a collection of twenty essays on philosophy and religion entitled *Weltanschauung* by Dilthey (died 1911), the biologist, Driesch, Adickes, Schwarz, Natorp, Simmel, Deussen, Troeltsch, Kaftan, and others; and in a new book by Eucken, *Können wir noch Christen sein?* A translation of Eucken's *Grundlinien einer neuen Lebensanschauung* has appeared under the title, *Life's Basis and Life's Ideal*. McDougall's *Body and Mind* and Becher's *Gehirn*

und Seele are important. Other books are: Windelband, *Präudien*, 2 vols. 4th ed., Heymans, *Einführung in die Metaphysik*; Natorp, *Philosophie*; Simmel, *Hauptprobleme der Philosophie*; Eleutheropulos, *Philosophie*; Kirn, *Weltanschauungen u. Welterkenntnis*; Kinkel, *Idealismus u. Realismus*; Tari, *Saggi di estetica e metafisica*; Becker, *Die moderne Weltanschauung*; J. Cohn, *Führende Denker*; Wobbermin, *Monismus u. Monotheismus*; Underhill, *Mysticism*; Bubnoff, *Zeitlichkeit u. Zeitlosigkeit*; Le Dantée, *Le chaos et l'harmonie universelle*; Dickinson, *Religion and Immortality*; Keyserling, *Unsterblichkeit*; Björklund, *Death and Resurrection*; Bowne, *Essence of Religion*. Interesting to the philosopher are: König, *Die Materie*; Ostwald, *Natural Philosophy*; Bernard, *Some Neglected Factors in Evolution*; Cuénot, *La genèse des espèces animales*; Rignano, *Inheritance of Acquired Characters*; Punnett, *Mendelism*, 3d ed.; Ségond, *Cournot et la psychologie vitaliste*; E. S. Russell, *Vitalism in Rivista di Scienza*, April, 1911; papers of Lovejoy on *Vitalism in Science*; also Rehmkne, *Das Bewusstsein*; Bohn, *La nouvelle psychologie animale*; Pickler, *Biologische Funktion des Bewusstseins*; Piéron, *L'évolution de la mémoire*; Dessoir, *Geschichte der Psychologie*; Klemm, *Geschichte d. Psychologie*; Villa, *Psicologia contemporanea*, 2d. ed.

LOGIC AND THEORY OF KNOWLEDGE. The literature in this field is as usual comprehensive and specialistic; indeed, the problem of knowledge remains the central one in modern philosophy. Besides the contributions already noticed under the new schools, we mention: Sigwart, *Logik*, 4th ed.; Höffding, *Der menschliche Gedanke*; La pensée humaine; Hodgson, *Some Cardinal Points in Knowledge*; Boodin, *Truth and Reality*; Leser, *Erkenntnistheorie*; Nelson, *Unmöglichkeit d. Erkenntnistheorie*; Lask, *Die Logik der Philosophie u. die Kategorielehre*; Losacco, *Razionalismo e misticismo*; Aars, *Die Idee zum Ursprung des Gedankens*; E. Jones, *A New Law of Thought*; Lomer, *The Concept of Method*; Brown, *The Judgment of Difference*; Couturat and others, *Weltsprache u. Wissenschaft*.

HISTORICAL. Cassirer, *Das Erkenntnisproblem in der Philosophie u. Wissenschaft der neuern Zeit*; Heim, *Das Gewissensproblem in der systematischen Theologie*; Reiniger, *Philosophie des Erkennens* (from Descartes to Kant); Christiansen, *Kritik der Kantischen Erkenntnislehre*; Gross, *Form u. Materie des Erkennens in der trans. Aesthetik*; Pohorilles, *Erkenntnistheorie E. v. Hartmanns*; Ehrenberg, *Die Parteilung der Philosophie* (against Hegel and Kantians).

LOGIC OF THE SCIENCES. Bauch, *Studien zur Philosophie der exakten Wissenschaften*; Natorp, *Die logischen Grundlagen der exakten Wissenschaften*; De la méthode dans les sciences, 2 vols., by many authors; Winter, *La méthode dans la philosophie des mathématiques*; Whitehead and Russell, *Principia Mathematica*; Young, *Lectures on Fundamental Concepts of Algebra and Geometry*; Dingler, *Grundlagen der angewandten Geometrie*; Jourdan, *On the Theory of the Infinite in Modern Thought*; Sattel, *Begriff u. Ursprung der Naturgesetze*; Glahn, *Unser Körper als Grundlage des Naturerkenntnis*; Cohn, *Physikalisches über Raum u. Zeit*; Müller, *Problem des absoluten Raumes*; Sterzinger, *Logik u. Naturphilosophie der Wahrscheinlichkeitslehre*.

ETHICS. THEORIES AND SPECIAL PROBLEMS. Hastings, *Encyclopedia of Religion and Ethics*, vol. III; Sorley, *The Moral Life and Moral Worth*; Bosanquet, *Individuality and Destiny*; *Individuality and Value*; Russell, B., *Philosophical Essays*; Goldscheid, *Höherentwicklung u. Menschenökonomie*; Stern, *Monistische Ethik*; Dürr, *Das Gute u. das Sittliche*; Müller-Lyer, *Der Sinn des Lebens*; Croce, *Philosophie ae la pratique* (trans.); Rauh, *Etudes de morale*; de Gaste, *Essai d'un code moral basé sur la science*; Gonzales Pinillos, *Etica*; Morselli, *Il fondamento dell'idealismo etico*; Mausbach, *Katholische Moral u. ihre Gegner*; Le Dantec, *L'égoïsme*; Dorner, *Pessimismus*; Benai, *Il genio etico ed alti saggi*; Temple, *Nature of Personality*; Hamillon, *Depersonalisation*; Dugas and Moutier, *La depersonalisation*; Surlbied, *La volonté*; Rehmkne, *Die Willensfreiheit*; Messer, *Das Problem der Willensfreiheit*; Bennett, *Justice and Happiness*; Jeudon, *La morale d'honneur*; Dromard, *Essai sur la sincérité*; Rogues de Fursac, *L'avarice*; van Buiasael, *Le mal et ses origines*; Schroeder, *Psychology of Conduct*; Barrett, *Motire-Force and Motiration-Tracts*; Michotte et Prüm, *Etude expérimentale sur le choix volontaire*; Bligh, *The Direction of Desire*; Mercier, *Conduct and its Disorders Biologically Considered*.

HISTORY OF ETHICS AND ETHICAL IDEALS. Rogers, R., *Short History of Ethics*; Rand, *Classical Moralists* (selections from moralists); Wundt, *Geschichte der griechischen Ethik*, vol. II; Wundt, *Griechische Weltanschauung*; Martin, *Great Religious Teachers of the East*; Delbos, *La philosophie pratique de Kant*; Hudson, *The Treatment of Personality in Locke, Berkeley, and Hume*; Goetz, *Geschichte u. Kulturgeschichte*; Simmel, *Philosophische Kultur*; Delvaile, *Essai sur l'histoire d'idée de progrès*; Majewski, *La théorie de l'homme et de la civilisation*; Wehnert, *Jesu Diesseitsreligion*; Lahy, *La morale de Jésus*; Davis, *Influence of Wealth on Imperial Rome*; Thudichum, *Geschichte des Eides*.

LEGAL ETHICS. Barillari, *Diritto e filosofia*; Rolin, *Prolegomenes à la science du droit*; Dallari, *Il nuovo contrulismo*; Lévi, *La société et l'ordre juridique*; Joly, *Problèmes de la science criminelle*; García-López, *Questions pénales de délit*; Dubuisson and Vigouroux, *Responsabilité pénale et folie*; Mercier, *Crime and Insanity*; Falter, *Die Staatsideale unserer Klassiker*; Wilson, R., *Province of the State*.

SOCIAL PHILOSOPHY. McCunn, *The Ethics of Social Work*; Jones, H., *The Working Faith of a Social Reformer*; Worms, *La solidarité sociale*; Deploige, *Du conflit de la morale et de la sociologie*; Baldwin, *The Individual and Society, or Psychology and Sociology*; Bernard, *Transition to an Objective Standard of Social Control*; Fouillée, *La démocratie politique et sociale en France*; Papers on *Inter-racial Problems*, ed. by Spiller; Simmel, *Soziologie*; Granger, *Historical Sociology*; Crozier, *Sociology applied to Practical Politics*; Margarita, *Le problème social*; Skelton, *Socialism*; Wundt, W., *Probleme der Völkerpsychologie*; Ruta, *Le psiche sociale*; Goldscheid, *Grundlegung der Sozialbiologie*; Mantagrin, *La psychologie sociale de Tarde*; Dupont, *Tarde et l'économie politique*; Vorländer, *Kant u. Marx*; Plenge, *Marx u. Hegel*; Perego, *L'individualismo etico di Fichte et il socialismo contemporanea*; Vis-

scher, *Religion u. sociales Leben bei den Naturvölkern*; Vernes, *Histoire sociale des religions*; Goldenweiser, *Totemism*; Avebury, *Marriage, Totemism, and Religion*.

MORAL EDUCATION. Paulsen, *Pädagogik*; Roenrich, *Philosophie de l'éducation*; Delvolvé, *Rationalisme et tradition: recherches des conditions d'efficacité d'une morale laïque*; Dubois, *Le problème pédagogique*; Gillet, *La valeur éducative de la morale catholique*; Siason, *Essentials of Character*; Welton, *Psychology of Education*; Lévy-Alvarez, *L'éducation des femmes*; Rakic, *Die Erziehung durch Spiel und Kunst*.

HISTORY OF PHILOSOPHY. Vörländer, *Geschichte der Philosophie*; Bonilla y San Martín, *Historia de la filosofía española*; Deussen, *Die Philosophie der Griechen*; Taylor, A. E., *Varia Socratica*; Marck, *Die platonische Ideenlehre*; Adam, *The Vitality of Platonism and Other Essays*; Brentano, F., *Aristoteles u. seine Weltanschauung*; Kinkel, *Die sozial-ökonomische Grundlage der Staats- u. Wirtschaftslehre des Aristoteles*; Taylor, A. E., *Epicurus*; Pascal, C., *Epicurei mystici*; Schmidt, *Epikurs Philosophie der Lebensfreude*; Arnold, *Roman Stoicism*; Bonhöffer, *Epiktet u. das neue Testament*; Schultz, *Dokumente der Gnosis*; de Wulf, *History of Medieval Philosophy* (trans.); Grabmann, *Geschichte d. scholastischen Methode*, vol. II.; Baumker, *Beiträge zur Geschichte der mittelalterlichen Philosophie*; Verweyen, *Philosophie u. Theologie im Mittelalter*; Mandonnet, *Siger de Brabant*; Picavet, *Roscelin*; Rousselot, *L'intellectualisme de St. Thomas*; Wagner, *Das natürliche Sittengesetz nach St. Thomas*; Croce, *La filosofia de G. Vico*; Sichel, *Montaigne*; Heimsoeth, *Die Methode der Erkenntnis bei Descartes u. Leibniz*; Picton, *Spinoza*; Schmitt, E., *Die unendlichen Modi bei Spinoza*; Adelpia, *De la souveraineté dans la politique de Spinoza*; Davillé, *Leibniz historien*; Lindau, *Die Theodicee im 18. Jahrhundert*; Unger, *Hamann u. die Aufklärung*; Bauch, I., *Kant*; Menzer, *Kants Lehre von der Entwicklung*; Guttmann, *Kants Lehre v. d. objektiven Erkenntnis*; Wernicke, *Kants kritischer Werdegang*; Israel, *Auflösung der Widerspruchslehre Kants*; Adickes, *Kants Philosophie*; Hammacher, *Die Bedeutung Hegels Geographie*; Mechler, *Erkenntnislehre bei Fries*; Metzger, *Die Epochen der Schellingschen Philosophie*; Hammacher, *Die Bedeutung Hegel's für die Gegenwart*; Archambault, *Hegel*; Pasquale, *Saggio panlogica*; Ambrosi, *Lotze*; Dupuy, *Le positivisme d' A. Comte*; Ruyssen, *Schopenhauer*; Mendelsohn-Bartholdy, *Taine, Sein Leben in Briefen*; Friedländer, *Nietzsche*; Barbat, *Nietzsche*; Richter, R., *Nietzsche*; Richter, C., *Nietzsche*; Buzello, *Maechs Erkenntnistheorie*; Fritsch, *Paulsens phil. Standpunkt*; Bockwitz, *Gourds phil. System*; Kesseler, *Euckens Werk*.

DICTIONARIES, NEW EDITIONS, TRANSLATIONS, ETC. Eisler, *Philosophen-Leikon*; Aster and others, *Grosse Denker*, 2 vols.; Mauthner, *Wörterbuch der Philosophie*; Kirchner, *Wörterbuch der philosophischen Grundbegriffe* (ed. by Michaelis); Baldwin's *Dictionary*; Ruge, *Philosophie d. Gegenwart* (bibliography). Works of Aristotle, trans. by Dowdall and Platt; Jamblichus, *Theurgia*, trans. by Wilder; Writings by Roger Bacon, ed. by Steele, and by Rashdall and Little; Works of Tauler, trans. into French by Noel; Telesio, *De Rerum Natura*; Descartes, trans. by Haldane and Ross, vol. I; Spinoza,

Short Treatise, trans. by Wolf; new ed. of Cournot's *Traité*; Kant's Works, vol. XIV and vol. I of manuscripts, published by Berlin Academy; Kant's *Critique of Aesthetic Judgment*, trans. by Meredith; new ed. of Schulze, *Änesidemus, Kantgesellschaft*; new ed. of W. v. Humboldt (selected), Fichte, Schelling, Hegel, Schleiermacher, Krause, Schopenhauer; Hegel, *Phenomenology of Mind*, trans. by Baillie; Hegel, *Philosophie des Rechts*, ed. by Lasson; Wundt's *Kleine Schriften*, vol. II.

PHILIPPS, Sir EDMUND HENRY CONSTANTINE. A British diplomat, died March 15, 1911. He was born in 1840 and was educated at Harrow. He entered the diplomatic service at an early age and in 1858 was appointed attaché to Berlin. He was transferred in rapid succession to Naples, Brussels, and Stuttgart. In 1863 he became a third secretary. He held appointments in various continental cities and in Washington and South America. He was appointed consul-general for the Kingdom of Hungary with the rank of secretary of legation. He was promoted to be secretary of the embassy at Vienna in 1885 and in 1892 was transferred to Paris and was later appointed one of the British commissioners of the Anglo-French commission for the delimitation of the British and French spheres of influence in the neighborhood of the Niger, and assisted in concluding the Sierra Leone and Gold Coast delimitation treaties. In 1894 he was promoted to be minister to Brazil. He was transferred to Brussels as minister in 1900 and held that position until the time of his death. In 1902 he was made a G. C. M. G.

PHOSPHATES. See FERTILIZERS.

PHOSPHOROUS. See CHEMISTRY.

PHOSPHOROUS POISONING. See OCCUPATIONAL DISEASES.

PHOTOTHERAPY. RÖNTGEN RAYS. Several new uses for the X-ray were found during 1911. Edling was able to diagnose pregnancy by this means. He obtained radiographs of the fetus as early as the beginning of the third month of pregnancy. Multiple gestation and abnormal position, and malformations can be readily recognized and intra-uterine pregnancies are detected at an early date.

Radiography was also used as a means of ascertaining whether or not an infant has lived. The means of medicolegal investigation to ascertain if a child has lived or not have been hitherto rather unsatisfactory. According to Baillant, radiography offers a means of determining this point. If the fetus has not lived none of the internal organs is visible, even if the radiograph is taken after the eighth day in summer and the fifteenth day in winter. Later on the whole arterial and venous system becomes visible on the negative, because putrefaction begins in the organs which functionate during intra-uterine life. On the other hand, in the bodies of infants which have lived, all the organs are visible if radiography is used as late as the tenth day after death. The only perceptible modification is produced by the increase of gas in the abdominal organs. There is no room for error in the interpretation of the results of radiography, whether it is used immediately after birth or later, because in either instance the results are different in the case of an infant which has lived from those in a fetus which has not lived.

Friedländer believes that the Röntgen ray is

valuable in the treatment of the enlarged thymus gland. He found that in cases of status lymphaticus, he could not only reduce the size of the thymus gland, but by exposing only the region of the thymus to the action of the X-ray, he could cause diminution in the size of the spleen and other lymph-nodes and could bring about a normal condition of the blood. One case treated six years ago showed no recurrence of the disease.

RADIUM. Haret introduced a new method of using radium and securing a greater penetration into the deep tissues. The procedure consists in employing electrolysis to make the radium, under the form of ions, penetrate through the skin into the cellular elements of pathological tissues. By this method a positive electrode, composed of a compress saturated with a dilute solution of radium bromide, is applied over the diseased region. Through this is passed an electric current of ten milliamperes for thirty minutes. Haret's researches have shown that electrolysis causes the radium ions to penetrate through the unbroken skin into the underlying tissues, muscle, periosteum, and bone, and that it reaches a depth of at least $3\frac{1}{2}$ inches, accumulates there in heavy doses, and remains for more than fifteen days without injury to the healthy cellular elements. Haret has applied this method in the treatment of ten cases of malignant neoplasms, the most important of which was a large sarcoma of the shoulder-blade in a young woman of 27. This sarcoma, after having diminished considerably in volume under the influence of Röntgen rays, remained stationary; but after several treatments with the radium, introduced by electrolysis, the tumor diminished and finally disappeared completely, together with the pains of which the patient had complained.

ULTRA-VIOLET RAYS. The germicidal action of light, particularly the ultra-violet rays, has long been known. One of the latest applications of this knowledge is the exposure of polluted water to the ultraviolet rays from a quartz-tube mercury-arc lamp of the "Westinghouse-silica" type. The method is based on experiments carried out in Paris in the Sorbonne laboratories. Its bactericidal action has been shown by many tests on water containing large numbers of *Bacillus coli* and other microorganisms. The apparatus consists of a trough or box provided with baffle plates through which the water is run in close proximity to the sterilizing lamps. It is necessary to clear a turbid water before treatment to insure penetration of the rays. An ultra-violet ray plant has recently been installed, as the result of competitive tests, at Marseilles, France, a city long scourged with typhoid fever. The cost of this mode of sterilization is said to compare favorably with that of the ozone process.

PHYSICS. It was not many years ago that a noted physicist stated that progress in physics from that time on could consist only in redetermining the values of the various physical constants with increased accuracy. Since that statement was made, the entire subject of radioactivity has been opened and the theory of relativity has been developed. This illustrates the difficulty confronting the man who attempts to review the progress of a science without the perspective which can come only from the several succeeding years. Since the year 1911 has been marked by no great epoch-making dis-

coveries, but rather by the enlargement and development of work started in previous years, a brief review of the chief results achieved in the past few years will be given in connection with the various topics.

RELATIVITY. To reconcile the negative results of the classic Michelson and Morley experiment with a theory of the ether which would account for the aberration of light, has long taxed the ingenuity of the leaders in theoretical physics. The explanation of this discrepancy by the Lorentz-Fitzgerald shortening, though suggestive, did not, for various reasons, seem altogether satisfactory. In 1905 Einstein published a paper in which he formulated a general theory of electromagnetic phenomena, some of the consequences of which seemed to furnish the desired explanation. This theory was elaborated in several subsequent papers.

As ordinarily stated there are two postulates in this theory. The first states that it is impossible by means of any phenomena which may be observed entirely within a moving system to detect any motion of that system as a whole relative to any set of axes fixed independent of the system. It follows from this that motion with respect to the ether, or in fact any motion except relative motion of two portions of matter, is meaningless. This at once explains the discrepancy in the old theory made evident by the results of the Michelson and Morley experiment.

The second postulate of this theory states that the velocity of the light emitted by a source in motion is independent of the velocity of that motion. Thus far this postulate has not been put to the test of direct experiment, though Comstock at the December, 1911, meeting of the American Physical Society called attention to certain astronomical phenomena which confirm it. An actual laboratory test would involve many experimental difficulties, but one or two crucial experiments have been recently suggested and we may hope for some data bearing on this within the next few years.

Since this theory was first suggested, many physicists have been engaged in applying it to various mechanical and electromagnetic problems. The relativity principle leads to the same shortening of matter in motion as that suggested by Fitzgerald and by Lorentz. It further leads to differences in time ("local time") as measured in stationary and moving systems. The dependence of the mass upon the energy associated with it is a striking consequence of this theory. Though the mechanics of very rapidly moving bodies is thus made more complicated, the treatment of electromagnetic phenomena is decidedly simplified, since the electromagnetic equations for stationary and moving systems are identical in form.

The work of the past year or two has been an elaboration of these revolutionary conceptions. Papers have been published in large numbers and almost every meeting of an organization of physicists has been enlivened by discussions on relativity. The bearings of this subject on the theory of elasticity (including the definition of a rigid body), the kinetic theory of gases, and the theories of radiation, have received particular attention.

LIGHT QUANTUM HYPOTHESIS. The "light bundle" hypothesis was first suggested something like a decade ago in the deduction of Planck's radiation law. Since then the importance of such an hypothesis has become increas-

ingly evident in all branches of theoretical physics. Not only the theory of light, but also the theoretical treatment of such questions as specific heat, conduction of heat and electricity in metals, photo-electric effect, and many other phenomena of molecular physics emphasize the importance of the conception of discrete units of energy. The bearings of this theory along many lines have been the subject of much discussion, but as yet this has not been productive of any definite conclusions that have commanded universal acceptance.

RADIO-ACTIVITY. While the large amount of painstaking work of the past few years on this subject has not been rewarded with such striking results as in the infancy of the science, it has done much to clarify our views of the actual processes involved in radio-active transformations and to increase and correct our numerical data concerning them.

As early as 1902 it was suggested by Rutherford and Soddy that helium might be one of the products of the disintegration of radio-active substances. In the following year Ramsay and Soddy succeeded in detecting by spectroscopic methods the presence of helium as one of the products of radium. Somewhat later it was suggested by Rutherford that the production of helium was intimately connected with the emission of α particles. The determination by Rutherford and Geiger of the number of α particles and the charge associated with a single α particle (see 1908 YEAR BOOK), together with the known value of $\frac{e}{m}$ for an α particle, enabled them to calculate its mass. Assuming that each α particle carried a positive charge twice as great as the negative charge of an electron, they found that its mass was approximately equal to the atomic mass of helium. The following year Rutherford and Royds separated the α particles from the other products of a number of radio-active substances. In each case the gas in the chamber in which the α particles were collected showed the characteristic helium spectrum. As calculated by Rutherford and Geiger, one gram of radium in equilibrium with its radio-active products should give out 13.6×10^{10} α particles per second. At standard conditions, this is equivalent to 158 cubic millimeters (approximately 0.01 cubic inch) of helium per year. The direct determination of this quantity by Sir James Dewar (1910) gave somewhat higher results. During the past year, Boltwood and Rutherford have made two determinations of the amount of helium produced by radium. The results agree with each other within 3 per cent.; their mean value is 156 cubic millimeters per year. This very close agreement with the calculations of Rutherford and Geiger, made three years earlier from entirely independent data, is very strong evidence of the truth of the theory of radio-activity in its present form, and of the accuracy of the measurement of its fundamental constants. Similar measurements of the amount of helium produced by radium emanation, radio-lead, and polonium were attempted. Owing to experimental difficulties, the results obtained were not so reliable as in the preceding work, but in general they agreed with it within the range of experimental error.

In the 1910 YEAR BOOK mention was made of the proposal of the Brussels Congress of Radiology and Electricity to establish definite stan-

dards of radio-activity. This work of Rutherford and Boltwood emphasizes the need of such standards, as a recalculation of Dewar's results from corrected values of his radium standard cut down by half the deviation of his results from the calculated values. Owing to the method used, the results of Rutherford and Boltwood are independent of the radium standard employed.

Owing to the rapid growth of the science of radio-activity, and to the number of investigators, it is natural that the nomenclature is in some cases inconsistent and misleading. The need of a thorough revision of the whole question was recognized by the Brussels Congress. It was but fitting that this very important work should have been undertaken by the man who has contributed more to the advancement of our knowledge along this line than has any of his contemporaries. Working with Geiger, Rutherford reviewed the results of a number of careful investigators on certain very short-lived radio-active products. These included the work of Geiger and Marsden—published early in 1910—which showed that either actinium emanation produces two α particles at a single disintegration or that there must be a very short-lived intermediate product. The maximum for the half-value period of this product was shown to be less than $1/10$ of a second. Early in 1911 Geiger demonstrated the existence of this short-lived product and found that its half-value period was approximately $1/500$ of a second. Geiger and Marsden also showed the existence of a similar short-lived product in the case of thorium emanation. Here the period for decay to half-value was about $1/5$ of a second. In both cases the short-lived product, which was found to have a positive charge, was isolated by the application of an electric field. These products were also studied by Mosley and Fajans with an apparatus especially adapted to the observation of such rapidly decaying products. Although the comparison of these results with those of former investigators did not clear up all the difficulties, they nevertheless aided greatly in the revision, along uniform and comprehensive lines, of the nomenclature of the various radio-active substances. The conclusions reached by Rutherford and Geiger are given in the following table.

URANIUM-RADIUM SERIES

Substance	Half-Value Period	Character of Radiation
Uranium	4.6×10^9 years	α [2.72]
Uranium X	21.8 days	β, γ
Ionium	104 years (possibly longer)	α [3.00]
Radium	1760 years	α, β [3.30]
Radium Emanation	3.86 days	α [4.23]
Radium A	3.0 minutes	α [4.83]
Radium B	26.7 minutes	soft β rays
Radium C	$\left\{ \begin{array}{l} C_1, 19.6 \text{ minutes} \\ C_2, 1.38 \text{ minutes} \end{array} \right.$	α [7.06]
Radium D		soft β rays

THORIUM SERIES

Substance	Half-Value Period	Character of Radiation
Thorium	3x10 ¹⁰ year	α [2.72]
Thorium 1.	5.5 years	α
Thorium 2		α
Meso-thorium	0.2 hours	β, γ
Thorium 3		α
Radio-thorium	730 days	[3.9]
Thorium X.	3.71 days	α [5.7]
Thorium		α
Emanation	53 seconds	[5.5]
Thorium A	0.14 second	α
Thorium B	10.6 second	soft β rays
Thorium C	C ₁ 55 minutes	α [5.0]
	C ₂ few seconds	α [8.6]
Thorium D	3.1 minutes	β, γ

ACTINIUM SERIES

Substance	Half-Value Period	Character of Radiation
Actinium	?	?
Radio-actinium	19.5 days	α, β [4.8]
Actinium X	10 days	α [6.55]
Actinium		α
Emanation	3.9 seconds	[5.7]
Actinium A	0.002 seconds	α [6.5]
Actinium B	36 minutes	soft β rays
Actinium C	2.1s minutes	α [5.4]
Actinium D	4.71 minutes	β, γ

Where α rays appear the number in brackets gives the range in air in centimeters.

The particular value of this revision of terminology lies in the analogies between the correspondingly named products. For example, the "A-products" of radium, thorium, and actinium are all short-lived and all emit α rays, while the "B-products" and the "D-products" emit only β or β and γ rays. The "C-products" are seen to be quite complicated and more investigation is needed to clear up their real nature.

Besides these two very important advances in radio-activity, each of which is in a sense a summing up of much work which has accumulated in the past few years, a number of important investigations have added to our general stock of data in this field. Thus, Geiger and Nuttall have found that certain relations exist between the ranges of the α particles and the half-value periods of the emitting substances. In general the α particles of longest range were found to come from the most rapidly decaying products. It has often been noted that α particles of range less than 2.58 cm. have never been observed. In the light of these results, this fact may be explained on the theory that a shorter range would correspond to such an excessively slow production of the α particles that the instruments at present at our command fail to detect them.

R. W. Gray and Sir William Ramsay have

made a careful determination of the density of niton—i. e., radium emanation—using an extremely sensitive balance. From their determination they calculated its atomic weight to be 223. The result deduced on the disintegration theory from the known atomic weight of radium is 222.4. This agreement is further evidence in favor of the disintegration theory.

As far as our experimental knowledge is concerned, there is no evidence that the rate of radio-active transformation is affected in any way by changes in physical or chemical conditions. These changes, however, do not affect the structure of the atom. Since it is known that a strong magnetic field affects the period of vibration of the electrons within the atom, it was suggested that it might also affect the rate of radio-active transformation. However, careful tests made by P. Weiss and Piccard with very strong magnetic fields gave negative results.

In 1909 the very interesting phenomenon of radio-active recoil was observed. (See YEAB Books for 1909 and 1910.) This has proved of great value in the study of certain radio-active phenomena. A notable example of this is the study of the short-lived products of thorium and actinium emanations by Mosley and Fajana, mentioned above. Recently Makower and Russ have observed that a copper reflector scatters a small portion of the recoil atoms from radium A. This is analogous to the scattering of α and β particles by metallic reflectors. In general the recoil atoms seem to be charged and thus act like ionized particles of short range. The work of Franck and Meitner shows that the mobility of the positively charged "rest-atom" is the same as that of the ions of the surrounding gas.

GENERAL ELECTRON THEORY AND DISCHARGE THROUGH GASES. In the 1910 YEAB BOOK the work of Prof. R. A. Millikan on the value of e , the elementary charge, was described at some length. Fuller details of this work have been published during the past year. Since Millikan's results are about 5 per cent. higher than the previously accepted values, his work has been subjected to very careful scrutiny. Among the critics have been F. Ehrenhaft, Przibram, and several other continental investigators. These men worked with metallic particles, which were much smaller than the oil drops used by Millikan. Their results were so discordant and differed so markedly from those obtained by other methods that they were at first led to question the existence of an elementary charge of the order of magnitude usually accepted. It was suggested that the results both of Millikan and of these investigators might be vitiated by the spontaneous movements of the particles known as the "Brownian movements." During the past year Fletcher, one of Millikan's associates, has applied the theory of the Brownian movements developed in 1905 by A. Einstein to the motion of charged particles. This theoretical treatment of the problem showed that the particles studied by Millikan were so large that his results were unaffected by these movements, while the work of Ehrenhaft, Przibram, and others was largely influenced by them. From similar observations Fletcher also determined the value of the charge carried by a gram atom. His results agree with those deduced from the laws of electrolysis.

This method of observing the behavior of a

charged oil drop has also been applied by Millikan to the study of the mechanism of gaseous ionization. He used a number of different ionizing agents such as β and γ rays and hard and soft X-rays. In each case in which the oil drop collided with an ion, the charge communicated to it by the ion was found to be equal to the elementary charge. From this he concluded that, in every case, ionization consists in the separation of a single electron from the neutral gas molecule.

The effects produced upon α and β particles by their passage through thin layers of matter has been recognized for some years as one of the most promising fields for the study of the ultimate structure of the atom. The atom is generally considered as made up of positive and negative charges in electrical equilibrium, but the exact distribution of these charges is still an open question. At the December, 1911, meeting of the American Association for the Advancement of Science, H. A. Wilson presented a paper in which he summarized three different theories that have been suggested by various investigators. Each one of these theories is supported by some experimental evidence, but each seems to fail in some particulars. One of these conceptions considers the atom as a sort of planetary system, consisting of a central positive charge surrounded by a number of electrons. The second is a modified form of this in which there are several positive charges instead of a single one. In the third theory, the positive electricity is pictured as a sphere of uniform density in which the electrons are imbedded.

On the last two of these theories J. J. Thomson has considered mathematically the deviations experienced by β rays in passing through matter. On comparing his results with those obtained by Crowther experimentally, he was led to adopt the third theory as the more plausible. The results of Crowther seem to indicate that the number of electrons in the atom is about three times the atomic weight. Following the same theory along somewhat different lines, Wilson has calculated, from the arrangement of the metals in the periodic system, that the number of electrons in the atom should be about eight times the atomic weight. In May, 1911, Rutherford published a paper in which he showed that the first hypothesis—that is, that of the simple planetary system—would satisfy the conditions imposed by the results of experiment if the radius of the positive charge was assumed to be about $1/300$ that of the atom. We may expect a large amount of investigation along this line in the near future.

Until 1910 Rutherford's theory that the velocity of an α particle at any point of its path is proportional to the square root of its remaining ionizing range was unquestioned. In that year Geiger showed that the velocity is proportional to the cube root of the range. These results have been confirmed during the present year by the work of T. S. Taylor on the ionization produced in a number of gases by the α particles from polonium. Taylor also found that the energy required to produce a single ion in the gases whose molecules were heavy and complex was less than that required in the case of the lighter and more simple gases. This indicates that in the latter the electrons are held in a more stable configuration.

By an ingenious adaptation of his famous

"cloud method" of showing ionization, C. T. R. Wilson has photographed the path of the radiation which produces ionization in a gas. In the case of α and β rays, these paths were found to be continuous, indicating a continuous production of ions. In the case of X-rays, however, these paths of ionization were found to be discontinuous, the parts showing ionization being very short in comparison with the remaining portions. These results agree with the theory suggested by Bragg, namely that ionization by X-rays is in reality due to the production of secondary β or cathode rays.

Though the canal rays (positive rays) have been known for a number of years, it is only within the last two or three that they have been made the subject of detailed study. J. J. Thomson has recently published two articles which deal with them. He finds that they naturally divide into three classes. In the first class are rays that are undeflected by either a magnetic or an electric field; this indicates that they consist of uncharged particles. There is a second class which he calls "secondary positive rays." These rays carry a positive charge and move with an approximately constant velocity. Further experiment has shown that there is a very close connection between the rays of the first class and those of the second, and probably one set of rays is the cause of the other. The third class consists of rays whose character is determined by the nature of the residual gas in the discharge tube. The mass of these moving particles is proportional to the atomic weight of the gas and their velocity depends upon the total difference of potential between the electrodes. From the values of e/m it has been shown that the particles making up these rays are really atoms or molecules of the residual gases. In some cases single atoms carrying double charges have been found, while in other cases each molecule is found to carry a single charge. In some cases, also, negatively charged particles have been found. Their presence supports the view that some of the rays are due to impacts between uncharged molecules and the rapidly moving particles. The positive rays from a hot lime cathode have been investigated by C. T. Knipp. By accelerating these by an electrostatic field, their energy was increased to such an extent that they were capable of affecting a photographic plate, and this method was used to study them. Knipp's paper is in the nature of a preliminary report, and in general his results are similar to those obtained by Thomson.

It is a well-known fact that when a beam of X-rays falls upon the surface of a metal, secondary X-rays are given off. The results obtained by several investigators, notable among whom are Barkla and Sadler, indicate that this secondary radiation may be divided into two parts. One part consists of rays whose character is similar to that of the incident beam and independent of the character of the metallic surface. During the past year it has been shown by Barkla and Ayers that this part of the radiation is polarized and that its intensity is greatest in the direction of the primary beam. These results are in accord with the electromagnetic theory of the nature of X-rays. From analogy with the scattering of light by small particles, this part of the secondary beam has been called the "scattered" radiation. The character of the other part of the secondary

beam is determined by the nature of the metal upon which the primary beam falls. This part is homogeneous as regards penetrating power, and this power is always less than that of the primary beam. The distribution of this radiation is uniform and independent of the direction or polarization of the incident beam. The emission of these rays is accompanied by a special absorption of the primary beam. From analogy with the corresponding phenomena in optics, this part of the secondary radiation has been called "fluorescent" X-radiation. The work of Sadler shows that the emission of secondary X-rays is accompanied by the emission of electrons. Some characteristics of this corpuscular emission are analogous to those of the well-known photo-electric effect.

In previous investigations of the photo-electric effect, contradictory results have often been obtained, some investigators finding that the effect increased with increasing wave length, and others finding that it decreased. Pohl and Pringsheim have made a careful study of the effect in amalgams of the alkali metals, and from their results have suggested a seemingly satisfactory explanation. They find that the normal photo-electric effect decreases with increasing wave length. In addition to this, however, there is a selective effect which is characteristic of the metal. If the incident beam is polarized, this selective effect occurs only when the electric vector lies in the plane of incidence. On the assumption that the electrons in the metal describe elliptical orbits about positively charged centres, Lindemann has calculated the wave lengths of the beams producing this selective effect in the different alkali metals. His calculations are based upon constants of the metals determined by means entirely independent of the photo-electric effect, and his results agree with remarkable accuracy with those determined experimentally.

The cause of the "after glow" in a discharge tube has been investigated by R. J. Strutt. He found that the yellow "after glow" in a tube containing air is due to the formation of nitric oxide and ozone and the subsequent phosphorescent combustion of the nitric oxide by the ozone. He also found that ozone would cause phosphorescent combustion of other substances such as sulphur and iodine. An "after glow" has also been observed when a heavy discharge takes place in pure nitrogen. The character of this glow is not affected by the action of a strong electric field, but its intensity is decreased by heating and increased by cooling. It is probable that the gas molecules have been dissociated in the discharge, and that the after glow accompanies their recombination. This chemical change is accompanied by extremely great ionization of the glowing gas, as is shown by the fact that its electrical conductivity is very high. This "active" nitrogen is found to react strongly with many substances with which nitrogen does not react in the ordinary form. The rate of decay of the phosphorescence in the electrodeless discharge in various gases has been studied by C. C. Trowbridge. His results indicate that the "after glow" is of the same nature as the phosphorescence of solids.

LIGHT For a number of years there has been a determined effort to bridge the gap existing between the shortest electric waves on the one hand and the longest heat waves of the infra-red spectrum on the other. There has been little

definite progress in the isolation of the extremely short electric waves of late and at present two millimeters is about the limit that has been reached. However, the past two years have witnessed great progress in the line of isolating and detecting the long infra-red waves. By the method of selective reflection, Rubens and Hollnagel succeeded in reaching wave lengths of about $100\ \mu$ (0.1 millimeter). See 1910 YEAR BOOK.

Late in 1910 a new method for the isolation of long heat waves was developed by Rubens and Wood. This consisted essentially in applying the method of chromatic aberration. By the use of a large quartz lens, waves of different lengths were brought to foci separated from each other by appreciable distances. A diaphragm with a small aperture placed at the focus of any desired wave length would then cut off most of the other radiation. The fact that quartz has a strong absorption band in the neighborhood of $60\ \mu$ to $80\ \mu$ was a great aid in purifying the remaining beam.

Early in 1911, by combining this method with that of selective reflection, Rubens made still further progress. He found that after the radiation from a Welsbach lamp was reflected from two calc spar surfaces and was then passed through two quartz lenses, a fairly homogeneous beam remained. This beam was analyzed by means of a quartz interferometer and was found to consist of a strong component of wave length $93\ \mu$ and a weaker component whose wave length was $116\ \mu$.

Rubens and von Baeyer next applied the quartz lens apparatus to the analysis of the radiation from the mercury arc inclosed in a quartz tube. In this way they obtained a beam whose mean wave length was $313\ \mu$. A study of the transparency of various common substances for these very long waves yielded some surprising results. Quartz, fluorite, and rock salt, which have strong absorption bands below $100\ \mu$, as well as paraffin, black cardboard, amber, and water, were found to be very transparent. Later improvements in their apparatus enabled them to separate this radiation into two wave lengths, $218\ \mu$ and $343\ \mu$. The isolation of heat waves of over $1/3$ of a millimeter ($1/75$ of an inch) wave length is certainly a remarkable achievement.

Du Bois and Rubens have used these long infra-red rays in studying the peculiar polarizing effect of very fine wire gratings. It has been shown both theoretically and experimentally by earlier investigators that when the grating space is small in comparison with the wave length, the transmitted radiation is polarized so that the electric vector is parallel to the grating slit, and that if the grating space is large compared to the wave length, the electric vector is perpendicular to the grating slit. By placing the grating at an angle to the incident beam, Du Bois and Rubens were able to vary the effective width of the grating space. In this way they were able to show the continuous transition from the polarization in one direction to that at right angles to it.

During the past few years Wood has devoted considerable attention to the fluorescence of sodium and iodine vapors. In his work on sodium vapor he showed that when this is illuminated by monochromatic light, the excited fluorescence consists of bands nearly equally spaced as regards wave length. These bands

he called "resonance spectra." His theory of this effect suggested that a similar result should be expected in the spectrum of iodine vapor, and very late in 1910 he confirmed this experimentally. During the past year he has continued this investigation with gratifying success. The presence of other gases which do not combine chemically with the iodine vapor was found to reduce greatly the intensity of the fluorescence. It has been suggested by Wood that this effect may be due to the fact that the molecules of the admixed gas "load" the vibrating electrons and so diminish the amplitude of their vibration. On this theory it would be expected that the more strongly electro-negative gases, such as oxygen and chlorine, would "load" the electrons more heavily than the less electro-negative gases, such as helium and argon. Wood's most recent experiments seem to confirm this deduction.

HEAT. For several years H. Kamerlingh Onnes has been investigating the properties of substances at very low temperatures at the Low Temperature Laboratory in Leyden. Temperatures as low as 2.5° absolute (455° below zero, on the Fahrenheit scale) have been obtained, and all gases, including helium, have been liquefied.

According to theory, the electrical resistance of pure metals should decrease with decrease of temperature and vanish at the absolute zero. During 1911 Onnes has shown that the resistance of pure mercury at 3° on the helium scale (about 3° absolute temperature, or -270° C.) is less than one ten-millionth of its resistance at 0° C.

PHYTIN. See BERIBERI.

PIERANTONI, AUGUSTO. An Italian jurist and publicist, died March 12, 1911. He was born at Chieti, Italy, in 1840. His education, which he obtained in his native city and Naples, was interrupted by the outbreak of war in Italy. He enlisted as a volunteer in Garibaldi's army and was with it at the victory of Volturno. When peace was declared he entered the ministry of public education at Naples and subsequently went to Turin. He published several works on international law and was installed as an instructor at the University of Modena. In 1866 he volunteered in the war with Austria, and on the conclusion of peace he was called to the chair of international law at the University of Naples. He later occupied the same chair at the University of Rome. In 1883 he was chosen senator and served through four legislative sessions. He was arbitrator for Italy at the conference relating to shipping in the Suez Canal in 1885. He was one of the founders of the International Law Institute at Geneva. He was a member of the permanent court of arbitration at The Hague. Among his best known works are *Gli arbitrati internazionali e il trattato di Washington* (1872); *Trattato di diritto costituzionale* (1873); *Il Senato e le leggi sociali* (1886), and *La rinunzia alla successione nel diritto internazionale privato* (1896).

PIERSON, ARTHUR TAPPAN. An American Presbyterian clergyman, author, editor, lecturer, and missionary, died June 3, 1911. He was born in New York City in 1837 and graduated from Hamilton College in 1857 and from the Union Theological Seminary in 1860. He was ordained a Presbyterian minister and in 1860 became pastor of a church in West Winsted,

Conn. He was afterwards pastor in Binghamton, N. Y., for three years and in Waterford, N. Y., for five years. He was pastor of the Second Presbyterian Church of Detroit for thirteen years and of the Presbyterian Church of Indianapolis for one year, and the Bethany Presbyterian Church of Philadelphia for eight years, until 1891. In the latter year he went to England to speak in behalf of the missionary movement. He became a substitute in Dr. Spurgeon's Metropolitan Temple pulpit, where he preached for two years. In 1902-3 and again in 1907-8 he was temporary pastor of Christ Church in London. He also gave lectures on the Bible at Exeter Hall, London, and at Scottish universities. In 188 Dr. Pierson became editor of the *Missionary Review of the World*, and was considered the leading authority of the denomination on foreign missions. Following the death of Dwight L. Moody, he was leader of the Northfield religious conferences. In 1910 the anniversary of his ordination and of his marriage was celebrated in the auditorium in East Northfield. A jubilee fund was started to send Dr. Pierson around the world on a missionary trip. He had visited Hawaii, Japan, China, and Korea, when he was obliged to turn back on account of illness. He was the author of many books. Among them are: *Miracles of Missions*; *New Acts of the Apostles*; *Seven Years in Sierra Leone*; *The Greatest Work in the World*; *The Pillar of Fire*; *The Heart of the Gospel*; *The Supernatural*; *The Making of a Sermon*; *Life of George Muller*; *The Divine Art of Preaching*; and *Bible Study and Spiritual Life*.

PIG IRON. See IRON AND STEEL.

PILCHER, JAMES EVELYN. An American surgeon, died April 8, 1911. He was born at Adrian, Mich., in 1857, graduating from the University of Michigan in 1879. He studied at the Long Island College Hospital and in 1883 was appointed assistant surgeon in the United States army. He was promoted to be captain and assistant surgeon in 1888 and major and brigade surgeon in the United States Volunteers in 1898. He retired from the army in 1900. From 1896 to 1898 he was professor of military surgery in the Ohio Medical University and lecturer on military hygiene at other medical schools in Ohio. In 1899 he became professor of anatomy and embryology at Dickinson College and from 1900 to 1903 was professor of sociology and economics in the same college. From 1899 to 1909 he was professor of medical jurisprudence in the Dickinson School of Law. He edited at various times the *Annals of Anatomy and Surgery*, the *Annals of Surgery*, and other publications. He was the author of *First Aid in Illness and Injury* (1892); *Life and Labors of Elijah Holmes Pilcher* (1893); *Arms and Seals of the State of Pennsylvania* (1902), and *The Surgeon-Generals of the Army* (1905).

PINEAPPLES. See HORTICULTURE.

PITMAN, BENJAH LANGLEY. An American Baptist clergyman and educator, died November 27, 1911. He was born in Torbrook, N. S., in 1862 and graduated from Brown University in 1887. He was ordained to the Baptist ministry in the same year, and in 1890 became pastor of the Free Street Church in Portland, Me., remaining until 1892, when he was elected president of Colby University. He remained in this position for three years, when he was chosen president of

Columbian (now George Washington) University. After continuing in this capacity for five years he accepted a call as pastor of the Fifth Church in Philadelphia. Here he remained for seven years, when he became pastor of the First Church in Seattle, Wash. This position he retained until the time of his death. From 1900 to 1907 he was lecturer at Bucknell University. He was the author of *Elements of Ethics* (1893); *Elements of Sociology* (1894); *Elements of Political Science* (1899), and *Outlines of Political History* (1900).

PLAGUE. India experienced another grave epidemic of the plague during the early part of 1911. In a single week in February nearly 25,000 cases, with 22,278 deaths, were reported. Shanghai, China, also had an epidemic of plague, mostly confined to the thickly crowded Chinese section of the town, and considerable difficulty was experienced in stamping out the disease. Vigorous measures undertaken both by the foreign residents and the Chinese government were finally successful. Manchuria and northern China were also visited by an epidemic during the early part of the year. The disease here assumed a pneumonic and septicæmic type rather than the bubonic form, and spread rapidly from Harbin, the original focus, in all directions. The International Plague Conference called together by the Chinese government, after the outbreak of the plague in that country, held the opinion that it originated from a species of marmot called tarabagan, a fur-bearing animal of the squirrel family. This animal is extremely susceptible to plague and is killed in large numbers for its fur, which is shipped in great quantities to Harbin. By some it was believed that the disease was brought to Harbin through the infected hides which trappers bring there for sale. (See CHINA, *History*.) A vigorous quarantine established by the Russians and Japanese, and active sanitary measures taken by the Chinese government, finally resulted in the stamping out of the epidemic. It is interesting to note, however, that the plague was hailed by many Chinese as a blessing, particularly in those portions of the country which are overpopulated. One traveler found the people everywhere rejoicing at the prospect of a reduction in the number of inhabitants who were unable to gain a subsistence from the overcrowded land. SEE VITAL STATISTICS.

POINDEXTER, MILES. United States senator from Washington. He was born in Mem-

phis, Tenn., in 1868, and was educated at Washington and Lee University, where he also studied law. In 1901 he removed to Walla Walla, Wash. He was elected prosecuting attorney of Walla Walla county in 1892. In 1897 he removed to Spokane and from 1898 to 1904 was assistant prosecuting attorney of Spokane county and from 1904 to 1906 was judge of the superior court. In 1909 he was elected a member of Congress. He was one of the most conspicuous members of the progressive wing in the House of Representatives and in the elections of November, 1910, he received the nomination for United States senator, defeating the regular Republican candidate. He was accordingly elected by the legislature in January, 1911.

POLAR RESEARCH. The most important results of Arctic exploration for a few years preceding 1911 were: Peary's attainment of 87° 6' N. lat. on April 21, 1906, and his survey, in the same year, of the unexplored part of the coast of Grant Land; Roald Amundsen's achievement of the "Northwest Passage," in 1906, on his vessel *Gjøa*, skirting the American mainland; Capt. J. E. Bernier's important researches in the archipelago north of our continent in 1906 and 1908, taking possession, in the name of Canada, of many islands; the sledge journey of Mikkelsen and Leffingwell in 1907, for about 100 miles over the sea ice between 140° and 150° W. long., north of Alaska, their soundings apparently showing that they soon crossed the edge of the continental shelf and advanced over the deep polar basin. In 1907 Dr. Mylius Erichsen, with two comrades, mapped the northeast coast of Greenland, thus completing the outlining of the great island. They perished of cold and hunger on their way back to the ship, but their map was recovered. On April 6, 1909, Commander R. E. Peary reached the North Pole by a sledge journey from Cape Columbia, Grant Land. The journey on the sea ice, 475 miles, was made at the average rate of over 13 miles a day. Peary's soundings appear to show that he passed the edge of the continental shelf about fifty miles from land; in the neighborhood of the Pole no bottom was reached, the depth of the ocean there exceeding 9000 feet. Dr. F. A. Cook, returning from Greenland, advanced the claim that he had reached the North Pole in the spring of 1908, but the evidence he adduced was declared by expert geographers to be unsubstantial and his claim has not been allowed.

ANTARCTIC EXPEDITIONS. The most conspicuous result of Antarctic work since its resumption in 1897 was the sledge journey of Lieut. (now Sir) Ernest H. Shackleton, who, on January 9, 1909, after traveling far south over the Antarctic continent, reached a point about 111 statute miles from the South Pole in 88° 23' S. lat. and 162° E. long. Traveling over the Great Barrier ice, he and his three companions reached the coast of the continent in 83° 28' S. and then ascended a mighty glacier, 130 miles long; reaching its top, they stood on the ice cap of East Antarctica at an elevation of 10,477 feet above the sea. They found on this tremendous plateau seams of coal from 8 inches to 4 feet thick. Meanwhile, another party of the same expedition, traveling northwest from winter quarters over the inland ice, fixed the position of the South Magnetic

Pole in 72°25' S., 155°16' E. Dr. Jean Charcot, on his exploring vessel, *Pourquoi Pas?* left the Antarctic in February, 1910, having largely supplemented the discoveries he had made earlier in the region of West Antarctica, south of South America. When he went to that region little was known of the west coast of West Antarctica except the Gerlache Strait district and two rather vague land falls further south. The coast is now practically surveyed from Liège Island in 64° S. Lat. to Charcot Land in 70° S. Charcot's soundings have also proved almost to a certainty that there is land about half way between Charcot Land and King Edward VIth Land.

The trend of events in 1911 showed that, with the close of Peary's enterprises in the Arctic, the larger attention, for a time, would be given to Antarctic exploration. There were in 1911 four finely equipped parties in that field representing England, Germany, Norway, and Australia. The third British South Polar expedition was under the command of Capt. Robert F. Scott, who led the first British party; the second German South Polar expedition was led by Lieut. Wilhelm Filchner, who showed ability of the first class in his Chinese and Tibetan researches and has since spent a season, with a number of his men, in Spitzbergen as a preparation for his Antarctic enterprise. The Australian expedition was commanded by Dr. Douglas Mawson, the physicist of the Shackleton party. Captain Amundsen headed the Norwegian explorers. Twenty Japanese, under the leadership of Lieutenant Shirase, were also in the south with the purpose of trying to reach the Pole. Their schooner, the *Kainan-maru*, left New Zealand in February, 1911; but failing to penetrate the pack ice off Coulman Island, South Victoria Land, she sailed for Sydney and left that port in the fall for another attempt to reach a place favorable for Antarctic headquarters. The proposed second Scottish expedition under Dr. W. S. Bruce had not yet been organized, as adequate funds had not been obtained.

The English expedition on the ship *Terra Nova* safely reached its proposed headquarters about the end of 1910 near the foot of Mt. Erebus, South Victoria Land, the base from which the South Polar party was to start for the goal that Shackleton barely failed to reach. It was proposed to land a small party under the command of Lieut. L. A. Campbell on King Edward VIth Land to explore that region and its surroundings, but the ice conditions prevented landing, and thus this desirable feature of the programme was eliminated. The expedition is thus confined mainly to Scott's former field of work. In addition to the dash for the Pole, large preparations have been made for scientific research. Among Scott's assistants were Dr. E. A. Wilson, zoölogist, T. G. Taylor and W. G. Thompson, geologists, Dr. G. C. Simpson, meteorologist and physicist, Lieut. H. L. L. Pennell, student of magnetic phenomena, and Dr. E. L. Atkinson, bacteriologist.

The Australian expedition should be of especial interest to Americans, because Dr. Mawson hopes to reveal both the coast and the hinterland of the long line of shores discovered by Wilkes of our navy and long known as Wilkes Land. Mawson sailed from Australia in November, 1911, to attack this whole coast-

line between Cape Adare and Gaussberg. He had a suitable vessel, the *Aurora*, a whaler built at Dundee. His force numbered about fifty men (ship and land party) and practically every man in the land party was a scientific specialist, most of them from the universities of Australia and New Zealand. The plan was to land several parties with supplies and huts to winter between Cape Adare and Gaussberg. The first German expedition at Gaussberg established the fact that the land there is continental. The special aim was to accomplish a complete coast survey between these two points, to reveal the nature of the hinterland, and to complete the magnetic charting of the region north of the South Magnetic Pole. The several stations were simultaneously to dispatch coastal sledging parties, thus dividing up the work of the coast survey. A special journey was to be made inland from the main base to the South Magnetic Pole, thus completing the crossing of that corner of South Victoria Land. Norwegian-built sledges, drawn by Greenland dogs, were to keep up communications and replenish supplies at the stations. The sum of \$210,000 was raised for this expedition. Nearly \$700,000 had been put into the British, German, and Australian expeditions.

Lieutenant Filchner and his German comrades sailed on their fine vessel, the *Deutschland*, early in the summer of 1911, and carried on oceanographic work across the Atlantic to Buenos Ayres. The party then proceeded to the Sandwich group and, in December, sailed for Weddell Sea with the expectation of erecting winter quarters on Coats Land or some unknown land further south. The party included 9 scientific specialists and 25 sailors. Among the features of the equipment was an installation for wireless telegraphy, specially constructed motor cars, and both dogs and Manchurian ponies for sledge transport. The main geographical objects were to establish the eastern coast line of the land mass or masses, and if possible to learn the relations between the eastern and western portions of the land and ascertain whether water channels divide it into two or more masses. Filchner expected to make a sledge journey with five men across the unknown land and, if possible, was to travel as far west as Ross Sea, on the southern edge of which Captain Scott had his camp. The distance from Coats Land to Ross Sea is about 1800 miles and, under the best conditions, the German explorer could not expect to return to his headquarters in the same season, but would probably have to winter at the British camp. It was hoped, in advance, to establish supply caches for a considerable distance along the inland route. The scientific programme included, besides the strictly geographical work, investigations in geology, oceanology, biology, meteorology, magnetism, etc., and, if possible, the ship was to leave the land party to resume its oceanographical work. Filchner's scientific assistants included Dr. Barkow as meteorologist, Dr. Seelheim as geographer, Dr. Heim as geologist, Dr. Przybyllok as observer of astronomical and magnetic phenomena, and several others. The German programme included an astonishing amount and variety of work and, if good fortune favors, excellent results may be expected from this party.

Captain Amundsen left Europe on the *Fram* to double Cape Horn, reach Bering Strait through the Pacific, and then to enter the

Arctic Sea ice to drift for several years. He finally decided to make a dash for the South Pole. He reported as the reason for this change of plan that he had not been able to raise sufficient funds to buy all the supplies required for the Arctic drift. He therefore embraced the more spectacular opportunity in the belief that if he reached the South Pole he would have no difficulty in raising funds for the northern enterprise. Unable to make a landing on King Edward VIIth Land he found a great indentation or bay in the Great Barrier ice wall, where he moored the *Fram*, sledged all his supplies to the top of the Barrier ice, erected his hut and tents, and went into camp, which Amundsen named "Framheim," 150 feet above the bay, in about 78°40' S. lat., 164° W. long. His supplies of all kinds were sufficient for two years. Seals were found in large numbers and when the *Fram* steamed north the whole party were living almost entirely on seal meat and the explorer expected soon to have enough frozen seal to feed his 115 Greenland dogs all winter. He expected to lay down a main depot for the southern dash at 80° S. lat., and hoped to plant a smaller cache as far south as 83°. As his camp was about 500 statute miles east of Scott's headquarters it was hoped that when they left the Barrier ice to travel over the land, their routes would be so far apart as to prevent duplication of work on the way to the Pole.

The presence of two well equipped expeditions making simultaneous effort to reach the South Pole aroused expectancy to a high pitch at the end of the year. Those familiar with Antarctic exploration were confident that either Captain Amundsen or Captain Scott, or both, would reach the Pole before their return. Both explorers had experience of previous Arctic and Antarctic explorations. Captain Amundsen had from 1903 to 1905 made the Northwest Passage and located the magnetic pole. Captain Amundsen had an advantage over Captain Scott in that by placing his winter quarters on the ice, he was given a starting point nearly one degree further South than Captain Scott. While Captain Scott depended largely on ponies as motive power, Captain Amundsen took with him more than 100 Eskimo dogs, which in the opinion of many experts in polar research are superior in point of endurance to ponies. Still another advantage enjoyed by Captain Amundsen and his men was their skill in the use of the ski, with which the party was well equipped. This enables the explorer to make more rapid progress across the ice fields than is possible by any other means of locomotion. His companions included Captain Hjalmar Johansen, who was with him in his former explorations.

ARCTIC EXPEDITIONS. The chief work in the Arctic was done by Captain Bernier and V. Stefánsson. Bernier, in command of the Canadian government steamer *Arctic*, returned in September from his third series of explorations and studies in the Arctic Archipelago to the north of this continent. He reached a point within twenty-five miles of the Banks Land entrance to the Northwest Passage, but the ice conditions were so bad that he did not attempt to reach the Pacific by that route as he had planned. The expedition surveyed the 300 miles of unexplored coast between Fury and Hecla Strait and Cape Kater, thus establishing the western extension of Baffin Island. This is one of the large islands of the world and, gradually,

its unknown coasts, still amounting to several hundred miles, are being revealed. The scientific assistants have added largely to our knowledge of this vast region and their results are handsomely printed by the Canadian government after each voyage.

Stefánsson, the ethnologist, has done remarkable work in the past three years in the study of the Eskimos of the Canadian Arctic and their habitat. His results have been admirably supplemented by Mr. Anderson, the zoölogist, who has made large collections for the American Museum of Natural History. A large part of the time these men have been destitute of supplies from home. They have had to live entirely upon the game or fish they secured and, while enthusiastic in their scientific pursuits, the quest for their daily food consumed much time and involved periods of anxiety. The latest letters from Stefánsson are dated in 1910 and January 21, 1911. His tramping ground has been from the Colville River to Coronation Gulf through more than forty degrees of longitude, and from Great Bear Lake to the middle of Victoria Island, some four degrees of latitude. He has found and studied groups of Eskimos on the Colville and Coppermine Rivers, on Victoria Island, and elsewhere, who never saw a white man; a group on Victoria Island that in color and physiognomy approaches the European type, suggesting that a part of their descent may have been derived from the Icelandic whites who disappeared from Greenland in the fifteenth century. He has found many blunders on the maps. The Rivière is a mythical river; the Horton proves to be a large river, with an average width of 100 yards for 400 miles; not half the islands of Coronation Gulf have been mapped, etc.

Mr. Ernest DeK. Leffingwell was, at the close of the year, still living on the Alaskan coast with his Eskimo helpers surveying the badly charted coasts, making maps, and doing much other work of scientific quality between the Colville River and the Canadian boundary.

POLICY LOANS. See **INSURANCE**.

POLIOMYELITIS, ANTERIOR. See **INFANTILE SPINAL PARALYSIS**.

POLITICAL AND SOCIAL SCIENCE.

Topics falling under this general head will be found in the present volume under their respective titles, as, for example, **ARBITRATION**, **INTERNATIONAL**; **ELECTORAL REFORM**; **POLITICAL ECONOMY**; **SOCIOLOGY**; **LABOR**; **SOCIALISM**; **STRIKES**; **CHILD LABOR**; **CHARITIES**; **PENOLOGY**, etc. The following paragraphs present a list of the important books within this field published during the year, especially those of interest to the general reader.

The peace movement, now thoroughly organized and well endowed, is productive of a large amount of literature in pamphlet, magazine, and book form, the most influential of which was *The Great Illusion*, by Norman Angell, aiming to prove that a war is injurious to both parties, and conquest never profitable. Other volumes on the same subject are: *War and Its Alleged Benefits*, by J. Novicow; *The Peace Problem*, by Frederick Lynch; *War—What For?* by George R. Kirkpatrick; *War or Peace*, a present duty and a future hope, by Gen. Hiram M. Chittenden; *Universal Peace—War is Measurism*, by Arthur Edward Stilwell; *A Short History of War and Peace*, by George Herbert Per-

ria; *The International Law and Custom of Ancient Greece and Rome*, by Coleman Phillipson. The American Institute of Criminal Law and Criminology is publishing a series of translations of the works of foreign investigators, beginning with: *Modern Theories of Criminality*, by C. Bernaldo DeQuiros; *Crime, its causes and remedies*, by Cesare Lombroso; *Criminal Psychology*, by Hans Gross.

Among the many books on the position of woman, the first place must be given to *Woman and Labor*, by Olive Schreiner, in which the author of *Dreams*, and *The Story of an African Farm*, earnestly pleads for wider opportunities and fairer treatment for women in the industrial world. Here should also be mentioned: *Woman and Womanhood*, by C. W. Saleeby, from the viewpoint of eugenics; *Woman's Part in Government*, by William Harvey Allen; *The Modern Woman's Rights Movement*, by Dr. Kaethe Schirmacher; *A Short History of Women's Rights*, by Eugene A. Hecker; *The Suffragette*, a history of the woman's militant suffrage movement, by E. Sylvia Pankhurst. *The Man-Made World*, by Charlotte Perkins Gilman; *The American Woman and Her Home*, by Mrs. Newell Dwight Hillis; *Love and Marriage*, by Ellen Key.

The books on labor and socialism are numerous as ever, this year, and include some of considerable importance. A valuable source book, involving years of research, is the *Documentary History of American Industrial Society*, edited by John R. Commons, Ulrich B. Phillips, Eugene A. Gilmore, Helen L. Sumner, and John B. Andrews; prepared under the auspices of the American Bureau of Municipal Research, with the coöperation of the Carnegie Institution of Washington, completed this year with the ninth and tenth volumes. *The Pittsburgh Survey*, carried on under the auspices of the Russell Sage Foundation, is a thorough and well-written study of the social and industrial conditions of a steel city. *American Socialism of the Present Day*, by Jessie W. Hughn; *Socialism and Success*, by W. J. Ghent; *State Socialism in New Zealand*, by Le Rossignol and Stewart, a moderate view. *Socialistic Fallacies*, by Yves Guyot, an anti-socialistic argument. *Common-sense of Municipal Trading*, by George Bernard Shaw, a Fabian socialist view. *Business*, by Charles Edward Russell; *Socialism*, a critical analysis, by Oscar Douglas Skelton. *The Conflict between Individualism and Collectivism in a Democracy*, by Charles W. Eliot; *The Case for Socialism*, by Fred Henderson; *The Superstition Called Socialism*, by G. W. de Tunzelmann; *Social Solutions in the Light of Christian Ethics*, by Thomas C. Hall. Syndicalism and Labor, notes upon some aspects of social and industrial questions of the day, by Sir Arthur Clay. *The Nation as a Business Firm*, by W. H. Mallock; *Social Insurance*, a programme of social reform, by Thomas C. Hall. *Syndicalism and Labor, Iems of Organized Labor*, by Frank Tracy Carlton. *The Village Laborer, 1760-1832*, a study in the government of England before the Reform bill, by J. L. Hammond and Barbara Hammond. There are several volumes by Scott Nearing: *Social Adjustment*; *Solution of the Child Labor Problem*; *Wages in the United States, 1908 to 1910*. *A Year in a Coal Mine*, by Joseph Husband; *Boy Labor and Apprenticeship*, by Reginald Bray. *Labor in Europe and America*, by Samuel Gompers. *Unemployment*, a social

study by B. Seeborn Rowntree and Bruno Lasker, statistics of the unemployed poor, but not of the unemployed rich.

POLITICAL AND SOCIAL SCIENCE, AMERICAN ACADEMY OF. A learned society founded in 1889 for the purpose of promoting political and social science in a broad sense of the term. The membership in 1911 was 5766, distributed among every State in the Union and 35 foreign countries. The society issues a bi-monthly publication called *The Annals*, of which Prof. Emory R. Johnson, of the University of Pennsylvania, is editor-in-chief. During the year the subjects dealt with in these *Annals* were: "Political and Social Progress in Latin America," May, with a supplement, "The Living Wage of Women Workers"; "Risks in Modern Industry," July, with a supplement, "Uniform Child Labor Laws"; "American Produce Exchange Markets," September, with a supplement, "The Work of the National Consumers' League"; and "Commission Government in American Cities," November. The fifteenth annual meeting was held in Philadelphia, April 7-8, 1911. The general topic of discussion was "Risks in Modern Industry." The first session of the meeting was devoted to the subject of "Industrial Insurance and Retiring Allowances." Papers were read by Edwin De Leon, president of the Casualty Company of America, on "The Attitude of Casualty Insurance Companies towards Employers' Liability and Workmen's Compensation Legislation," and by F. Spencer Baldwin, of Boston University, on "Pensions for Municipal Employees." At the second session the topic for discussion was "Industrial Accidents in the United States and Their Prevention." Papers were read by Hon. J. C. Delaney, chief factory inspector of the State of Pennsylvania; James B. Reynolds, Esq., Mrs. Florence Kelly, and J. A. Holmes, director of the United States bureau of mines. At the third session was discussed "Defects in our Present Liability Laws." Miles M. Dawson, Esq., Talcott Williams, Joseph P. Cotton, Jr., and Lee K. Frankel read papers dealing with the subject. At the fourth session was discussed "Employers' Liability and Workmen's Compensation." Papers on this subject were read by William B. Dickson, Esq., William D. Lewis, dean of the law school of the University of Pennsylvania, William G. Smith, Esq., and Henry J. Harris, Esq. At the fifth and last session the subject discussed was "Recent Progress and Legislation, with reference to Employers' Liability and Workmen's Compensation." In this discussion Hon. Austin L. Crothers, governor of the State of Maryland, Hon. Simeon S. Pennewill, governor of Delaware, Hon. Charles P. Neill, commissioner of labor of the United States, and John Mitchell, vice-president of the American Federation of Labor, took part. The officers for 1911 were: President, L. S. Rowe, of the University of Pennsylvania; secretary, Carl Kelsey, University of Pennsylvania; editor, Emory R. Johnson.

POLITICAL ECONOMY. Economic problems and movements will be found treated under their respective headings. A general survey of the industrial and commercial conditions of the year is given under **FINANCIAL REVIEW**. Under **LABOR** will be found references to a number of topics treating various aspects of that general subject. Under **BANKS AND BANKING** will be

found a discussion of general banking conditions and cross references to the several kinds of banking institutions, MONEY, etc. There are special articles on the following: PRICES, including the cost of living; TRUSTS, besides articles on STANDARD OIL COMPANY, AMERICAN TOBACCO COMPANY, and UNITED STATES STEEL CORPORATION; TARIFF; INSURANCE; and TAXATION. Social economic topics are treated under their own headings, as OLD-AGE PENSIONS, CHILD LABOR, WOMEN IN INDUSTRY, WORKINGMEN'S INSURANCE, CONGESTION OF POPULATION, EMPLOYERS' LIABILITY, JUVENILE COURTS, MINIMUM WAGES, OCCUPATIONAL DISEASES.

AMERICAN ECONOMIC ASSOCIATION. The Twenty-fourth annual meeting of this association was held in Washington, D. C., December 27-30, being in some respects the most noteworthy in its history. The attendance was larger and more visitors from the general public were attracted. The presidential address by Prof. Henry W. Farnum of Yale University was devoted to the "Economic Utilization of History." For the first time the association was honored by an address by the President of the United States. President Taft spoke on scientific methods of framing a federal budget. In connection with the American Statistical Association, the "Rural Conditions in the South and the Decline of the Rural Population of the United States" were discussed. The tendencies with respect to land tenure since the Civil War were brought out; and the general decline in the rural population of western New York and northwestern Pennsylvania and in the corn-belt of the Middle West was shown. The decline in the latter section, however, has not resulted in a decline of production on account of the increase in the number of work horses, the value of farm machinery, and the better methods of cultivation. One of the most interesting sessions was that in connection with the American Sociological Society (q. v.) on the subject of immigration.

A number of interesting round table meetings were held upon Terminology in Economic Theory, the Cost of Living (q. v.), and Industrial Efficiency, and the Interests of Labor. A session was also held with Section I of the American Association for the Advancement of Science on the corporation problem. Prof. Frank A. Fetter of Princeton University was chosen president for 1912, and Boston the place of meeting.

BIBLIOGRAPHY. In addition to the books listed below consult the lists to be found under LABOR, PENOLOGY, SOCIOLOGY, WORKINGMEN'S INSURANCE, and WOMEN IN INDUSTRY.

GENERAL THEORY. Among the general treatises of the year the most notable were the following: *Principles of Economics* (2 vols.), by E. W. Taussig; Chicago University, Faculty of Political Economy, *Outlines of Economics*; *Elementary Principles of Economics*, by Irving Fisher; *History of Economic Thought*, a critical account of the origin and development of the economic theories of the leading thinkers in the leading nations, by L. H. Haney; *Business Administration*, 10 vols., published for the La Salle Extension University, W. D. Moody (ed.); *Syllabus for Economics I.*, by E. V. Phelan; *Outlines of Political Economy*, by S. J. Chapman; *Disturbing Elements in the Study and Teaching of Political Economy*, by J. Bonar; *Economic Prejudice*, by Y. Guyot; *Contribution to the Critique of Political Economy*, by K. Marx; *A Documentary History of American Industrial*

Society, J. R. Commons, ed.; *Industrial Depressions, Analysis of Causes, Classification, and a Practical Remedy*, or *Iron, a Barometer of Trade*, by George H. Hull; *The Science of Wealth*, Home University Library, by J. A. Hobson; *Das Problem der Wirtschaftskrisen im Lichte der neuesten nationalökonomischen Forschung*, by W. Fissler; *Cost Keeping for Manufacturing Plants*, by S. H. Bunnell; *The Principles of Industrial Management*, by John C. Duncan.

The great attention being given in the United States and England to agricultural life resulted in several notable books: *Report of the Commission on Country Life*, with an Introduction by Theodore Roosevelt; *Land Problems and National Welfare*, by Christopher Turnor; *The Country-Life Movement in the United States*, Rural Outlook Series, by L. H. Bailey; *A System of Tenant Farming and its Results*, Farmers' Bulletin 437, by J. W. Froley and C. B. Smith; *Government Lands and How to Obtain Them*, a digest of the rules and regulations governing entries, by C. L. Gilmore; *A Study of English Agricultural Economics*, by H. Levy, trans. by Ruth Kenyon; *British Rural Life and Labour*, by F. G. Heath.

TAXATION. The new literature on taxation and public finance consisted mainly of studies of special taxes and public documents. No general treatise of the entire field was put out. The following list is suggestive of the principal lines of development: *A Study of the History, Theory, and Practice of Income Taxation at Home and Abroad*, by Edwin R. A. Seligman; *Moral und Technik bei der Veranlagung der preussischen Einkommensteuer*, by F. Meisel; *Zur Geschichte der Vermögensteuern*, by B. Moll; *Taxation: a Problem*, by R. F. Sturgis; *A History of Public Permanent Common School Funds in the United States, 1795-1905*, by F. H. Swift; *Taxation of Corporations*, Part III., prepared by the commissioner of corporations; *The Cost of Our National Government*, by Henry James Ford.

MONEY AND BANKING. The subjects of money and banking have received an unusual amount of attention in the last few years not only in the United States but in foreign countries. It is always a subject of interest and study and has been a chief topic ever since the panic of 1907. Among the books of the year were: *Banques d'Emission et Tresors public*, by Raphael Georges-Lévy; *Building loan and savings associations, how to organize and successfully conduct them*, by H. S. Rosenthal, 2d edition, rev. and enl.; *The Purchasing Power of Money: Its Determination and Relation to Credit, Interest, and Crisis*, by Irving Fisher and Harry G. Brown; *Banking Reforms in the United States*, by O. W. M. Sprague; *A Comprehensive Study of the Advantages of the Branch Bank System*, by H. M. P. Eckardt.

TRADE AND TRANSPORTATION. Among the year's output of new books were the following: *Imperial Telegraphic Communication*, by C. Bright; *All about Railways*, by F. S. Hartnell; *Le petit commerce français, sa lutte pour la vie*, by Martin Saint-Léon; *Public Ownership of Telephones on the Continent of Europe*, by A. N. Holcombe; *Railway Rate Theories of the Interstate Commerce Commission*, by M. B. Hammond; *Scientific Management and Railroads: being Part of a Brief submitted to the Interstate Commerce Commission*, by Louis D. Brandeis; *Problems of Railway Regulation*, by

Henry S. Haines; *American Railway Problems, in the Light of European Experience*, by Carl S. Vrooman; *Business, Accounting, and Auditing*, by William Morse Cole; *Shop Management*, by F. W. Taylor; *Kartel und Trust*, by Dr. S. Tschierschky; *Kartel-Probleme*, by Wilhelm Kantorowicz; *Municipal Franchises; a description of the terms and conditions upon which private corporations enjoy special privileges in the streets of American cities—Vol. II., Transportation Franchises, Taxation, and Control of Public Utilities*, by D. F. Wilcox; *The Special Law governing Public Service Corporations and all Others engaged in Public Employment*, 2 vols., by B. Wyman; *Report on the Pulp and News-Print Paper Industry*, by the Tariff Board; *Summary of Report of the Commissioner of Corporations on the Steel Industry*.

MISCELLANEOUS. *How Money is made in Security Investments; or a Fortune at Fifty-five*, by H. Hall; *The History, Law, and Practice of the Stock Exchange*, 2d ed., rev., by A. P. Poley and F. H. C. Gould; *Influencing Men in Business; the Psychology of Argument and Suggestion*, by W. D. Scott; *Cotton Futures*, by A. B. Shepperson.

POLITICAL SCIENCE ASSOCIATION.

AMERICAN. A learned body, founded in 1903 for the study of subjects described in its title. It had a membership in 1900 of approximately 1400. The association holds annual meetings. The meetings of 1911 were held during the last week in December in Buffalo, Ithaca, and Toronto. These meetings were held in conjunction with the American Historical Association (q. v.). The most notable paper read at the meetings was entitled "The Courts in their Relation to Constitutions and Statutes," by Prof. Roscoe Pound. The general topic of the session was "The Courts and Judges as Governing Bodies." Professor Pound traced the relation of the courts to popular views of the Constitution, found historical explanation for the general reliance upon interpretation as a corrective of legislation. In other sessions the association discussed "State Constitution Making," on which papers were read by J. B. Dunn of Indianapolis and Prof. J. Q. Dealey of Brown University. In an address on "The County Problem in Municipal Government," F. D. Bramhall of the University of Chicago gave a survey of the corporate control over Cook county. A discussion of "State Political Organization" was led by Herbert Croly. The association published the *American Political Science Review*, and an annual volume of *Proceedings*. Prof. Albert Bushnell Hart was chosen to succeed Governor Baldwin as president of the association. The meeting for 1912 will be held in Boston and Cambridge.

POLLARD, J. PERCIVAL. An American author and playwright, died December 17, 1911. He was born at Greifswald, Pomerania, in 1869. He removed to the United States in 1885. He entered journalism on the St. Joseph, Mo., *News*, and was afterwards engaged in editorial work in Chicago and New York. He was the author of *Figaro Fiction* (1892); *Dreams of To-day* (1897); *Recollections of Oscar Wilde* (1906), and a play, *The Ambitious Mrs. Alcott* (1907).

POLLEN, PRESERVATION OF. See **HORTICULTURE**.

POLO. Polo never before attained such popularity in the United States as it did in 1911. This was largely due to the international

matches played on the Hempstead Plains at Westbury, L. I., between the Meadow Brook Club of the United States and the Hurlingham Polo Club of England. These matches attracted great interest throughout the entire sporting world and were witnessed by thousands of spectators.

The American team was made up of Lawrence Waterbury, J. M. Waterbury, Jr., Harry Payne Whitney, and D. Milburn. The British team consisted of Capt. Leslie St. George Cheape, Lieut. A. Noel Edwards, Capt. J. Hardress Lloyd, and Capt. H. Herbert Wilson. The Americans were the victors in both matches played, winning the first by a score of $4\frac{1}{2}$ to 3 and the second by $4\frac{1}{2}$ to $3\frac{1}{2}$. It was the opinion of experts before the competition that the Meadow Brook players would have an easy victory and the closeness of the matches proved a great surprise. The results of previous matches between the two countries were: 1886—Great Britain won 2 games, America 0; 1900—Great Britain scored 8 goals, America 2; 1902—Great Britain won 2 games, America 0; 1909—America won 2 games, Great Britain 0.

Before the international matches were played in 1911 the British team defeated Bryn Mawr 12 to $5\frac{1}{4}$; Cooperstown 14 to 5; Red Freebooters 8 to 3; Rockaway Hunt Club $9\frac{1}{2}$ to $5\frac{1}{2}$. The British players lost to a picked team (Alexander Brown, R. La Montagne, Joshua Crane, and W. H. T. Huhn) 5 to $7\frac{1}{2}$ and to the Rockaway Freebooters $1\frac{1}{4}$ to $10\frac{1}{4}$. In other important matches of the year Meadow Brook defeated Myopia 7 to 2; Philadelphia Country Club, $16\frac{1}{2}$ to $5\frac{1}{4}$; Cooperstown $10\frac{1}{2}$ to $6\frac{1}{2}$, for the Westbury challenge cup; and 14 to 7 in final for Cedarhurst trophy; Great Neck $18\frac{1}{4}$ to $10\frac{1}{4}$ for Meadow Brook Club and Westbury challenge cups; Rockaway $14\frac{1}{2}$ to 12 for the senior championship. Bryn Mawr defeated Cooperstown $11\frac{1}{4}$ to 7 and 6 to $4\frac{1}{4}$; Devon 13 to 9 for the Philadelphia Country Club cup; Cooperstown $11\frac{1}{4}$ to $5\frac{1}{4}$ and Devon 17 to 8 for the Wootton cup; Cooperstown $12\frac{1}{2}$ to $\frac{1}{2}$ for the junior championship. New Haven won the Watch Hill cup by defeating Cooperstown $6\frac{1}{2}$ to $3\frac{1}{4}$, The Atlantic cup by defeating Aiken 13 to $10\frac{1}{4}$ and the Raulagah cup by defeating the Meadow Brook Magpies 17 to $2\frac{1}{2}$. Cooperstown defeated Great Neck 13 to $6\frac{1}{2}$ for the Hempstead cup.

POLTAVA. See **BATTLESHIPS**.

POMERENE, W. ATLEE. United States senator (Democrat) from Ohio. He was born at Berlin, O., in 1863 and graduated from Princeton University in 1884. He studied law at the Cincinnati Law School and after receiving his degree practiced at Canton, O. He was city solicitor from 1887 until 1891. In 1896 he was elected prosecuting attorney of Stark county, serving three years. He was chairman of the Ohio State Democratic convention, which in June, 1910, nominated him for lieutenant-governor on the ticket with Governor Harmon. He was elected lieutenant-governor November 8, 1910, but on June 10, 1911, was elected United States senator to succeed Senator Dick. (See OHIO.) His term of office expires in 1917.

POOL. See **BILLIARDS**.

POPULATION. CONGESTION OF. This subject received unusual attention in 1911 in a number of American cities. The reports of the New York commissions noted below were the most important studies, but numerous local investigations were also made. It is now every-

where recognized that the evils of congested population are numerous and fundamentally important for the welfare of a large portion of the industrial population of the country. The physical effects are found at every age of life. Thus the death of children under five years of age in New York is about 52 per 1000; but in congestive blocks the death rate of children runs as high as 92 per 1000. Even persons of mature years have their general efficiency reduced and their susceptibility to various diseases increased. Tuberculosis is considerably aggravated in congestion areas. Similarly the congested sections are considered nurseries for crime. Indeed some students find a direct connection between recent apparent increase of crime in the United States and the existence of many sections of congested population. The economic effects are equally important. Low wages and high rents go hand in hand with congestion and with increased land values and higher costs of building construction. Low wages doubtless form one of the causes of congestion, but congestion in turn reacts upon standards of living and consequently upon wages.

Among the events of the year was an investigation at Columbus, O., by the Associated Charities. This disclosed an unexpected number of dark rooms, of houses with no water supply, of houses using cistern water, of houses without decent toilet facilities, and other evidences of bad housing conditions. This was in part responsible for the passage of a new housing code by the city council. This was a very great improvement, setting a standard equal to the best in the country. The height of tenement houses as related to width of street was regulated; rear tenements and dwellings were prohibited; yard space, front and rear, was required; and regulations were passed regarding wooden and fire proof construction. The Pittsburgh Civic Commission was one of the sixty authorities in as many different cities which in recent years have called in experts on city planning and other means of relieving congestion and bettering the housing and transportation of the city. Los Angeles began the erection of a model village. Salem, Mass., organized a board of city plan commissioners. Binghamton, N. Y., engaged an expert on city planning. Governor Foss of Massachusetts appointed a metropolitan planning commission. A movement was started in Brooklyn for the reduction of congestion, the elimination of the 49,000 dark interior bed rooms and the 103,000 illegally lighted rooms in Brooklyn tenements. Some interest also was aroused in San Francisco, where as yet no sufficient attempt has been made to prevent the development of bad conditions.

The Third National Conference on City Planning and Congestion was held at Philadelphia, May 15-17. Plans of sixty American and forty foreign cities were on exhibition. Addresses were made by leading American experts as well as by Thomas Adams of the Local Government Board of England, Raymond Unwin, the Garden City architect, and Thomas Morsin of the University of Liverpool. Considerable difference of opinion developed between Mr. Lawrence Veiller, who advocated many streets and short lots in the poorer quarters of the city, and the exponents of the Garden City idea, who favored infrequent streets, with vacant yard space in front and rear, and with special plots dedicated

to gardening and recreation. The conference approved the bibliography on town planning being prepared by Harvard University and the lectures on this subject given at Columbia University, 1911-12. Another resolution called for the appointment of a commission by the national government to suggest town planning possibilities in the United States.

NEW YORK COMMISSIONS. The most important reports of the year were those of the New York Commission on Congestion of Population and the New York Commission on the Distribution of Population. The former of these commissions was appointed in 1910 by Mayor Gaynor and was composed of nine aldermen and eight prominent citizens. It published a report of five hundred pages early in March. It is impossible more than to hint at its findings. Out of 122 blocks which in 1905 had a population of 150 or more per acre it found that 65 had increased in density. It found that room crowding was increasing in both Manhattan and Brooklyn and was not stopped by the tenement house laws. Out of the 750,000 factory operatives in Greater New York more than 500,000 work below 14th Street on the East Side and below 20th Street on the West Side. It found that the average wage of factory operatives was \$537 per year, although a committee of the State Conference on Charities and Corrections had reported a minimum income of \$800 per year to be necessary for the support of a family in New York City. It found that these operatives were compelled to live near the factory on account of long hours. The early hour of starting work and the poor transit facilities therefore resulted in high rents and more room and acreage congestion. Owing to the fluctuations in industry many families would contract work in the tenement to tide themselves over periods of depression. The concentration of office buildings in lower Manhattan, necessitating a large number of caretakers, also added to congestion. Among the causes of congestion the commission enumerated the following, several of which overlap: 1, Poverty, defined as inability to maintain a reasonable standard of living; 2, concentration of factories and offices; 3, consolidation of the five boroughs; 4, intensive use of land; 5, high price of land due to intensive use; 6, lack of control over aliens and citizens; 7, long hours of work; 8, cost of transit and the transit policy of the city; that is, the commission held that the transportation of the city should be controlled by social considerations rather than by commercial ones; 9, lack of a definite city plan; 10, present system of taxation, which penalizes the man who owns land improved by buildings; 11, failure to prepare the land for housing purposes; 12, methods of public and especially of private charities; 13, failure of the city to adopt a policy to attract people to the outlying boroughs; 14, immigration and failure to distribute and control it.

The recommendations of the commission were embodied in 29 bills and ordinances, of which seven were presented at Albany. Among these was one limiting the height of all buildings hereafter erected or altered south of 181st Street. Others required fire-proof construction; established a system of zones for factories and for buildings of different heights; required a license to take in lodgers; made compulsory the acquisition of land in advance of public

need for parks and playgrounds and school sites; empowered the Tenement House Department to vacate all insanitary and dark rooms; closed certain streets in congested areas so that children could use them for playgrounds. The commission favored the increasing of cheap transportation facilities. Doubtless its most important proposal, embodied in one of the bills presented to the State legislature, was that the tax on improvements be reduced to one-half the tax on land. This recommendation was based on evidence from Australia, New Zealand, certain German cities, and western Canadian cities that this plan has uniformly decreased speculation in land and increased building construction. The commission would bring about this modification in taxation gradually during five years.

The New York Commission on the Distribution of Population was appointed by Governor Hughes in October, 1910, and made a report to Governor Dix in February. Its recommendations were embodied in three bills. One of these provided for the creation of a commission to continue the study of the problem of distribution of population; another authorized inquiry into the extent, conditions, and results of home work in tenements. The third bill required the State Department of Labor to prepare an annual industrial directory showing opportunities for manufacture in the cities and villages of the State. It recommended systematic city planning by all cities; the removal of public and private institutions out of cities wherever they increase congestion; the teaching of school gardening and greater publicity as to the agricultural opportunities of the State; the study of the possibility of creating small holdings in country real estate; and vocational farm training by means of special schools.

TAXATION AND CONGESTION. Following the above recommendation of the New York City Commission for a change in taxation methods attention was called to the practices in other countries. Germany began to tax the unearned increment in land values in 1904 in Frankfort. Since then the system has spread to nearly every large city and the Reichstag has extended it to all communities as a source of both local and imperial revenue. It is found to discourage speculation, to force land into use, and to encourage building. Similarly the reduction of the appraised value of houses and improvements in Australia had the effect of reducing land speculation. Vancouver, British Columbia, reduced the taxation on improvements by 50 per cent. The result was the doubling of building permits. This had the effect of increasing the demand for labor and the raising of wages. It was believed by some to have stimulated the growth of Vancouver at the expense of neighboring cities in Oregon. Prof. Frank J. Goodnow of Columbia, who was chairman of the committee on taxation of the above commission, while believing it to be a valuable policy, did not think its influence sufficient to justify reliance on it as a chief method of relieving congestion.

POPULATION, RURAL. See AGRICULTURE.

PORTLAND (ORE.). See BUILDING.

PORTLAND CEMENT. See CEMENT.

PORTO RICO. POPULATION. The Thirteenth Census, taken in 1910, showed a population of 1,118,012, as compared with 953,233 in 1900. The principal cities with their popula-

tions in 1910 are as follows: San Juan, 48,716; Ponce, 25,005; Mayagüez, 16,563; Caguas, 10,354; Arecibo, 9612; Aguadilla, 6315.

AGRICULTURE. Conditions during the fiscal year 1911 were generally favorable in agricultural pursuits, and the output of all products except coffee was increased in a marked degree. The acreage under cultivation was largely extended throughout the island, and greater attention was given to the scientific study of agriculture and the methods of farming. There has been great advance in the industrial activity of the territory since the tariff barriers between the mainland and the island were removed in 1911. In that year the exports of sugar were less than 70,000 tons. In 1910 they were nearly 285,000 and in 1911 323,000. The exports of cigars were fourteen times greater in 1911 than in 1901. In the former year they reached a total of \$174,000,000. The coffee industry showed improved conditions in 1911, the result of improved conditions in the market, which nearly doubled the average value of the product. While the quantity exported was less than that shipped during the previous year, the price received was greater. The production of fruit for external markets has become an important industry. In 1911 the shipments of fruits were valued at over \$2,000,000. These included oranges, pineapples, and grapefruit. The production of coconuts has increased year by year, and owing to the fact that the trees thrive in otherwise waste sandy soil along the coast, it has received more and more attention as agricultural lands advance in value. The industries mentioned comprise the leading agricultural activity of the island.

COMMERCE. The imports during the fiscal year 1911 amounted to \$38,786,997, as compared with \$30,634,855 in 1910. The exports were valued at \$39,918,367, compared with \$37,960,219 in 1910. Of the imports, \$34,671,958 were received from the United States, and of the exports, \$34,760,409 were sent to the United States. The imports showed a large increase in the purchases of all classes of manufactured articles, and the breadstuffs imported, not including rice, were valued at \$2,392,863, representing an increase of \$112,819. Imports of iron and steel were valued at \$4,977,146, an increase of \$1,666,611. Canned and preserved meats and dairy products were imported to the value of \$3,564,137, and cotton clothing, textiles, and other manufactures of cotton, \$5,132,693. Increases were shown also in the imports of boots and shoes and other manufactures of leather. The rice imported was valued at \$3,866,986, an increase in quantity of over 9,000,000 pounds. Rice is the staple food of the laboring classes in Porto Rico.

Of the exports, sugar was the most valuable, the amount exported in 1911 being 322,919 tons, valued at \$24,439,346, compared with a value for the exports in 1910 of \$23,545,922. This was the largest quantity of sugar ever exported from Porto Rico. The exports of manufactured and unmanufactured tobacco were valued at \$6,910,006. Of these cigars made up \$5,355,233, and leaf and wrappers, \$1,554,783. There were exported in the fiscal year 33,937,021 pounds of coffee, compared with 45,209,792 pounds in 1911.

COMMUNICATIONS. There were at the end of the fiscal year 1911 983.5 kilometers of insular railways in maintenance. During the year 200 kilometers were added to the extent of the railroads. The rapid increase in the number

of high-power automobiles used in the Territory augments the difficulty of keeping the roads in good repair. The employment of convict labor upon the insular highways has proved to be a successful experiment.

HARBORS AND DOCKS. There is great need of increased shipping accommodations in the harbors of Porto Rico. Dredging done by means of federal funds has provided a depth of 25 feet in a portion of the inner harbor and of 30 feet at the entrance to the port of San Juan. There is still a considerable area that must be dredged before suitable accommodations will be available for vessels which now enter and for those which cannot now enter. It is anticipated that on the opening of the Panama route, San Juan will become one of the busiest ports of America. There is need of improvement also at the ports of Mayagüez, Aguadilla, Arecibo, and Guayanilla.

IRRIGATION. The plan for irrigating the dry zone between the foothills and the southern coast, extending from the Patillas River on the east to the Jacaguas River on the west, a strip of land approximately 40 miles in length and averaging two miles in width, received special attention during the year. The territory comprised within this project contains about 30,000 acres of land which, with sufficient water supply, will be the most valuable in the island for agricultural purposes. Conditions compelled a complete reorganization of the work during the year and this caused delay in its progress. It is estimated that the principal features of the system will be completed so that water may be furnished during 1913.

EDUCATION. The total enrollment of pupils in the public schools in 1911 was 145,525, compared with 121,453 in 1910. During the year 17 new school buildings were acquired, making the total number now in use, 1042, equally distributed throughout all parts of the island. A large number of schools were equipped with courses of instruction in agriculture, manual training, cooking, sewing, and other practical subjects, and attention was devoted to hygiene, physical culture, and military training, and remarkable interest is shown in the night schools. There was during the year an increase of 75 per cent. in the attendance of these schools, bringing the total enrollment up to 15,138. The total enrollment in the University of Porto Rico at the end of the fiscal year was 1919. In the normal department, notable progress was made in manual training and domestic science courses. Especial attention was devoted to the department of agriculture during the year. A department of liberal arts was established in the university, in which is offered a two-years' course, qualifying the students for the proper certificate.

The expenditures for education during the year amounted for administration to \$43,029; for public and high schools, \$804,899; for the University of Porto Rico, \$61,418; for scholarships in the United States and Porto Rico, \$25,304, and for miscellaneous purposes, \$767; in all, \$935,418.

HEALTH AND SANITATION. Special attention was directed during the year to the suppression of occasional local epidemics of typhoid fever, chickenpox, and other infectious diseases. Food inspectors exercised a supervision over the manufacture and sale of food and drugs, and condemned and destroyed 194,000 pounds of

adulterated or decomposed articles of food intended for human consumption and 50,000 bottles of misbranded wines and liquors.

There were during the year 37,692 births, or 249 more than during the previous year. The birthrate per thousand reached 33.71. The deaths numbered 20,579, or 23.5 per thousand inhabitants.

A campaign against the hookworm disease was carried on during the year. Dispensaries for special treatment of this disease were maintained in 45 different places in the island, and there were admitted for treatment for the first time 22,810 patients, which, together with the 6418 old patients, brought the number during the year up to 29,228. Of these 6629 were cured, 6193 practically cured, and 10,292 were under treatment at the end of the year, while in the case of 6103 treatment was discontinued. There were 11 deaths from this cause during the year.

CHARITIES AND CORRECTIONS. The charitable institutions of the island in 1911 included the insane asylum, with 334 patients, the Asylum for the Blind, 79 patients, Leper Colony, 25 patients, Girls' Charity School, 152 inmates, Boys' Charity School, 150 inmates. In the penal institutions of the island there were confined during the year 8032 prisoners.

FINANCE. The receipts from all sources during the year aggregated \$6,813,575, or \$1,417,607 more than in 1910. Internal revenue receipts amounted to \$2,571,450. The assessed value of property in the Territory is \$133,282,453. There was a cash balance available for expenditures at the end of the fiscal year of \$1,214,000.

POLITICS AND GOVERNMENT

It was a quiet year politically in the history of the island. The legislature met and enacted a number of important measures. These are noted below. In July Secretary of War Dickinson visited the island, where he reviewed the troops and inspected military posts. There was no legislation enacted in Congress to alleviate the grievances of which Porto Ricans complained and measures were introduced to effect improved conditions. The chief criticisms are the lack of American citizenship, the prominence of the executive department, and the constitution of the Senate.

LEGISLATION. The first session of the Sixth Legislative Assembly convened January 9, 1911, and remained in session until March 9. There were enacted 79 acts and 14 joint resolutions. Perhaps the most important measures passed were those relating to public service corporations. These measures enlarged the powers of the Executive Council with regard to public service corporations in the Territory. It subjects all such corporations to the control of the Executive Council and makes it the duty of the attorney-general to institute criminal proceedings in the courts and gives the latter power to enforce the orders of the Executive Council when necessary. Several other measures relating to corporations were enacted. Other legislation of importance related to the agricultural interests of the island. These embraced two acts and one joint resolution, affecting the irrigation project mentioned above. Measures were passed amending the Criminal procedure.

OFFICERS. During the year several changes were made among the officers of the Territory. On June 13, 1911, J. W. Bonner was appointed

auditor to succeed A. P. Sawyer, resigned, and on February 23 M. Drew Carrel was appointed secretary. The officers at the end of the year were as follows: Governor, George R. Colton; Secretary, M. Drew Carrel; Treasurer, Samuel D. Gromer; Commissioner of the Interior, John A. Wilson; Attorney-General, Foster V. Brown.

PORTUGAL. A republic on the western coast of the Iberian peninsula (previous to October 5, 1910, a constitutional monarchy). Capital, Lisbon.

AREA, POPULATION, ETC. Total area, 35,582 sq. miles (including the Azores, 922, and the Madeira Islands, 314). Population (1900), 5,423,132 (estimate 1907, 5,668,954). Marriages (1909), 34,150 (1908, 34,135); births, 176,707 (177,231); deaths, 111,395 (116,430); emigrants (1908), 40,056. Lisbon had (1900) 356,009 inhabitants; Oporto, 167,995; Braga, 24,202; Setúbal, 22,074.

Primary education is free and nominally compulsory; but in fact few of the children of the people attend school. The percentage of illiteracy was, in 1900, 75.1 of the population above the age of six. Roman Catholicism was formerly the national religion; but a bill passed by the provisional government early in 1911 provides for the separation of church and state, the cessation (from July 1, 1911), of state expenditure for worship, the financial restriction of religious congregations, and free public observance (between sunrise and sunset) of all creeds.

PRODUCTION. Notwithstanding the excellence of soil and climate, more than 43 per cent. of the total area is barren. Crops cover 26.2 per cent.; vines, 3.5; fruit trees, 3.9; forest, 17.3. Although three-fifths of the population are engaged in agriculture, it is necessary, excepting in the event of extraordinary crops, to import foodstuffs in considerable quantities. Wheat, corn, and rye are raised, besides fruits and vegetables. Olive-oil production in 1909 is (unofficially) reported at 7,906,859 gallons, against 10,411,136 gallons in 1908.

BUREAU OF AGRICULTURAL STATISTICS. A decree issued March 29, 1911, by the government, provides for the compilation of annual agricultural statistics by a bureau especially formed under the control of the Direcção Geral da Estatística, pending the establishment finally of a permanent bureau whose duties shall include the compilation and publication of agricultural and other statistics, the taking of a decennial census, and the making of a general inquiry into the economic condition of the country.

Persons engaged in the mines in 1909, 7753. Output (1909): 74,419 metric tons of sulphur ore, 673 of wolfram, 197,979 of cupreous iron pyrites, 3037 of copper precipitate, 12,337 of cupreous pyrites, 1420 of arsenic, 2325 of silver ore, 736 of lead ore, 18 of tin ore; value of gold mined, 17,420 milreis. Salt, gypsum, lime, and marble are worked. The sardine and cork industries are important.

Persons engaged in the fisheries, 29,513; vessels, 12,621, of 41,331 tons; besides 987 persons and 31 vessels (6746 tons) in the cod fisheries. Value of products in 1909, 5,678,480 milreis (sardines, 2,535,153 milreis, tunny-fish, 470,764); besides 439,019 milreis from the cod fisheries and 14,437 from the Azores whale fisheries.

COMMERCE. Below is shown the trade by great classes, with totals for two years, in milreis (a, raw materials; b, provisions; c, yarns and textiles; d, machinery and implements; e, live

animals; f, various manufactures; g, tare. C & B=coin and bullion.):

	Imports		Exports	
	1908	1909	1908	1909
a	26,125,938	26,627,261	6,555,276	6,851,123
b	20,005,462	18,662,491	14,500,184	15,463,428
c	6,631,595	6,582,358	1,195,101	2,177,804
d	5,673,920	4,696,160	119,163	149,146
e	3,415,671	2,859,401	4,051,482	4,142,466
f	5,289,560	5,210,634	2,041,088	2,186,122
g	114,837	123,559
	67,257,083	64,751,864	28,462,294	30,970,088
C & B..	292,898	1,895,497	1,605,918	919,661
Total	67,549,981	66,647,361	30,068,212	31,889,749

Colonial products, not included in above table, were reexported to the value of 10,791,421 milreis (cacao, 7,071,931; rubber, 3,064,825) in 1908, and 12,300,286 milreis (cacao, 7,168,019; rubber, 3,958,863) in 1909.

The principal articles of export in 1910 (total trade not available) were wine, 12,416,000 milreis; cork, 4,518,000; live animals, 3,534,000; cotton yarn, etc., 2,645,000; fish, 2,604,000; southern fruits, 1,645,000; copper, 943,000; timber, 909,000; olive-oil, 702,000. The wine export in 1909 (9,356,669 milreis) was divided into Oporto, 5,040,348 milreis; *vin ordinaire*, 3,655,017; madeira, 401,474; liqueurs, 169,830. The principal countries of origin and destination are, in the order of their import importance, Great Britain, Germany, France, United States, Spain, Belgium, Brazil, the Portuguese colonies, etc.

Vessels entered (1909), 10,794, of 20,001,858 tons. Merchant marine (1911): 66 steamers, of 70,193 tons, and 259 sailing vessels, of 43,844.

COMMUNICATIONS. Miles of railway (December 31, 1909), 1758 (state, 672); of telegraph lines (1907), 5860; wires, 13,290; telegraph offices, 576, post offices (1909), 3861.

FINANCE. The milreis (worth \$1.08) is the monetary unit. The following table shows revenue and expenditure for three years, in milreis:

	1907-8	1908-9	1909-10
Revenue	71,039,000	70,169,000	69,262,336
Expenditure ...	77,121,000	75,275,000	74,605,880

The estimates for 1910-11 are reported as in the table below:

Rev.	1000 m.	Expend.	1000 m.
Indirect taxes ...	28,902	Debt	31,925
Direct taxes	14,207	Public Works	10,597
Rec. <i>d'ordre</i>	13,590	War	8,592
Stamps, etc.....	6,815	Interior	5,954
Domains, etc.....	5,184	Finance	4,894
Other taxes	1,037	Marine	3,997
		Civil list, etc....	2,646
		Justice, etc.....	1,384
		Colonies	1,180
		Various	1,597
Total ord.....	69,735		
Extraord.	1,069	Total ord.....	72,767
		Extraord.	732
Total	70,804	Total	73,499

The foreign debt stood, December 31, 1910, at 194,062,500 milreis; the internal, at 624,515,000 (floating debt, 88,900,000). The yearly excess of expenditure over income has added to the national debt.

NAVY. One armored coast-defense vessel (3200 tons); 5 protected small cruisers (aggregate, 11,-

266 tons); 19 gunboats (9093); one torpedo-boat destroyer (530); 4 torpedo boats (252) composed the navy in 1911, besides a schoolship, transports, river gunboats and obsolete gunboats. In construction: 2 torpedo-boat destroyers, 6 torpedo boats, 2 submarines, 1 service boat, 1 vedette. The personnel includes 420 officers and 5687 men.

ARMY. By enactment of the National Assembly an army to consist of active, reserve, and territorial forces was established in the new republic. Each citizen is liable for military service from his sixteenth to forty-fifth year, though until twenty years of age the instruction will be confined to simple gymnastics and rudimentary rifle practice. When twenty years of age each Portuguese will be held liable for ten years' service in the organization of the active army, with varying times of service with the colors. A second period of ten years will be spent within the reserves with supplemental training, and then the final period is served with the territorial militia, where eight days' training each year is provided. The recruiting of the army is secured by eight large recruiting areas in each of which there are an active division and two reserve infantry brigades, and the necessary formation for the territorial forces. Under the monarchy the army was maintained on a peace basis of about 30,000, which for war could be increased to about 100,000, including 53 militia. In 1911 there were 4 divisions of the active army, garrisons at Madeira and the Azores, and the reserves, while in the colonies an army of about 10,000 men was maintained. During the year there were partial mobilizations of the army. In consequence of monarchist disturbances, and of reports as to movements of conspirators on Spanish territory near the north frontier of Portugal, reservists were called out as a preventive measure. Considerable war material was also bought for the army, as the monarchist régime had left the army in an unprepared condition.

GOVERNMENT Upon the abolition of the constitutional hereditary monarchy, the republic was proclaimed October 5, 1910, and sanctioned by the constituent national assembly August 21, 1911. The executive is the president, elected for four years by congress, which exercises the legislative power and is composed of a chamber of deputies (164 members elected for three years by direct suffrage), and a senate (71 members, elected for six years). The president elected August 24, 1911, was Manoel de Arriaga. The ministry as constituted November 11, 1911, was as follows: premier and minister of foreign affairs, A. de Vasconcellos; interior, Silvestre Falco; justice, Antonio Macieira; finance, S. Paes; public works, E. de Vasconcellos; war, Col. Alb. Silveira; navy, C. de Almeida; colonies, Capt. Freitas Ribeiro.

HISTORY

DANGERS OF THE NEW GOVERNMENT. Early in the year Dom Miguel of Braganza, the pretender wrote that now that the situation had changed and the return of King Manuel was not to be thought of, the only recourse was to fall back on the old Miguelist dynasty. He added that if the country called him to the throne he would answer the call, but would take no extraordinary action to gain the throne if the country preferred to remain under the present régime. The chief

danger to the new republic, however, came on the one hand from the attempts to restore the deposed king, and on the other from the discontent of the extreme radical element, who were disappointed with what had been accomplished toward social reform. In February certain prominent monarchists who had held office under the old régime were notified that they must leave Portuguese territory within three days. A manifesto was issued by a monarchist officer, Captain Couceiro, declaring that after six months of republican rule economic conditions had not improved and urging a truce between monarchical and republican factions for the purpose of taking a plebiscite of the country as to the form of government. On the publication of the manifesto Captain Couceiro was dismissed from the service. He was subsequently active in organizing monarchist plots. In March a monarchist conspiracy was discovered at Lamego and seven soldiers were imprisoned. In April there were fears of monarchist reprisals in the north and on the border. In the early summer there were frequent alarms at the danger of royalist raids from Spain, whither the émigrés had taken refuge, and where Captain Couceiro was believed to be organizing a military movement. In June and July there were alternating reports that royalists were on the point of invasion, and that their plots had wholly failed. Many persons were arrested on suspicion, and troops were concentrated to meet an invasion from Galicia. The Spanish government, however, gave assurances that no hostile movement would be permitted on Spanish soil, and that the Portuguese monarchists would be expelled; whereupon the minister of war recalled the reserves. Nevertheless, the rumors of a royalist uprising persisted during August, and the government kept the frontier strongly garrisoned. These fears were realized on September 30, when an anti-republican revolt occurred at Oporto and Villa Nova, but the troops were faithful to the government and the movement was checked without serious loss. Later it was reported that the people had risen for the monarchy in the commune of Santo Tirso and that the royalists were about to cross the frontier from Spain. The long-threatened royalist raid finally occurred on October 5, when a column of 700 monarchists crossed the frontier into the Braganza district, where they occupied several towns and were reinforced by about 3000 men. Another monarchist force, estimated at 2000, was gathered at Vinhães, under Captain Couceiro. Within a few days it was reported that the Vinhães force had been dispersed and that many of the royalists had recrossed the border and were taking refuge in the hills. It was believed that the expedition had failed to arouse any special enthusiasm among the people and that further attempts could easily be checked. It was reported that on October 17 the monarchists had captured the frontier town of Montalegre, inflicting a loss of sixteen men on the government's forces, and that Captain Couceiro's forces had made a triumphal entry into the town. Later reports, however, indicated the suppression of the movement, which appeared to be less important than was at first supposed, and to have been undertaken, not on behalf of King Manuel, but of Dom Miguel, the pretender. The alarm of the government continued, however, and many monarchist plots were discovered or suspected.

Six hundred arrests were reported and Parliament was summoned in special session to pass a measure providing for a special court to try monarchist conspirators. There was also much alarm over industrial and Socialist agitation during the year. The year began with the threat of a serious and prolonged railway strike. This was declared on January 10, and the number of men was estimated at 7000. A cabinet crisis was threatened on account of the resignation of Senhor de Almeida, minister of the interior. He was favored by the strikers and the government was informed that the strike would end if Senhor de Almeida resumed his office. This was arranged and a compromise was subsequently reached by which certain of the demands of the strikers were granted. The employees of the Lisbon Gas Company under radical influence went on strike and did a considerable amount of damage before they were scattered by the troops. Other strikes occurred during the year at Setúbal, Lisbon, and elsewhere, some of them leading to riots.

SEPARATION OF CHURCH AND STATE. As to the policy toward the church, the Portuguese minister for foreign affairs announced in February that all religions should be free, that schools in which creeds could be taught would be permitted, and that any property belonging to foreign religious bodies that had temporarily been seized by the government would be restored or an indemnity would be paid. A sharp issue arose between the provisional government and the clergy, owing to the publication of a pastoral letter by several of the bishops criticising the ministry. The government ordered the priests not to read the letter and most of them obeyed. Those who read it were imprisoned and threatened with the loss of their living. The government's energetic measures obliged most of the bishops to give orders that the letter should not be read. The bishop of Oporto, however, who insisted on ordering his priests to read the letter, was summoned before the minister of justice and after he had boldly defended his position was deprived of his post. The church condemned the course of the government in the separation of church and state as placing the Portuguese clergy in an abject position, since not only the present, but future possessions were appropriated and the state would have control over the administration of canonical rights. Moreover, the law invited priests to marry and provided pensions for their widows and children, thus attacking ecclesiastical discipline; and the bishops and clergy were left at the mercy of the laity.

The Church Separation law, which was ready for promulgation at the end of April, provided that the Catholic church should cease to be the religion of the state and that it should be henceforth maintained by the offerings of its members, the state assuming control of all property belonging to the churches and the congregations. The accounts of the church are to be under fiscal supervision. Churches and the property necessary for religious worship would be ceded to the clergy, and the Portuguese and foreign priesthood were to continue to exercise their functions as before. Each holder of a benefice on July 1, 1911, was to receive the same stipend from the state. New appointments were to require the consent of the government. Religious property belonging to private individuals would be respected. The state will not oppose the mar-

riage of priests. One provision of the law forbade members of seminaries to walk about the streets in their clerical vestments. The great mass of clergy and bishops agreed not to accept the government stipends, but to insist that the church have the same rights in Portugal as in the United States, Switzerland, and Brazil.

The papal encyclical *Jamdudum*, dated March 21, deplored the anti-religious acts of the republic, namely the law of separation, the expulsion of the orders, the suppression of public festivals, the introduction of divorce, the abolition of the religious oath and of religious instruction in the schools. It also lamented specifically the dismissal of the bishops of Beja and Oporto. It declared that the separation law not only despoiled the church of the means of subsistence, but forbade it to acquire such means in the future and denied the common liberties of subjects to the church and to Catholics. It condemned the law and pronounced it void. It was believed, however, that in spite of the bishops' orders, two-thirds of the minor clergy would accept the government stipend. It was estimated that the government securities held by the clergy, and to be confiscated, amounted to \$25,000,000, consisting chiefly of legacies to the church. Despite the government's offers, the clergy continued to refuse its financial aid. Toward the close of the year a deputy proposed to sever diplomatic relations with Rome, but the Chamber rejected the motion.

ESTABLISHMENT OF CONSTITUTIONAL GOVERNMENT. Among the many serious tasks before the provisional government of the new republic were the drafting of the constitution and the framing of an electoral law. The latter was published in February. It bestowed the suffrage on all males 21 years of age and over who are fathers of families and can read and write, with certain specific exceptions, as, for example, soldiers, bankrupts, ex-convicts, etc. The elections to the new constitutional republican chamber took place quietly on May 28. There were no monarchist candidates, and it was too soon for differences to develop among the republicans. On June 19, the republican constitutional chamber was opened, and unanimously approved the decree declaring the abolition of the monarchy, and the banishment of the Braganza dynasty. The president read the decree to the people from the balcony, thus formally proclaiming the new republic. The constitution was read to the chamber on July 3. It provided for two chambers, of which one should be composed of members elected by the people, and the second, or upper chamber, of members chosen by the municipalities; a president to be elected for four years by both chambers, but not to be reelected; the ministers to be chosen by him, but responsible to Parliament. On August 20 the draft of the constitution was adopted and on August 24 Dr. Manoel de Arriaga was elected president of the republic by 121 votes against 86. Dr. Arriaga, well known as a journalistic orator, was the candidate of the Moderates and Independents, who united against the radical candidate, Dr. Machado, minister of foreign affairs in the provisional government. The first cabinet was announced at the beginning of September. Its chief was Senhor Chagas, who was also minister of the interior. The new republic was recognized by the United States after the meeting of the chamber in June, and by the other powers after the announcement of the cabinet in September.

In the autumn, dissensions arose in the Republican *bloc*. Dr. Almeida, leader of the principal group in the *bloc*, decided to withdraw his support from the government, and as this deprived the ministry of a majority, the premier resigned (November 8). A new cabinet was formed under Senhor Vasconcellos, who took the portfolio of foreign affairs. Concerning the question of native labor in the African colonies, see SÃO THOMÉ AND PRINCEPE.

PORTUGUESE EAST AFRICA, or MOZAMBIQUE. A Portuguese colony. Estimated area, 293,860 sq. miles; population, 3,120,000. Capital, Lorenzo Marques (10,000 inhabitants). The trade of the state territories in 1909 was 5,178,000 milreis imports, 5,433,000 exports, 4,305,000 reexports, 27,008,000 transit; of the Mozambique Company, 1,669,000 imports, 1,900,000 exports, 4,366,000 reexports, 3,950,000 transit; of the Nyassa Company, 490,000 imports, 434,000 exports, 80,000 reexports. Railways in the colony, about 300 miles. Revenue (1910-11), 5,418,332 milreis; expenditure, 5,118,832. Dr. J. F. de Acevedo Silva was high commissioner in 1911.

PORTUGUESE GUINEA. A Portuguese African colony, of about 13,940 sq. miles area and with 820,00 inhabitants. Bijagoz and Bolama belong to the colony, and the town of Bolama is the capital. The imports in 1905 were valued at 857,155 milreis and the exports at 492,238. Revenue (1910-11) and expenditure balanced at 309,900 milreis. Lieut. C. A. Pereira was governor in 1911.

POSTAL SAVINGS BANKS. According to a statement of Postmaster-General Hitchcock the number of post offices in the United States

authorized to receive savings deposits was 5185 at the close of the year. He stated that preparations were being made to establish the system in about forty thousand fourth-class offices that do a money-order business. Deposits at post offices are receipted for by certificates of deposit, accounts being kept at the individual offices. This differs from the universal practice of other countries whereby deposits are entered in pass books and a ledger account for each depositor is kept at the central office. The latter system is more expensive. The deposits amounted to only \$80,252 at the end of the first month, January, 1911; by the end of June they amounted to nearly \$700,000, and by the end of the year to \$15,000,000. The Postmaster-General predicted that with the great increase in number of depositing offices the total by the end of 1912 would be not less than \$40,000,000.

The law permits the depositor to exchange his deposits for United States 2½ per cent. bonds in denominations of \$20, \$40, \$60, \$80, \$100, or multiple thereof, and \$500 or multiple thereof. The first issue of these postal savings bonds was made on July 1, 1911, the amount being \$41,000. Of these 85 per cent. were in the registered form, indicating the intention of the depositor to retain them as a permanent investment. The second issue of these bonds amounted to \$416,920, of which about 75 per cent. were in the registered class.

The deposits are transferred to approved national and State banks, of which about 6000 had been authorized at the end of the year. The deposits are protected by bonds deposited with the treasurer of the United States.

Following is a table compiled by the Bureau of Statistics showing growth of postal savings banks in foreign countries. See also SAVINGS BANKS.

Country.	Year	No. of de- positors	Deposits	Year	Number of depositors	Deposits	Av. de- posits
Austria	1899	1,415,348	\$ 26,877,778	1909	2,143,611	\$ 45,671,080	\$ 21.26

POTASH. See FERTILIZERS.

POTATOES. In many of the more important potato-growing countries of the world the crop of 1911 was threatened with low production, if not failure, by a late and cold spring and by a dry and hot summer. The weather during the latter part of the season, however, was so favorable that a much better yield than was at first anticipated was finally secured. No accurate statistics regarding the world's production are available, but the world's crop is estimated at about five and one-half billion bushels. Germany and Russia, in spite of poor prospects early in the season, were again the leading countries in 1911. Germany produced in 1911 1,263,023,607 bushels on 8,207,375 acres, against 1,597,173,727 bushels on 8,144,957 acres in 1910. The average yield per acre was 196.13 bushels and 153.90 bushels for 1910 and 1911 respectively. Russia produced 1,166,323,000 bushels in 1911 and 1,333,312,000 bushels in 1910. In Great Britain, France, and Ireland the crop of 1911 was larger than the crop of the preceding year. Great Britain produced 142,994,805 bushels on 571,808 acres in 1911 and 129,813,100 bushels on 539,684 acres in 1910. The French crop of 1911 amounted to 423,573,500 bushels and the crop of 1910 to 308,885,000 bushels, the acreage for the two years being 3,837,463 and 3,765,804 respectively. Ireland produced in the year 137,942,000 bushels, as compared with 107,178,000 bushels the previous year. The Canadian yield for 1911 was 66,023,000, being about 8 million bushels less than in 1910 and about 33 million bushels less than in 1909. In the United States the dry weather of the season prevented the proper development of the early planted crop. Late plantings were more successful, but in many sections continued rains later in the summer proved deleterious. A late open fall favored the late planted crops. The total production reached 292,737,000 bushels, as compared with 349,032,000 bushels in 1910. The crop of 1911 was exceeded five times and was about 10 per cent. below the five-year average. Based on the farm value per bushel of 79.9 cents on December 1, 1911, the value of the crop was \$233,778,000, or over \$27,000,000 greater than the previous record value in 1909. The average yield was only 80.9 bushels per acre, as compared with 93.8 bushels in 1910 and 106.1 bushels in 1909. The production of the leading potato-growing States was as follows: Wisconsin, 32,480,000 bushels; Michigan, 31,020,000 bushels; New York, 27,750,000 bushels; Minnesota, 25,875,000 bushels, and Maine, 21,240,000 bushels. New York ranked first in acreage, with 375,000 acres, being followed by Michigan, with 330,000 acres, Wisconsin with 280,000 acres, Pennsylvania with 270,000 acres, and Minnesota with 225,000 acres. The highest average yield, 180 bushels per acre, was secured in Idaho and Maine. According to data gathered by the United States Department of Agriculture during the year the average cost of production was 24.6 cents per bushel.

In Germany the practice of drying potatoes and grinding them into meal for use in place of wheat flour has become widely established. During the past year 436 plants were in operation and the output of dried potatoes was 150,000 tons. The meal produced is practically finely ground and sifted potato starch and costs about 2 cents per pound. It is used in bread-

making and bakers mix from 10 to 15 per cent. with wheat flour and about 15 per cent. with rye flour.

POULSON, NILS. An American ironmaster and philanthropist, died May 3, 1911. He was born at Horsens, Denmark, in 1843 and was educated in Copenhagen as an architect and builder. He came to the United States in 1864 and after working for a time as a mason secured a position in the supervising architect's office in the government in Washington. He remained in that position for two years and then was employed by the New York Architectural Iron Works, where he had charge of the architectural and engineering department. In 1876 he went into business for himself with Charles M. Eger. In 1897 the firm was incorporated as the Hecla Iron Works and Mr. Poulson was made president. He had always shown a great interest in the welfare of the employees and one of the phases of the business to which he gave his attention was a series of evening classes. This resulted in improving the standard of the work of the company and also in fitting many of the men to start in business for themselves. In 1910 he gave \$100,000 for the establishment of educational relations between the United States and the Scandinavian countries. Scholarships for Scandinavian students were established at the Massachusetts Institute of Technology, and at Yale, Harvard, and Columbia universities.

PRESBYTERIAN CHURCH IN THE UNITED STATES. Often called the Southern Presbyterian Church. This denomination, which has its strength almost entirely in the South, numbered in 1911 286,174 communicants, 1694 ministers, and 3224 churches. In the Sunday schools of the denomination were 224,497 scholars. There are 14 synods and 83 presbyteries. The denomination sustains home and foreign missions and contributes liberally to educational purposes and to evangelical work among the negroes. The total contributions to all causes is about \$3,500,000 annually. The general assembly of the denomination was held in Louisville, Ky., May 18, 1911.

PRESBYTERIAN CHURCH IN THE UNITED STATES OF AMERICA. This division of the Presbyterian church is known as the northern branch, in distinction from the Presbyterian church in the United States, called the Southern Presbyterian Church. In 1911 the communicants of the Presbyterian Church in the United States of America numbered 1,354,453, the ministers 9128, and the churches 10,051. The denomination is divided into 37 synods and 297 presbyteries. In the Sunday schools of the denomination were 1,205,030 Sunday school scholars. There was contributed for all purposes throughout the year \$25,909,336, divided as follows: Home missions, \$1,668,859; foreign missions, \$2,488,477; educational work, \$157,162; Sunday-school work, \$193,278; for the erection of churches, \$189,660; for the support of colleges, \$832,520; for congregational purposes, \$17,969,150, and for miscellane-

ous purposes, \$1,781,336. The missionary work of the church is carried on by the board of home missions, which has control of domestic missions, and by the board of foreign missions, which conducts the work in foreign countries. There were 26 missions in 1911, 144 stations, and 1030 missionaries. The communicants in the missions numbered 114,166 and the pupils in the Sunday schools numbered 152,057. Other boards for carrying on church work are the board of publication and Sabbath-school work, board of church erection, board of relief, board of missions for freedmen, college board and the permanent committee on temperance. The denomination holds annually a general assembly. This was held in May, 1911, at Atlantic City. The most important acts of the assembly were as follows:

The World Conference of Christian Churches on Faith and Order was approved. The plan of union with the Reformed Church in the United States was adopted. A plan of vacancy and supply was sent down to the presbyteries for consideration. Training schools for lay workers were approved. Churches in all communities were asked to unite with other denominations in coöperative Christian work. Members were warned to have no part in the liquor traffic. The only terms of church membership were declared to be a profession of faith in Jesus Christ, and of obedience to Him, to be followed by baptism. Ministers were admonished to refrain from utterances which unsettled the church. The Rev. William D. Grant was suspended from the ministry for departures from the doctrinal standards.

Missionary committees were recommended to be constituted in each congregation. A further examination in writing of candidates in theology was authorized when verbal examination was unsatisfactory to one-fourth of the presbytery. The authority of superior judicatories in the Presbyterian system of government over congregations was reaffirmed. A committee was appointed to take part in the coming centennial of Princeton Theological Seminary. A basis of coöperation with other denominations in home missions was adopted, and it was recommended that the work among the colored people be unified. A movement to raise \$100,000 for the Waldensian church was approved. The faithfulness of presbyteries in complying with the deliverances of the assembly, as to approved schools for students for the ministry, was approved.

A heresy trial of unusual interest was held before the permanent judicial commission of the general assembly. The case was that of Rev. William D. Grant. The Judicial Commission of the Presbytery of Northumberland had acquitted Dr. Grant of certain heresy charges. These included allegations that he had failed to ascribe to Christ attributes which belonged to Him as the Son of God, and that he impugned the veracity of the Scriptures of the Old and New Testament and divested them of authority. The commission of the assembly reversed the findings of the presbyterial commission and found Dr. Grant guilty, with a sentence that he be suspended from the functions of his office until he should satisfy the Presbytery of Northumberland that he had renounced the errors of which he had been convicted. The report was affirmed by the general assembly.

Negotiations were carried on during the year

for a plan of union between the Presbyterian and Reformed German churches. For an account of litigation with the Cumberland Presbyterian church during the year, see CUMBERLAND PRESBYTERIAN CHURCH.

The officers of the general assembly in 1911 were as follows: Moderator, Rev. John F. Carson, D. D.; vice-moderator, Rev. Hugh H. Hanna; stated clerk, Rev. William Henry Roberts, D. D.; permanent clerk, Rev. William Brown Noble, D. D.; assistant clerk, Rev. James M. Hubert, D. D.

PRICES. The very high level of commodity prices in recent years has been the occasion of world-wide discussion as well as considerable disturbance in industry. The general level of prices in 1911 was slightly lower than during the preceding year, but higher than during any year preceding 1910. *Bradstreet's* index number, which is based on the per pound prices of 96 articles on the first of each month, stood at 8.8361 January 1. The indexes for the succeeding months were as follows: February, 8.7602; March, 8.6929; April, 8.5223; May, 8.4586; June, 8.5294; July, 8.5935; August, 8.6568; September, 8.8191; October, 8.8065; November, 8.8922; December, 8.9824. The index for December was the highest since May, 1910, and in several decades has been exceeded only in December, 1909, and the first five months of 1910. The index for December was 17 per cent. higher than ten years earlier; it was slightly more than 50 per cent. higher than the low point of 1896. Of the 96 articles 47 showed advances during the year, 43 showed declines, and 16 remained unchanged. Among the articles showing increases in prices were cereals, fresh meats, milk, butter, sugar, coffee, tea, potatoes, and leather. Among those showing decreases were cured meats, fish, apples, cotton, cotton sheeting, pig iron, coal, rubber, and tobacco.

The level of English prices is indicated by Sauerbeck's index, which is based on 45 commodities. The average of these indexes for the years 1900-10 was 73. In 1907, 80; 1908, 73; 1909, 74; 1910, 78; in March 1911, 78.9; June, 80; July, 78.9; August, 79.5; September, 80.3; October, 80.7; November, 80.6. While higher prices caused an appreciable cessation of demand in Great Britain there were no serious popular outbreaks resulting.

FOOD RIOTS. On the continent, however, high prices caused numerous demonstrations, often accompanied by rioting and the destruction of property. In Germany there was an increase in all prices except those of animal products, the increase in home agricultural products being from an index of 109.3 to 153.3. The chief cause of this advance was said to be the very dry summer. The Prussian ministry in Germany reduced by one-half the rates for the transportation of potatoes, vegetables, corn, and fodder. They also formulated a plan whereby food products might be distributed to the poor at or even below cost. In Berlin the municipal authorities organized ten public markets for

the sale of fresh fish. In October and November there was much discussion of the problem in the Reichstag. Opponents of the protective system declared high prices to be due to the high tariff. The chancellor made a spirited defense of the existing fiscal system. He pointed out that Germany now supplies nearly all her meat, although the consumption per capita has risen almost to the English level. Similarly the per capita consumption of wheat has greatly increased in the last decade. He found that the protective system greatly strengthened the empire and should not be sacrificed to a passing demand for a reduction of prices. He declared that the Socialists were endeavoring to make political capital for the coming election.

In Vienna occurred the most serious of the food riots. There were outbreaks in many parts of the city on September 17, attended with considerable destruction of both public and private property, many injuries, and some bloodshed. Severely repressive measures were adopted by the police. The demonstration, however, was partly revolutionary in character. The real cause was not perfectly clear, one explanation being that the riots were fomented by Socialists; another that they were spontaneous protests of workmen against high food prices. Probably both factors entered. The demonstration was attended by 30,000 Socialists, together with some thousands of rowdies and hooligans. Immediately thereafter there were demonstrations in various parts of the country on account of the almost intolerable level of food prices. The government at once reduced by one-half the freight rates on potatoes, vegetables, corn, and fodder. In October the city council of Budapest decided to increase to threefold the capacity of the municipal bakery, to establish a public milk market, to build public abattoirs, and to convert vacant grounds into market gardens.

In September also occurred open-air demonstrations in Paris, lead by Socialists and the General Confederation of Labor. They raised the cry of "down with war and dear food." Meetings were held also in numerous cities in the north of France, in Brittany, and even in the southern part of the country. In many places, both large and small, the retail dealers were forced either to agree to sell at prices formulated by groups of house-wives or to close their shops. Among the causes assigned for the advance in prices were the tariff, the trusts, the existence of the foot-and-mouth disease among cattle, and the drouth, with its consequent bad crops. The council of ministers agreed to permit the communes to engage in coöperative butcher and bakery shops. Premier Caillaux also declared that the 1912 budget would include an appropriation for the establishment of butcher shops and bakeries, and for the erection of cheap lodgings. See FRANCE, *History*.

At the same time with disturbances at St. Quentin and neighboring cities in northern France occurred demonstrations in Belgian cities. Complaints were heard also from St. Petersburg, where all prices have advanced rapidly since 1900 and where the price of flour became almost intolerable.

THE BRITISH BOARD OF TRADE INQUIRY. An investigation has been carried on during several years by agents of the British Board of Trade as to wages and prices in Great Britain, Germany, France, and the United States. The

American investigation covered the following twenty-eight cities: New York, Boston, Brockton, Fall River, Lawrence, Lowell, Providence, Baltimore, Newark, Paterson, Philadelphia, Cincinnati, Cleveland, Detroit, Louisville, Muncie, Pittsburgh, Chicago, Duluth, Milwaukee, Minneapolis, St. Paul, St. Louis, Atlanta, Augusta, Birmingham, Memphis, New Orleans, and Savannah. Data were collected for the month of February, 1909, with reference to wages and hours as shown by the time-sheets of employers, rents as reported by real estate officers, and by a house-to-house canvas, food prices as reported by dealers, and food expenditures as estimated in 7616 family budgets. The occupations chosen for comparison were the building and engineering trades and printing. Two-thirds of the families studied had incomes of between ten and twenty-five dollars per week. The report also gave a very interesting and correct statement of the social and industrial conditions prevailing, not only in the towns studied but in the country as a whole. The wages, rents, food prices, and rent-and-food cost combined in New York City was taken as a base, the data for the other cities being stated in percentages of the New York figures. Thus the Middle West towns showed a wage index of 95 (that of New York being 100), rent index of 79, food prices 95, and rent-and-food combined (rent one-fourth, food three-fourths) 91, as compared with New York. Therefore these Middle West cities showed an approximate real wage of 104, the New York wage being 100. In all other groups of cities the real wages were found to be less than in New York; for New England the index was 85, for the other Eastern cities 95, for central cities 97, and for Southern cities 92.

As compared with the wages of skilled workmen in the selected occupations in England the wages of American workmen were found to be in the ratio of 230 to 100; the hours of labor in the ratio of 96 to 100; rents in ratio of 207 to 100; food prices, in ratio of 138 to 100. By combining the food and rent indexes, the cost of living index was found to be 152 in the United States to 100 in England. It should be noted, however, that this ratio of 152 to 100 probably exaggerates the advantage in favor of the American workman, since the data all dealt with skilled laborers who are relatively less numerous in the United States than in England. Among the distinctive characteristics of American industrial life which the report emphasized are the relatively high standard of living, the modifications due to the presence of many nationalities, and the tendency to employ unskilled labor with machinery in the processes where skilled labor is employed in Europe. The report also calls attention to the smaller percentage of total income which the American laborer spends for food, the larger annual consumption of meat, and larger expenditures for fruits and vegetables. It also finds that the American worker appears better dressed on the street, though American clothing is less durable and more costly than English. It notes that American bedrooms are not uncommonly heated in winter, and that ice and iced drinks are universal in summer. The report finds that many adaptations have been introduced into American industry in order to fit the capacities of a great mass of untrained immigrant workers. For this reason the comparison between the wages and the cost of living in the United States and

England, as based on a few highly skilled trades, is not believed to be typical of American conditions in general.

The similar comparisons made with France, Belgium, and Germany showed that wages there were lower and hours longer than in England, while cost of living is higher. In Germany the money wage per hour was estimated to be three-fourths the English wage, and the cost of rent, food, and fuel nearly one-fifth greater. In France the weekly money wage was found to be 75 per cent. of the English; the hours per week 117 per cent. as long; and the hourly wage only 64 per cent. But rent, food, and fuel were higher. In Belgium the weekly wage in the industries compared was 63 per cent., the hours per week 121 per cent., and the hourly wage 52 per cent. of the English. It was also reported that the cost of living was higher in Scotland and lower in Ireland than in England.

INTERNATIONAL COMMISSION. The fact that the rise in prices is world-wide and has caused serious social and economic disturbances in a number of countries was the basis of a proposition made by Prof. Irving Fisher of Yale University that there be created an international commission to inquire into the causes of the rise. At the annual meeting of the American Economic Association the proposal was approved by many members. It also received the approval of President Taft and other officials. Moreover, the proposition was favored by leading economists, financiers, and statesmen of Europe. The matter was still in the stage of agitation at the close of the year, with every probability of success.

CAUSES. Little progress was made in 1911 in the analysis of conditions producing higher prices. There was rather wide agreement that the chief and most general cause has been the increased production of gold. The world's annual production has risen rapidly from little more than \$100,000,000 in the early 90's to more than \$450,000,000 in recent years. That this in all probability is the chief cause is shown by two facts. The first is that prices are merely ratios between the value of money and the values of commodities, and a great increase in the volume of gold would cheapen it and raise prices. The second fact is that this is the only important cause which would affect prices throughout the world. Other causes assigned with good show of reason in cases of special articles were: The tariff; the trusts; cold storage; deceptive weights, measures, and qualities; higher standards of living; concentration of population in cities; and increased costs of retailing. Still other less plausible causes assigned were: Wasteful farming methods; bad banking methods; great increase in public expenditures; trade unions, advance in wages, and shortening of hours of labor. The causes assigned often depended on the special hobbies of the writer.

PRIMARY ELECTIONS. See ELECTORAL REFORM.

PRINCE EDWARD ISLAND. An insular province of the Dominion of Canada. Capital, Charlottetown (population, preliminary returns, census of June 1, 1911, 11,198). Area, 2184 sq. miles. Population (1911 final), 93,728. The province is administered by a lieutenant-governor (in 1911, appointed June 1, 1910, Benjamin Rogers), appointed by the governor-general of Canada, aided by an executive council (responsible ministry), and a unicameral legis-

lative assembly of 30 elected members. Premier, Herbert James Palmer. See CANADA.

PRINCESS ROYAL. See BATTLESHIPS.

PRINCETON UNIVERSITY. The number of students in all the departments of the university in the collegiate year 1911-12 was 1543, of whom all but 152 were in the academic department. There were 143 in the graduate school and 9 in the school of electrical engineering. In the graduate body were included students from Canada, Japan, Brazil, Ceylon, China, Egypt, India, England, Ireland, Italy, and Wales. The faculty and instructors numbered 182. During the year there were several important changes in the faculty. Winthrop More Daniels, professor of political economy, resigned to become a member of the Public Utilities Commission of New Jersey. Dr. Oliver Samuel Tonks, since 1905 preceptor in art and archaeology, resigned to accept a professorship in art at Vassar College. Dr. George David Birkhoff, since 1909 preceptor in mathematics, was elected professor in mathematics. Dr. Edward S. Corwin was elected professor of politics. Prof. Ulric Dahlgren professor of biology, Dr. Henry N. Russell professor of astronomy, Dr. Frank Albert Fetter professor of political economy, and Dr. John Duncan Spaeth professor of English. During the year Holder Hall, a new dormitory, a gift of Mrs. Russell Sage, was completed. Another dormitory, the gift of the classes of 1884 and 1885, was added. Work upon the graduate college buildings was begun in June, 1911, and at the end of the year the foundations were practically completed. These buildings include the dormitories of Thompson College, Proctor dining hall, and the Cleveland Memorial Tower. At the end of the year a successor to Dr. Woodrow Wilson as president of the university had not been chosen. John Aikman Stewart was chosen president pro tempore. See UNIVERSITIES AND COLLEGES.

PRINCIPE. See SÃO THOMÉ.

PRINGLE, CYRUS GUERNSEY. An American botanist and traveler, died May 26, 1911. He was born in Charlotte, Vt., in 1838, and received his education in various schools in Vermont and Canada. From 1881 to 1884 he made important collections in forestry and general botany in Arizona, California, Oregon, and Washington as collector for the American Museum of Natural History. From 1885 to the time of his death he was botanical collector for Harvard University. He was also keeper of the herbarium of the University of Vermont. He was for many years engaged upon the thorough exploration of the flora of Mexico, placing large collections in 50 or more of the most important herbaria of the world. He was the author of *Notes on the Forest Vegetation of Mexico* and *Notes on Botanical Travel in Mexico*. He was a member of several botanical societies.

PROTESTANT EPISCOPAL CHURCH. The communicants in this denomination, including those in the United States and foreign missions, numbered in 1911 963,067, compared with 946,252 in 1910, an increase of 16,845 in the year. The clergy numbered 5806, the parishes and missions 8065. In the Sunday schools of the denomination were 449,938 scholars and 50,456 teachers. The total contributions from all sources for the work of the denomination in 1911 amounted to \$18,692,211. The denomination comprised in the United States 68 dioceses and 23 missionary districts, including those in Alaska and insular possessions. There are also 11 foreign missionary districts. During 1911 the church lost by death five of its bishops: Edward Atwell, Bishop of Canada; William Paret, Bishop of Maryland; Alexander Hamilton Vinton, Bishop of Western Massachusetts; Ozi William Whitaker, Bishop of Pennsylvania, and Channing Moore Williams, sometime missionary Bishop of Japan. The following bishops were consecrated during the year: Julius W. Atwood, Missionary Bishop of Arizona, consecrated January 18, 1911; Thomas Frederick Davies, Bishop of Western Massachusetts, consecrated October 18; Rogers Israel, Bishop of Erie, consecrated February 24; James de Wolf Perry, Jr., Bishop of Rhode Island, consecrated January 6; Philip M. Rhinelander, Bishop Coadjutor of Pennsylvania, consecrated May 10; Louis C. Sanford, Missionary Bishop of San Joaquin, consecrated January 25; Theodore Payne Thurston, Missionary Bishop of Eastern Oklahoma, consecrated January 25; and James R. Winchester, Coadjutor Bishop of Arkansas, consecrated September 29.

The latest general convention of the denomination was held in Cincinnati, O., in 1910. These conventions are triennial. The church congress held its twenty-ninth annual session in Washington in April, 1911. Among the questions discussed were the following: "The Value of Protestantism," "Woman Suffrage as Affecting Our Religious and Educational Institutions," "Seat of Authority in Church Government," and "The Need of Prayer Book Revision to Meet Present Day Conditions." The congress was addressed by President Taft.

One of the most interesting events in the history of the denomination during the year was the opening and consecration of the choir and crossing of the Cathedral of St. John the Divine on Morningside Heights, New York City, which took place on Wednesday, April 19, in Easter week. The consecrator was the Right Rev. Dr. Greer, Bishop of New York.

Social Work in the Church was a subject which

received marked attention during the year. At the general convention in 1910 an entire day was devoted to a discussion of this phase of church work. Commissions were appointed during 1911 in several dioceses. In the diocese of Milwaukee the commission obtained from the diocesan council the authority to represent the church in great social and moral questions which at any time might be at issue in bills before the legislature, and the commission acted in behalf of the church in connection with a number of bills at the session of 1911.

PSYCHICAL RESEARCH. The work of 1911, especially that of the British Society, bears witness to the deep influence left upon "research" by the late Mr. Frank Podmore, whose posthumous book *The Newer Spiritualism* (1910) has aroused much discussion. Podmore offered the unusual spectacle of a competent writer once thoroughly convinced of the truth of the spiritistic doctrine only to turn skeptic and critic, while still he maintained an active and generous interest in psychical research. (See *Proceedings of the [British] Society for Psychical Research*, lxii, March, 1911). Podmore's influence was perhaps as wholesome as that of any person prominent in "research" within the present generation. It was his mission, as Andrew Lang put it, in his presidential address on May 16, "to throw cold water on too sanguine brethren." The current British *Proceedings* are occupied, for the most part, with further interpretation of the communications "received through" the famous mediums and with the general theory of spiritistic phenomena. The *Proceedings of the American Society for Psychical Research* (vol. v., pt. 1) were devoted to "A Case of Hysteria." The medium was a young woman without "professional" training or practice, who was examined at length by Drs. Hyslop, Hamilton, and Smyth. The authors regard the person as an hysterical, although an independent medical examination "failed to disclose any sign of either mental or physical disease." Pictures taken by flashlight during the trance séances revealed many clever manoeuvres on the part of the medium. In interpreting the results, the writers make much of the principle of "trance deception." The "mixture of successful and abortive efforts" at supernormal communication they refer to the hysterical condition of the patient, and they are inclined to believe that "it is precisely in this mixture that the priceless value of the case lies." A brief account of the case is given in the *Journal of the Society for May* (vol. v., 289). The October number of the *Journal* announced the establishment of an endowment fund of \$25,000. In *The Evidence for the Supernatural*, I. L. Tuckett hopes to interest those who have not much time for reading and who are nevertheless anxious to form for themselves a sound opinion upon the evidence in question. The volume reviews the testimony for and against telepathy, clairvoyance, spiritism, miracles, and the efficacy of prayer. The author supports an agnostic attitude by the contention that much of the corroborative evidence has been furnished and interpreted by persons untrained either in scientific research at large or in the

methodical study of the mental processes and functions involved. Tuckett alludes to Lecky's assertion that the final rejection of witchcraft was due less to the cogency of argument than to the incongruence of the belief with the intellectual tendencies of modern times, and he suggests that likewise the fate of current beliefs in the supernatural will rest, in large measure, upon their conformity to the general intellectual attitude of future generations. Two English ladies, who wrote under the names "Miss Morison" and "Miss Lamont," describe in *An Adventure*, their hallucinatory experience during a visit to the Petit Trianon at Versailles. Objects and persons appeared to them as of the time of Marie Antoinette. The authors say, by way of explanation, that they may have "entered within an act of the queen's memory when alive." An interesting review and criticism of the book are to be found in the British *Proceedings* of the Society for Psychical Research for June (lxiii, 353). Readers of Henry Frank's *Modern Light on Immortality* (1909) will know the type of speculative construction to expect in his new book entitled *Psychic Phenomena, Science and Immortality*. The volume on *Psychical Research*, written for the *Home University Library of Modern Knowledge*, has been done by Prof. W. F. Barrett of Dublin, the veteran worker in the British Society. *Spiritism and Psychology* is a new book by Th. Flournoy, the author of *From India to the Planet Mars*.

PSYCHOLOGICAL ASSOCIATION, AMERICAN. See **PSYCHOLOGY**.

PSYCHOLOGY. Within the last few years two strong and distinct tendencies have appeared within the science of psychology; the first leads toward the various arts of practice and of application, especially toward education, law, medicine, and commerce, and the second involves wide extension of empirical methods of research to the study of the intellectual functions and of the will. They may both be called "terminal tendencies," since, on the one hand, application collects within the arts the ripest fruits of pure science, and since, on the other, thinking and voluntary action bring the investigator to the furthest bounds, to the most subtle and involved processes and functions, of mind. It is, then, perhaps, natural that these two far-reaching tendencies should have led psychologists, during the year just closed, to undertake a new inventory of principles, methods, and results. Certain it is that a review of psychology for the year 1911 reveals an unusually large number of general systematic treatises which cover the subject in whole or in part from many different points of view.

MEETINGS AND GENERAL NEWS. During the Christmas holidays the American Psychological Association held its annual meetings for 1911 with the Southern Society for Philosophy and Psychology, at Washington. The conference of experimental psychologists occurred in Ithaca, April 17-19. A part of the Bologna (4th international) Congress for Philosophy (April 6-19) was devoted to psychological subjects. The list of deaths during the year includes the following names: Sir Francis Galton, author of *Hereditary Genius* and *Inquiries into Human Faculty*, and founder of the science and art of eugenics; W. A. Nagel, of the University of Rostock, widely known for his work upon the senses of man and of animals and as editor of the German periodical *Zeitschrift für Psychologie* and

Physiologie der Sinnesorgane, and Alfred Binet, director of the psychological laboratory of the Sorbonne, editor of *L'année psychologique* and brilliant writer of numerous psychological books and articles. Twenty-three doctoral degrees were conferred upon students of psychology by American universities.

GENERAL BOOKS AND TREATISES. First to be mentioned are several new textbooks. In the production of these, America seems to have been most prolific. Two outlines of similar aim but of unlike temper are *An Introduction to Psychology*, by R. M. Yerkes of Harvard, and *The Essentials of Psychology*, by W. B. Pillsbury of the University of Michigan. Yerkes discovers the fourfold root of the science in analytical and integrative description, in the tracing of individual and racial histories, in the enunciation of laws and principles, and in the exposition of causes and correlations. To this fourfold treatment he prefixes a general introduction and appends a section on mental control. The book gives a prominent place to introspection. The lay reader will find of especial interest the chapters which discuss animal psychology and eugenics. Pillsbury defines psychology as the science of human behavior, and behavior "includes everything from the simplest movements of walking or of fingering the pen to the activities involved in awaying an audience by speech or in carrying to completion some great engineering work." Consciousness, so the author holds, is only a means to the study of behavior. The book treats in order nervous physiology, the analysis of consciousness and of behavior, and the study of the more complicated activities. It takes, for the most part, the "functional" point of view and it is of the "biologizing" sort. Work, fatigue, and sleep are separately treated (chap. xiv.). C. S. Myers's *An Introduction to Experimental Psychology* is a new British text. The treatment is elementary and the work is designed to interest the novice in psychology. To this end, illustrative material is freely imported from anthropology, art, and common life. Two chapters are devoted to tests for the display of individual differences. A readable *Introductory Psychology* was written by M. S. Read. It covers the general field at second-hand, and the author has made no attempt "to add to the body of scientific knowledge on the subject." The student who enters the science through this work will have presently—if he continues—to revise a large number of his concepts and definitions, for the author has set them forth in an untechnical and common-sense form. In 1887, Professor Ladd of Yale published his *Elements of Physiological Psychology*. It was the first general work of its kind in English and it served an extremely important function in the development of psychology in this country. In 1911 it appeared in a revised and enlarged edition (G. T. Ladd and R. S. Woodworth). Within the last quarter of a century our knowledge of the conditions and consequents of mental process has undergone vast extension; and the new book brings together in a compendious way the results of recent research. Its usefulness is much enhanced by a full index. Another psychophysical work of generous proportions is the volume entitled *Body and Mind*. Its author is W. McDougall of Oxford University. It is less an exposition of psychological facts than a critical essay in psychological theory. It at-

tempts "a history and a defense of animism," and it is written for the general public as well as for psychologists. The book opposes animism or the belief in an "animating principle" to materialism; though the author means to give the terms a scientific, not a metaphysical, interpretation. He argues that the mechanistic view of the world is inadequate and he contends that the "conception of the soul is an hypothesis which is indispensable to science at the present day." He would make "psychical dispositions" responsible not alone for "conscious thinking," but for morphogenesis, heredity, and evolution as well. The causal efficacy of mind is also supported by E. Becker in *Gehirn und Seele*. A skeptical view of the scientific integrity of experimental psychology is taken by N. Kostyleff in *La crise de la psychologie expérimentale*, etc. The validity of the view is challenged by N. Braunshausen (*Arch. f. d. ges. Psych.*, xxi., Literaturbericht, p. 1), who reviews the results and accomplishments of the science.

The psychological articles of the new (11th) edition of the *Encyclopædia Britannica* have been written by many hands. The chief article is the long, systematic *Psychology* by Prof. James Ward of Cambridge University. It is a compilation and revision of the articles which appeared in the 9th (1886) and 10th (1902) editions. A recent appraisalment of the new articles leads the reviewer (E. B. Titchener in *Amer. J. of Psych.* xxiii., 1912, 37) to conclude: "My general impression, after this survey, is that the new Britannica does not reproduce the psychological atmosphere of its day and generation." It is a noteworthy fact that new editions of all three of the general works on psychology by Wilhelm Wundt should have appeared during a single year: *Grundzüge der physiologischen Psychologie* (vol. iii., 6th ed.); *Grundriss der Psychologie* (10th ed.), and *Vorlesungen über die Menschen- und Tierseele* (6th ed.). There came also from the pen of the same writer a volume of essays (*Kleine Schriften*, vol. ii.), and a book on the psychology of peoples (*Probleme der Völkerpsychologie*).

In *The Mind of Primitive Man*, Franz Boas has made a valuable contribution to the historical study of the human consciousness. Professor Boas compares primitive and civilized minds, while he tries to estimate the hereditary and environmental influences which have played their part in shaping human societies. The book is commendable for its critical acumen as well as for the rigor of its scientific method. The writer clears the ground by bringing into question such venerable dogmas as the inequality of races, the evolution of culture, and the growth of human faculty. He presents strong arguments for the essential likeness of primitive and civilized minds and for the equal endowment of all races. Cultural inequalities he refers rather to environmental influences and to such "accidents" as size and isolation of stocks than to ultimate differences of heritable ability. The same fundamental qualities and functions of mind, then—the doctrine runs—are to be found at all levels or stages of culture; the same intellect, the same volitional and emotive reactions, and likewise the same forms of society and essentially the same human institutions. Obvious divergences in primitive and advanced cultures and striking differences of race remain to be accounted for.

Boas's explanation is psychological. Although all races and all cultures share the same mental organization, the character of their traditions leads them to interpret the world in widely different ways. While they alike possess articulate language, implements, and the "power of reason," disparity in their geographical and social surrounding suggests the unlike employment of mental functions. Thus where the primitive view of the world is based upon such emotive experiences as are embodied in folk-lore and mythology, civilized man substitutes the more logical categories which his traditions have developed in his scientific and metaphysical systems. Causal explanation is substituted for casual and emotional connections. "The striking features of primitive culture are the great number of associations of entirely heterogeneous groups of phenomena, such as natural phenomena and individual emotion, social groupings, and religious concepts, decorative arts, and symbolic interpretation."

The Place of Movement in Consciousness is the paradoxical title of an essay by W. B. Pillsbury (*Psych. Rev.*, xviii., 83) upon "motor" theories. The author's contention is that although organic movement is of large import to mind, the true key to the understanding of mental functions is the concept of organization. "More important than either sensation by itself or movement by itself is the fact that consciousness is always an organized system. This system is constantly growing with and by use, and to it every experience contributes. It is constantly receiving new contributions from sensory elements and each stage in its development is tested by action." The French annual, *L'année psychologique* (17th year), published for the last time under the direction of the gifted Alfred Binet, is devoted in large measure to problems in social and genetic psychology and in the psychology of the abnormal. It contains also a large number of bibliographical notices and reviews. *Within the Mind Maze* (E. L. Larkin) is the curious attempt of an astronomer, innocent of psychological knowledge and impressed by the recent achievements of physical and biological science, to deduce the history of the universe from the "directive" action of a creative mind upon electrons. The first of three volumes to be devoted to memory and allied subjects (*Zur Analyse der Gedächtnistätigkeit und des Vorstellungsverlaufes*) by G. E. Müller was published during 1911. The work promises to be of the first importance. For nearly twenty years Professor Müller has been engaged upon the experimental study of memory and association. During this time a large number of investigations have come from his laboratory in Göttingen. The present work started from the examination of a case of phenomenal memory (Dr. Rückle); but it has expanded to problems of memory at large and even to certain aspects of perception, reproduction, abstraction, thought, and volition. To the psychologist, the most important section of the first instalment is one which includes (pp. 61-176) a searching and profound critique of psychological method. It is doubtful whether the theory and the practice of introspection have ever before received so able an exposition.

A definitive history of psychology has never been written. Some years ago M. Dessoir of Berlin published the first volume of a *Geschichte der*

neueren deutschen Psychologie (2nd ed., 1902). It was largely biographical and it brought the subject down to the beginning of the eighteenth century. During the year just closed, Dessoir added to this fragment a general historical sketch, *Abriss einer Geschichte der Psychologie*. At the same time, O. Klemm brought out his *Geschichte der Psychologie* for the German scientific series called *Wissenschaft und Hypothese*. Klemm's treatment is developmental as well as chronological. He outlines first the general trends (metaphysical and empirical) of the subject, then he traces the development of fundamental concepts—such as 'consciousness,' 'mental analysis,' and 'mental measurement'—and he concludes with the history of the more important theories (of sensation, perception of space, feeling, and will). The volume forms a useful handbook. It will be especially welcome to teachers of the science. They will find it to be of first-rate assistance to nature students.

ASSOCIATION AND THOUGHT. Reference has been made in previous issues of the YEAR BOOK (e. g. 1909, 606; 1910, 613) to the widely-used method of paired-associates. A word (called the stimulus-word) is presented to the observer, who calls out or writes down the next word that comes to his mind. It is obvious that the quality and the quickness of the response-word will be subject to the effects of practice. This fact was worked out in part by Wreschner (see YEAR BOOK, 1907, 661); but the matter has been more fully and explicitly ascertained by F. L. Wells (*Amer. J. of Psych.*, xxii., 1). When his observers repeated the experiments day after day, Wells found (1) a decrease in the association-time to a minimum of 1.2 sec., (2) an increased availability of the vocabulary of the observer, and (3) a loss in emotive coloring and in the depth and significance of the associations formed. The third result is, in all probability, related to the monotony experienced by persons who lead narrow lives within a limited range of interests. (Cf. Kent and Rosanoff, YEAR BOOK, 1910, 613.)

Continuing the investigation of thought by the method of question-and-answer, H. Kakise found (*Amer. J. of Psych.*, xxii., 14) that whether or not fully developed images appear in the understanding of words and phrases depends upon the length of time during which the thought processes run. The quicker the thought the less frequent and full the imagery. Besides images, Kakise thinks that meaning is carried by a "feeling of concept" (cf. Moore, YEAR BOOK, 1910, 614), which is reducible either to a "feeling of familiarity" (a simple "quality") or to a "feeling of content" (the experienced thinness or thickness of incipient associative aggregates.) In an experimental study of the same problem, E. Jacobson draws a sharp distinction between the *process* of thought and its *meaning* or *significance* (*ibid.*, xxii., 553). He required his observers to place marks of parenthesis about everything in their reports (expression, intimation, objective reference, description of bodily processes, etc.), which was not a direct and immediate transcript of consciousness itself. This device should help to decide the issues of "imageless thought" (cf. J. R. Angell, *Psych. Rev.* xviii., 295). Another topic of debate in the psychology of the thought processes concerns the nature of the "conscious attitudes" (the Germans' *Bewusstseinslagen*). The attitudes are compact 'glimpses' of thought

which mean such things as 'doubt,' 'vacillation,' 'apprehension,' and 'conviction.' The point under discussion is whether these flashes of thought are simple and unique processes or compressed fragments and residua of sensations and images. H. M. Clarke took the latter view (*Amer. J. of Psych.*, xxii., 214) and succeeded in analysing a number of the processes in question (cf. YEAR BOOK, 1910, 614).

INDIVIDUAL PSYCHOLOGY. The problem of individual or "differential" psychology lies in the description and classification of minds as belonging to different "types" or species. Everyday life teaches clearly enough that minds do differ, in temper, in aptitude, and in capacity. In school, in business, and in society at large, persons are said to be 'brilliant,' 'dull,' 'morose,' 'benevolent,' 'selfish,' 'capable,' and the like; and it is just these differences that individual psychology attempts to reduce to lower terms to bring to scientific description. The first basis of classification to lead to important results was that of "ideational" type. Galton in England, Charcot in France, and Fechner in Germany, independently discovered signal differences in the imaginal 'furniture' of minds. They found that where one person used picture images, another thinks in terms of sounds, and still another in images of movements or of touch. Individuals came then to be designated as "eye-minded," "ear-minded," "muscle-minded," and so on. Recent years have brought a rapid development of the doctrine of types. Not only dissimilarities in imagery, but also differences in mode of action, in liability to fatigue, in capacity for mental work, in quickness of association, and in emotive tendency have been revealed by experiment. However, a final and satisfactory means of depicting the essential processes, states, and functions of the individual consciousness has not yet been devised. That is the main problem of "mental tests." In this connection, A. Feuchtwanger's proposal during the year of the method of "systematic self-observation" is of interest (*Zeitschr. für Psych.*, lviii., 161). The method is that of the thought processes. Words, sentences, and nonsense syllables were read to and by the observers and also written down, questions were propounded, objects and pictures were shown, etc. In each case the observer reacted with an associated word and then he wrote down a full introspective account of his imagery. The results confirm the suspicion that one and the same person may use, upon different occasions and under different circumstances, quite different imageries. Thus, reading may be carried on in auditory-kinesthetic images, the memory of places held in visual pictures, and the memory of events in terms of movement. Feuchtwanger found, in some cases, that the verbal consciousness revealed to introspection no imagery whatsoever. These experiences he calls, after the fashion of the times, "verbal attitudes." The method is of interest because it can be checked both by an enormous amount of introspective material already collected in the study of thought and also by a number of other, "indirect," methods which stand in the literature. The relation of ideational type to memory and association was discussed at length by G. E. Müller (see above).

LAUGHTER AND THE COMIC. No one of the typical attitudes which man assumes toward

the world has more persistently stimulated intellectual curiosity than the comic attitude. H. M. Kallen has reviewed various theories of the comic in the *Amer. J. of Psych.* (xxii., 137). "The net result is that they are all true, and in so far as they deal with unrelated facts, all exclusive of one another. They contain the essence of the comic, but they have not really isolated it. Our journey through the field of laughter has shown us that this essence may reside anywhere in the universe. It is not confined to human beings or to social norms, as certain authors believe; nor is it limited to the merely living. Its habitat is as wide as experience. As anything may be beautiful, so anything may be comic. It becomes comic, when somehow it is at a disadvantage, out of proportion, mal-adjusted. It becomes comic when it constitutes a disharmony." The disharmony, the mal-adjustment, is removed in the comic attitude because the observer stands apart from it and in commanding it degrades it and pronounces it ineffectual. "The environment which comedy presents to the mind is primarily an evil, full of discord and unrest. This evil comes to us, however, not as our peer, but as our slave, bankrupt, and stripped of its power to harm. It is a relation which converts evil into goodness. It adapts us adequately to disharmony and mal-adjustment, snatching, as it were, life's victory from the jaws of death itself." It is obvious that the psychological description and explanation of comedy are still imperfect. The critical reader will not fail to note the influence of Bergson's theory of laughter upon Kallen's account. It may be remarked, by the way, that Bergson's book *Laughter; an Essay on the Meaning of the Comic*, has appeared in English during the year (translators, C. Brereton and F. Rothwell).

ANIMAL PSYCHOLOGY. The French writer, Georges Bohn, has followed his *La naissance de l'intelligence* (YEAR BOOK, 1909, 607) with another volume which he calls *La nouvelle psychologie animale*. The earlier work was chiefly devoted to the lower animals; this one to the vertebrates and to the higher invertebrates. Both are inspired by the methods and principles of Loeb, and both confuse psychology, biology, and physiological chemistry. The new book gives a large place to instincts and to certain physiological methods of studying the higher forms of life. An important survey of a single class of animal responses to stimulus is contained in S. O. Mast's large volume on *Light and the Behavior of Lower Organisms*. The book rests upon a broad basis of experimental fact, much of which has been laid at first hand by the author himself. It serves to classify the various ways in which animals are orientated under the influence of light-stimulation. The work is done in the spirit of Jennings and it furnishes a counterblast to the theories of Loeb. The first volume of *The Journal of Animal Behavior* was published in 1911. Many of its 500 pages are devoted to psychological subjects. The volume includes studies of protozoa, insects, birds, the frog, the newt, the turtle, the chick, and the white rat, and also an annual review and bibliography. During the year, four *Behavior Monographs* have been published in connection with the *Journal: The Development of Certain Instincts and Habits in Chicks* (R. S. Breed), *Methods of Studying Vision in Animals* (R. M. Yerkes and J. B. Watson), *An Experimental*

Study on the Death-Feigning of Belostoma, etc. (H. H. P. Severin and H. C. Severin), and *The Biology of Physa* (J. Dawson). The employment of experiment in the study of learning among the higher animals owes much to the pioneer labors of E. L. Thorndike, who developed in the nineties the "puzzle" or "problem" method, using cats, dogs, chicks, and monkeys. During the year, Thorndike republished his studies, together with some essays of a more general nature, in a volume entitled *Animal Intelligence*. This exploitation of the forms which stand near the upper end of the animate scale has raised the question as to the relation of learning to consciousness at large. Is consciousness necessary—psychologists are asking—to learning? S. O. Mast (*Psych. Bull.*, viii., 284) finds striking modifications of behavior in *Amœba* and L. M. Day and M. Bentley (*Journal of Animal Behavior*, i., 67) changed certain performances of *Paramecium* by a few hours' tuition. And yet these authors hesitate to say that such instances of acquisition fall under the same type as human or animal "learning," or even that they imply consciousness at all. There is first required a definition of learning which shall set its relation to consciousness and to bodily performances. This relation has just been made the subject of a special inquiry by L. E. Ordahl (*Amer. J. of Psych.*, xxii., 158), who defines learning as "the formation of associations between certain stimuli and definite modes of reaction." This writer finds that consciousness is a "corrective agent" serving to improve and to organize the process of learning; but that non-conscious factors coöperate both to fix the process and to modify the organic response. Certainly learning may proceed quite without an appreciation of end and also without knowledge of the process itself. It may be that it proceeds under some circumstances as a purely physiological matter.

PSYCHOTHERAPY. Persons interested in the doctrine and the practices of the Freudian school (see YEAR BOOK, 1909, 607, 608) will find long and sympathetic reviews of the recent literature in the *Amer. J. of Psych.* (xxii., 408, xxiii., 115). The same periodical (xxii., 477) also contains an article written in the spirit of Freud on the *Psychopathology of Everyday Life* (E. Jones). Jones believes, after Freud, that such common occurrences as slips of the tongue or of the pen, lapses of memory, absent-minded performances, and the like, are referable to definite mental causes which lie in secondary dispositions or trains of thought and which can be revealed through the process of psychoanalysis. The cause or motive is unintentionally repressed, but nevertheless the repression, which serves to keep out of consciousness "undesirable or painful thoughts," may, on occasion, produce serious, even pathological, consequences. During the year, Dr. Jones also published a paper (*J. of Abnormal Psych.*, v., 217) designed to show the relative value of suggestion and psychoanalysis in psychotherapeutical practice. "Suggestion," he says, "plays the chief part in all methods of treatment of the psychoneuroses except the psychoanalytic one. It acts by releasing the repressed desires that are finding expression in the form of symptoms, and allowing them to become attached to the idea of the physician; psychologically this means the replacement of one symptom by another, namely psychosexual dependence on the physician. This

is often of temporary, and sometimes of permanent, benefit, but in severe cases the replacement is inconvenient and detrimental. In psychoanalysis the repressed desires are permanently released by being made conscious, and hence can be directed, by sublimation, to more useful, non-sexual, social aims."

The usefulness of Freud's method in some cases of dementia præcox is attested by A. Hoch (*ibid.*, v., 255). There remains, however, plenty of opposition to the Freudian school; and especially to its emphasis upon sex. "The psychoanalytic method is surely not the only one that is of value in the treatment of hysteria, neurasthenia, or obsessions. In so far as the method is connected with the detailed discussion of sexual matters and perversities, it is justly rejected by many authors. Psychological treatment, as it is practiced by those who do not belong to Freud's school, accomplishes as much as sexual psychoanalysis, but it must be aided according to the particular case by general therapeutic measures" (A. Friedländer, *ibid.*, v., 319). M. Prince goes further: "No one," he declares, "who has shown by his writings that he is thoroughly trained in and conversant from first-hand knowledge with all the phenomena of abnormal experimental and functional psychology has accepted Freud's theory" (*ibid.* v., 353). For a current French critique of Freudian method, see N. Kostyleff, (*J. de psych. normale et pathologique*, viii., 135, 246). A book on *Scientific Mental Healing* (H. A. Bruce) contains several popular essays on the history of psychotherapy and on other matters pertaining to the abnormal in mind. A history of the use of mental agencies in medicine was written during the year by G. B. Cutten in *Three Thousand Years of Mental Healing*. Among other virtues, the book is notable as showing the connection which has for centuries obtained between typical forms of the art of healing and prevalent attitudes assumed toward religion, medicine, superstition, and science.

PULITZER, JOSEPH. An American journalist, died October 29, 1911. He was born in Budapest, Hungary, in 1847. His father was a Hungarian Jew and his mother a Roman Catholic. He received some instruction from a private tutor in his boyhood, which was the extent of his formal education. In 1864 he came to the United States as an immigrant. In the same year he joined the Federal army as a private in the First New York Cavalry. He served throughout the war and was honorably discharged at its close. He endeavored to secure employment in New York, and, failing, went to St. Louis, where he was engaged in various employments, including firing on a steamboat running between St. Louis and New Orleans. In 1867 he secured a position as a reporter on a daily German newspaper, the *Westliche Post*. He was very successful as a reporter and in 1871 was made managing editor of the newspaper. A small inheritance added to his savings enabled him at the same time to become part owner. He took great interest in politics and came to have considerable political power. He is credited with having largely brought

about the nomination of Horace Greeley for President in 1872. He made many political speeches during his campaign, chiefly in German. Before the next campaign he had changed his political belief and had become a Democrat. Carl Schurz had an interest in the *Westliche Post*, but their divergent political beliefs made it impossible for him and Mr. Pulitzer to continue their newspaper relations. In 1875 the latter sold his interests to Schurz and Dr. Preetorius. In the following year Charles A. Dana selected Mr. Pulitzer to go to Washington to report the proceedings of the Electoral Commission, which was considering the election of President Hayes. Shortly afterwards he went to Europe as a special correspondent of the *New York Sun*. He returned to the United States in the winter of 1878 and went again to St. Louis. In the following year he bought at public auction the *St. Louis Evening Dispatch*. At the same time he acquired the *Evening Post* and issued the paper under the title *St. Louis Post-Dispatch*. This was successful, and in 1883 Mr. Pulitzer was able to buy the *New York World* from Jay Gould. This was on the eve of the presidential campaign, and he entered actively into the fight to elect Grover Cleveland, and to him was given a considerable amount of credit for the Democratic success in that election. In 1885 he was elected to Congress from the Ninth New York district as candidate of Tammany Hall. Three months later, however, he resigned his seat and returned to his editorial work. Mr. Pulitzer rose from the editorship of a paper with a small circulation and doubtful reputation to be one of the most prosperous newspaper proprietors in the world. He was the first exponent of what later came to be known as "yellow journalism," and he published a paper which frankly appealed to the less enlightened portion of the community. He kept in constant touch with the management of his papers in both New York and St. Louis up to the time of his death. In 1887 his health broke down from overwork, and at the same time his eyesight failed, so that for many years before his death he was totally blind. In 1903 he endowed Columbia University with \$1,000,000 to establish a school of journalism, with the promise of an additional million when the school should be established. Mr. Pulitzer spent the greater part of his latter years in cruising about the world in his private yacht.

PURDUE UNIVERSITY. An institution of higher learning at Lafayette, Ind., founded in 1869. The number of students enrolled in the various departments of the university in 1910-11 was 1885. The faculty numbered 158. There were no notable changes in the faculty during the year. The institution is supported chiefly by the State. The amount of its invested funds is about \$340,000, and the annual income amounts to \$700,000. The library contains about 30,000 volumes. President, 1911, W. E. Stone, LL. D.

PYGMIES. See EXPLORATION, *Australasia*.

PYLE, HOWARD. An American artist and illustrator, died November 9, 1911. He was born at Wilmington, Del., in 1853, and was educated in private schools. His only formal training in art was obtained in three years in a

Philadelphia art school and in the Art Students' League in New York City. After this course he returned to Wilmington and engaged in business, in the meantime writing and drawing at night. After sketches and verses had been accepted by *Scribner's Magazine* and *St. Nicholas*, he removed to New York, where he contributed drawings to *Harper's Weekly* and other periodicals. Within a few years he had become well known as an illustrator. He returned to Wilmington, which was his home for the remainder of his life. In addition to his work as an artist and writer, he established a school where were trained some of the foremost American artists engaged in making illustrations for newspapers and periodicals. Mr. Pyle wrote many stories which he illustrated himself and which appeared in leading magazines in the United States. He also wrote many books for children. Among his published works are *The Merry Adventures of Robin Hood* (1883); *Pepper and Salt* (1885); *Within the Capes* (1885); *The Wonder Clock* (1887); *The Rose of Paradise* (1887); *The Garden Behind the Moon* (1895); *Rejected of Men* (1903); *The Story of King Arthur and His Knights* (1903); and *Stolen Treasure* (1907).

QUAKERS. See FRIENDS.

QUARLES, JOSEPH VERY. An American jurist, died October 7, 1911. He was born at Kenosha, Wis., in 1843. He enlisted in the Civil War and at its close entered the University of Michigan, graduating in 1866. He studied law and was admitted to the bar in 1868. He practiced at Kenosha until 1882 and subsequently at Racine and Milwaukee. He served as district attorney for Kenosha county and as mayor of that city. He also served in both houses of the Wisconsin legislature. In 1889 he was elected United States senator, serving until 1905. He was appointed district judge for the eastern district of Wisconsin in 1905 and remained on the bench until the time of his death.

QUEBEC. A province of the Dominion of Canada. Capital, Quebec (population, preliminary returns, census of June 1, 1911, 78,067). Area, 351,872 sq. miles. Population (1911 final), 2,002,712, an increase over 1901 of 353,814, or 21.46 per cent. The province is administered by a lieutenant-governor (Sir Francois Langelier, appointed 1911), appointed by the governor-general of Canada. He is aided by an executive council (responsible ministry), and a legislative body composed of two houses—the Legislative Council (24 appointed members) and the Legislative Assembly (74 elected members). Premier (1911), Sir Lomer Gouin. See CANADA.

QUEEN MARY (ship). See BATTLESHIPS.

QUEENSLAND. A state of the Commonwealth of Australia. Capital, Brisbane. Area, 670,500 sq. miles. Population, according to the final returns of the census of April 3, 1911, 605,813, which showed an increase since 1901 of 21.62 per cent., as compared with 18.05 per cent. for the commonwealth. There are a governor, appointed by the British crown, a responsible ministry, and a parliament of two houses. Governor in 1911, Sir William MacGregor; premier, D. F. Denham. See AUSTRALIA.

Early in February the retirement of Mr. Kidston, premier, and Mr. A. G. C. Hawthorn,

treasurer, caused a change of ministry. A new cabinet was formed under Mr. D. F. Denham. Parliament sanctioned a comprehensive plan for railway development, opening up wide areas of arable lands and pasture.

QUICKSILVER. The production of quicksilver in the United States in 1910 was 20,601 flasks of 75 pounds avoirdupois each, as compared with 21,075 flasks in 1909. The value of the product in 1910 was \$958,153. The greatest quantity in 1910 came from California, 17,211 flasks. From Texas came 3390 flasks. These two States are practically the only ones producing quicksilver. A small quantity is produced in Nevada and Oregon. The world's production of quicksilver in 1910 was 3399 metric tons. The largest quantity came from Spain, which produced about 1000 metric tons. From Italy came 800 tons; from Austria-Hungary, 694 tons, and about 200 metric tons were produced in Mexico. Imports of quicksilver greatly decreased, dropping from 15,568 pounds in 1909 to 667 pounds in 1910. There were exported 144,237 pounds, valued at \$91,077. Preliminary figures made by the United States Geological Survey indicate that the domestic production of quicksilver in 1911 was 21,821 flasks of 75 pounds each, valued at about \$1,000,000. There were 22 mines producing in 1911, of which 19 were in California.

RABIES. The important discovery was announced in 1911 by Sir David Semple of the Indian Medical Service that an effective anti-rabic vaccine could be made from the dead virus. Semple established the fact that animals can be as highly immunized against rabies by the vaccine prepared from dead cultures, as with the living virus, such as is used in the Pasteur method. The latter consists of a highly attenuated living virus which is difficult to handle or ship to a distance. Semple found that the rabies virus was easily destroyed by heat; a temperature of 50° C. killed a 5 per cent. dilution of fixed virus in fifteen minutes. An 8 per cent. dilution in normal saline solution was killed by 1 per cent. carbolic acid at 37° C. in twenty-four hours. When this fluid is diluted with an equal volume of normal saline solution, it becomes a 4 per cent. virus in 5 per cent. carbolic acid, which is the characteristic strength for antirabic treatment. The serum so made proved efficient in the protection of dogs, rabbits, and monkeys against inoculation of rabies. In some cases the protection was not complete, but these animals developed the disease at a later period than animals not immunized.

RACING. The passage of the Agnew-Hart racing bill by the New York legislature in 1910 sounded the death knell of the sport in New York, where the principal racing interests of the United States were centred. This bill provided that the owners and directors of the various racing associations were to be held criminally liable for any betting and bookmaking on their premises. The result of this and previous legislation was that racing in America in 1911 was confined to the Canadian tracks, to Pimlico, Md., Louisville and Latonia, Ky., and Jacksonville, Fla. Nearly all of the horses that had won renown on the United States tracks in former years were disposed of to foreign purchasers or taken abroad by their owners and entered in the French and English meetings.

Zeus, owned by S. C. Hildreth, was the best

colt of the year in the United States, H. P. Whitney's Moisant the leading filly, and H. C. Hallenbeck's Worth made the best showing of the two-year-olds. Zeus captured several races in Canada during the early part of the season and was beaten by Nigger Mike for the Toronto cup by only a few inches. Fitz-Herbert, owned by H. P. Whitney, and the winner of the Brooklyn Handicap, in 1910, was unplaced in this race. Zeus ended the season at Pimlico by easily winning the 2-mile Boure stake. The historical English Derby was won by J. B. Joel's Sunstar in 2.35%. In France the Gould and Vanderbilt stables made excellent showings.

The only important new running records of the year were made by Priscillian, who ran the $\frac{3}{4}$ mile at Hamilton, Ontario, in 1.11, and Olambala, who at Fort Erie ran 1 3-16 miles in 1.57%. There were four new records established in trotting and pacing. Uhlan, owned by C. K. G. Billings, who trotted the mile in 1.58% in 1910, beat the best time on record by trotting a mile to wagon without wind shield in 2.00. The same horse also trotted the mile on a two-lap track in 2.02%. Two notable pacing records were made in 1911. Frank Perry lowered the mark for yearlings from 2.30% to 2.15, and Miss de Forest clipped a quarter of a second off the record for three-year-olds, placing it at 2.05%.

RACQUETS AND COURT TENNIS. The national amateur racquet championship tournament in singles was held at New York in February. In the final round Reginald Fincke defeated J. Gordon Douglas 7-15, 18-13, 15-3, 15-8. In the doubles event held at Boston in January George R. Fearing, Jr., and H. D. Scott defeated Payne Whitney and M. Barger 15-5, 15-8, 15-5. J. Gordon Douglas won the gold racquet championship at Tuxedo Park, defeating H. F. McCormick 15-8, 0-15, 18-13, 15-10. Abroad, C. Williams, after winning the professional championship of England by beating E. M. Baerlein 8 games to 4, captured the world's championship by defeating Jamsetzi of Bombay, India.

Jay Gould, the amateur champion, again demonstrated his superiority in court tennis by defeating Joshua Crane in the championship tournament held at Boston in April 6-5, 6-1, 6-0. In the English championships, A. H. Gobert of France defeated F. G. Lowe, holder of the title, 6-3, 7-5, 6-2. Gobert and J. G. Ritchie of England won the doubles championship by beating the Lowe brothers 6-4, 6-4, 6-3. The French championship also was won by Gobert, who defeated Max Decurgis, the title holder, 9-7, 6-2, 4-6, 6-4.

The clay court tennis championship tournament of the United States was held at Omaha, Neb., in August. W. T. Hayes won the singles title and H. G. Whitehead and J. H. Winston the doubles title.

RAILWAYS, INTRODUCTION. During the period from 1907 to 1911 the railways in the United States were passing through a crisis.

The first six months of 1907 were marked by an unprecedented volume of traffic, but in the closing months of the year the general business of the country was almost paralyzed by the short but severe money panic. Railway earnings fell off alarmingly, all improvement work was abandoned, and every effort was made to keep down expenses to an amount commensurate with the greatly reduced earnings. To add to the perplexities of the situation a wave of federal and State legislation, much of it unreasonable and all of it hostile to the railway interests, spread over the entire country. Congress in 1906 had conferred on the Interstate Commerce Commission power to regulate railway rates and increased its powers in other respects. The passage of this federal rate law brought the subject of railway regulation in all of its aspects prominently before every legislative body. In 1907 more than 300 new laws affecting railways were passed by the legislatures of 39 States. For some of this hostile legislation the railways by their own unreasonable and arrogant acts in the past were directly responsible. The passage of these new laws had the good effect of making the railways put their houses in order to better combat the hostility of the public. Rebating, stock-jobbing, preferential rate making, and similar practices virtually ceased and show no signs of being revived. With a return to normal business and industrial activity throughout the country railway earnings soon began to increase, but this favorable condition was offset somewhat by increased costs of material and supplies, large increases in wages of employees, and steadily rising taxes, which combined to keep down net earnings. In 1910, immediately after the Mann-Elkins act went into effect and conferred still larger powers on the Interstate Commerce Commission, the railways announced general increases in freight rates. Under the new powers given it by Congress, the Interstate Commerce Commission suspended these increases pending an investigation as to their reasonableness. This investigation required nearly nine months and in March, 1911, the commission handed down its decision denying the increased rates. On the whole the railways have passed creditably through the four-year crisis which has confronted them. Comparatively few roads suffered financially to the extent of having to resort to a receivership or even to reduce dividends. A check was put on the construction of new roads, however, and many contemplated improvements were abandoned for the time being. At the end of 1911 the general railway situation was distinctly encouraging in spite of the setbacks of the previous four years.

FEDERAL LEGISLATION IN 1911. The Sixty-first Congress was so engrossed in tariff legislation and reciprocity and in political jockeying that railway legislation received but little attention. In February, 1911, Congress passed a law requiring the regular inspection of locomotive boilers under the supervision of the Interstate Commerce Commission. Inspections must be made by the railways and reports must be filed with district inspectors, to whom authority is given to order a locomotive out of service if in their opinion the boiler or its appurtenances are not in safe condition. The law went into effect July 1, 1911. The penalty for violation of any of its provisions is a fine of \$100.

No amendments to the rate-regulation provi-

sions of the Interstate Commerce act were passed. Bills were introduced but not acted upon, requiring the railways to substitute steel passenger cars for wooden cars after January 1, 1918; to enlarge the clearances of bridges, tunnels, station platforms, and other structures, and to install block signals on all lines. It is estimated that if these changes were made as provided for in the bills which were introduced, the cost to the railways would be \$1,361,000,000, or about 10 per cent. of the total net capitalization of the railways in the United States. The annual interest charge at 4 per cent. would be \$55,000,000, or 2½ times the total amount paid by the railways for injuries to persons in 1910. These bills were typical of the restrictive measures which the railways have had to combat in State and national legislatures during the past four years.

STATE LEGISLATION. The legislatures of 40 States met in 1911 and a large number of bills affecting railways were introduced. Returns from 37 States show that 474 such bills were introduced, although only 276 became laws. In 1909 the legislatures of 41 States passed 664 laws affecting railways. Twenty-four of the 40 legislatures in session in 1911 passed few, if any, new measures, and it is significant of a change in public sentiment that many of the States which were pioneers in railway regulation and had done most in that direction seemed to have given up the quest for further restrictions and have now begun to evince an interest in attracting capital for the development of transportation and business enterprises through the enactment of sound constructive legislation in place of radical restrictive laws. Notable among such States were Texas, Oklahoma, Alabama, and Iowa.

Railway or public utility commissions with rate-making powers were established in California, Washington, Ohio, Illinois, Connecticut, and New Hampshire. Several States, including New Jersey and Massachusetts, which already had commissions passed laws giving them additional powers to regulate rates. Bills creating public utility commissions in Pennsylvania and Idaho were defeated. In Indiana the railway commission was authorized to require all steam and electric railways within the State to install block signals on all lines. Pennsylvania, California, and Indiana, among other States, passed "full crew" laws, fixing the number of trainmen carried on trains of different classes. Several States passed laws regulating the character of the rolling stock operated on passenger trains and also employers' liability laws.

RATE CASE DECISIONS. The Mann-Elkins act passed by Congress on June 18, 1910, conferred on the Interstate Commerce Commission, among other powers, the right to suspend new tariffs for from four to six months from the date they go into effect pending an inquiry as to the reasonableness of the new rates and made it incumbent on the carrier to prove the reasonableness of the proposed rate. Shortly before the passage of this act several Western roads filed new tariffs which increased freight rates between all points, to take effect July 1. The law went into effect on the same day that the increased rates were to become effective, and the Interstate Commerce Commission immediately suspended the tariffs and announced that it would inquire into the reasonableness of the new rates. The Eastern and Southwestern roads also

filed tariffs increasing freight rates and these were also suspended. Hearings were begun by the commission in New York and Chicago and the railways presented evidence purporting to show the necessity for the advanced rates on account of the increases in wages of employees, cost of materials and supplies, and in taxes. Associations of shippers presented evidence to show that the existing rates afforded a fair profit to the railways, and the commission then took the whole question under advisement shortly after the first of the year.

On February 24, 1911, the commission announced its decisions in all three cases. It refused the advances of the Eastern and Western roads, but upheld most of the increases sought by the Southwestern roads. These decisions, without doubt, constituted the most important event of the year in railway history. They came as a surprise to the railways, which confidently expected decisions in their favor. In the Southwestern rate case the commission found that the railways in that territory had not prospered as had many in other parts of the country, and therefore it permitted most of the increases, which amounted to about 7 per cent., to be put into effect.

The commission in its decision in these cases pointed out that it was not empowered to pass on the reasonableness of the *increase* in the rate, but only on the reasonableness of an *increased rate*. It was irrelevant, therefore, to consider whether there had been an increase in the cost of handling a specific commodity. A rate on one commodity between two points might be too low as compared with other rates and therefore an advance in it might be reasonable, even if the actual cost of transporting the particular commodity was reduced. While the commission explicitly recognized the fact that the rate of return on the mere physical valuation of a railway was not the sole criterion of the reasonableness of its rates, the language of the decisions implied that preponderance should be given to the cost of physical reproduction. The whole complicated question of valuation and payment for improvements out of earnings was thus introduced into the controversy. The Chicago, Burlington & Quincy Railroad, for example, contended that while its capitalization was but \$29,000 per mile, it should be permitted to earn a fair return on about \$60,000 per mile of road, owing to the increase in the value of its real estate and the sums expended out of earnings for permanent improvements. In denying this contention, the commission said:

"A railway may not increase its rates for the reason that it has accumulated out of its rates a balance of profit, which has been invested in the property. It is a conservative statement of the law that a railway may not increase its rates solely because its real estate has risen in value."

The effect of this phase of the decisions on the future financial policy of railways remains to be seen. It has been characteristic of American railways that they have always made improvements largely out of earnings, and hence their capitalization is low. If all permanent improvements of the future are to be financed entirely by new issues of securities, railway capitalization will increase at a much faster rate than ever before. In the opinion denying the rate increases of the Eastern roads, emphasis was placed on the need of efficiency in railway operation. The commission said: "No general

advance in rates should be permitted until the carriers have exhausted every reasonable effort toward economy in their business." However, but little importance was attached by the commission to the testimony adduced at one of the hearings by Louis Brandeis, attorney for an association of shippers who had made the statement that the railways of the country could save \$1,000,000 a day by the introduction of scientific efficiency methods. The commission dismissed this claim with the statement that scientific management was still everywhere in the experimental stage and that the railways could hardly expect to offset the wage increases by its general adoption.

No appeal from the decisions of the commission was made to the courts by the railways and the old rates still remain in force.

LONG AND SHORT HAUL DECISION. In July the Interstate Commerce Commission handed down another important rate decision, which hinged on an interpretation of the "long and short haul" section of the Interstate Commerce law as amended by the Mann-Elkins act, passed in 1910. The case involved the relation between rates from Atlantic coast and central points to Pacific coast cities, and to inland cities, such as Denver and Spokane. The commission recognized the effect on rates of water competition between Atlantic and Pacific coast points and therefore held that the railways could make rates from the Atlantic coast to inter-mountain points as much as twenty-five per cent. higher than the rates to the coast. However, as the force of water competition grows less with increasing distance of the originating points from the Atlantic coast, the commission established successively lower differentials between rates to the Pacific coast and to inter-mountain territory until St. Paul and Missouri River originating points were reached. From these points west, the decision of the commission prohibited lower rates to the coast than to intermediate points. The effect of this decision on the trans-continental railways was far-reaching. If the rates to the coast were maintained at a point low enough to compete with water transportation, sweeping reductions would have to be made in the rates to intermediate points, involving an estimated loss of \$12,000,000 annually in net revenue. The railways on October 3 appealed from the decision of the commission to the newly created commerce court, praying for an injunction. A month later the commerce court issued an injunction restraining the commission from enforcing its original order, relating to percentage differentials. The injunction was granted on the ground that the commission had exceeded its powers in establishing percentage relations between the rates to intermediate points and the rates to coast points, which were practically fixed by water competition. The result of the commission's decision, therefore, would be to create unreasonable and confiscatory rates to either the coast or intermediate points. An appeal from the decision of the Commerce Court was at once taken to the United States Supreme Court, which had not handed down its final decision at the close of the year.

COURT DECISIONS. The United States Supreme Court handed down during the year several decisions directly affecting railways. The most important of these were:

(a) That a railway may not exchange trans-

portation for services, releases, property, or advertising.

(b) That a State law regulating the size of crews on trains within a State is not an obstruction to interstate commerce, and is therefore valid.

(c) That the initial carrier is liable for damages occurring off its own lines.

Two important decisions were rendered in the lower federal courts. The Eighth District Circuit Court, applying the "rule of reason" of the Supreme Court, decided in June that the ownership of Southern Pacific stock by the Union Pacific Railroad was not a violation of the Sherman anti-trust law. In April, Judge Sanborn of the United States Circuit Court handed down a decision in the Minnesota rate case, which was an important event in the history of railway rate regulation. The State of Minnesota, through its legislature and its railway commission, had prescribed maximum passenger and freight rates on interstate business, which were lower than the interstate rates of the railways. A master in chancery had reported that these low rates were unconstitutional, both because they interfered with interstate commerce and because they were confiscatory in that they did not permit a fair return on the capital invested in the railways. Judge Sanborn upheld the master's opinion in the following words: "To the extent that it does not substantially burden or regulate interstate commerce, a State may regulate interstate commerce and the fares and rates therein within its border, but no further." The fair return to which the railways are entitled in the opinion of Judge Sanborn, is seven per cent. on their cost of reproduction new. The Interstate Commerce Commission in denying the Western increases held that the railways were not entitled to capitalize their unearned increment for the purpose of rate-making, but Judge Sanborn held that they were so entitled, the cost of reproduction new, which he used as a basis, including not only the original investment and the cost of improvements paid for out of earnings, but the unearned increment as well. The case was appealed to the United States Supreme Court, which had not rendered a decision by the end of the year.

ACTIVITIES OF THE INTERSTATE COMMERCE COMMISSION. The amendments to the Interstate Commerce law, incorporated in the Mann-Elkins act, passed June 18, 1910, greatly increased the labors of the Interstate Commerce Commission for the year ending December 1, 1911. Decisions were rendered in 507 formal proceedings during the year and 881 new complaints were filed. On the special docket for cases in which there was no dispute as to facts, orders were issued in 3875 cases and \$329,388 was awarded to shippers as reparation for overcharges, damages, etc. Indictments were returned against sixty-two carriers, shippers, or passengers for criminal violations of the Interstate Commerce law, and forty-two prosecutions were concluded, the aggregate fines imposed amounting to \$214,225. In January, 1911, Judson C. Clements was appointed chairman of the commission to succeed Martin A. Knapp, who was appointed presiding judge of the newly created commerce court.

COMMERCE COURT. The Mann-Elkins act of 1910 created a new judicial body known as the commerce court to review the decisions of the Interstate Commerce Commission on appeal and expedite rate cases formerly tried in the United

States circuit courts. President Taft appointed, as members of this court, Martin A. Knapp, formerly chairman of the Interstate Commerce Commission; John E. Carland, Robert W. Archbald, William H. Hunt, and Julian W. Mack. The court held its first public session in Washington, D. C., on April 3, 1911. Up to December 1 it had rendered decision in twenty-seven cases appealed from the rulings of the Interstate Commerce Commission, the most important of which was the "long and short haul" case, in which it issued an injunction restraining the commission from enforcing its orders. In all but seven of the cases heard, the court decided in favor of the railways against the contentions of the shippers. In only three cases, in which the commission sustained the shippers, did the commerce court side with the commission.

RAILROAD SECURITIES COMMISSION. Another section of the Mann-Elkins act of 1910 authorized the President of the United States to appoint a commission to investigate the propriety of federal regulation of railway stock and bond issues. In 1910 the following commission was appointed: A. T. Hadley, president of Yale University, chairman; F. N. Judson, Frederick Strauss, Walter L. Fisher, and Prof. B. H. Meyer. This commission held several hearings, at which prominent railway officials, bankers, and economists testified and its report was transmitted to Congress early in December, 1911.

The commission in its report did not attempt to draft a statute embodying its recommendations, but merely presented a summary of the points which it believed should be incorporated in amendments to the Interstate Commerce act. The principal recommendations of the commission were:

(1) That a railway engaged in interstate commerce should furnish the Interstate Commerce Commission at the time of issue of stocks and bonds with a detailed statement of the issue, the proceeds therefrom, and the uses to which the proceeds have been or are to be put.

(2) That the Interstate Commerce Commission be given broad powers and adequate means for the valuation of the physical property of railways, a fundamental though not necessarily controlling element in value being cost of reproduction.

(3) That the intercorporate holding of railway stocks and the issue of collateral trust bonds against stocks be discouraged, but not forbidden.

(4) That companies should be encouraged to incorporate with stock having no par value and that existing companies be encouraged to exchange their stock into shares without par value.

(5) That no attempt should be made to limit railway profits to a fixed percentage, or to treat a high rate of dividends as necessarily indicating extortion.

(6) That in general no limitation should be placed on the price at which bonds may be sold, but that any discount should be amortized during the life of the bonds out of income or accumulated surplus.

(7) That the Interstate Commerce Commission should have full authority to make public all information received by it concerning new financing and the complete financial operations of railways during their fiscal years.

In brief the remedy for existing abuses proposed by the commission is the fullest possible publicity of every detail of railway financing

to the end that the investing public may intelligently and accurately discriminate between the good and the bad.

TENDENCIES OF RAILWAY EARNINGS AND EXPENSES. Railway gross earnings fell off from the figures of 1910 about 5 per cent. during the first six months of the year, but by July they began to approach more nearly the figures of the previous year. Operating expenses were reduced by restricting maintenance charges and other economies, so that net earnings were only a little less than in 1910. In the last three months of the year most of the railway reports were unfavorable, some large decreases in net earnings being shown. Railway taxes continued to increase out of all proportion to new mileage. In the first quarter of the fiscal year of 1911 the average mileage increased but 1.5 per cent., while taxes rose 10 per cent. In Connecticut the railways pay nearly one-half of the State taxes. A striking indication of the retrenchment policy of the railways, following the refusal of the proposed rate increases and the general cessation in business, is shown in the reduction of the number of railway employees, as compared with the number in the service in 1910; this amounted to approximately 9 per cent. by the end of April. This reduction of force was in large part offset by general increases in wages of all classes of employees, averaging nearly 5 per cent. As the cost of labor represents about 40 per cent. of the gross earnings of the railways, the wage increases of one year amounted to a direct additional tax of 2 per cent. on the gross revenue. Near the close of the year the railways placed numerous large orders for cars, locomotives, rails, and other supplies, which had been long deferred in anticipation of a more favorable outlook.

With the exception of a general strike of shop men on the Union Pacific, Southern Pacific, and Illinois Central, which greatly hampered operation, there were no serious strikes of railway employees during the year. Several strikes were averted by granting in whole or in part the employees' demands for higher pay.

CHANGES IN RAILWAY OWNERSHIP AND CONTROL. In April, 1911, Benjamin F. Bush was elected president of the Missouri Pacific Railroad, succeeding George J. Gould. An unsuccessful attempt was made at the time completely to wrest control of the Missouri Pacific from the Gould interests. On September 28 Judge R. S. Lovett retired as president of the Harriman lines, and was succeeded by A. L. Mohler, William Sproule, Thornwell Fay, Epes Randolph, and J. D. Farrell, as presidents respectively of the Union Pacific, Southern Pacific of California, Southern Pacific of Texas, Southern Pacific of Mexico, and the Oregon-Washington Railroad & Navigation Company.

In December the New York Central acquired control of the New York, Ontario & Western from the New York, New Haven & Hartford, and in turn transferred control of the Rutland Railroad to the New York, New Haven & Hartford, which desired it for a through connection to Montreal to compete with the Grand Trunk, now a competitor in New England through control of the Central Vermont Railroad.

RECEIVERSHIPS AND FORECLOSURE SALES. The only important railway system which was forced into the hands of receivers during the year was the Wabash, which admitted its inability to meet the interest on its bonds in December. It

operates 2515 miles of track and has a funded debt of \$115,156,496, with stock outstanding to the amount of \$92,801,986. This receivership followed primarily as the result of the receiverships of the Wheeling & Lake Erie and the Wabash-Pittsburgh Terminal railroads, which had been bankrupt since 1908. Only four other small roads aggregating 91 miles of track fell into financial difficulties during the year. Thirteen roads aggregating 1386 miles of track with a total capitalization of \$40,741,453 were sold under foreclosure proceedings. Of these the most important was the International & Great Northern with 1160 miles of track.

RAILWAY FINANCING. The money market ruled easy throughout the year and a large number of railways took advantage of this condition to arrange financing for present and future needs. The number of new issues was exceptionally large and the aggregate value of the securities sold slightly exceeded \$1,000,000,000, as compared with approximately \$950,000,000 in 1910. No very large issues of securities were put out by any one company. A few issues were sold abroad. The largest single transaction of the year was the sale of \$50,000,000 of 4 per cent. collateral trust bonds by the Southern Pacific, which was also one of the few foreign issues, the bonds being disposed of in France. Several noteworthy changes in railway dividend rates occurred during the year. The New York Central & Hudson River Railroad reduced its dividend from 6 per cent. to 5 per cent., and the Boston & Maine common from 6 per cent. to 4 per cent. Denver & Rio Grande preferred, Chicago & Alton preferred, and Cleveland, Cincinnati, Chicago & St. Louis common, all of which paid dividends of from 4 to 6 per cent. in 1910, passed their dividends entirely for 1911. To offset these decreases, the Canadian Pacific dividend rate increased from 8 to 10 per cent., Norfolk & Western common from 5 to 6 per cent., and Hocking Valley from 4 to 6 per cent., while Atlantic Coast Line common paid 7 per cent., as compared with nothing in 1910. The Delaware, Lackawanna & Western paid a stock dividend of 35 per cent. in addition to regular dividends of 20 per cent.

RAILWAY CONSTRUCTION. According to statistics compiled by the *Railway Age Gazette*, a total of 3066.93 miles of new railway track were built in the United States during the year. This compares with 4121.58 miles built in 1910 and is the smallest mileage built since 1897 when only 2109 miles were constructed. The total reflects the cessation of railway improvement work resulting from adverse legislation and general dullness in business activity during the past three years. The average annual increase for the past fifteen years has been 3885 miles.

By States, Texas led with 413.78 miles and Oregon was second with 224.21 miles.

The Chicago & Northwestern built a cut-off in Wisconsin 130.55 miles long which was the longest single piece of new construction completed during the year. In Canada the Grand Trunk Pacific built 271 miles of its new transcontinental line on the western end and the National Transcontinental which is building the eastern end completed 280 miles. Other roads in Canada were also active in their construction work, the total length of new track added in the Dominion being 1899 miles, as against 1844 miles built in 1910.

The railways of the world, according to statistics compiled by the *Archiv für Eisenbahnwesen*, had an aggregate mileage at the end of 1909 of 625,698, an increase of 14,220 miles in one year. The mileage was divided by continents as follows:

Europe, 204,904; Asia, 61,800; Africa, 20,809; North America, 277,015; South America, 42,329; Australasia, 18,849 miles.

The increase in mileage since 1886 has been at an average rate of 13,600 miles per year. The total investment of capital in the world's railways is estimated at \$51,600,000,000. These figures do not include street railways or narrow-gauge industrial and light railways.

ELECTRIFICATION. In May the Boston & Maine completed the electrification of the Hoosac Tunnel in Massachusetts. The tunnel is 25,031 feet long and contains two tracks. Including the approaches and yard tracks a total of 21.31 miles of single track was equipped with overhead trolley wires carrying single-phase alternating current at 11,000 volts. All trains are now being hauled through the tunnel by electric locomotives. The New York, New Haven & Hartford made good progress on the electrification of its six-track Harlem River branch from New Rochelle to Harlem River, including the large freight yards at the latter point, a total of 178 miles of single track. In December the New Haven announced that it would begin immediately on the electrification of its main line from Stamford, Conn., the end of its suburban electric zone to New Haven, a distance of 42 miles. This will be the first actual trunk line electrification in the United States. But little progress was made toward the electrification of the railway terminals in Chicago, although the railways and the city authorities have appointed a joint board of engineers to study the question. The Southern Pacific electrified 40 miles of its suburban lines entering Oakland, Cal., across the bay from San Francisco, using the overhead trolley 1200-volt direct-current system.

CAR AND LOCOMOTIVE BUILDING. At the end of 1910 the uncertainty of the future caused the railways practically to retire from the market for new rolling stock, and the decision in the rate cases early in 1911, together with the unfavorable earnings, prevented any recovery in the equipment market. Not until the last quarter of the year did the railways begin to place orders for much-needed new cars and locomotives. For these reasons the number of cars built during 1911, as shown by statistics compiled by the *Railway Age Gazette*, is the smallest in 12 years. Only 55,931 freight cars and 3566 passenger cars were built, a total of 59,507 cars. The following table shows the number of cars built in each year since 1905:

Year	Freight	Passenger	Total
1905	165,155	2,551	168,006
1906	240,503	3,167	243,670
1907	284,188	5,457	289,645
1908	76,555	1,716	78,271
1909	93,570	2,849	96,419
1910	180,945	4,412	185,357
1911	55,931	3,566	59,507

The number of locomotives built was proportionately larger, being 3530, as compared with 4755 in 1910. The output by years since 1906 has been as follows:

Year	No.	Year	No.
1906	6,952	1909	2,887
1907	7,362	1910	4,755
1908	2,342	1911	3,530

BLOCK SIGNALS. About 4000 miles of track was equipped with some form of block signals during 1911, bringing the total up to a little more than 73,000 miles. Of this total 20,000 miles are protected with automatic signals.

RAILWAY ACCIDENTS. The casualties to passengers and employees of railways as reported to the Interstate Commerce Commission for the year ended June 30, 1911, show a large decrease from the totals for 1910, and are even lower than the number reported in 1909.

In 1911 a total of 3519 passengers and employees were killed and 60,235 were injured, as compared with 3804 killed and 82,374 injured in 1910. To these figures should be added 6438 trespassers and other persons killed and 10,687 injured. The detailed record of accidents for 1910 and 1911 is shown below:

	1911		1910	
Passengers	Killed	Inj'd	Killed	Inj'd
In train accidents.....	142	6,722	217	7,516
Other causes	214	6,711	204	6,240
Total	356	13,433	421	13,756
Employees				
In train accidents.....	633	6,775	715	6,791
In coupling accidents...	209	2,968	208	2,985
Overhead obstructions...	78	1,523	98	1,377
Falling from cars, etc...	588	13,346	588	13,196
Other causes	1,655	22,192	1,780	44,269
Total	3,163	46,802	3,383	68,618
Total passgrs. and employees	3,519	60,235	3,804	82,374

FOREIGN RAILWAYS. Outside of the United States railway development was most marked in Canada, South America, and Africa. In Europe the greater part of the construction was concerned with urban and interurban lines, often in subway, though on the Continent a few mountain roads were built, or proposed, and some notable tunnel work was prosecuted. In Asia political conditions interfered with the development projected for China, but in Africa there was a steady advance in which political necessities, as well as trade conditions, seemed to have been considered. In South America large systems were undergoing considerable development, and new construction was under way as well as planned for the future. This development was truly continental, and unquestionably will have its effect on the commercial activity of the various South American countries. In Australia there was a marked growth in railway construction, and here, too, plans of development were being prosecuted vigorously.

General progress will be found summarized in the sections on *Communications, Railways, or Transportation* in the records of the various foreign countries. See also the article on **RAILWAYS, AFRICAN**, below, and **ARBITRATION AND CONCILIATION**.

RAILWAYS. AFRICAN. Progress in railway building in the British and German colonies of Africa was marked during 1911. The Cape-to-Cairo system had been extended to 165 miles

beyond the frontier of the Belgian Congo, and in Portuguese Angola the Benguela Railway had advanced 124 miles. The German railway in Togo from Lome to Atakpame was virtually completed, and an extension to Tschiporva was being considered. The Germans were also pushing forward the Northern Railway in the Kamerun, and the Keetmanshoop-Windhoek line in Southwest Africa, which had been partly completed, was being extended to Gibeon. Lines from Buala to Manenguba Hills, and to the Njong region via Edea were being developed, and the Usambara Railroad in German East Africa was being extended beyond the length of 170 miles which had been opened during the year. The French were at work on the line from Tamatave to Brickaville in Madagascar.

The railways in British South Africa were under the amalgamated management of the government of the Union. During 1911 four of the seven lines under construction in the Cape province had been completed and in Natal three lines, aggregating 54 miles, had been completed. In the Transvaal four of the six lines of railway, amounting to 383 miles, had been opened, wholly or in part, and in the Orange Free State two lines of 35 and 59 miles were virtually completed during the year. The Standerton-Vrede line, connecting the Transvaal and the Orange Free State 46 miles in length, was reaching completion at the end of the year. The lines whose construction had been authorized in the state amounted to 110 miles in the Cape province, 103 miles in Natal, 232 in the Transvaal and 81 miles in the Orange Free State.

The construction of 85 miles of the Salisbury-Mazoe branch of the Blinkwater Railway and of 130 miles of the Rhodesia-Katanga Railway represented the most important development in Rhodesia. The Ayrshire-Lomagunda narrow-gauge railway was widened to 3 feet 6 inches, for 13 miles from Salisbury.

In Nigeria the Lagos railway to Northern Nigeria progressed and the construction had extended beyond Zungeru, but the bridges over the Niger were still unfinished. A line 100 miles in length from Zaria to the Bauchi tin mines was being built. On the Gold Coast the Accra-Mangoase line was nearly finished, while in Sierra Leone a branch line from Boia towards the Rokelle River 50 miles in length was under construction.

Egyptian railway construction included progress on the Zipthap and Zagazig line, while in the Sudan the line from Khartum which followed the Blue Nile to Senaar and then crossed the White Nile had reached El Obeid. In British East Africa the Uganda Railway started a branch from its main line at a point 282 miles from Mombasa, 93 miles westward to Soda Lake at Magadi, while in Uganda itself progress was made on the line from Jinga on Victoria Nyanza towards Kakindu.

RAILWAYS, ELECTRIC. See **ELECTRIC RAILWAYS**.

RANKIN, CATHERINE BLANCHARD. An American actress, died December 14, 1911. She was born in Philadelphia in 1847, the daughter of Loring Blanchard, who was professor of mathematics at Bowdoin College. She made her first appearance on the stage at the age of ten years as a dancer. In 1863 she appeared in the rôle of *Angelica* in the play called *The*

Secret. After playing small parts for three years she joined the stock company of the Continental Theatre in Boston and there married Arthur McKee Rankin, who was a member of the company. For many years following she appeared in plays with her husband. In 1874 she created the part of *Henriette* in the play *The Two Orphans*. Mr. and Mrs. Rankin secured the dramatic rights of Joaquin Miller's novel, *The First Families of the Sierras*, and from it made the play, *The Danites*, which was played with great success in New York and other cities in the United States. After a year on the road the play was taken to London, where it ran for one hundred nights. This play was followed by *Forty-Nine*, another successful Western play, and in 1883 Mr. and Mrs. Rankin built Rankin's Third Avenue Theatre, which was opened by Joseph Jefferson in *Rip Van Winkle*. Several years before her death Mrs. Rankin was obliged to retire from the stage on account of ill health. She was the author of several articles and reminiscences in various magazines.

RED CROSS, AMERICAN NATIONAL. Relief work was given during 1911 by the National Relief Board of the American Red Cross Society in the cases of the Minnesota forest fires, the Washington Place fire in New York on March 25, the disaster at the Pancoast mine at Throop, Pa., the fire in Bangor, Me., on April 30, in the troubles on the Mexican border during the progress of the revolutionary uprising in Mexico, in the heavy hailstorm in Alabama and Georgia on July 4, in forest fires in Michigan in July, in smallpox in Alaska during the summer, in the storm along the coast of South Carolina on August 27, at the breaking of the dam at Austin, Pa., on September 30, the breaking of the dam at Black River Falls, Wisconsin, on October 6, in the Mount Taal eruption in the Philippine Islands, and in the Colon (Panama) fire May 27. The total relief funds contributed during the year and expended wholly by the Red Cross amounted to \$227,013. Relief funds contributed during the year in the expenditure of which the Red Cross participated, \$28,000, and in the relief funds contributed in previous years, but in process of expenditure up to 1911, about \$455,000. The total relief expenditures of the year in the United States which were administered wholly or partially by the Red Cross amounted to about \$810,000.

The International Relief Board rendered assistance in nine foreign fields and expended a total of about \$94,000. Relief was given in the cases of the Chinese famine, the pneumonic plague in Manchuria, in relief of the Jewish cholera epidemic at Tripoli, in Mexican relief, in forest fires in Ontario, in assisting refugees from Albania, and in the Stamboul fire.

Progress was made in an attempt to raise an endowment fund of \$2,000,000. The amount already raised at the end of the year was

\$792,803, and otherwise available, \$90,047, making a total of \$882,851. The seventh annual meeting of the American Red Cross was held in Washington December 5, 1911. The officers chosen for 1910 were as follows: Honorary president, William H. Taft; vice-president, Robert W. de Forest; treasurer, A. Piatt Andrew; counselor, Hon. Frederick W. Lehmann; secretary, Charles L. Magee. Red Cross medals of merit were awarded as follows: Dr. Richard P. Strong, in recognition of his services under the Red Cross as a member of the International Commission on the pneumonic plague in Manchuria, a gold medal; to Dr. Oscar Teague, for services as Dr. Strong's assistant in this work, a silver medal; to Col. William C. Rivers, U. S. A., in recognition of his services under the Philippine Red Cross board in the relief operations after the eruption of the Taal volcano in the Philippines, a gold medal.

REDONDA. See ANTIGUA.

REED, JAMES A. United States senator (Democrat), from Missouri. He was born in Mansfield, O., in 1861 and three years later was taken by his parents to Iowa and later to Kansas City, Mo. He was educated in the public schools and at Coe College. After studying law he was admitted to the bar in 1885. In 1897 he was appointed county counselor of Jackson county, Mo., and in the following year was elected prosecuting attorney. He resigned that office in 1900 to become mayor of Kansas City. In 1902 he was reelected to fill this office. He was delegate-at-large from Missouri to the Democratic national convention in 1898. On November 8, 1910, he was nominated by the Democrats for United States senator in a statewide primary election, and defeated his closest competitor, David R. Francis, by more than 29,000 votes. He was elected to the United States Senate by the legislature to succeed Senator William Warner. His term of office will expire in 1917.

REEDER, WILLIAM HERBON. A rear-admiral, retired, of the United States navy, died January 24, 1911. He was born at Muscatine, Ia., in 1848 and graduated from the United States Naval Academy in 1867. He rose through various grades to that of captain in 1902 and in 1907 was retired as rear-admiral. He saw active service during the Civil War in the summer of 1863. He was on duty on various assignments afloat and ashore and in 1894 commanded the naval brigade in the railroad strike at Oakland, Cal. He was executive officer of the *Charlestown* in Luzon and Japan during the Chinese-Japanese war. In 1904 he was on duty at the Naval War College, and in 1904-5 commanded the *Alabama*. He was commandant of the navy yard in New York in 1896-7, and commanded the *Hancock* until his retirement on June 30, 1907.

REFORMED CHURCH IN AMERICA (DUTCH). A Protestant religious denomination composed originally of settlers from Holland, but now largely intermixed with elements from many other sources. It was known until 1867 as the Reformed Protestant Dutch Church of North America. The first church organization

of the denomination was established in 1628. According to the reports rendered to the general synod in June, 1911, the total number of communicants in the denomination was 117,288, with 689 churches and 750 ministers. The Sunday schools numbered 775, with a total enrollment of 118,687. Contributions received during the year for denominational objects were \$402,466, and for other objects, \$105,861. There were received for congregational purposes, \$1,615,727, making a total of all contributions of \$2,242,741. Foreign missions are sustained by the church in China, India, Japan, and Arabia. The church building fund has charge of the aid for the erection of new churches. Other funds supported by the denomination are the disabled ministers' fund and the widows' fund. There are three theological seminaries, the New Brunswick Seminary at New Brunswick, N. J., the Western Seminary at Holland, Mich., and the Arcot Theological Seminary at Vellore, India. The denomination sustains two colleges, Rutgers College at New Brunswick, N. J., and Hope College at Holland, Mich. The official organs are *The Christian Intelligencer*, published in New York City, *The Leader*, published in Holland, Mich., and *De Hope*, published in the Dutch language. There are in addition many missionary and departmental publications. The church has a board of education which furnishes aid to educational institutions and to young men studying for the ministry. Its legislative bodies consist of the general synod, four particular synods, and thirty-six classes. The synods meet annually, the classes semi-annually.

REFORMED CHURCH IN THE UNITED STATES (GERMAN). This denomination, known also as the German Reformed Church, had in 1911 297,116 communicants, 1730 churches, and 1226 ministers. There are 8 district synods and 59 classes, corresponding to the presbyteries in Presbyterian bodies. In the Sunday schools of the denomination are 235,000 scholars and about 25,000 teachers. Mission work is carried on in practically the entire United States and portions of Canada. Foreign missions are also carried on in Japan and China. The denomination maintains the Eastern Theological Seminary at Lancaster, Pa., the Central Theological Seminary of the Reformed Church in the United States at Dayton, O., and a mission house for training missionaries at Cheboygan, Wis. The leading collegiate institution under the denominational auspices is Franklin and Marshall College. Heidelberg College at Tiffin, O., is also under the control of this denomination. Colleges for women are maintained at Frederick, Ind., and at Allentown, Pa.

REFORMED EPISCOPAL CHURCH. An Episcopal church of historic orders organized in 1873 in New York City by members of the Protestant Episcopal Church who were opposed to the growth of sacramentarianism and sacerdotalism, and who made the separation in order that they might continue to worship after the historic orders of the English Reformation. There were in 1911 9610 communicants, 80 churches, and 94 ministers. Work is carried on among the colored people in South Carolina. At the head of the church are six bishops. Foreign missions are carried on in India. The theological seminary of the denomination is in Philadelphia. The official organ is *The Episcopal Recorder*, published in Philadelphia.

REFORMED PRESBYTERIANS.

The general name given to several religious bodies of Presbyterian doctrine, founded by members of the Covenanted or Reformed Presbyterian Church of Scotland. Included in the title are the Synod of the Reformed Presbyterian Church of North America, the Reformed Presbyterian Church in North America, General Synod, the Reformed Presbyterian Church, Covenanted, and the Reformed Presbyterian Church in the United States and Canada. The largest of these bodies is the Synod of the Reformed Presbyterian Church of North America. It includes about 10,000 communicants, with about 100 churches and 125 ministers. In the Reformed Presbyterian Church of North America, General Synod, there were about 3700 communicants, 27 churches, and 22 ministers. The other two bodies are small. The general synod maintains a theological seminary at Philadelphia and a college at Cedarville, O. It sustains a mission in northern India.

REID, WILLIAM MAX. An American journalist and author, died November 27, 1911. He was born at Amsterdam, N. Y., in 1839 and was educated at the Amsterdam Academy. He entered the mercantile business early in life and in addition to this devoted himself largely to historical research. He was the author of *St. Anne's Church and Queen Anne's Chapel* (1897); *The Mohawk Valley: Its Legends and Its History* (1902); *The Terrible Mohawk* (1904) and *The History of Old Fort Johnson* (1906). He also contributed to many journals on historical subjects.

RELIGIOUS DENOMINATIONS. The most important events in the history of the individual denominations will be found under the title of the denominations in their proper alphabetical order. Incorporated below are the general results of the statistics gathered by Dr. H. K. Carroll, and printed in the *Christian Advocate*, New York. Although these figures show but a small increase in the growth of the denominations, it is somewhat greater than the increase of 1910. These figures show that there were in 1911 221,197 churches with 35,836,190 communicants. The total increase for 1911 was 1990 ministers, 2832 churches, and 594,366 communicants. In the case of various denominations, no statistical information is obtainable. This is true of the Christian Scientists and of the Christian Catholic Church, otherwise known as the Dowie Movement. The Disciples of Christ furnished no returns for 1911. The Methodist Episcopal Church shows the largest absolute increase among Protestant denominations. The Presbyterian Church, North, falls below 1 per cent., and the Protestant Episcopal Church barely reaches 2 per cent. The net increase during the decade ending with 1910 was about 786,000 a year for all denominations. The table at the top of page 604 gives the number of communicants in each denomination in 1911 and in 1890.

Denominations	Rank in 1911	Communi- cants	Rank in 1890	Communi- cants
Roman Catholic	1	12,556,612	1	6,231,417
Methodist Episcopal	2	3,234,822	2	2,240,354
Regular Baptist (South)	3	2,304,724	4	1,280,066
Methodist Episcopal, South	4	1,892,454	5	1,209,976
Regular Baptist (Colored)	5	1,799,222	3	1,348,989
Presbyterian (Northern)	6	1,340,310	7	788,244

RELIGIOUS MOVEMENTS. The notable success of the Laymen's Missionary Movement, which since 1909 has held conventions throughout the country, continued during 1911. A series of training institutes were held during the year. In these instruction was given to men who expressed a willingness to canvass for money for missions. A series of conventions was held in Canada. The reports of the missionary societies of the various churches showed greatly increased work during the year, which is attributed largely to this movement.

The following summary of the Protestant foreign missions, taken from the *Almanac* of the American Board of Commissioners for Foreign Missions, shows the number and distribution of missionaries throughout the world in 1911:

Countries	Stations	Men and women	Native laborers	Com' cants	Added 1911	Under instruction	Income in dollars
United States	12,935	6,013	30,507	802,596	81,825	389,725	10,707,711
Canada	461	509	796	18,582	1,061	6,969	563,988
Great Britain and Ireland	17,907	6,614	38,413	615,514	35,585	725,501	8,316,679
Continental Europe	6,854	3,145	11,505	489,484	23,767	299,793	3,001,160
Totals	38,157	16,281	80,771	1,962,176	142,238	1,421,989	22,589,548

1 1910 summary. 2 And out-stations.

Men and Religion Forward Movement. One of the striking features of the religious world in 1911 was the remarkable success of this movement which has been in active progress since May, 1910. Since the early autumn of that year a committee of 100 business and professional men have been at work in each of 76 cities of the United States and Canada, making preparations for an eight-day campaign to be conducted by specialists in religious work. The movement is under the direction of Fred B. Smith, who for many years has been the head of the religious works department of the international committee of the Young Men's Christian Associations. With him works a committee of 97 members, selected from almost every State in the Union. The general plan of the movement is an effort to arouse to activity laymen in local churches all over the country. To

bring this about there was gathered together a company of about 30 men, including evangelists, and men who have proved their ability to work with boys, and in other special lines of activity, including social service. At the close of the year work had been carried on in South Bend, Ind., Louisville, Ky., Cedar Rapids, Ia., Minneapolis, Minn., Dallas, Tex., Des Moines, Ia., Columbus, O., and Detroit, Mich. The executive secretary of the movement is the Rev. Roy B. Guild.

REUNION, or ROUBRON. An island in the Indian Ocean; a French colony, with an area of 965 sq. miles and a population in 1911 of 173,822. Capital, St. Denis, with 25,689 inhabitants. Sugar-cane is the most important uroduct; other crops are vanilla, tobacco, manioc, coffee, cacao, and spices. Imports (1909), 13,233,483 francs; exports, 16,351,853. Chief exports: Sugar, 30,500 tons; rum 874,438 gallons; coffee, 120 tons; tapioca, 4649 tons; vanilla, 30½ tons. Railways (end of 1909), 78 miles; telegraph lines, 206. In 1909, 87 vessels of 169,326 tons entered, and 88 of 171,679 tons cleared. The budget for 1911 balanced at 4,125,000 francs; French expenditure (budget of

1911), 2,128,000, inclusive of 1,999,000 for railway and harbor. Governor (1911), M. Rodier.

ST. PAUL (7 sq. kilometers), AMSTERDAM (66 sq. k.), and KERGOULEN (3414 sq. k.), are attached administratively to Réunion.

REVENUE. See paragraphs on FINANCE, in articles on countries and States of the United States.

REYES, GEN. BERNARDO. See MEXICO, History.

RHEINLAND. See BATTLESHIPS.

RHIZOTOMY, DANA'S OPERATION. The operation of dividing and resecting certain sensory nerve roots, at the point of their emergence from the spinal canal. It was first devised by C. L. Dana of New York, for whom Abbe of New York operated in December, 1888. It was devised with the object of relieving the chronic spasm or stiffness of groups of muscles in certain types of paralysis, as well as pain, pain reflex, and athetosis. Of late the procedure has been practiced widely for the relief of the pains of locomotor ataxia and the "gastric crises" in that disease. A certain proportion of the latter cases are relieved permanently or temporarily, but the operation is somewhat uncertain in its effects in the present stage of its development, and many failures to relieve spasm are reported. It is improperly called "Foerster's operation" in Germany, as that physician of Breslau first advocated it in 1908. Tramonti also claims priority for his countryman, Mingazzini of Rome, but the latter first recommended it in 1899. See Abbe, in *Medical Record*, February 9, 1899; also in *Medical Record*, March 4, 1911.

RHODE ISLAND. POPULATION. The Thirteenth Census showed a population in 1910 of 342,610, compared with 428,556 in 1900, an increase of 26.6 per cent. in the decade, compared with an increase of 21 per cent. for the entire United States. Rhode Island is the most densely populated of any of the States. There were in 1910 508.5 people per square mile, compared with 400.7 in 1900. The principal cities with their population in 1910 and 1900 are as follows (the figures in parentheses are for 1900): Providence, 224,326 (275,537); Pawtucket, 51,622 (39,231); Woonsocket, 38,125 (28,204); Newport, 27,149 (22,111); Warwick, 26,629 (21,316); Central Falls, 22,754 (17,167).

AGRICULTURE. The Thirteenth Census, taken in 1910, includes statistics of agriculture. These statistics are of date April 15, 1910. According to these figures the number of all farms in the State on that date was 5292, as compared with 5498 on June 1, 1900. The land in farms amounted to 443,308 acres. The improved land in farms was 178,344 acres. The average number of acres per farm was 83.8. The total value of farm property was \$32,990,739. The average value per farm with its buildings and equipment was \$6234. Of all the farms in the State 4338 were operated by owners and managers and 954 by tenants. Of the farms operated by persons owning all or part of the land, those free of mortgage numbered 2811 or 70.4 per cent.; those mortgaged numbered 1180. Of those owning and operating farms 4408 were native whites; 843 were foreign-born whites, and 41 were negroes and other non-whites. The value of the various kinds of domestic animals and poultry in 1910 was \$3,276,472, as compared with a value in 1900 of \$2,593,659. The cattle numbered 34,148 valued at \$1,309,088; horses and colts, 9547,

valued at \$1,424,177; mules, 63 valued at \$11,155; swine, 14,038, valued at \$123,647; sheep and lambs, 6789, valued at \$32,637. The total number of fowls of all kinds was 415,209, valued at \$368,018. The acreage, production, and value of the principal crops in 1910 and 1911 are given in the following table:

		Acreage	Prod., bu.	Value
Corn	1911	11,000	495,000	\$470,000
	1910	10,000	400,000	332,000
Oats	1911	2,000	58,000	34,000
	1910	2,000	70,000	34,000
Potatoes ..	1911	5,000	550,000	583,000
	1910	5,000	680,000	469,000
Hay	1911	61,000	61,000	1,470,000
	1910	63,000	74,000	1,450,000

MINERAL PRODUCTION. The value of the mineral products of the State in 1910 was \$800,503. The principal products are stone and mineral waters.

EDUCATION. The school population in the State between the ages of 5 and 15 in 1911 was 105,230. The enrollment in the public schools in the same year was 70,966. The total number of teachers was 2371. The average salary paid to men teachers per year was \$1297.15, and to women teachers, \$587.01. The total expenditure for public schools was \$2,486,756. Education in Rhode Island has been characterized in recent years by the same growth, enterprise, and achievements as have characterized its economic and social order. There has been a lively response in the State to leading educational movements. During 1911 perhaps the most signal advance was the provisions for the health of school children. In 1911 a law was passed providing for medical inspection of schools, and also providing for State aid for the same. The year was also marked by a substantial increase in the State's appropriation for educational purposes. As a rule, in Rhode Island, the State contributes financial support to nearly every educational interest. The educational system of the State has some peculiar features of its own. Among the most recent gains previous to 1911 were the system of teachers' pensions (supported wholly by the State), the minimum teachers' salary law; establishment of the Rhode Island School for the Feeble-minded, and the system of traveling libraries.

CHARITIES AND CORRECTIONS. The charitable and correctional institutions of the State include the State prisons and almshouses, the Sockanossett School for Boys, the Oaklawn School for Girls, and the State Hospital for the Insane. The buildings were completed in 1910 for the State Hospital and for the Sockanossett School for Boys.

POLITICS AND GOVERNMENT

The legislature, which meets annually in Rhode Island, failed to enact new taxation measures which were recommended and failed to provide the revenue necessary for many of its appropriations. As a consequence the week following adjournment Governor Pothier vetoed bills passed by the assembly that carried appropriations of \$467,674. This was the first important use of the veto power, which has been possessed by the governor of Rhode Island only two years.

On January 18 the legislature elected Henry F. Lippitt, of Providence, to succeed Nelson W.

Aldrich as United States senator. Mr. Aldrich had declined to be a candidate for reelection on the expiration of his term. Mr. Lippitt is a cotton manufacturer who has never held a public office before, though both his father and his elder brother have been governors of Rhode Island. It was a three-cornered contest for the senatorship, Mr. Lippitt on the final ballot receiving 72 votes, Judge LeBaron B. Colt of the United States Circuit Court, another Republican, receiving 23 votes, Judge Arthur L. Brown of the United States District Court, Democrat, receiving 44 votes.

The State was one of the few in which elections for State officers were held in 1911. The Democrats nominated for governor Lewis A. Waterman of Providence, while Governor Aram J. Pothier was renominated for the fourth term by the Republicans. On November 7 Governor Pothier was reelected by a plurality of 7394, the total vote being Pothier 37,969 and Waterman 30,575. Republicans also carried the general assembly by increased pluralities, electing 33 members in a Senate of 38, and 71 members in a House of 100. For the first time a Socialist was elected to the Rhode Island assembly, but he was chosen in a district where there was a three-cornered fight and his election was consequently less significant. The chief Republican issue in the campaign was the demand for a new system of taxation, doing away with the present unsatisfactory general property tax, and the chief Democratic issue was the abolition of a property qualification which prevents a registered voter who does not pay taxes on property from casting a ballot for city or town councilmen. The Democrats opposed a constitutional amendment providing biennial elections which was approved by a vote of 27,149 in favor, with 14,176 in opposition. A constitutional amendment in Rhode Island requires a three-fifths vote of the electorate in approval, and the vote on this amendment means that beginning in 1913 there will be biennial elections in Rhode Island.

There was a close municipal election in the city of Providence, where Henry Fletcher, Republican, was reelected for a fourth term, receiving 12,269 votes, as against 12,174 for Alderman Joseph H. Gainer, Democrat, a plurality of only 95.

OTHER EVENTS. The most notable commercial event in the State within the year was the completion of the plans of the entrance into Providence of the Southern New England Railroad, a branch of the Grand Trunk, whose route for a new line from Providence to Palmer, Mass., giving through connections with Canada and the West, has been approved.

RHODESIA. An inland South African territory; a British protectorate. The Zambezi River divides the country into Northern and Southern Rhodesia; both are administered by the British South Africa Company.

SOUTHERN RHODESIA covers about 144,000 sq. miles, and includes the two provinces of Matabeleland (capital, Bulawayo) and Mashonaland (capital Salisbury). European population 1907, 14,018; census of 1911, 23,582; natives (1907), 662,786. Bulawayo had (1911) 5200 white inhabitants; Salisbury, 3479. Cereals and vegetables are cultivated; tobacco, rubber, and cotton are indigenous. Gold output in 1910, 609,956 oz. (623,388 oz. in 1909). Silver, lead, copper, coal, chrome ore, asbestos, diamonds, etc., are mined. Total value of gold mined from 1890

to October 31, 1910, £16,583,359; silver, £131,028; copper, £23,058; lead, £68,089; wolframite, £5972; chrome iron, £212,669; coal, £423,293; diamonds, £31,050; other precious stones, £8065; scheelite, £4958; asbestos, £6095. Total imports (1910), £2,786,321 (mdse., £2,425,821; of which £506,318 came by way of the Cape, and £1,171,280 through Beira). Exports, £2,801,811 (gold, £2,531,341; gold concentrates, £66,535; chrome ore, £100,633; tobacco, £31,596).

RAILWAYS. Total length of railways (end of 1910), 2334 miles. There are two main systems—the Rhodesia Railways (1393 miles, with sidings), and the Mashonaland Railway (547). The Rhodesia system includes the following sections: Vryburg to Bulawayo, 588 miles; Bulawayo to Salisbury, 301; Bulawayo to Victoria Falls, 280; Victoria Falls to Kalomo, 94; Bulawayo to West Nicholson, 103; Gwelo to Selukwe, 24. Sections of the Mashonaland Railway: Umtali to Salisbury, 170; Kalomo to Broken Hill, 281; Salisbury to Ayrshire, 84; Banket Junction to Eldorado, 12. Branch lines: Lyndhurst Halt to Umvuma, 60 miles; Westacre Junction to the Matopos (the grave of Cecil Rhodes), 9; Ayrshire line to the Mazoe district, 22. A line has been built from Broken Hill to the Congo border (132 miles) and an extension into the Belgian Congo to the Star of the Congo mine (about 167 miles north of the Rhodesian frontier) has been completed. Miles of telegraph and telephone lines under control of the administration (December 31, 1909), 3017; of wires, 6513.

Estimated administrative revenue (1910-11), £671,000 and £708,686. Administrator for the company (1911), Sir W. H. Milton.

NORTHERN RHODESIA, hitherto divided into North-Eastern (109,000 sq. miles) and North-Western Rhodesia (Barotseland) (182,000 sq. miles), was constituted by the order in council of May 4, 1911, a single British sphere, with an area of 291,000 sq. miles and an estimated population in 1911 of about 1,000,000, including 1424 Europeans. The amalgamation went into effect August 17, 1911. Barotseland had (1910) imports and exports amounting to £236,359 and £143,457 respectively. The native king, Lewanika, resides at Lealui. Administrator for the company (1911), L. A. Wallace, at Livingstone.

RICE. The rice crop is so extensively grown in countries which publish no statistics with reference to it, that accurate data regarding the world's crop for any one year are not at hand. China is estimated to produce over one billion bushels annually. In 1911 Egypt, Italy, Japan, Spain, and the United States produced about 438,000,000 bushels. The Asiatic crop was largely reduced as a result of dry weather and floods in parts of Burma, Siam, and Indo-China. The trade estimated that the supplies available for export from Burma on account of the reduced production would be about 500,000 tons short. In the United States the rice supply of 1910 was sold out before the crop of 1911 came upon the market. The year in the principal rice-growing sections of the United States was marked by too much moisture at planting time, drouth during the growing season, and rainy weather when the crop was harvested and threshed. The late rains reduced the quality in many sections and well demonstrated the

THE LABORATORY AND HOSPITAL OF THE ROCKEFELLER INSTITUTE FOR MEDICAL RESEARCH

value of drainage or water control. The production of the country reached 22,934,000 bushels from 696,300 acres, as compared with a yield of 24,510,000 bushels from 722,800 acres in 1910. Among the ten rice-growing States Louisiana led with a yield of 11,639,000 bushels, followed by Texas with 8,174,000 bushels, Arkansas with 2,792,000 bushels, and South Carolina with 117,000 bushels. The greatest advance in acreage took place in Arkansas, where the area increased from 60,000 acres in 1910 to 71,600 acres in 1911. In South Carolina the area was decreased by 7000 acres and in Texas by 26,500 acres. The average yield per acre for the entire country was 32.9 bushels.

RICHARDS, ELLEN HENRIETTA. An American sanitary chemist and educator, died in April, 1911. She was born at Dunstable, Mass., in 1842, and graduated from Vassar College in 1870. She carried on post-graduate courses at the Massachusetts Institute of Technology until 1873. In 1875 she married Robert Hallowell Richards. From 1876 to 1884 she was instructor in the woman's laboratory and from 1884 to the time of her death was professor of sanitary chemistry at the Massachusetts Institute of Technology. She conducted many important researches with reference to safety from spontaneous combustion in the use of oils. She was also a specialist in water analysis. Among her published writings are *Chemistry of Cooking and Cleaning* (1882), re-written in 1907; *Food Materials and Their Adulteration* (1886), re-written in 1906; *The Cost of Living* (1899); *Air, Water and Food* (1900); *The Cost of Food* (1900); *The Art of Right Living* (1905); *Sanitation in Daily Life* (1907) and *Industrial Water Analysis* (1909).

ROBERT-FLEURY, TONY. A French painter, died December 8, 1911. He was born in 1838 and was a pupil of Paul Delaroche and Léon Cogniet. In 1870 he won the Grand Medal for the "Last Day of Corinth." This was afterwards selected to illustrate French art in the Luxembourg as well as in the Universal Exposition of 1878. Among other well-known works from his hand are "The Old Women of the Piazza Navona, Rome" (1867), "Danaides" and "The Musical Cardinal."

ROBERTSON EDMUND, 1st BARON LOCHEE OF GOWRIE (1908). An English publicist, died September 14, 1911. He was born in 1845 and was educated at St. Andrews and at Corpus Christi College, Oxford. He was appointed a fellow of Corpus Christi in 1872. From 1892 to 1895 he was civil lord of the admiralty and was secretary to the admiralty from 1905 to 1908. He was a student of American affairs and wrote *American Home Rule*. He also contributed numerous articles on legal and constitutional subjects to the *Encyclopædia Britannica*.

ROBERTSON, PETER. An American dramatic critic and writer, died August 9, 1911. He was born in Vale of Leven, Scotland, in 1847 and was educated in Glasgow. As a young man

he engaged in the mercantile business. He spent several years in China and Japan and in 1875 settled in California, where he engaged in land and mining enterprises. In 1875 he began writing dramatic criticism and from 1881 to 1906 was dramatic critic for the *San Francisco Chronicle*. He was the author of several plays given by the Bohemian Club of San Francisco. He also wrote the book for two comic operas. He was the author of *Bunders* (1875) and of *The Seedy Gentleman* (1902).

ROBIE, EDWARD DUNHAM. A rear-admiral, retired, of the United States navy, died June 7, 1911. He was born in Burlington, Vt., in 1831. He was educated at private schools and at the Binghamton, N. Y., Academy. He was appointed an assistant engineer in the United States navy in 1852 and was promoted through various grades, and retired on account of age with the rank of commodore in 1893. He was advanced to the rank of rear-admiral, retired, by Congress in 1906 for creditable record in the Civil War. In 1852-55 he circumnavigated the globe on the flagship *Mississippi* on Commodore M. C. Perry's Japan expedition. He erected and operated the first line of telegraph ever seen in Japan and instructed the Japanese in building and operating the first steam railways. On his return to the United States he took part in the expedition to capture filibusters in Nicaragua, and in laying the first electric cable from Ireland to the United States in 1857, when the cable broke. He was chief engineer of the *Mohican* at the capture of the forts at Port Royal, S. C., in 1861 and was a member of the board which designated the first floating dry dock in the United States navy. He was fleet engineer of the combined fleets at Key West, Fla., during the trouble with Spain over the *Virginius* in 1874, and in the Spanish-American war he selected and fitted out many vessels for the auxiliary naval force. He was chief engineer of the Norfolk navy yard from 1874 to 1877 and from 1887 to 1891. He also held this position at the Boston navy yard and at the New York navy yard, and served as president of the American Society of Naval Engineers.

ROBINSON, WILLIAM CALLYHAN. An American educator, died November 7, 1911. He was born in Norwich, Conn., in 1834 and graduated from Dartmouth College in 1854. He studied at the General Theological Seminary, graduating in 1857. In the same year he was ordained to the Protestant Episcopal ministry, and served during the following year as a missionary at Pittston, Pa. In 1859 he was chosen rector of St. Luke's Church, Scranton, Pa., remaining there until 1862. In 1864 he was admitted to the bar, and from 1865 to 1895 practiced at New Haven. He was appointed dean of the Law School of the Catholic University of America in 1895 and held that position until the time of his death. From 1869 to 1895 he was lecturer and professor of law at Yale University. He served for two years as judge of the City Court of New Haven and as judge of the Court of Common Pleas of New Haven county from 1874 to 1876. In 1874 he was a member of the Connecticut House of Representatives. He was the author of *Life of Ebenezerariah Kelly* (1855); *Notes of Elementary Law* (1876); *Elementary Law* (1882, revised edition, 1909); *Law of Patents* (1890); and *Elements of American*

Jurisprudence (1900). He also contributed articles on legal subjects to periodicals. He edited the *Mirror of Justice* in 1903.

ROCKEFELLER INSTITUTE FOR MEDICAL RESEARCH. This institution was founded in 1901 by gifts made for the purpose by John D. Rockefeller, who pledged himself to give \$200,000 for the support of the institute during a period of ten years. The first work of the institute was begun in 1904, when a small building was leased and a simple equipment for research in pathology, physiology, and chemistry was established. The first investigations were conducted under the direction of Dr. Simon Flexner, who had been elected director of the laboratories of the institute in 1902. As the result of further gifts by Mr. Rockefeller, a new site for the institute was purchased in 1904. In the two years succeeding, a laboratory building, animal house, and power house were erected. These were formally opened on May 11, 1906. In the following year the work of the institute was placed on a permanent basis by a gift from Mr. Rockefeller of \$2,620,610 as an endowment. During the same year plans for the erection of a hospital were completed. This was opened on October 17, 1910. Its total cost, including buildings and equipment, was \$900,000. At the time of the opening of the hospital another gift of \$3,650,000 was received from Mr. Rockefeller. The institute is composed of the laboratories and the hospital.

The principal event in the progress of the Institute for Medical Research during the year 1911 was the completion of the first year of the operation of the new hospital, which was opened in the autumn of 1910. The hospital selects a small number of diseases for study, and admits only those cases which embody the aspects of those diseases which are most conducive to fruitful observation, while receiving treatment under the most favorable conditions. The permanent endowment of the institute was increased by a gift from Mr. John D. Rockefeller of about \$925,000, making the total endowment of the institute a little more than \$7,000,000, exclusive of buildings and equipment. The institute is divided into two main departments—the laboratories, of which Dr. Simon Flexner is the director, and the hospital, of which Dr. Rufus Cole is the director. The laboratories are divided into departments of pathology and bacteriology, physiology and pharmacology, chemistry, experimental biology, and experimental surgery. The diseases thus far studied at the hospital include pneumonia, infantile paralysis, certain types of heart disease, syphilis, scarlet fever, and certain cases of disturbed metabolism. The funds of the institute are applied almost entirely to the work carried on in its own buildings, but a limited number of small grants are made to investigators in different parts of the world. Appointments to the staff of the institute are ordinarily made only as vacancies occur. The full time of all members of the staff is engaged by the institute for purposes of research. They therefore offer no instruction to students, and do not engage in private practice. Board, treatment, and all other services rendered by the hospital to patients are free, and no pecuniary interest is retained by the institute in any discovery or invention made by members of its staff. See INFANTILE SPINAL PARALYSIS.

ROMAN CATHOLIC CHURCH. The most important event in the history of the Roman Catholic Church in 1911 was the creation by a consistory held in September of seventeen new cardinals, including three American cardinals. The Americans who became cardinals were Archbishop Farley of New York, Archbishop O'Connell, and Monsignor Falconio, apostolic delegate to Washington, who, although an Italian by birth, is a naturalized American citizen. In addition to the cardinals created at the consistory of 1911, a number of other American dignitaries were confirmed. These included Rt. Rev. George W. Mundelin, Vermont, as auxiliary bishop to the Bishop of Brooklyn; Rt. Rev. John J. Nilan, Bishop of Hartford; Rt. Rev. Edmond F. Prendergast, Archbishop of Philadelphia, and the Rt. Rev. John Baptist Gorordo, Bishop of Cebu, Philippine Islands. Other dignitaries, American and Canadian, confirmed were the following: James J. Keane, Archbishop of Dubuque; Pius Dowling, Archbishop of Port of Spain; Joseph Koudelka, Auxiliary Bishop of Milwaukee; John M. Laval, Titular Bishop of Hierocæsarea and Auxiliary Bishop of New Orleans; Joseph Schrembs, Bishop of Toledo, Ohio; Peter J. Muldoon, Bishop of Rockford, Ill.; John Farrelly, Bishop of Cleveland; Edmund M. Dunne, Bishop of Peoria, Ill.; John Stariha, Titular Bishop of Antipatris; James O'Reilly, Bishop of Fargo, N. D.; Joseph J. Rice, Bishop of Burlington, Vt.; John G. Lawler, Auxiliary Bishop of St. Paul, Minn.; John W. Shaw, Coadjutor Bishop of San Antonio, Tex.; Denis O'Donaghue, Bishop of Louisville, Ky.; Joseph Petrille, Bishop of Lipa, Philippine Islands; John B. McGinley, Bishop of Nueva Caceres, Philippine Islands; Thomas F. Lillis, Coadjutor Bishop of Kansas City; Vincent Wehrle, Bishop of Bismarck, N. D.; Timothy Corbett, Bishop of Crookston, Minn.; Joseph F. Busch, Bishop of Lead, S. D.; Charles Currier, Bishop of Lamboanga, Philippine Islands; Maurice P. Foley, Bishop of Tuquegarao, Philippine Islands; Joseph Chartrand, Coadjutor Bishop of Indianapolis; John Ward, Bishop of Leavenworth; Edward P. Kelly, Auxiliary Bishop of Detroit; J. H. Tihen, Bishop of Lincoln, Neb.; Fergus P. McEvay, Archbishop of Toronto; Neil MacNeil, Archbishop of Vancouver; Charles H. Gauthier, Archbishop of Ottawa; Paul E. Roy, Titular Bishop of Eleutheropolis and Auxiliary Bishop of Quebec.

The cardinals confirmed by the consistory were, in addition to the American cardinals mentioned above, the following: Francis Bourne, Archbishop of Westminster, England; Giuseppe Maria Cos y Macho, Archbishop of Valladolid, Spain; Antonio Vico, Papal Nuncio to Spain, an Italian; Gennaro Granito di Belmonte, Archbishop of Edessa, Italian; Francis Bauer, Archbishop of Olmütz, Austrian; Leone Adolfo Amette, Archbishop of Paris; Francis Virginio Dubillard, Archbishop of Chambéry, France; Francis Nagl, Archbishop of Vienna; Francis Maria Rovérié de Cabrières, Bishop of Mont-

THREE AMERICAN CARDINALS OF 1911

FARLEY

FALCONIO

O'CONNELL

Taken in the garden of the American College in Rome after the Public Consistory of November 30th, at which they were made Princes of the Church

pellier, France; Gaetano Bisleti, Papal major domo, Italian; Giovanni Battista Lugari, assessor of the congregation of the holy office, Italian; Basilio Pompili, secretary of the congregation of the council, Italian; Ludovico Billet, French Jesuit; Guglielmo van Rossum of the Fathers of the Resurrection, Dutch; Enriquez Almaraz y Santos, Archbishop of Seville, Spain.

An important and interesting event in the history of the church in the United States during the year was the celebration of the fiftieth anniversary of the consecration of Cardinal Gibbons as a priest, and the twenty-fifth anniversary of his elevation to the cardinalate. These anniversaries were celebrated in Baltimore in June. The presence of men of the highest official station and distinction gave the event national significance and importance. President Taft was present and made an address, and Vice-President Sherman, Chief Justice White, Champ Clark, Speaker of the House of Representatives, Theodore Roosevelt, and others took part in the celebration.

THE DECREE OF NE TEMERE. A decree issued by the Pope declaring marriages invalid which had been entered into by Catholics unless contracted before a parish priest or ordinary of the place where they were performed created much feeling in Canada. As a result of this decree the Archbishop of Montreal annulled a marriage of Roman Catholics solemnized by a Protestant clergyman. The case at issue was that of a citizen of Canada who, in 1908, was married by a Methodist minister of Montreal. Both persons married were Roman Catholics. This union was dissolved by the archbishop on the ground that it was not solemnized by a priest. The persons in question took the matter into the courts, which sustained the action of the archbishop. The case on appeal went to the King's Privy Council. The Anglican Primate of Canada declared in connection with the case that no Canadian law should permit a marriage to be annulled because it was contrary to the canon law of the Church of Rome. To this the Roman Catholic vice-chancellor of the Archdiocese of Montreal replied that it seemed to be forgotten in certain quarters that it was in virtue of a treaty that Canada was ceded to Great Britain, that in this treaty there were conditions guaranteeing to Catholics full, complete, and absolute liberty in religious matters. These rights, he said, had been maintained in the various constitutions since drawn up. He affirmed that it was useless to protest against the action of the church in claiming certain rights in connection with marriage as a sacrament. The church, he said, would continue to pass laws regarding marriage, and if the church came into conflict with the legislation prevailing in certain countries, she is not to blame.

THE CHURCH IN FOREIGN COUNTRIES. An account of the efforts to bring about a separation of the church and state in Portugal will be found in the article on PORTUGAL under *History*.

The Eucharistic Congress in 1911 was held in Madrid, June 25 to 29. The session was brought to a close by an imposing procession through the streets of Madrid. For an account of Spain's difficulty with the Vatican, see SPAIN, *History*. See also GERMANY, and FRANCE, under *History*.

CHURCH STATISTICS. According to the official Catholic Directory at the close of 1910, there were in the United States at that time a Roman Catholic population of 14,618,761. The churches numbered 13,461 and the clergy 17,084, of whom 4434 were religious and 12,650 were secular. The hierarchy of the church was composed of 4 cardinals, 13 archbishops, and 97 bishops. The seminaries numbered 82, with 6969 students; the colleges for boys, 225; academies for girls, 696, and parishes with schools, 4972, with a total attendance of 1,270,131, scholars. The missionary, educational, and philanthropic work of the church is carried on by various religious orders, including brotherhoods and sisterhoods.

ROTHSCHILD, GUSTAV SAMUEL JAMES, Baron. A Jewish financier and philanthropist, died November 28, 1911. He was born in Paris in 1829 and was one of the family of four brothers, descendants of the famous Rothschild brothers, who laid the foundation of the great fortune which made the name such a power in the financial history of Europe. The father of these brothers was Baron James Rothschild, the head of the Rothschild banking house in France, who established relations with the tobacco growers in the United States and built up a lucrative business. By the time Gustav and his older brother, Mayer Alphonse, had succeeded to their father's business, these relations had ceased, although they still retained large holdings of American securities. The brothers became producers in rubber and gold and other metals in various parts of the world. They inaugurated a great fleet of their own and established their own warehouses in many ports. During the joint headship of Baron Mayer and Baron Gustav, the French house was the capital of the Rothschild domain. It was said that his power in political affairs was almost absolute. He could make or stop wars by the lifting of a finger or with the stroke of a pen. The terms of the crushing indemnity exacted by Prussia after the humiliation of France in the Franco-Prussian War was credited to the house of Rothschild. After the death of Baron Mayer Rothschild in 1905, Gustav continued to represent the head of the French house, although in later years the domination shifted first to Vienna and then to London. He was honorary consul-general of Austria at Paris and administrator of the Northern Railroad of France, and the Paris, Lyons and Mediterranean line. He was a chevalier of the Legion of Honor.

ROUVIER, MAURICE. A French public official, former prime minister, died June 7, 1911. He was born at Aix-en-Provence in 1842 and was educated at the lycée in Marseilles. He was called to the bar, but preferring business became connected with a grocery concern, of which he soon was made a member. At the same time

he contributed to democratic papers. In 1876 he was elected to the Chamber of Deputies from Marseilles. Then began his national career. He joined the Extreme Left and devoted himself to financial, commercial, and naval questions. He was active in the support of Gambetta. While holding the office of secretary of the Chamber he was charged with immorality. He was, however, acquitted at a trial held at his own request. In 1881 he was made minister of commerce and of colonies by Gambetta. In 1885 he failed of election in Marseilles and removed to the department of Alpes-Maritimes, where he was successful. In 1887 he was made president of the council (premier) and minister of finance. The chief feature of his administration was the substitution of General Ferron for General Boulanger as minister of war. There followed soon after disclosures as to traffic in decorations of the Legion of Honor brought against President Grévy and members of his cabinet. The president endeavored to save himself by throwing over his cabinet, but its resignation was followed by his own. Rouvier returned to office six months later as minister of finance under Premier Tirard, a post which he continued to hold under three successive premiers. Under the last of these, Ribot, he had held office for only a few days when the Panama scandals burst forth. He admitted that he had asked certain financiers to assist the state in time of great stress. He was censured by the Chamber and was prosecuted, but not convicted. After his retirement from office he continued to serve as a member of the commission of the budget. In 1902 he was again made minister of finance by Combes. His first venture was the conversion of the total funded debt of France from $3\frac{1}{2}$ to 3 per cent. loans. He also introduced an income tax. In 1905 he became prime minister for the second time, but in the following year resigned.

ROWING. The outcome of the annual intercollegiate regatta held on the Hudson River, near Poughkeepsie, in 1911, ended another chapter in the wonderful rowing history of Cornell. Since 1895 the crews representing Cornell in the eight-oared varsity event have finished first twelve times. Pennsylvania and Syracuse have each won twice, and Columbia once. In the 1911 regatta Cornell, for the third successive year, captured the chief prize. Columbia made an excellent showing, and for the fifth time in her history finished second. Pennsylvania was third, Wisconsin fourth, and Syracuse last.

The Cornell crew consisted of C. H. Elliott, bow; E. S. Bates, 2; B. A. Lum, 3; W. O. Kruse, 4; G. B. Wakely, 5; W. G. Distler, 6; C. B. Ferguson, 7; and E. F. Bowen, stroke. The winners' time for the four miles was 20 minutes, 10 $\frac{1}{2}$ seconds. The record for the event, 18 minutes, 53 $\frac{1}{2}$ seconds, was made by Cornell in 1901. The times of the other crews in the 1911 varsity eight oars follow: Columbia, 20:16 $\frac{1}{2}$; Pennsylvania, 20:33; Wisconsin, 20:34; and Syracuse, 21:03 $\frac{1}{2}$. In the varsity four-oared event (2 miles) Cornell also finished first, with Syracuse second, Columbia third, and Pennsylvania fourth. No time was taken. Columbia won the eight-oared freshmen race, covering the two miles in 10 minutes, 13 $\frac{1}{2}$ seconds. Cornell was second, in 10:20 $\frac{1}{2}$; Syracuse third, in 10:23 $\frac{1}{2}$; Pennsylvania fourth, in 10:24 $\frac{1}{2}$, and Wisconsin last, in 10:38.

Harvard for the fourth year in succession was triumphant over Yale in the annual races held on the Thames River, near New London, Conn. The Cambridge crews, however, failed to make a clean sweep of the events as they had done in 1909 and 1910. Harvard won the varsity eight oars and four oars, while Yale captured the freshman eight-oared event. Harvard's time in the varsity eight oars was 22 minutes, 44 seconds, or more than two minutes and a half slower than Cornell's on the Hudson. The winning crew comprised G. H. Balch, bow; G. F. Stratton, 2; G. P. Metcalf, 3; A. M. Goodale, 4; L. Withington, 5; A. S. Strong, 6; R. W. Cutler, 7; and G. F. Newton, stroke. Yale's time was 23 minutes, 41 $\frac{1}{2}$ seconds. In the four-oared event Yale made a much better showing, but both crews rowed in very slow time—Harvard in 15:37 $\frac{1}{2}$ and Yale in 15:52. The freshman eight-oared race was the most exciting of the three, Yale winning in 11:53. The Harvard youngsters' time was six seconds slower.

Several other college races were held during the year. Cornell defeated the Harvard eight over a two-mile course on Lake Cayuga, and also beat both Yale and Princeton on Carnegie Lake. Pennsylvania defeated Yale at Springfield, Mass. Annapolis defeated Pennsylvania and Syracuse, but lost to Columbia. In the West the University of Washington defeated the University of California.

The thirty-ninth annual regatta of the National Association of Amateur Oarsmen was held at Saratoga. The members of the Argonaut Boat Club of Toronto easily proved their superiority by capturing six of the thirteen events. The Argonauts took first place in the senior eights and fours, the quarter-mile dash, single sculls, intermediate eights, and association singles. E. B. Butler was the individual star of the Argonauts, capturing three races, the quarter-mile dash, association singles, and championship singles. The international fours were won for the second successive year by the Arundel Boat Club of Baltimore. The intermediate fours went to the Detroit Boat Club and the senior double sculls were won by G. W. Engle and S. F. Gordon of the Vesper Boat Club of Philadelphia.

The ninth annual regatta of the National Rowing Association, popularly known as the American Henley, took place on the Schuylkill River, over a course 1 mile, 550 yards long. The winners of the main events were: First four-oared shells, University Barge Club of Philadelphia; junior collegiate eight oars, Cornell University; first single sculls, E. T. Hoffman, Jr., of the University Barge Club. In the forty-fifth annual regatta on the Harlem River the senior eight-oared shells were won by Columbia University, the international eight oars and junior eight oars by the New York Athletic Club, and the intermediate single sculls by M. C. Doyle of the Hudson Boat Club.

Magdalen College, Oxford, for the second successive year, won the Grand Challenge Cup in the Henley Regatta held on the Thames, England. Eton College captured the Ladies' Plate event, and W. D. Kinnear of Kensington the diamond sculls race.

The sixty-eighth annual Oxford-Cambridge regatta was won for the third successive year by Oxford, whose time for the four miles—18:29—established a new record. The old record—18:47—was made by Oxford in 1893 and equaled

by Cambridge in 1900. R. Arnst of New Zealand, who won the professional sculling championship in 1908, retained his title in 1911 by defeating Harry Pearce of Sydney over the Parramatta course (3 miles). Arnst's time, 19:46, excelled all former records.

ROYAL COMMISSION ON TUBERCULOSIS. See TUBERCULOSIS.

RUBBER. The rubber industry in 1911 passed through a year with little of unusual moment. In England the capitalization of new companies formed was but \$6,899,000, as compared with \$38,841,500 in 1910 and \$12,008,000 in 1909. The formation of companies for such colonial undertakings on such large scales, aside from the speculative side, lent increased interest to the consideration of future supplies of India rubber. In Germany estimates were made that by 1916-17, when the areas planted previous to 1911 would become productive, the world's output of plantation rubber would reach 110,000 tons. To this must be added about 65,000 tons of wild rubber, so that a gross supply more than twice the production of 1910, as indicated by the accompanying table, would be available. Now the natural increase in consumption was but 10 per cent. per annum, so that by 1916 the normal consumption would only be about 110,000 tons. Great increases were anticipated from the East Indies and at the present growth of plantations in Ceylon and the Malay Peninsula conservative estimates place the annual production at 60,000 tons of rubber by 1916. In fact by that time the annual increase from this region should amount to some 15,000 tons per annum. Thus in 1911 Malaysia exported 19,081,269 pounds, as compared with 7,693,409 pounds. Such activity in Asia naturally threatened South American supremacy and this was realized fully in Brazil. Towards the end of 1911 a special parliamentary commission appointed to take measures for the defense of the Brazilian rubber industry against foreign competition and local dangers submitted its report, including the draft of a proposed law for adoption by the federal government and applicable to the entire republic as distinguished from a mere state measure. It proposed the reduction or abolition of the export duties, the improvement of transportation facilities, the encouragement of commerce, and the attraction of labor and its maintenance at points distant from the coast. The export duties were to be reduced one-half in annual stages of 10 per cent. and new railway line and river transport improvements were proposed, while immigrant barracks and supply depots were to be built and articles intended for consumption in the rubber industry were to be exempted from duty. Surveys of plantations were to be made and titles were to be conferred. Various bonuses on new plantations, replantations, factories, and plantations for food supplies were proposed. With certain modifications the scheme was enacted into law at the December session of the Brazilian National Congress. The measure attracted much favorable comment in the rubber industry.

The relative importance of the various rubber-producing countries is shown in the official table at top of next column (compiled by the government of Pará, Brazil):

	1909 Tons	1910 Tons
Federal Territory of Acre.....	10,500	11,565
State of Amazonas.....	10,700	10,454
State of Pará.....	11,400	10,257
State of Matto Grosso.....	2,200	2,300
Island of Cajuelro (Plauhy).....	150	200
Republic of Peru.....	2,700	2,495
Republic of Bolivia.....	2,300	2,486
Republic of Venezuela.....	34	25
Republic of Colombia.....	6	18
Total South America.....	39,990	39,980
Central America.....	5,000	6,000
East Africa.....	5,460	4,200
West Africa.....	15,500	14,800
Ceylon and Malaysia plantations...	4,050	8,200
Total tons.....	70,000	73,000

Imports into U. S.	1911	1910	1909
Pará, excluding Caucho.....	15,892	14,896	17,591
Central East Indies, Africa and Ceylon.....	19,196	18,020	13,538

Average prices in New York for Pará rubber:

	Up river Fine	Coarse	Islands Fine	Coarse	Cameta coarse
1911	118%	95	110%	64	70%
1910	201%	136%	183%	90	100
1909	159%	107	149%	66%	77

Statistics of Pará rubber for three years follow (in tons):

	1911	1910	1909
World's visible supply Dec. 31, tons.....	5,852	3,891	2,358
Pará receipts July 1 to Dec. 31.....	14,635	13,400	14,970
Pará receipts of caucho July 1 to Dec 31.....	1,760	2,370	1,840
Afloat from Pará to U. S. Dec. 31.....	1,300	435	916
Afloat from Pará to Europe Dec. 31.....	720	1,080	700

The manufacture of rubber as distinguished from its production continued to prosper during 1911. Practical substitutes failed to come into widespread use and the demand for motor tires and other purposes continued. Should increased supplies of rubber result in lower prices it was quite evident that many new uses would be found. The condition of the industry in the United States as reported by the census of manufactures is summarized in the following table:

	1909	1904
Cost of materials used.....	\$122,745,102	\$ 80,002,476
Salaries	7,840,700	4,538,912
Wages	25,136,976	20,084,166
Misc. expenses	16,360,993	11,303,336
Prin. elements of cost.....	\$172,083,771	\$115,928,890
Estimated difference....	25,310,867	39,086,501
Selling value of products	\$197,394,638	\$155,015,391
Capital	162,144,564	98,979,636

The rubber trade in Germany in 1911 enjoyed a fairly prosperous year and there were employed 27,238 hands, of whom 18,555 were men whose average wages per week was 24.19 marks, as compared with 13.07 marks for the women. See CHEMISTRY, INDUSTRIAL.

RUMANIA. A constitutional monarchy, composed of the Moldo-Wallachian provinces and the territory of the Dobruja. Capital, Bucharest.

AREA AND POPULATION. Area, 50,720 sq. miles.

Population (1899), 5,956,900; estimated at end of 1910, 6,966,002. Births (1910), 273,106 (1909, 282,342); deaths, 172,843 (188,325); still-births, 7441 (7617); marriages, 64,286 (63,212). Bucharest had (1910) 293,435 inhabitants; Jassy, 79,402; Galatz, 66,216.

EDUCATION. Primary instruction is compulsory, and educational conditions are steadily improving. A special census in 1909 returns 60.16 per cent. of the population as unable to read or write, against 78 per cent. in 1899; of the army recruits, 43.12 per cent. in 1909 and 41 per cent. in 1910 could neither read nor write. State-supported primary schools in 1909-10, 5074 (4900 in 1908-9), with 7780 (7667) teachers, and 584,953 (560,649) pupils. Secondary schools (1906-7), 64, with 17,050 pupils. Total boys in secondary, professional, industrial, and agricultural institutions, 19,280; girls, 6016.

The Greek Orthodox is the national church.

AGRICULTURE, ETC. Of the 5,974,798 hectares under cultivation in 1908, 5,133,459 were under cereals, 36,228 under textile and oleaginous plants, 90,022 under legumes and tubers, 110,240 under grasses and forage crops, 428,474 natural pasture, 70,267 plum orchards, 86,337 vines, 19,771 industrial plants.

In the following table are shown the area (in hectares) under chief crops and the yield (in thousands of quintals) for 1910 and 1911 (1911 yield preliminary), with the yield per hectare in 1910:

	Hectares		1000 quintals		Qs. p.h.a.
	1910	1911	1910	1911	
Wheat	1,948,217	1,930,164	30,162	26,033	15.5
Rye	173,861	131,796	1,945	1,266	11.2
Barley	549,391	507,201	6,441	5,686	11.7
Oats	446,760	401,415	4,463	4,016	10.0
Corn	1,986,259	2,085,167	27,800	31,277	14.0
S. beets	13,318	13,603	3,081	2,250	281.4
Vines*	88,277	85,860	1,713	1,250	19.4

* Yield in hectoliters of must.

The table below gives the area in acres (a) and the yield in bushels (bu.) of several cereal crops for the three years next preceding (from the report of the minister of agriculture and domains):

Year	Wheat	Barley	Oats	Rye
1907 (a.)	4,236,100	1,259,500	871,000	362,400
" (bu.)	42,257,000	20,062,000	17,842,000	2,554,000
1908 (a.)	4,452,000	1,532,500	1,211,600	363,400
" (bu.)	54,813,000	12,873,000	17,212,000	2,640,000
1909 (a.)	4,173,000	1,357,100	1,197,200	337,200
" (bu.)	56,751,000	19,955,000	25,945,000	3,090,000

Under colza in 1909 69,146 acres (527,170 bu.); under flax, 12,173 (72,389 bu. seed); under sugar-beets, 11,406.

Area under forests, 2,759,930 acres, divided as follows: 1,069,703 state; 125,985 communal; 1,492,841 private; 71,401 domain and crown.

Livestock (December, 1900): 864,324 horses, 2,589,528 cattle, 5,655,444 sheep, 232,515 goats, 1,709,205 swine. The number of cattle and sheep has steadily declined since 1900.

Silk-worm culture and fishing are carried on. The petroleum industry is important; the output in 1910 was 1,352,300 tons, against 1,297,000 in 1909. Coal is mined.

COMMERCE. Imports and exports (1909) were valued at 366,748,000 and 443,858,000 lei respectively. Imports of metals were valued at 86,912,210 lei; textiles, etc., at 65,633,620; wool, hair, etc., 31,471,995. Exports: Cereals, etc.,

357,587,891 lei; petroleum, etc., 36,208,546; wood and timber, 29,445,651.

Germany supplied (1909) imports and received exports valued at 124,637,000 and 26,604,000 lei respectively; Austria-Hungary, 85,786,000 and 115,030,000; Great Britain, 57,736,000 and 34,650,000; France, 23,677,000 and 27,502,000; Italy, 17,677,000 and 33,998,000; Belgium, 11,620,000 and 121,297,000; Turkey, 11,607,000 and 21,474,000; Russia, 10,780,000 and 4,129,000; Netherlands, 5,360,000 and 49,491,000.

Vessels entered (1910), 36,727, of 11,028,482 tons; cleared, 36,729, of 11,058,707. Merchant marine (January 1, 1911): 94 steamers, of 22,893 tons; 478 sailing vessels and boats, of 144,618 tons.

COMMUNICATIONS. Length of railways in operation September 1, 1910, 3755 kilometers (state, 3473); telegraph lines (1909-10) 7651 kms.; wires, 19,311; officers, 3096. Telephone lines, 1292 kms. urban (wires, 16,243), and 32,824 interurban (50,035). Post offices, 2970.

The European Commission of the Danube, with headquarters at Galatz, is independent of the Rumanian government, and has sovereign powers within its territory. A resident executive committee exercises executive authority. Receipts in 1909, 3,616,790 lei; expenditure, 2,847,400. There has been no debt since 1887. Vessels cleared at Soulina in 1910, 1307, of 2,274,493 tons (English, 461, of 1,039,493).

FINANCE. The unit of value is the leu, worth 19.3 cents. The revenue and expenditure (including railway and other budgets) for three successive years are given in lei below:

	1909-10	1910-11*	1911-12*
Revenue	458,886,905	461,079,942	478,395,230
Expenditure	417,966,070	461,079,942	478,395,230

* Estimate.

Revenue from public services (1911-12), 120,366,000 lei; indirect taxes, 75,900,000. Expenditure for the department of finance, 200,964,965 lei; public works, 85,300,876; war, 69,278,668. Debt, April 1, 1911, 1,579,728,904 lei.

ARMY. The application of the law of March 29, 1908, on the organization of the army, modified as it was by the law of April 15, 1910, came up again in 1911, as this law defined the state of the various contingents from November 1, 1910. In accordance with it the active army is formed from all men between the ages of 21 and 28 years, two years being spent with the colors and four years on leave, except for the cavalry, where three years are spent with the colors. Men from 28 to 38 serve in the reserve, and the militia is composed of men from 38 to 42 years, and the territorial forces of men from 42 to 46 years. Young men from 19 to 21 years of age will be summoned each year from April 1 to November 30, two Sundays a month, for a session of three hours at most, under the control of the garrison commandants. The instruction of the auxiliaries or *schimbui*, made up of the more educated classes, will be for the first year (21 years of age) from December 1 to March 31, every Sunday and holiday, two sessions of three hours each for instruction.

The effective force for 1911-12, as provided by the budget, was as follows: Infantry, 50,561; permanent cavalry, 7772; artillery, 13,137; engineers, 3542; medical, 727; navy, 4962; outside cadres, 2741; troops of other departments,

firemen, gendarmes, 5161; reëngaged, chief sergeants, 3148; and pupils of the military schools, 856, making a total of 89,670.

NAVY. The navy consisted in 1911 of 31 vessels, of 6004 aggregate tons, the more important as follows: One protected cruiser of 1320 tons, a training-ship of 350, 7 gunboats, 6 coast-guard vessels, a screw dispatch boat (240 tons), 6 first- and 2 second-class torpedo boats. In addition there are 12 naval police boats, with 8 vedettes. Personnel, 143 officers, 2176 men.

GOVERNMENT. A king (1911, Charles I.) is the executive, aided by a cabinet of eight members. The legislative body is composed of a senate and a chamber of deputies. The council of ministers, as composed January 10, 1911, was as follows: Premier and Minister of Finance, P. P. Carp; Interior, Al. Marghiloman; Foreign Affairs, T. Majoresco; Worship and Instruction, C. C. Arion; Agriculture and Domains, J. N. Lahovary; Justice, M. G. Cantacuzene; Public Works, B. Delavrancea; War, N. Filipescu; Commerce and Industry, D. S. Nenitzesco.

HISTORY. On January 10, the Bratiano ministry having retired, a new ministry was constituted under the presidency of M. Carp. On January 23 the chamber was dissolved and the elections were fixed for March 1. They resulted in an overwhelming majority for the Conservative government, the Liberal chief, M. Bratiano, being defeated in his own district. The long-standing disputes between the Conservative Democratic party and the Conservative party now in power seemed to stand a chance of reconciliation and negotiations to that end were undertaken in the hope of simplifying political conditions, but proved unavailing owing to the inability to agree on important points, such as the dissolution of parliament and the revision of the constitution.

RURAL SCHOOLS. See EDUCATION.

RUSSELL, WILLIAM CLARK. An English writer of sea stories, died November 8, 1911. He was born in New York in 1844. His father was Henry Russell, the well-known song writer. He was educated at private schools and became an apprentice in the English merchant service at the age of 13. He made many voyages to all parts of the world. A dispute with the captain over a trifling matter, which resulted in his arrest, decided him to end his career as a sailor. He entered the office of a stock broker, but the work wearied him and he began to write. His first production was a five-act tragedy in blank verse, *Fra Angelo*. This was produced at the Haymarket Theatre, London, and proved a failure. He followed this with a three-volume novel, which was rejected by many publishers. He became a contributor to the *London Review* at the same time working on the *Newcastle Chronicle*. His first successful book, *The Wreck of the Grosvenor*, established his reputation as a writer of sea stories. This was followed by *John Holdsworth*, *Chief Mate*, *A Sailor's Sweetheart*, *The Frozen Pirate*, *The Lady Maud*, and other novels. He put into his books many of the experiences of his life on the sea. In addition to his novels he wrote a *Life of Lord Nelson* and a *Life of Lord Collingwood*. For many years before his death he was a great sufferer from rheumatism. Many of his books were written at the expense of much physical suffering. He did not allow this to influence his writings and his novels are full of a cheerful optimism.

RUSSELL, WILLIAM HEPBURN. An American lawyer and politician, died November 21, 1911. He was born at Hannibal, Mo., in 1857, and was educated in the high and commercial schools of that city. After serving on the staffs of several newspapers he was admitted to the bar in 1882. For two years following he was city attorney of Hannibal and then removed to Indiana, where he was appointed general attorney for the Louisville, New Albany & Chicago Railroad. In 1887 he removed to Chattanooga, Tenn., where he remained until 1895. He removed to New York in that year and began the practice of law in that city. He engaged in politics and became affiliated with Tammany Hall. A disagreement with Richard Croker, however, resulted in his leaving that organization in 1897. He took an active part in the political campaigns in New York City and was in great demand as a political orator. He served as commissioner of accounts under Mayor Low. After the departure of Mr. Croker from the leadership of Tammany Hall, Mr. Russell rejoined that organization, but again left it in 1909, as the result of the nomination of William J. Gaynor for mayor. He was the author, with William B. Winslow, of *Russell and Winslow's Syllabus Digest of the United States Supreme Court's Reports*.

RUSSIA. An empire of eastern Europe and northern Asia, lying between the Baltic and the Bering seas and extending from central Europe and Asia to the Arctic Ocean. Capital, St. Petersburg.

AREA AND POPULATION. In the table below are given the area, and the population for 1907 and 1910:

	Sq. miles	1907	1910
European Russia	1,862,524	111,279,500	118,690,800
Poland	49,018	11,138,700	12,123,200
Ciscaucasia	85,201	4,464,800	5,039,600
Trans-Caucasia ..	95,402	6,199,100	6,695,600
Siberia	4,786,730	6,893,900	8,220,100
Steppes	710,905	2,856,100	3,282,100
Turkestan	400,770	5,856,400	6,250,500
Trans-Caspian Province	213,855	405,500	440,800
Finland	125,784	2,925,300	3,069,300
Internal waters...	317,486
Total	8,647,657	152,009,300	163,807,700

Population of Russia, exclusive of Finland, in 1910 160,748,400 (80,475,000 males and 80,273,400 females); of the empire, including Finland (3,059,300), Bokhara (1,500,000), and Khiva (800,000), 166,107,700. The population is made up, in the order named, of Aryans, Uralo-Altays, Jews, Georgians, other Caucasians, Chinese, Japanese, Koreans, Hyperboreans, and others. See FINLAND, BOKHARA, and KHIVA for further details respecting those countries.

Marriages (1905) in European Russia, 839,986; births, 4,819,155; deaths, 3,410,569. Emigration into Siberia in 1910, 352,950; 1909, 707,463; 1908, 758,812; 1907, 572,579; total emigration to Siberia 1896-1910, 3,969,943.

St. Petersburg had (1910) 1,907,708 inhabitants; Moscow, 1,481,240; Warsaw, 855,900; Odessa, 478,900; Kiev, 446,800; Lodz, 395,670; Riga, 324,720; Kharkov, 219,600; Saratov, 198,600; Vilna, 186,200; Kishinev, 118,610; Minsk, 109,300 (all in European Russia); Baku, 217,900; Tashkent, 192,000; Tiflis, 188,400; Khokand, 112,800; Tomsk, 105,620; Omsk, 90,200;

Vladivostok, 90,160; Irkutsk, 85,860; Batum, 32,700 (all in Asiatic Russia).

EDUCATION AND RELIGION. Education in Russia is imperfectly developed; on an average out of every 1000 only 211 are literate. The state provides and maintains the following categories: Universities, normal schools, seminaries and institutes, gymnasias, *realschulen*, urban and district schools, parochial schools, and special technical institutes of all grades. Primary schools are provided either by the local authorities or by private persons. The table below gives the number of schools of all kinds by great divisions of the empire, with pupils, male and female, on January 1, 1908 (a, European Russia; b, Poland; c, Caspianasia; d, Trans-Caspian; e, Siberia; f, Central Asia; g, Finland):

	Schools No.	Number of pupils		
		Male	Female	Total
a	82,983	3,760,940	1,672,572	5,433,512
b	6,649	253,814	131,423	414,839
c	2,554	143,590	61,951	205,541
d	2,493	100,410	29,020	129,430
e	4,846	160,786	75,950	240,784
f	9,100	153,644	43,119	197,376
g	4,467	94,779	84,990	217,849
Total		4,667,913	2,099,028	6,766,941

To provide for the education of Jewish children, whose attendance at the general schools is severely restricted to a small percentage of the whole, the government has established special schools, far too few and inadequately maintained (less than 200, with an average of 113 pupils each). Private Jewish schools (*kheders*) are reported to number 14,740, with 202,000 pupils. Universities: Moscow (2), St. Petersburg, Kiev, Kharkov, Yuriev or Dorpat, Warsaw, Kazan, Odessa, Tomsk and Saratov.

Of the total (1897) creedal population, 69.3 per cent. (all Russians, Rumanians, most Kartvelians, and some Turko-Tatars and Finns) belong to the Greek Orthodox Church; 11.7 per cent. (the majority of Turko-Tatars, and Caucasus mountain tribes) are Mohammedans; 9.1 per cent. (Poles and Lithuanians), Roman Catholics; 4.1 per cent., Jews; 2.8 per cent. (Finns, Germans, Letts, etc.), Protestants. The emperor is the head of the Greek Church in Russia; the Procurator of the Holy Synod has, under the emperor, practically unlimited authority. Of the Jews in Russia, 93.9 per cent. are restricted to the "pale"; 4 per cent. in European, and 2.1 in Asiatic Russia reside without the "pale." The pale covers about 302,000 sq. miles—a little under 20 per cent. of European Russia, a little over 4 per cent. of the empire.
